Market development

Market review June 30, 2024

The stock market boom experienced during the end of 2023 continued during the first half of 2024, supported by growth prospects and enthusiasm for artificial intelligence. However, the growth momentum subsided slightly. This was partly due to persistently high inflation, which has dissipated expectations of rapid cuts in key interest rates. The markets still expect interest rates to fall, but at a more moderate pace than before.

In the United States, the positive development of the stock market was driven especially by technology and growth stocks, of which Nvidia, which has made a meteoric rise, is particularly noteworthy. Euro area equities also rose strongly, driven in particular by technology companies. The economic environment in Europe continued to be more challenging than in the United States, but expectations for growth strengthened.

Despite the rise in share prices, uncertainty and risks in the market were high. The continuation of the war in Ukraine, the escalation of the Israeli-Palestinian situation and the subsequent rise in tensions in the Middle East put investors on their toes. Political uncertainty was also on the rise. The European elections saw the rise of the right wing and the crushing defeat of the ruling main party in the British elections. The US presidential election in the autumn is still ahead, and interviews with the candidates will be closely followed around the world.

Persistently high inflation and strong developments in the US economy limited central banks' ability to cut interest rates. Expectations for them subsided for 2024.

The Federal Reserve signaled that it expects certainty that inflation has fallen sustainably to the two percent target before interest rate cuts can begin. The European Central Bank, for its part, launched interest rate cuts in June to support economic growth, but more moderately than expected at the beginning of the year.

Globally, the development of the investment markets was positive during the first half of the year. U.S. equities (S&P 500) rose 15.3 percent and European equities (Stoxx 600) rose 9.6 percent. During the same period, Finnish equities (OMX Helsinki Cap) rose by only 3.5 percent.

The development in the fixed income markets was also generally positive. The value of corporate bonds with a higher credit rating increased by 0.4 percent. The value of lower-rated high-yield bonds increased by 2.0 percent. By contrast, euro area government bond values fell by 2.1 percent. The exchange rate of the euro fell by 3.0 percent against the dollar.

Portfolio management policy

According to Evli's investment philosophy, our investment activities are systematic, rigorous, and well planned in advance. We believe that active portfolio management coupled with efficient risk management yields the best result in the long run and enables us to add value to our clients' investment operations.

Evli's fund management is largely based on teamwork, and on a mutually agreed investment strategy. During the investment process, we draw up separate strategies for allocation, fixed income investments, and equity investments. Decision-making is divided up between different teams. Our allocation committee is responsible for the allocation strategy, our equity team is in charge of the investment strategy for equity portfolios, and the fixed income team draws up the fixed income strategy.

Ownership principles events on January 1 – June 30, 2024

Evli Fund Management Company attended on behalf of its three funds a total of 29 companies' general meetings of shareholders and one extraordinary general meeting during the January 1 - June 30, 2024 shareholder meeting season. On behalf of Evli Finnish Small Cap Fund were 27 general meetings attended, Evli Finland Select 13 general meetings, and Evli Finland Mix 5 general meetings. Participation in the meetings took place by issuing voting instructions in advance, attending the meetings in person or by attending a remote meeting. 18 shareholder meetings were attended in person. The Funds' representatives attended the general meetings of shareholders of Musti Group, Qt Group, Talenom, Kojamo, Admicom, Valmet, Enento Group, Fortum, Metsä Board, Terveystalo, Konecranes, Detection Technology, Kempower, Neste, Gofore, Verkkokauppa.com, Sitowise Group, UPM Kymmene, Lemonsoft, Ponsse, Eezy, Relais Group, Noho Partners, Remedy Entertainment, Marimekko, Sanoma, Huhtamäki, Harvia and Puuilo. The Funds' representatives attended also the extraordinary meeting of Musti Group. The meetings were chosen based on their agendas and the fund management company's ability to influence the decisions. Before the general meetings of shareholders, Evli had contacted 18 companies regarding good governance.

On behalf of the three funds Evli cast votes in advance in 12 general meetings and backed all the proposals. In two general meetings which Evli attended in person a vote against the resolution on selection of board members was recorded in the minutes as requested by Evli's representative. In addition, Evli voted once against a resolution on a remuneration report. The voting information mentioned above is at company level. In the other general meetings which Evli attended in person Evli did not oppose any proposal.

AJ Evli Value Hedge

AJ Evli Value Hedge invests mainly in Nordic value companies, but can also diversify its investments beyond the Nordic countries.

HALF YEAR COMMENT

At the end of June, the value of the AJ Evli Value Hedge C share was 37.733€. Since the beginning of the year, the value of the C share has increased by 7.36%.

During H1 2024, we have maintained a high level of equity exposure. At the end of June, equity investments accounted for around 91% of the fund's portfolio. Among our major investments, Incap performed very well in H1, rising by more than 50%. Cargotec rose by more than 40%. Componenta and Konecranes both rose by around

30% in H1 2024. Among our large investments, SSAB performed poorly, announcing a major investment in a fossil-free steel mill. SSAB fell by around 27%. Aspocomp shares fell by 17%. During H1, we sold small amounts of shares in Konecranes, Wärtsilä, Optomed, Saab, Investor, and Nordea, among others, to take profits. We bought additional shares in Billerud, Essity, and Nokian Tyres. In June, we participated in the Exel Composites share issue and bought more shares. Exel raised money from investors to strengthen its balance sheet and enable it to accelerate its growth and transformation strategy. Exel's share price has fallen, but if the company succeeds in its objectives, the share price could multiply.

At the end of June, the largest equity holdings of AJ Evli Value Hedge were UPM, QT, Incap, Nordea, Telia, Konecranes, Nokia, SSAB, Aspocomp, Cargotec, Componenta, Endomines, and Commerzbank.

Evli Emerging Frontier

Equity fund investing in rapidly growing developing economies.

HALF YEAR COMMENT

The Evli Emerging Frontier fund finished H1 2024 with a performance of +16.1%. While the fund does not have an official benchmark, the MSCI Frontier Emerging Markets Index returned +6.9%. The fund's positive absolute and relative performance in H1 2024 came from successful bottom-up stock picks.

The largest contributors to the portfolio were Surya Semesta (+3.2%), Arabian Pipes (+2.6%), and Al Babtain (+2.3%), whereas the biggest detractors were Moura Dubeux (-0.7%), Orge Energi (-0.6%), and Pentamaster International (-0.5%). Qatar, Turkey, and Thailand weights increased by 3.3%, 3.2%, and 2.9% respectively, and were offset by decreases in Kuwait, Saudi Arabia, and the UAE by 7.2%, 6.7%, and 3.4% respectively. On the sector front, weights of Communication Services and Materials increased, and were offset by decreases in Financials, Industrials, and Consumer Staples.

Every company in the portfolio has earnings growth expectations in the double digits, with most expecting over 20% growth. Most stocks' valuation multiples are in the single digits, while the average portfolio P/E multiple is 10x, significantly lower than 16x of the MSCI Emerging Markets Index. Furthermore, the portfolio's quality metrics (debt ratio and returns on capital) are more favorable than the index's as well. We are hopeful that the market will reprice our holdings to reflect their value.

Evli Equity

Evli Equity invests globally in the equity markets and in equity-linked securities.

HALF YEAR COMMENT

The first half of 2024 has been strong for stock markets. The global stock index is up about 15 percent, mainly driven by large growth companies in the United States. European and emerging market stocks have also performed well and are both up about 10 percent, while the return on Finnish stocks has remained around five percent.

After the acceleration of inflation in the first quarter, prices slowed down in April and May. This is positive news for both the United States and the world economy, as US inflation has been a significant macroeconomic risk. Despite the easing of inflation figures, the Federal Reserve remains cautious about inflation. The Fed now anticipates only one rate cut this year, as it has raised its inflation forecasts. However, the markets are expecting nearly two rate cuts.

In February we decided to lower the weight of Finnish stocks from overweight to neutral due to their ongoing weak performance. In Europe, on the other hand, the economy has shown signs of picking up, which is why we gradually bought Europe back to neutral during the spring. Thus, at the end of June, we are overweighting the United States and underweighting emerging markets.

Evli Equity Factor Europe

Equity fund that invests in European companies using a factor-based strategy.

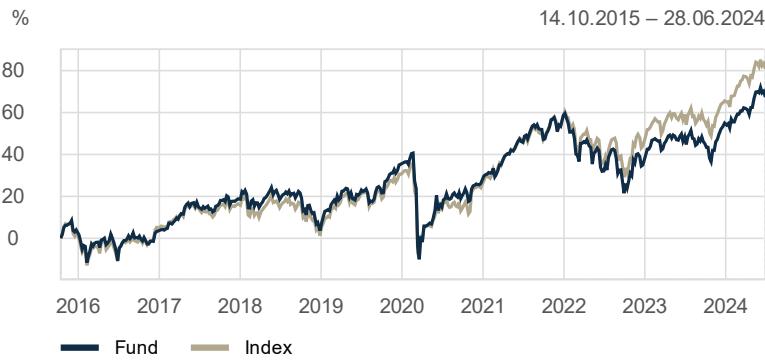

HALF YEAR COMMENT

Evli Equity Factor Europe focuses on four academically determined factors: value, low risk, momentum and quality. The fund complies with policies for responsible investment (ESG) and excludes from its investments companies that have substantial business in the following areas: weapons, alcohol, tobacco, mining of thermal coal, controversial weapons, gambling and adult entertainment. The fund also excludes companies with the lowest ESG rating and companies which have very severe confirmed ESG controversies.

The first half of the year saw good market-beating returns for the momentum factor. Quality and low volatility were on par with the benchmark while value lagged behind. Small and mid caps, which the fund overweights, lost ground to the benchmark.

In H1, Evli Equity Factor Europe gained 8.19% while the MSCI Europe Daily Net TR benchmark rose 9.31%. Since inception, Evli Equity Factor Europe has returned 67.39%, while the benchmark index has returned 80.85%.

²⁾ Includes management and custody fees.

Evli Equity Factor Global

Equity fund that invests in developed markets' companies globally using a factor-based strategy.

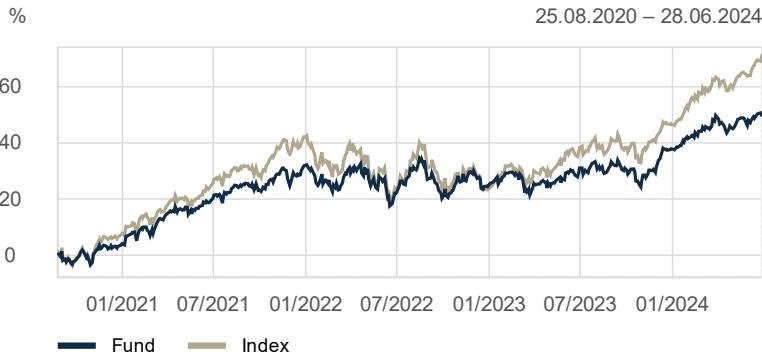

HALF YEAR COMMENT

Evli Equity Factor Global focuses on four academically determined factors: value, low risk, momentum and quality. The fund complies with policies for responsible investment (ESG) and excludes from its investments companies that have substantial business in the following areas: weapons, alcohol, tobacco, mining of thermal coal, controversial weapons, gambling and adult entertainment. The fund also excludes companies with the lowest ESG rating and companies which have very severe confirmed ESG controversies.

In relative terms versus the benchmark, momentum was the strongest factor performer in the first half of the year while quality also performed well. Low volatility stocks lagged behind slightly while value stocks struggled. Small and mid caps, which the fund overweights, lost ground to the benchmark.

Evli Equity Factor Global gained 8.46% in H1, while the benchmark MSCI World Daily Net TR was up by 15.38%. Since inception, Evli Equity Factor Global has returned 49.58%, while the benchmark index has returned 69.44%.

¹⁾ Includes fees paid to the Custodian.

²⁾ Includes management and custody fees.

Evli Equity Factor USA

Equity fund that invests in American companies using a factor-based strategy.

HALF YEAR COMMENT

Evli Equity Factor USA focuses on four academically determined factors: value, low risk, momentum and quality. The fund complies with policies for responsible investment (ESG) and excludes from its investments companies that have substantial business in the following areas: weapons, alcohol, tobacco, mining of thermal coal, controversial weapons, gambling and adult entertainment. The fund also excludes companies with the lowest ESG rating and companies which have very severe confirmed ESG controversies.

In relative terms versus the benchmark, momentum was the strongest factor performer in the first half of the year while quality also performed well. Low volatility stocks lagged behind slightly while value stocks struggled. Small and mid caps, which the fund overweights, lost ground to the benchmark.

In H1, Evli Equity Factor USA gained 9.12% while the MSCI USA Daily Net TR benchmark rose 18.37%. Since inception, Evli Equity Factor USA has returned 116.12%, while the benchmark index has returned 188.38%.

Evli Europe

Equity fund that invests in European companies.

HALF YEAR COMMENT

During H1 2024, stock selection weakened the return differential vs. the benchmark index. In terms of sectors, the most harmful selection effects came from IT, industrials, and materials, and the most beneficial ones from consumer staples and communication services. Geographically, underperformance was mainly due to selection in Denmark, Sweden, Germany, and Italy, overweights in France and Norway, and an underweight in the Netherlands. Beneficial effects came for example from Switzerland (selection, underweight, and the related currency effect) and from selection in France. By stock, the bottom attributors were the fact that we did not hold Novo Nordisk and ASML, and our portfolio company SSAB. The top attributors were Britvic and Future, and not having Nestle in the portfolio.

We exited 19 stocks and entered into 29 new positions during the first half of the year. 24 positions remained the same. As a result of stock selection, the largest end-of-period country weights were in the UK and France, and the largest sector weights in industrials and energy. We invest in underpriced companies that generate cash flow and have strong debt coverage.

PERFORMANCE SINCE START

Evli Europe Growth

Equity fund that invests in European growth companies.

HALF YEAR COMMENT

Evli Europe Growth focuses on large-cap European growth companies. The fund seeks to invest in companies that exceed their growth expectations by using investment growth and growth momentum metrics. The holdings' weights are market-cap scaled.

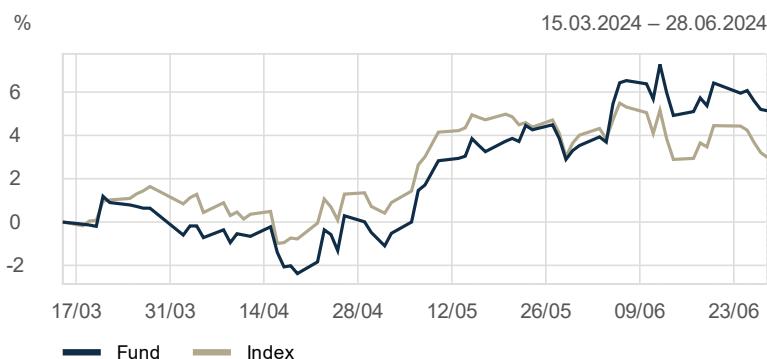

Since the fund starting operating on the 15th of March 2024, mega caps and technology stocks, which the fund has overweighted, have continued to outperform. The health care sector, another key overweight, deliver market-beating returns as well.

Evli Europe Growth gained 1.56% in June, while the benchmark MSCI Europe Daily Net TR declined by -0.98%. Since inception, Evli Europe Growth has returned 5.14%, while the benchmark index has returned 2.98%.

Evli Finland Select

Equity fund that invests in Finnish companies.

HALF YEAR COMMENT

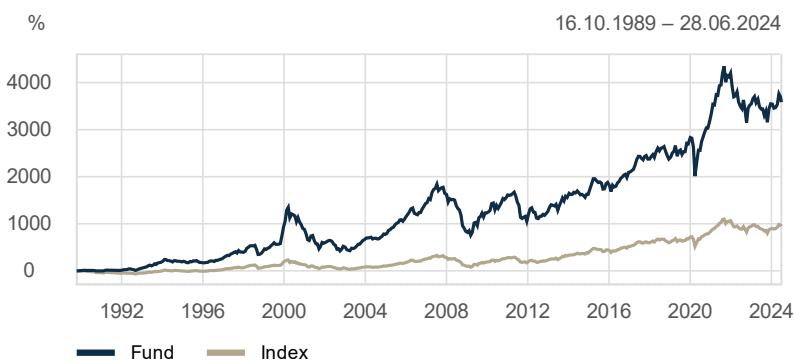

Global stock markets continued their rise in the first half of 2024, with the MSCI World Index increasing by 14.4% (EUR). The Finnish stock market, however, rose only by 3.5% during the first half of the year, indicating continued underperformance compared to global stock markets. Underperformance can be attributed to the industry and company composition of our domestic market, which does not include major technology or pharmaceutical companies like Nvidia and Novo Nordisk, whose businesses are supported by the explosive demand for semiconductors and weight-loss drugs. After a relatively good performance in April and May, the Helsinki Stock Exchange's -2.9% return in June was weak and significantly lagged behind the MSCI World Index's 3.3% return.

The fund's -0.3% return in the first half of the year lagged the benchmark, as the OMX Helsinki Cap Index was up 3.5%. Relative performance was negatively affected the most by our overweight in Kempower and our underweights in Cargotec and Kemira. On the positive side, boosting relative performance the most were our overweights in Wärtsilä and Puuilo, and our underweights in TietoEvry and Outokumpu.

During the first half of the year, we made new investments in Harvia and Konecranes, increased our holding in Wärtsilä, exited our position in TietoEvry, and reduced our positions in, amongst others, Huhtamäki, Valmet, and UPM.

Evli Finnish Small Cap

Equity fund that invests in Finnish small cap companies.

HALF YEAR COMMENT

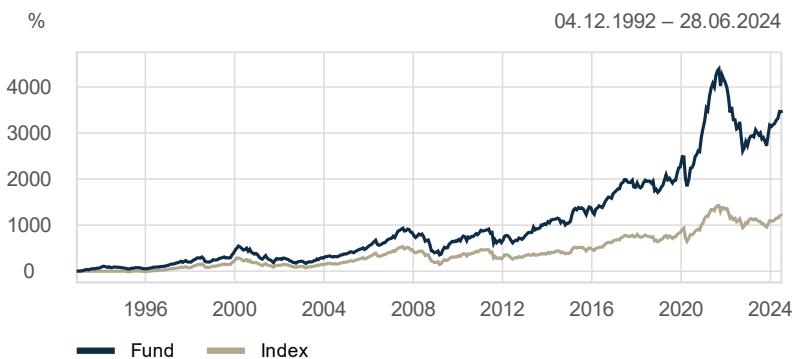

Global stock markets continued their rise in the first half of 2024, with the MSCI World Index increasing by 14.4% (EUR) over six months. In contrast, the Finnish stock market rose only by 3.5% during the first half of the year, indicating continued underperformance of the Helsinki Stock Exchange relative to global stock markets. Small caps performed somewhat better, with the Carnegie Finnish Small Cap Index rising by 6.8%. The relative outperformance of small caps in Helsinki compared to large caps in early 2024 is an exception, as large caps in the U.S. (S&P 500 vs. Russell 2000) and Sweden (OMX Stockholm vs. Carnegie Swedish Small Cap) have continued to outperform small caps.

The fund slightly lagged its benchmark in the first half of the year, with a total return of 6.4%. Contributing to relative performance the most were our overweight in Harvia and our underweights in Outokumpu and TietoEvry (neither of which are in the fund). The largest negative impacts on relative performance came from our overweights in Kempower and Talenom, as well as our underweights in Kemira and Cargotec, both of which were among the top performers in the benchmark index during the first half of the year.

In the first half of the year we opened new positions in e.g. Bioretec, Cargotec, and Orion. We exited our position in SSAB and reduced our holdings in Huhtamäki and Puuilo.

Evli GEM

Equity fund that invests in emerging markets' companies globally.

HALF YEAR COMMENT

During H1 2024, stock selection improved the relative return in the aggregate, especially in industrials, but also for example in consumer discretionary and materials. The most negative effects on the return differential came from selection in IT and an overweight in materials. Geographically, selection in India proved to be especially beneficial. The Fund also benefitted from an overweight and selection in Turkey and an underweight and selection in China. The biggest harm came from Taiwan, where negative selection effects outweighed the gain from an overweight position. By stock, Cochin Shipyard, Oracle Financial Services, and Mavi Giyim Sanayi Ve Ticaret were top attributors, while bottom attributors were the fact that Taiwan Semiconductor and Tencent were not in the portfolio and our investment in China Medical System Holdings.

We sold 40 stocks from the portfolio during the first half of the year and bought 40 new stocks. 54 stocks remained the same. As a result of stock selection, the largest end-of-period country weights were in Taiwan, India, and China, and the largest sector weights in IT, consumer discretionary, and industrials.

Evli Global

Equity fund that invests in developed markets' companies globally.

HALF YEAR COMMENT

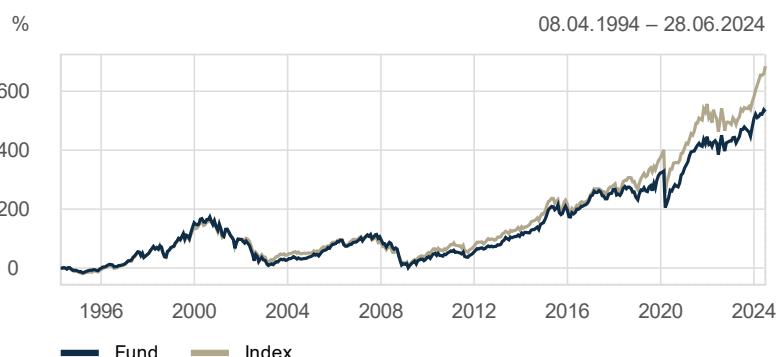

During H1 2024, stock selection weakened the fund's return differential vs. its benchmark. By sector, the most negative effects came from IT and industrials, while geographically, the underperformance was mainly due to selection in the US. An overweight in France and an underweight in USD are other examples of harmful factors during H1. By stock, the most negative attribution effects came from not holding Nvidia and from our investments in Malibu Boats and Thor Industries, while top attributors were Infocom, Perficient, and Yamaichi

Electronics.

We exited 20 positions and entered into 28 new positions during the first half of the year. 35 positions remained the same. As a result of stock selection, the largest end-of-period sector weights were in industrials and IT, and the largest country weight in the US. We invest in underpriced companies that generate cash flow and have strong debt coverage.

Evli Global X

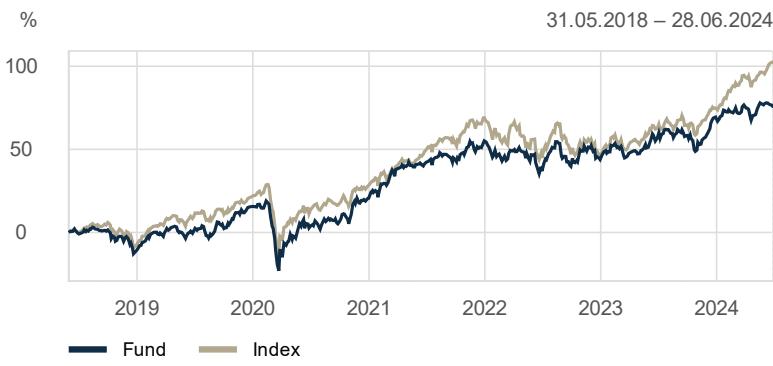

An active equity fund that excludes companies operating in certain sectors.

HALF YEAR COMMENT

During H1 2024, stock selection weakened the fund's return differential vs. its benchmark. By sector, the most negative effects came from IT and industrials, while geographically, the underperformance was mainly due to selection in the US. An overweight in France and an underweight in USD are other examples of harmful factors during H1. By stock, the most negative attribution effects came from not holding Nvidia and from our investments in Malibu Boats and Thor Industries, while top attributors were Infocom, Perficient, and Yamaichi Electronics.

We exited 24 positions and entered into 26 new positions during the first half of the year. 30 positions remained the same. As a result of stock selection, the largest end-of-period sector weights were in industrials and IT, and the largest country weight in the US. We invest in underpriced companies that generate cash flow and have strong debt coverage.

Evli Hannibal

Equity fund that invests in European companies whose prices are not only as low as possible, but also significantly lower than historical prices.

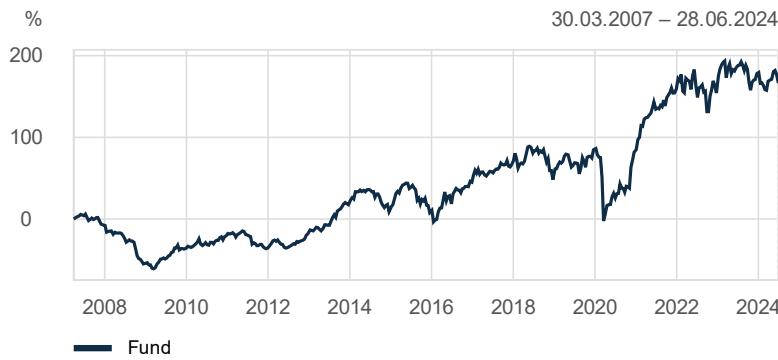

HALF YEAR COMMENT

A basket of 8 shares "industrials at 1/3 x book value" is now the largest category in the portfolio, with a value of 21.8 m€ and a corresponding massive share in net assets of 73.6 m€. We increased our holdings in two German steel conglomerates, Thyssenkrupp and Salzgitter, and in the leading potash producer, K+S AG.

It is notable that the market valuation of the German steel manufacturing industry is currently so deeply negative. The combined value of cash and shareholdings already exceeds the market caps for both conglomerates, even before considering the value of other operating divisions. Both companies have reached their lowest value ever relative to net assets, with the ratio hitting 0.20 (!). Needless to say, we find all this highly interesting. At the same time, 4 years after the last purchase, we bought shares in stainless steel maker Outokumpu. Despite the company's debt-free status for the first time in its 36-year history on the exchange, its share price reached its lowest level ever relative to equity.

Evli Impact Equity

Global equity fund specializing in impact investing.

HALF YEAR COMMENT

In the first half of 2024, the fund's return was 7.80%, while the benchmark return was 14.92%. The fund's relative underperformance was primarily due to the absence of Nvidia, Amazon, and Meta stocks in the portfolio. Among the top positive contributors to fund performance were United Therapeutics, a biotech company; Clean Harbors, a hazardous waste treatment company; and Spie, an engineering company. Thematically, the fund has high concentrations in the industrials and IT sectors, currently 41% weight in industrials and 22.5% in IT, versus benchmark weights of these sectors of 10.3% and 26%, respectively. The fund invests in activities such as infrastructure construction, building materials, semiconductors, and software producers. These activities are aligned with the fund's objective of promoting a resource-efficient, low-carbon economy. The fund currently has a 20.3% weight in companies that contribute to the social objective of accessible and affordable healthcare and education.

During the first half of 2024, the fund added 16 new holdings, while 18 holdings were sold. This is the result of the annual investment revision process. The fund's strategy is to invest in companies that demonstrate consistent growth and financial strength, while meeting the fund's environmental and social objectives. As of June 2024, the fund had 39 holdings.

Evli Japan

Equity fund that invests in Japanese companies.

HALF YEAR COMMENT

During H1 2024, stock selection in industrials and health care and an underweight in financials weakened the return differential the most, while selection in IT and communication services improved it. By stock, bottom attributors were Solasto, JustSystems, and ValueCommerce, whereas the most positive attribution effects came from our investment in Infocom and Dexerials, and from the fact that Sony Group was not in the portfolio.

We exited 29 positions and entered into 31 new positions during the first half of the year. 17 positions remained the same. As a result of stock selection, the largest end-of-period sector weights were in consumer discretionary, industrials, and IT, and small and mid caps had an important role in the portfolio. We invest in underpriced companies that generate cash flow and have strong debt coverage.

Evli Nordic

Equity fund that invests in Nordic companies.

HALF YEAR COMMENT

During H1 2024, sector weights weakened the fund's return differential vs. its benchmark, and the most harmful of them were an overweight in energy and an underweight in health care. The net effect of stock selection was neutral, as the beneficial effect of selection in IT and energy was canceled out by the harmful impact of selection in other sectors, such as health care and materials. Geographically, stock selection in Sweden and Denmark led to underperformance, which was only partly compensated by successful selection in Norway and Finland. By stock, the most negative attribution effects came from the fact that Novo Nordisk was not in the portfolio and from our investments in Kambi Group and SSAB, while the most positive ones came from our holdings Crayon Group and Kemira and from not having Vestas Wind Systems in the portfolio.

We exited 18 positions and entered into 18 new positions during the first half of the year. 19 positions remained the same. As a result of stock selection, the largest end-of-period sector weight was in industrials, materials, and energy, while the largest country weight was in Norway. We invest in underpriced companies that generate cash flow and have strong debt coverage.

Evli Nordic Small Cap

Equity fund that invests in small and medium-sized Nordic companies.

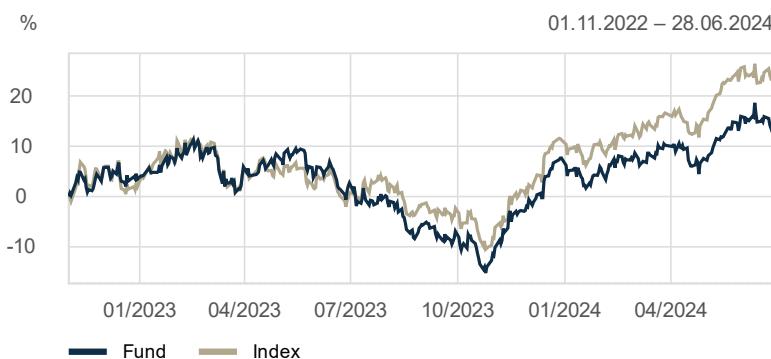

HALF YEAR COMMENT

Nordic small-caps (VINX Small Cap Index) rose 10.9% (EUR) in the first half of the year, somewhat underperforming Nordic large-caps (VINX Index total return was 14.2% (EUR), with Novo Nordisk contributing 9.7%). A similar trend was observed in the United States, where the performance of the Russell 2000 Index, which tracks small-cap shares, significantly lagged behind the S&P 500. After the strong outperformance in May, in June Nordic small-caps (down -1.7%) were somewhat weaker compared to Nordic large-caps and global stock markets. In the currency markets, both the Swedish and Norwegian kroner ended June close to the levels seen at the end of the previous year.

The fund got trounced by the benchmark index in first six months of 2024 (5.6% vs. 10.9%). Hurting relative performance the most were our underweights in Zealand Pharma and Kongsberg Gruppen, as well as our overweights in Paradox Interactive and Surgical Science. Relative performance was positively impacted the most by our overweights in Ambea, AAK, and AFRY.

During the first half of the year, we exited positions in Alcadon, Aker, Surgical Science, and Zaptec. New additions to the fund include Boliden, MIPS, Munters, and Xvivo.

Evli North America

Equity fund that invests in North American companies.

HALF YEAR COMMENT

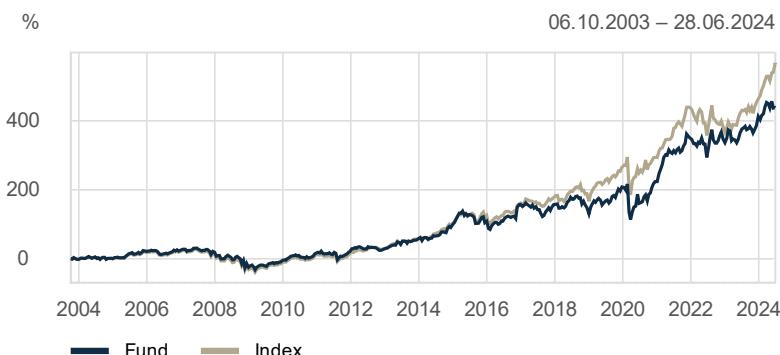

During H1 2024, both stock selection and sector weights weakened the fund's return differential vs. its benchmark, and the most harmful effects came from an underweight and selection in information technology. The underperformance was also due to, for example, overweights and selection in materials and consumer discretionary. By stock, the most negative attribution effects came from the fact that Nvidia, Meta Platforms, and Amazon.com were not in the portfolio, while top attributors were Emcor, Sprouts Farmers Market, and

not holding Tesla.

We exited 53 positions and entered into 46 new positions during the first half of the year. 58 positions remained the same. As a result of stock selection, the largest end-of-period sector weights were in industrials and consumer discretionary. We invest in underpriced companies that generate cash flow and have strong debt coverage.

Evli Swedish Small Cap

Equity fund that invests in small and medium-sized Swedish companies (SEK-denominated).

HALF YEAR COMMENT

Swedish small-caps (Carnegie Small Cap Index) had a 8.6% return (SEK) in the first half of the year, slightly lagging behind the performance of Swedish large-caps (OMX Stockholm's total return was 10.6%). A similar trend was observed in the United States, where the performance of the Russell 2000 Index, which tracks small-cap shares, significantly lagged behind the S&P 500. After the strong outperformance in May, Swedish small-caps (-2.6% for the month) were somewhat weaker in comparison to local large-caps and global stock markets in June. In the currency markets, the Swedish krona ended roughly at the same level as at the end of the previous year, with the final EUR/SEK exchange rate in June being 11.36.

The fund's return slightly exceeded the benchmark index's return in the first half of the year (8.64% vs. 8.59%). Relative performance was positively impacted the most by our over-weights in Ambea, AAK, and MedCap. Relative performance was negatively affected the most by our underweight in SAAB (prohibited by the fund's rules) and our overweights in Paradox Interactive, RVRC, and Surgical Science.

During the first half of the year, we exited positions in Bravida, Coor, Fortnox, and Note. New additions to the fund include Boliden, MIPS, and Xvivo.

Equity fund that invests in US growth companies.

HALF YEAR COMMENT

Evli USA Growth focuses on large-cap US growth companies. The fund seeks to invest in companies that exceed their growth expectations by using investment growth and growth momentum metrics. The holdings' weights are market-cap scaled.

The US market was again driven by strong performance in the technology sector in H1. Mega-cap growth companies were the main positive contributors to both the fund and the benchmark. The fund continued to overweight technology companies throughout the period.

Evli USA Growth gained 23.63% in H1, while the benchmark MSCI USA Daily Net TR was up by 18.37%. Since inception, Evli USA Growth has returned 41.33%, while the benchmark index has returned 31.73%.

PERFORMANCE SINCE START

Evli Silver and Gold

Equity fund that invests in gold and silver mining companies globally.

HALF YEAR COMMENT

An eventful H1 for gold miners produced the following series of monthly fund returns (A series): -7.9%, -8.4%, +24.9%, +8.1%, +11.2%, -8%, totaling +16.5% YTD. Gold and silver prices are up 12.8% and 22.5% YTD, respectively. The "miners to metals" relation has thus remained considerably below the same relation for the fund since launch: fund +323% vs gold +108%, or a ratio of 3.

Precious metals miners have underperformed metals in recent years compared to many periods in the past. This is also evident in the fund being 14% below its 4/22 peak, despite gold and silver being 18% and 13% above the levels at that time. The same can be seen in the valuation graph for our current portfolio, which is below its 10-year median, despite the considerably higher metal value of reserves with gold at a nominal all-time high. This relationship is particularly interesting right now as gold miners will soon report very good Q2 earnings as a direct consequence of the average Q2 gold price of 2300+. The "catch-up" potential for miners is significant at current metal prices, and even more so at higher metal prices.

The fund has increased its holdings in platinum miners to close to 10% of AUM as the sector's top three miners have been trading at about two-thirds of their levels from 3 years ago. Platinum is the huge laggard of the sector, with the platinum/gold ratio at its lowest point ever.

Zenito UK Value Fund

Equity fund that invests in British publicly traded companies, focusing on those with the lowest possible price.

HALF YEAR COMMENT

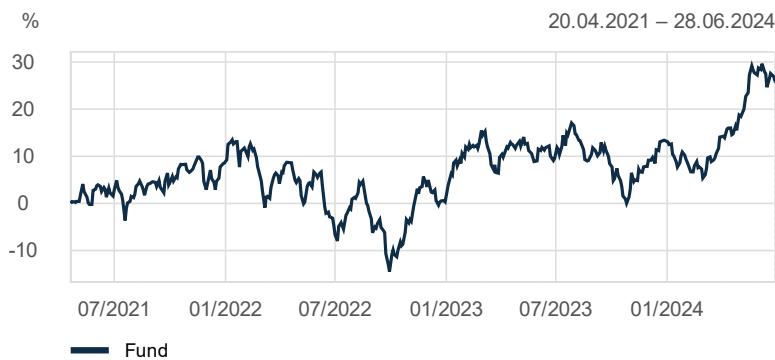

The five best performing shares in June were retailer N Brown, shuttle tanker company Knot Offshore, media outlet Reach (formerly Trinity Mirror), the crises-struck oil service and engineering firm Petrofac, and consulting and engineering firm John Wood. The five worst performers were marketing firm NAHL, venture capital investment company IP Group, satellite operator Eutelsat/Oneweb, ilmenite miner Kenmare, and the FTSE-100 silver miner Fresnillo Plc.

At the end of June, the value of the fund was 20.9 m€, while our share in the net assets of our companies was significantly higher at 30 m€. The median ratio between the market value and equity of our current holdings over the last 10 years stands at 1.33, with the highest ratio being 2.13. The current ratio is 0.7, thus the distance to "normal" is +90% and to the highest valuation in history +204%.

Interest among investors for smaller UK companies appears to at least partly be returning. High takeover activity can also be seen as a sign of this. Attempted and successful takeovers appear to be "price driven" to a rather meaningful extent, motivated by the low valuation levels of the targets. The first half of the year was a strong period for the fund, as it has also been for the fund's performance relative to other members of the fund's international class, "UK Mid Cap", both this year and since inception.

Evli Finland Mix

Balanced fund that invests in Finnish equities and euro area fixed income instruments.

HALF YEAR COMMENT

Global stock markets continued their rise in the first half of 2024, with the MSCI World Index increasing by 14.4% (EUR) over six months. In contrast, the Finnish stock market rose only by 3.5%. After the Finnish stock market's relatively good performance in April and May, June's -2.9% performance was clearly behind the MSCI World index return of 3.2%. Rates rallied strongly going into the year. In January, markets were pricing in more than 6 rate cuts from the ECB, but as inflation data began coming in higher-than-expected markets began to shift their rate cut bets further into the horizon. As expected, ECB played ball first and cut rates in June with more cuts to be expected in the second half of the year. Yields in the credit market have remained at attractive levels, driving credit spreads tighter; IG credit spreads tightened 18 and HY spreads 37 basis points.

The fund's return was 2.36% in the first half of the year, outpacing the index return of 1.09%. In the equity portfolio, the most positive impacts on relative performance came from our overweight in Cargotec and Puuilo, while not holding Konecranes and Wärtsilä had a negative impact. In the fixed income portfolio, the best relative performance came from Finnair and PHM Group bonds. With rates rising in H1, higher duration bonds in the portfolio (Elisa and Fortum) contributed negatively to the relative performance.

Evli Global Multi Manager 30

International allocation fund that invests with a focus on fixed income instruments.

HALF YEAR COMMENT

The first half of 2024 has been strong for stock markets. The global stock index is up about 15 percent, mainly driven by large growth companies in the United States. European and emerging market stocks have also performed well and are both up about 10 percent, while the return on Finnish stocks has remained around five percent.

Market rates fell in the second half of 2023 but returned to an upward trend in the first half of 2024. This has particularly affected the returns of longer duration bonds. Therefore, of the fixed-income asset classes we use, government bonds have performed the weakest, down about 2 percent. The best performers have been high-yield corporate bonds and money market investments.

No significant changes have been made to the allocation between stocks and bonds during the first half of 2024, and we remain overweight in stocks. Within equities, in February we decided to sell Finnish stocks from overweight to neutral. In addition, Europe was gradually bought from underweight to neutral during the spring. Thus, at the end of June, we are overweighting the United States and underweighting emerging markets. In bond investments, no changes have been made during the first half of the year, and we maintain a slight overweight in high-yield corporate bonds and emerging market bonds, and an underweight in government bonds.

Evli Global Multi Manager 50

International allocation fund that invests equally in equities and fixed income instruments.

HALF YEAR COMMENT

The first half of 2024 has been strong for stock markets. The global stock index is up about 15 percent, mainly driven by large growth companies in the United States. European and emerging market stocks have also performed well and are both up about 10 percent, while the return on Finnish stocks has remained around five percent.

Market rates fell in the second half of 2023 but returned to an upward trend in the first half of 2024. This has particularly affected the returns of longer duration bonds. Therefore, of the fixed-income asset classes we use, government bonds have performed the weakest, down about 2 percent. The best performers have been high-yield corporate bonds and money market investments.

No significant changes have been made to the allocation between stocks and bonds during the first half of 2024, and we remain overweight in stocks. Within equities, in February we decided to sell Finnish stocks from overweight to neutral. In addition, Europe was gradually bought from underweight to neutral during the spring. Thus, at the end of June, we are overweighting the United States and underweighting emerging markets. In bond investments, no changes have been made during the first half of the year, and we maintain a slight overweight in high-yield corporate bonds and emerging market bonds, and an underweight in government bonds.

Evli Q7

Balanced fund that invests globally in equities and fixed income instruments.

The first half of 2024 has been strong for stock markets. The global stock index is up about 15%, mainly driven by large growth companies in the United States. European and emerging market stocks have also performed well and are both up about 10%. Market rates fell in the second half of 2023 but returned to an upward trend in the first half of 2024. This has particularly affected the returns of longer duration bonds.

After the acceleration of inflation in the first quarter, prices slowed down in April and May. This is positive news for both the United States and the world economy, as US inflation has been a significant macroeconomic risk. Despite the easing of inflation figures, the Federal Reserve remains cautious about inflation. The Fed now anticipates only one rate cut this year, as it has raised its inflation forecasts. However, the markets are expecting nearly two rate cuts.

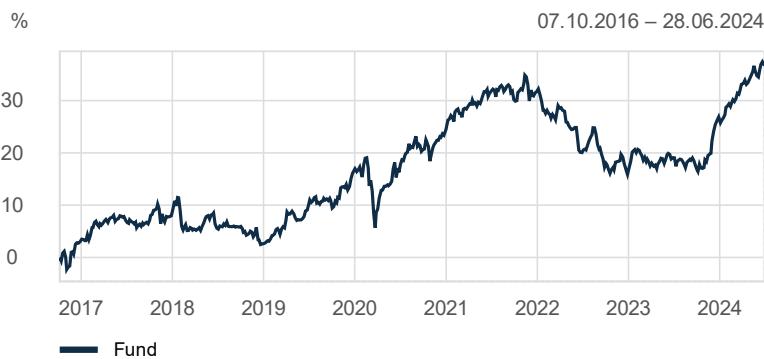

The return for Evli Q7 in the first six months of the year 2024 was excellent in both absolute and relative terms, about 7.9%. An active allocation with an emphasis on equity investments clearly added value. During the review period, the average weight of equity investments was higher than usual, about 64%. Correspondingly, the average share of the fund's long-term fixed income investments was about 20%, short-term fixed income investments 6%, and other investments 10%.

Evli Corporate Bond

Long-term fixed income fund that invests in European corporate bonds with both low and high credit ratings.

HALF YEAR COMMENT

In the first half of 2024, the focus of the markets was on central bank policies and inflation. Postponed expectations for interest rate cuts and sticky inflation resulted from stronger-than-expected growth, particularly in the United States. Risky asset classes performed well. The ECB started its rate cuts in June, historically before the Fed. The ECB is expected to make two more 0.25 percentage-point cuts in 2024 and the Fed is expected to join the rate-cutting cycle by the end of the year. In the first half of the year, investment grade spreads tightened by 18 basis points and high yield spreads by 37 basis points.

The return for the first half of 2024 was 1.47% (B series), well above the index return of 0.99%. Both allocation and selection, especially in the BBB category, performed exceptionally well. We believe we are at the peak of central banks' rate hike cycles, with anticipated cuts to policy rates supporting the market throughout 2024. During the first half of the year, we bought mid-curve investment grade bonds, which should benefit from the cutting cycle. We continue to favor investment grade bonds for their attractiveness but have slowly started to increase our high yield weighting again.

The fund's yield to maturity (YTM) was 4.80%, and its modified duration was 3.86.

Evli Emerging Markets Credit

Long-term fixed income fund that invests in the emerging markets with both low and high credit ratings.

HALF YEAR COMMENT

Bond markets in the first half of 2024 were perhaps best characterized by rising interest rates and increased volatility. Despite the rise in rates, emerging market corporate bonds performed well during the first half of the year. The fund's H1 return was 2.29%, compared to the benchmark's 3.07%. The fund had a relatively strong start to the year; however, towards the end of H1, one of the fund's investments came under pressure, weakening the fund's relative performance. Credit spreads tightened at the beginning of the year and remained stable thereafter.

The fund's key figures and composition remained fairly unchanged during the first half of the year. Credit risk in the fund was reduced by increasing the weight of investment grade companies in the portfolio. The fund's duration at the end of June was 4.35, roughly in line with that of the benchmark.

The biggest question mark for the market in 2024 remains central bank monetary policy and inflation developments. Depending on macroeconomic variables, the fund's duration may be increased during the year. Thanks to higher interest rates, the absolute yield level of emerging market corporate bonds is at a very attractive level for investors.

Evli Euro Government Bond

Long-term fixed income fund that invests in EEA member state euro-denominated bonds with high credit ratings.

HALF YEAR COMMENT

June saw a tiny rally down in bond yields, as hopes for a US rate cut were rekindled after some softer economic data. Markets and most economists have been wrong for a long time, so any tiny supportive news is worth clinging to. Technically, the move broke the trend developed in the spring, at least for the moment. The ECB opened the path to cut and for good reason. The Eurozone's fear of inflation is the only driver for the central bank, not growth, so the next move will not be seen until the fall.

The fund's interest rate risk was clearly below the index at the start of the year, then rose above the index towards the summer. With the recent rally, risk is again below the index. Italy and Portugal have been kept underweight and Spain overweight during the first half of the year. France caused a small storm in country spreads, and Italy in particular widened significantly.

Evli Euro Liquidity

Short-term fixed income fund that invests in Nordic euro-denominated fixed income instruments.

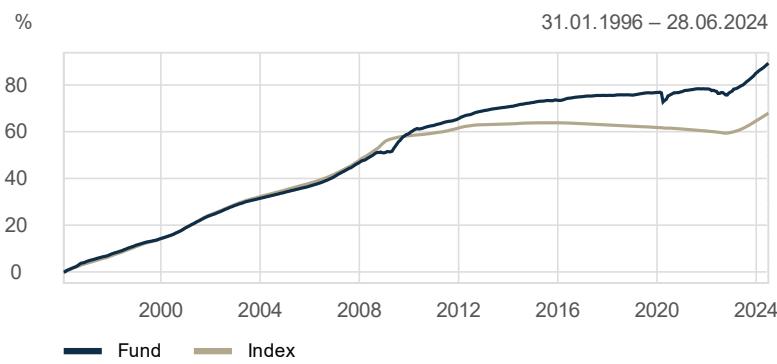

HALF YEAR COMMENT

June saw a tiny rally down in bond yields, as hopes for a US rate cut were rekindled after some softer economic data. Markets and most economists have been wrong for a long time, so any tiny supportive news is worth clinging to. Technically, the move broke the trend developed in the spring, at least for the moment. The ECB opened the path to cut and for good reason. The Eurozone's fear of inflation is the only driver for the central bank, not growth, so the next move will not be seen until the fall.

Evli Euro Liquidity continued to offer an excellent return in line with expectations. Uncertainty regarding how central banks will act continued to help reinvestment all the way until early June, and maturing bonds have found new targets at decent levels. Part of the portfolio has already been built with 2025 in mind. Eurozone short rates are slowly falling towards the 2% area.

Evli European High Yield

Long-term fixed income fund that invests in European corporate bonds with low credit ratings.

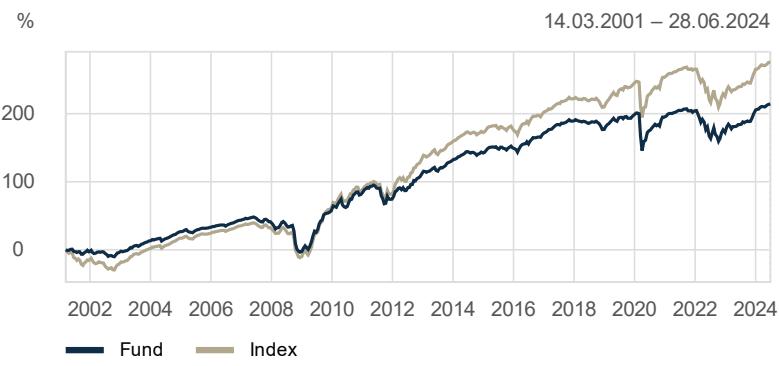

HALF YEAR COMMENT

In the first half of 2024, the focus of the markets was on central bank policies and inflation. Postponed expectations for interest rate cuts and sticky inflation resulted from stronger-than-expected growth, particularly in the United States. Risky asset classes performed well. The ECB started its rate cuts in June, historically before the Fed. In the first half of the year, high yield spreads tightened by 37 basis points.

The return for the first half of 2024 was 2.93% (B series), ahead of the index return (2.86%). The best performance came from real estate, where the fund has a large overweight. The best relative return came from selection in technology. The weakest sector was financial services due to Intrum's distressed situation. New issue market activity increased significantly with refinancing from last year. New bonds are coming in at attractive levels and the fund has been active in these. We believe that defaults will remain low, as company earnings have been stable and balance sheets are strong. We have reduced the portfolio risk by decreasing B-rated bonds and added short duration bonds that are refinanceable and trade below par. Low cash prices support the market and we believe 2024 will be favorable for high yield investors.

The fund's yield to maturity (YTM) was 7.24%, and its modified duration was 2.69.

Evli European Investment Grade

Long-term fixed income fund that invests in European corporate bonds with high credit ratings.

HALF YEAR COMMENT

During the first half of 2024, long-term interest rates rose as expectations for inflation remained higher than anticipated. The ECB made its first rate cut in June, but forecasts for future rate cuts are modest. In the corporate bond market, spreads have tightened by about 17 basis points since the start of the year.

The fund's return since the beginning of the year was +0.66% (B series), as rising long-term rates have negatively impacted bond prices. The return was slightly better than the benchmark index. Banks and real estate companies were the fund's best performers.

The fund has reduced credit risk by decreasing the amount of subordinated bonds in the portfolio. Sector weights have been kept mostly unchanged. Duration has also been kept slightly longer than the index. As of the end of June, the fund's yield level was 4.09%, and its duration was 4.39.

Evli Green Corporate Bond

Long-term fixed income fund that invests in European green corporate bonds.

HALF YEAR COMMENT

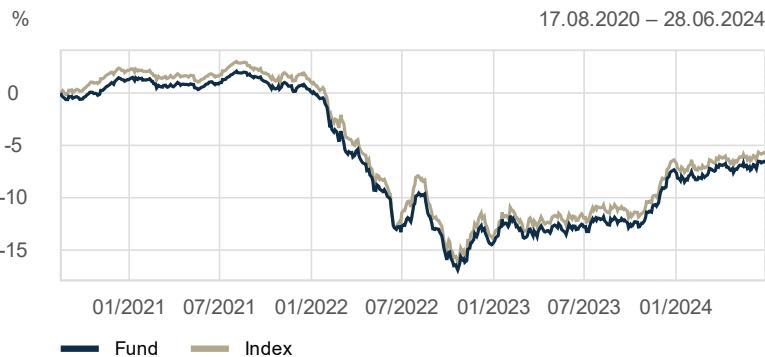

Going into 2024, rates had rallied strongly on the back of expected interest rate cuts. In January, markets were pricing in more than 6 rate cuts from the ECB, but the tide turned as disinflation expectations were pushed further away due to higher-than-expected wage and services inflation. At the current attractive all-in yields, corporate bonds have been in high demand and credit spreads have followed suit, with investment grade spreads tightening by 18 basis points (bps) and high yield by 37 bps.

The fund's first half 2024 return after fees was 0.89% (B series), outperforming the index return of 0.87%. Overweight positions in real estate and telecommunications had a positive attribution to the relative performance, while underweights in banks and utilities had a negative impact on relative performance. Security selection in real estate contributed positively to the outperformance, while selection in utilities lagged the benchmark. During H1, we increased the weights of the automotive and utilities sectors in the portfolio and decreased the weight of the financial services sector.

The new issue market was robust in the first half of the year, with May being the busiest month in the history of European green bond issuance. Despite the strong performance in spreads, the corporate bond market remains attractively priced with investment grade spreads near the long-term median.

Evli Leveraged Loan

Fixed income fund that invests in the Nordic leveraged loan markets.

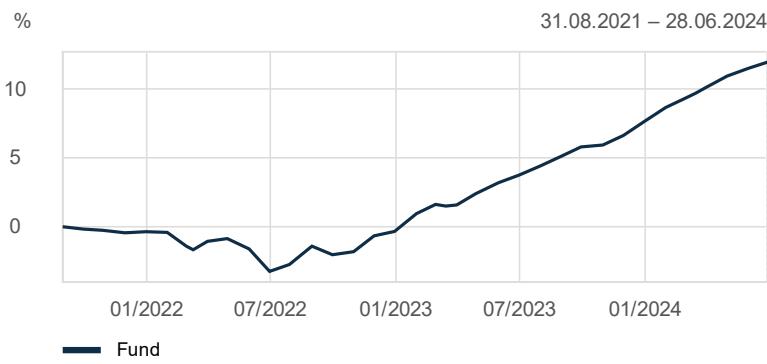

HALF YEAR COMMENT

The fund continued to implement its investment strategy initiated on August 31, 2021, focusing on credit investments in senior secured loans and floating rate, high yield bonds from Nordic borrowers.

The fund's deployment percentage was approximately 95% (including investments and investment commitments) as of June 30, 2024. Approximately 75% of investments were comprised of loan instruments and 25% of floating rate, high yield bonds. 100% of investments were focused on floating rate and senior secured instruments. The investments have been primarily within stable, non-cyclical industry sectors and companies. The fund has actively avoided investing in companies with sensitivity to, for example, interest rate movements (e.g., real estate companies), changes in consumer behavior, raw material prices, and weak pricing power in general.

At the end of June, the fund's yield to maturity was 8.35%, and its modified duration was 0.17. The performance of the fund (B series) over the last 6 months was +4.06% and +7.91% over the last 12 months after fees. Performance was positively impacted by the stable performance of the underlying credit investments and the level of short-term interest rates. Credit quality has remained very strong during the first half of the year.

Evli Nordic 2025 Target Maturity

Fixed-period fund that invests in Nordic corporate bonds.

HALF YEAR COMMENT

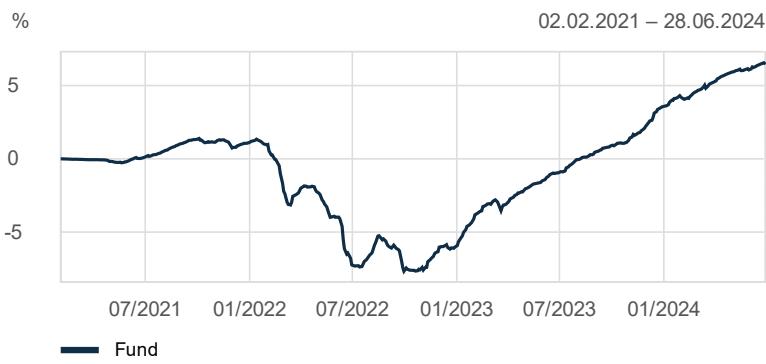

During the first half of 2024, long-term interest rates rose as expectations for inflation remained higher than anticipated. The Swedish central bank made its first rate cut in May and the ECB in June. In Sweden, the forecasts for rate cuts are still slightly faster than in the Eurozone. Corporate results have generally been in line with expectations, and credit risk in the portfolio has remained stable.

The fund's return since the beginning of the year was +2.94% (B series). No significant changes were made to the fund's investments, as the bonds are typically held until maturity. The fund's interest rate and credit risk durations are gradually decreasing. However, bonds that are maturing or being bought back before maturity are replaced with new ones as necessary. As of the end of June, the fund's yield level was 6.18% hedged to euros.

Evli Nordic Corporate Bond

Long-term fixed income fund that invests in Nordic corporate bonds.

HALF YEAR COMMENT

During the first half of 2024, long-term interest rates rose as expectations for inflation remained higher than anticipated. The Swedish central bank made its first rate cut in May and the ECB in June. In Sweden, the forecasts for rate cuts are still slightly faster than in the Eurozone. Corporate results have generally been in line with expectations, and credit risk in the portfolio has remained stable.

The fund's return since the beginning of the year was +2.74% (B series). The best-performing bonds were those of banks and real estate companies. The market for new issues was very active, and companies refinanced bonds maturing in 2025. The fund participated in dozens of new issuances during the early part of the year.

Credit quality in the fund has remained better than before and the weight of BBB bonds has increased slightly. There were no significant changes in sector allocations. As of the end of June, the fund's yield level was 5.31%, and its interest rate duration was 2.09.

Evli Short Corporate Bond

Fixed income fund that invests in short-maturity corporate bonds in a diversified manner.

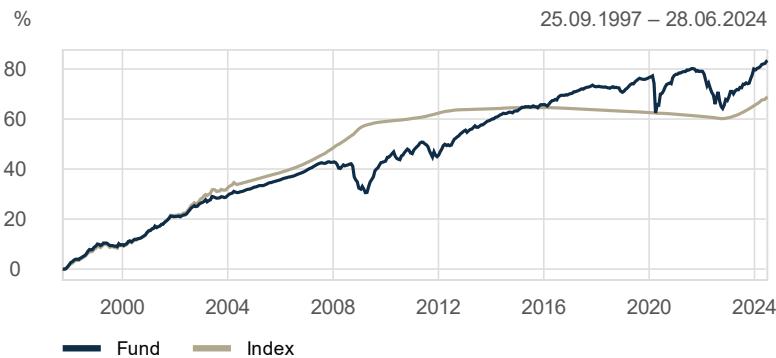

HALF YEAR COMMENT

The rally in corporate bonds that started in October faded in January when high expectations for rate cuts in 2024 were scaled back significantly. That resulted in a rapid rise in yields back to levels where the move last October started. Ultimately, sentiment was driven by rate cut expectations on the one hand (disappointment raised the 2-year German yield by 43 basis points, bps, and the 5-year yield by 53 bps), and good corporate profitability and strong balance sheets on the other (yield spreads narrowed by 18 bps for investment grade and 37 bps for high yield).

The fund netted a return of 1.82% (B series) during H1, falling 0.30% short of the benchmark return. The underperformance occurred during the first quarter, when the rapid rise in yields had a negative impact on the fund's return. However, the return over the last 12 months exceeded the benchmark by 2.26 percentage points. The best relative performance in the beginning of the year came from overweights in transportation and real estate, while the underperformance came from underweights in banks and insurance. In terms of allocation, we made small changes during the beginning of the year, driven in particular by the primary market. The most significant changes in allocation were a decreased weight in banks and financial services and an increased weight in the automotive industry and capital goods.

PERFORMANCE SINCE START

Past performance is no guarantee of future returns.

²⁾ Includes management and custody fees.

Dictionary

Active Share, % measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns attained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon Footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

OAS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk free rate.

Portfolio Turnover is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = $((X + Y) - (S + T)) / M \times 100 / 2$, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R2 (R-squared) describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-squared is the square of the correlation coefficient.

SFDR In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investments decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three $\pm 5\%$ of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is $12 \pm 20\%$, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM) Estimated annual rate of return to maturity (yield to maturity).

YTW Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).

Green bonds are bond instruments where the proceeds are earmarked to projects or activities with environmental benefits.

Sustainability bonds are instruments where the proceeds are earmarked to a combination of projects or activities with environmental or social benefits.
