Reporting of sustainability data

1 Board of Directors' Report for the financial year January 1 – December 31, 2023

General market performance in 2023

Despite the market turbulence seen during the fall, 2023 was a good year for investors. Equity markets, which had risen rapidly in the early part of the year, particularly in the US, Europe and Japan, started to decline in the third quarter. The decline was quickly reversed, however, and valuation levels again rose towards the end of the year, despite the weakening outlook for corporate earnings growth. At the same time, yields on fixed income investments rose during the year, offering interesting investment opportunities. Despite the rise in valuation levels, uncertainty and risks in the market remain high. The continuing war in Ukraine, the escalation of the Israeli-Palestinian situation in late autumn into an attack on Gaza, and the subsequent rise in tensions in the Middle East have investors on their toes. In addition to geopolitical risks, weaker-than-expected economic growth in China, problems in its real estate sector and ongoing tensions with the US have also raised concerns. The Nordic real estate market has also run into difficulty, leading to declining values and a slowdown in trading. This has been particularly reflected in the activities of real estate funds.

Interest rate movements by central banks have been a major factor in the development of equity and fixed income markets over the past year. Central banks in Europe and the US sought to curb rising inflation in the first half of the year by raising interest rates rapidly, which led to slower economic growth. Although inflation turned down towards the end of the year, the continued strong economic growth and employment situation, particularly in the United States, led the Fed to indicate that a cut in policy rates was not imminent. A similar message was sent by the European Central Bank, which stressed that the tightening stance in monetary policy would continue.

Investment markets in the US and Europe were generally positive, as were those in Japan. In contrast, valuation levels in Finland fell, under pressure from the equity market's largest cyclical companies. US equities (S&P 500) rose 26.3 percent and European equities (Stoxx 600) 16.8 percent during the year. Finnish equities (OMX Helsinki Cap) declined 0.6 percent during the same period.

In the fixed income markets, performance was positive in January–December. The values of investment grade corporate bonds increased 8.2 percent, and the values of euro area government bonds increased 7.2 percent. In contrast, the values of lower-rated high yield bonds increased 11.8 percent. The euro weakened by 3.1 percent against the dollar.

Performance of Evli's fund operations in 2023

Net subscriptions in mutual funds amounted to nearly EUR 0.5 billion in January–December. Evli's strategic target is to boost the international sales of investment products. Net subscriptions from foreign investors amounted to EUR -56 million during the review period.

The yields of all of Evli's fixed income funds developed positively during the period. The best-performing funds relative to the benchmark index were Evli Short Corporate Bond and Evli Nordic Corporate Bond. The performance of almost all equity funds was also positive over the review period, boosted by the general market situation. The best performing funds relative to the benchmark index were the Evli Finnish Small Cap and Evli GEM funds.

Over the period, 42 percent of Evli's traditional mutual funds outperformed their benchmark index. Over a three-year period, 45 percent of the mutual funds outperformed the benchmark index. At the end of December, Evli was the best among fund managers in the analyst company Morningstar's quality ranking, with 4.00 stars.

The combined assets of the traditional mutual funds managed by the fund management company were EUR 9.9 billion (EUR 8.6 billion). Of this, approximately EUR 3.5 billion was invested in equity funds (EUR 2.8 billion), EUR 6.3 billion in fixed income funds (EUR 5.6 billion) and EUR 0.2 billion in balanced funds (EUR 0.2 billion). EUR 2.7 billion of Evli's fund capital came from clients outside of Finland at the end of December (EUR 2.2 billion) in terms of direct fund investments.

Responsibility is at the heart of the Evli asset management. At the end of the year, the average sustainability rating of Evli's funds was "A" (source: MSCI ESG database).

Administration, personnel and risk management

During the financial year, the Board of Directors of Evli Fund Management Company Ltd consisted of the following:

Maunu Lehtimäki, Chairperson of the Board, January 1, 2023 – December 31, 2023

Juho Mikola, Chief Financial Officer, January 1, 2023 – December 31, 2023

Janne Lassila, Director, January 1, 2023 – December 31, 2023

Outi Helenius, independent Board member, January 1, 2023 – December 31, 2023

Petri Olkinuora, independent Board member, January 1, 2023 – December 31, 2023

Lea Keinänen, independent Board member, January 1, 2023 – December 31, 2023

The Fund Management Company's Annual General Meeting was held on March 15, 2023. During the review period, the auditor of the company and the funds under its management was Ernst & Young Oy, with Miikka Hietala, APA, as the principally responsible auditor.

During the financial year, the company employed an average of 74 full-time persons. They were responsible for general administration, portfolio management for the mutual funds, sales and back-office functions.

The company complies with Evli Group's risk management principles, which are described in Evli Plc's financial statements, and with the more specific risk management framework approved by the company's Board of Directors. The company does not engage in investment activities on its own behalf, and it does not have risk positions. The main future risks and uncertainties are associated with the general market conditions and related general demand for investment services and the relevance of fund products. The company seeks to manage these uncertainties with continuous product development and by launching new products, and through the critical review of the life cycle of existing funds. The future development of business operations is linked to both the general market conditions and competitiveness with regard to other companies operating in the same sector.

The risk management of mutual funds is based on an advance approval procedure on the one hand (new funds and acceptability of new investment instruments), and real time monitoring of investment restriction on the other (limit monitoring, reacting to overdrafts and associated reporting). The risks associated with the NAV calculation of mutual funds and the maintenance of the fund register are managed with instructions and process descriptions, by avoiding so-called hazardous work combinations and doubling of data systems and using backups. The valuation of the funds' investment instruments complies with valuation principles that have been approved in advance and that are primarily based on public quotes available on the market.

Proposal concerning the company's profit or loss for the financial year

The Board of Directors proposes that distributable funds be used as follows:

- EUR 10,000,000.00 to be distributed as dividend
- EUR 7,189,312.72 to be left in unrestricted shareholders' equity

2 AJ Evli Value Hedge Fund

Monthly report 31.12.2023

AJ Evli Value Hedge A

AJ Evli Value Hedge invests mainly in Nordic value companies, but can also diversify its investments beyond the Nordic countries.

EVLI

FUND MANAGER'S COMMENT

In December, the value of the C share of the AJ Evli Value Hedge fund increased by approximately 6.5% to EUR 35.143. During 2023, the value of the C share decreased by 0.34%.

The best return on the largest investments in 2023 was QT, SSAB, and Konecranes, which were all up more than 40%. The worst return among the largest investments was Incap and Aspocomp. Over the year, we increased the allocation of equity investments to around 89% of the fund's portfolio. In early 2023, we sold off almost half of Incap's shares from our portfolio to take profits. This was one of our successes in 2023. The other major sell in 2023 was the well-performing SSAB, of which we sold part. We bought shares in several companies during the second half of the year. Of Nasdaq Helsinki stocks, these included Telia, F-Secure, and Oriola. We bought more Nokian Tyres shares after its Q3 results when the share fell to a EUR 6.3 level. New positions in the portfolio include Fortum, Valmet, Huhtamäki, Siili, and Enento. On the Stockholm stock exchange, we bought shares in Sinch, Cint AB, Waysstream, Essity, Ambea, Billerud, Garo, Bico, B3 Consulting Group, and Securitas.

At the end of December 2023, AJ Evli Value Hedge's largest equity holdings were in UPM, QT, Nordea, SSAB, Telia, Konecranes, Incap, Aspocomp, Pampalo (Endomines), Nokia, Cargotec, Componenta, and Stora Enso.

AJ Evli Value Hedge A

EVLI

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	BBB
Social	BBB
Governance	A
Coverage of the Analysis (%)	63

Excellent (AAA)
 Very Good (AA)
 Good (A)
 Average (BBB)
 Satisfactory (BB)
 Weak (B)
 Very Weak (CCC)

ESG means factors related to Environmental, Social and Governance issues.

ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.

Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <-15), Low (15 to <-70), Moderate (70 to <-250), High (250 to <-525), and Very High (>=525).

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as its benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $((X + Y) - (S + T)) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fee which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

3 Evli Emerging Frontier Fund

Monthly report 31.12.2023

Evli Emerging Frontier B

Equity fund investing in rapidly growing developing economies.

EVLI

FUND MANAGER'S COMMENT

In 2023, the fund returned +9.4%, outperforming the MSCI Emerging Markets Index's +6.3% and MSCI Frontier Emerging Markets Index's +8.3%. This strong relative performance came from successful bottom-up stock picks (one stock returned over 100%; five more returned over 50%) and limited setbacks (no stock lost over 50%).

The largest contributor to the portfolio was the Turkish lira hedge (+2.8% contribution; fund fully hedges its Turkish lira exposure). The largest stock contributors were Arabian Pipes (+1.6%), Emaar Development (+1.3%), and Unlu Yatirim (+1.3%), while the largest detractors were Global Yatirim (-2.3%), Systems (-1.2%), and Escort Teknoloji (-0.9%). Saudi Arabia and Kuwait weights increased by 14% and 13% respectively, while Mexico and Turkey weights decreased by 18% and 12%. On the sector front, Financials and Consumer Staples weights increased by 11% and 6%, while Energy and Information Technology weights decreased by 6% and 4%.

This year, the Evli Emerging Frontier had its 10-year anniversary. The fund is currently rated 5 stars by Morningstar and ranked #1 among frontier peers on Citywire for 5 years. This year, the fund received a Lipper Award as the best-performing EM fund in Europe for 3 and 5 years. According to data on Bloomberg, the fund is ranked #1 out of all 703 EM funds over a 10-year period, and #2 out of all 1,030 EM funds over a 5-year period.

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns attained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $((X + Y) - (S + T)) / M \times 100 / 12$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expense includes all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

4 Evli Europe Fund

Monthly report 31.12.2023

Evli Europe B

Equity fund that invests in European companies.

EVLI

FUND MANAGER'S COMMENT

In 2023, the sector weights of the fund's investments had an overall favorable impact on the return differential, especially with overweight in industrials, and underweight in consumer goods and healthcare. The absence of bank stocks had a negative impact. By country, positions in the UK, France, and Sweden had the most positive impact, while positions in Germany, the Netherlands, and Denmark caused the most relative underperformance. Currency movements had negative effects on the return differential, mainly due to the strengthening of the Swiss

franc, in which the fund had an underweight due to stock selection. By stock, top attributors were SSAB, Harbour Energy, and Saint-Gobain, while the absence of Novo Nordisk from the portfolio and investments in Byggmax and Ahold Delhaize had the most negative impact.

During the year, we sold our holdings in 37 companies and entered 21 new positions. We held on to 22 companies in the portfolio. As a result of stock selection, the fund's largest country weights at the end of December were in France and the UK, and the largest sector weights were in industrials and materials. We invest in underpriced companies that generate cash flow and have strong debt coverage.

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	BBB
Social	BBB
Governance	A
Coverage of the Analysis (%)	100

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 8 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, S = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The Elite Alfred Berg Emerging Europe Focus Fund merged with the Evli Europe Fund on December 28, 2022.

The amount of return distributed annually on the mutual funds' series A units (x%/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution financial years is not linked to the fund's financial year or the result of the most recently closed or earlier

5 Evli GEM Fund

Monthly report 31.12.2023

Evli GEM B

Equity fund that invests in emerging markets' companies globally.

EVLI

FUND MANAGER'S COMMENT

The fund significantly beat its benchmark index in 2023. In the sector-specific analysis, the return differential was positive due to stock selection, for example in IT, consumer discretionary, and industrials. Examined by country, both country weights and stock selection all in all improved the return differential, while currency weights somewhat weakened it. Relative advantage for the fund came, for example, from China (underweight with currency effects and stock selection) and Taiwan (stock selection and overweight). At the company level, the top attributors were Gigabyte Technology, Cochin Shipyard, and Budimex, while negative impacts came, for example, from the absence of Taiwan Semiconductor and Samsung Electronics, as well as from our investment in Impala Platinum Holdings.

During the year, we sold our holdings in 41 companies and acquired shares in 43 new companies. We kept 51 companies in the portfolio. As a result of stock selection, the fund's largest country weightings at the end of the year were in Taiwan, China, and India, and the largest sector weightings in IT, materials, and industrials. We invest in underpriced companies that generate cash flow and have strong debt coverage.

EVLI GEM B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	BB
Environment	BB
Social	BBB
Governance	BBB
Coverage of the Analysis (%)	79

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	414 (t CO2e/\$M sales)

The Elite Alfred Berg Emerging Markets Focus Fund merged with the Evlí GEM Fund on December 28, 2022.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key investor information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

6 Evli Global Bond Fund

Monthly report 31.12.2023

Evli Global Bond B

Evli Global Bond invests its assets worldwide in various fixed income asset classes.

FUND MANAGER'S COMMENT

Massive moves in long yields and high volatility of rates marked 2023. Central banks were forced to tighten monetary policy to a historically high level in a battle against inflation. Investors were concerned about the state of the US regional banking sector regarding bank runs during the spring.

The biggest shift to markets happened in the last two months of the year, when expectations rose globally towards the central bank's policy easing and global bonds posted the biggest two-month gain on record since 1990. The Fed held rates unchanged as expected, but they surprised markets when Powell gave the clearest signal yet that its historic policy tightening campaign is over by indicating more interest rate cuts than previously for 2024. The ECB also held rates unchanged and its rhetoric was completely different from the Fed's. Markets dismissed Lagarde's statements and started to price in earlier and more rate cuts.

The investment ratio and duration changed a lot during the year, but the investment ratio was high at the end of the year when government bonds and duration were significantly overweight. Credit risk was increased with leveraged loans in the spring. The weight of emerging market frontier government bonds in local currency decreased during H2 2023. The weight of emerging market USD-denominated government bonds and European investment grade corporate bonds increased.

Evli Global Bond B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	63

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <-15), Low (15 to <-70), Moderate (70 to <-250), High (250 to <-525), and Very High (>=525).

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fees charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The amount of return distributed annually on the mutual funds' series E units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

7 Evli Green Corporate Bond Fund

Monthly report 31.12.2023

Evli Green Corporate Bond B

Long-term fixed income fund that invests in European green corporate bonds.

EVLI

FUND MANAGER'S COMMENT

As 2023 began, we were greeted by unusually attractive pricing in fixed income as an asset class, especially corporate bonds. Even though the year was expected to be good in terms of total returns, the actual total return far exceeded expectations. For many bond categories, such as government bonds, however, the majority of the return was generated only during the interest rate rally at the end of the year. Yield spreads tightened significantly throughout the year across the board.

The fund's 2023 annual return after fees was 8.04% (B series; IB was 8.42%), with the index returning 8.42%. An overweight position in basic industries and capital goods had a negative impact on relative return. On the other hand, an overweight position in telecommunications and an underweight position in the banking sector produced a positive attribution effect. During the year, we significantly increased the weight of the defensive utilities sector in the portfolio. The weight of the banking sector also rose over the year.

Despite the substantial rally in markets at the end of the year, the corporate bond market remains attractively priced. The yield spread of the investment grade market in particular is wide in relation to its long-term history, especially considering the strong credit fundamentals of companies.

Evli Green Corporate Bond B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	85

ESG means factors related to Environmental, Social and Governance issues.

ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.

Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <-15), Low (15 to <-70), Moderate (70 to <-250), High (250 to <-525), and Very High (>=525).

Carbon Footprint	100 (tCO2e/\$M sales)

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its benchmark.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 6.5 years out of ten.

QIS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 12$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fees charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is $12 \pm 20\%$, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

Green bonds are bond instruments where the proceeds are earmarked to projects or activities with environmental benefits.

Sustainability bonds are instruments where the proceeds are earmarked to a combination of projects or activities with environmental or social benefits.

The fund started its operations on August 18, 2020.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

8 Evli European High Yield Fund

Monthly report 31.12.2023

Evli European High Yield B

Long-term fixed income fund that invests in European corporate bonds with low credit ratings.

EVLI

FUND MANAGER'S COMMENT

2023 was full of significant events in the markets. The banking crisis, initiated by SVB in the spring, the weak bond market in late summer—when interest rates were expected to stay higher for longer—and the expansion of geopolitical crises into the Middle East, posed challenges. However, slowed inflation and hopes for a soft landing concluded the year with an impressive rally lasting over two months. The markets believe that interest rate cuts will begin in 2024. Throughout the year, high yield spreads tightened by 109 basis points.

December was 2023's second strongest month for returns, with the fund's 2.94% (B series) beating the index's 2.83%. The annual return was 12.06%, slightly below the index at 12.29%. The best performance came from the energy sector and selection in real estate and transportation, while retail lagged. New issuance activity in 2023 grew from last year but remained below the 10-year average. Companies' financial health remained reasonable compared to expectations, although signs of softening were seen in the second half of the year. We believe that default rates will remain low, as balance sheets are very strong. Over the year, we have reduced the portfolio's risk by decreasing the amount of B-rated loans. We believe that 2024 will be a good year for high yield investors.

The fund's yield (YTM) is 7.19% and modified duration is 2.5.

Evli European High Yield B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	A
Social	BBB
Governance	BBB
Coverage of the Analysis (%)	61

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

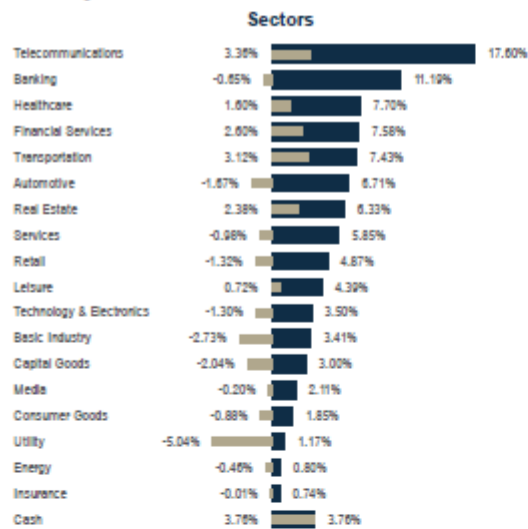

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <-15), Low (15 to <-70), Moderate (70 to <-250), High (250 to <-525), and Very High (>=525).

Carbon Footprint	103 (t CO2e/\$M sales)

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns attained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

QAS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk-free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S-T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redeemed, M = Average total value of assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ±5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ±20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

The amount of return distributed annually on the mutual funds' series A units (x%/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key investor information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

9 Evli Impact Equity Fund

Monthly report 31.12.2023

Evli Impact Equity B

EVLI

FUND MANAGER'S COMMENT

Evli Impact Equity fund was launched on December 11, 2023. It is a global thematic fund with environmental and social sustainable investment objectives. The fund focuses on power generation, renewables, environmental infrastructure, resources efficiency, education services and healthcare. Fund portfolio companies contribute to environmental and social sustainable investment objectives with products, services or technology that the companies produce. At times, portfolio companies contribute to sustainable objectives

with substantial investment in activities such as production of renewable energy or development of low carbon solutions.

The fund measures the achievement of sustainability objectives and contribution to positive environmental and social impact with key resource efficiency indicators such as renewable energy generated and social indicators such as life expectancy.

The fund compares the portfolio financial return against the MSCI ACWI Net Total Return USD Index, which represents All Country broad equity markets. The MSCI ACWI Net Total Return USD Index increased by +18.3% in 2023 (EUR). For the period December 11–29, 2023, the fund increased by +1.34%, while the benchmark index rose by +0.92% (EUR).

Evli Impact Equity B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	BBB
Social	BBB
Governance	A
Coverage of the Analysis (%)	89

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	179 (\$ CO2e/\$ sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the aforementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ±5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are steady the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ±20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Evli Impact Equity Fund was launched on December 11, 2023.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

10 Evli European Investment Grade Fund

Monthly report 31.12.2023

Evli European Investment Grade B

Long-term fixed income fund that invests in European corporate bonds with high credit ratings.

EVLI

FUND MANAGER'S COMMENT

Markets were strong at the end of the year as interest rates fell and credit spreads narrowed. The German 10-year rate dropped to 2.02%. During the year, investment-grade credit spreads narrowed by about 30 basis points. Spreads are still wider than historical averages. Currently, financial markets are anticipating the first interest rate cut to occur in spring 2024. In total, the ECB is expected to make approximately 1.50 percentage points of cuts in 2024.

The fund's 2023 annual return was +8.39% (B series) as interest rates fell and credit spreads narrowed. The fund's performance was clearly better than the index. Corporate selection contributed to the excess return, and bonds from the banking and real estate sectors performed the best. During the year, the weight of banks in the fund was significantly increased. The fund's duration was kept close to a neutral level throughout. The fund's duration was 4.49 and the yield level was 3.92%.

Evlí European Investment Grade B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	AA
Social	BBB
Governance	A
Coverage of the Analysis (%)	86

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	79 (CO2e/\$Million)

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The fund's holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

OWS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ±5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ±20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

11 Evli Japan Fund

Monthly report 31.12.2023

Evli Japan B

Equity fund that invests in Japanese companies.

FUND MANAGER'S COMMENT

In 2023, the fund benefitted from sector weights, such as overweights in energy, IT and industrials. Stock selection hurt the performance in the aggregate; stock selection was weakest in industrials and financials, and most successful in consumer staples. By stock, the most positive effects came from our investment in Screen Holdings, not having Daiichi Sankyo in the portfolio, and our investment in Shibaura Mechatronics. Fullcast Holdings, Hito Communications, and Senshu Electric were bottom attributors.

We exited 41 positions and entered into 30 new positions during the year. 16 positions remained the same. As a result of stock selection, the largest end-of-year sector weights were in industrials and IT, and small caps had an important role in the portfolio. We invest in underpriced companies that generate cash flow and have strong debt coverage.

Evlí Japan B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	BBB
Environment	BBB
Social	BBB
Governance	BBB
Coverage of the Analysis (%)	77

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	82 (tCO2e/M€ sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

12 Evli Emerging Markets Credit Fund

Monthly report 31.12.2023

Evli Emerging Markets Credit B

Long-term fixed income fund that invests in the emerging markets with both low and high credit ratings.

EVLI

FUND MANAGER'S COMMENT

In emerging market corporate bonds, the end of the year provided a strong finish to an eventful year. In December, the return of the fund (B series) was 2.98%, while the return of the benchmark index was 2.90%. For the entire year, the return of the fund (B series) was 5.66%, while the return of the benchmark index was 6.67%. The most significant guiding factor for the asset class in both December and throughout the year was the development of market interest rates in the United States, with peak interest rates experienced in October.

A key development of the fund included enhancing the credit risk quality of investments. By reducing exposure to lower credit ratings, the average rating improved to BBB-. This adjustment now aligns with the benchmark index. Geographic allocations also shifted, elevating South Korea and Saudi Arabia among the largest positions, while China remains a notable underweight. The fund's duration was increased over the year.

US Treasury yields remain the primary driver for this dollar-based market. Current market sentiment suggests that peak rates have passed, with anticipation of rate cuts projected for 2024. Such market dynamics could bolster emerging market corporate bonds as an asset category. The fund's currency-hedged yield to maturity at year-end was 6.65% and duration was 4.2.

Evli Emerging Markets Credit B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	BBB
Social	BBB
Governance	BBB
Coverage of the Analysis (%)	65

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	370 (CO2e/\$M sales)

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The fund's holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

ONS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the aforementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

13 Evli Leveraged Loan Fund (AIF)

Monthly report 31.12.2023

Evli Leveraged Loan B

Fixed income fund that invests in the Nordic leveraged loan markets.

FUND MANAGER'S COMMENT

The fund's deployment percentage increased in December as planned and the fund made one new loan investment (software business, Denmark) and increased its exposure in one of its existing loan investments (software business, Norway).

In 2023, the fund continued to grow and diversify the investment portfolio in accordance with the investment strategy started on August 31, 2021. During the second full year in operation, the fund executed ten new investments on a net basis. All new investments were made in floating-rate loan and high yield bond instruments issued by Nordic issuers. In 2023, the fund continued its conservative investment strategy and did not make any investments in interest-rate-sensitive sectors (e.g., real estate and property development, etc.) and continued to avoid investments in cyclical and directly consumer-facing sectors driven by discretionary spending.

The fund's value development continued a positive trend during 2023 (B-series return of +7.95% in 2023 after fees) and the credit quality of the investment portfolio remained strong. Rising short-term rates during 2023 have substantially increased the effective yield of the fund (yield to maturity of 8.84% as of year-end 2023) and we expect the yield profile to remain at that level in 2024.

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

OAS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 12, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR is accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +52%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

The fund started its operations on August 31, 2021.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

14 Evli Euro Liquidity Fund

Monthly report 31.12.2023

Evli Euro Liquidity B

Short-term fixed income fund that invests in Nordic euro-denominated fixed income instruments.

EVLI

FUND MANAGER'S COMMENT

The short curve year was divided into two parts: rising yields all the way until the end of September, then the tide turned. The reason behind the change was the rapid improvement in the inflation outlook towards the last quarter. The ECB may now need to consider the revitalizing effect of this fast drop in yields, even though euro economies' growth looks sluggish. Employment has so far remained at a good level. Deposit rate hikes were never properly transmitted to the interest rate curve because of excess liquidity. Would it now be better to

reduce the central bank's balance sheet and not lower the interest rate? The world has been taught to expect automatic interest rate cuts whenever trouble appears, without the need for structural reforms.

Evli Euro Liquidity fund's return was high in 2023, almost 5%. Additionally, the fund's carry is still near 5%, even after the rally. Longer-maturity papers were bought until October and even beyond, though only very selectively. Duration has fallen slightly below the target level since the rally drove yields to uncomfortable levels. The fund's return target for the new year is at a hefty level, around 4.50%.

Evlí Euro Liquidity B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	72

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	103 (tCO2e/\$M sales)

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

OWS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = (X + Y) - (S + T) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

15 Evli Short Corporate Bond Fund

Monthly report 31.12.2023

Evli Short Corporate Bond B

Fixed income fund that invests in short-maturity corporate bonds in a diversified manner.

FUND MANAGER'S COMMENT

As 2023 began, we were greeted by unusually attractive pricing of fixed income as an asset class, especially corporate bonds. Even though the year was expected to be good in terms of total returns, the actual total return far exceeded expectations. For many bond classes with long durations, such as government bonds, the majority of the return was only generated during the end-of-year interest rate rally. Yield spreads tightened significantly throughout the year across the board, but they are still wider than average in short maturity corporate bonds.

The fund achieved its best annual return in its history, rising by 7.44% (B series; IB by 7.86%). The best-performing sectors were airlines and financial services, whereas retail and basic industries lagged the general performance. During the year, we increased the weight of banks, capital goods, and utilities. At the same time, we continued to reduce the weight of real estate companies. We have also improved the average credit quality, focusing on attractively priced BBB-rated bonds while reducing the BB weight, mainly through reinvestment in better credit quality of matured or repurchased BB bonds.

Heading into the new year, short maturity corporate bonds remain very attractive due to the inverted yield curve, elevated spreads, and companies' strong balance sheets.

Evlí Short Corporate Bond B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	80

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Scores: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	211 (t CO2e/\$M sales)

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice, this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

ONS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk-free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ±5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ±20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

16 Evli Global Fund

Monthly report 31.12.2023

Evli Global B

Equity fund that invests in developed markets' companies globally.

FUND MANAGER'S COMMENT

In 2023, sector weights, such as an overweight in consumer discretionary, improved the return differential. Stock selection, on the other hand, undermined relative performance in the aggregate, mainly due to selection in consumer discretionary and IT. Geographically, country weights weakened the return differential, while stock selection improved it. The most beneficial effects came from selection in the US and the most harmful ones from selection in Japan. By stock, the top attributors were Boise Cascade, Rambus, and Broadcom, while negative

attribution effects came for example from not having Nvidia and Microsoft in the portfolio and from our investment in AMN Healthcare Services.

We exited 43 positions and entered into 28 new positions during the year. 28 positions remained the same. As a result of stock selection, the largest end-of-year country weight was in the US, while the largest sector weights were in industrials and IT. We invest in underpriced companies that generate cash flow and have strong debt coverage.

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Governance	A
Coverage of the Analysis (%)	96

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <-15), Low (15 to <-70), Moderate (70 to <-250), High (250 to <-525), and Very High (>=525).

Carbon Footprint	52 (€ CO2/M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holders' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the aforementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The Evli Wealth Manager Fund merged with the Evli Global Fund on May 12, 2023.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

17 Evli Global X Fund

Monthly report 31.12.2023

Evli Global X B

An active equity fund that excludes companies operating in certain sectors.

FUND MANAGER'S COMMENT

In 2023, sector weights, such as an overweight in consumer discretionary, improved the return differential. Stock selection, on the other hand, undermined relative performance in the aggregate, mainly due to selection in consumer discretionary and IT. Geographically, country weights weakened the return differential, while stock selection improved it. The most beneficial effects came from selection in the US and the most harmful ones from selection in Japan. By stock, the top attributors were Boise Cascade, Rambus, and Broadcom, while negative attribution effects came for example from not having Nvidia and Microsoft in the portfolio and from our investment in AMN Healthcare Services.

We exited 40 positions and entered into 26 new positions during the year. 27 positions remained the same. As a result of stock selection, the largest end-of-year country weight was in the US, while the largest sector weights were in industrials and IT. We invest in underpriced companies that generate cash flow and have strong debt coverage.

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	96

ESG means factors related to Environmental, Social and Governance issues.

ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.

Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	53 (t CO2e/\$ Mil rev)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the aforementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ±5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ±20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Fund net asset value Dec 31	5 863 459,12	6 390 055,80	4 749 733,43

The fund started its operations on May 31, 2018.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

18 Evli Nordic 2025 Target Maturity Fund

Monthly report 31.12.2023

Evli Nordic 2025 Target Maturity B

Fixed-period fund that invests in Nordic corporate bonds.

EVLI

FUND MANAGER'S COMMENT

Markets were strong at the end of the year as interest rates fell and credit spreads narrowed. The German 10-year rate dropped to 2.02%. During the year, investment-grade credit spreads narrowed by about 30 basis points. Spreads are still wider than historical averages. Currently, financial markets are anticipating the first interest rate cut to occur in spring 2024. In total, the ECB is expected to make approximately 1.50 percentage points of cuts in 2024.

The fund's 2023 annual return was +10.07% (B series) as interest rates fell and credit spreads narrowed. The best-performing sectors were financial services and transportation. No significant changes were made to the fund's investments, as the bonds are typically held to maturity. The fund's yield level was approximately 7.07% hedged to euros.

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	BBB
Social	BBB
Governance	A
Coverage of the Analysis (%)	63

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	98 (CO2e/\$M sales)

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The fund's holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the duration risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

QIS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 12$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expense includes all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

19 Evli Optimal Allocation Fund

Monthly report 31.12.2023

Evli Optimal Allocation B

Evli Optimal Allocation is an active fund of funds that diversifies its investments globally in the equity and fixed income markets, emphasizing different geographical areas, asset classes and investment styles in accordance with the market situation.

FUND MANAGER'S COMMENT

Regarding the tactical equity allocation, we started 2023 slightly underweight. When the bank nervousness seen in March offered a buy opportunity, we raised the equity weight to neutral. In the fall, there was another correction in the stock market, which was largely due to the increase in interest rates. Despite the weak market sentiment, we believed that there would be a good chance for a year-end rally. We moved to an equity overweight in October, and the position has not been changed since then.

Within equities, we moved to overweight in emerging markets in January 2023. We sold the overweight in May as China's recovery began to show signs of slowing. In June, we decided to overweight US stocks and underweight European stocks. The change made the portfolio more defensive, as the dollar acts as a safe haven during periods of market turbulence. In August, we decided to overweight Finland in addition to US due to its weak relative performance through the year. In December, we reduced our underweight in Europe and also moved emerging markets to underweight. We believe that China's weak trend may continue unless a comprehensive economic stimulus policy is implemented.

No changes have been made to fixed income investments in 2023. Within fixed income we have a modest overweight in high yield, investment grade and emerging market bonds, and an underweight in government bonds.

Evli Optimal Allocation B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	70

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 9.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR 9-T) from the sum of the securities bought and sold by the fund (EUR X-Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X - Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ±5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Profit and loss for the period	9 849 737,82	-20 778 051,48	17 232 308,17
Fund net asset value Dec 31	102 190 385,26	115 393 627,56	142 731 275,27

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents.

The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

20 Evli Equity Fund

Monthly report 31.12.2023

Evli Equity B

Evli Equity invests globally in the equity markets and in equity-linked securities.

FUND MANAGER'S COMMENT

Regarding tactical stock allocation, in January 2023 we moved to an overweight position in emerging markets. This overweight position was dismantled in May when signs of a slowdown in China's recovery began to show. In June, we decided to favor US stocks and underweight European stocks. This change made the portfolio more defensive, as US stocks are traditionally more stable and the dollar acts as a safe haven when volatility strikes. In addition, the US economy is in stronger shape than Europe's economy, which is in a technical recession.

In August, we decided to overweight Finland in addition to US due to its weak relative performance through the year.

In December, we reduced the underweight in Europe and also moved emerging markets to an underweight position. China's stock markets have shown weak performance throughout the year 2023. We believe that this trend may continue unless a broad-based economic stimulus policy is adopted. However, such measures seem unlikely at this stage. In addition, recent macroeconomic data from Europe have been less negative than expected. Current leading economic indicators suggest that the European industrial sector will recover in the coming months. Although negative growth is likely to continue, it is possible that the worst phase of the European economic downturn is over.

Evlí Equity B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	BBB
Social	BBB
Governance	A
Coverage of the Analysis (%)	88

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Scores: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C = D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

21 Evli Equity Factor Europe Fund

Monthly report 31.12.2023

Evli Equity Factor Europe B

Equity fund that invests in European companies using a factor-based strategy.

FUND MANAGER'S COMMENT

Evli Equity Factor Europe focuses on four academically determined factors: value, low risk, momentum and quality. The fund complies with policies for responsible investment (ESG) and excludes from its investments companies that have substantial business in the following areas: weapons, alcohol, tobacco, mining of thermal coal, controversial weapons, gambling and adult entertainment. The fund also excludes companies with the lowest ESG rating and companies which have very severe confirmed ESG controversies.

Momentum and low risk factors in the fund underperformed the benchmark index in 2023. Value and quality performed in line with the index. The fund was underweight in the largest mega-cap companies which performed well into Q3, but underperformed in the last quarter.

Evli Equity Factor Europe gained 4.54% in December, while the benchmark MSCI Europe Daily Net TR was up by 3.47%. In 2023, Evli Equity Factor Europe returned 15.19%, while the benchmark index returned 15.56%.

Evli Equity Factor Europe B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	99

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	39 (tCO2e/\$M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovesmentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 12, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fees charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

22 Evli Equity Factor Global Fund

Monthly report 31.12.2023

Evli Equity Factor Global B

Equity fund that invests in developed markets' companies globally using a factor-based strategy.

FUND MANAGER'S COMMENT

Evli Equity Factor Global focuses on four academically determined factors: value, low risk, momentum and quality. The fund complies with policies for responsible investment (ESG) and excludes from its investments companies that have substantial business in the following areas: weapons, alcohol, tobacco, mining of thermal coal, controversial weapons, gambling and adult entertainment. The fund also excludes companies with the lowest ESG rating and companies which have very severe confirmed ESG controversies.

All factors in the fund underperformed the benchmark index in 2023. Value was the largest underperformer while quality underperformed the least. The largest US mega-cap growth companies were the main positive contributors to the global equity market during the period. The fund's underweight in these growth stocks attributed most negatively to the relative performance in 2023.

Evli Equity Factor Global gained 4.90% in December, while the benchmark MSCI World Daily Net TR was up by 3.26%. In 2023, Evli Equity Factor Global returned 11.39%, while the benchmark index returned 19.83%.

Evli Equity Factor Global B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	98

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	41 (CO2e/\$Mwhe)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The fund's holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice, this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is $12 \pm 20\%$, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Fund net asset value Dec 31	26 010 990,28	32 334 628,08	38 326 338,33

The fund started its operations on August 25, 2020.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

23 Evli Equity Factor USA Fund

Monthly report 31.12.2023

Evli Equity Factor USA B

Equity fund that invests in American companies using a factor-based strategy.

FUND MANAGER'S COMMENT

Evli Equity Factor USA focuses on four academically determined factors: value, low risk, momentum and quality. The fund complies with policies for responsible investment (ESG) and excludes from its investments companies that have substantial business in the following areas: weapons, alcohol, tobacco, mining of thermal coal, controversial weapons, gambling and adult entertainment. The fund also excludes companies with the lowest ESG rating and companies which have very severe confirmed ESG controversies.

All factors in the fund underperformed the benchmark index in 2023. Value was the largest underperformer while quality underperformed the least. The largest mega-cap growth companies were the main positive contributors to the US equity market during the period. The fund's underweight in these growth stocks attributed most negatively to the relative performance in 2023.

Evli Equity Factor USA gained 5.15% in December, while the benchmark MSCI USA Daily Net TR was up by 3.03%. In 2023, Evli Equity Factor USA returned 8.97%, while the benchmark index returned 22.44%.

Evli Equity Factor USA B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	99

ESG means factors related to Environmental, Social and Governance issues.

ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.

Responsibility Scores: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	42

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The fund's holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice, this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the aforementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ±5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ±20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

24 Evli North America Fund

Monthly report 31.12.2023

Evli North America B

Equity fund that invests in North American companies.

EVLI

FUND MANAGER'S COMMENT

In 2023, the fund's return differential vs. its benchmark index was undermined for example by an underweight and selection in IT, while selection in industrials improved it. Geographically, an overweight in Canada and selection in both US and Canada weakened the relative return. By stock, the most negative attribution effects came from the fact that Nvidia, Microsoft, and Meta Platforms were missing from the portfolio, while the most positive attribution effects came from our holdings in Sterling Infrastructure, Boise Cascade, and Builders

FirstSource.

We exited 71 positions and entered into 49 new positions during the year. 63 positions remained the same. As a result of stock selection, the largest end-of-year sector weights were in industrials and consumer discretionary. We invest in underpriced companies that generate cash flow and have strong debt coverage.

Evli North America B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	BBB
Social	BBB
Governance	A
Coverage of the Analysis (%)	99

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	135 (CO2e/\$M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR B+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (B + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, B = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The Elite Alfred Berg USA Focus Fund merged with the Evlí North America Fund on December 28, 2022.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

25 Evli Nordic Fund

Monthly report 31.12.2023

Evli Nordic B

Equity fund that invests in Nordic companies.

EVLI

FUND MANAGER'S COMMENT

In 2023, the sector weights of the fund's investments had a favorable impact on the return differential, while the overall effect of stock selection turned the differential negative. Especially harmful impacts came from stock selection in consumer discretionary and industrials. The absence of bank stocks also had a negative impact. By country, the slight overweight in Finland, the underweight in Denmark and stock selection in Sweden caused the most relative underperformance. On country level, stock selection in Finland had the most positive impact. By

stock, top attributors were our investment in Vår Energi and not having Genmab and Orsted in the portfolio, while the absence of Novo Nordisk from the portfolio and investments in Stillfront Group and Elkem had the most negative impact.

During the year, we sold our holdings in 34 companies and entered 21 new positions. We held on to 16 companies in the portfolio. As a result of stock selection, the fund's largest country weights at the end of December were in Sweden and Norway, and the largest sector weights were in industrials and materials. We invest in underpriced companies that generate cash flow and have strong debt coverage.

Evlí Nordic B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	BBB
Social	BBB
Governance	A
Coverage of the Analysis (%)	94

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	174 (t CO2e/\$M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S-T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fees charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

26 Evli Nordic Small Cap Fund

Monthly report 31.12.2023

Evli Nordic Small Cap B

Equity fund that invests in small and medium-sized Nordic companies.

EVLI

FUND MANAGER'S COMMENT

With a +4.1% return for 2023, the fund lagged the benchmark's +9.1% return. For December, the fund returned +10.0%, versus +10.2% for the index.

In terms of relative performance, the fund did well in the first half of the year but lost it all and then some in the July to September period's factor rotation. During that time, growth and quality factors clearly underperformed as bond yields shot up when investors got convinced, for a while, that central bank policy rates were going to be "higher for longer". Biggest detractors from relative performance in 2023 were the fund's overweights in Fasadgruppen (a compounder operating even with a moderate amount of debt was an anathema in 2023) and NCAB (expanding margin not enough to compensate for uneven demand in investors' minds). Aiding relative performance the most were the fund's overweights in Kempower (flawless operational execution and supercharged sales growth) and Bufab (raised targets propelled the share in Q4).

During the year, we sold our holdings in e.g. Sdipitech, Sydbank, Wallenius Wilhelmsen, Hemnet, Kempower, Ambu and Hexatronic. Positions initiated in 2023 include e.g. Ambea, Modern Times Group, Europris, Bonesupport and Surgical Science.

Evli Nordic Small Cap B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	BBB
Social	BBB
Governance	A
Coverage of the Analysis (%)	69

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	43 (t CO2e/\$M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is $12 \pm 20\%$, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Fund net asset value Dec 31	2 521 043,48	1 188 966,30

The fund started its operations on November 1, 2022.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

27 Evli Nordic Corporate Bond Fund

Monthly report 31.12.2023

Evli Nordic Corporate Bond B

Long-term fixed income fund that invests in Nordic corporate bonds.

EVLI

FUND MANAGER'S COMMENT

Markets were strong at the end of the year as interest rates fell and credit spreads narrowed. The German 10-year rate dropped to 2.02%. During the year, investment-grade credit spreads narrowed by about 30 basis points. Spreads are still wider than historical averages. Currently, financial markets are anticipating the first interest rate cut to occur in spring 2024. In total, the ECB is expected to make approximately 1.50 percentage points of cuts in 2024.

The fund's 2023 annual return was +8.59% (B series) as interest rates fell and credit spreads narrowed. All sectors had a positive return, with the best performance in transportation, financial services, and the real estate sector. The market for new issues was quite active, and the fund participated in approximately 80 new issues in 2023. The best risk-return ratio appeared to be with investment grade issuers, so their weight in the fund increased and the average credit quality of the fund improved. The attractiveness of Nordic bonds, especially in local currencies, is strong compared to Europe due to more favorable pricing. The fund's yield level was 5.54% and its duration was 2.08.

Evlí Nordic Corporate Bond B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	75

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Score: based on MSCI's methodology and taking into account the market-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	114 (\$ CO2e/\$M sales)

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

QAS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = (X + Y) - (S + T) / M x 100 / 12, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of investments.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

The Evli Target Maturity Nordic Bond 2023 Funs merged with the Evli Nordic Corporate Bond Fund on December 28, 2023.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

28 Evli Q7 Fund (AIF)

Monthly report 31.12.2023

Evli Q7 B

Balanced fund that invests globally in equities and fixed income instruments.

FUND MANAGER'S COMMENT

The second half of 2023 was excellent in terms of returns on the capital markets, and global economic growth continued at a good level. However, the most significant factor behind the strong development of the capital markets was the slowing inflation trend and the strengthened expectations of central bank interest rate cuts. This was reflected in falling long-term interest rates and rising stock markets in both the US and Europe.

Stock markets generated an average return of 12.9% in the latter half of the year. The good performance was mainly due to the US stock markets, and particularly the large growth companies in the technology sector there. Elsewhere in the world, the performance was weaker. For example, the Finnish HEX index rose 4.4% during the same period. Bond markets also saw improved returns towards the end of the year. High yield bonds performed the best among the bond categories (+7.6%) and short-term fixed income investments the weakest (+1.8%).

In the second half of 2023, the return of the Evli Q7 fund was moderate in relative terms (+8.5%). The average weight of stock investments during the review period was higher than average, at about 43%. The larger weighting to equities was occasionally limited by the investment strategy's volatility target. Correspondingly, the fund's long-term bond investments accounted for about 50% at the end of the year.

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	41

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <-15), Low (15 to <-70), Moderate (70 to <-250), High (250 to <-525), and Very High (>=525).

Carbon Footprint	133 (t CO2e/€M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S-T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three \pm 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is $12 \pm 20\%$, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

29 Evli Sweden Equity Index Fund

Monthly report 31.12.2023

Evli Sweden Equity Index B

Equity fund that invests in Swedish large cap companies (SEK-denominated).

FUND MANAGER'S COMMENT

The fund is a passive index fund that aims to follow its benchmark index as closely as possible and invests in accordance with the composition of the index. The value of the fund increased 20.21% while the benchmark increased 20.86% in 2023.

At the end of the previous year, Nibe Industrier was added to the index.

Evlí Sweden Equity Index B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	95

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Scores: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	18 (tCO2e/\$M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR 5-T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S - T) / M \times 100 / 12$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued (redemptions), T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = $A + B + C + D$, where A = Management fees charged from the fund's assets, B = Custodian fees that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

30 Evli Swedish Small Cap Fund

Monthly report 31.12.2023

Evli Swedish Small Cap B

Equity fund that invests in small and medium-sized Swedish companies (SEK-denominated).

FUND MANAGER'S COMMENT

With a +11.5% return for 2023, the fund lagged the benchmark's +14.7% return. For December, the fund returned +8.4%, versus +9.6% for the index.

In terms of relative performance, the fund did well in the first half of the year but lost it all and then some in the July to September period's factor rotation. During that time, growth and quality factors clearly underperformed as bond yields shot up when investors got convinced, for a while, that central bank policy rates were going to be

"higher for longer". Biggest detractors from relative performance in 2023 were the fund's overweights in Hexatronic (bears proven right as growth faltering lead to several profit warnings) and Norva24 (sub-par operational execution meant sub-par profitability). Aiding relative performance the most were the fund's overweights in Bufab (raised targets propelled the share in Q4) and Revolution Race (sales and earnings momentum held up well in 2023).

During the year, we sold our holdings in e.g. Troax, Sdiptech, Re:newcell, Hemnet, SOBI and Hexatronic. Positions initiated in 2023 include e.g. Ambea, Billerud, Castellum, Modern Times Group and Surgical Science.

Evli Swedish Small Cap B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	BBB
Social	BBB
Governance	A
Coverage of the Analysis (%)	72

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Scores: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	65 (tCO2e/\$M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S-T) from the sum of the securities bought and sold by the fund (EUR X-Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $((X + Y) - (S + T)) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fee which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The fund is denominated in SEK.

The Evli Sweden Select Fund merged with the Evli Sweden Small Cap Fund on January 9, 2019

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

31 Evli Finland Mix Fund

Monthly report 31.12.2023

Evli Finland Mix B

Balanced fund that invests in Finnish equities and euro area fixed income instruments.

FUND MANAGER'S COMMENT

The fund's return in 2023 was 6.8%, exceeding the benchmark index's return of +2.8%. In December, the fund returned +2.1% and the benchmark index +2.8%.

For the majority of 2023, the consensus was expecting an imminent recession, sticky inflation, and continued tightening from central banks. That none of the above either came to pass or is no longer the consensus view led to a bit of a rollercoaster for equities – but also good returns in most Western markets. Finland was an obvious exception with the Helsinki stock exchange ending slightly in the red. However, the return on the fund's equity portfolio was clearly positive. Our overweight positions in Rovio and Puuilo contributed most to the outperformance in 2023. In the bond portfolio, the relative return for the whole year was most positively affected by the bonds in the transportation and real estate sectors. Finnair, benefiting from strong demand in air traffic, contributed most to the performance of the bond portfolio. The spreads in credit markets tightened over the year; investment grade (IG) loan spreads tightened by 30 basis points and high yield (HY) loans by 98 basis points.

From January to October, the fund's equity weighting was neutral. In October, we went to an equity overweight. In the bond portfolio, we participated in the new bond issues of Nokia, Fortum, Terveystalo, Fiskars, and Huhtamäki during the year.

Evli Finland Mix B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	BBB
Social	BBB
Governance	AA
Coverage of the Analysis (%)	76

ESG means factors related to Environmental, Social and Governance issues.

ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.

Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	143 (t CO2e/\$M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three a 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

32 Evli Finnish Small Cap Fund

Monthly report 31.12.2023

Evli Finnish Small Cap B

Equity fund that invests in Finnish small cap companies.

EVLI

FUND MANAGER'S COMMENT

With a +17.8% return for 2023, the fund beat the benchmark's +8.6% return. For December, the fund returned +5.4%, versus +8.4% for the index.

Stock market investing in 2023 took place against a backdrop of expectations of an imminent recession, sticky inflation and continued tightening from central banks. That none of the above either came to pass or are no longer consensus views led to a bit of a rollercoaster for equities, but in the end also quite good returns for most western markets – with Finland being the obvious exception at its slightly negative outcome for 2023, dragged down by a poor showing from large caps. The fund outperformed the market and its benchmark index, though. Relative performance in 2023 was aided the most by the fund's overweights in Kempower (flawless operational execution and supercharged sales growth) and Musti (a takeover bid emerges). Biggest detractors of last year's relative performance were the fund's underweight in Cargotec (demand held up well despite weak manufacturing sentiment) and overweight in Talenom (multiple contraction continues as demand shows no signs of picking up).

During the year, we increased our positions in e.g. Huhtamäki, Konecranes and Kojamo, and reduced our positions in e.g. Sanoma. We sold our positions in Revenio and Uponor. Harvia is a new position in the fund.

Evli Finnish Small Cap B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	BBB
Social	BBB
Governance	A
Coverage of the Analysis (%)	62

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	118 (t CO2e/\$M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the aforementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 6 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expense include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Monthly report 31.12.2023

Evli Finland Select B

Equity fund that invests in Finnish companies.

FUND MANAGER'S COMMENT

With a +4.0% return for 2023, the fund beat the benchmark's -0.6% return. For December, the fund returned +3.4%, versus +3.6% for the index.

Stock market investing in 2023 took place against a backdrop of expectations of an imminent recession, sticky inflation and continued tightening from central banks. That none of the above either came to pass or are no longer consensus views led to a bit of a rollercoaster for equities, but in the end also quite good returns for most western markets – with Finland being the obvious exception at its slightly negative outcome for 2023. The fund outperformed the market though. Relative performance in 2023 was aided the most by the fund's overweights in Kempower (flawless operational execution and supercharged sales growth) and SSAB (that down-cycle profitability is clearly better than before is appreciated by investors). Biggest detractors of last year's relative performance were the fund's underweight in Konecranes (demand held up well despite weak manufacturing sentiment) and overweight in Neste (investor disbelief in sustainability of renewable fuel margins lead to muted share price performance).

During the year, we increased our positions in e.g. Wärtsilä, Puuilo, UPM-Kymmene and StoraEnso, and reduced our positions in e.g. Nokia and Elisa. Three positions (Uponor, Rovio and Nordic Lights) were exited due to takeover bids.

Evli Finland Select B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	A
Social	BBB
Governance	AA
Coverage of the Analysis (%)	94

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Scores: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	183 (tCO2e/\$M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S-T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fee which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The Elite Alfred Berg Emerging Markets Focus Fund merged with the Evlí Finland Select Fund on December 28, 2022.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

34 Evli USA Growth Fund

Monthly report 31.12.2023

Evli USA Growth B

Equity fund that invests in US growth companies.

FUND MANAGER'S COMMENT

Evli USA Growth focuses on large-cap US growth companies. The fund seeks to invest in companies that exceed their growth expectations by using investment growth and growth momentum metrics. The holdings' weights are market-cap scaled.

The US market was driven by strong performance in the technology sector in 2023. Better growth prospects driven by the artificial intelligence trend supported many technology companies. The largest mega-cap growth companies were the main positive contributors to the US equity market in 2023. The fund overweighted technology companies including some of the mega-cap ones throughout the year.

Evli USA Growth gained 2.53% in December, while the benchmark MSCI USA Daily Net TR was up by 3.03%. In 2023, Evli USA Growth returned 24.10%, while the benchmark index returned 22.44%.

Evli USA Growth B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	A
Social	BBB
Governance	BBB
Coverage of the Analysis (%)	91

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Scores: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	43 (CO2e/\$M sales)

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holding's carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three \pm 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 \pm 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The fund started its operations on September 6, 2022.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

35 Evli Euro Government Bond Fund

Monthly report 31.12.2023

Evli Euro Government Bond B

Long-term fixed income fund that invests in EEA member state euro-denominated bonds with high credit ratings.

FUND MANAGER'S COMMENT

The year of long interest rates was divided into two parts: bullishness until October and then a sharp rally. On the last trading day, some sense returned. The rally was underpinned by the fact that the inflation picture improved quite quickly at the end of the year. Therefore, returns for the coming year were consumed in a front-loaded manner with the idea that policy rates could be lowered significantly with a deteriorating economic outlook. But do central banks have room to cut rates before they are fully certain there will not be another

wave of inflation? Country-specific interest rate differentials changed only moderately, with the exception of Portugal and Italy, where domestic private demand for government bonds is being bolstered by internal tax breaks. At the same time, the EU is taking on a huge amount of debt collectively and distributing it to "poorer" countries in the hope of structural reforms. This free money handout will not end well. There will be plenty of supply in government bonds as debt levels increase and the ECB reduces its balance sheet.

The fund's interest rate risk was clearly underweight until the end of September, after which it was neutral. Portuguese bonds were switched to Spain after a significant narrowing of the interest rate differential, and Italy was kept underweight. The total return for the year was good.

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

OAS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

36 Evli Global Multi Manager 30

Monthly report 31.12.2023

Evli Global Multi Manager 30 B

International allocation fund that invests with a focus on fixed income instruments.

FUND MANAGER'S COMMENT

Regarding the tactical equity allocation, we started 2023 slightly underweight. When the bank nervousness seen in March offered a buy opportunity, we raised the equity weight to neutral. In the fall, there was another correction in the stock market, which was largely due to the increase in interest rates. Despite the weak market sentiment, we believed that there would be a good chance for a year-end rally. We moved to an equity overweight in October, and the position has not been changed since then.

Within equities, we moved to overweight in emerging markets in January 2023. We sold the overweight in May as China's recovery began to show signs of slowing. In June, we decided to overweight US stocks and underweight European stocks. The change made the portfolio more defensive, as the dollar acts as a safe haven during periods of market turbulence. In August, we decided to overweight Finland in addition to US due to its weak relative performance through the year. In December, we reduced our underweight in Europe and also moved emerging markets to underweight. We believe that China's weak trend may continue unless a comprehensive economic stimulus policy is implemented.

No changes have been made to fixed income investments in 2023. Within fixed income we have a modest overweight in high yield, investment grade and emerging market bonds, and an underweight in government bonds.

Evli Global Multi Manager 30 B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	74

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The fund's holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR 9+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three \pm 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 \pm 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The Evlí Evlí Tactical Asset Allocation Fund merged with the Evlí Global Multi Manager 30 Fund on April 24, 2018.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

Monthly report 31.12.2023

Evli Global Multi Manager 50 B

International allocation fund that invests equally in equities and fixed income instruments.

FUND MANAGER'S COMMENT

Regarding the tactical equity allocation, we started 2023 slightly underweight. When the bank nervousness seen in March offered a buy opportunity, we raised the equity weight to neutral. In the fall, there was another correction in the stock market, which was largely due to the increase in interest rates. Despite the weak market sentiment, we believed that there would be a good chance for a year-end rally. We moved to an equity overweight in October, and the position has not been changed since then.

Within equities, we moved to overweight in emerging markets in January 2023. We sold the overweight in May as China's recovery began to show signs of slowing. In June, we decided to overweight US stocks and underweight European stocks. The change made the portfolio more defensive, as the dollar acts as a safe haven during periods of market turbulence. In August, we decided to overweight Finland in addition to US due to its weak relative performance through the year. In December, we reduced our underweight in Europe and also moved emerging markets to underweight. We believe that China's weak trend may continue unless a comprehensive economic stimulus policy is implemented.

No changes have been made to fixed income investments in 2023. Within fixed income we have a modest overweight in high yield, investment grade and emerging market bonds, and an underweight in government bonds.

Evli Global Multi Manager 50 B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	A
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	76

ESG means factors related to Environmental, Social and Governance issues.
 ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
 Responsibility Scores: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

DICTIONARY

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $(X + Y) - (S + T) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redemmed, M = Average total value of net assets.

R² (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR in accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. $TER = A + B + C + D$, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ±5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ±20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

38 Evli Corporate Bond Fund

Monthly report 31.12.2023

Evli Corporate Bond B

Long-term fixed income fund that invests in European corporate bonds with both low and high credit ratings.

FUND MANAGER'S COMMENT

2023 was full of significant events in the markets. The banking crisis, initiated by SVB in the spring, the weak bond market in late summer—when interest rates were expected to stay higher for longer—and the expansion of geopolitical crises into the Middle East, posed challenges. However, slowed inflation and hopes for a soft landing concluded the year with an impressive rally lasting over two months. The markets believe that interest rate cuts will begin in 2024. Throughout the year, investment grade spreads tightened by 31 basis points and high yield spreads by 109 basis points.

In December, the fund's return (B series) was 2.78%, the same as the index return. The full-year return was 9.29%, which beat the index return of 9.07%. The best relative return came from our allocation and selection in investment grade and Nordic non-rated bonds. We believe that we are at the peak of the central banks' rate hike cycle, and therefore, we increased the duration during 2023. We are maintaining our underweight position in high yield, as we believe investment grade is more attractive at these levels.

The fund's yield (YTM) is 4.74% and modified duration is 3.98.

Evlí Corporate Bond B

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility Score	AA
Environment	A
Social	BBB
Governance	A
Coverage of the Analysis (%)	84

ESG means factors related to Environmental, Social and Governance issues.
ESG Rating: companies are analyzed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.
Responsibility Score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings.

CARBON FOOTPRINT

Evlí uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon Footprint	98 (t CO2e/€M sales)

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional return obtained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds' holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

ONS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk-free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S-T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the above-mentioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 12, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued/subscribed, T = Fund's fund units cancelled/redeemed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investment decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

The amount of return distributed annually on the mutual funds' series A units (x %/net asset value of series A unit on date of Annual General Meeting of the Management Company) is specified in the funds' valid key information documents. The objective in return distribution is stability and as a result, return distribution is not linked to the fund's financial year or the result of the most recently closed or earlier financial years.

39 Board of Directors' proposals for return distribution

Proposal of the Board of Directors to the General Meeting of Shareholders on the distribution of returns to the mutual funds managed by Evli Fund Management Company Ltd.

According to the investment fund rules, the Annual General Meeting of the management company decides on the annual return and its distribution to holders of distribution units.

As a general rule, a minimum of four (4) percent of the value of the management company's distribution units on the day of the General Meeting is distributed as returns to equity and balanced funds. For fixed income funds, the distribution of returns may be lower.

Evli Emerging Frontier Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Europe Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli GEM Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Global Bond Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (E).

Evli Green Corporate Bond Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli European High Yield Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Impact Equity Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli European Investment Grade Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Japan Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Emerging Markets Credit Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Leveraged Loan Fund (AIF)

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Euro Liquidity Fund

We propose to distribute at least 3 percent per unit to the holders of distribution units (A).

Evli Short Corporate Bond Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Global Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Global X Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Nordic 2025 Target Maturity Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Optimal Allocation Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Equity Factor Europe Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Equity Factor Global Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Equity Factor USA Fund

We propose to distribute at least 4 percent per unit to holders of distribution units (A/IA).

Evli North America Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Nordic Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Nordic Small Cap Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Nordic Corporate Bond Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli EQ7 Fund (AIF)

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Swedish Small Cap Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Finland Mix Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Finland Select Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli USA Growth Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Euro Government Bond Fund

We propose to distribute at least 4 percent per unit to holders of distribution units (A/IA).

Evli Global Multi Manager 30 Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Global Multi Manager 50 Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Evli Corporate Bond Fund

We propose to distribute at least 4 percent per unit to the holders of distribution units (A).

Unit holders of the QA units of the funds will be allocated at least the above-mentioned percentage of the unit series' value on the date of the General Meeting, divided into four equal instalments per unit. The euro amount per unit decided at the General Meeting is distributed on each payment date, irrespective of the number of units in issue on the ex-date of the return specific to each instalment.

40 Accounting policies of the financial statements

Basis for preparation of the financial statements

The mutual funds' financial statements have been prepared in accordance with the provisions of Decree 231/2014 of the Ministry of Finance, the Act on Common Funds, and other provisions and regulations in force in Finland concerning financial statements. The financial statement data is based on the value as at the last banking day.

Net income from securities

Capital gains and losses

Capital gains and losses are calculated on the basis of the difference between the net sales price and the acquisition price of the securities realized. The net sales price is the acquisition price minus the brokerage fee and any transfer tax.

The acquisition price is the transaction price of the security plus the brokerage fee and any transfer tax. If a security is acquired at more than one acquisition price, the individual securities are valued at the average price.

Unrealized appreciation and depreciation

The difference between the acquisition price and the market value of securities is calculated daily as unrealized appreciation or depreciation. The calculation is done on an instrument-by-instrument basis.

Net income from derivative contracts

The net result of the closed position or the final net result of the lapse of the derivative position is treated as profit or loss. Derivatives premiums include brokerage fees. Forward contract commissions are expensed in connection with the relevant commission payment. Gains and losses on futures are processed and settled daily, so there is no unrealized appreciation or depreciation.

All net income on derivatives is reported as equity- or interest-linked items.

Dividend income and profit-sharing

Dividend income and participation in profits are generally recognized on the date of the dividend. By decision of the Board of Directors of Evli Fund Management Company Ltd, dividend income from Evli Emerging Frontier and Evli GEM funds is recognized on a cash basis. Dividends received in a form other than cash are recorded at the fair value of the dividend equivalent.

Interest income

Interest income obtained from financial assets is recognized as interest income.

Other income

Other income includes, for example, compensation received from equity lending.

Assets and liabilities denominated in foreign currencies

Items denominated in foreign currencies are valued at the exchange rates prevailing at the time of NAV calculation on the balance sheet date in accordance with the valuation guidelines approved by the Board of Directors of Evli Fund Management Company Ltd. The exchange rates used in the valuation are Bloomberg CMPL (Composite London) rates; for equity funds at 8 pm and for fixed income funds at 4:30 pm.

Listed securities

Securities are valued at fair value at market closing prices. The valuation principle is defined in the fund rules and in the valuation guidelines approved by the Board of Directors of Evli Fund Management Company Ltd. The closing price used in the valuation is based on exchange rates obtained from Bloomberg CMPL (Composite London). The valuation of listed securities is further described in the valuation guidelines approved by the Board of Directors of Evli Asset Management Company Ltd.

Unquoted securities

The price of securities not quoted on a securities exchange can be determined as the average of the bid prices placed for a given day by one or more brokers who generally trade on the market. If bid prices are not available or cannot be considered reliable, the average is calculated using the final trading prices of the security concerned. Commercial and municipal papers and certificates of deposit are measured at fair value based on the yield curve and a security-specific risk premium. Total return swaps are measured at fair value based on the accumulated change in the market price of the underlying asset, and on interest income.

If reliable quotes are not available on the market for securities not quoted on a securities exchange, a benchmark group is used to determine the price.

The companies included in the benchmark group are selected primarily from companies operating in the same or a similar sector as the target company and quoted on the securities exchange of the target company's domicile or on another comparable public trading system. The aim is to select 2–5 companies for the benchmark group. The benchmark group and any changes to it are approved by the Managing Director and the Chief Investment Officer of Evli Fund Management Company Ltd. The benchmark group must be set up without delay when the fund has acquired unquoted securities.

If Evli Fund Management Company Ltd trades in the securities, the price is considered the fair value of the security. In this case, the monitoring based on the benchmark group starts from zero and the performance of the benchmark companies from the above trade date. The price of a security may be converted to zero or close to zero if the security has been de-listed or its trading has been suspended for an extended period of time, or for any other similar exceptional reason. This price change is approved by the Managing Director of Evli Fund Management Company or their deputy.

These valuation principles apply to equities and other equity-linked securities, such as options, warrants, subscription rights, bonds and bonds with equity warrants. The exception is that the price of bonds and bonds with equity warrants cannot be determined using the benchmark group. Derivative instruments may be valued on a delta basis, if necessary.

Currency forwards are valued on the basis of Bloomberg CMPL (Composite London) spot rates and interest rate quotes for the currencies concerned.

The valuation of unquoted securities is further described in the valuation guidelines approved by the Board of Directors of Evli Fund Management Company Ltd.

Comparability of NAV calculation and financial statements

The management fee expenses for the funds in the financial statements correspond to the management fee expenses calculated up to the last valuation day of the year in accordance with NAV calculation.

In principle, only the items that make up the NAV calculation are included in the accounting of the fund.

EVLI

OWNERSHIP PRINCIPLES EVENTS ON JANUARY 1 – DECEMBER 31, 2023

Evli Fund Management Company attended on behalf of its five funds a total of 27 companies' general meetings of shareholders during the January 1 – December 31, 2023 shareholder meeting season. On behalf of Evli Finnish Small Cap Fund were 26 general meetings attended, Evli Finland Select 10 general meetings, Evli Finland Mix eight general meetings, Evli Swedish Small Cap one general meeting and Evli Nordic Small Cap one general meeting. Participation in the meetings took place by both issuing voting instructions in advance and by attending the meetings in person. In 2023, majority of the general meetings of shareholders Evli Fund Management Company's representatives attended, were arranged in a way that the shareholders were allowed to participate by casting votes in advance and by presenting counterproposals and questions in advance. Six shareholder meetings were attended in person. The Funds' representatives attended the general meetings of shareholders of Musti Group, Talenom, Uponor, Admicom, Valmet, Metsä Board, Revenio Group, Terveystalo, Gofore, Enento Group, Verkkokauppa.com, Kempower, Detection Technology, Lemonsoft, Relais Group, Ponsse, Marimekko, Eezy, Remedy Entertainment, Fortum, SSAB, Noho Partners, Sanoma, Sitowise, Huhtamäki and Puuilo. The meetings were chosen based on their agendas and the fund management company's ability to influence the decisions. Before the general meetings of shareholders, Evli had contacted eight companies regarding good governance.

With respect to the selection of board members and/or board chairman and vice-chairman, on behalf of the five funds Evli Fund Management Company abstained from voting 18 times in relation to selection of board members and/or board chairman and vice-chairman, and twice regarding resolution on the discharge of the members of the Board of Directors and the CEO from liability. The fund management company voted once against a resolution in relation to selection of board members. The voting information mentioned above is at fund level. Apart from these, Evli Fund Management Company backed all the proposals. In the general meetings attended in person none of the matters on the agenda rose to vote and Evli did not vote in advance in these meetings.

Changes to reported information regarding annual general meetings on January 1 – June 30, 2023

Unlike mentioned in Evli Mutual Funds' Semi-Annual Review on June 30, 2023, Evli Fund Management Company's representative attended in person six meetings instead of four. Evli Fund Management Company abstained from voting 18 times on behalf of its five funds in relation to selection of board members instead of 16 times, and abstained twice instead of once regarding resolution on the discharge of the members of the Board of Directors and the CEO from liability. In addition, no votes were cast with respect to minority dividend requirement or regarding changes in remuneration policy.

REPORTING OF SUSTAINABILITY DATA

January 1 – December 31, 2023

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli European High Yield

Legal entity identifier: 743700918M1LH05HT753

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 2.1% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the NZAM [website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with two companies in the fund and continued to follow up on the previous engagement case of one company. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	47.7%	39.3%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	102.6	124
Reporting year - 1	114.4	131.2
Reporting year - 2	129.7	89.7

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

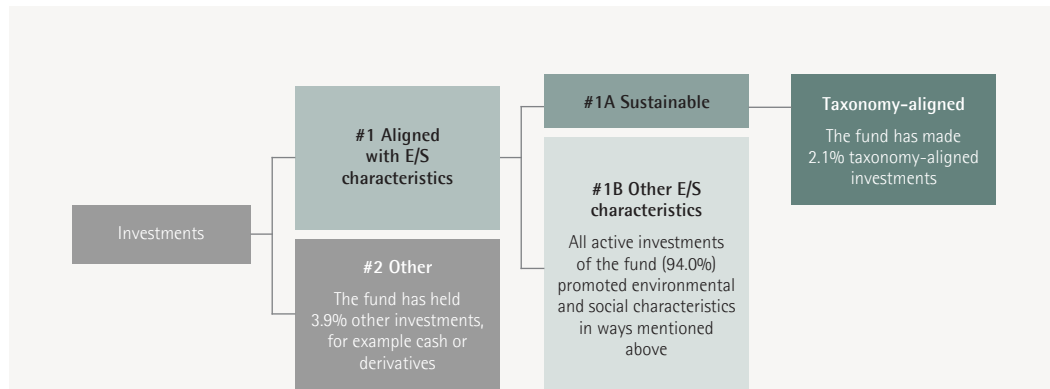

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	% Assets
Banking	11.2%
Financial Services	7.6%
Insurance	0.7%
Automotive	6.7%
Basic Industry	3.4%
Capital Goods	3.0%
Consumer Goods	1.9%
Energy	0.8%
Healthcare	7.7%
Media	2.1%
Transportation	7.4%
Real Estate	6.3%
Retail	4.9%
Leisure	4.4%
Services	5.9%
Telecommunications	17.6%
Technology & Electronics	3.5%
Utility	1.2%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	1.47%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

Legend for Graph 1:

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

Legend for Graph 2:

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 2.1% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.0% and enabling activities 0.1%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 1.6%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Evli European High Yield has promoted environmental and social characteristics and has focused especially on the comprehensive assessment of target companies' sustainability and has avoided investing in companies that have problems with sustainability factors. In addition to the current state of sustainability factors, the analysis focused on the direction of development, the targets set by the companies and the plausibility of the development plans. Active and continuous sustainability monitoring and the ability to react to any emerging sustainability problems are crucial in portfolio management.

The fund has engaged with some of its the target companies during the review period as part of the promotion of environmental and social characteristics. The aim of the engagement has been to accelerate the development of sustainability factors in the target companies' operations and to encourage the companies to establish science-based emission reduction targets.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli European Investment Grade

Legal entity identifier: 743700F3A5XZYGPNOK49

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 5,9 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with four companies in the fund and continued to follow up on an earlier engagement case with one company. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	63.7%	69.8%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	79,4	111,7
Reporting year - 1	78,6	111
Reporting year - 2	83,7	136,4

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the NZAM [website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. Evli also began engagement with two companies in the fund during the year. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	16.1%	12.1%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	369,9	312
Reporting year - 1	203	428,5
Reporting year - 2	267,4	732,3

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

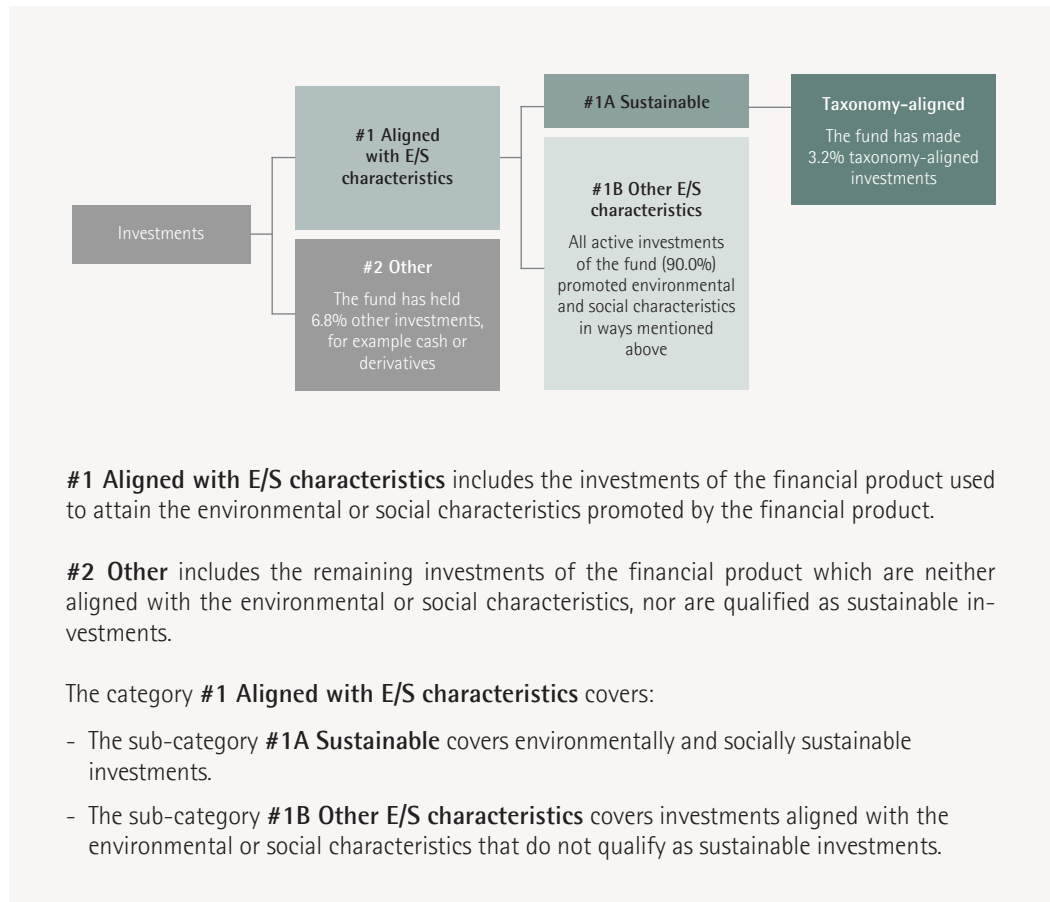

Largest investments	Sector	% Assets	Country
Otp Bank 5.10.2027 6.125% Callable Variable	Financial	1.83%	Hungary

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Consumer	6.8%
Diversified	1.2%
Financial	41.3%
Industrial	6.1%
Infrastructure	1.9%
Metals & Mining	0.9%
Oil & Gas	11.6%
Pulp & Paper	0.6%
Real Estate	2.5%
TMT	5.7%
Transport	2.3%
Utilities	12.3%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	18.69%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Yes:
 In fossil gas In nuclear energy
 No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Legend for Graph 1:
■ Taxonomy-aligned: Fossil gas
■ Taxonomy-aligned: Nuclear
■ Taxonomy-aligned (no fossil gas and nuclear energy)
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds*

Legend for Graph 2:
■ Taxonomy-aligned: Fossil gas
■ Taxonomy-aligned: Nuclear
■ Taxonomy-aligned (no fossil gas and nuclear energy)
■ Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 3.2% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0% and enabling activities 0%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 3.0%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Evli Emerging Markets Credit has promoted environmental and social characteristics and has focused especially on the comprehensive assessment of target companies' sustainability and has avoided investing in companies that have problems with sustainability factors. In addition to the current state of sustainability factors, the analysis focused on the direction of development, the targets set by the companies and the plausibility of the development plans. Active and continuous sustainability monitoring and the ability to react to any emerging sustainability problems are crucial in portfolio management.

The fund has engaged with some of its the target companies during the review period as part of the promotion of environmental and social characteristics. The aim of the engagement has been to accelerate the development of sustainability factors in the target companies' operations and to encourage the companies to establish science-based emission reduction targets.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Euro Liquidity

Legal entity identifier: 743700POQPUOAVCKI185

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 4.5 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with six companies in the fund and continued to follow up on the previous engagement cases of two companies. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	51.3%	46.4%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	103	114,3
Reporting year - 1	131	164,6
Reporting year - 2	184,3	293,9

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly

or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with seven companies in the fund and continued to follow up on the previous engagement case of one company. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	56.5%	58.6%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	210,8	196,9
Reporting year - 1	198,8	248,7
Reporting year - 2	270,1	194

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund's objective is to invest at least 2 percent of its total investments in activities that are environmentally sustainable economic activities under the EU taxonomy system (EU Taxonomy Regulation). The EU Taxonomy Regulation sets criteria for economic activity that is considered to promote the environmental objectives of the regulation. The fund invested a total of 6.6 percent in taxonomy-aligned economic activities. More detailed information on EU taxonomy-aligned investments can be found later in the report.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The fund does not make sustainable investments that would cause significant harm to other environmental or social objectives. The fund has made sustainable investments that are aligned with the EU Taxonomy Regulation. The EU Taxonomy Regulation establishes criteria for when an economic activity promotes the environmental objectives referred to in the regulation, one of which is that an activity must not cause significant harm to other environmental objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The principal adverse impacts (PAI indicators) on sustainability factors have been taken into account in accordance with Evli's Principles for Responsible Investment and Climate Change Principles. The PAI indicators are considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The consideration of PAI indicators also covers the OECD Guidelines for Multinational Enterprises. Evli regularly monitors its active investments and seeks to influence the companies' practices. Evli's Principles for Responsible Investment define the basic standards for norm-based screening and exclusion of companies. If a company violates the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD Guidelines for Multinational Enterprises, Evli will either seek to engage with the company to influence its practices or exclude it from its investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023

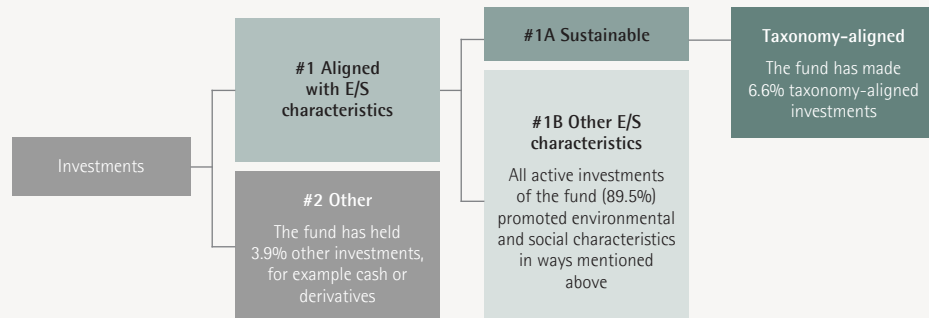

Largest investments	Sector	% Assets	Country
Teollisuuden Voi 9.3.2026 1.125% Callable Fixed	Utility	1.75%	Finland
Sato-Oyj 31.5.2024 1.375% Callable Fixed	Real Estate	1.61%	Finland
Santander Issuan 4.4.2026 3.25%	Banking	1.56%	Spain
Societe Generale 27.2.2025 2.625% At Maturity Fixed	Banking	1.54%	France

Fortum Oyj 26.5.2028 4% Callable Fixed	Utility	1.15%	Finland

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **In which economic sectors were the investments made?**

Sector	% Assets
Banking	17.6%
Financial Services	8.7%
Automotive	11.3%
Basic Industry	4.0%
Capital Goods	11.7%
Consumer Goods	2.4%
Healthcare	2.5%
Media	1.2%
Transportation	9.9%
Real Estate	7.3%
Retail	0.4%
Services	4.7%
Telecommunications	1.8%
Technology & Electronics	3.3%
Utility	9.4%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	3.49%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The fund has made 6.6% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 1.0% and enabling activities 2.2%.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 4.8 %.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Evli Short Corporate Bond has promoted environmental and social characteristics and has focused especially on the comprehensive assessment of target companies' sustainability and has avoided investing in companies that have problems with sustainability factors. In addition to the current state of sustainability factors, the analysis focused on the direction of development, the targets set by the companies and the plausibility of the development plans. Active and continuous sustainability monitoring and the ability to react to any emerging sustainability problems are crucial in portfolio management.

The fund has engaged with some of its the target companies during the review period as part of the promotion of environmental and social characteristics. The aim of the engagement has been to accelerate the development of sustainability factors in the target companies' operations and to encourage the companies to establish science-based emission reduction targets.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Nordic 2025 Target Maturity

Legal entity identifier: 743700F1H77UQ59SS852

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 13.1 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the NZAM [website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with five companies in the fund. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	43.9%	33.9%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	98,4	105
Reporting year - 1	125	113
Reporting year - 2	150,8	148,3

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 13.1% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0% and enabling activities 3.4%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 8.5%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Evli Nordic 2025 Target Maturity has promoted environmental and social characteristics and has focused especially on the comprehensive assessment of target companies' sustainability and has avoided investing in companies that have problems with sustainability factors. In addition to the current state of sustainability factors, the analysis focused on the direction of development, the targets set by the companies and the plausibility of the development plans. Active and continuous sustainability monitoring and the ability to react to any emerging sustainability problems are crucial in portfolio management.

The fund has engaged with some of its the target companies during the review period as part of the promotion of environmental and social characteristics. The aim of the engagement has been to accelerate the development of sustainability factors in the target companies' operations and to encourage the companies to establish science-based emission reduction targets.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and

Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. Evli started engagement with eight companies in the fund during the year. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	56.0%	48.8%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	113,8	87,2
Reporting year - 1	104,9	104,6
Reporting year - 2	116,5	149,9

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund's objective is to invest at least 2 percent of its total investments in activities that are environmentally sustainable economic activities under the EU taxonomy system (EU Taxonomy Regulation). The EU Taxonomy Regulation sets criteria for economic activity that is considered to promote the environmental objectives of the regulation. The fund invested a total of 10.9 percent in taxonomy-aligned economic activities. There will be more details on environmentally sustainable investments later in the report.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The fund does not make sustainable investments that would cause significant harm to other environmental or social objectives. The fund has made sustainable investments that are aligned with the EU Taxonomy Regulation. The EU Taxonomy Regulation establishes criteria for when an economic activity promotes the environmental objectives referred to in the regulation, one of which is that an activity must not cause significant harm to other environmental objectives.

How were the indicators for adverse impacts on sustainability factors taken into account?

The principal adverse impacts (PAI indicators) on sustainability factors have been taken into account in accordance with Evli's Principles for Responsible Investment and Climate Change Principles. The PAI indicators are considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The consideration of PAI indicators also covers the OECD Guidelines for Multinational Enterprises. Evli regularly monitors its active investments and seeks to influence the companies' practices. Evli's Principles for Responsible Investment define the basic standards for norm-based screening and exclusion of companies. If a company violates the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD Guidelines for Multinational Enterprises, Evli will either seek to engage with the company to influence its practices or exclude it from its investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations..

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023

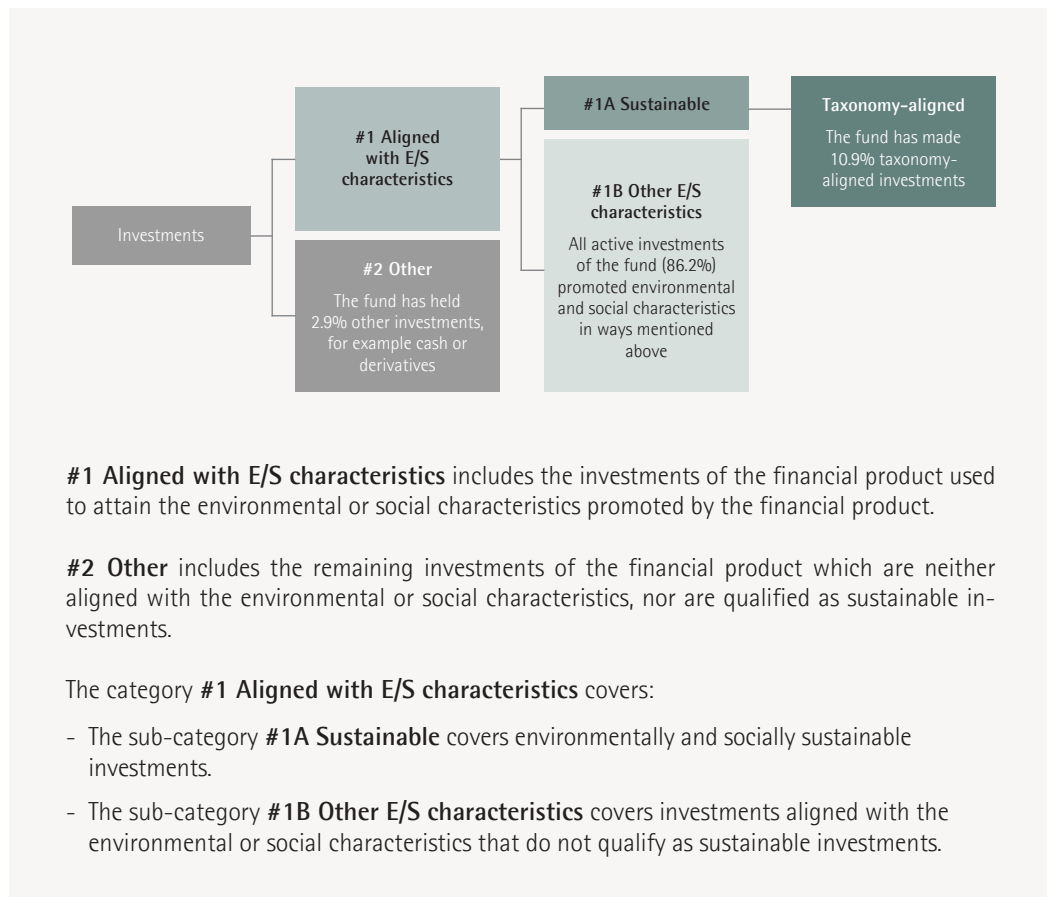

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Banking	9.4%
Financial Services	4.0%
Insurance	5.4%
Automotive	3.2%
Basic Industry	6.7%
Capital Goods	13.5%
Consumer Goods	6.9%
Healthcare	5.0%
Media	2.5%
Transportation	3.3%
Real Estate	6.0%
Retail	1.3%
Services	8.2%
Telecommunications	2.6%
Technology & Electronics	7.7%
Utility	11.3%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	
	2.77%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The fund has made 10.9% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.8% and enabling activities 4.2%.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 8.4%.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Evli Nordic Corporate Bond has promoted environmental and social characteristics and has focused especially on the comprehensive assessment of target companies' sustainability and has avoided investing in companies that have problems with sustainability factors. In addition to the current state of sustainability factors, the analysis focused on the direction of development, the targets set by the companies and the plausibility of the development plans. Active and continuous sustainability monitoring and the ability to react to any emerging sustainability problems are crucial in portfolio management. The fund has engaged with some of its target companies during the review period as part of the promotion of environmental and social characteristics. The aim of the engagement has been to accelerate the development of sustainability factors in the target companies' operations and to encourage the companies to establish science-based emission reduction targets.

Evli Target Maturity Nordic Bond 2023 was merged into Evli Nordic Corporate Bond during the year. Both the merging and the acquiring fund promote, in addition to their other characteristics, environmental and social characteristics in accordance with Article 8 of the Sustainable Finance Disclosure Regulation.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Corporate Bond

Legal entity identifier: 743700ZQV8X3HK2IZ016

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 6.8 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with four companies in the fund and continued to follow up on an earlier engagement case with one company. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	61.5%	69.5%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	97,6	128,3
Reporting year - 1	94,3	125,3
Reporting year - 2	122,1	87,9

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023

Utility	8.8%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	2.38%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***

2. Taxonomy-alignment of investments **excluding sovereign bonds***

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 6.8% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.4% and enabling activities 2.2%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 5.9%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Evli Corporate Bond has promoted environmental and social characteristics and has focused especially on the comprehensive assessment of target companies' sustainability and has avoided investing in companies that have problems with sustainability factors. In addition to the current state of sustainability factors, the analysis focused on the direction of development, the targets set by the companies and the plausibility of the development plans. Active and continuous sustainability monitoring and the ability to react to any emerging sustainability problems are crucial in portfolio management.

The fund has engaged with some of its the target companies during the review period as part of the promotion of environmental and social characteristics. The aim of the engagement has been to accelerate the development of sustainability factors in the target companies' operations and to encourage the companies to establish science-based emission reduction targets.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Europe

Legal entity identifier: 7437006VRFZEBSVZHF06

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 7.7 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the NZAM [website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. Evli also began engagement with two companies in the fund during the year. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	94.7%	100.0%
Share of companies with Paris aligned climate targets	73.8%	65.7%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	200,4	273,9
Reporting year - 1	256	317,9
Reporting year - 2	335,3	331,1

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

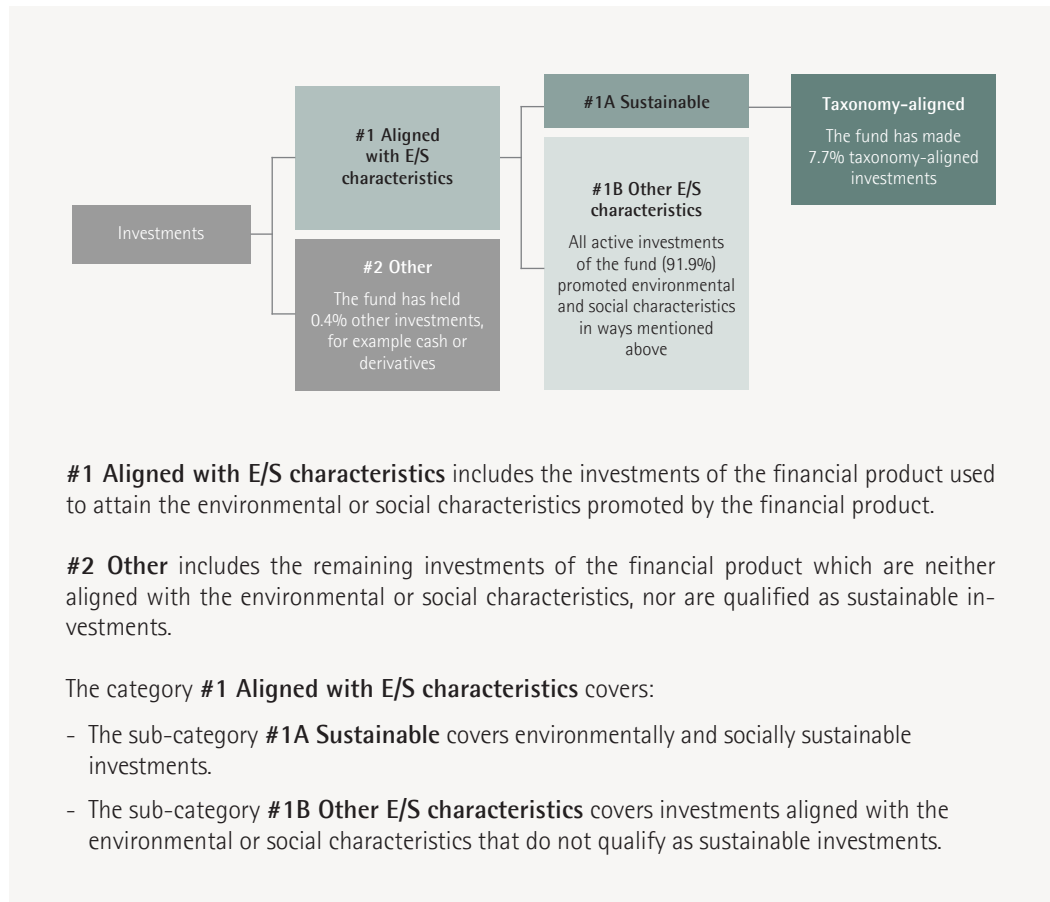

Largest investments	Sector	Sector	Country
CRH PLC	Materials	3.19%	Ireland
Cie de Saint-Gobain	Industrials	3.12%	France
Arcadis NV	Industrials	3.11%	Netherlands
Azimut Holding SpA	Financials	3.02%	Italy
Aker BP ASA	Energy	2.94%	Norway
Wienerberger AG	Materials	2.93%	Austria
Betsson AB	Consumer Discretionary	2.9%	Sweden
Harbour Energy PLC	Energy	2.9%	United Kingdom
Publicis Groupe SA	Communication Services	2.87%	France
Rexel SA	Industrials	2.83%	France
Equinor ASA	Energy	2.82%	Norway
SSAB AB	Materials	2.82%	Sweden
TotalEnergies SE	Energy	2.74%	France
Cia de Distribucion Integral L	Industrials	2.72%	Spain
Ipsen SA	Health Care	2.69%	France

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Energy	11.4%
Materials	20.2%
Industrials	25.3%
Consumer Discretionary	8.5%
Consumer Staples	4.8%
Health Care	6.3%
Financials	5.5%
Information Technology	9.4%
Communication Services	8.2%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	18.58%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned: Fossil gas
 Taxonomy-aligned: Nuclear
 Taxonomy-aligned (no fossil gas and nuclear energy)
 Non Taxonomy-aligned

Taxonomy-aligned: Fossil gas
 Taxonomy-aligned: Nuclear
 Taxonomy-aligned (no fossil gas and nuclear energy)
 Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 7.7% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 3.0% and enabling activities 2.5%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 6.4%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Seven companies were excluded from the target list of Evli Europe Fund for product-related reasons (reasons related to society), two companies were excluded for environmental and social reasons related to the principles of the UN Global Compact. Engagement with one company in accordance with Evli's Climate Targets that was started in 2021 and continued in 2022 was discontinued in 2023 due to divesting. The company published its SBTi target in 2023. Evli had encouraged the company to set SBTi targets as part of its engagement activities. In 2023, we started engagement with one company for reasons related to the Climate Targets and with another company for social reasons.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with two companies in the fund and continued to follow up on the previous engagement cases of two companies. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	22.2%	18.0%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	422,3	564,2
Reporting year - 1	493	541,1
Reporting year - 2	539,1	557,9

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

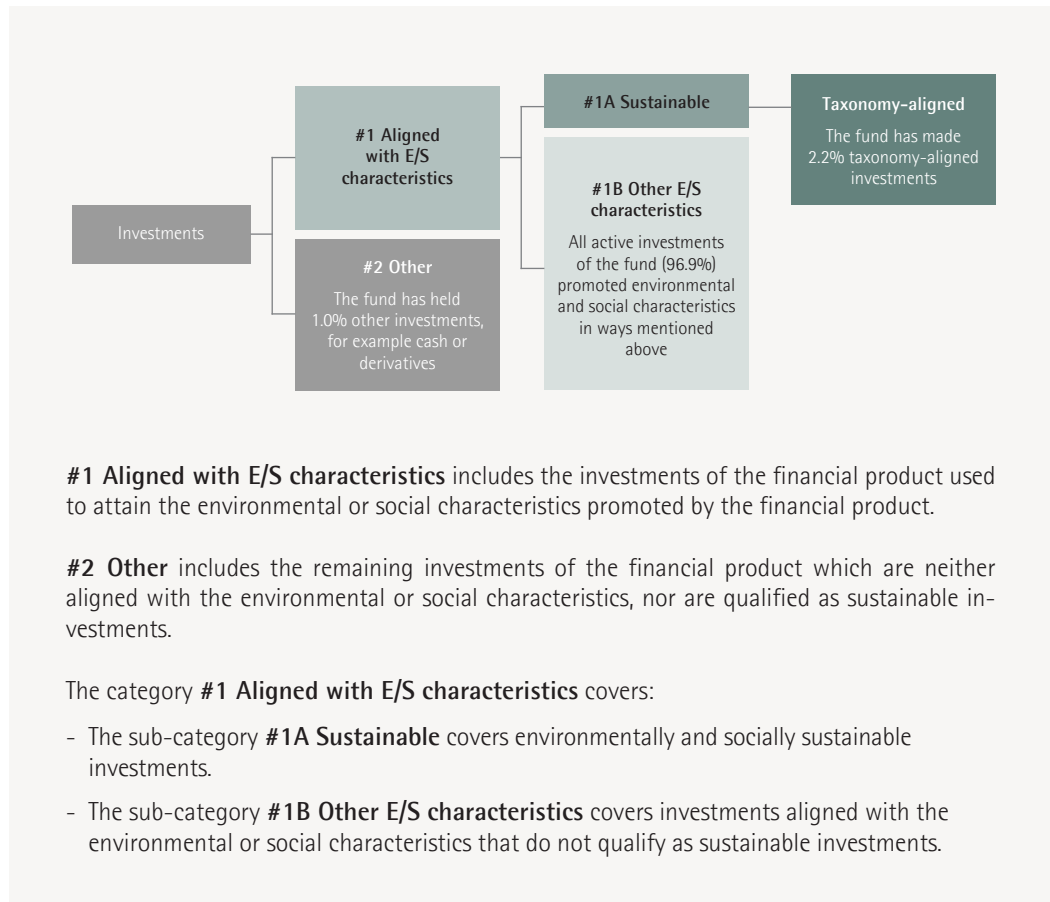

Largest investments	Sector	% Assets	Country

Sinotruk Hong Kong Ltd	Industrials	1.34%	China

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

In which economic sectors were the investments made?

Sector	% Assets
Energy	4.4%
Materials	19.6%
Industrials	15.8%
Consumer Discretionary	13.3%
Consumer Staples	5.4%
Health Care	3.1%
Financials	1.1%
Information Technology	26.9%
Communication Services	6.1%
Utilities	2.1%
Real Estate	1.0%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	12.79%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 2.2% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0% and enabling activities 0%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 1.0%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Ten companies were excluded from the target list of Evli GEM Fund for product-related reasons (reasons related to society), one company was excluded for environmental and social reasons related to the principles of the UN Global Compact, seventeen companies were excluded on the basis of Evli's Climate Change Principles, and two companies were excluded because of sanctions. In addition, Russian companies continued to be excluded, and investments made in them in the past will be divested when possible. Two of the ongoing engagement processes under the Climate Targets that were launched in previous years ended during 2023 after the companies exited the portfolio. Engagement was started or previous engagement was continued with four companies..

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the NZAM [website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with one company in the fund. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	25.5%	9.9%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	81,5	71,1
Reporting year - 1	129,4	82,4
Reporting year - 2	149,3	81,3

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

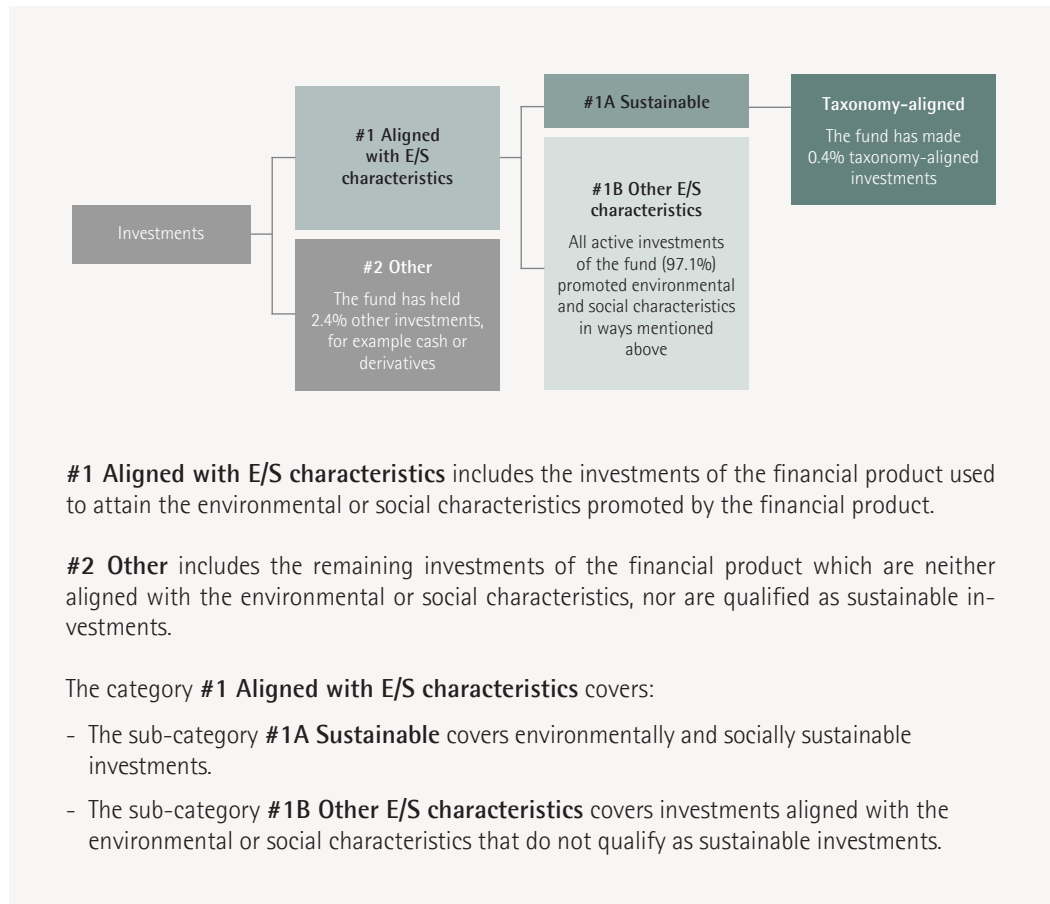

Largest investments	Sector	% Assets	Country
SCREEN Holdings Co Ltd	Information Technology	3.3%	Japan
Nippon Yusen KK	Industrials	2.77%	Japan
Sankyo Co Ltd	Consumer Discretionary	2.72%	Japan
Nichireki Co Ltd	Industrials	2.63%	Japan
Horiba Ltd	Information Technology	2.62%	Japan
Happinet Corp	Consumer Discretionary	2.56%	Japan
Dexerials Corp	Information Technology	2.55%	Japan
Yamato Kogyo Co Ltd	Materials	2.51%	Japan
SKY Perfect JSAT Holdings Inc	Communication Services	2.42%	Japan
Tokyo Steel Manufacturing Co L	Materials	2.4%	Japan
Inpex Corp	Energy	2.35%	Japan
Shimamura Co Ltd	Consumer Discretionary	2.33%	Japan
Sangetsu Corp	Consumer Discretionary	2.29%	Japan
Japan Lifeline Co Ltd	Health Care	2.25%	Japan
Renesas Electronics Corp	Information Technology	2.23%	Japan

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

In which economic sectors were the investments made?

Sector	% Assets
Energy	4.3%
Materials	6.9%
Industrials	29.7%
Consumer Discretionary	11.8%
Consumer Staples	4.2%
Health Care	7.9%
Financials	1.4%
Information Technology	20.7%
Communication Services	8.6%
Real Estate	2.1%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	7.04%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

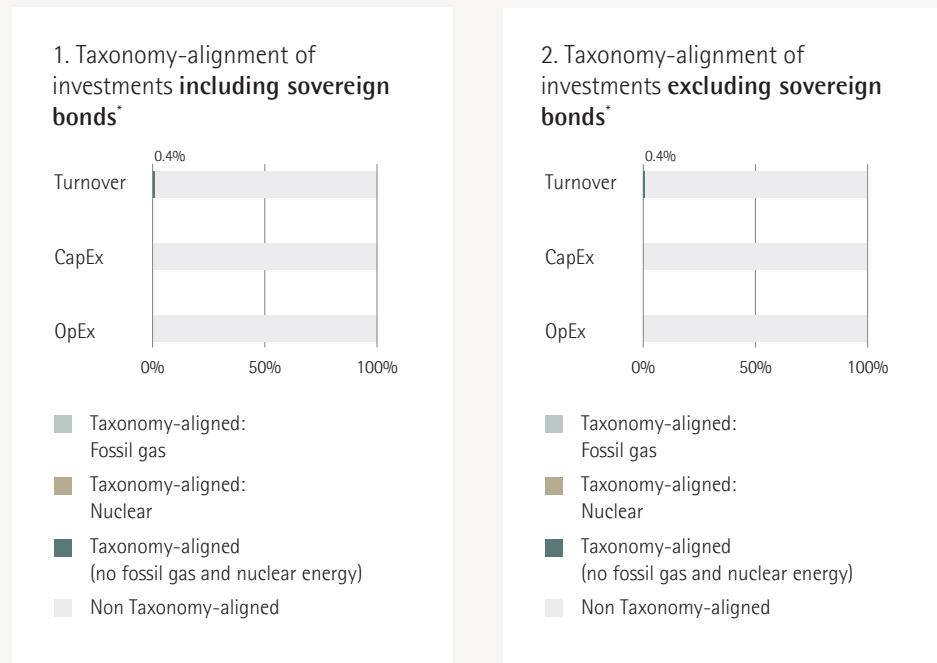

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 0.4% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0% and enabling activities 0%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 1.9%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

One company was excluded from Evli Japan Fund's target list for product-related reasons (reasons related to society). Engagement in accordance with Evli's Climate Targets was started in 2023 with one company.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Global

Legal entity identifier: 743700V8NI00S6S2UW75

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 4.6 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of

having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with one company in the fund. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Materials	2.3%
Industrials	26.2%
Consumer Discretionary	15.3%
Consumer Staples	1.4%
Health Care	12.9%
Financials	8.0%
Information Technology	24.8%
Communication Services	7.5%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	1.44%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Yes:
 In fossil gas In nuclear energy
 No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 4.6% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.0% and enabling activities 0.7%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 3.0 %.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Eighteen companies were excluded from the target list of Evli Global fund for product-related reasons (reasons related to society), two companies were excluded for environmental and social reasons related to the principles of the UN Global Compact, and fifteen companies were excluded on the basis of Evli's Climate Change Principles. Four companies were removed from the Fund's target list for other sustainability-related reasons. In 2023, engagement was started with one company on the basis of social and good governance factors.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 4.6 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the NZAM [website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with one company in the fund. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	54.9%	46.5%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	52,9	58,7
Reporting year - 1	62,9	66,9
Reporting year - 2	70,6	70,6

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

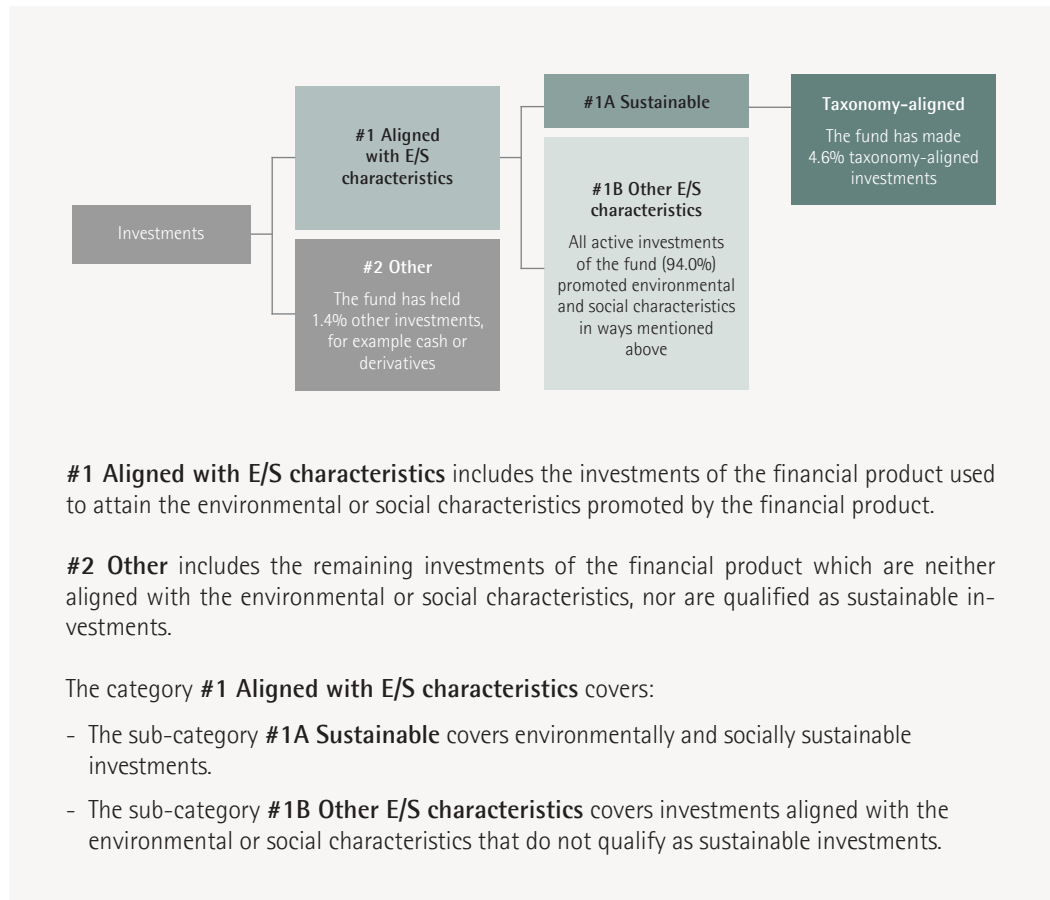

Largest investments	Sector	% Assets	Country
Boise Cascade Co	Industrials	3.67%	United States
Broadcom Inc	Information Technology	2.87%	United States
Owens Corning	Industrials	2.55%	United States
Thor Industries Inc	Consumer Discretionary	2.47%	United States
Artisan Partners Asset Managem	Financials	2.38%	United States
Computacenter PLC	Information Technology	2.28%	United Kingdom
CRH PLC	Materials	2.27%	Ireland
Dropbox Inc	Information Technology	2.23%	United States
Cie de Saint-Gobain	Industrials	2.21%	France
Arcadis NV	Industrials	2.2%	Netherlands
McKesson Corp	Health Care	2.14%	United States
Virtus Investment Partners Inc	Financials	2.14%	United States
Trigano SA	Consumer Discretionary	2.09%	France
CBIZ Inc	Industrials	2.07%	United States
Cognizant Technology Solutions	Information Technology	2.06%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Materials	2.3 %
Industrials	26.3 %
Consumer Discretionary	14.6 %
Consumer Staples	1.4 %
Health Care	13.2 %
Financials	7.9 %
Information Technology	25.0 %
Communication Services	7.9 %
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	1.43%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Yes:
 In fossil gas In nuclear energy
 No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 4.6% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.0% and enabling activities 0.7%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 3.2%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Several dozen companies were excluded from Evli Global X Fund's target list for product-related reasons (reasons related to society) or on the basis of Evli's Climate Change Principles. In 2023, engagement was started with one company on the basis of social and good governance factors.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli North America

Legal entity identifier: 743700EXIKW3U6TY8K56

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 5.6% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with one company in the fund and continued to follow up on the previous engagement cases of two companies. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
 - In fossil gas
 - In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 5.6% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0% and enabling activities 0%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 4.1%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

A total of ten companies were excluded from Evli North America Fund's target list for product-related reasons (reasons related to society), and seven companies were excluded on the basis of Evli's Climate Change Principles. Four companies were removed from the Fund's target list for other sustainability-related reasons. In 2023, engagement was started with one company on the basis of social and good governance factors. Climate action progress continued to be monitored in 2023 for two companies engaged with in 2021.

Product name: Evli Nordic

Legal entity identifier: 743700PAD6VICPCZH806

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 5.7 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. Evli did not engage with any new companies in the fund during the year and continued to follow up on previous cases of engagement with two companies. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	63.2%	71.4%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	173,6	68,2
Reporting year - 1	198,2	88,1
Reporting year - 2	265,4	99,8

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

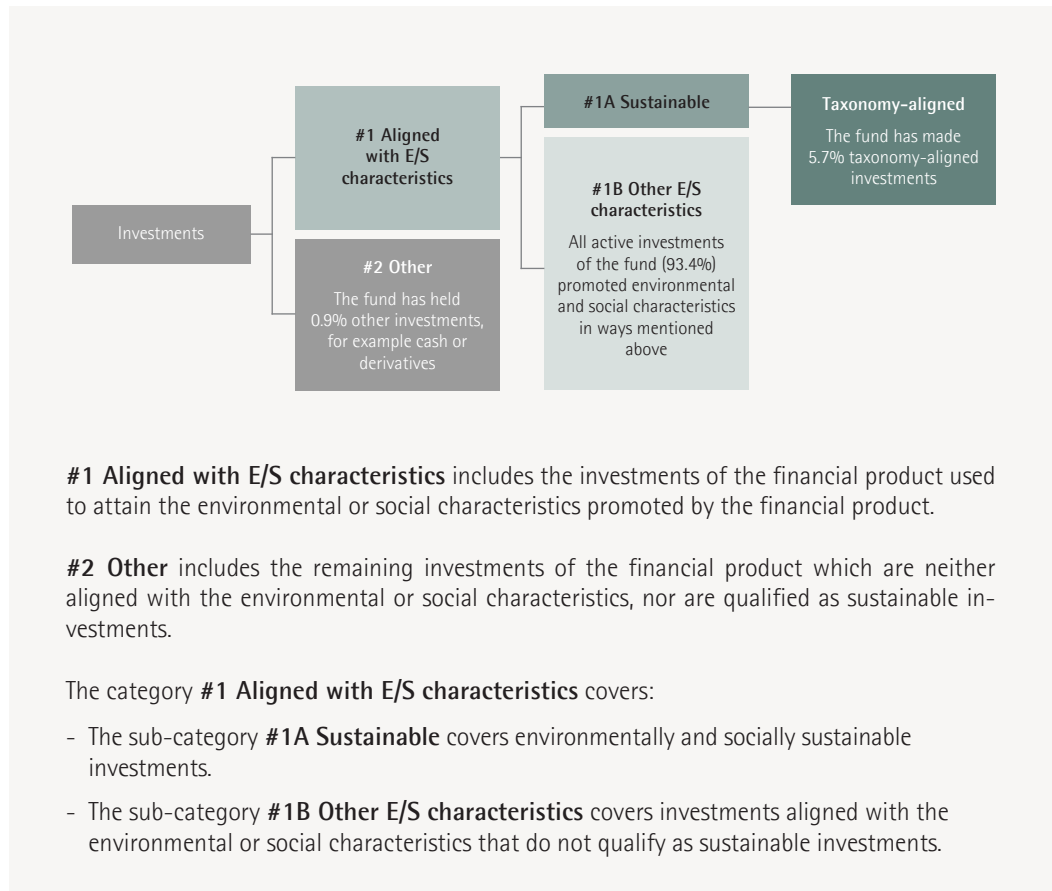

Largest investments	Sector	% Assets	Country
Var Energi ASA	Energy	3.85%	Norway
Inwido AB	Industrials	3.55%	Sweden
Aker BP ASA	Energy	3.37%	Norway
Matas A/S	Consumer Discretionary	3.33%	Denmark
Assa Abloy AB	Industrials	3.25%	Sweden
Equinor ASA	Energy	3.21%	Norway
SSAB AB	Materials	3.21%	Sweden
AddLife AB	Health Care	3.21%	Sweden
Mycronic AB	Information Technology	3.12%	Sweden
Betsson AB	Consumer Discretionary	3.12%	Sweden
Aker Solutions ASA	Energy	3.09%	Norway
Europri ASA	Consumer Discretionary	3.03%	Norway
FLSmidth & Co A/S	Industrials	2.94%	Denmark
Telefonaktiebolaget LM Ericsson	Information Technology	2.92%	Sweden
Sweco AB	Industrials	2.86%	Sweden

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Energy	13.5%
Materials	20.6%
Industrials	23.6%
Consumer Discretionary	14.2%
Consumer Staples	4.7%
Health Care	8.5%
Information Technology	12.3%
Communication Services	1.7%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	12.88%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 5.7% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 4.0% and enabling activities 1.0%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 4.0 %.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Two companies were excluded from Evli Nordic Fund's target list for product-related reasons (reasons related to society). In 2023, Evli engaged with two companies with regard to the climate objectives.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Swedish Small Cap

Legal entity identifier: 743700ROZLWD4LUBBN33

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 5.3% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. Evli did not initiate any new engagement activities in the fund's companies during the year. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	50.7%	32.5%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	65,2	107,6
Reporting year - 1	72,7	153,7
Reporting year - 2	106,5	182,6

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

Legend for Graph 1:

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

Legend for Graph 2:

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 5.3% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 1.8% and enabling activities 2.1%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 2.2 %.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The most important approaches of Evli Swedish Small Cap Fund for taking sustainability factors into account during the year were ESG integration and exclusion. Despite the higher inflation and interest rates, responsible business practices have remained a high priority for listed companies. Discussions with corporate management generally focused on the business opportunities created by responsible business, not just on managing sustainability risks or minimizing carbon footprints. The analysis of ESG factors is integrated into the overall company analysis that informs the fund's investment decisions. Although the weightings of sustainability factors varied by company and sector, environmental factors were given the highest priority in investment decisions on average. Exclusion was carried out in relation to companies in the gambling and energy industries that were in the investment universe. The fund did not need to engage with individual companies in the year under review.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Finnish Small Cap

Legal entity identifier: 743700WUKDUMIKOSUL38

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 4.6 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with ten companies in the fund and continued to follow up on the previous engagement cases of four companies. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%

Reporting year - 2	154,7	133,2

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

Materials	17.9%
Industrials	26.8%
Consumer Discretionary	25.0%
Consumer Staples	3.0%
Health Care	4.4%
Information Technology	9.9%
Communication Services	2.9%
Real Estate	5.8%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	3.31%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 4.6% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 1.0% and enabling activities 0.2%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 7.1%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The most important approaches of Evli Finnish Small Cap Fund for taking sustainability factors into account during the year were ESG integration, engagement and active ownership. Despite the higher inflation and interest rates, responsible business practices have remained a high priority for listed companies. Although the weightings of sustainability factors varied by company and sector, environmental factors were given the highest priority in investment decisions on average. On the engagement side, the fund focused on encouraging selected companies to set science-based (SBT) Climate Targets and improve their sustainability reporting. We also systematically reported on Evli's own Climate Targets to halve the carbon emissions of investments by 2030 and to be a carbon-neutral asset manager by 2050 at the latest. The fund also participated actively in general meetings of shareholders in the spring, mainly by supporting proposals given by boards of directors to general meetings of shareholders, with some exceptions. By participating in general meetings of shareholders, the aim is to engage in active ownership in companies in which the fund is a significant owner or that have a significant weight in the fund.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Finland Select

Legal entity identifier: 7437003W9A5JX1A72V39

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 10.3 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with seven companies in the fund and continued to follow up on the previous engagement case of one company. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	59.9%	56.4%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	182,5	127,8
Reporting year - 1	161,3	156,4
Reporting year - 2	201,7	280,7

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

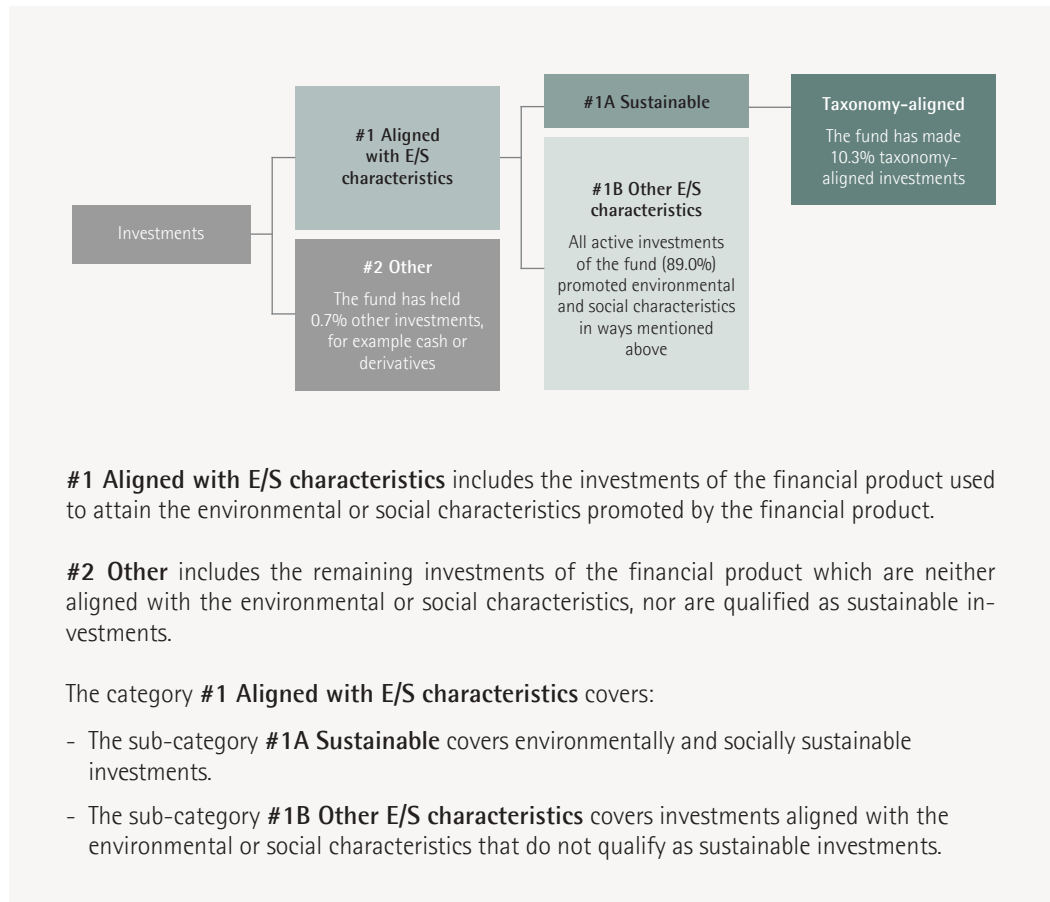

Largest investments	Sector	% Assets	Country
SAMPO OYJ A	Financials	8.87%	Finland
Neste Oyj	Energy	8.64%	Finland
NORDEA BANK ABP	Financials	8.48%	Finland
UPM-Kymmene OYJ	Materials	6.61%	Finland

METSO OYJ	Industrials	4.08%	Finland
KESKO OYJ B	Consumer Staples	3.89%	Finland
VALMET	Industrials	3.67%	Finland
PUIILO OYJ	Consumer Discretionary	3.34%	Finland
SSAB AB	Materials	3.32%	Sweden

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Energy	8.6%
Materials	19.0%
Industrials	20.4%
Consumer Discretionary	5.5%
Consumer Staples	3.9%
Health Care	4.7%
Financials	18.8%
Information Technology	7.3%
Communication Services	4.2%
Utilities	4.5%
Real Estate	2.4%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	16.5%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 10.3% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 2.5% and enabling activities 2.1%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 8.9%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The most important approaches of Evli Finland Select Fund for taking sustainability factors into account during the year were ESG integration, engagement and active ownership. Although the weightings of sustainability factors varied by company and sector, environmental factors were given the highest priority in our investment decisions on average. Responsibility matters were addressed at company meetings if they were deemed relevant in view of the fund's sustainability principles. Active ownership and engagement were implemented at company meetings and by voting in the general meetings of shareholders of selected companies. With respect to active ownership and engagement, we focused on encouraging selected companies to set environmental targets and we also told them about Evli's targets of halving the carbon emissions of investments by 2030 and of becoming a carbon neutral asset manager by 2050.

Product name: Evli Nordic Small Cap

Legal entity identifier: 63670014UA2YDY04UL24

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 6.3% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the NZAM [website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. Evli also began engagement with two companies in the fund during the year. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	39.8%	36.5%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	43,3	143
Reporting year - 1	58,1	176,8
Reporting year - 2	68,3	203,3

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023

Information Technology	20.0%
Communication Services	7.8%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	6.59%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned: Fossil gas

■ Taxonomy-aligned: Nuclear

■ Taxonomy-aligned (no fossil gas and nuclear energy)

■ Non Taxonomy-aligned

■ Taxonomy-aligned: Fossil gas

■ Taxonomy-aligned: Nuclear

■ Taxonomy-aligned (no fossil gas and nuclear energy)

■ Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 6.3% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.6% and enabling activities 2.2%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 6.5%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund's other investments can for example be for hedging or liquidity purposes. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The most important approaches of Evli Finnish Small Cap Fund for taking sustainability factors into account in 2021 were ESG integration, engagement and active ownership. Though the year was marked by crises, responsible business practices have remained high on the list of priorities for listed companies. Although the weightings of sustainability factors varied by company and sector, environmental factors were given the highest priority in investment decisions on average. On the engagement side, the fund focused on encouraging selected companies to set science-based (SBT) climate targets and improve their sustainability reporting. We also systematically reported on Evli's own climate targets to halve the carbon emissions of investments by 2030 and to be a carbon-neutral asset manager by 2050 at the latest. The fund also participated actively in general meetings of shareholders in the spring, mainly by supporting proposals given by boards of directors to general meetings of shareholders, with some exceptions. By participating in general meetings of shareholders, the aim is to engage in active ownership in companies in which the fund is a significant owner or that have a significant weight in the fund.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Equity Factor Europe

Legal entity identifier: 743700G1CZM3LAYJY046

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 7.0 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with one company in the fund and continued to follow up on the previous engagement case of one company. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Weighted average carbon intensity (Scope 1+2 tCO2e / \$M sales)	36,2	46,8
ESG ratings distribution		
AAA	33.0%	27.4%
AA	40.9%	41.1%
A	21.5%	22.2%
BBB	2.3%	5.2%
BB	0.1%	0.2%
B	0.1%	0.0%
CCC	0.0%	0.0%
Not rated	2.1%	4.0%

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

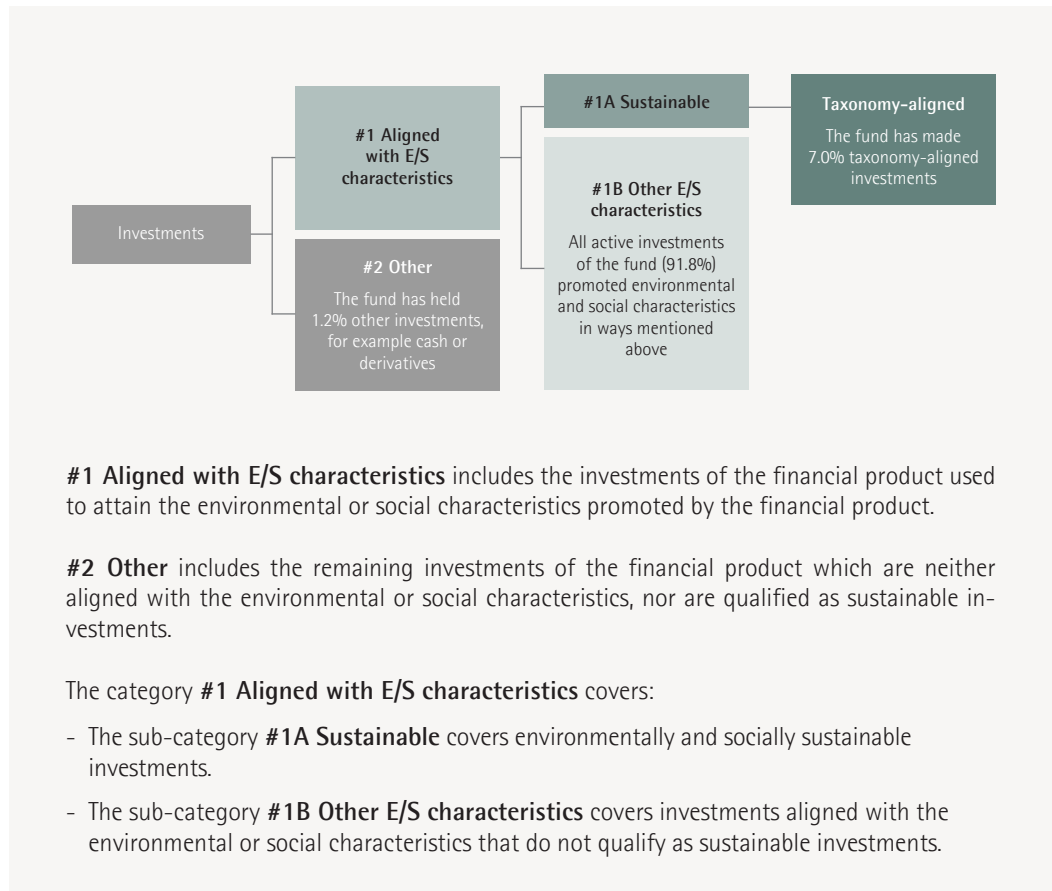

Largest investments	Sector	% Assets	Country
Siemens AG	Industrials	1.76%	Germany
SAP SE	Information Technology	1.67%	Germany
Givaudan SA	Materials	1.66%	Switzerland
HSBC Holdings PLC	Financials	1.59%	United Kingdom
GlaxoSmithKline PLC	Health Care	1.38%	United Kingdom
Nestle SA	Consumer Staples	1.33%	Switzerland
Allianz SE	Financials	1.3%	Germany
Novartis AG	Health Care	1.29%	Switzerland
Unilever PLC	Consumer Staples	1.24%	United Kingdom
Iberdrola SA	Utilities	1.23%	Spain
ASML Holding NV	Information Technology	1.23%	Netherlands
Sanofi	Health Care	1.17%	France
Koninklijke DSM NV	Materials	1.1%	Netherlands
Schneider Electric SE	Industrials	1.1%	France
Infineon Technologies AG	Information Technology	1.01%	Germany

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Energy	1.1%
Materials	4.5%
Industrials	22.3%
Consumer Discretionary	9.2%
Consumer Staples	7.8%
Health Care	12.9%
Financials	17.1%
Information Technology	10.6%
Communication Services	5.4%
Utilities	3.7%
Real Estate	4.2%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	5.24%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 7.0% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.3% and enabling activities 2.2%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 5.0%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The responsibility factors (ESG) of Evli Equity Factor Europe Fund have been comprehensively integrated in the funds' investment processes. The aim is to reduce the fund's carbon emissions by excluding companies with very high carbon intensity (overall emissions in relation to revenue). The fund also avoided investing in companies that have fossil fuel reserves. The fund also excluded companies in which more than five percent of revenue originates from weapons and firearms, tobacco products, alcoholic products, gambling, adult entertainment or thermal coal. In addition, the fund excluded companies that received a poor rating in a general responsibility assessment.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Equity Factor Global

Legal entity identifier: 74370060V83W9RFYW889

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 3.8 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with one company in the fund. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022

BB	2.7%	3.4%
B	0.2%	0.4%
CCC	0.0%	0.0%
Not rated	2.0%	5.3%

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

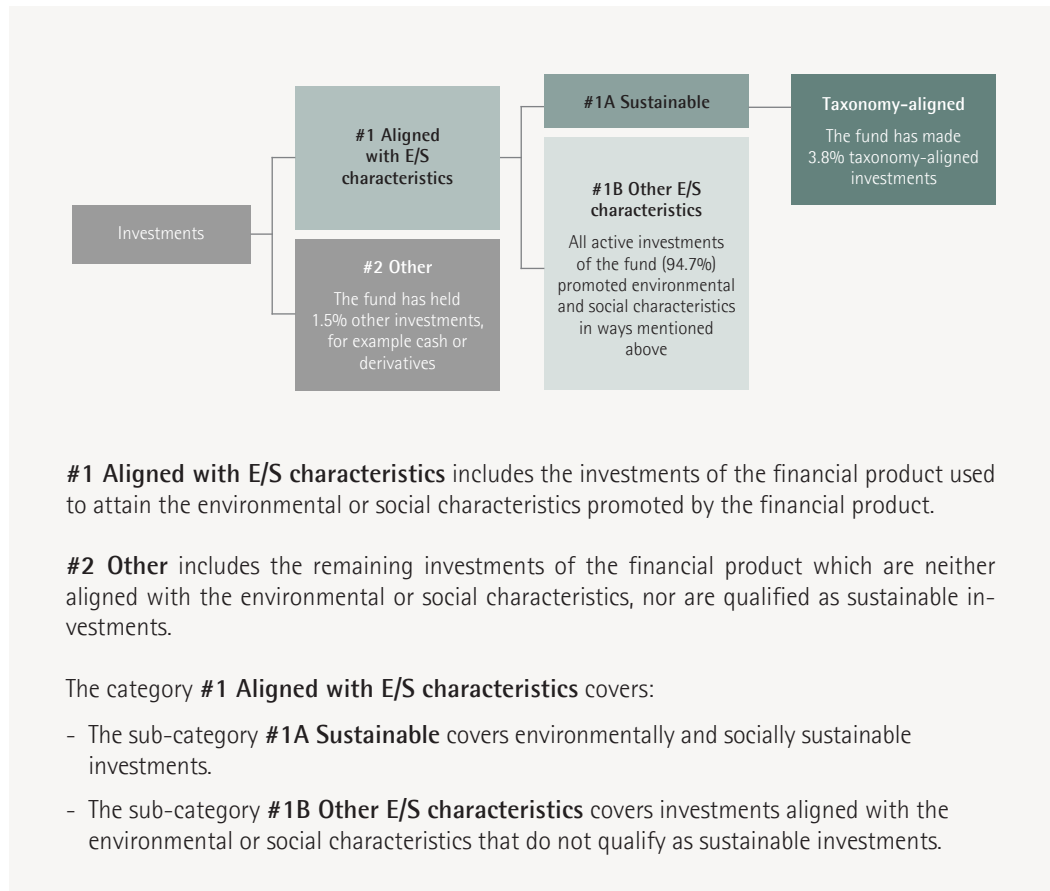

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

Largest investments	Sector	% Assets	Country

Cigna Corp	Health Care	0.86%	United States
Sumitomo Mitsui Financial Grou	Financials	0.83%	Japan
Gilead Sciences Inc	Health Care	0.83%	United States
NEC Corp	Information Technology	0.78%	Japan
AbbVie Inc	Health Care	0.73%	United States
Aflac Inc	Financials	0.73%	United States
Kao Corp	Consumer Staples	0.72%	Japan

What was the proportion of sustainability-related investments?

● What was the asset allocation?

● In which economic sectors were the investments made?

Sector	% Assets
Energy	0.8%
Materials	4.4%
Industrials	16.7%
Consumer Discretionary	10.9%
Consumer Staples	5.1%
Health Care	17.2%
Financials	15.2%
Information Technology	19.0%
Communication Services	6.4%
Utilities	1.4%
Real Estate	1.4%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	3.29%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned: Fossil gas
 Taxonomy-aligned: Nuclear
 Taxonomy-aligned (no fossil gas and nuclear energy)
 Non Taxonomy-aligned

Taxonomy-aligned: Fossil gas
 Taxonomy-aligned: Nuclear
 Taxonomy-aligned (no fossil gas and nuclear energy)
 Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 3.8% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.1% and enabling activities 0.6%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 2.7%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The responsibility factors (ESG) of Evli Equity Factor Global Fund have been comprehensively integrated in the fund's investment processes. The aim is to reduce the fund's carbon emissions by excluding companies with very high carbon intensity (overall emissions in relation to revenue). The fund also avoided investing in companies that have fossil fuel reserves. The fund also excluded companies in which more than five percent of revenue originates from weapons and firearms, tobacco products, alcoholic products, gambling, adult entertainment or thermal coal. In addition, the fund excluded companies that received a poor rating in a general responsibility assessment.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Equity Factor USA

Legal entity identifier: 7437005N2I7MBZ97YL71

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 2.2% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with one company in the fund and continued to follow up on the previous engagement cases of three companies. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Weighted average carbon intensity (Scope 1+2 tCO2e / \$M sales)	42,2	41,2
ESG ratings distribution		
AAA	8.4%	4.6%
AA	25.5%	25.2%
A	37.4%	37.8%
BBB	24.5%	25.1%
BB	3.1%	5.0%
B	0.3%	0.8%
CCC	0.0%	0.0%
Not rated	0.8%	1.5%

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

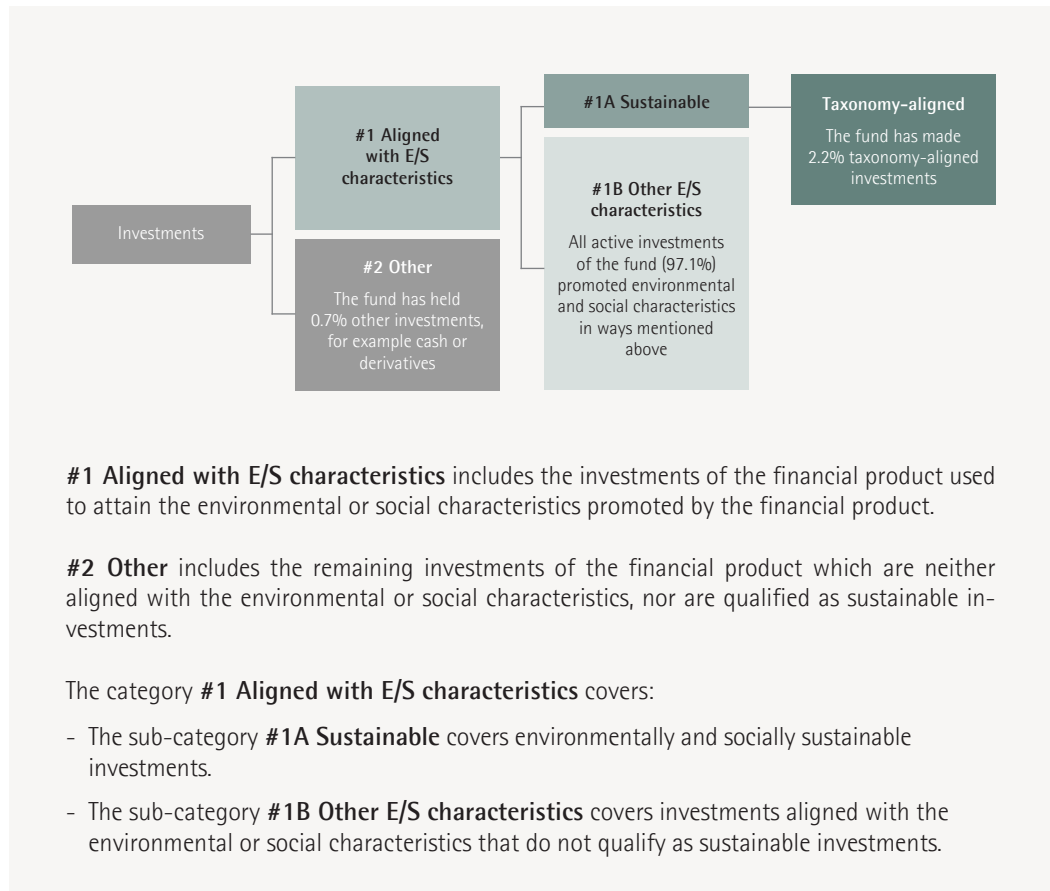

Largest investments	Sector	% Assets	Country
Apple Inc	Information Technology	3.66%	United States
Broadcom Inc	Information Technology	2.97%	United States
Mastercard Incorporated	Financials	1.38%	United States
Visa Inc	Financials	1.34%	United States
Procter & Gamble Co/The	Consumer Staples	1.32%	United States
JPMorgan Chase & Co	Financials	1.3%	United States
Intercontinental Exchange Inc	Financials	1.16%	United States
Bank of America Corp	Financials	1.12%	United States
American International Group I	Financials	1.11%	United States
salesforce.com inc	Information Technology	1.11%	United States
PepsiCo Inc	Consumer Staples	1.08%	United States
Fiserv Inc	Financials	1.07%	United States
Illinois Tool Works Inc	Industrials	1.02%	United States
TJX Cos Inc/The	Consumer Discretionary	1.0%	United States
Automatic Data Processing Inc	Industrials	0.96%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Energy	1.0%
Materials	2.8%
Industrials	12.9%
Consumer Discretionary	11.0%
Consumer Staples	7.1%
Health Care	16.8%
Financials	19.2%
Information Technology	21.7%
Communication Services	4.1%
Utilities	1.0%
Real Estate	1.7%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	3.57%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 2.2% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0% and enabling activities 0%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 2.3 %.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The responsibility factors (ESG) of Evli Equity Factor USA Fund have been comprehensively integrated in the fund's investment processes. The aim is to reduce the fund's carbon emissions by excluding companies with very high carbon intensity (overall emissions in relation to revenue). The fund also avoided investing in companies that have fossil fuel reserves. The fund also excluded companies in which more than five percent of revenue originates from weapons and firearms, tobacco products, alcoholic products, gambling, adult entertainment or thermal coal. In addition, the fund excluded companies that received a poor rating in a general responsibility assessment.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with one company in the fund and continued to follow up on the previous engagement case of one company. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	66.8%	72.1%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	42,7	127,6
Reporting year - 1	44,6	149,8
Reporting year - 2	51,9	141,9

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	6.23%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 5.8% taxonomy-aligned investments. This share includes possible investments to transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 4.3 %.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The most important approaches of Evli USA Growth for taking sustainability factors into account during the year were ESG integration and exclusion. The analysis of ESG factors is integrated into the company analysis based on which the fund's investment decisions are made. As part of promoting the environmental and social characteristics, the fund has engaged with one company in relation to Evli's Climate Targets and encouraged the company to set science-based Climate Targets.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Emerging Frontier

Legal entity identifier: 743700YPCR6AEFOX2L80

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.3% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's

Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. Evli did not initiate any new engagement activities in the fund's companies during the year. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

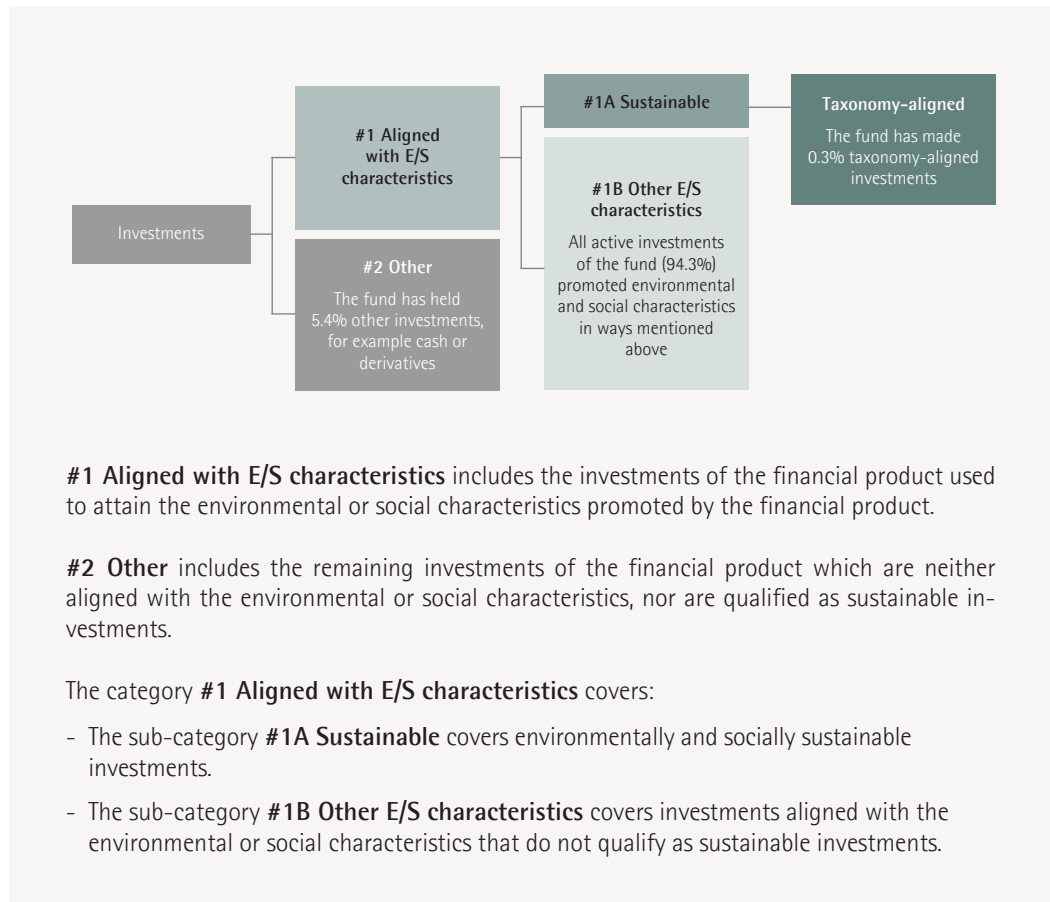

Largest investments	Sector	% Assets	Country
Arabian Pipes Co	Materials	6.71%	Saudi Arabia
Al Babtain Power Et Telecommuni	Industrials	5.42%	Saudi Arabia
IIFL Securities Ltd	Financials	4.3%	India
Meezan Bank Ltd	Financials	4.19%	Pakistan
A'ayan Leasing Et Investment Co	Financials	4.14%	Kuwait
International Financial Adviso	Financials	3.9%	Kuwait
Sai Gon-Ha Noi Securities JSC	Financials	3.64%	Vietnam
Satin Creditcare Network Ltd	Financials	3.51%	India
Emaar Development PJSC	Real Estate	3.32%	United Arab Emirates
Etihad Atheeb Telecommunicatio	Communication Services	3.31%	Saudi Arabia
Kuwait Real Estate Co KSC	Real Estate	3.25%	Kuwait
Jasa Marga Persero Tbk PT	Industrials	3.08%	Indonesia
Mills Estruturas e Servicos de	Industrials	3.0%	Brazil
Repco Home Finance Ltd	Financials	2.94%	India
Yalla Group Ltd	Communication Services	2.84%	United Arab Emirates

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Energy	4.5%
Materials	6.7%
Industrials	22.1%
Consumer Discretionary	8.2%
Financials	30.2%
Information Technology	5.7%
Communication Services	8.2%
Real Estate	9.1%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	4.46%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds*

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 0.3% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0% and enabling activities 0%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 0.4%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Active and prospective investments are analyzed in terms of ESG factors through a third-party ESG database and recent ESG-related issues are identified. Engagement is done with active and prospective investee companies to determine any sustainability or ESG-related developments within the company. The portfolio management team has met with 128 companies during the year.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly

for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative ("NZAM initiative"). The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the NZAM [website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with five companies in the fund and continued to follow up on the previous engagement case of one company. In addition, Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	60.4%	54.4%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	143,4	181,9
Reporting year - 1	147,1	223
Reporting year - 2	162,2	343,9

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

Legend for Graph 1:

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

Legend for Graph 2:

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 5.3% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0,8% and enabling activities 1.8%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 6.3 %.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Evli Finland Mix focuses especially on the comprehensive assessment of target companies' sustainability and avoids investing in companies that have problems with sustainability factors. The most important approaches of the fund for taking sustainability factors into account during the year were ESG integration and engagement. When analyzing new possible investment targets, the role of ESG integration was highlighted as an integral part of comprehensive company analysis. Although the weightings of sustainability factors varied by company and sector, environmental factors were given the highest priority in our investment decisions on average. In addition to the current state of sustainability factors, our analysis has focused on the direction of development, the targets set by the companies and the plausibility of the development plan. We also addressed responsibility at company meetings when we deemed it relevant in view of the fund's sustainability principles. We practiced active ownership and engagement at company meetings and by voting in the general meetings of shareholders of selected companies. In active ownership and engagement, we focused on encouraging certain companies to set Climate Targets, and highlighted Evli's own Climate Targets as an asset manager. Active and continuous sustainability monitoring and the ability to react to any emerging sustainability problems are crucial in portfolio management.

Further, none of the Information can in and of itself be used to determine which securities to buy or sell or when to buy or sell them. None of the ESG Parties shall have any liability for any errors or omissions in connection with any data herein, or any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Global Multi Manager 30

Legal entity identifier: 7437002L55WGSZ1VZW72

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 14.9 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics in accordance with Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets with regard to assets invested in mutual funds managed by Evli. It has also required that investment comply with good governance practices. In accordance with its investment strategy, the fund's goal has been to invest in funds that, in addition to other characteristics, promote environmental and/or social characteristics or whose objective is to make sustainable investments. Funds other than those managed by Evli have followed their own principles for responsible investment. Environmental and social characteristics have been implemented through the actions described below:

ESG integration: The target companies of the investments are analyzed at regular intervals during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis has made use of, among other things, the internal ESG database built by Evli, which is based on content data from Evli's own and third-party funds and sustainability data from external data providers. An ESG score is calculated for each fund and ETF (Exchange Traded Fund) invested in, which reflects how well the companies invested in have taken sustainability risks and opportunities into consideration as a whole. When the fund invests in the funds of Evli Fund Management Company Ltd or another management company, emphasis is placed on funds that promote environmental and social characteristics, among other characteristics. Regarding the funds managed by Evli Fund Management Company contained in the fund, the target companies have been

analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year.

In its international investments Evli has only cooperated with reputable and reliable partners and expects its partners to be signatories of the United Nations' Principles for Responsible Investment. Evli has emphasized its public commitment to the objectives of the Paris Climate Agreement, preferably in line with established standards such as PRI, Climate Action 100+ or Net-Zero Asset Manager initiatives. In addition, Evli has expected third parties to commit to encouraging companies to set emission reduction targets, to comply with good governance and climate policies, and to promote emissions reporting. Evli monitors its partners' active equity and fixed-income funds for companies that are in breach of the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD's Guidelines for Multinational Enterprises. If the investment is found to include a company that is violating the above-mentioned principles, the situation will be analyzed with Evli's Responsible Investment Team and portfolio management. Evli requires the issuer of the fund to provide a responsibility assessment of the company violating the principles and a report on the engagement with the company. This is followed by a decision on subsequent action. If the issuer's engagement efforts are sufficient, their progress will be monitored and regular reporting on the company's status will be required. Otherwise, Evli will start engagement with the issuer of the fund. The alternatives are to require an extension of the engagement measures against the violating company, a freeze on subsequent investments, or divestment.

Exclusion by industry: Funds managed by Evli Fund Management Company have excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies of funds invested in have been monitored regularly for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest in its investment and own operations, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund's share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative. The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: Active ownership and engagement with companies with regard to fund and ETF investments is carried out through the activities of Evli Fund Management Company and other management companies. During the year, Evli exercised active ownership by engaging with a total of 37 companies with regard to its funds and direct investments. The activities of other management companies have been monitored through the management companies' active ownership reporting. In addition, at meetings with management companies, there has been dialogue on active ownership and companies' engagement activities.

Collaborative engagement is also an important part of Evli's engagement work. Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	99.3%	99.7%
Share of companies with Paris aligned climate targets	48.0%	44.0%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	159,5	166,6
Reporting year - 1	155	196,5
Reporting year - 2	184,7	227,6

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report. The investments' Article 9-compliant funds have made environmentally and/or socially sustainable investments in line with their own sustainable investment objectives.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The EU Taxonomy Regulation establishes criteria for when an economic activity promotes the environmental objectives referred to in the regulation, one of which is that an activity must not cause significant harm to other environmental objectives. The investments' Article 9-compliant funds observe the "do no significant harm" principle in their environmentally and/or socially sustainable investments, the purpose of which is to ensure that the sustainable investment objective does not conflict with other sustainability objectives.

— **How did this financial product consider principal adverse impacts on sustainability factors?**

Evli has taken account of its investments' principal adverse impacts on sustainability factors (PAI indicators). The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. In the selection of external funds, emphasis is placed on products that take into account the principal adverse sustainability impacts in their investment strategy in accordance with Evli's responsibility principles. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The consideration of PAI indicators also covers the OECD Guidelines for Multinational Enterprises. Evli regularly monitors its active investments and seeks to influence target companies' practices. Evli Group's Principles for Responsible Investment define the basic standards for norm-based screening and exclusion of companies. If a company violates the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD Guidelines for Multinational Enterprises, Evli will either seek to engage with the company to influence its practices or exclude it from its investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of its investments' principal adverse impacts on sustainability factors (PAI indicators). The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. In the selection of external funds, emphasis is placed on products that take into account the principal adverse sustainability impacts in their investment strategy in accordance with Evli's responsibility principles. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

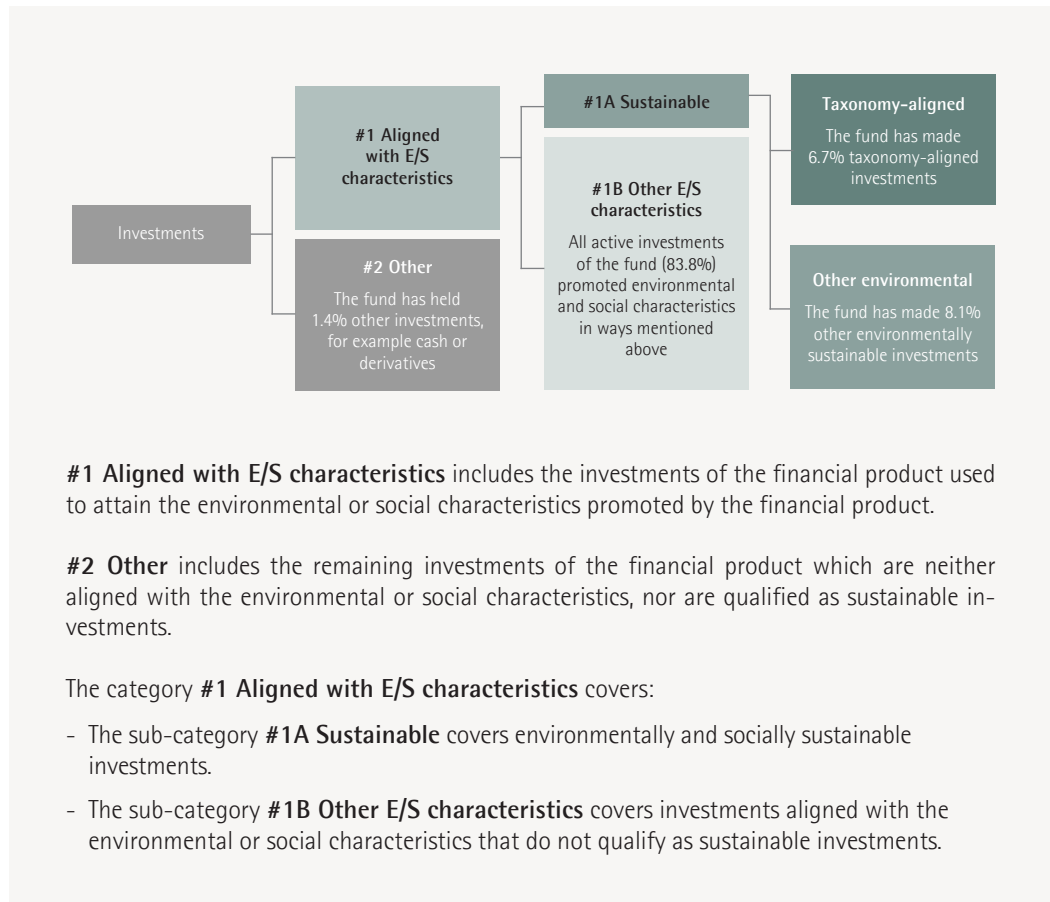

Largest investments	Sector	% Assets	Country
Evli Nordic Corporate Bond B	Bonds	17.69%	Finland
Evli European High Yield B	Bonds	14.05%	Finland
Evli Emerging Markets Credit B	Bonds	10.21%	Finland
Evli Green Corporate Bond B	Bonds	8.23%	Finland
Evli Short Corporate Bond B	Bonds	7.25%	Finland
MS Investment FDS Emerging Markets Debt Opport. ZH (EURHDG)	Bonds	5.15%	Luxembourg
iShares MSCI USA ESG Enhanced	Equities	4.84%	Ireland
Evli Finnish Small Cap B	Equities	3.94%	Finland
Evli USA Growth B	Equities	3.87%	Finland
Evli Finland Select B	Equities	3.65%	Finland
Evli North America B	Equities	3.64%	Finland
Evli Europe B	Equities	2.63%	Finland
iShares MSCI Europe ESG Enhanc	Equities	2.26%	Ireland
Evli GEM B	Equities	2.13%	Finland
iShares MSCI EM ESG Enhanced U	Equities	2.05%	Ireland

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Equities	37.0%
Emerging markets	5.7%
Europe	8.6%
Finland	7.6%
North America	13.6%
World	1.5%
Bonds	62.6%
Emerging market bonds	15.4%
Bonds High Yield	14.1%
Corporate Bonds	33.2%
Money Market	0.4%
Cash position	0.4%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	7.32%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned: Fossil gas
 Taxonomy-aligned: Nuclear
 Taxonomy-aligned (no fossil gas and nuclear energy)
 Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned: Fossil gas
 Taxonomy-aligned: Nuclear
 Taxonomy-aligned (no fossil gas and nuclear energy)
 Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 6.7% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.5% and enabling activities 1.6%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 4.6 %.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The fund is not committed to making environmentally sustainable investments, but 8.1 percent of the fund's investments have been in other funds with an environmental objective. Funds or ETFs managed by other management companies may also have made environmentally sustainable investments that are not taxonomy-aligned.

- **What was the share of socially sustainable investments?**

The fund is not committed to making socially sustainable investments, but the fund has invested in the Evli Impact Equity Fund, which makes environmentally and socially sustainable investments. The proportion of socially sustainable investments in this fund is small and does not stand out in the allocation of sustainable investments.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The fund may also have invested in funds that do not promote objectives related to environmental and social characteristics. The principles described above apply when selecting these funds and making investment decisions.

The fund may also have held small amounts of cash and derivatives that do not promote objectives related to environmental and social characteristics.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

During 2023, a total of five companies were excluded from the fund's active investments managed by Evli: one due to a nuclear weapons connection and four based on the update of Evli's Climate Change Principles. The exclusion of companies is based on regular monitoring for violations of international principles and Evli's Climate Change Principles. In addition, a total of 32 companies of the fund's active investments managed by Evli Fund Management Company were engaged with during the year. This took place through engagement dialogue and emails. The engagement concerned the companies' climate work and targets, good governance and corporate responsibility work in general.

The ESG integration of the fund has been developed by enhancing the assessment of third parties from a sustainability perspective. Evli has improved the monitoring of its partners' active equity and fixed-income funds for companies that are in breach of the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD's Guidelines for Multinational Enterprises. In December, the fund also made a new investment in the Article 9 fund Evli Impact Equity Fund, which aims to make environmentally and socially sustainable investments.

Product name: Evli Global Multi Manager 50

Legal entity identifier: 743700NCX4P3RRVQCQ58

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 13.6 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics in accordance with Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets with regard to assets invested in mutual funds managed by Evli. It has also required that investment comply with good governance practices. In accordance with its investment strategy, the fund's goal has been to invest in funds that, in addition to other characteristics, promote environmental and/or social characteristics or whose objective is to make sustainable investments. Funds other than those managed by Evli have followed their own principles for responsible investment. Environmental and social characteristics have been implemented through the actions described below:

ESG integration: The target companies of the investments are analyzed at regular intervals during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis has made use of, among other things, the internal ESG database built by Evli, which is based on content data from Evli's own and third-party funds and sustainability data from external data providers. An ESG score is calculated for each fund and ETF (Exchange Traded Fund) invested in, which reflects how well the companies invested in have taken sustainability risks and opportunities into consideration as a whole. When the fund invests in the funds of Evli Fund Management Company Ltd or another management company, emphasis is placed on funds that promote environmental and social characteristics, among other characteristics. Regarding the funds managed by Evli Fund Management Company contained in the fund, the target companies have been

analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year.

In its international investments Evli has only cooperated with reputable and reliable partners and expects its partners to be signatories of the United Nations' Principles for Responsible Investment. Evli has emphasized its public commitment to the objectives of the Paris Climate Agreement, preferably in line with established standards such as PRI, Climate Action 100+ or Net-Zero Asset Manager initiatives. In addition, Evli has expected third parties to commit to encouraging companies to set emission reduction targets, to comply with good governance and climate policies, and to promote emissions reporting. Evli monitors its partners' active equity and fixed-income funds for companies that are in breach of the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD's Guidelines for Multinational Enterprises. If the investment is found to include a company that is violating the above-mentioned principles, the situation will be analyzed with Evli's Responsible Investment Team and portfolio management. Evli requires the issuer of the fund to provide a responsibility assessment of the company violating the principles and a report on the engagement with the company. This is followed by a decision on subsequent action. If the issuer's engagement efforts are sufficient, their progress will be monitored and regular reporting on the company's status will be required. Otherwise, Evli will start engagement with the issuer of the fund. The alternatives are to require an extension of the engagement measures against the violating company, a freeze on subsequent investments, or divestment.

Exclusion by industry: Funds managed by Evli Fund Management Company have excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies of funds invested in have been monitored regularly for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest in its investment and own operations, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund's share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative. The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: Active ownership and engagement with companies with regard to fund and ETF investments is carried out through the activities of Evli Fund Management Company and other management companies. During the year, Evli exercised active ownership by engaging with a total of 37 companies with regard to its funds and direct investments. The activities of other management companies have been monitored through the management companies' active ownership reporting. In addition, at meetings with management companies, there has been dialogue on active ownership and companies' engagement activities.

Collaborative engagement is also an important part of Evli's engagement work. Evli participated as a company in the following investor initiatives that promote Evli's responsible investment themes: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Companies without serious norm violations	99.0%	99.6%
Share of companies with Paris aligned climate targets	48.0%	43.3%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	150,7	160,3
Reporting year - 1	153,9	184,7
Reporting year - 2	181,7	208,2

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report. The investments' Article 9-compliant funds have made environmentally and/or socially sustainable investments in line with their own sustainable investment objectives.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The EU Taxonomy Regulation establishes criteria for when an economic activity promotes the environmental objectives referred to in the regulation, one of which is that an activity must not cause significant harm to other environmental objectives. The investments' Article 9-compliant funds observe the "do no significant harm" principle in their environmentally and/or socially sustainable investments, the purpose of which is to ensure that the sustainable investment objective does not conflict with other sustainability objectives.

— **How did this financial product consider principal adverse impacts on sustainability factors?**

Evli has taken account of its investments' principal adverse impacts on sustainability factors (PAI indicators). The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. In the selection of external funds, emphasis is placed on products that take into account the principal adverse sustainability impacts in their investment strategy in accordance with Evli's responsibility principles. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The consideration of PAI indicators also covers the OECD Guidelines for Multinational Enterprises. Evli regularly monitors its active investments and seeks to influence target companies' practices. Evli Group's Principles for Responsible Investment define the basic standards for norm-based screening and exclusion of companies. If a company violates the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD Guidelines for Multinational Enterprises, Evli will either seek to engage with the company to influence its practices or exclude it from its investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of its investments' principal adverse impacts on sustainability factors (PAI indicators). The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. In the selection of external funds, emphasis is placed on products that take into account the principal adverse sustainability impacts in their investment strategy in accordance with Evli's responsibility principles. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

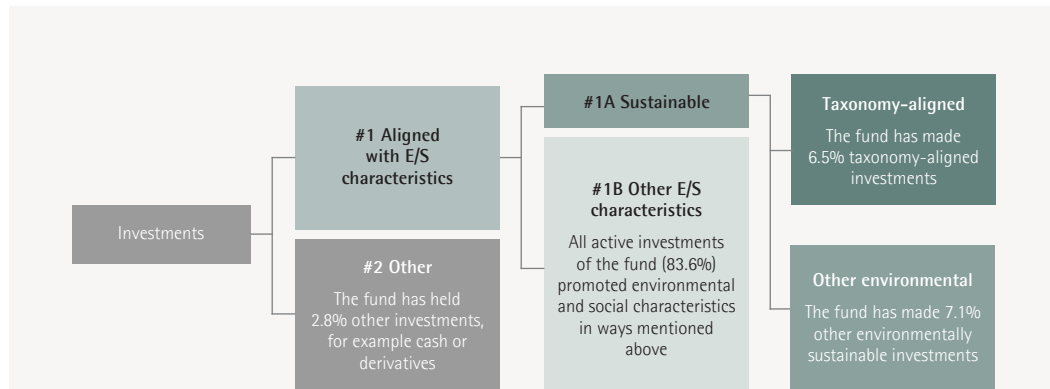

Largest investments	Sector	% Assets	Country
Evli Nordic Corporate Bond B	Bonds	12.75 %	Finland
Evli European High Yield B	Bonds	8.83 %	Finland

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	% Assets
Equities	57.0%
Emerging markets	9.1%
Europe	13.4%
Finland	11.4%
North America	20.7%
World	2.5%
Bonds	42.4%
Emerging market bonds	11.2%
Bonds High Yield	8.8%
Corporate Bonds	22.4%
Money Market	0.6%
Cash position	0.6%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	7.86%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

Legend for Graph 1:

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

Legend for Graph 2:

- Taxonomy-aligned: Fossil gas
- Taxonomy-aligned: Nuclear
- Taxonomy-aligned (no fossil gas and nuclear energy)
- Non Taxonomy-aligned

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 6.5% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.5% and enabling activities 1.3%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 4.3%.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The fund is not committed to making environmentally sustainable investments, but 7.1 percent of the fund's investments have been in other funds with an environmental objective. Funds or ETFs managed by other management companies may also have made environmentally sustainable investments that are not taxonomy-aligned.

- **What was the share of socially sustainable investments?**

The fund is not committed to making socially sustainable investments, but the fund has invested in the Evli Impact Equity Fund, which makes environmentally and socially sustainable investments. The proportion of socially sustainable investments in this fund is small and does not stand out in the allocation of sustainable investments.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The fund is not committed to making socially sustainable investments, but the fund has invested in the Evli Impact Equity Fund, which makes environmentally and socially sustainable investments. The proportion of socially sustainable investments in this fund is small and does not stand out in the allocation of sustainable investments.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

During 2023, a total of five companies were excluded from the fund's active investments managed by Evli: one due to a nuclear weapons connection and four based on the update of Evli's Climate Change Principles. The exclusion of companies is based on regular monitoring for violations of international principles and Evli's Climate Change Principles. In addition, a total of 32 companies of the fund's active investments managed by Evli Fund Management Company were engaged with during the year. This took place through engagement dialogue and emails. The engagement concerned the companies' climate work and targets, good governance and corporate responsibility work in general.

The ESG integration of the fund has been developed by enhancing the assessment of third parties from a sustainability perspective. Evli has improved the monitoring of its partners' active equity and fixed-income funds for companies that are in breach of the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD's Guidelines for Multinational Enterprises. In December, the fund also made a new investment in the Article 9 fund Evli Impact Equity Fund, which aims to make environmentally and socially sustainable investments.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Green Corporate Bond

Legal entity identifier: 743700TUHVU5NQXPV31

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** 98.9%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The fund's objective is to make sustainable investments in a way that achieves a positive and measurable social or environmental impact. Under its rules, the fund may invest in corporate bonds that seek environmentally and/or socially positive goals and the attainment of the UN's Sustainable Development Goals. The fund has invested in assets that, based on a sustainability analysis, are expected to have a positive impact on the achievement of environmental objectives. These assets include green bonds. The positive impacts of the fund's investments are described below in the section on sustainability indicators and in a separate fund-specific allocation and impact report.

Climate change mitigation: The fund's objective is to invest at least 5 percent of its total investments in activities that are environmentally sustainable economic activities under the EU taxonomy (EU Taxonomy Regulation). The EU Taxonomy Regulation sets criteria for economic activity that is considered to promote the environmental objectives of the regulation. The fund invested a total of 16.8 percent in taxonomy-aligned economic activities. More details on environmentally sustainable investments are provided later in the report.

Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary

between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative. The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the NZAM [website](#).

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. During the year, Evli's equity and corporate bond funds were awarded ESG4Real certification. ESG4Real is a non-profit and politically independent certification that provides a basic platform for responsible investment and ESG analysis, and offers independent quality assurance on asset managers' attainment of these requirements.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. During the year, Evli started engagement with 13 companies in the fund and continued to follow up on the previous engagement case of one company. The engagement themes have included setting Climate Targets, signing the UN Global Compact and improving waste management. In addition, portfolio management has engaged with five portfolio companies, encouraging them to improve their reporting practices.

Evli also participated in the following investor initiatives: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023	2022
Avoided CO2 emissions (tCO2e)	71 600	79 500
Renewable energy generated (MWh/year)	107 000	97600
Renewable energy capacity added (MW)	22	6
Companies without serious norm violations	100.0%	100.0%
Share of companies with Paris aligned climate targets	59.5%	64.4%
WACI (Scope 1+2 tCO2e / \$M sales) of reporting year's investments		
Reporting year	100,4	135,6
Reporting year - 1	134,4	155,2
Reporting year - 2	156	190,9

● **...and compared to previous periods?**

The performance of the sustainability indicators in previous reporting years is shown above.

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

The fund does not make investments that would cause significant harm to other environmental or social objectives. The fund has made sustainable investments that are aligned with the EU Taxonomy Regulation. The EU Taxonomy Regulation establishes criteria for when an economic activity promotes the environmental objectives referred to in the regulation, one of which is that an activity must not cause significant harm to other environmental objectives. In addition, the fund observes Evli's Principles for Responsible Investment and its Climate Change Principles and aims to invest in companies with a good responsibility rating. If a company's responsibility rating is lower than BB (on the data provider's scale), a more detailed analysis of the company's responsibility has been carried out. Moreover, a company that violates the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD's Guidelines for Multinational Enterprises can be excluded from investment by the Responsible Investment Team. The fund also takes into account the principal adverse impacts on sustainability factors.

— How were the indicators for adverse impacts on sustainability factors taken into account?

The principal adverse impacts (PAI indicators) on sustainability factors have been taken into account in accordance with Evli's Principles for Responsible Investment and Climate Change Principles. The PAI indicators are considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

— Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The consideration of PAI indicators also covers the OECD Guidelines for Multinational Enterprises. Evli regularly monitors its active investments and seeks to influence the companies' practices. Evli's Principles for Responsible Investment define the basic standards for norm-based screening and exclusion of companies. If a company violates the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD Guidelines for Multinational Enterprises, Evli will either seek to engage with the company to influence its practices or exclude it from its investments.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023

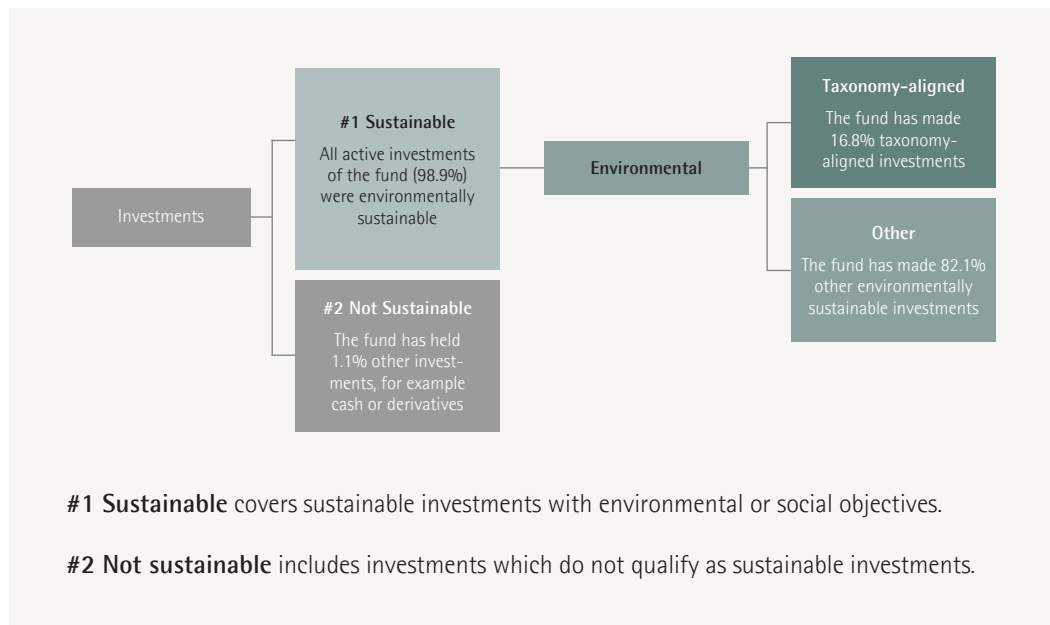

Largest investments	Sector	% Assets	Country
Vr-Group Plc 30.5.2029 2.375% Callable Fixed	Transportation	2.89%	Finland

What was the proportion of sustainability-related investments?

- What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● **In which economic sectors were the investments made?**

Sector	% Assets
Banking	31.7%
Financial Services	2.4%
Insurance	1.5%
Automotive	6.7%
Basic Industry	6.8%
Capital Goods	4.4%
Consumer Goods	1.1%
Transportation	3.2%
Real Estate	12.2%
Retail	0.5%
Services	0.7%
Telecommunications	4.6%
Utility	23.1%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	9.0%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation.

The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As corporate bond level data is only partially available on taxonomy alignment, the proportion of taxonomy-aligned investments presented in this report is based on company-level proportions calculated by the data provider. This is to ensure that the reported data is consistent between taxonomy-aligned revenue, capital expenditure and operating expenditure and between different issuers, regardless of whether the company reports a taxonomy-aligned proportion of the use of assets. Corporate bond level data is available for 29.8 percent of the portfolio investments. At the corporate bond level, the share of taxonomy-aligned investments is 18.7 percent (weighted by portfolio weights). Companies currently do not distinguish in their corporate bond reporting whether the use of taxonomy-aligned assets is related to revenue, capital expenditure or operating expenditure, which means that a more detailed breakdown of the proportion of taxonomy-aligned investments with regard to these criteria is not possible.

The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

The fund has made 16.8% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.0% and enabling activities 4.9%.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In the previous year the share of taxonomy-aligned investments based on revenue was 10.4 %.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

The fund invested 82.1 percent in other environmentally sustainable investments in green corporate bonds. The assets raised through green corporate bonds are allocated to projects that aim at positive environmental impacts. Consequently, all investments in the portfolio have an environmental objective. However, many issuers of green corporate bond do not yet commit to allocating assets according to EU taxonomy or report what proportion of the assets raised is allocated to projects that meet the taxonomy criteria. For these issuers, current data does not allow a reliable estimate of the proportion of financed projects that comply with EU taxonomy. These investments are therefore classified as sustainable investments with an environmental objective that are not aligned with the EU taxonomy.

● **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

The policies mentioned above and sustainable investment objectives apply to all direct investments of the fund. The fund has made other non-sustainable investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

The attainment of the fund's sustainable investment objective is based on an in-depth analysis of the target companies and frameworks of their green corporate bonds.

The evaluation of the frameworks of green corporate bonds focuses in particular on the analysis of use of proceeds categories, as the positive environmental or social impact of an investment is largely determined by the projects to which assets are allocated. The target company's plan on reporting the impact of financed projects will also be analyzed.

On the company level, the fund focuses on evaluating the comprehensive sustainability of target companies and avoids investing in companies that have issues with sustainability factors. In addition to the current state of sustainability factors, the analysis focuses on the direction of development, the targets set by the companies and the plausibility of the development plans. In the evaluation of sustainable investments, Evli takes account of the principal adverse impacts on sustainability factors (PAI indicators).

In addition, during the current reference period, target companies' reports on green corporate loans and their impact were reviewed, and based on these a fund-by-fund report was produced to monitor the impact of the financed projects. Companies were contacted if inconsistencies or omissions in the reports were identified. In addition, sustainability issues were raised in company meetings and calls.

This disclosure was developed using information from MSCI ESG Research LLC or its affiliates or information providers. Although Evli Fund Management Company Ltd information providers, including without limitation, MSCI ESG Research LLC and its affiliates (the "ESG Parties"), obtain information (the "Information") from sources they consider reliable, none of the ESG Parties warrants or guarantees the originality, accuracy and/or completeness, of any data herein and expressly disclaim all express or implied warranties, including those of merchantability and fitness for a particular purpose. The Information may only be used for your internal use, may not be reproduced or disseminated in any form and may not be used as a basis for, or a component of, any financial instruments or products or indices. Further, none of the Information can in and of itself be used to determine which securities to buy or sell or when to buy or sell them. None of the ESG Parties shall have any liability for any errors or omissions in connection with any data herein, or any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Impact Equity

Legal entity identifier: 3670072X7J056JBZL32

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 70,9 %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 21,8 %

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The fund's objective is to make sustainable investments and to contribute to measurable positive environmental and social impact. All of the fund's active investments are environmentally or socially sustainable. The fund invests in companies that, based on sustainability and impact analysis, are substantially involved in economic activities that are considered sustainable and contribute to selected United Nations Sustainable Development Goals (SDGs). The fund sets objectives for positive environmental and social real-world outcomes. Fund's investee companies' sustainable activities contribute to real world outcomes. Fund contributes to positive change in real world outcomes through active ownership, impact management and measurement.

The fund was launched in December 2023. Current fund impact objectives are: 1. Enhance clean and efficient energy use, 2. Improve water access, use efficiency and quality, 3. Reduce pollution, recover, reuse. 4. Provide quality education for all. 5. Ensure healthy lives. Fund impact objectives are aligned with globally defined goals such as by UN SDGs. The fund's environmental impact objectives are similar to EU Taxonomy environmental objectives because the fund commits to make investments that contribute to UN Sustainable Development Goals. The fund may invest in economic activities that qualify as environmentally sustainable under the EU Taxonomy and substantially contribute to climate change mitigation. Also, the fund may invest in economic enabling and transitional activities. The fund will make minimum of 5 % investments to economic activities that qualify environmentally sustainable under the EU Taxonomy.

Sustainability indicators measure how Fund holding companies' products, services, technology and at times investment activity contribute to Fund impact objectives. Due to recent launch, Fund is in process of collecting sustainability indicators from holdings companies. Sustainability indicators are to be published within H1/2024.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023
Companies without serious norm violations	100.0%
Share of companies with Paris aligned climate targets	44.8%
Low carbon transition category	
Solutions, % of Portfolio	15.2%
Transitions (Product and Operations), % of Portfolio	14.8%
WACI (Scope 1+2 tCO2e / \$M sales) of reporting year's investments	
Reporting year	178,7
Reporting year - 1	262,2
Reporting year - 2	311

● **...and compared to previous periods?**

The fund has started operating during 2023, and information on sustainability indicators has only been collected for one year.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The fund does not make investments that would cause significant harm to other environmental or social objectives. The fund has made sustainable investments that are aligned with the EU Taxonomy Regulation. The EU Taxonomy Regulation establishes criteria for when an economic activity promotes the environmental objectives referred to in the regulation, one of which is that an activity must not cause significant harm to other environmental objectives. In addition, the fund observes Evli's Principles for Responsible Investment and its Climate Change Principles. Moreover, a company that violates the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD's Guidelines for Multinational Enterprises can be excluded from investment by the Responsible Investment Team. The fund also takes into account the principal adverse impacts on sustainability factors.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The principal adverse impacts (PAI indicators) on sustainability factors have been taken into account in accordance with Evli's Principles for Responsible Investment and Climate Change Principles. The PAI indicators are considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The consideration of PAI indicators also covers the OECD Guidelines for Multinational Enterprises. Evli regularly monitors its active investments and seeks to influence the companies' practices. Evli's Principles for Responsible Investment define the basic standards for norm-based screening and exclusion of companies. If a company violates the principles of the UN Global Compact, the UN Guiding Principles on Business and Human Rights or the OECD Guidelines for Multinational Enterprises, Evli will either seek to influence the company's actions or exclude it from its investments.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory PAIs that measure greenhouse gas emissions, biodiversity, water, waste, and social and employee matters as well as two additional indicators (climate indicator number 4. Investments in companies without carbon emission reduction initiatives and social indicators number 14. Number of identified cases of severe human rights issues and incidents) have been considered. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023

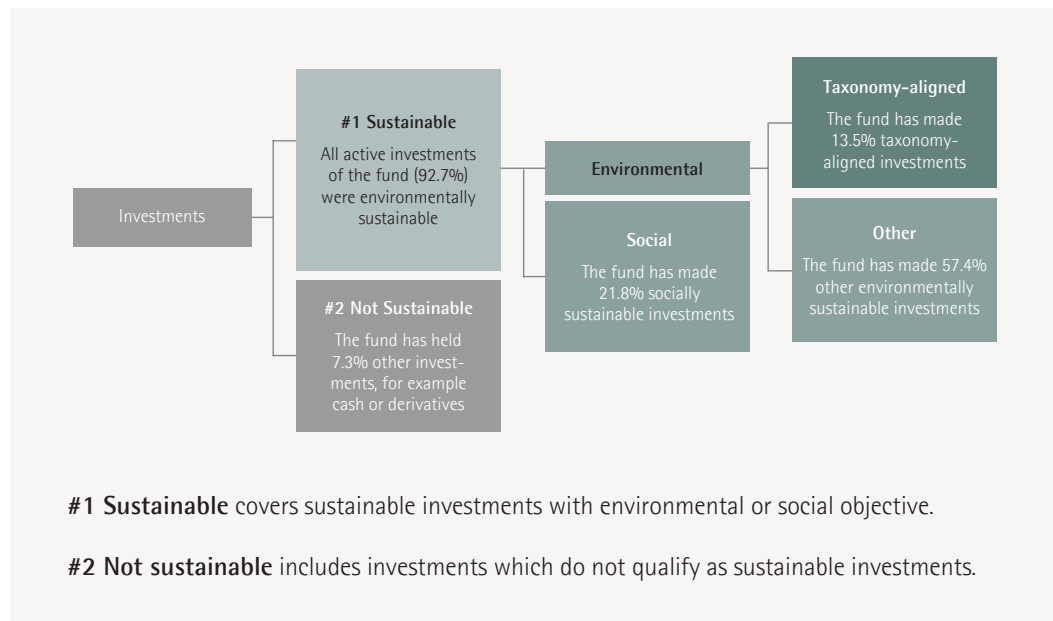

Largest investments	Sector	% Assets	Country
iShares MSCI ACWI UCITS ETF		5.15%	Ireland
Afya Ltd	Consumer Discretionary	3.56%	Brazil
Perdoceo Education Corp	Consumer Discretionary	2.98%	United States
Mytilineos SA	Industrials	2.89%	Greece
Stride Inc	Consumer Discretionary	2.88%	United States
Swedish Orphan Biovitrum AB	Health Care	2.84%	Sweden
Advanced Drainage Systems Inc	Industrials	2.76%	United States
Horiba Ltd	Information Technology	2.74%	Japan
A2A SpA	Utilities	2.6%	Italy
SPIE SA	Industrials	2.56%	France
NXP Semiconductors NV	Information Technology	2.56%	Netherlands
Laboratory Corp of America Hol	Health Care	2.42%	United States
Vinci SA	Industrials	2.42%	France
Otter Tail Corp	Utilities	2.38%	United States
Watts Water Technologies Inc	Industrials	2.36%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Industrials	34.7%
Consumer Discretionary	9.4%
Health Care	18.8%
Information Technology	22.6%
Utilities	7.2%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	7.68%

● **To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Yes:
 In fossil gas In nuclear energy
 No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflecting the share of revenue from green activities of investee companies
 - **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 13.5% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0.1% and enabling activities 1.4%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund was launched in 2023, and data on taxonomy alignment is presented only for one year.

- **What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

13.5% of sustainable investments with environmental objectives were aligned with EU Taxonomy. The vast majority of fund holdings are not reporting on EU Taxonomy alignment. 57.4% of investments are in companies that contribute to environmental objective was not aligned with EU Taxonomy.

The fund invests in economic activities that contribute to the fund's environmental impact objectives. These economic activities shall be qualified as sustainable under EU Taxonomy classification or contribute to selected UN SDG goals. Fund relies on internal classification and assessment process to identify UN SDG aligned economic activities.

- **What was the share of socially sustainable investments?**

21.8% was invested in companies that contribute to social impact objective.

- **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

5.15% was invested in MSCI ACWI ETF, Article 6 fund. MSCI ACWI ETF was used to cover expected cash liquidity needs of portfolio. MSCI ACWI ETF was sold in January 2024.

The policies mentioned above and sustainable investment objectives apply to all direct investments of the fund. The fund has made other non-sustainable investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to attain the sustainable investment objective during the reference period?**

Fund was launched on December 11, 2023. The fund made investments according to impact and investment strategy. No engagement activity was done during the period 11.12.2023-29.12.2023.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Evli Leveraged Loan Fund (AIF)

Legal entity identifier: 743700PPUYNVX34MFA28

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.6 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund has promoted environmental and social characteristics by observing Evli's Principles for Responsible Investment, Climate Change Principles and Climate Targets, and by requiring that target companies observe good governance practices. The fund has used the means described below to implement the environmental and social characteristics it promotes:

ESG integration: The fund's target companies have been analyzed before making an investment decision and during the investment period with regard to environmental, social, and corporate governance matters, or ESG factors. The analysis is based on an internal ESG database built by Evli, which is based on data from external data providers. Evli has developed ESG integration by updating its Principles for Responsible Investment and its Climate Change Principles, and developing ESG tools for portfolio management during the year. In addition, the fund has collected information from the target companies on PAI indicators describing adverse sustainability impacts.

Exclusion by industry: The fund has excluded harmful industries on the basis of Evli's Principles for Responsible Investment and Climate Change Principles. In addition, the target companies have been monitored regularly for violations of the principles defined in the UN Global Compact, the UN Guiding Principles on Business and

Human Rights and the OECD Principles for Multinational Enterprises. On the basis of regular monitoring, Evli's Responsible Investment Team will take the necessary measures with respect to companies that are suspected of having violated the above-mentioned international principles. Such companies can either be excluded directly or Evli can engage with them. If dialogue with a company fails or is deemed to be unhelpful, the company may be added to the exclusion list.

Climate change mitigation: Evli's goal is to achieve carbon neutrality by 2050 at the latest, and it has set an interim target of a 50 percent reduction in indirect emissions from all investments by 2030, provided that this is possible in the investment environment. The comparison year is 2019. The fund-specific share of the emission reduction target may vary between funds. During the year, Evli set the first interim target under the Net Zero Asset Managers Initiative. The interim target consists of three separate goals: an investment goal, an engagement goal and a company assessment goal. More information on the interim target is published on the [NZAM website](#).

Active ownership and engagement: During the year, Evli exercised active ownership by engaging with a total of 37 companies. There were no new engagement cases in the fund during the year, but ESG issues have been discussed with the target companies in the context of PAI data collection. In addition, Evli participated in the following investor initiatives: Climate Action 100+, investor letters coordinated by CDP, and engagement through CDP, the purpose of which is to encourage companies to set Science-Based Targets. In the area of human rights, Evli continued as an endorser in the PRI Advance initiative, under which investors take joint action on human rights and social issues. During the year, participants in the initiative have started to engage with the targeted companies. In 2023, Evli joined the international Nature Action 100 investor initiative, which encourages companies to take more ambitious action to reverse nature loss. In addition, in summer 2023 Evli signed a joint investor statement with other investors on the European Sustainability Reporting Standards (ESRS) of Eurosif, the PRI, the IIGCC, EFAMA and the UNEP FI. The statement calls on the EU Commission to uphold previously agreed guidelines on the ESRS reporting standard in order to fill the current data gaps in EU sustainable finance legislation. Evli also participated in companies' materiality analyses, discussed responsibility themes with other stakeholders and actively participated in the consultation process on the Disclosure Regulation with various parties.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Indicator name	2023
Companies without serious norm violations	100.0%
Share of companies with Paris aligned climate targets	38,50%
Weighted Average Carbon Intensity (Scope 1+2 tCO2e / \$M sales) of reporting year's investments	
Reporting year	9,75

● **...and compared to previous periods?**

The fund was classified as an Article 8 fund promoting environmental and social characteristics among other characteristics in 2023, and data on sustainability indicators has been collected for only one year.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund promotes environmental and social characteristics in addition to other characteristics but does not commit to making sustainable investments. The fund has, however, made investments that meet the criteria of the EU taxonomy system (EU Taxonomy Regulation) in environmentally sustainable economic activities. The EU Taxonomy Regulation sets criteria for environmentally sustainable economic activity that is considered to promote the environmental objectives of the regulation. More detailed information on EU taxonomy-aligned investments can be found later in the report.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Evli has taken account of the principal adverse impacts of its investments on sustainability factors (Principal Adverse Impact or PAI indicators) in accordance with Evli's Principles for Responsible Investment and its Climate Change Principles. All mandatory indicators measuring greenhouse gas emissions, biodiversity, water, waste and social and employee matters, plus two voluntary indicators (environmental indicator 4. Investments in companies without carbon emission reduction initiatives, and social indicator 14. Number of identified cases of severe human rights issues and incidents) has been taken into account. The PAI indicators have been considered through an internal process based on Evli's Principles for Responsible Investment. An internal PAI tool has been built based on data from an external service provider to view PAI indicators relevant to the investment target. In addition, the fund has collected data on PAI indicators directly from the target companies to improve coverage. Evli's Principles for Responsible Investment are asset class-specific and cover all Evli funds. Evli's Principles for Responsible Investment and Climate Change Principles define industry-specific exclusion limits and the process for dealing with any identified norm violations.

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	% Assets
Automotive	0.8%
Basic Industry	7.3%
Capital Goods	4.7%
Consumer Goods	1.6%
Healthcare	15.1%
Transportation	1.6%
Retail	4.5%
Leisure	3.2%
Services	35.4%
Technology & Electronics	18.3%
Sectors and sub-sectors that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels	0%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emission and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The fund has made investments that are EU taxonomy-aligned as set out below. Other reported investments that promote environmental factors are not sustainable investments under the Taxonomy Regulation. The presented proportion of taxonomy-aligned investments is based on data provided by an external data provider and not verified by a third party. The fund reports only on the information that is available on taxonomy. As data on alignment with taxonomy is only partially available from companies, the proportion of taxonomy-aligned investments is partly based on the calculations of the data provider. The data presented for taxonomy-aligned fossil gas and nuclear energy and the proportions of capital and operating expenditure are those reported by the target companies. In addition to the data reported by the companies, taxonomy-aligned revenue is based on estimates from the data provider. To the extent that issuers start to report on taxonomy alignment, the reported figures will replace the current figures calculated by the data provider and the taxonomy alignment information may become more precise.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund has made 0.6% taxonomy-aligned investments. According to the information reported by the companies, the share of transitional activities has been 0% and enabling activities 0%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund was classified as an Article 8 fund promoting environmental and social characteristics among other characteristics in 2023, and data on taxonomy alignment is presented only for one year.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The Principles for Responsible Investment, the Climate Change Principles and the exclusion principles apply to all direct investments made by the fund. The fund has also made investments for hedging or liquidity purposes, for example. The fund may also have invested in derivatives contracts both for hedging purposes and within the fund's investment strategy, and it may have held cash. Such investments are not subject to the ESG requirements or minimum safeguards described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Evli Leveraged Loan fund promoted environmental and social characteristics and focused especially on the comprehensive assessment of target companies' sustainability and has avoided investing in companies that have issues with sustainability factors. In addition to the current state of sustainability factors, the analysis focused on the direction of development, the targets set by the companies and the plausibility of the development plans. Active and continuous sustainability monitoring and the ability to react to any emerging sustainability problems are crucial in portfolio management.

The fund has engaged in dialogue with its the target companies during the review period as part of the promotion of environmental and social characteristics. The aim of the dialogues has been to accelerate the development of sustainability factors in the target companies' operations and to encourage the companies to report on indicators of adverse impacts.
