INVESTMENT AND MANAGEMENT INFORMATION

CM-AM INSTITUTIONAL SHORT TERM

This Fund is actively managed on a discretionary basis. The fund's investment objective is to outperform, over the recommended investment period, its benchmark index, which is the Compounded €STR. Particularly low, negative or volatile interest rates may cause the fund's net asset value to decline in a structural manner. The index accounts for the compounding of interest.

To achieve its investment objective, the Fund employs an active management style in order to ensure that it does not deviate from its risk exposure limits and performance objectives, while seeking to optimise/return profile of its portfolio relative to its benchmark.

The portfolio is constructed within the sensitivity range based on the conclusions of the various market and risk analyses carried out by the management team.

The management process is based first and foremost on macro-economic analysis, aimed at anticipating market trends based on an analysis of the global economic and geo-political context. This approach is then supplemented by a micro-economic analysis of issuers and by an analysis of the various technical elements of the market, aimed at monitoring the multiple sources of added value in the fixed-income markets in order to integrate them into the decision-making process. Investment decisions are mainly based on:

- exposure to interest rate risk,
- geographic allocation within the eurozone,
- credit risk exposure resulting from sector allocation and issuer selection,
- The selection of investment vehicles.

The Fund's maximum volatility will not deviate by more than 0.50% from that of the compounded €STR index.

Environmental, social and governance (ESG) criteria are one of the components of investment management, but their weighting in the final decision is not defined upstream.

The Fund will observe the following net asset exposure limits:

Up to 110% of net assets may be invested in public and private debt instruments of issuers in OECD countries and the eurozone, of Investment Grade as determined by the asset management company or a credit-rating agency.

The Fund's exposure to interest-rate risk will range from 0 to + 0.5.

- From 0% to 10% exposure to currency risk on non-euro currencies

The fund may invest in:

- debt securities and money-market instruments of Investment Grade,

- up to 10 % of its net assets in French or foreign UCITS or general-purpose investment funds governed by French law, meeting the conditions of article R.214-13 of the Monetary and Financial Code.

The fund may also trade in:

- forward contracts, futures and options and securities with embedded derivatives, used for hedging and/or to gain exposure to interest-rate, credit and currency risks. The indicative leverage effect is 150%.
- deposit and borrow cash and engage in securities financing transactions.

CM-AM GLOBAL GOLD

This Fund is actively managed on a discretionary basis. The objective of the Fund is to achieve a performance, net of fees, linked to the performance of gold mining and commodities stocks, without constraints and through the selective management of stocks linked to gold and natural resources, over the recommended investment period. Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, the Fund's performance may be compared with a benchmark, such as the NYSE ARCA GOLD MINERS, for ex-post evaluation.

The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index.

The index is calculated at closing prices and is expressed in euros and with dividends reinvested.

In order to achieve its management objective, the Fund adopts a selective management style of direct stocks and/or UCIs, determined by means of a fundamental analysis of the economic situation, the various sectors of activity linked to gold, commodities and natural resources and the economic forecasts made by the portfolio management company.

Environmental, social and governance (ESG) criteria are one of the components of investment management, but their weighting in the final decision is not defined upstream.

The Fund will observe the following net asset exposure limits:

From 60 % to 110 % of net assets may be invested in equities, with no restrictions as to geographic region, market capitalisation or economic sector, within the following limits:

- from 60 % to 110 % in equities linked to gold and to natural resources
- at least 50% in gold mining equities
- from 0% to 50% in emerging market countries
- from 0% to 10% in equities of companies with a market cap of < in 150 million euros

From 0% to 10% of net assets may be invested in public and private debt instruments of geographic region, including emerging markets, of Investment Grade as determined by the asset management company or a credit-rating agency

From 0% to 10% in convertible bonds.

From 0 % to 110 % exposure to currency risk on non-euro currencies

The fund may also trade in:

- forward contracts, futures, options and securities with embedded derivatives, used for hedging and/or to gain exposure to equity, interest-rate, credit and currency risks, which may leverage the portfolio.

CM-AM SUSTAINABLE PLANET

This Fund is actively managed on a discretionary basis in compliance with a qualitative extra-financial filter in accordance with the policy implemented by Crédit Mutuel Asset Management and in compliance with the requirements of the French SRI label. The fund's objective is to outperform the eurozone equity markets over the recommended investment period, through selective management of securities issued by companies committed to sustainable development and social responsibility. This type of management strategy, which gives the manager discretion in asset allocation, does not require a benchmark. However, the fund's performance may be compared with a benchmark for ex-post evaluation, such as the MSCI AC World Index. The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index. The index is calculated at closing prices and is expressed in euros and with dividends reinvested.

The Fund's theme refers to the ambition to reduce our environmental footprint. The environment is usually defined as "all elements surrounding an individual or a species, some of which contribute directly to meeting its needs". To achieve its investment objective, the management team uses a discretionary stock-picking approach to selected companies. The initial investment universe is made up of stocks from the European Union, Switzerland and Norway, as well as the United Kingdom, with a market capitalisation of over EUR 500 million and which have been given an ESG rating, to which the various extra-financial criteria set out below are applied. Accordingly, the Fund's management strategy establishes a universe of targeted stocks using an extra-financial process complemented by a financial analysis. The Fund's strategy is based on a selective approach that favours the best rated companies or those demonstrating good prospects for their environmental, social and governance (ESG) practices, and excludes issuers with ESG risks. The management process can be broken down into the following four stages:

1. ESG filter: the management team will apply extra-financial filters based on ESG criteria derived from a proprietary methodology developed by the Responsible and Sustainable Finance division. This filter covers quality of governance, societal, social and environmental criteria, as well as the commitment of the company to a socially responsible approach. For example, Pillar E: carbon intensity, Pillar S: human resources policy, and Pillar G: proportion of independent directors are included in our ESG categories. This filter determines a classification from 1 to 5 (5 being the best classification). The fund managers will only select companies with a rating of more than 2. In terms of controversy management, each security is specifically analysed, monitored and rated. Management will exclude all companies with major controversies. This first ESG filter eliminates at least 20% of the lowest-rated stocks.

2. Thematic filter: The remaining values are then subjected to a thematic filter based on the following 5 pillars:

- Environmental efficiency: solutions to make buildings, infrastructures and industrial processes smarter, cleaner and safer.
- Cities & Mobility of the future: developing public transport and improving housing.
- Circular economy: producing goods and services in a sustainable way, limiting the consumption and wastage of resources and the production of waste. Recycling will also be addressed in this theme.
- Alternative energies: energies that do not rely on fossil fuels (solar, wind, biomass, hydrogen, etc.).
- Well-being: protecting people from health risks, contributing to their well-being while minimising their impact on the environment.

The companies selected will be those that are exposed to one of the 5 pillars above.

3. Financial analysis: Securities are analysed from a financial point of view to ensure that only those of clearly identified quality are retained. This universe constitutes a watch list for securities that are eligible for investment.

4. Portfolio construction: From this shortlist, stocks offering a valuation deemed attractive by the management team are added to the portfolio, using a stock-picking approach. The portfolio is constructed according to the managers' convictions (potential and quality).

On an ancillary basis, the management team may invest in UCIs. Mutual funds managed by Crédit Mutuel Asset Management that have been awarded the SRI label will include the extra-financial qualitative filter in accordance with the policy implemented by the asset management company.

At least 90% of the securities and UCIs selected by the management team include extra-financial criteria. The Fund may invest up to 10% of its net assets in securities and units or shares of UCIs that do not include extra-financial criteria. This selection of UCIs/live securities may result in a lack of consistency between assets in terms of approaches, criteria or management techniques.

As a result of the financial analysis, companies with the highest ESG ratings are not automatically included in the portfolio.

The Fund will observe the following net asset exposure limits:

From 60% to 110% of net assets may be invested in equities, with no restrictions as to geographic region, market capitalisation or economic sector, within the following limits:

- From 60% to 110% in markets in the eurozone
- from 0% to 25% on markets outside the eurozone, including 0% to 10% on markets in the Americas, Asia and the Pacific zones
- from 0% to 10% in equities of companies with market capitalisations of less than EUR 3 billion

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region, of Investment Grade, as determined by the asset management company or a credit-rating agency

From 0 % to 25 % exposure to currency risk on non-euro currencies

PEA-eligible securities always account for at least 75% of net of the Fund's assets

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for exposure or to gain hedging to equity and currency risks, but without leveraging the portfolio.

CM-AM INFLATION

This Fund is actively managed on a discretionary basis. Its investment objective is to achieve a return, net of fees and charges over the recommended investment period that exceeds the performance of its benchmark index, Barclays Euro Government inflation linked bonds 1-10 years. The composition of the Fund's portfolio may differ significantly from that of its benchmark index. The index is calculated at closing prices and is expressed in euros and with dividends and coupons reinvested.

In order to achieve its management objective, the Fund's strategy is based on investments in debt securities and money market instruments:

- mainly issued by governments, public and private companies in the eurozone, indexed to inflation,
- issued by OECD member states, public and private companies outside the eurozone, indexed to inflation,

- issued by governments, public and private companies that are members of the OECD, at fixed, floating or revisable rates,

The Fund adopts an active management style based on expectations in terms of:

- inflation, changes in Central Bank interest rates, the nominal yield curve and the real yield curve,
- credit risk, in order to increase the portfolio's return through a rigorous selection of sovereign, public and private issuers.

The Fund will observe the following net asset exposure limits:

From 0% to 100% of net assets may be invested in public and private debt instruments in OECD member countries, of Investment Grade at the time of acquisition, as determined by the asset management company or a credit-rating agency, or not rated, subject to the following limits:

- from 80% to 100 % in issuers in the eurozone
- from 0% to 20% in issuers outside the eurozone
- from 0% to 25% in speculative or unrated securities

The fund's exposure to interest-rate risk will range from 0 to +8.

From 0% to 10% exposure to currency risk on non-euro

The fund may invest in:

- in debt securities and money-market instruments, including securitisation instruments
- up to 10 % of its net assets in French or foreign UCITS or general-purpose investment funds governed by French law, meeting the conditions of article R.214-13 of the Monetary and Financial Code.

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for hedging and/or to gain exposure to interest-rate credit and currency risks.

These instruments may result in an overall leveraging of the portfolio of up to 10% of net assets.

- deposit cash with credit institutions, borrow cash and engage in securities financing transactions.

CM-AM GLOBAL LEADERS

This Fund is actively managed on a discretionary basis in compliance with a qualitative extra-financial filter in accordance with the policy implemented by Crédit Mutuel Asset Management and in compliance with the requirements of the French SRI label. The management objective is to offer a performance net of fees linked to the performance of global equities by investing in international companies whose leadership is based on the strength of their brand or business model and which are committed to meeting sustainable development and social responsibility criteria, a source of value creation for shareholders, over the recommended investment period. Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, the Fund's performance may be compared with a benchmark, such as the MSCI AC World Index, for ex-post evaluation. The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index.

The index is calculated at closing prices and is expressed in euros and with dividends reinvested.

In order to achieve its management objective, the Fund actively and rigorously picks stocks from the universe of leading international stocks. This stock picking is based on a fundamental analysis of stocks and macroeconomic growth expectations, with no predefined sector or geographical allocation. The Fund's management strategy establishes a universe of targeted stocks using an extra-financial process complemented by a financial analysis. The Fund's strategy is based on a selective approach that favours the highest-rated issuers or those demonstrating good prospects for their environmental, social and governance (ESG) practices, and excludes issuers with ESG risks. The management process can be broken down into the following four stages:

1. ESG filter and controversy management: the management team will apply extra-financial filters based on ESG criteria derived from a proprietary methodology developed by the Responsible and Sustainable Finance division. This filter covers quality of governance, societal, social and environmental criteria, as well as the commitment of the company to a socially responsible approach. For example, Pillar E: carbon intensity, Pillar S: human resources policy, and Pillar G: proportion of independent directors are included in our ESG categories. This filter determines a classification from 1 to 5 (5 being the best classification). Fund managers will eliminate the lowest-rated issuers. In terms of controversy management, each security is specifically analysed, monitored and rated. Management will exclude all issuers with major controversies. These first ESG filters eliminate at least 20% of the lowest-rated stocks.

2. Filter by brand: The stocks are then filtered to ensure that only those with a widely recognised brand, reputation or franchise are retained. Management is based on global brand rankings published and reviewed each year by consultancies, the trade press and polling institutes. The stock picking process is based on qualitative and quantitative criteria linked to the maturity of the brand and the operational and financial excellence of the companies, which are classified into three categories;

- leading brands or those with high-quality business models,
- up-and-coming brands that are influential and/or benefit from new consumer habits around the world,
- brands undergoing a renaissance and offering a particular opportunity to enhance their value.

3. Financial analysis: Within this filtered universe, stocks are subjected to a financial analysis to retain only those whose quality is clearly identified. This universe constitutes a watch list for stocks that are eligible for investment.

4. Portfolio construction: Following this financial and extra-financial analysis, the portfolio is constructed on the basis of the managers' convictions, using a stock-picking approach.

At least 90% of the securities and UCIs selected by the management team include extra-financial criteria. The Fund may invest up to 10% of its net assets in securities and units or shares of UCIs that do not include extra-financial criteria.

As a result of the financial analysis, issuers the highest ESG ratings are not automatically included in the portfolio.

The Fund will observe the following net asset exposure limits:

From 80% to 110% of net assets may be invested in equities, with no restrictions as to geographic region (including emerging countries), market capitalisation or economic sector, within the following limits: The Fund may invest up to 20% of its net assets in companies with a market capitalisation of less than 3 billion euros

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region (including emerging countries), with an Investment Grade rating when purchased as determined by the asset management company or a credit-rating agency, or that are not rated

From 0% to 10% in convertible bonds.

Up to 100% of net assets may be exposed to currency risk

The fund may also invest in: forward contracts, futures or options and securities with embedded derivatives, in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, that may leverage the portfolio.

CM-AM GREEN BONDS

This Fund is actively managed on a discretionary basis in compliance with a qualitative extra-financial filter in accordance with the policy implemented by CREDIT MUTUEL ASSET MANAGEMENT and in compliance with the requirements of the GREENFIN label. It is not managed with reference to a benchmark index. Its investment objective is to provide a return net of expenses that is consistent with the performance of the green bond market over the recommended investment period.

The Fund's management strategy consists mainly in establishing a universe of targeted stocks using an extra-financial process complemented by a financial analysis. A "green" bond is a bond issued by a company, international organisation, local authority or government on the financial markets to finance a project or activity with environmental benefits, such as adaptation to climate change, sustainable water management, sustainable management of natural resources and biodiversity conservation. It is qualified as such by its issuer, which must, after its issue, set up activity reports to monitor the implementation of these projects. Based on this set of data declared by the issuers, the issues and projects financed will be analysed according to the following 3-stage process:

1. Extra-financial analysis:

1. Exclusion filter: The management team excludes investments in companies that derive part of their turnover or income from activities such as the exploration, production and exploitation of fossil fuels and the entire nuclear sector, as well as storage and landfill centres that do not capture greenhouse gases. The conditions of exclusion are defined in the prospectus.

2. Filter applied to the issue (rating scale: 1 to 100): The green bond issued is analysed according to the 4 pillars: the existence of a green project, the process for evaluating and selecting "green" projects, the management of the proceeds of the bond issue and regular reporting. These defined characteristics comply with the best practice guide for issuing a Green Bond as defined by the Green Bond Principles. The Green Bond Principles may evolve over time. The regulatory documents for emissions specify the criteria and methodologies used to make investments in eligible projects. The fund manager may use data provided by environmental and social agencies as well as his own analysis.

3. Filter applied to the issuer (rating scale: 1 to 100): The issuer is analysed on the basis of 3 pillars: ESG performance, contribution to the environmental transition and management of ESG controversy risks.

4. Ratings: Based on these analyses, an extra-financial rating is awarded on a scale of 1 to 100. The overall rating is 70% for the issue and 30% for the issuer. Only securities with an overall rating of 50 or more will be included in the investment universe.

2. Financial analysis: Securities are analysed from a financial point of view to ensure that only those of clearly identified quality are retained. This universe constitutes the list of securities eligible for investment.

3. Portfolio construction: The portfolio is constructed across the entire yield curve within the sensitivity range based on the conclusions of the various market and risk analyses carried out by the management team.

The selection processes are detailed in the "Investment strategy" section of the prospectus. Green bonds always represent at least 85% of net assets. This active stock picking may result in a lack of

consistency between assets in terms of approaches, criteria or management techniques. As a result of the financial analysis, green bonds that obtain the highest extra-financial ratings are not automatically included in the portfolio.

The Fund will observe the following net asset exposure limits:

From 0% to 200% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region (including emerging countries), credit rating as determined by the asset management company or a credit-rating agency, or the lack of such a rating. The Fund's exposure to speculative debt instruments may not exceed 20%.

The fund's exposure to interest-rate risk will range from 0 to +10.

From 0% to 20% in convertible bonds.

From 0% to 10% of net assets may be invested in equities, with no restrictions as to geographic region (including emerging countries), market capitalisation or economic sector, within the following limits: The Fund will not hold any shares directly.

Up to 20% of net assets may be exposed to currency risk

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for hedging and/or exposure to equity, interest rate, credit and foreign exchange risks. The indicative leverage effect is 100%.
- securities financing transactions.

CM-AM ENTREPRENEURS EUROPE

This Fund is actively managed on a discretionary basis. It is not managed with reference to a benchmark index. Its investment objective is to seek a return net of fees that exceeds the performance of the European equity markets over the recommended investment period.

To achieve its investment objective, the Fund adopts a stock-picking strategy based on fundamental analysis of entrepreneurial and/or family-owned companies. Based on the fund manager's analysis, these companies are characterised by a strong capacity for innovation, both in terms of products and services, differentiation within their sectors of activity, and a strong desire to expand geographically.

The Fund will invest mainly in companies in which at least 20% of the capital is held by a stable shareholder, primarily the founders and/or managers.

The criteria for picking stocks are as follows:

- Quantitative criteria: growth in sales and earnings, cash flow, debt ratios, return on capital employed,
- Qualitative criteria: analysis of competitive position, company's long-term strategy, management stability.

Environmental, social and governance (ESG) criteria are one of the components of investment management, but their weighting in the final decision is not defined upstream.

The Fund will observe the following net asset exposure limits:

From 60% to 100% of net assets may be invested in European equities, including emerging markets, irrespective of economic sector, within the following limits:

From 0% to 30% in small-cap companies < EUR 3 billion

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region, of Investment Grade, as determined by the asset management company or a credit-rating agency

From 0 % to 100 % exposure to currency risk on non-euro currencies

PEA-eligible securities always account for at least 75% of net assets.

The fund may invest:

- in equities
- in debt securities and money-market instruments
- up to 10% of its net assets in French or foreign UCITS or general purpose investment funds governed by French law, meeting the conditions of article R.214-13 of the Monetary and Financial Code.

The fund may also trade in:

forward contracts, futures or options and securities with embedded derivatives, in order to hedge against equity, interest rate and currency risk which may increase the portfolio's overall leverage to a maximum of 10% of net assets.

- cash deposits and borrowing.

CM-AM GLOBAL INNOVATION

This Fund is actively managed on a discretionary basis. Its management objective is to offer performance linked to trends in international equities which, according to the asset management company's analysis, are benefiting from changes in the economy (digitalisation, robotisation). Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, the Fund's performance may be compared with a benchmark, such as the MSCI AC World Index, for ex-post evaluation.

The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index.

The index is calculated at closing prices and is expressed in euros and with dividends reinvested.

Innovation is defined as the introduction of something new into the system.

The criteria used to analyse the company's innovation effort are both qualitative (technological, human and organisational resources deployed for innovation within the company) and quantitative (Research & Development, contribution of new products to growth, investment, etc.). The innovation must enhance the selected company's prospects for growth and profitability.

In order to achieve its management objective, the Fund actively and rigorously picks stocks from the universe of leading international stocks, including emerging countries. The selection process for

innovative stocks is based on fundamental and financial analysis (growth, profitability, valuation) of the stocks.

Stocks are picked from a limited universe of stocks characterised by:

- companies in the high-tech sector that disseminate technological innovation to businesses,
- traditional companies in a wide range of sectors (industry, health, finance, services, consumer, energy, real estate, communications, materials, business services) that are significantly integrating innovation into their production processes,
- companies that differentiate themselves in their market by offering products and services that were previously non-existent. These companies are reinventing and dis-intermediating traditional industries.

Within these categories, the fund selects companies whose innovation drive enhances their potential to create shareholder value.

The manager will invest in equities, debt securities and money market instruments, either directly or via units or shares in UCIs.

Environmental, social and governance (ESG) criteria are one of the components of investment management, but their weighting in the final decision is not defined upstream.

The Fund will observe the following net asset exposure limits:

From 80% to 120% of net assets may be invested in equities, with no restrictions as to geographic region, market capitalisation or economic sector, within the following limits: In particular, the Fund may be exposed to equities with a capitalisation of less than €150 million (maximum 20%) and emerging market equities (maximum 30%).

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region (including emerging countries), with an Investment Grade rating when purchased as determined by the asset management company or a credit-rating agency.

Up to 100% of net assets may be exposed to currency risk.

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, in order to hedge against equity, interest-rate, credit or currency risk which may increase the portfolio's overall leverage to a maximum of 20% of net assets.

CM-AM HIGH YIELD 2024

This Fund is actively managed on a discretionary basis. The fund's objective is to outperform its performance indicator, which is the yield-to-maturity of the OAT (*Obligation Assimilable du Trésor*) 1.75% 25 November 2024 (FR0011962398) (for information purposes, the yield-to-maturity of the OAT is 0.25% at 19/10/2018), through exposure to speculative high-yield securities with no or low rating, over the period between the fund's inception and the last NAV in 2024 (31/12/2024).

The Fund's management objective considers the estimated risk of default, the cost of hedging and management fees. This objective is based on market assumptions determined by Crédit Mutuel Asset Management. It is not a promise of return or performance. Investors should note that the performance indicated in the management objective does not include all cases of default.

After the net asset value calculated on 31/12/2024, and subject to the prior approval of the AMF and the provision of information to shareholders, the Fund will change its investment strategy.

To achieve its investment objective, the Fund uses a "buy and hold" investment strategy. Initially, the manager will select bonds with maturities of no more than 3 months after the last net asset value in December 2024, seeking to diversify the Fund's geographical exposure and sector allocation. The construction of the portfolio (debt securities and money market instruments, UCIs) will reflect the convictions of the asset management company in terms of credit analysis and will comply with the investment process defined by the asset management company. The portfolio will consist mainly of speculative high-yield securities with no or low ratings. This choice of portfolio potentially enables a significantly higher return to be obtained in return for a greater risk than a portfolio composed exclusively of securities rated "Investment Grade" according to the analysis of the asset management company or those of the rating agencies, due to the speculative nature of the debt securities of certain companies. This type of strategy involves very low portfolio turnover. However, the manager retains the right to make arbitrages in the shareholder's interest. Cash from securities maturing before December 2024 will be reinvested in bonds and debt securities with a maturity as close as possible to the last net asset value in December 2024 or in money market instruments.

Environmental, social and governance (ESG) criteria are one of the components of investment management, but their weighting in the final decision is not defined upstream.

The Fund will observe the following net asset exposure limits:

From 90% to 200% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region including emerging countries, credit rating as determined by the asset management company or a credit-rating agency, or the lack of such a rating

The fund's exposure to interest-rate risk will range from 0 to +7.

From 0% to 10% of net assets may be invested in equities, with no restrictions as to geographic region (including emerging countries), market capitalisation or economic sector, within the following limits:

Instruments issued in currencies other than the euro are systematically hedged against currency risk.

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for hedging and/or to gain exposure to interest-rate, credit and equity risks and to hedge against currency risk, but without leveraging the portfolio,
- securities financing transactions.

CM-AM SHORT TERM BONDS

This Fund is actively managed on a discretionary basis. The fund's investment objective is to outperform, over the recommended investment period, its benchmark index, which is the Compounded €STR. Particularly low, negative or volatile interest rates may cause the fund's net asset value to decline in a structural manner. The index accounts for the compounding of interest.

To achieve its investment objective, the Fund employs an active management style in order to ensure that it does not deviate from its risk exposure limits and performance objectives, while seeking to optimise/return profile of its portfolio relative to its benchmark.

The portfolio is constructed within the sensitivity range based on the conclusions of the various market and risk analyses carried out by the management team.

The management process is based first and foremost on macro-economic analysis, aimed at anticipating market trends based on an analysis of the global economic and geo-political context.

This approach is then supplemented by a micro-economic analysis of issuers and by an analysis of the various technical elements of the market, aimed at monitoring the multiple sources of added value in the fixed-income markets in order to integrate them into the decision-making process. Investment decisions are mainly based on:

- exposure to interest rate risk,
- geographic allocation within the eurozone,
- credit risk exposure resulting from sector allocation and issuer selection,
- selection of investment vehicles,
- management of short positions (hedging against interest rate risk or arbitraging the yield curve of one issuer against another by betting on the widening of credit spreads).

Environmental, social and governance (ESG) criteria are one of the components of investment management, but their weighting in the final decision is not defined upstream.

The Fund will observe the following net asset exposure limits:

From 80% to 150% of net assets may be invested in sovereign, public and private debt instruments, in the eurozone and in OECD member countries, of all ratings (including speculative) as determined by the asset management company or a credit-rating agency, or that are not rated

The Fund's exposure to interest-rate risk will range from 0 to + 0.5.

From 0% to 10% of net assets may be invested in equities, with no restrictions as to geographic region (including emerging countries), market capitalisation or economic sector, within the following limits:

Up to 10% of net assets may be exposed to currency risk

The fund may also trade in:

- forward contracts, futures and options and securities with embedded derivatives, used for hedging and/or to gain exposure to interest-rate, equity, credit and currency risks. The indicative leverage effect is 200%.
- securities financing transactions.

CM-AM CONVICTIONS EURO

This Fund is actively managed on a discretionary basis in compliance with a qualitative extra-financial filter in accordance with the policy implemented by Crédit Mutuel Asset Management and in compliance with the requirements of the French SRI label. Its investment objective is to achieve a return Annual, net of fees and charges over the recommended investment period that exceeds the performance of its benchmark index, the EURO STOXX Net Return index. The composition of the Fund's portfolio may

differ significantly from that of its benchmark index. The index is calculated at closing prices and is expressed in euros and with dividends reinvested.

The Fund's objective is to increase the value of your investment by investing in equities denominated in euros. The Fund is actively managed and invests in equities and convertible securities denominated in euros (financial products that can be converted into shares), issued by companies established in the eurozone with a capitalisation threshold of 200 million euros.

The Fund invests at least 75% of its assets in equities issued by companies whose registered office is located in a European Union country. PEA-eligible securities always account for at least 75% of net of the Fund's assets.

In order to achieve its management objective, the Fund adopts a selective management style for direct holdings or holdings in UCIs, determined by means of a fundamental approach focusing on the securities of companies with potential for value creation over the long term. The Fund's management strategy establishes a universe of targeted stocks using an extra-financial process complemented by a financial analysis. The Fund's strategy is based on a selective approach that favours the highest-rated companies or those demonstrating good prospects for their environmental, social and governance (ESG) practices, and excludes issuers with ESG risks.

The management process can be broken down into the following three stages:

1. ESG filter: the management team will apply extra-financial filters based on ESG criteria derived from a proprietary methodology developed by the Responsible and Sustainable Finance division. This filter covers quality of governance, societal, social and environmental criteria, as well as the commitment of the company to a socially responsible approach. For example, Pillar E: carbon intensity, Pillar S: human resources policy, and Pillar G: proportion of independent directors are included in our ESG categories. This filter determines a classification from 1 to 5 (5 being the best classification). In terms of controversy management, each security is specifically analysed, monitored and rated. Management will exclude all issuers with major controversies. These first ESG filters eliminate at least 20% of the lowest-rated stocks.

2. Financial analysis: Stocks are analysed from a financial point of view, so that only those whose quality economic model and solid company fundamentals are clearly identified are retained. This universe constitutes a watch list for stocks that are eligible for investment.

3. Portfolio construction: From this shortlist, stocks offering a valuation deemed attractive by the management team are added to the portfolio, using a stock-picking approach. The portfolio is constructed according to the managers' convictions (potential and quality).

At least 90% of the stocks picked by the management team include extra-financial criteria. The Fund may invest up to 10% of its net assets in securities and units or shares of UCIs that do not include extra-financial criteria.

As a result of the financial analysis, issuers the highest ESG ratings are not automatically included in the portfolio.

The Fund will observe the following net asset exposure limits:

From 60% to 100% of net assets may be invested in equities, with no restrictions as to geographic region, market capitalisation or economic sector. Up to 10% of the Fund's net assets may be invested in equities from outside the European Union and up to 10% in equities from emerging countries.

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments, in the eurozone, irrespective of credit rating as determined by the asset management company or a credit-rating agency, or the lack of a credit rating

From 0% to 100% exposure to currency risk

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for hedging and/or to gain exposure to equity, interest-rate, credit and currency risks, but without leveraging the portfolio.

CM-AM SMALL & MIDCAP EURO

This Fund is actively managed on a discretionary basis in compliance with a qualitative extra-financial filter in accordance with the policy implemented by Crédit Mutuel Asset Management and in compliance with the requirements of the French SRI label. Its investment objective is to achieve a return Annual, net of fees and charges over the recommended investment period that exceeds the performance of its benchmark index, the EURO STOXX Small Net Return index. The composition of the Fund's portfolio may differ significantly from that of the benchmark index.

The Fund's management objective is to increase the value of your investment by investing in equities with a market capitalisation of between EUR 200 million and EUR 10 billion at the time of purchase. The Fund is actively managed and invests in equities (including preference shares) and convertible securities denominated in euros (financial products that can be converted into equities).

The Fund selects companies that it considers to offer the best commercial prospects in their respective industrial sectors. PEA-eligible securities always account for at least 75% of net of the Fund's assets.

The Fund's management strategy establishes a universe of targeted stocks using an extra-financial process complemented by a financial analysis. The Fund's strategy is based on a selective approach that favours the highest-rated issuers or those demonstrating good prospects for their environmental, social and governance (ESG) practices, and excludes issuers with ESG risks. The management process can be broken down into the following three stages:

1. ESG filter: the management team will apply extra-financial filters based on ESG criteria derived from a proprietary methodology developed by the Responsible and Sustainable Finance division. This filter covers quality of governance, societal, social and environmental criteria, as well as the commitment of the company to a socially responsible approach. For example, Pillar E: carbon intensity, Pillar S: human resources policy, and Pillar G: proportion of independent directors are included in our ESG categories. This filter determines a classification from 1 to 5 (5 being the best classification). In terms of controversy management, each security is specifically analysed, monitored and rated. Management will exclude all issuers with major controversies. These first ESG filters eliminate at least 20% of the lowest-rated stocks.

2. Financial analysis: Stocks are analysed from a financial point of view, so that only those whose quality economic model and solid company fundamentals are clearly identified are retained. This universe constitutes a watch list for stocks that are eligible for investment.

3. Portfolio construction: From this shortlist, stocks offering potential for value creation in the view of the management team are added to the portfolio, using a stock-picking approach. The portfolio is constructed according to the managers' convictions (potential and quality).

At least 90% of the securities and UCIs selected by the management team include extra-financial criteria. The Fund may invest up to 10% of its net assets in securities and units or shares of UCIs that do not include extra-financial criteria.

As a result of the financial analysis, issuers the highest ESG ratings are not automatically included in the portfolio.

The Fund will observe the following net asset exposure limits:

60% to 100% in equities from all geographical areas, all market capitalisations (including emerging countries) and all sectors. The Fund may be exposed to European Union equities with a market capitalisation of between EUR 200 million and EUR 10 billion at the time of purchase (minimum 60%).

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments, in the eurozone, irrespective of credit rating as determined by the asset management company or a credit-rating agency, or the lack of a credit rating.

From 0% to 100% exposure to currency risk.

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for hedging and/or to gain exposure to equity, interest-rate, credit and currency risks, but without leveraging the portfolio.

CM-AM FLEXIBLE EURO

This Fund is actively managed on a discretionary basis in compliance with a qualitative extra-financial filter in accordance with the policy implemented by Crédit Mutuel Asset Management and in compliance with the requirements of the French SRI label. The fund's objective is to outperform its performance indicator, 50% €STR Capitalised + 50% EURO STOXX LARGE Net Return, net of fees, over the recommended investment period. This index is calculated at closing market prices in euros with dividends reinvested, with its interest component compounded at the €STR rate. The composition of the Fund's portfolio may differ significantly from that of its benchmark index.

The Fund is actively managed and invests mainly in equities or convertible securities denominated in euros (financial products that can be converted into equities), negotiable debt securities that can be converted into equities and warrants (financial contracts under which the Fund can buy equities at a later date and usually at a fixed price) issued by companies based in Europe.

The investment strategy consists of managing the Fund on a discretionary basis, investing in diversified French and foreign transferable securities. More specifically, it involves:

- picking stocks or shares based on the convictions of specialist teams of managers/analysts. To do this, the managers attach particular importance to the business model of the companies and their valuation,
- complementing this selection of stocks and shares by purchasing securities representative of the EUROSTOXX LARGE index, so that the Fund is always at least 75% invested in equities,
- actively managing the asset allocation of derivatives, split between equity markets and money market products.

Depending on its assessment of the outlook for the equity markets, the management team may decide to reduce exposure to the equity market by hedging the equity portfolio through sales of listed equity futures contracts. The Fund's exposure to the equity market will therefore vary between 0% and 100% of the Fund's net assets, with no possibility of leverage.

The investment strategy consists of actively managing the asset allocation, divided between equity markets and fixed income products. This is achieved by partially or fully hedging the equity portfolio through the sale of listed equity futures or by investing in fixed income products. This asset allocation is defined by the management team on the basis of an economic scenario, market valuations and portfolio risk control.

The Fund invests at least 75% of its assets in equities issued by companies whose registered office is located in a European Union country. PEA-eligible securities always account for at least 75% of net of the Fund's assets.

In order to achieve its management objective, the Fund adopts a selective management style for direct holdings or holdings in UCIs, determined by means of a fundamental approach focusing on the securities

of companies with potential for value creation over the long term. The Fund's management strategy establishes a universe of targeted stocks using an extra-financial process complemented by a financial analysis. The Fund's strategy is based on a selective approach that favours the highest-rated issuers or those demonstrating good prospects for their environmental, social and governance (ESG) practices, and excludes issuers with ESG risks. The management process can be broken down into the three stages:

1. ESG filter: the management team will apply extra-financial filters based on ESG criteria derived from a proprietary methodology developed by the Responsible and Sustainable Finance division. This filter covers quality of governance, societal, social and environmental criteria, as well as the commitment of the company to a socially responsible approach. For example, Pillar E: carbon intensity, Pillar S: human resources policy, and Pillar G: proportion of independent directors are included in our ESG categories. This filter determines a classification from 1 to 5 (5 being the best classification). In terms of controversy management, each security is specifically analysed, monitored and rated. Management will exclude all issuers with major controversies. These first ESG filters eliminate at least 20% of the lowest-rated stocks.

2. Financial analysis: Stocks are analysed from a financial point of view, so that only those whose quality economic model and solid company fundamentals are clearly identified are retained. This universe constitutes a watch list for stocks that are eligible for investment.

3. Portfolio construction: From this shortlist, stocks offering potential for value creation in the view of the management team are added to the portfolio, using a stock-picking approach. The portfolio is constructed according to the managers' convictions (potential and quality).

At least 90% of the stocks picked by the management team include extra-financial criteria. The Fund may invest up to 10% of its net assets in securities and units or shares of UCIs that do not include extra-financial criteria.

As a result of the financial analysis, issuers the highest ESG ratings are not automatically included in the portfolio.

The Fund will observe the following net asset exposure limits:

From 0% to 100% of net assets may be invested in equities, with no restrictions as to geographic region, market capitalisation or economic sector. The Fund's may be exposed up to 100% to equities in the European Union.

From 0% to 100% of net assets may be invested in sovereign, public and private debt instruments, in the eurozone, irrespective of credit rating as determined by the asset management company or a credit-rating agency, or the lack of a credit rating, or directly or via mutual funds, or by hedging the equity portfolio through the sale of equity futures

From 0% to 100% exposure to currency risk

The fund may also invest in: forward contracts, futures or options and securities with embedded derivatives, in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, without leveraging the portfolio.

CM-AM CONVERTIBLES EURO

This Fund is actively managed on a discretionary basis in compliance with a qualitative extra-financial filter in accordance with the policy implemented by Crédit Mutuel Asset Management and in compliance with the requirements of the French SRI label. The Fund's objective is to achieve an annual

performance, net of fees, that exceeds that of its performance indicator, REFINITIV CONVERTIBLE EUROPE, over the recommended investment horizon. The composition of the Fund may differ significantly from that of the performance indicator. The index is calculated at closing prices and is expressed in euros and with coupons reinvested.

The Fund is actively managed and invests in negotiable debt securities (convertible or exchangeable bonds or notes), warrants (financial contracts under which the Fund can buy shares at a later date and usually at a fixed price) and other financial instruments that can be converted into shares issued by companies based in Europe or other developed countries around the world. The Fund will purchase negotiable debt securities denominated in euros, but may also purchase debt securities denominated in currencies other than the euro.

The Fund's management strategy establishes a universe of targeted stocks using an extra-financial process complemented by a financial analysis. The Fund's strategy is based on a selective approach that favours the highest-rated issuers or those demonstrating good prospects for their environmental, social and governance (ESG) practices, and excludes issuers with ESG risks. The management process breaks down as follows:

1. ESG filter and controversy management: the management team will apply extra-financial filters based on ESG criteria derived from a proprietary methodology developed by the Responsible and Sustainable Finance division. This filter covers quality of governance, societal, social and environmental criteria, as well as the commitment of the company to a socially responsible approach. For example, Pillar E: carbon footprint, Pillar S: human resources policy, and Pillar G: proportion of independent directors included in our ESG categories. This filter determines a classification from 1 to 5 (5 being the best classification). Fund managers will eliminate the lowest-rated issuers. In terms of controversy management, each security is specifically analysed, monitored and rated. Management will exclude all issuers with major controversies. These first ESG filters eliminate at least 20% of the lowest-rated stocks.

2. Portfolio construction: Following this financial and extra-financial analysis, the portfolio is constructed on the basis of the managers' convictions, using a stock-picking approach.

At least 90% of the securities and UCIs selected by the management team include extra-financial criteria. The Fund may invest up to 10% of its net assets in securities and units or shares of UCIs that do not include extra-financial criteria.

As a result of the financial analysis, issuers the highest ESG ratings are not automatically included in the portfolio.

The Fund will observe the following net asset exposure limits:

From 0% to 100% of net assets may be invested in public and private convertible or exchangeable bonds, regardless of geographic region (including emerging countries), credit rating as determined by the asset management company or a credit-rating agency, or the lack of such a rating

From 0% to 150% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region (including emerging countries), credit rating as determined by the asset management company or a credit-rating agency, or the lack of such a rating

From 0% to 100% of net assets may be invested in equities, with no restrictions as to geographic region (including emerging countries), market capitalisation or economic sector. In particular, the Fund may be exposed to shares purchased directly, excluding conversions (maximum 20%)

From 0% to 100% exposure to currency risk

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, in order to hedge against equity, interest-rate, credit or currency risk which may increase the portfolio's overall leverage to a maximum of 100% of net assets.

CM-AM GLOBAL CLIMATE CHANGE

This Fund is actively managed in a discretionary manner on the basis of fundamental and financial analysis, while incorporating a qualitative extra-financial filter in accordance with the policy implemented by Crédit Mutuel Asset Management and complying with the requirements of the GREENFIN label. The fund's investment objective is to offer a performance linked to the performance of the equity market over the recommended investment period by investing in international companies listed on regulated markets that play an active role, directly or indirectly, in the fight against global warming, the energy and climate transition and sustainable development. The fund is in line with the sustainable development objectives defined by the United Nations, and more specifically with the following objectives: clean water and sanitation, clean and affordable energy, responsible consumption and production, life on land and measures to combat climate change. Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, for ex-post evaluation purposes the fund's performance may be compared with that of a composite benchmark index composed of: MSCI ALL COUNTRY WORLD Index. The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index. The index is calculated at closing prices and is expressed in euros and with dividends reinvested.

The initial universe is made up of international stocks from the MSCI ALL COUNTRY WORLD index. The universe is also enriched by companies with a market capitalisation of over EUR 100 million and from all geographical regions, including emerging countries, which generate at least 10% of their sales in one or more of the eight eco-activity areas. From these stocks, the management team selects around 30 to 60 according to an extra-financial process supplemented by a financial analysis. The management process can be broken down into several stages:

1. Thematic filter: The companies selected must operate in at least one of the following eight "eco-activities": energy, construction, circular economy, industry, transport, information and communication technologies, agriculture (including forestry) and adaptation to climate change.
2. Exclusion filter: The management team excludes investments in companies that derive part of their turnover or income from activities such as the exploration, production and exploitation of fossil fuels and the entire nuclear sector, as well as storage and landfill centres that do not capture greenhouse gases. The conditions of exclusion are defined in the prospectus.
3. Carbon filter: Based on a carbon scoring model developed by Crédit Mutuel Asset Management's Responsible and Sustainable Finance division, each company is rated from 1 to 5 (5 being the best). The model then adds an assessment of the trend over several years, using a - sign (falling), = sign (stable) and + sign (improving). As indicated in the prospectus, the combination of these two elements makes it possible to eliminate at least 20% of the worst-rated securities.
4. ESG filter and controversy management: The fund management team will apply extra-financial filters based on environmental, social and governance (ESG) criteria derived from a proprietary methodology developed by the Responsible and Sustainable Finance division. These filters cover quality of governance, societal and environmental (including climate) criteria, as well as the commitment of the company to a socially responsible approach. For example, respect for human rights, climate strategy and management quality are included in our ESG categories. These filters determine a classification from 1 to 5 (5 being the best classification). The fund managers will only select companies with a rating of more than 1. In terms of controversy management, each security is specifically analysed, monitored and rated. The fund manager will exclude all companies with major controversies.

5. Selection within this filtered universe: Within this filtered investment universe, the management team analyses companies from a fundamental, financial and extra-financial point of view. Fundamental and financial analysis focuses in particular on the position of companies in their sector's value chain, growth prospects, value creation, the quality of the management team and their voluntary policy of combating global warming, as well as monitoring a certain number of financial ratios.

6. Portfolio construction: Following this financial and extra-financial analysis, the management team selects stocks offering attractive valuations and builds the portfolio in accordance with the following criteria:

- the stocks selected for the portfolio have an average carbon score higher than that of the investable universe, calculated after eliminating at least 20% of the worst performers on this indicator. Within this filtered universe, the management team will select companies generating all or part of their sales in the eight "eco-activity" areas mentioned above, according to the following breakdown:
- at least 20% of companies generating more than 50% of their sales from eco-activities,
- a maximum of 25% of companies generating between 0% and 10% of their sales in eco-activities,
- the balance being made up of companies generating between 10% and 50% of their sales in eco-activities and also debt and money market instruments up to a maximum of 10% for these last two categories.

The use of external data or the lack of availability of certain data may lead to inconsistencies in the selection of carbon and ESG values as detailed in the prospectus. The proportion of net assets analysed on the basis of extra-financial criteria exceeds 90%.

The Fund will observe the following net asset exposure limits:

From 80% to 110% of net assets may be invested in equities, with no restrictions as to geographic region (including emerging countries), market capitalisation or economic sector, within the following limits:

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region (including emerging countries), credit rating as determined by the asset management company or a credit-rating agency, or the lack of such a rating

Up to 100% of net assets may be exposed to currency risk

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for hedging and/or to gain exposure to equity, interest-rate, credit and currency risks, which may leverage the portfolio,
- securities financing transactions.

CM-AM GLOBAL EMERGING MARKETS

This UCITS is actively managed on a discretionary basis using fundamental and financial analysis. The fund's objective is to offer a performance linked to equity market trends over the recommended investment period by investing in international companies listed on regulated markets and benefiting from the development and growth of emerging and frontier countries as defined by MSCI. Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, for ex-post evaluation purposes the fund's performance may be compared with that of a composite benchmark index composed of: MSCI Emerging Markets.

The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index, the MSCI Emerging Markets (dividends reinvested).

The index is calculated at closing prices and is expressed in euros and with dividends reinvested.

In order to achieve its management objective, the Fund adopts a selective stock-picking style, investing in issuers located in emerging and frontier countries as defined by the MSCI. The process for selecting companies is based on fundamental and financial analysis (growth, profitability regular, valuation). Companies selected for their growth potential benefit from economic trends in these countries, such as the development of the middle class, the digitalisation of the economy, natural resources, infrastructure development and emerging leaders.

Environmental, social and governance (ESG) criteria are one of the components of investment management, but their weighting in the final decision is not defined upstream.

The Fund will observe the following net asset exposure limits:

From 60 % to 110 % of net assets may be invested in equities, with no restrictions as to geographic region, market capitalisation or economic sector, within the following limits:

- from 0% to 20 % in companies with market capitalisations < EUR 3 billion
- from 0% to 10% in equities in frontier countries as defined by MSCI.

From 0% to 10% of net assets may be invested in sovereign public and private debt instruments, regardless of geographic region or credit rating, as determined by the asset management company or a credit-rating agency

From 60 % to 110 % in equity markets in emerging market countries

From 0 % to 110 % exposure to currency risk on non-euro currencies

The fund may invest:

- in equities
- up to 10% of its net assets in French or foreign UCITS or general purpose investment funds governed by French law, meeting the conditions of article R.214-13 of the Monetary and Financial Code.

The fund may also trade in:

- forward contracts, futures, options and securities with embedded derivatives, used for hedging and/or to gain exposure to equity, credit, interest-rate and currency risks may leverage the portfolio,
- deposits, cash loans.

CM-AM EUROPE GROWTH

The Fund is actively managed on a discretionary basis in compliance with a qualitative extra-financial filter in accordance with the policy implemented by Crédit Mutuel Asset Management and in compliance with the requirements of the French SRI label. It is not managed with reference to a benchmark index. The objective of this Fund is to increase the value of the portfolio using a stock-picking approach, by selecting companies that meet sustainable development and social responsibility criteria that have a profitable growth profile, as determined by the asset management company, over the recommended investment period.

In order to achieve its management objective, the Fund adopts a selective management style for direct holdings or holdings in UCIs, determined by means of a fundamental approach focusing on the securities

of companies whose stock market valuation depends on their growth. The Fund's management strategy establishes a universe of targeted stocks using an extra-financial process complemented by a financial analysis. The Fund's strategy is based on a selective approach that favours the highest-rated issuers or those demonstrating good prospects for their environmental, social and governance (ESG) practices, and excludes issuers with ESG risks.

The management process can be broken down into the following three stages:

1. ESG filter: the management team will apply extra-financial filters based on ESG criteria derived from a proprietary methodology developed by the Responsible and Sustainable Finance division. This filter covers quality of governance, societal, social and environmental criteria, as well as the commitment of the company to a socially responsible approach. For example, Pillar E: carbon intensity, Pillar S: human resources policy, and Pillar G: proportion of independent directors are included in our ESG categories. This filter determines a classification from 1 to 5 (5 being the best classification). The fund managers will only select issuers with a rating of more than 2. In terms of controversy management, each security is specifically analysed, monitored and rated. Management will exclude all issuers with major controversies. These first ESG filters eliminate at least 20% of the lowest-rated stocks.
2. Financial analysis: Stocks are analysed from a financial point of view, so that only those whose quality and earnings growth are clearly identified are retained. This universe constitutes a watch list for stocks that are eligible for investment.
3. Portfolio construction: From this shortlist, stocks offering a valuation deemed attractive by the management team are added to the portfolio, using a stock-picking approach. The portfolio is constructed according to the managers' convictions (potential and quality).

At least 90% of the stocks picked by the management team include extra-financial criteria. The Fund may invest up to 10% of its net assets in securities and units or shares of UCIs that do not include extra-financial criteria.

As a result of the financial analysis, issuers the highest ESG ratings are not automatically included in the portfolio.

The fund will observe the following net asset exposure limits:

From 0% to 110% of net assets may be invested in equities, with no restrictions as to geographic region, market capitalisation or economic sector, within the following limits:

- from 0% to 25% in equity markets outside the European Union
- from 0% to 25% in small-cap companies < EUR 3 billion
- from 0% to 10% in emerging market countries

From 0% to 25% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region, credit rating as determined by the asset management company or a credit-rating agency, or the lack of such a rating, subject to the following limit:

- from 0% to 5% in speculative or unlisted debt instruments

From 0% to 10% in convertible bonds.

From 0% to 100% exposure to currency risk on non-euro currencies.

PEA-eligible securities always account for at least 75% of net assets.

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for hedging and/or to gain exposure to equity, interest-rate, credit and currency risks, which may leverage the portfolio.

CM-AM DOLLAR CASH

This Fund is actively managed on a discretionary basis. The fund's objective is to outperform its performance indicator, the compounded SOFR (Secured Overnight Financing Rate), less actual management fees, over the recommended investment horizon. In the event of particularly low, negative or volatile interest rates, the net asset value of the Fund may fall structurally, which could have a negative impact on the performance of your Fund and compromise the management objective of capital preservation.

In order to achieve its management objective, the Fund adopts an active management style aimed at achieving a performance close to that of the capitalised SOFR in a context of market risk comparable to that of this rate, while respecting the regularity of net asset value movements. This translates into:

- Active management of the average life of securities in relation to expected

changes in Central Bank rates, management of the money market yield curve and management of fluctuations in the SOFR rate over the month. The split between floating and fixed rates changes according to expectations of changes in interest rates.

- Managing credit risk as a complement to the portion of the portfolio managed on a day-to-day basis in order to seek to increase the portfolio's return: a rigorous selection of private sector signatures helps to increase the portfolio's overall return.

The Fund is denominated in USD: residents of France or of one of the countries in the eurozone are exposed to currency risk to the extent of their investment.

The portfolio is composed of money market instruments meeting the criteria of Directive 2009/65/EC and term deposits from credit institutions according to an internal process of analysis and assessment of high quality by the asset management company, or by reference, but not exclusively, to the short-term ratings of the rating agencies registered with ESMA which have rated the instrument and which the asset management company deems to be the most relevant, avoiding any mechanical dependence on these ratings.

If the instrument is not rated, the asset management company determines an equivalent quality using an internal process.

A money market instrument is not of high credit quality if it does not have at least one of the two highest short-term ratings determined by the asset management company.

The Fund limits its investments to financial instruments with a maximum residual maturity of 2 years or less, provided that the rate can be revised within a maximum period of 397 days.

The weighted average maturity (WAM) is less than or equal to 6 months. The weighted average life (WAL) of financial instruments is less than or equal to 12 months. By way of derogation, it may invest more than 5% of its net assets and up to 100% of its net assets in money market instruments issued or guaranteed individually or jointly by certain sovereign, quasi-sovereign or supranational entities.

Environmental, social and governance (ESG) criteria are one of the components of investment management, but their weighting in the final decision is not defined upstream.

They may invest up to 10% of net assets in French or foreign UCITS funds and in French general purpose investment funds (FIVG) that meet the requirements of Article R.214-13 of the French monetary and financial code and governed by Regulation (EU) 2017/1131.

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for hedging and/or to gain exposure to interest-rate, credit and currency risks.

Direct or indirect exposure to equity and commodity risk, even through financial contracts, is prohibited.

CM-AM PIERRE

This Fund is actively managed on a discretionary basis in compliance with a qualitative extra-financial filter in accordance with the policy implemented by Crédit Mutuel Asset Management and in compliance with the requirements of the French SRI label. The objective of this Fund is to increase the value of the portfolio using a stock-picking approach, by selecting companies that meet sustainable development and social responsibility criteria, as determined by the asset management company, over the recommended investment period.

Its management objective is to offer performance linked to trends in the listed European property and real estate market through selective management of European stocks over the recommended investment period.

Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, the Fund's performance may be compared with that of a benchmark index such as the FTSE EPRA (European Public Real Estate Association) Europe Index, which is made up of the main stocks in the pan-European property and real estate sector.

The management process can be broken down into the following three stages:

1. **ESG filter:** the management team will apply extra-financial filters based on ESG criteria derived from a proprietary methodology developed by the Responsible and Sustainable Finance division. This filter covers quality of governance, societal, social and environmental criteria, as well as the commitment of the company to a socially responsible approach. For example, Pillar E: carbon intensity, Pillar S: human resources policy, and Pillar G: proportion of independent directors are included in our ESG categories. This filter determines a classification from 1 to 5 (5 being the best classification). In terms of controversy management, each security is specifically analysed, monitored and rated. Management will exclude all issuers with major controversies. These first ESG filters eliminate at least 20% of the lowest-rated stocks.
2. **Fundamental analysis:** Within this narrow investment universe, the management team analyses companies from a fundamental, financial and extra-financial point of view, using qualitative and quantitative criteria to give the management team a complete view of the company from an environmental, social and governance perspective.
3. **Portfolio construction:** From this universe of eligible stocks, the management team builds the portfolio using a stock-picking approach, based on its main convictions from a financial and extra-financial point of view, and on stocks deemed attractive in terms of valuation and offering potential for medium-term appreciation. At least 90% of the securities and UCIs selected by the management team include extra-financial criteria. The Fund may invest up to 10% of its net assets in securities and units or shares of UCIs that do not include extra-financial criteria.

As a result of the financial analysis, issuers the highest ESG ratings are not automatically included in the portfolio.

The Fund will observe the following net asset exposure limits:

From 65 % to 110 % of net assets may be invested in equities, with no restrictions as to geographic region, market capitalisation or economic sector, within the following limits:

- at least 65% in property or real estate equities
- 60% minimum exposure to the equity markets of European Union countries, the United Kingdom, Switzerland and Norway
- from 0% to 30% to equity markets outside the European Union, the United Kingdom, Switzerland and Norway
- from 0% to 10% in emerging market countries
- from 0% to 20% in property or real estate equities

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region, of Investment Grade, as determined by the asset management company or a credit-rating agency

From 0% to 10% in convertible bonds.

From 0% to 100 % of the currency risk on non-euro currencies, with no more than 30% outside European Union countries, the United Kingdom, Switzerland and Norway

At least 75% of the Fund is invested in property and real estate securities from the European Union, the United Kingdom, Switzerland and Norway.

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for hedging and/or to gain exposure to equity, currency, credit and interest-rate risks, which may leverage the portfolio.

CM-AM EUROPE VALUE

The Fund is actively managed on a discretionary basis in compliance with a qualitative extra-financial filter in accordance with the policy implemented by Crédit Mutuel Asset Management and in compliance with the requirements of the French SRI label. It is not managed with reference to a benchmark index. The objective of this Fund is to increase the value of the portfolio through selective management of stocks deemed to be undervalued, over the recommended investment period.

In order to achieve the management objective, the manager uses a discretionary approach to select ESG-rated companies with a market capitalisation of more than 500 million euros from European Union countries, the United Kingdom, Switzerland and Norway. The strategy then consists in establishing a universe of targeted stocks using an extra-financial process complemented by a financial analysis. The Fund's strategy is based on a selective approach that favours the highest-rated issuers or those demonstrating good prospects for their environmental, social and governance (ESG) practices, and excludes issuers with ESG risks.

The management process can be broken down into the three stages:

1. ESG filter and controversy management: the management team will apply extra-financial filters based on ESG criteria derived from a proprietary methodology developed by the Responsible and Sustainable Finance division. This filter covers quality of governance, societal, social and environmental criteria, as well as the commitment of the company or governments to a socially responsible approach. For example, for Pillar E: carbon intensity, for Pillar S: the pay gap between average salary and CEO pay, and for Pillar G: the proportion of women on boards of directors are included in our ESG categories. This filter determines a classification from 1 to 5 (5 being the best classification). Fund managers will eliminate the lowest-rated issuers. In terms of controversy management, each security is specifically analysed, monitored and rated. Management will exclude all issuers with major controversies. This first ESG filter eliminates at least 20% of the lowest-rated stocks.

2. Financial analysis: Within this filtered universe, stocks are subject to in-depth financial analysis to match the corresponding management style, i.e. Value management. The aim is to identify companies with an unjustified valuation discount, a solid balance sheet structure and the catalysts needed to boost their value. This universe constitutes a watch list for stocks that are eligible for investment.

3. Portfolio construction: Following this financial and extra-financial analysis, the portfolio is constructed on the basis of the managers' convictions, using a stock-picking approach. At least 90% of the securities and UCIs selected by the management team include extra-financial criteria. The Fund may invest up to 10% of its net assets in securities and units or shares of UCIs that do not include extra-financial criteria.

As a result of the financial analysis, issuers the highest ESG ratings are not automatically included in the portfolio.

The Fund will observe the following net asset exposure limits:

From 60% to 110% of net assets may be invested in equities, with no restrictions as to geographic region, market capitalisation or economic sector, within the following limits:

- at least 60% in European Union equities
- from 0% to 25% in small-cap companies < EUR 3 billion

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region, of Investment Grade, as determined by the asset management company or a credit-rating agency.

From 0% to 10% in convertible bonds.

From 0% to 100% exposure to currency risk on non-euro currencies.

PEA-eligible securities always account for at least 75% of net assets.

The fund may also trade in:

- forward contracts, futures or options and securities with embedded derivatives, used for hedging and/or to gain exposure to equity, credit, interest-rate and currency risks, which may leverage the portfolio.

ANNUAL GENERAL MEETING AGENDA

Ordinary business

1. Report of the Board of Directors and report of the Statutory Auditors on the financial statements for the year ended 28 March 2024 - Discharge of the Directors
2. Examination and approval of the annual financial statements - Allocation of distributable amounts
3. Special Auditor's report
4. Ratification of the co-opting of Ms. Eliana DE ABREU as Director
5. Granting of powers.

Extraordinary business

1. Management report from the Board of Directors to the Extraordinary General Meeting on the proposed merger of the 'CM-AM HIGH YIELD 2024' sub-fund of the CM-AM SICAV into the 'CM-AM HIGH YIELD SHORT DURATION' mutual fund.
2. Approval of the merger agreement
3. Determination of the transaction date
4. Delegation of all powers to the Chairman and Chief Executive Officer to carry out the valuation of the contributions and determine the exchange parity
5. Granting of powers.

MANAGEMENT REPORT OF THE BOARD OF DIRECTORS TO THE ANNUAL GENERAL MEETING HELD ON 31 JULY 2024

Ladies and Gentlemen,

We have called this Ordinary Annual General Meeting, in accordance with legal and regulatory requirements and the Company's Articles of Association, to report to you on your Company's activities during the year just ended and to ask you to approve the financial statements for the year ended 28 March 2024.

I. ACTIVITIES REVIEW

1. Management Policy

CM-AM INSTITUTIONAL SHORT TERM

Post-pandemic tensions over supply and the war in Ukraine have sent the entire global economy into an inflationary spiral. In Europe, this meant that rates continued to rise throughout the year. Faced with a steady rise in prices and resilient growth, the ECB has raised its key rates 6 times over 2023. This has pushed the deposit rate to a record level of 4%. From the second half of 2023, theories of an economic slowdown and a lull in inflation began to materialise. This ended the upward cycle from September onwards. The rest of the year was marked by speculation about the dates of the next rate cuts. It should be noted that money market credit spreads remained particularly resilient over the year.

Against this inflationary backdrop, we have maintained a low average maturity and low credit sensitivity. Our investments continued to focus on the most liquid instruments.

The performances of the fund's units over the year are listed below:

- FR0007033477 (RC): 3.70%
- FR0013241452 (EI): 3.70%
- FR0014007LZ3 (IC): 3.70%
- FR0010290924 (RD): 3.70%

compared with 3.73% for the benchmark index (Ester capitalised).

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM INSTITUTIONAL SHORT TERM**

Legal entity identifier: **969500F7QYRETZA47C55**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 25%

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but **did not make sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 5.85/10 while its benchmark universe had a score of 5.82/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

- ESG score.

For funds with a sustainable investment objective: add the proportion of sustainable investment as a sustainability indicator.

- the proportion of sustainable investment (only for funds with a sustainable investment component)

The ESG score of the financial product is 5.85/10

The ESG score remained higher than the benchmark universe ESG score

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

N/A

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

N/A

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely: **31/03/2023–28/03/2024**

Major investments	Sector	% of assets	Country
TOYOTA MOTOR FINANCE NETHERLANDS BV	Consumer Discretionary	7.6	NETHERLANDS
MITSUBISHI HC CAPITAL UK PLC	Financial	4.9	UNITED KINGDOM
ALD	Industry	4.2	FRANCE
STANDARD CHARTERED BANK	Financial	3.9	UNITED KINGDOM
FEDERATION DES CAISSES DESJARDINS DU QUEBEC	Financial	3.3	CANADA
LLOYDS BANK CORPORATE MARKETS PUBLIC LIMITED COMPANY	Financial	3.3	UNITED KINGDOM
STEF	Industry	3.3	FRANCE
L OCCITANE INTERNATIONAL SA	Consumer Goods	3.3	FRANCE
FINANCIERE AGACHE	Consumer Discretionary	3.3	FRANCE
ITM ENTREPRISES	Consumer Goods	3.2	FRANCE

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- **of revenues** to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- **of capital expenditure** (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- **of operating expenses** (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

For funds with a sustainable investment objective: The financial product commits to a minimum of **25%** sustainable investment, as a proportion of the fund's total assets.

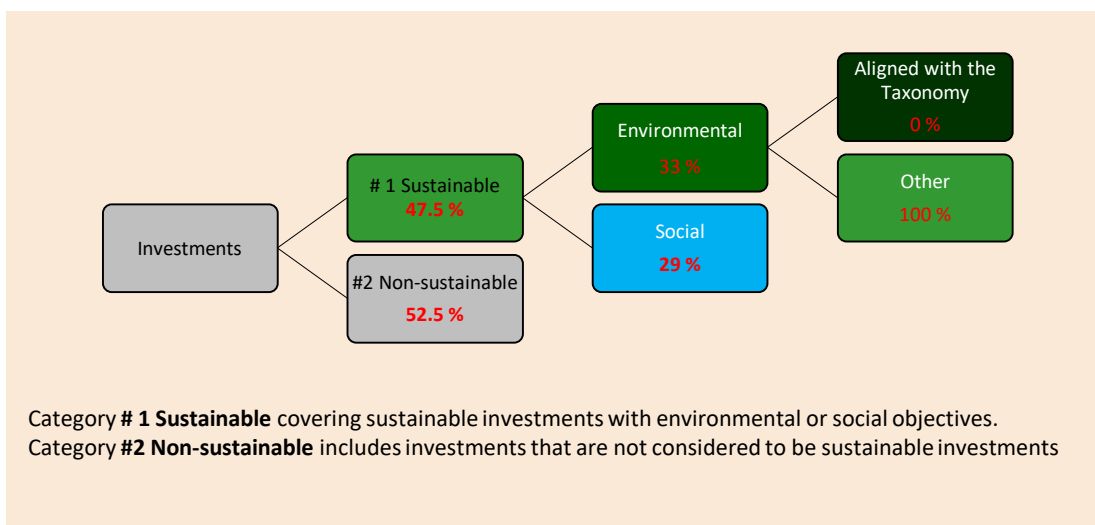

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

In which economic sectors have investments been made?

Investments were made in the following sectors:

GICS sectors	% Share
Financial	39.5
Industry	18.8
Consumer Discretionary	15.2
Consumer Goods	11.8
Utilities	3.2
Communications services	2.4
Information technology	0.2

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 33%.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- Coal Developers (5): issuers developing coal mining capacity;
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM GLOBAL GOLD

Environmental and/or social characteristics

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefitting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

It has made **sustainable investments with an environmental objective:**

%

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted **environmental and/or social (E/S) characteristics** and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 0 %

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

N/A

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

● **How did the sustainability indicators perform?**

N/A

● **... and compared with previous periods?**

N/A

● **What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?**

N/A

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

● **To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?**

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely:
01/04/2023–28/03/2024

Major investments	Sector	% of assets	Country
AGNICO EAGLE MINES LTD	Metals	6.2	CANADA
FRANCO NEVADA CORP	Metals	4.6	CANADA
BARRICK GOLD CORP	Metals	4.4	CANADA
WHEATON PRECIOUS METALS CORP	Metals	4.2	CANADA
NEWMONT CORPORATION	Metals	4.1	UNITED STATES OF AMERICA
NORTHERN STAR RESOURCES LTD	Metals	3.8	AUSTRALIA
KINROSS GOLD CORPORATION	Metals	3.6	CANADA
ALAMOS GOLD INC	Metals	3.4	CANADA
FREEMONT MCMORAN INC	Metals	3.2	UNITED STATES OF AMERICA
OCEANAGOLD CORPORATION	Metals	2.9	CANADA

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- of revenues to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- of capital expenditure (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- of operating expenses (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

The financial product commits to a minimum of 0% sustainable investment, as a proportion of the fund's total assets.

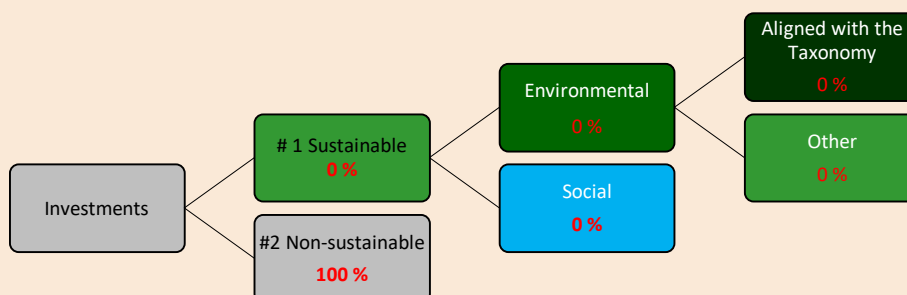

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

GICS sectors	% Share
Metals	97.0

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 0% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 0%.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Global Gold Annual Report March 2024

2023-24 was a positive year for gold, which ended the year at an all-time high of \$222.03, up 12.83% (in USD on 28 March 2024).

It was supported by physical purchases by central banks and individual investors, particularly in emerging countries. Demand for jewellery remained buoyant.

Gold has also moved in step with financial indicators such as the US dollar and US real interest rates. However, the correlation is not as strong as in previous periods. Gold benefited from its status as a safe-haven asset during the Hamas attack on Israel and the war that this provoked.

However, gold companies did not fully benefit from the strong performance of precious metals prices. Half year results were disappointing. This was due to the investments made by the companies, which reduced part of the return to shareholders.

The Nyse Arca closed the financial year down slightly by -2.7% in USD or -2% in euros.

During the 2023-24 financial year, the fund's strategy changed little. In the first half of the year, we increased our cash holdings in order to reduce our overall exposure. We reduced our weighting in silver companies, which often underperform in periods of margin pressure. In the first half we favoured royalty companies such as Franco Nevada and Wheaton Precious Metals. We also favoured the major companies.

In the second half of the year, we strengthened 'intermediate' producers with growing production, such as Centerra Gold, and junior producers, as they are potential Skeena targets.

Performance of CM-AM Global Gold fund units in 2023-24:

Net absolute return from 31/03/2023 to 28/03/2024

CM-AM SUSTAINABLE PLANET

- Commentary on the year

The excitement surrounding artificial intelligence, the banking panic in March, disappointment over China's recovery and ongoing conflicts (Ukraine, Middle East) drove the world's financial markets in 2023. Despite a slightly worsening macroeconomic and geopolitical backdrop as the year progressed, the major stock market indices remained in a "bull market" phase, with highs reached time and time again. Stubborn inflation and the continuing rise in interest rates also contributed to the prevailing volatility, without causing the indices to falter.

Over the full year ending March 2024, European markets rose by more than 15%, with two distinct periods: from March to September 2023, a relatively stable period on the markets, followed by a major rebound from the end of October, buoyed by the first signs of a rate cut.

Over the 2nd half of the year, mid-caps and growth stocks in particular performed best, while value stocks gradually ran out of steam based on these expectations.

On the stock market, sector performances varied widely, with sectors such as utilities and telecoms being penalised by the high interest-rate environment due to their indebtedness. On the other hand, Financials and Technology posted the best performances over the period.

The year was marked by rapid and short rotation effects, triggering high volatility, which was detrimental to a conviction fund with a long-term focus, particularly on the theme of energy transition.

Over the full year, the fund underperformed its index, penalised by its exposure to indebted renewable stocks (Solaria, Acciona, EDP) and the absence of banking and energy stocks, which do not correspond to the fund's theme.

Specifically, the fund's underperformance is mainly due to the absence of banks (more than 10% of the index), which posted double-digit returns, and even triple-digit returns for Unicredit (+112.6%). The geopolitical context and the rise in oil prices were particularly favourable for the oil companies, which were understandably absent from the fund.

The underweighting of the technology sector also weighed heavily: ASML (+44,1%), SAP (+58,12%). The fund did, however, benefit from the good performance of Capgemini (+27.6%), which is heavily overweighted.

As for positive contributors over the period, we benefited from our overweight positions in the Healthcare sector via Novo Nordisk (not included in the index), which rose by more than 64%; in Construction with St Gobain (+42.5%) and Kingspan (+35%); and in the Automotive sector (Stellantis +71.5% and Michelin +32%).

As regards investment movements, we increased our exposure to companies with exposure to the energy efficiency theme, such as Spie, SAP and Infineon. The Italian cable company Prysmian was introduced and gradually strengthened over the period. In renewables, we were more selective, reducing our exposure to Neste and Solaria in favour of the more diversified Neoen, which was added to the fund. Following a series of controversies and setbacks, we decided to sell our positions in Worldline and Alstom. Nibe was also removed from the portfolio due to the lack of visibility on its end markets.

Over the year as a whole, the fund's performance was up: +6.26% for the RC share, +7.15% for the IC share and +7.07% for the S share, while its benchmark index rose by +18.50%.

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM SUSTAINABLE PLANET**
Legal entity identifier: **969500S8P9XFWKJ4IQ68**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted **environmental and/or social (E/S) characteristics** and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 60 %

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but **did not make sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 6.95/10 while its benchmark universe had a score of 5.34/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

The ESG score of the financial product is 6.95/10 an improvement of 0.25 over the period. This is due to the progress made by the companies in the portfolio in terms of ESG, as well as the construction of the portfolio to take account of extra-financial criteria.

The ESG score remained higher than the ESG score of the benchmark universe, for reasons relating in particular to selecting securities that comply with stringent extra-financial criteria.

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

N/A

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

N/A

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

Issuer CM AM	Sector	Country	% Share
SPIE SA	Industry	FRANCE	5.0
SCHNEIDER ELECTRIC SE	Industry	FRANCE	4.9
SIEMENS AG	Industry	GERMANY	3.8
COMPAGNIE DE SAINT GOBAIN SA	Industry	FRANCE	3.6
AXA SA	Financial	FRANCE	3.6
STELLANTIS NV	Consumer Discretionary	NETHERLANDS	3.4
PRYSMIAN SPA	Industry	ITALY	3.4
DASSAULT SYSTEMES	Information technology	FRANCE	3.2
ENEL SPA	Utilities	ITALY	3.2
SIKA AG	Materials	SWITZERLAND	3.2

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely:
31/03/2023–28/03/2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- **of revenues** to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- **of capital expenditure** (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- **of operating expenses** (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

For funds with a sustainable investment objective: The financial product commits to a minimum of 60% sustainable investment, as a proportion of the fund's total assets.

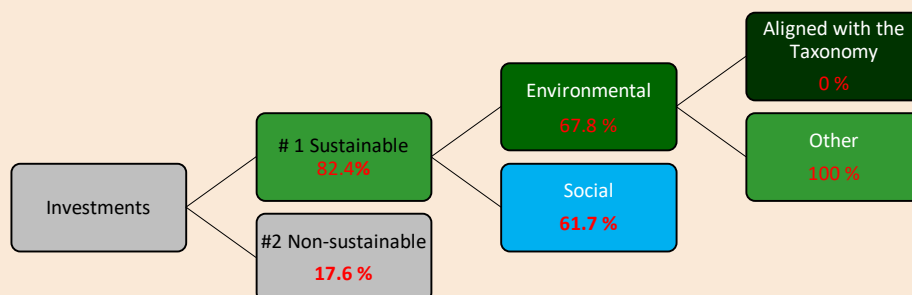

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Investments were made in the following sectors:

Sectors	% Share
Industry	33.6
Materials	14.7
Information technology	13.5
Utilities	12.4
Consumer Discretionary	5.8
Financial	5.8
Health care	5.2
Communications services	4.3
Consumer Goods	1.8
Energy	0.5

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 61.7%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

- Sectoral policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- Coal Developers (5): issuers developing coal mining capacity;
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;

Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- ☐ the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM INFLATION

Annual Report from 31/03/2023 to 31/03/2024

Market environment

After partially correcting the rally triggered by the banking shock in the US and Europe at the start of the second quarter of 2023, the bond market finally ended in a stable April position after a series of short episodes of risk aversion and a flight to quality: 10-year German and US government bond yields closed at 2.31 and 3.42 respectively. In addition to the downgrading of France to AA- by Fitch, the last week of April was marked by a return of risk, with a sharp fall in 2-year yields driven by fears about the situation of US banks, the growing risk of default by the United States and concerns about growth, related to the economic slowdown emerging from the statistics. Credit spreads for non-financial companies fell more than those for banks, while those for France and Italy rose by 7 bp against the Bund, while the yield curve remained stable. The rest of the quarter was fairly favourable for risky assets, with the passage of the debt ceiling bill in the United States, good inflation data in the eurozone and the easing of expectations of a further rate hike by the Fed, despite mixed economic data and cautious corporate communications in the United States. The German 10- year bond finished stable at 2.28%, after hitting a high for the month of 2.54%. Non-financial corporate credit spreads underperformed the financial issuers due to an extremely buoyant primary market. The end of the 2nd quarter marked the first pause in the Fed's rate hike cycle, unlike the ECB, which once again delivered a 25 bp hike. Macro indicators generally pointed to the resilience of employment, with inflation persisting at levels that were still too high (particularly core inflation), and comments by central bankers at the Sintra conference maintaining the course of further monetary tightening pushed German and US 10-year yields up to 2.39% and 3.84% respectively, with the curves flattening sharply at the same time. Investor optimism kept risk aversion in check as peripheral spreads narrowed.

The 3rd quarter was marked by a further rise in Fed and ECB key rates, but the Central Banks were more flexible about the need for further increases. European and US interest rates began on an upward trend, but lower-than-expected US inflation figures led to a marked easing in sovereign interest rates, particularly short rates. As a result of the fall in European yields and reduced risk aversion, the spread between Italian and German sovereign yields narrowed, as did the IG credit market. August saw a strong upward drive in long-term yields following the persistent resilience of US growth and fears that central banks would maintain a restrictive monetary policy for longer, the beginning of a shift in the BoJ's monetary policy, the forthcoming acceleration in massive US Treasury issuance and reduced liquidity. However, statistics indicating a gradual disinflationary trend and a worrying growth outlook, particularly in the eurozone, combined with ECB communication highlighting the deteriorating environment and the restrictive impact of current and future monetary policy, reversed the uptrend in yields, with the German 10-year closing virtually unchanged at 2.46%. Credit spreads widened by around ten bp vs Bund, unlike spreads on peripheral and semi-core countries. Credit spreads widened by around ten bp against the Bund, in contrast to spreads on peripheral and semi-core countries. The end of the quarter saw a widespread correction in bonds on the main markets, with curves steepening sharply and real rates rising, setting new highs for US 10-year yields at 4.60% and German 10-year yields at 2.85%. The risks multiplied, with monetary policy decisions by the FED, ECB and BOE fuelling fears of high interest rates over the long term, the umpteenth risk of a US shutdown, the shift in expectations of the start of ECB rate cuts towards the second half of 2024 and the resurgence of Italian risk. With inflation data fairly reassuring but oil prices rising, positive macro figures at the end of the month in the US and EUR but a bearish outlook, and worrying news from China, the market favoured risk aversion, as illustrated by the BTP spread (+29 bp) and credit over the second half of the month.

The start of the final quarter of 2023 was marked by the resurgence of geopolitical risk linked to the conflict in the Middle East, economic statistics that were slow to send out a message of economic slowdown, and mixed corporate results. However, after peaking at 5% for the US 10Y and 3% for the German 10Y, the trend reversed in the second half of October, ending the month 10bps and 20bps

lower respectively. At the end of the month, the ECB brought a measure of relief to interest rates by accepting the largely consensual scenario of a pause in its monetary tightening, followed shortly afterwards by the FED, as the wide gap between the US and Europe in terms of economic momentum and inflation was confirmed. Risk aversion was reflected in risky assets, with the BTP-BUND spread reaching a high of 212bps and credit spreads widening by +/- 66bps over the month. The fall in sovereign rates accelerated from November onwards, on the back of economic statistics that supported the hypothesis that inflation was easing without a collapse in growth, as well as the first signs of a perceptible adjustment in the Fed's communication. The US 10-year yield thus fell back below 4%, ending the year at 3.88%, while the German 10-year ended the year at 2%. The credit rally was boosted by lower-than-expected inflation figures on both sides of the Atlantic, reinforcing expectations of future rate cuts by the Fed and the ECB from 2024. The continued fall in sovereign interest rates supported credit spreads, which narrowed on both CDS and cash markets. The BTP-Bund spread also benefited from the momentum of appetite for risk, narrowing by almost 30bps over the quarter.

As expected at the start of Q1 2024, the ECB left its key rates unchanged and did not express very outspoken opposition to the rate cut expectations embedded in market prices, softening its language on the inflation outlook and concerns about wage growth. National inflation rates also showed a relapse continuing at a comfortable pace, but the underlying components were more resilient, encouraging the ECB to take its time in ensuring that inflation was indeed on track. There were no major surprises at the Fed meeting either, with key rates unchanged as expected and Powell's communication measured. In addition, central banks had to contend with considerable geopolitical instability. In response to the sharp fall in the last quarter of 2023 and the high issuance volume, the German 10-year tightened by 14 bps as the curve steepened and peripheral debt outperformed. In February, euro data showed that while price rises continued to slow, the downturn remained very modest for the underlying component, since services, whose prices rose later, took time to slow down, as they are supported by wage increases. The same is true in the United States, where January's PCE inflation is still showing a resilience that is incompatible with a rapid easing of monetary policy, because service prices are decelerating too slowly. At the same time, the strength of the US data raised questions about the genuinely restrictive nature of monetary policy, and the euro PMIs showed signs of strength in a weak economy. As a result, expectations of rate cuts continued to be pushed back in both the US and the eurozone, with a number of central bankers taking a negative stance. Finally, March ended in a status quo for sovereign rates on both sides of the Atlantic. However, the apparent stability of yields was no reason to disguise their marked volatility, with a 25bp and 20bp gap respectively between the high and low points for US and German 10-years. At its meeting on 20 March, the Fed kept its key interest rates unchanged for the 5th time in a row, at their highest level for 23 years. However, Fed members were still considering 3 rate cuts between then and the end of the year. Similarly, the ECB left its monetary policy unchanged. The surprise came from the Swiss National Bank, which beat its peers to a 1st rate cut of 0.25%, in view of the "easing of inflationary pressure". The spread between Italy and Germany continued to narrow, while the spread between France and Germany underperformed following the announcement of a higher-than-expected deficit of 5.5% of GDP in 2023.

Management policy

As regards managing our exposure, at the start of the 2nd quarter of 2023, we reduced our exposure to German index-linked bonds 2026, while maintaining our sensitivity in line with that of the benchmark index. We also subsequently divested our exposure to a French indexed bond with a residual maturity of 1 year. At the end of the quarter, we divested our exposure to French and Spanish index-linked bonds with a residual maturity of 1 year. We also increased our exposure to index-linked bonds by selling French and German 2026 maturities in exchange for a German 2033 maturity.

In Q3 2023, we divested our exposure to French European inflation-linked bonds maturing in 2027 and 2031. We maintain a sensitivity in line with that of the benchmark index. We then increased our exposure to the German 2033 index-linked bond and, at the same time, sold the German 2026 index-linked bond and a French bond linked to European inflation maturing in 2026, while maintaining a sensitivity to real rates slightly below that of the benchmark index.

In Q4 2023, we sold short maturities in Spain 2027 and German 2026 and bought longer maturities in Spain 2033 and Spain 2030. In the middle of the quarter, we sold Spain 2030 and German 2026 maturities. At the end of 2023, we sold French and Italian 2026 and 2027 maturities to buy Spain 2030, Italy 2033 and Spain 2033, while maintaining a slightly undersensitive positioning relative to real rates.

In Q1 2024, we sold a short maturity of OAT€i 2026 in its entirety and maintained a sensitivity to the real rate slightly lower than that of the benchmark index.

Performance

Between 1 April 2023 and 31 March 2024, the fund's performance was:

+2.10% for the IC unit

+1.79% for the RC unit

+2.00% for the S unit

Against a benchmark performance of +2.25%.

Annex SFDR Annual Report (ex-post addendum)

Product name: CM-AM INFLATION
Legal entity identifier: 96950044GUZ0EADSIM46

Sustainable development objective

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted **environmental and/or social (E/S) characteristics** and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 0 %

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but **did not make sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

N/A

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

How did the sustainability indicators perform?

- N/A

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

In addition to promoting environmental and social characteristics, which are at the heart of the financial product's investment proposition, the product has a minimum investment pocket whose objective is to invest in companies and/or issuers identified as 'sustainable' according to Crédit Mutuel Asset Management's own internal methodology.

The United Nations Sustainable Development Goals are used as a reference framework to determine which investments contribute to an environmental or social objective.

The financial product seeks to encourage the best companies and/or issuers in terms of environmental, social and governance practices, while at the same time rewarding and encouraging those who also demonstrate a proven contribution to the achievement of environmental and/or social objectives, particularly through their activities.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

As part of its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the main negative impacts that could cause significant harm and thus weaken the positive environmental and/or social contribution proposal, identified initially through the proportion of sales aligned with the Sustainable Development Goals (SDGs).

The potential for significant damage was assessed on the following basis:

- Sector exclusion rules concerning investment activities in sectors with high environmental and social risks, such as coal or mining.
- Normative exclusion rules concerning controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Consideration, through Crédit Mutuel Asset Management's proprietary ESG methodology and rating, of the Principal Adverse Impacts (PAIs).

All the PAI indicators (table 1, appendix 1 RTS) are taken into consideration here, either directly (indicator of violation of the United Nations Global Compact and OECD principles), or by using elements of Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In this case, each PAI was associated with a sub-pillar of the corresponding proprietary ESG score.

The Sustainable Investment model developed by Crédit Mutuel Asset Management has therefore made it possible to take into account the negative impacts and guiding principles of the OECD and the United Nations upstream of the investment, thus avoiding any exposure to a company or issuer identified as likely to cause significant environmental or social harm.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

In order to achieve its management objective, the Fund's strategy is based on investments in debt securities and money market instruments - mainly issued by governments, public and private companies in the Eurozone - indexed to inflation. The Fund's investment strategy, as described below, incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

What were the main investments in this financial product?

The list includes investments constituting the largest proportion of investments of the financial product during the reference period, namely: **01/04/2023–31/03/2024**

Major investments	Sector	% of assets	Country
OAT 0,10%17-01032028 INDX	Government	9.678	FRANCE
OATE 1,85%11-25072027 IND	Government	9.191	FRANCE

SPAIN 1%15-301130 INDX	Government	6.870	SPAIN
ITALY VR15-150932 INFLATI	Government	5.905	ITALY
ITALY VR18-301133 INFLATI	Government	5.093	SPAIN
ITALY VR17-150528 INFLATI	Government	5.091	ITALY

What was the proportion of sustainability-related investments?

What was the asset allocation?

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

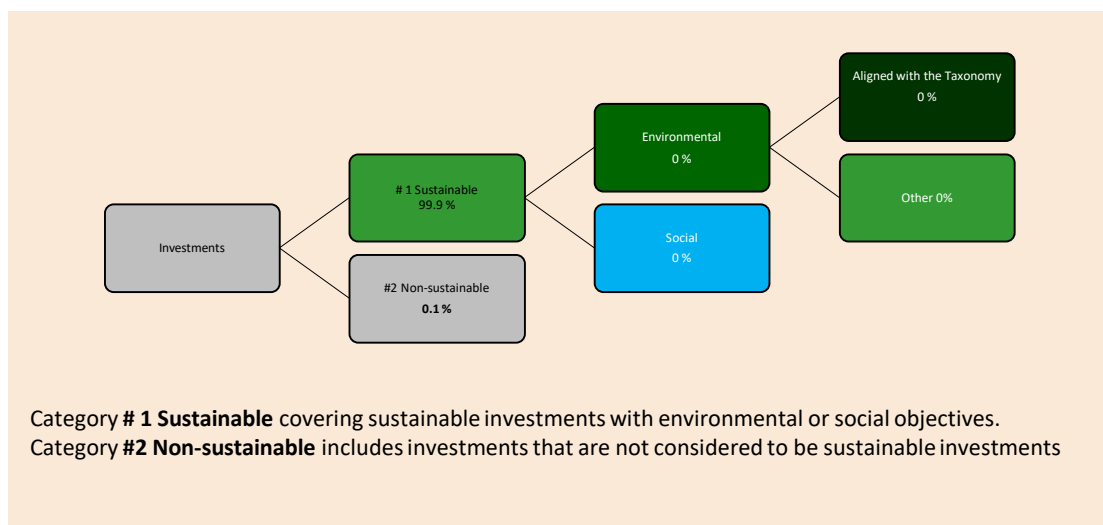

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 0% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held are therefore considered 'sustainable' (according to the methodology described above).

In which economic sectors have investments been made?

Investments were made in the following sectors:

Government 100%

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include emission limits and a switch entirely to renewable electricity or low-carbon fuels by the end of 2035.

As far as **nuclear energy** is concerned, the criteria include comprehensive rules on nuclear safety and waste management.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective.

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the UE taxonomy?

Yes:

In fossil gas

In nuclear energy

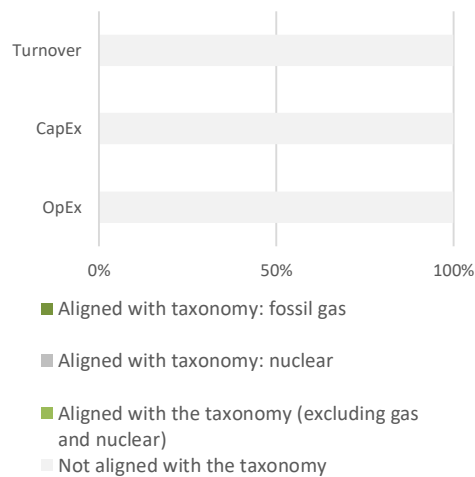

No

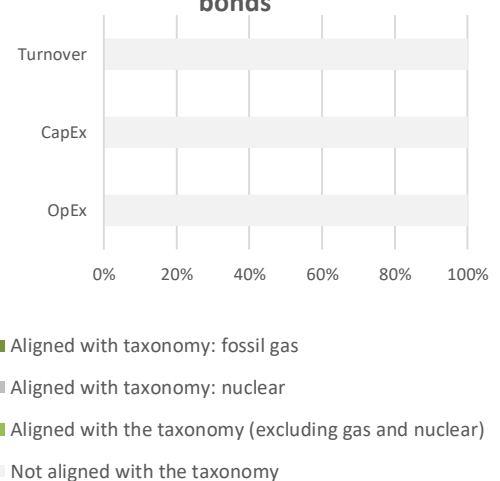

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

1. Alignment of investments with the taxonomy, including **sovereign bonds**

2. Alignment of investments with the Taxonomy, **excluding sovereign bonds**

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

● **How much of the investment was in transitional and enabling activities?**

N/A

● **What is the percentage of investments aligned with the EU taxonomy compared with previous reference periods?**

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 0% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 0%.

What investments were included in the 'other' category, what was their purpose and did minimum environmental or social safeguards apply?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How did this financial product perform against the benchmark?

NA

How does the benchmark differ from a relevant broad market index?

NA

How did this financial product perform in relation to sustainability indicators designed to determine the alignment of the benchmark with the environmental or social characteristics being promoted?

NA

How has this financial product performed against the benchmark index?

NA

How has this financial product performed against the broad market index?

NA

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- Coal Developers (5): issuers developing coal mining capacity;
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM GLOBAL LEADERS

With equity markets characterised by a gradual easing in interest rates and a surge in technology stocks fuelled by generative artificial intelligence, global equities had bounced back strongly, with the MSCI AC World index (Eur dividends reinvested) up 23.89%.

In the aftermath, the RC share of your leading responsible brands fund rose by 18.37%.

S, ER and IC units rose by 19.24%, 18.29% and 19.48% respectively.

While the easing in interest rates had a positive impact on the valuation of our selection of leading companies, the vast majority of which are long-duration assets, several factors explain the difference in performance compared with the index

- o Extreme market concentration: the performance of Microsoft-Nvidia-Amazon-Meta-Eli Lilly and Broadcom contributed 34% to the performance of the MSCI ACWI index. Our financial criteria only allowed us to invest in Nvidia at the end of the first half of the year, once its pricing power had become clear and its financial valuation had become affordable again (PE down 7 points).

- o The thematic effect related to the decline in consumer purchasing power worldwide: Fiscal normalisation (ending cheques sent to Americans, lifting the interest freeze on student loans) and the general rise in prices are eroding consumer purchasing power in the US. The same is true in Europe, where consumers are cutting back because of energy bills. Chinese consumers, concerned about job prospects, poor health cover and the value of their property, are also precautionary savers. This is weighing on certain consumer stocks. As a result, our luxury goods stocks slowed in the second half of the year, as did our food stocks, which were hit hard by concerns over the anti-obesity treatments developed by Eli Lilly and Novo Nordisk, as well as a degree of uncertainty among investors over the volumes and prices expected in 2024.

- o Selection: once again, our major digital and premium brands have driven the fund's performance:

contributors: Microsoft (+2,7pts) Nvidia (+2.4 pts), Eli Lilly (+2,24), Amazon (+1,85 pts), Eli Lilly (+2,24), Ferrari (+1.56 pts)

detractors: Estée Lauder (-1 pt) Aia (-0,73 pts) Nike (-0,86 pts), Yum China (-0,59 pts), Tencent (-0.47 pts)

Overall, Nvidia was lacking in the 1st half, while in consumer goods, Nike and Estée weighed down the fund as the market favoured Lululemon and Deckers.

The management team has been active this year, buying three leaders.

Nvidia (an up-and-coming brand), whose virtual monopoly on its graphics chips gives it a significant price impact on the chips that are essential to the adoption of AI. Among the brands undergoing a renaissance, we opted for Meta, which after failing on the Metaverse is regaining momentum by increasing its audience figures on the web thanks to the adoption of generative AI (+7% of audience time for advertisers adopting the latest generation tools). Lastly, Costco joined the category of leading brands: this retailer, which operates like a club with an annual subscription, has a wealthy American clientele and meets management's expectations in terms of a strong brand (30% of products sold under its Kirkland brand).

This was financed by the sale of Coty (fragile financial structure), Nestlé (lack of growth) and Campari (change of management).

At the end of the year, we strengthened our positions in Amazon, Ferrari and Xylem and reduced our weighting in luxury brands (LVMH, Apple, Moncler and Richemont), which are likely to be bought back at higher levels once fears over the normalisation of growth in 2024/26 have dissipated.

Outlook:

The 2024 financial year looks set to be an intermediate year, with a more pronounced recovery expected in 2025. However, the geopolitical scene remains turbulent, with several areas of open conflict (Ukraine,

Middle East) and key elections in the US, Europe (European Parliament) and India. The rise in Brent crude oil prices as a result of tensions in the Middle East and the robustness of the US economy have already triggered a rotation towards defensive assets in March. Management is scrupulous about the entry prices of new portfolio holdings and does not hesitate to sell securities weakened by a change in the investment case.

Regarding the sustainability of the fund, a number of points should be highlighted:

Responsible and Sustainable Finance by Crédit Mutuel Asset Management. As at 29 March 2024, the fund does not hold any class 1 assets.

In addition, the fund must have a lower carbon intensity (tonnes of CO₂ emitted per €1 million turnover) than its benchmark index, the MSCI All Country World.

At 29 March 2024, the carbon intensity of CM-AM Global Leaders was 12.5 tCO₂/M€ CA vs. the 49.9 tCO₂/M€ CA of the index. The fund is therefore well within this criterion.

The sustainable investment rate was 50.4% as at 29 March 2024.

* Source: Bloomberg as at 28/03/2024 for the performance and the attributed performance of securities and indices.

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM GLOBAL LEADERS**
Legal entity identifier: **96950027WFIYR6AN9O73**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefitting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 30 %

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but **did not make sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting a selective approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 6.15/10 while its benchmark universe had a score of 5.82/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

The ESG score of the financial product is 6.15/10 an improvement of 0.15 over the period.

Carbon intensity (scope 1 and 2) was 62.36 tCO₂/M€ turnover at the end of the period.

- The governance indicator (% of women on the Board of Directors) was 36.50% at the end of the period.

- The sustainable investment rate was 49.5%

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

N/A

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

N/A

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely: **31/03/2023–28/03/2024**

Major investments	Sector	% of assets	Country
MICROSOFT CORP	Information technology	6.5	UNITED STATES OF AMERICA
LVMH MOET HENNESSY LOUIS VUITTON SE	Consumer Discretionary	4.5	FRANCE
NVIDIA CORP	Information technology	4.3	UNITED STATES OF AMERICA
VISA INC	Financial	3.9	UNITED STATES OF AMERICA
AMAZON COM INC	Consumer Discretionary	3.9	UNITED STATES OF AMERICA
FERRARI NV	Consumer Discretionary	3.2	NETHERLANDS
L OREAL SA	Consumer Goods	3.2	FRANCE
ELI LILLY AND CO	Health care	3.1	UNITED STATES OF AMERICA
LINDE PLC	Materials	3.0	IRELAND
HILTON INC	Consumer Discretionary	3.0	UNITED STATES OF AMERICA

What was the proportion of sustainability-related investments?

What was the asset allocation?

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

For funds with a sustainable investment objective: The financial product commits to a minimum of 30% sustainable investment, as a proportion of the fund's total assets.

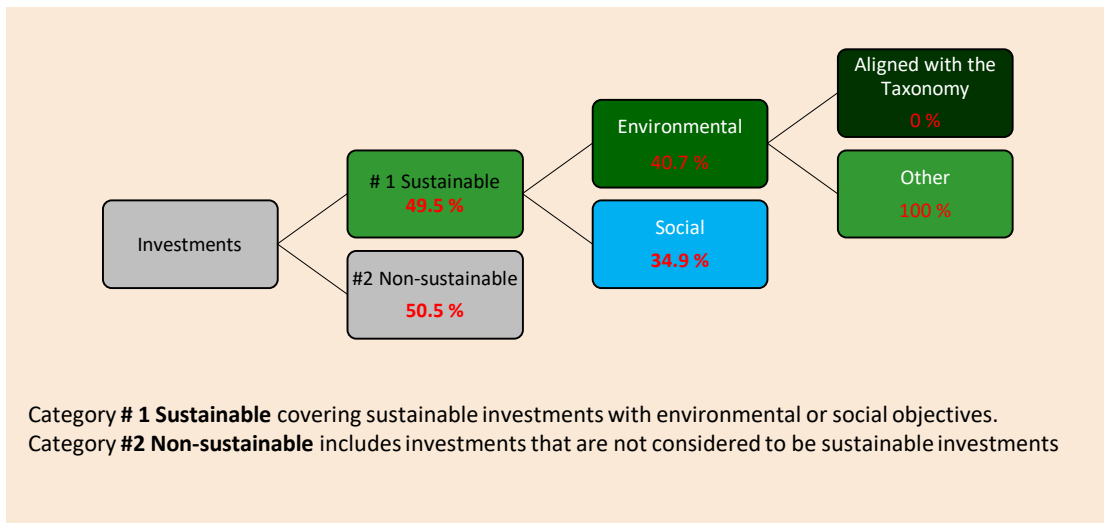

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

In which economic sectors have investments been made?

Investments were made in the following sectors:

Consumer Discretionary	28.2
Information technology	23.1
Industry	11.1
Health care	9.2
Financial	8.8
Consumer Goods	8.6
Communications services	6.2
Commodities	3.0

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

1. Alignment of investments with the taxonomy, including sovereign bonds

1. Alignment of investments with the Taxonomy, excluding sovereign bonds

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 34.9%.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves the sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- Coal Developers (5): issuers developing coal mining capacity;
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;

o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM GREEN BONDS

CM AM Green Bonds' 2023-2024 financial year was conducted in a volatile macroeconomic and financial environment, driven by expectations of the return and persistence (or not) of high inflation.

After partially correcting the rally triggered by the banking crisis in the US and Europe at the start of the first quarter of the year, the bond market ended April 2023 on a stable footing after a series of brief episodes of risk aversion and a flight to quality: 10-year German and US government bond yields ended the first month of the year at 2.31% and 3.42% respectively. In addition to the downgrading of France to AA- by Fitch, the last week of April was marked by a return of risk, with a sharp fall in 2-year yields driven by fears about the situation of US banks, the growing risk of default by the United States and concerns about growth, related to the economic slowdown emerging from the statistics. Credit spreads for non-financial companies fell more than those for banks, while those for France and Italy rose by 7 bp against the German Bund, while the yield curve remained stable. The rest of the quarter was fairly favourable for risky assets, with the passage of the debt ceiling bill in the United States, good inflation data in the eurozone and the easing of expectations of a further rate hike by the Fed, despite mixed economic data and cautious corporate communications in the United States. The German 10-year bond finished stable at 2.28%, after hitting a high for the month of 2.54%. Non-financial corporate credit spreads underperformed the financial issuers due to an extremely buoyant primary market. The end of the quarter marked the first pause in the Fed's rate hike cycle, unlike the ECB, which once again delivered a 25 cts hike. Macroeconomic indicators generally pointed to the resilience of employment, with inflation persisting at levels that were still too high (particularly core inflation), and comments by central bankers at the Sintra conference maintaining the course of further monetary tightening pushed German and US 10-year yields up to 2.39% and 3.84% respectively, with the curves flattening sharply at the same time. Investor optimism kept risk aversion in check as peripheral and credit spreads narrowed.

The 2nd quarter of the financial year was marked by a further rise in Fed and ECB key rates, but the Central Banks were more flexible about the need for further increases. European and US interest rates began on an upward trend, but lower-than-expected US inflation figures led to a marked easing in sovereign interest rates, particularly short rates. As a result of the fall in European yields and reduced risk aversion, the spread between Italian and German sovereign yields narrowed, as did the IG credit market. August saw a strong upward drive in long-term yields following the persistent resilience of US growth and fears that central banks would maintain a restrictive monetary policy for longer, the beginning of a shift in the Bank of Japan's monetary policy, the forthcoming acceleration in massive US Treasury issuance and reduced liquidity. However, statistics indicating a gradual disinflationary trend and a worrying growth outlook, particularly in the eurozone, combined with ECB communication highlighting the deteriorating environment and the restrictive impact of current and future monetary policy, reversed the uptrend in yields, with the German 10-year closing virtually unchanged at 2.46%. Credit spreads widened by around ten cts against the Bund, unlike spreads on peripheral and semi-core countries. Credit spreads widened by around ten bp against the Bund, in contrast to spreads on peripheral and semi-core countries. The end of the quarter saw a widespread correction in bonds on the main markets, with curves steepening sharply and real rates rising, setting new highs for US 10-year yields at 4.60% and German 10-year yields at 2.85%. The risks multiplied, with monetary policy decisions by the FED, ECB and BOE fuelling fears of high interest rates over the long term, the umpteenth risk of a US shutdown, the shift in expectations of the start of ECB rate cuts towards the second half of 2024 and the resurgence of Italian risk. With inflation data fairly reassuring but oil prices rising, positive macro figures at the end of the month in the US and EUR but a bearish outlook, and worrying news from China, the market favoured risk aversion, as illustrated by the BTP spread (+29 cts) and credit over the second half of the month.

The start of the 3rd quarter of the year was marked by the resurgence of geopolitical risk linked to the conflict in the Middle East, economic statistics that were slow to send out a message of economic slowdown, and mixed corporate results. However, after peaking at 5% for the US 10Y and 3% for the German 10Y, the trend reversed in the second half of October, ending the month 10cts and 20cts lower

respectively. At the end of the month, the ECB brought a measure of relief to interest rates by accepting the largely consensual scenario of a pause in its monetary tightening, followed shortly afterwards by the FED, as the wide gap between the US and Europe in terms of economic momentum and inflation was confirmed. Risk aversion was reflected in risky assets, with the BTP-BUND spread reaching a high of 211cts and credit spreads widening by +/- 6 cts over the month. The fall in sovereign rates accelerated from November onwards, on the back of economic statistics that supported the hypothesis that inflation was easing without a collapse in growth, as well as the first signs of a perceptible adjustment in the Fed's communication. The US 10-year yield thus fell back below 4%, ending the year at 3.88%, while the German 10-year ended the year at 2%. The credit rally was boosted by lower-than-expected inflation figures on both sides of the Atlantic, reinforcing expectations of future rate cuts by the Fed and the ECB from 2024. The continued fall in sovereign interest rates supported credit spreads, which narrowed on both CDS and cash markets. The BTP-Bund spread also benefited from the momentum of appetite for risk, narrowing by almost 30 cts over the quarter.

In Q1 2024, the last quarter of our financial year, the ECB left its key rates unchanged as expected and eased its language on the outlook for inflation and wage growth. National inflation rates also showed a relapse, but the underlying components proved more resilient, encouraging the ECB to take its time in getting inflation back on track. The Fed also kept its key rates unchanged, with a measured message: it would need more evidence before lowering them, given the resilience of the economy and the high level of geopolitical instability. In response to the sharp fall in the last quarter of 2023 and the high volume of issuance, the German 10-year yield rose by 14 cts as the curve steepened, peripheral debt outperformed and Credit remained stable. The euro data showed that while price rises continued to slow, the downturn remained very modest for the underlying component, since services, whose prices rose later, took time to slow down, as they are supported by wage increases. The same is true in the United States, where January's PCE inflation is still showing a resilience that is incompatible with a rapid easing of monetary policy, because service prices are decelerating too slowly. At the same time, the strength of the US data raised questions about the genuinely restrictive nature of monetary policy, and the euro PMIs showed signs of strength in a weak economy. As a result, expectations of rate cuts continued to be postponed in both the US and the eurozone, with a number of central bankers making negative statements. Overall, the German 10-year yield rose by 25 cts to 2.41% in February 2024 as the yield curves flattened and sovereign and credit spreads narrowed.

The last month of the financial year ended in a status quo for sovereign interest rates on both sides of the Atlantic. The apparent stability of yields should not, however, mask marked volatility, with 25 cts and 20 cts respectively between the high and low points for US and German 10-year yields. At its meeting on 20 March, the US Federal Reserve kept its key interest rates unchanged for the 5th time in a row, at their highest level for 23 years. However, Fed members were still considering 3 rate cuts between then and the end of the year. Similarly, the European Central Bank left its monetary policy unchanged. The surprise came from the Swiss National Bank, which beat its peers to a 1st rate cut of 0.25%, in view of the "easing of inflationary pressure". The spread between Italy and Germany continued to narrow, while the spread between France and Germany underperformed following the announcement of a higher-than-expected deficit of 5.5% of GDP in 2023. The National Institute of Statistics and Economic Studies's (INSEE) publication came at a rather bad time, as the rating agencies were due to reassess France's rating in the next 2 months. Risky assets such as credit continued to perform well.

There was little change in the composition of the portfolio during the year. Its investments were exclusively made up of Green Bonds, whose purpose was to finance projects with environmental benefits. As at 31 March 2024, these bonds represented 91.76% of the Fund's assets.

Interest rate risk, reflected in the portfolio's sensitivity, was reduced during the period under review in response to market rate rises. It fell from 6.47 at the start of the 2023-2024 financial year to 5.40 at 31/03/24.

The proportion of government securities remained unchanged at around 35% of the total.

As at 31 March 2024, gross returns equalled

- 3.9876% for a final net asset value of €9,975.29 for the IC share
- 3.8623% for a final net asset value of €89.28 for the RC share

On the same date, the S unit created on 9 January 2024 had a final net asset value of €100.66, giving a return of 0.66%.

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM GREEN BONDS**
Legal entity identifier: **96950023VOG4Q9TONZ41**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☒ It has made **sustainable investments with an environmental objective**: 100 %

☒ of economic activities which are considered environmentally sustainable under the EU taxonomy

☒ of economic activities which are not considered environmentally sustainable under the EU taxonomy

☐ It has made a minimum of **sustainable investments with a social objective**: %

☐ It promoted **environmental and/or social (E/S) characteristics** and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 0 %

☐ with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

☐ with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

☐ with a social objective

☐ It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 6.31/10 while its benchmark universe had a score of 6.08/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicator used by this financial product is the proportion of Green Bonds held in the portfolio. This represented 91.77% of the portfolio at 31 March 2024 and has been consistently maintained at a level above 90% throughout the 2023-2024 financial year.

The portfolio also maintained a level of sustainable investment (as defined in our internal processes) of 100% (excluding cash) throughout the year.

The selection of Green Bonds in the portfolio is based on a dual analysis of issuers and issues (the projects financed). Assessments are made on the basis of scores expressed on a scale of 1 to 4. No Green Bond with a score of less than 2 may be included in the portfolio.

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

The sustainable investment objective of the CM AM Green Bonds fund was to participate in the energy and ecological transition. At all times throughout the year, the portfolio consisted solely of Green Bonds, which finance projects with environmental benefits.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

As part of its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the main negative impacts that could cause significant harm and thus weaken the positive environmental and/or social contribution proposal, identified initially through the proportion of sales aligned with the Sustainable Development Goals (SDGs).

The potential for significant damage was assessed on the following basis:

- Sector exclusion rules concerning investment activities in sectors with high environmental and social risks, such as mining coal or
- Normative exclusion rules concerning controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Consideration, through Crédit Mutuel Asset Management's proprietary ESG methodology and rating, of the Principal Adverse Impacts (PAIs).

All the PAI indicators (table 1, appendix 1 RTS) are taken into consideration here, either directly (indicator of violation of the United Nations Global Compact and OECD principles), or by using elements of Crédit Mutuel Asset Management's proprietary ESG score as a proxy.

In this case, each PAI was associated with a sub-pillar of the corresponding proprietary ESG score.

The Sustainable Investment model developed by Crédit Mutuel Asset Management has therefore made it possible to take into account the negative impacts and guiding principles of the OECD and the United Nations upstream of the investment, thus avoiding any exposure to a company or issuer identified as likely to cause significant environmental or social harm.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting the **largest proportion of investments** of the financial product during the reference period, namely: **01/04/2023–28/03/2024**

Major investments	Sector	% of assets	Country
ROYAUME DE BELGIQUE Other		6.9	BELGIUM
IRISH REPUBLIC	Other	6.3	IRELAND
EUROPEAN UNION	Other	6.2	BELGIUM
KINGDOM OF THE NETHERLANDS	Other	5.0	NETHERLANDS
KINGDOM OF SPAIN	Other	4.8	SPAIN
REPUBLIQUE FRANCAISE Other		3.8	FRANCE
REGIE AUTONOME DES TRANSPORTS PARISIENS	Industry	3.4	FRANCE
ALLIANDER NV	Utilities	3.3	NETHERLANDS
ICADE	Real estate	3.0	FRANCE
BANCO BILBAO VIZCAYA ARGENTARIA SA	Financial	2.9	SPAIN

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- **of revenues** to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- **of capital expenditure** (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- **of operating expenses** (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

The financial product commits to a minimum of 100% sustainable investment, as a proportion of the fund's total assets.

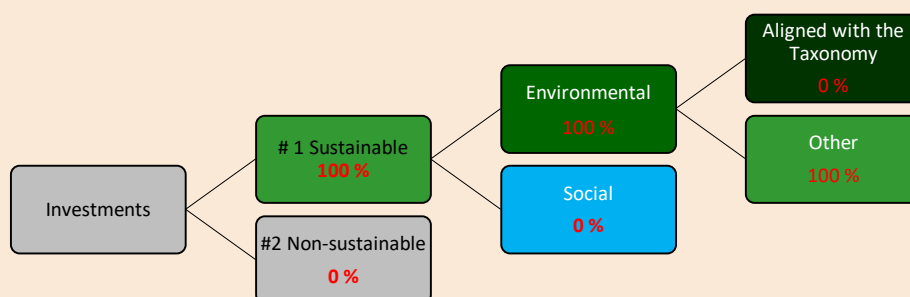

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Investments were made in the following sectors:

Utilities	11.4
Financial	10.9
Industry	3.4
Real estate	3.0
Commodities	1.6
Information technology	1.1

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 0%.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

- Sectoral policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- "Coal Developers": issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;

o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- Oil or shale gas,
- Oil from tar sands,
- Heavy and extra-heavy oil,
- Deepwater oil,
- Oil extracted in the Arctic,
- Coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM ENTREPRENEURS EUROPE

Over the period, the fund's performance fell by -1.58% for the FR0013266624 (RC) unit, -0.71% for the FR0013266640 (IC) unit and -0.95% for the FR0013298759 (S) unit. This compares with a rise of 9.97% in the Europe Stoxx Small ex UK index, dividends reinvested (Bloomberg code SCXG).

The fund recorded redemptions during the year, which represented -5.6% of assets under management.

As at 31 March 2024, the fund had €248 million in assets under management.

The main contributors in 2023/2024

The top five positive contributors:

Kingspan +35.0% benefited from a positive return to volumes in the second half of the year, while maintaining excellent cost discipline and a policy of acquisitions that remains as relevant as ever.

Laboratorios Rovi +116.8% succeeded in protecting its results against all expectations. The market was expecting a sharp fall in Covid vaccine business, but the switch to single-dose vaccines instead of multi-dose deliveries helped to moderate the impact significantly.

Majorel +48.4% had received an offer to be acquired by the world leader Teleperformance.

Reply +14.7% benefited from an extremely buoyant environment for IT investment, particularly in its home country of Italy, which is experiencing a wave of accelerated digitalisation.

Vidrala +24.3% managed the energy crisis perfectly, maintaining the price discipline and operational excellence that characterise them. The completion of the acquisition of Vidroporto in Brazil has opened up an interesting new avenue for future growth.

These companies were followed by Rational, SEB, ALK-Abello, Securitas and Novonesis.

The five biggest negative contributions were:

Worldline -70.7% suffered from a sharp compression in multiples after a series of operational disappointments.

Tomra, down 49.2%, experienced delays in the roll-out of data collection systems, the Food business also posted significant growth over the period, and finally had to absorb the consequences of a cyber attack.

Carl Zeiss -26.9% saw destocking in ophthalmic treatments and price renegotiations for Chinese tenders.

Ariston -48.1% suffered from a lacklustre construction environment, and the discontinuation or change of subsidies in Italy, Germany and France, leading to erratic movements in demand for heat pumps in particular.

Compugroup -39.2% saw its software business for self-employed doctors slow sharply, and management had to implement efficiency measures to curb the deterioration in operating margins.

These companies are followed by Barry Callebaut, Sixt, Royal Unibrew, Puma and Sartorius Stedim.

Main movements during the year

We sold positions in stocks that were facing a deteriorating environment and were trading at high valuations, such as Carl Zeiss, Tomra, Campari and Sartorius Stedim. We initiated positions in Vidrala, Puma, Maire Tecnimont, Verallia and Subsea7, which offered an attractive medium-term outlook at an attractive valuation.

The main investments at 31/03/2023

Our main holdings were: Kingspan, Amplifon, Reply, SEB, Biomérieux, Vidrala, Husqvarna, Sixt, Rational, Straumann.

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM ENTREPRENEURS EUROPE**

Legal entity identifier: **969500KFQADESSXRUH79**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

☐ of economic activities which are considered environmentally sustainable under the EU taxonomy

☐ of economic activities which are not considered environmentally sustainable under the EU taxonomy

☐ It has made a minimum of **sustainable investments with a social objective:** __%

☒ It promoted **environmental and/or social (E/S) characteristics** and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 20 %

☐ with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

☒ with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 5.44/10 while its benchmark universe had a score of 5.08/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

- ESG score.

For funds with a sustainable investment objective: add the proportion of sustainable investment as a sustainability indicator.

- the proportion of sustainable investment (only for funds with a sustainable investment component)

The ESG score of the financial product is 5.44/10 an improvement of 0.14 over the period. This is due to the addition or strengthening of holdings in highly rated companies such as Rovi, Verallia, SEB and Puma.

The ESG score remained higher than the ESG score of the benchmark universe, mainly due to the inclusion in the Top10 of highly rated groups with an average extra-financial rating of 5.42, which represented 36% of the portfolio.

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

N/A

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

N/A

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely: **31/03/2023–28/03/2024**

Major investments	Sector	% of assets	Country
KINGSPAN GROUP PLC	Industry	5.6	IRELAND
AMPLIFON SPA	Health care	5.1	ITALY
REPLY SPA TORINO	Information technology	4.0	ITALY
SEB SA	Consumer Discretionary	3.6	FRANCE
BIOMERIEUX	Health care	3.3	FRANCE
VIDRALA SA	Commodities	3.3	SPAIN
HUSQVARNA AB	Industry	3.1	SWEDEN
SIXT SE	Industry	3.0	GERMANY
RATIONAL AG	Industry	2.8	GERMANY
STRAUMANN HOLDING AG WALDENBURG	Health care	2.7	SWITZERLAND

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- **of revenues** to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- **of capital expenditure** (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- **of operating expenses** (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

For funds with a sustainable investment objective: The financial product commits to a minimum of 20% sustainable investment, as a proportion of the fund's total assets.

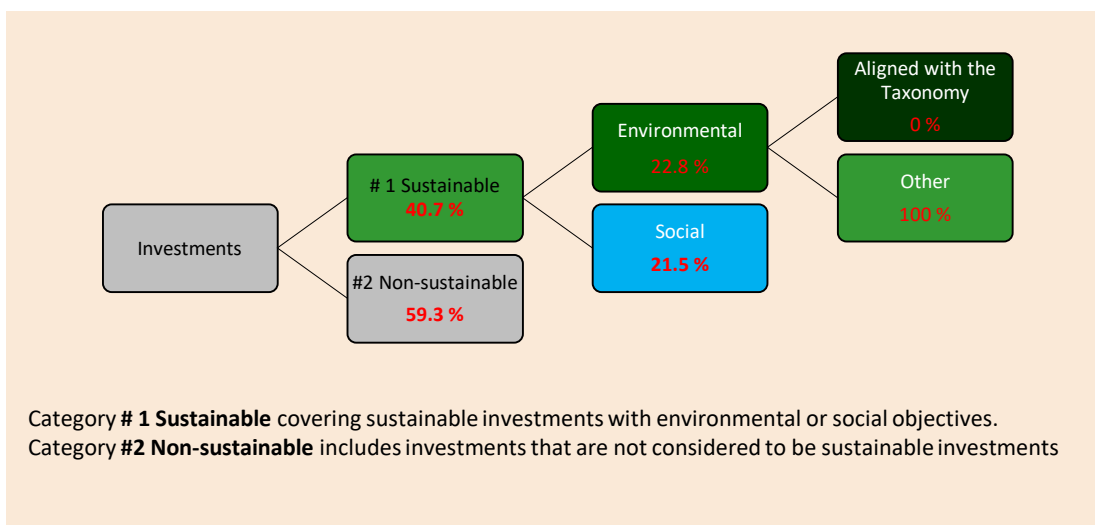

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

In which economic sectors have investments been made?

Investments were made in the following sectors:

GICS sectors	% Share
Industry	28.4
Health care	21.0
Consumer Discretionary	12.4
Information technology	10.6
Commodities	8.8
Consumer Goods	5.0
Financial	1.5
Energy	1.3
Utilities	0.2

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 21.5%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM GLOBAL INNOVATION

CM-AM Global Innovation Annual Report (for the financial year from 31/03/2023 to 28/03/2024)

The innovation theme suffered in the previous financial year due to an unfavourable environment, resulting in a 10% fall in the fund's various units.

After the correction of 2022, which we considered excessive, management focused on companies benefiting from age-old growth drivers and whose valuations had become more attractive once again. The past financial year has shown that innovative companies are making a comeback in a much more favourable market environment for the CM-AM Global Innovation fund. The fund's strong performance in absolute terms as well as relative to its benchmark (MSCI All Country World) is due to:

- A more favourable macro environment, with the expectation of a "soft landing", the end of the interest rate rise in 2023, potentially followed by a fall in 2024. Interest rate rises
- The resilience of IT spending, the recovery in advertising spend and the artificial intelligence craze have been major catalysts for innovative companies.
- At the same time, after a period of strong hiring and investment during the covid period, innovative companies have rationalised their costs, generating a positive impact on their margins.
- Positioning in the rapidly expanding field of artificial intelligence. We carried out an analysis of the artificial intelligence value chain in order to establish the reality of sales and productivity gains, to determine whether there was a tangible economic reality beyond the hype. As a result, the fund has positioned itself in companies further up the value chain, with a particular focus on semiconductors and cloud computing providers.

Some of the main detractors from performance were innovative companies linked to the climate transition (Enphase -54bp, Alfen -62bp, Longshine -71bp). The theme was penalised by rising interest rates, inventory corrections and regulatory changes. Exposure to Chinese and ASEAN companies also weighed on performance: Alibaba -90bp, Tencent -49bp, Sea Limited -77bp. The sector is taking longer than expected to return to proper expansion, with China's macro-economic environment not encouraging investors to reposition themselves in the country. Lastly, OVH Group (-33bp) suffered from downward revisions to its forecasts and a lack of interest in small caps.

Companies with exposure to cloud computing and artificial intelligence are among the main contributors to performance: Nvidia +417bp, AMD +157bp, Microsoft +243bp, ServiceNow +191bp et MongoDB +66bp. These themes drove the fund's semiconductor stocks: Synopsis +190bp, TSMC +127bp, ASML +77bp et SK Hynix +77bp. Spending on cyber security continued to grow, with good execution at Palo Alto Networks and CrowdStrike contributing +136bp and +204bp respectively. Finally, holdings exposed to ecommerce and advertising benefited from the rebound or continued spending: Amazon +153bp, Meta Platforms +129bp, MercadoLibre +54bp, Alphabet +152bp et Trip.com +55bp.

In terms of performance, the RC, S and I shares rose by +29.84%, +30.33% and +30.92% respectively. The benchmark MSCI All Country World index, denominated in euros and dividends reinvested, rose by 23.89%.

Regarding the sustainability of the fund, a number of points should be highlighted:

- Responsible and Sustainable Finance by Crédit Mutuel Asset Management. As at 29 March 2024, the fund held 0.7% of its assets in class 1, meeting this criterion by a very wide margin.

- In addition, the fund must have a lower carbon intensity (tonnes of CO₂ emitted per €1 million turnover) than its benchmark index, the MSCI All Country World. At 29 March 2024, the carbon intensity of CM-AM Global Innovation was 19.9 tCO₂/M€ CA vs. the 108.9 tCO₂/M€ CA of the index. The fund is therefore well within this criterion.

- The sustainable investment rate was 58.8% as at 29 March 2024.

* Source: Bloomberg as at 28/03/2024 for the performance and the attributed performance of securities and indices.

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM GLOBAL INNOVATION**
Legal entity identifier: **969500N07VRAXOEYDA43**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 20 %

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 5.86/10 while its benchmark universe had a score of 5.82/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

- ESG score.

The ESG score of the financial product is 5.86/10 an improvement of +0.12 over the period.

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

This financial product is designed to invest in a minimum number of companies and/or issuers identified as 'sustainable' according to Crédit Mutuel Asset Management's own internal methodology. The United Nations Sustainable Development Goals are used as a reference framework to determine which investments contribute to an environmental or social objective.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

As part of its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the main negative impacts that could cause significant harm and thus weaken the positive environmental and/or social contribution proposal, identified initially through the proportion of sales aligned with the Sustainable Development Goals (SDGs).

The potential for significant damage was assessed on the following basis:

- Sector exclusion rules concerning investment activities in sectors with high environmental and social risks, such as coal or mining.
- Normative exclusion rules concerning controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Taking into account the main negative impacts (PAI) through Crédit Mutuel Asset Management's ESG methodology and proprietary ratings

All the PAI indicators (table 1, appendix 1 RTS) are taken into consideration here, either directly (indicator of violation of the United Nations Global Compact and OECD principles), or by using elements of Crédit Mutuel Asset Management's proprietary ESG score as a proxy.

In this case, each PAI was associated with a sub-pillar of the corresponding proprietary ESG score.

The Sustainable Investment model developed by Crédit Mutuel Asset Management has therefore made it possible to take into account the negative impacts and guiding principles of the OECD and the United Nations upstream of the investment, thus avoiding any exposure to a company or issuer identified as likely to cause significant environmental or social harm.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting the **largest proportion of investments** of the financial product during the reference period, namely: **01/04/2023–28/03/2024**

Major investments	Sector	% of assets	Country
MICROSOFT CORP	Information technology	5.8	UNITED STATES OF AMERICA
NVIDIA CORP	Information technology	5.1	UNITED STATES OF AMERICA
MASTERCARD INC	Financial	4.0	UNITED STATES OF AMERICA
SALESFORCE INC	Information technology	3.1	UNITED STATES OF AMERICA
AMAZON COM INC	Consumer Discretionary	3.1	UNITED STATES OF AMERICA
SERVICENOW INC	Information technology	3.0	UNITED STATES OF AMERICA
TAIWAN SEMICONDUCTOR MANUFACTURING CO LTD	Information technology	3.0	TAIWAN
ALPHABET INC	Communications services	2.9	UNITED STATES OF AMERICA
INTUITIVE SURGICAL INC	Health care	2.8	UNITED STATES OF AMERICA
SYNOPSYS INC	Information technology	2.8	UNITED STATES OF AMERICA

What was the proportion of sustainability-related investments?

What was the asset allocation?

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

The financial product commits to a minimum of 20% sustainable investment, as a proportion of the fund's total assets.

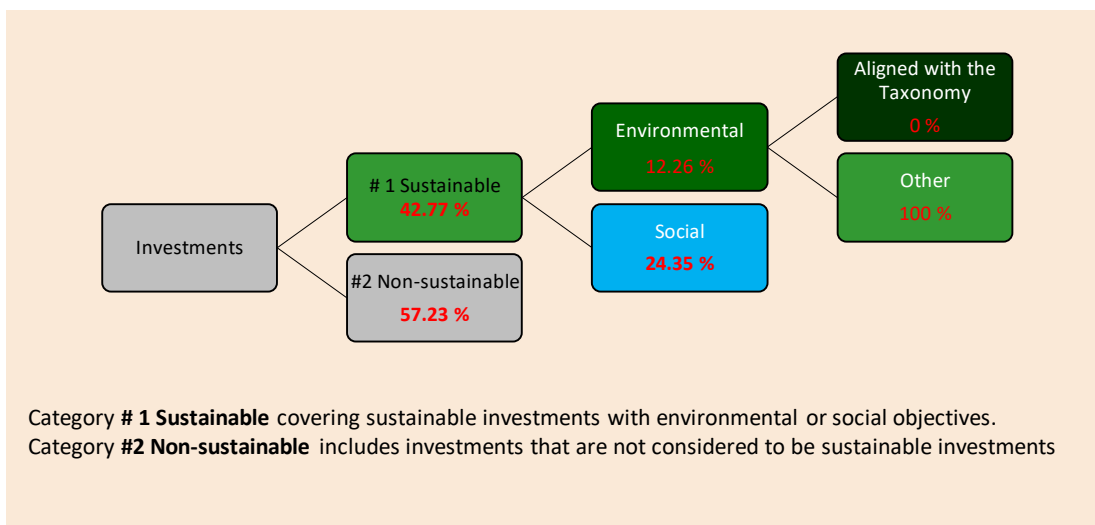

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

In which economic sectors have investments been made?

Investments were made in the following sectors:

GICS sectors	% Share
Information technology	61.0
Health care	8.9
Consumer Discretionary	8.6
Communications services	8.5
Industry	5.8
Financial	4.0

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 24.35%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;

o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM HIGH YIELD 2024

At the start of the 2023-2024 financial year, investors remain focused on the US banks' situation and growth. The economic slowdown began to materialise in the statistics published, but credit spreads started to fall again, particularly those of non-financial issuers, which tightened more than those of banks. Given the vote on the debt ceiling bill in the United States and positive inflation data for the eurozone, May was a good month for risky assets, despite mixed economic data and cautious corporate announcements in the United States. The ECB President was nevertheless keen to point out that the level of core inflation remained excessive in the eurozone, while tensions on the labour market were still conducive to second-round effects from wage increases. By the end of May, the German 10-year yield was at 2.28%, having peaked at 2.54% on 26 May. The euro yield curve continued to flatten, with the 2 – 10 years slope rising from -35 bp to -45 bp. On Investment Grade credit, spreads on corporate issuers underperformed financial issuers, due to a very dynamic primary supply. In the High Yield segment, after tightening by 25 bp, spreads were finally stable over the month. June marked the first pause in the Fed's rate hike cycle, unlike the ECB, which delivered another 25 bp. Macroeconomic indicators generally pointed to the resilience of employment, the persistence of inflation, in particular core inflation at levels that were still too high, and the statements by central bankers at the Sintra conference that maintained the course of further monetary tightening, pushed up German (+11 bp to 2.39%) and US (+20 bp to 3.84%) 10-year yields in a strong flattening of the curves. Investor optimism sustained the decline in risk aversion through the reduction in peripheral and credit spreads, mainly in the high yield segment.

As widely expected by the markets, the Fed and ECB raised their key rates by 25bp in July. However, these increases were accompanied by more flexible communication on the need for further tightening. After starting the month on an uptrend, European and US sovereign yields eased in the second half of the year, driven by lower-than-expected US inflation data, particularly core inflation. Bund and T-note yields ended July at 2.49% and 3.96% respectively, compared with 2.39% and 3.84% at the end of June. On both sides of the Atlantic, this downward movement focused more on short rates and explained the steepening of the yield curve. The beginning of August was marked by a further surge in long rates following publications that confirmed the resilience of the US economy and, consequently, the fear that central banks would maintain a restrictive monetary policy for longer. Other factors also contributed to this movement in rates: the beginning of a shift in the Bank of Japan's monetary policy, the recognition of massive forthcoming issues by the US Treasury, no doubt amplified by the downgrading by Fitch, not to mention reduced liquidity. Statistics indicating a gradual disinflationary trend and a worrying growth outlook in the eurozone finally reversed the rise in European yields, with the German 10-year yield ending the month virtually unchanged at 2.46% as the euro curve steepened. Semi-core and peripheral spreads remain broadly stable versus Germany. Credit spreads widen by around ten bp. At the end of the second quarter, global bond markets underwent a severe correction, accompanied by a steepening of the yield curve and a rise in real rates. US and German 10-year yields hit new highs of 4.60% and 2.85% respectively. The risks multiplied with monetary policy decisions by the Fed, ECB and BOE fuelling fears of high interest rates over the long term, the umpteenth risk of a shutdown, the repricing of future key rate cuts towards the second half of 2024 and the resurgence of Italian risk. Between relatively reassuring inflation data and positive macroeconomic publications at the end of September, but a bearish outlook and worrying news from the Chinese economy, the market favoured risk aversion, as illustrated by the BTP spread, which widened by 29 bp. In the credit market, after an initial tightening, spreads widened significantly in the second half of the month.

The third quarter of the financial year was marked by the resurgence of geopolitical risk linked to the conflict in the Middle East, economic statistics that were slow to send out a message of economic slowdown, and mixed corporate results. After reaching a high of 5% on the US 10Y and 3% on the German 10Y, the trend reversed, ending the month 10 bp and 20 bp lower respectively. At the end of October, the ECB brought a measure of relief to interest rates by accepting the largely consensual scenario of a pause in its monetary tightening, followed shortly afterwards by the FED. However, there was still a big gap between the US and Europe in terms of economic momentum and inflation, and wage

data, house prices and the consumer confidence index did nothing to contradict this trend. Risk aversion was reflected in risky assets: the BTP-Bund spread reached a high of 211bp and credit spreads widened by around ten bp on the IG segment and around thirty bp on the HY segment. In November, global sovereign yields resumed a strong downward trend on the back of economic data that supported the hypothesis that inflation was easing without a collapse in growth, accompanied by a perceptible adjustment in the Fed's communication. The US 10-year yield thus fell back below 4.30% for the first time since mid-September. The German 10-year yield ended the month at 2.45%, down 35 bp compared with the end of October. The rally in the credit market continued to be fuelled by expectations of future Fed and ECB rate cuts as early as 2024. Against this backdrop, the easing in sovereign interest rates supported credit spreads, which narrowed for the fifth week running on both CDS and cash markets. December was marked by continued market optimism over expectations of monetary easing. In the United States, inflation, consumer spending and consumer confidence emphasised the remarkable resilience of economic momentum. At the end of December, sovereign yields continued to fall, providing further support for risky assets.

As expected, at the start of the last quarter of the year, the ECB left its key rates unchanged and did not express outright opposition to the rate cut expectations built into market prices, softening its language on the inflation outlook and wage growth concerns. National inflation rates also showed a relapse that continued at a comfortable pace, but the underlying components proved more resilient, encouraging the Governing Council to take its time in ensuring that inflation was on track. There were no major surprises at the Fed meeting either, with key rates unchanged and Powell's communication measured. Moreover, central banks have to contend with considerable geopolitical instability. In response to the sharp fall in the last quarter of 2023 and the high volume of issuance, the German 10-year yield rose by 14 bp as the curve steepened, peripheral debt outperformed and high yield credit tightened. February's statistics showed that while price rises continued to slow in the Eurozone, the inflexion in prices remained modest, due to the cost of services being driven by wage increases. The situation was similar in the United States, where inflation showed a resilience that was incompatible with a rapid easing of monetary policy. In addition, the strength of the US economic data raised questions about the genuinely restrictive nature of monetary policy. Eurozone PMIs also showed signs of strength in a weak economy. As a result, expectations of rate cuts continued to be pushed back in both the United States and the eurozone. Against this backdrop, the German 10-year yield edged up 25 bp over the month to 2.41%, as curves flattened and sovereign and credit spreads narrowed.

The year ended in a status quo for sovereign interest rates on both sides of the Atlantic. However, the apparent stability of yields was no reason to disguise their marked volatility, with a 25bp and 20bp gap respectively between the high and low points for US and German 10-year yields. At its meeting on 20 March, the Fed kept its key interest rates unchanged for the 5th time in a row, at their highest level for 23 years. Similarly, the ECB left its monetary policy unchanged. The surprise came from the Swiss National Bank, which beat its peers to a 1st rate cut of 0.25%, in view of the "easing of inflationary pressure". The BTP-Bund spread continued to tighten, while the OAT-Bund spread underperformed following the announcement of a higher-than-expected deficit of 5.5% of GDP in 2023. On the credit side, the Euro High Yield segment continues to outperform, driven by the performance of issuers in the BB rating category, while the B and lower categories came under pressure as idiosyncratic risks increased.

The CM-AM High Yield 2024 fund is mainly invested in speculative grade private sector bonds with a final maturity not exceeding 31 March 2025.

As at 28 March 2024, the fund's net assets amounted to €153.3 million (compared with €229.3 million as at 31 March 2023). A total of 34.3% (versus 68.8%) of the portfolio's net assets are invested in issuers or UCIs rated High Yield and 52.8% (versus 25.5%) in investment grade issuers, with the balance (12.9%) invested in money market UCIs and cash.

The credit quality of issuers in the portfolio was enhanced during the year. High-yield issues redeemed at maturity were reinvested in Investment Grade issuers in order to comply with the concentration ratios for issuers rated High Yield.

Most of the securities in the portfolio are BBB-rated (49.3%), followed by BB-rated (31%). The other rating categories are incidental: 3.6% for A-rated issues, 3.2% for B-rated issues. The fund does not hold any CCC-rated issues.

Geographically, the fund invests in issuers from OECD member countries. Issuers from the eurozone account for the majority of exposure, with 80.7% of the portfolio. Outside the eurozone, exposure is incidental. Cash and cash equivalents account for 9.6%.

From a sector point of view, the proportion of the portfolio invested in the securities of financial issuers has risen sharply due to reinvestment of matured issues.

Between 31 March 2023 and 28 March 2024, the fund's performance was:

+4.1917% for the IC unit

+3.9887% for the RC unit

+3.9848% for the RD unit

4.1940% for the S unit

Annex SFDR Annual Report (ex-post addendum)

Sustainable development objective

Did this financial product have a sustainable investment objective?

<div><div><div></div><div></div><div></div></div></div> Yes	No	<div><div><div></div><div></div><div></div></div></div>
<div><input type="checkbox"/> It has made sustainable investments with an environmental objective: %</div>		<div><input checked="" type="checkbox"/> It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least <u>25</u> %</div>
<div><input type="checkbox"/> of economic activities which are considered environmentally sustainable under the EU taxonomy</div>		<div><input type="checkbox"/> with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy</div>
<div><input type="checkbox"/> of economic activities which are not considered environmentally sustainable under the EU taxonomy</div>		<div><input checked="" type="checkbox"/> with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy</div>
		<div><input checked="" type="checkbox"/> with a social objective</div>
<div><input type="checkbox"/> It has made a minimum of sustainable investments with a social objective: __%</div>		<div><input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments</div>

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe.

The financial product's ESG score at the end of the year was 6.17/10 while its benchmark universe had a score of 5.85/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

- the ESG score

For funds with a sustainable investment objective: *add the proportion of sustainable investment as a sustainability indicator.*

The ESG score of the financial product is 6.17/10.

The ESG score is higher than the ESG score of the investable universe, due to overexposure to issuers whose E, S and G pillars are higher than those of the issuers in the universe (E pillar: 5,94 vs 5,98 / S pillar: 6,02 vs 5,74 / pillar G: 6.47 vs 5.70).

... and compared with previous periods?

Maintain overexposure to "committed" issuers in the investable universe.

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

For funds with a sustainable investment objective: This financial product is designed to invest in companies and/or issuers identified as 'sustainable' according to Crédit Mutuel Asset Management's own internal methodology. The United Nations Sustainable Development Goals are used as a reference framework to determine which investments can contribute to an environmental or social objective.

For funds without a sustainable investment objective: N/A

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds with a sustainable investment objective:

As part of its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the main negative impacts that could cause significant harm and thus weaken the positive environmental and/or social contribution proposal, identified initially through the proportion of sales aligned with the Sustainable Development Goals (SDGs).

The potential for significant damage was assessed on the following basis:

- Sector exclusion rules concerning investment activities in sectors with high environmental and social risks, such as coal or mining.
- Normative exclusion rules concerning controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Consideration, through Crédit Mutuel Asset Management's proprietary ESG methodology and rating, of the Principal Adverse Impacts (PAIs).

All the PAI indicators (table 1, appendix 1 RTS) are taken into consideration here, either directly (indicator of violation of the United Nations Global Compact and OECD principles), or by using elements of Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In this case, each PAI was associated with a sub-pillar of the corresponding proprietary ESG score.

The Sustainable Investment model developed by Crédit Mutuel Asset Management has therefore made it possible to take into account the negative impacts and guiding principles of the OECD and the United Nations upstream of the investment, thus avoiding any exposure to a company or issuer identified as likely to cause significant environmental or social harm.

For funds without a sustainable investment objective: N/A

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

Major investments	Sector	% of assets	Country
BFCM	Financial	5.3	FRANCE
BNP	Financial	3.2	FRANCE
LEONARDO SPA	Defence	3.0	ITALY
RENAULT	Automotive	3.0	FRANCE
TELECOM ITALIA	Telecom	2.9	ITALY
DEUTSCHE LUFTHANSA	Aviation	2.6	GERMANY
DEUTSCHE BANK	Financial	2.6	GERMANY

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely:
01/04/2023–29/03/2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- **of revenues** to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- **of capital expenditure** (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- **of operating expenses** (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

For funds with a sustainable investment objective: The financial product commits to a minimum of 5% sustainable investment, as a proportion of the fund's total assets.

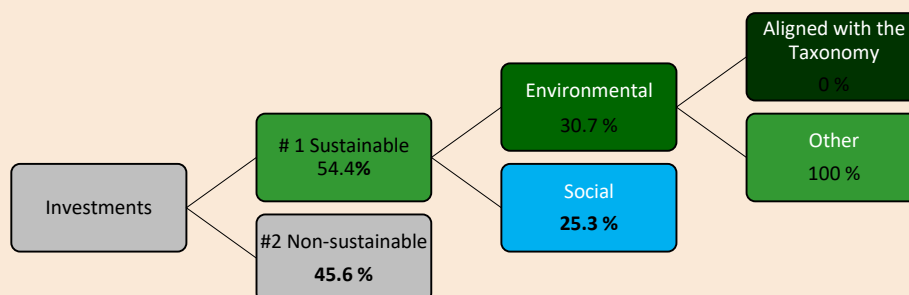

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Investments were mainly made in the following sectors:

- Financial
- Automotive
- Telecom
- Cyclical and Non-cyclical consumption
- Discretionary consumption
- etc.

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

How much of the investment was in transitional and enabling activities?

N/A

What is the percentage of investments aligned with the EU taxonomy compared with previous reference periods?

N/A

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 25.3%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

If the financial product does not have a benchmark index: NA

If the financial product has a benchmark index: NA

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM SHORT TERM BONDS

Post-pandemic tensions over supply and the war in Ukraine have sent the entire global economy into an inflationary spiral. In Europe, this meant that rates continued to rise throughout the year. Interest rate rises Faced with a steady rise in prices and resilient growth, the ECB has raised its key rates 6 times over 2023. This has pushed the deposit rate to a record level of 4%. From the second half of 2023, theories of an economic slowdown and a lull in inflation began to materialise. This ended the upward cycle from September onwards. The rest of the year was marked by speculation about the dates of the next rate cuts. It should be noted that money market credit spreads remained particularly resilient over the year.

Against this inflationary backdrop, we have maintained a low average maturity and low credit sensitivity. Our investments continued to focus on the most liquid instruments.

Over the year, the fund's performance was 3.93% compared with 3.73% for the benchmark index (Ester capitalised).

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM SHORT TERM BONDS**
Legal entity identifier: **969500ZTLPLWAC0EJH45**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 25 %

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 6.16/10 while its benchmark universe had a score of 5.82/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

- ESG score.

For funds with a sustainable investment objective: add the proportion of sustainable investment as a sustainability indicator.

- the proportion of sustainable investment (only for funds with a sustainable investment component)

The ESG score of the financial product is 6.16/10.

The ESG score remained higher than the benchmark universe ESG score

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

This financial product is designed to invest in a minimum number of companies and/or issuers identified as 'sustainable' according to Crédit Mutuel Asset Management's own internal methodology. The United Nations Sustainable Development Goals are used as a reference framework to determine which investments contribute to an environmental or social objective.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

As part of its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the main negative impacts that could cause significant harm and thus weaken the positive environmental and/or social contribution proposal, identified initially through the proportion of sales aligned with the Sustainable Development Goals (SDGs).

The potential for significant damage was assessed on the following basis:

- Sector exclusion rules concerning investment activities in sectors with high environmental and social risks, such as coal or mining.
- Normative exclusion rules concerning controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Consideration, through Crédit Mutuel Asset Management's proprietary ESG methodology and rating, of the Principal Adverse Impacts (PAIs).

All the PAI indicators (table 1, appendix 1 RTS) are taken into consideration here, either directly (indicator of violation of the United Nations Global Compact and OECD principles), or by using elements of Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In this case, each PAI was associated with a sub-pillar of the corresponding proprietary ESG score.

The Sustainable Investment model developed by Crédit Mutuel Asset Management has therefore made it possible to take into account the negative impacts and guiding principles of the OECD and the United Nations upstream of the investment, thus avoiding any exposure to a company or issuer identified as likely to cause significant environmental or social harm.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely:
01/04/2023–28/03/2024

Major investments	Sector	% of assets	Country
CM-AM INSTITUTIONAL SHORT TERM	UCI	8.6	FRANCE
STANDARD CHARTERED BANK	Financial	3.6	UNITED KINGDOM
ALD	Industry	3.6	FRANCE
FEDERATION DES CAISSES DESJARDINS DU QUEBEC	Financial	3.0	CANADA
STEF	Industrial	2.8	FRANCE
AVRIL	Consumer Goods	2.8	FRANCE
TOYOTA MOTOR FINANCE NETHERLANDS BV	Consumer Discretionary	2.8	NETHERLANDS
ALD	Industrial	2.8	FRANCE
ACCIONA FINANCIACION FILALES SA	Utilities	2.8	SPAIN
SOCIETE GENERALE	Financial	2.6	FRANCE

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- **of revenues** to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- **of capital expenditure** (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- **of operating expenses** (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

The financial product commits to a minimum of 25% sustainable investment, as a proportion of the fund's total assets.

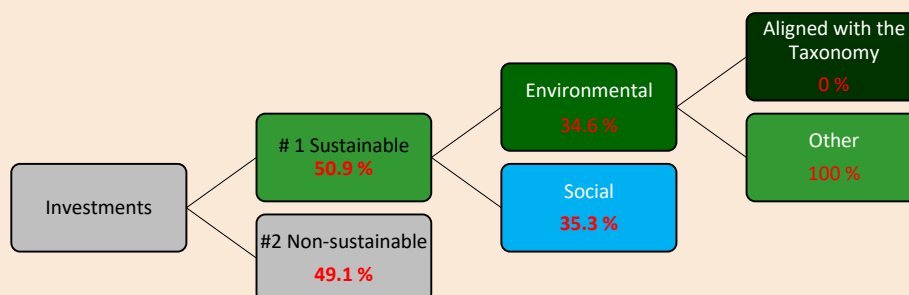

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Investments were made in the following sectors:

GICS sectors	% Share
Financial	40.3
Industrial	21.6
Consumer Discretionary	12.6
Consumer Goods	6.3
Utilities	2.8
Communications services	2.1
Commodities	1.6
Information technology	0.2
Health care	0.2

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 35.3%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM CONVICTIONS EURO

How did the markets perform?

The balance sheet is drawn up for a 12-month period and is broken down into two distinct periods during the period under review:

1/ from 31 March 2023 to 31 December 2023

2/ from 31 December 2023 to 28 March 2024

First period

The economic data from China finally showed a slower recovery than hoped for at the start of the year, and a fragile property market, which weighed on internationally-exposed stocks such as luxury goods, whose results disappointed investors' expectations after years of exceptional growth. However, there was good news from the United States, where, having ruled out the risk of the debt ceiling, the themes of Artificial Intelligence and the energy transition linked to the Inflation Reduction Act led to a rebound in the equity markets. The cycle of innovations rekindled trade tensions between China and the United States, which is seeking to halt deliveries of advanced chips.

The year was generally marked by the impact of monetary policies and the hawkish tone of central banks until the Fed's first pause in June, followed by the slowdown in inflation, which raised hopes of the first rate cuts in 2024.

Finally, commodity prices remained volatile, particularly for oil with the continuing war in Ukraine and a new conflict in the Middle East. Orders for the defence and aerospace sectors hit new records.

Second period

The equity markets started 2024 on a positive trend, despite ongoing geopolitical tensions. The US economy continued to post stronger-than-expected growth, driven by consumer spending and a resilient labour market. Many European companies surprised on the upside when their results for 2023 were published, including SAP, Novo Nordisk, ASML and LMVH. The gradual delay in estimates of the first rate cuts by the Central Banks has helped the banking sector to outperform, with the EURO STOXX Banks index up 19% since the start of the year.

Management approach

Against this backdrop, the fund maintained significant positions in financial stocks, which benefited from the paradigm shift in interest rates: BNP PARIBAS, AXA, ALLIANZ, UNICREDIT, INTESA SANPAOLO et MUNICH RE. We also took advantage of attractive entry points for companies driven by the following long-term trends, most of which have been in the fund for a long time: 1) Sectors linked to the sustainable economy and energy transition (SCHNEIDER ELECTRIC, AIR LIQUIDE, VEOLIA); 2) The health and life sciences sector (NOVO NORDISK); 3) Sectors exposed to innovation and new technologies (SAP, SAFRAN, THALES, AIRBUS, ASM INTERNATIONAL); 4) Sectors linked to luxury and the pursuit of well-being (HERMES, L'OREAL, FERRARI, INDITEX). Finally, the weighting of small- and mid-cap companies was reduced to around 10% at the end of the period, but some of these positions made a positive contribution to the fund, such as SPIE, ELIS and ACCOR.

Overall, from 31 March 2023 to 28 March 2024, the IC, S and RC units will have grown by +22.2%, +21.8% and +20.9% respectively, while the EURO STOXX NET Return index posted a performance of +16.7% over the period.

Breakdown of assets (28/03/2023):

- Equities and UCIs 98.4
- Cash and cash equivalents 1.6

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM CONVICTIONS EURO**
Legal entity identifier: **9695007RBC43W6TDSI26**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes	No
<input type="checkbox"/> It has made sustainable investments with an environmental objective: ____% <input type="checkbox"/> of economic activities which are considered environmentally sustainable under the EU taxonomy <input type="checkbox"/> of economic activities which are not considered environmentally sustainable under the EU taxonomy <input type="checkbox"/> It has made a minimum of sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least <u>30</u> % <input type="checkbox"/> with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 6.64/10 while its benchmark universe had a score of 5.29/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

The ESG score of the financial product is 6.64/10 an improvement of 0.24 over the period. This is due to the strengthening of attractive, well-rated companies.

The ESG score remained higher than the ESG score of the benchmark universe, for reasons relating in particular the integration of ESG criteria into the various stages of the management process.

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

This financial product is designed to invest in a minimum number of companies and/or issuers identified as 'sustainable' according to Crédit Mutuel Asset Management's own internal methodology. The United Nations Sustainable Development Goals are used as a reference framework to determine which investments contribute to an environmental or social objective.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

As part of its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the main negative impacts that could cause significant harm and thus weaken the positive environmental and/or social contribution proposal, identified initially through the proportion of sales aligned with the Sustainable Development Goals (SDGs).

The potential for significant damage was assessed on the following basis:

- Sector exclusion rules concerning investment activities in sectors with high environmental and social risks, such as coal or mining.
- Normative exclusion rules concerning controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Consideration, through Crédit Mutuel Asset Management's proprietary ESG methodology and rating, of the Principal Adverse Impacts (PAIs).

All the PAI indicators (table 1, appendix 1 RTS) are taken into consideration here, either directly (indicator of violation of the United Nations Global Compact and OECD principles), or by using elements of Crédit Mutuel Asset Management's proprietary ESG score as a proxy.

In this case, each PAI was associated with a sub-pillar of the corresponding proprietary ESG score.

The Sustainable Investment model developed by Crédit Mutuel Asset Management has therefore made it possible to take into account the negative impacts and guiding principles of the OECD and the United Nations upstream of the investment, thus avoiding any exposure to a company or issuer identified as likely to cause significant environmental or social harm.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely: **01/04/2023–28/03/2024**

Major investments	Sector	% of assets	Country
SAP SE	Information technology	7.0	GERMANY
ASML HOLDING NV	Information technology	6.7	NETHERLANDS
LVMH MOET HENNESSY LOUIS VUITTON SE	Consumer Discretionary	4.1	FRANCE
SCHNEIDER ELECTRIC SE	Industrial	4.1	FRANCE
SAFRAN	Industrial	3.5	FRANCE
AIRBUS SE	Industrial	3.1	NETHERLANDS
INTESA SANPAOLO SPA	Financial	2.6	ITALY
AXA SA	Financial	2.5	FRANCE
ALLIANZ SE	Financial	2.5	GERMANY
RHEINMETALL AG	Industrial	2.5	GERMANY

What was the proportion of sustainability-related investments?

What was the asset allocation?

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

The financial product commits to a minimum of 30% sustainable investment, as a proportion of the fund's total assets.

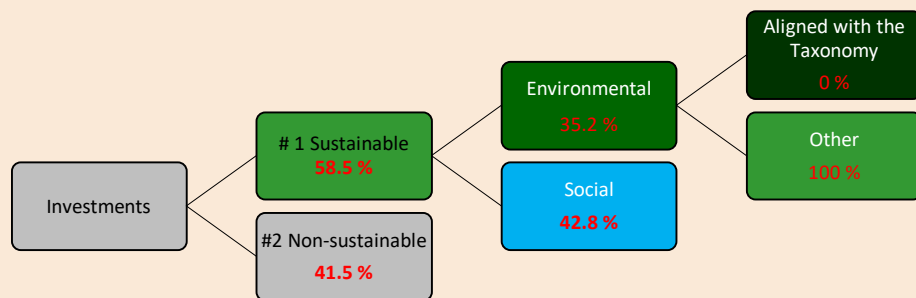

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Investments were made in the following sectors:

Industrial	26.8
Financial	19.5
Information technology	16.3
Consumer Discretionary	13.3
Commodities	5.5
Health care	4.9
Utilities	4.4
Consumer Goods	2.7
Energy	2.1
Communications services	2.0

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 42.8%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM SMALL & MIDCAP EURO

How did the markets perform?

The balance sheet is drawn up for a 12-month period and is broken down into two distinct periods during the period under review:

1/ from 31 March 2023 to 31 December 2023

2/ from 31 December 2023 to 28 March 2024

First period

The economic data from China finally showed a slower recovery than hoped for and a fragile property market, which weighed on internationally-exposed stocks such as luxury goods, whose results disappointed investors' expectations after years of exceptional growth, particularly at the end of the Covid period. However, there was good news from the United States, where, having ruled out the risk of the debt ceiling, the themes of Artificial Intelligence and the energy transition linked to the Inflation Reduction Act led to a rebound in the equity markets. The cycle of innovations rekindled trade tensions between China and the United States, which is seeking to halt deliveries of advanced chips.

The year was generally marked by the impact of monetary policies and the hawkish tone of central banks until the Fed's first pause in June, followed by the slowdown in inflation, which raised hopes of the first rate cuts in 2024. As a result, long-term yields rose until October, with the 10-year yield in the United States even reaching 5%, putting pressure on the equity markets until the end of October. Over the last two months of the year, the easing of long rates following improved inflation figures and less hawkish rhetoric from the Fed in particular led to a significant rebound in the equity markets.

Second period

The equity markets started 2024 on a positive trend, despite ongoing geopolitical tensions. The US economy continued to post stronger-than-expected growth, driven by consumer spending and a resilient labour market. Many European companies surprised on the upside when their results for 2023 were published. Combined with the prospect of lower interest rates towards the end of the year, investors rediscovered their appetite for growth/quality stocks, as well as for a number of smaller, quality projects. Against this backdrop, the fund continued the rebound that began at the end of October 2023, with strong performers such as Accor (+25.1% over the period), Moncler (+24.2%), Spie (+23%), MTU Aero Engines (+20.5%), ASM International (+20.4%) and Brunello Cucinelli (+19.6%).

Management approach

We have increased our exposure to companies driven by the following long-term trends, most of which were already in the fund: 1) Sectors linked to the sustainable economy and the energy transition (Spie, GTT); 2) The health and life sciences sector (Carl Zeiss Meditec, Amplifon); 3) Sectors exposed to innovation and new technologies (BE Semiconductor Industries, Alten); 4) Sectors linked to luxury and the quest for well-being (Brunello Cucinelli, SEB). We also invested in or strengthened positions in companies with good business trends and a favourable outlook, such as Elis, Accor and Rational.

Over the period (from 31/03/2023 to 28/03/2024), the RC unit returned 2.36%; the IC unit returned 3.44%; the S unit returned 3.10%; the benchmark index returned 6.84%

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

It has made **sustainable investments with an environmental objective:**

%

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted **environmental and/or social (E/S) characteristics** and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 30 %

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 5.95/10 while its benchmark universe had a score of 5.05/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

● **How did the sustainability indicators perform?**

The sustainability indicators used by this financial product are:

The ESG score of the financial product is 5.95/10 an improvement of 0.23 over the period. This is due to the strengthening of attractive, well-rated companies and a change in rating methodology by our in-house FRED team.

The ESG score remained higher than the ESG score of the benchmark universe, for reasons relating in particular the integration of ESG criteria into the various stages of the management process.

● **... and compared with previous periods?**

N/A

● **What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?**

N/A

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

● **To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?**

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

N/A

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely: **01/04/2023–28/03/2024**

Major investments	Sector	% of assets	Country
ASM INTERNATIONAL NV	Information technology	7.0	NETHERLANDS
ALTEN	Information technology	5.4	FRANCE
BRUNELLO CUCINELLI SPA	Consumer Discretionary	4.6	ITALY
SPIE SA	Industrial	4.6	FRANCE
SARTORIUS STEDIM BIOTECH	Health care	4.0	FRANCE
AMPLIFON SPA	Health care	3.7	ITALY
MONCLER SPA	Consumer Discretionary	3.6	ITALY
BE SEMICONDUCTOR INDUSTRIES NV	Information technology	3.5	NETHERLANDS
ELIS SA	Industrial	3.4	FRANCE
GAZTRANSPORT ET TECHNIGAZ	Energy	3.3	FRANCE

What was the proportion of sustainability-related investments?

What was the asset allocation?

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

For funds with a sustainable investment objective: The financial product commits to a minimum of 30% sustainable investment, as a proportion of the fund's total assets.

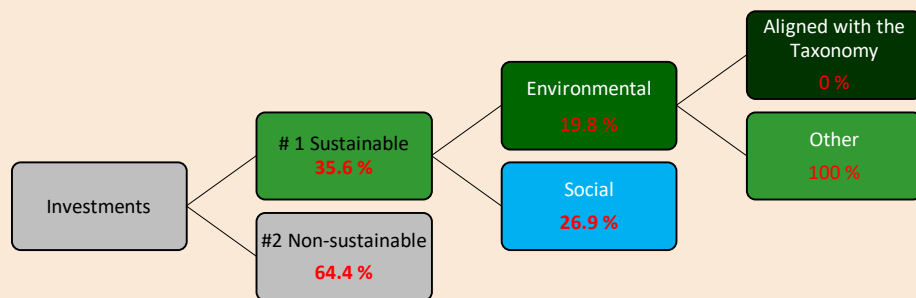

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Investments were made in the following sectors:

Industrial	28.1
Information technology	19.0
Consumer Discretionary	18.2
Health care	13.4
Financial	8.9
Energy	4.5
Communications services	1.2
Commodities	1.0
Utilities	0.8
Consumer Goods	0.1

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 26.9%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM FLEXIBLE EURO

How did the markets perform?

The balance sheet is drawn up for a 12-month period and is broken down into two distinct periods during the period under review:

1/ from 31 March 2023 to 31 December 2023

2/ from 31 December 2023 to 28 March 2024

First period

The economic data from China finally showed a slower recovery than hoped for at the start of the year, and a fragile property market, which weighed on internationally-exposed stocks such as luxury goods, whose results disappointed investors' expectations after years of exceptional growth. However, there was good news from the United States, where, having ruled out the risk of the debt ceiling, the themes of Artificial Intelligence and the energy transition linked to the Inflation Reduction Act led to a rebound in the equity markets. The cycle of innovations rekindled trade tensions between China and the United States, which is seeking to halt deliveries of advanced chips.

The year was generally marked by the impact of monetary policies and the hawkish tone of central banks until the Fed's first pause in June, followed by the slowdown in inflation, which raised hopes of the first rate cuts in 2024.

Finally, commodity prices remained volatile, particularly for oil with the continuing war in Ukraine and a new conflict in the Middle East. Orders for the defence and aerospace sectors hit new records.

Second period

The equity markets started 2024 on a positive trend, despite ongoing geopolitical tensions. The US economy continued to post stronger-than-expected growth, driven by consumer spending and a resilient labour market. Many European companies surprised on the upside when their results for 2023 were published, including SAP, Novo Nordisk, ASML and LMVH. The gradual delay in estimates of the first rate cuts by the Central Banks has helped the banking sector to outperform, with the EURO STOXX Banks index up 19% since the start of the year.

Management approach

Against this backdrop, the fund maintained significant positions in financial stocks, which benefited from the paradigm shift in interest rates: BNP PARIBAS, AXA, ALLIANZ, UNICREDIT, BBVA, INTESA SANPAOLO et MUNICH RE. We also took advantage of attractive entry points for companies driven by the following long-term trends, most of which have been in the fund for a long time: 1) Sectors linked to the sustainable economy and energy transition (SCHNEIDER ELECTRIC, AIR LIQUIDE, VEOLIA); 2) The health and life sciences sector (NOVO NORDISK); 3) Sectors exposed to innovation and new technologies (SAP, SAFRAN, THALES, AIRBUS, ASM INTERNATIONAL); 4) Sectors linked to luxury and the pursuit of well-being (HERMES, L'OREAL, FERRARI, INDITEX).

The fund's exposure to equity markets fluctuated between 44% and 62% over the period. At the end of March 2024, it stood at 55%.

Overall, between 31 March 2023 and 28 March 2024, the IC and RC units will have risen by 16.13% and 14.85% respectively, compared with 11.04% for the benchmark index.

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM FLEXIBLE EURO**
Legal entity identifier: **969500YWVJ49GCIFA243**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

☐ of economic activities which are considered environmentally sustainable under the EU taxonomy

☐ of economic activities which are not considered environmentally sustainable under the EU taxonomy

☐ It has made a minimum of **sustainable investments with a social objective:** __%

☒ It promoted **environmental and/or social (E/S) characteristics** and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 30 %

☐ with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

☒ with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 6.69/10 while its benchmark universe had a score of 5.29/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

● **How did the sustainability indicators perform?**

The sustainability indicators used by this financial product are:

The ESG score of the financial product is 6.69/10 an improvement of 0.13 over the period. This is due to the strengthening of attractive, well-rated companies. .

The ESG score remained higher than the ESG score of the benchmark universe, for reasons relating in particular the integration of ESG criteria into the various stages of the management process.

● **... and compared with previous periods?**

N/A

● **What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?**

N/A

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

● **To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?**

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

N/A

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely:
01/04/2023–28/03/2024

Major investments	Sector	% of assets	Country
SAP SE	Information technology	7.4	GERMANY
ASML HOLDING NV	Information technology	7.1	NETHERLANDS
LVMH MOET HENNESSY LOUIS VUITTON SE	Consumer Discretionary	5.5	FRANCE
SAFRAN	Industrial	5.3	FRANCE
SCHNEIDER ELECTRIC SE	Industrial	4.5	FRANCE
AIRBUS SE	Industrial	4.0	NETHERLANDS
AIR LIQUIDE SA	Commodities	3.9	FRANCE
HERMES INTERNATIONAL SA	Consumer Discretionary	3.6	FRANCE
ALLIANZ SE	Financial	3.3	GERMANY
L OREAL SA	Consumer Goods	3.3	FRANCE

What was the proportion of sustainability-related investments?

What was the asset allocation?

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

For funds with a sustainable investment objective: The financial product commits to a minimum of 30% sustainable investment, as a proportion of the fund's total assets.

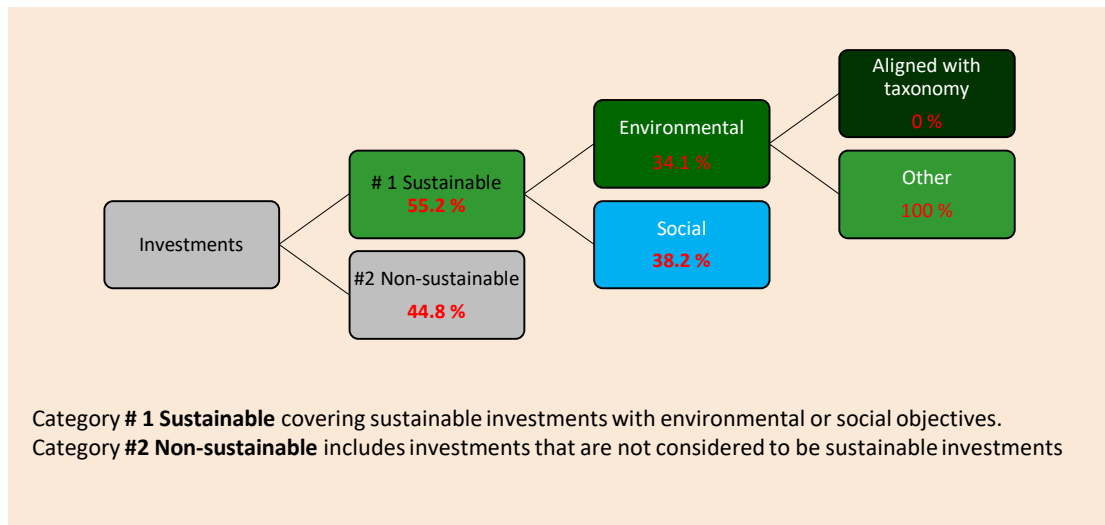

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

In which economic sectors have investments been made?

Investments were made in the following sectors:

Industrial	21.6
Financial	20.8
Information technology	16.6
Consumer Discretionary	15.6
Commodities	5.1
Consumer Goods	3.5
Utilities	3.3
Health care	3.0
Communications services	2.1

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 38.2%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;

Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM CONVERTIBLES EURO

How did the markets perform?

The balance sheet is drawn up for a 12-month period and is broken down into two distinct periods during the period under review:

1/ from 31 March 2023 to 30 September 2023

2/ from 30 September 2023 to 28 March 2024

First period

At the start of the 2023-2024 financial year, investors remain focused on the US banks' situation and growth. The economic slowdown began to materialise in the statistics published, but credit spreads started to fall again, particularly those of non-financial issuers, which tightened more than those of banks. Given the vote on the debt ceiling bill in the United States and positive inflation data for the eurozone, May was a good month for risky assets, despite mixed economic data and cautious corporate announcements in the United States. The ECB President was nevertheless keen to point out that the level of core inflation remained excessive in the eurozone, while tensions on the labour market were still conducive to second-round effects from wage increases. By the end of May, the German 10-year yield was at 2.28%, having peaked at 2.54% on 26 May. The euro yield curve continued to flatten, with the 2-10 year slope rising from -35 bp to -45 bp. On Investment Grade credit, spreads on corporate issuers underperformed financial issuers, due to a very dynamic primary supply. In the High Yield segment, after tightening by 25 bp, spreads were finally stable over the month. June marked the first pause in the Fed's rate hike cycle, unlike the ECB, which delivered another 25 bp. Macroeconomic indicators generally pointed to the resilience of employment, the persistence of inflation, in particular core inflation at levels that were still too high, and the statements by central bankers at the Sintra conference that maintained the course of further monetary tightening, pushed up German (+11 bp to 2.39%) and US (+20 bp to 3.84%) 10-year yields in a strong flattening of the curves. Investor optimism sustained the decline in risk aversion through the reduction in peripheral and credit spreads, mainly in the high yield segment.

As widely expected by the markets, the Fed and ECB raised their key rates by 25bp in July. However, these increases were accompanied by more flexible communication on the need for further tightening. After starting the month on an uptrend, European and US sovereign yields eased in the second half of the year, driven by lower-than-expected US inflation data, particularly core inflation. Bund and T-note yields ended July at 2.49% and 3.96% respectively, compared with 2.39% and 3.84% at the end of June. On both sides of the Atlantic, this downward movement focused more on short rates and explained the steepening of the yield curve. The beginning of August was marked by a further surge in long rates following publications that confirmed the resilience of the US economy and, consequently, the fear that central banks would maintain a restrictive monetary policy for longer. Other factors also contributed to this movement in rates: the beginning of a shift in the Bank of Japan's monetary policy, the recognition of massive forthcoming issues by the US Treasury, no doubt amplified by the downgrading by Fitch, not to mention reduced liquidity. Statistics indicating a gradual disinflationary trend and a worrying growth outlook in the eurozone finally reversed the rise in European yields, with the German 10-year yield ending the month virtually unchanged at 2.46% as the euro curve steepened. Semi-core and peripheral spreads remain broadly stable versus Germany. Credit spreads widen by around ten bp. At the end of the second quarter, global bond markets underwent a severe correction, accompanied by a steepening of the yield curve and a rise in real rates. US and German 10-year yields hit new highs of 4.60% and 2.85% respectively. The risks multiplied with monetary policy decisions by the Fed, ECB and BOE fuelling fears of high interest rates over the long term, the umpteenth risk of a shutdown, the repricing of future key rate cuts towards the second half of 2024 and the resurgence of Italian risk. Between relatively reassuring inflation data and positive macroeconomic publications at the end of September, but a bearish outlook and worrying news from the Chinese economy, the market favoured risk aversion,

as illustrated by the BTP spread, which widened by 29 bp. In the credit market, after an initial tightening, spreads widened significantly in the second half of the month.

In the equity market, the economic data from China finally showed a slower recovery than hoped for at the start of the year, and a fragile property market, which weighed on internationally-exposed stocks such as luxury goods, whose results disappointed investors' expectations after years of exceptional growth. However, there was good news from the United States, where, having ruled out the risk of the debt ceiling, the themes of Artificial Intelligence and the energy transition linked to the Inflation Reduction Act led to a rebound in the equity markets. The cycle of innovations rekindled trade tensions between China and the United States, which is seeking to halt deliveries of advanced chips. This period was generally marked by the impact of monetary policies and the hawkish tone of central banks until the Fed's first pause in June, followed by the slowdown in inflation, which raised hopes of the first rate cuts in 2024. Finally, commodity prices remained volatile, particularly for oil with the continuing war in Ukraine and a new conflict in the Middle East. Orders for the defence and aerospace sectors hit new records.

Second period

The third quarter of the financial year was marked by the resurgence of geopolitical risk linked to the conflict in the Middle East, economic statistics that were slow to send out a message of economic slowdown, and mixed corporate results. After reaching a high of 5% on the US 10Y and 3% on the German 10Y, the trend reversed, ending the month 10 bp and 20 bp lower respectively. At the end of October, the ECB brought a measure of relief to interest rates by accepting the largely consensual scenario of a pause in its monetary tightening, followed shortly afterwards by the FED. However, there was still a big gap between the US and Europe in terms of economic momentum and inflation, and wage data, house prices and the consumer confidence index did nothing to contradict this trend. Risk aversion was reflected in risky assets: the BTP-Bund spread reached a high of 211bp and credit spreads widened by around ten bp on the IG segment and around thirty bp on the HY segment. In November, global sovereign yields resumed a strong downward trend on the back of economic data that supported the hypothesis that inflation was easing without a collapse in growth, accompanied by a perceptible adjustment in the Fed's communication. The US 10-year yield thus fell back below 4.30% for the first time since mid-September. The German 10-year yield ended the month at 2.45%, down 35 bp compared with the end of October. The rally in the credit market continued to be fuelled by expectations of future Fed and ECB rate cuts as early as 2024. Against this backdrop, the easing in sovereign interest rates supported credit spreads, which narrowed for the fifth week running on both CDS and cash markets. December was marked by continued market optimism over expectations of monetary easing. In the United States, inflation, consumer spending and consumer confidence emphasised the remarkable resilience of economic momentum. At the end of December, sovereign yields continued to fall, providing further support for risky assets.

As expected, at the start of the last quarter of the year, the ECB left its key rates unchanged and did not express outright opposition to the rate cut expectations built into market prices, softening its language on the inflation outlook and wage growth concerns. National inflation rates also showed a relapse that continued at a comfortable pace, but the underlying components proved more resilient, encouraging the Governing Council to take its time in ensuring that inflation was on track. There were no major surprises at the Fed meeting either, with key rates unchanged and Powell's communication measured. Moreover, central banks have to contend with considerable geopolitical instability. In response to the sharp fall in the last quarter of 2023 and the high volume of issuance, the German 10-year yield rose by 14 bp as the curve steepened, peripheral debt outperformed and high yield credit tightened. February's statistics showed that while price rises continued to slow in the Eurozone, the inflexion in prices remained modest, due to the cost of services being driven by wage increases. The situation was similar in the United States, where inflation showed a resilience that was incompatible with a rapid easing of monetary policy. In addition, the strength of the US economic data raised questions about the genuinely restrictive nature of monetary policy. Eurozone PMIs also showed signs of strength in a weak economy. As a result, expectations of rate cuts continued to be pushed back in both the United States and the eurozone.

Against this backdrop, the German 10-year yield edged up 25 bp over the month to 2.41%, as curves flattened and sovereign and credit spreads narrowed.

The year ended in a status quo for sovereign interest rates on both sides of the Atlantic. However, the apparent stability of yields was no reason to disguise their marked volatility, with a 25bp and 20bp gap respectively between the high and low points for US and German 10-year yields. At its meeting on 20 March, the Fed kept its key interest rates unchanged for the 5th time in a row, at their highest level for 23 years. Similarly, the ECB left its monetary policy unchanged. The surprise came from the Swiss National Bank, which beat its peers to a 1st rate cut of 0.25%, in view of the "easing of inflationary pressure". The BTP-Bund spread continued to tighten, while the OAT-Bund spread underperformed following the announcement of a higher-than-expected deficit of 5.5% of GDP in 2023. On the credit side, the Euro High Yield segment continues to outperform, driven by the performance of issuers in the BB rating category, while the B and lower categories came under pressure as idiosyncratic risks increased.

The prospect of a halt to rate rises by the Fed, and even the hope that the Federal Reserve could enter the rate-cutting cycle, fuelled by an upturn in inflation and the likelihood of a stronger-than-expected landing for the US economy, led to a sharp easing in interest rates on both sides of the Atlantic. Between the end of September and the end of December 2023, the Bund fell from almost 3% to less than 2% in the final quarter of 2023. The T-Notes followed almost the same path, from 5% in mid-October to 3.80% at the end of December.

The equity markets started 2024 on a positive trend, despite ongoing geopolitical tensions. The US economy continued to post stronger-than-expected growth, driven by consumer spending and a resilient labour market. Many European companies surprised on the upside when their results for 2023 were published, including SAP, Novo Nordisk, ASML and LMVH. The gradual delay in estimates of the first rate cuts by the Central Banks has helped the banking sector to outperform, with the EURO STOXX Banks index up 19% since the start of the year.

Management approach

Against this backdrop, the fund maintained a cautious approach during the first period and increased its beta during the second period, with a delta higher than its benchmark during this period. We chose companies driven by the following long-term trends, most of which have been present in the fund for a long time: sectors linked to the sustainable economy and the energy transition (SCHNEIDER ELECTRIC, VEOLIA); sectors exposed to innovation and new technologies (SAFRAN, STM, BE SEMICONDUCTEURS); sectors linked to luxury goods and the quest for well-being (LVMH). Lastly, small and mid-caps such as SPIE, ELIS and ACCOR made a significant contribution to the fund's performance.

Overall, from 31 March 2023 to 28 March 2024, the RC, IC, S and RD units will have grown by +8.66%, +9.11%, +9.05% and +8.61% respectively, while the Refinitiv Convertibles Europe index posted a performance of +7.62% over the period.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 25 %

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 6.44/10 while its benchmark universe had a score of 5.95/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

- ESG score.

The ESG score of the financial product is 6.3/10 for the period.

The ESG score remained higher than the ESG score of the benchmark universe, for reasons relating in particular to over exposure to committed and best-in-class issuers.

... and compared with previous periods?

Increased selectivity

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

This financial product is designed to invest in a minimum number of companies and/or issuers identified as 'sustainable' according to Crédit Mutuel Asset Management's own internal methodology. The United Nations Sustainable Development Goals are used as a reference framework to determine which investments contribute to an environmental or social objective.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

As part of its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the main negative impacts that could cause significant harm and thus weaken the positive environmental and/or social contribution proposal, identified initially through the proportion of sales aligned with the Sustainable Development Goals (SDGs).

The potential for significant damage was assessed on the following basis:

- Sector exclusion rules concerning investment activities in sectors with high environmental and social risks, such as coal or mining.
- Normative exclusion rules concerning controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Consideration, through Crédit Mutuel Asset Management's proprietary ESG methodology and rating, of the Principal Adverse Impacts (PAIs).

All the PAI indicators (table 1, appendix 1 RTS) are taken into consideration here, either directly (indicator of violation of the United Nations Global Compact and OECD principles), or by using elements of Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In this case, each PAI was associated with a sub-pillar of the corresponding proprietary ESG score.

The Sustainable Investment model developed by Crédit Mutuel Asset Management has therefore made it possible to take into account the negative impacts and guiding principles of the OECD and the United Nations upstream of the investment, thus avoiding any exposure to a company or issuer identified as likely to cause significant environmental or social harm.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely:
01/04/2023–28/03/2024

Major investments	Sector	% of assets	Country
SAFRAN	Industrial	7.9	FRANCE
ACCOR SA	Consumer Discretionary	5.5	FRANCE
RHEINMETALL AG	Industrial	4.5	GERMANY
CM-AM DOLLAR CASH	UCITS	4.4	FRANCE
ELIS SA	Industrial	3.7	FRANCE
SCHNEIDER ELECTRIC SE	Industrial	3.3	FRANCE
SPIE SA	Industrial	3.1	FRANCE
SCHNEIDER ELECTRIC SE	Industrial	2.7	FRANCE
AMADEUS IT GROUP SA	Consumer Discretionary	2.5	SPAIN
WORLDLINE	Financial	2.4	FRANCE

What was the proportion of sustainability-related investments?

What was the asset allocation?

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

The financial product commits to a minimum of 25% sustainable investment, as a proportion of the fund's total assets.

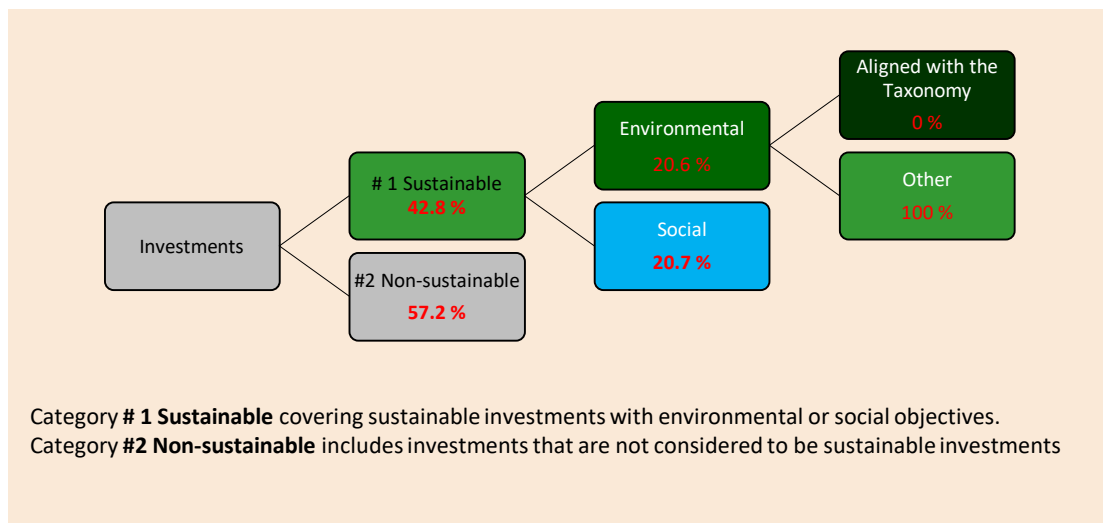

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

In which economic sectors have investments been made?

Investments were mainly made in the following sectors:

- Information technology
- Industry
- Consumer Staples
- Consumer discretionary
- Utilities

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 20.7%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM GLOBAL CLIMATE CHANGE

2023- 2024 Year: An eventful year for the theme

These are complicated times for the fight against global warming. The rise in interest rates has put pressure on the sector's business models and valuations, triggering a wave of multiple compression unprecedented for the sector. This phenomenon was then accentuated by the various setbacks experienced by companies in the sector: Orsted, Nextera Energy, Siemens Energy. All these factors, coupled with the many forthcoming elections, have put pressure on stocks and created an unfavourable environment for unprofitable growth companies. As a result, the sector began to react very strongly to macroeconomic news, particularly that relating to interest rates, creating a high level of volatility that was quite unfavourable to the fund in a setting of rising interest rates. Conversely, technology stocks rebounded strongly, buoyed by the trend towards artificial intelligence.

In emerging markets, trends were also fairly divergent, with India on the one hand posting stratospheric performances, buoyed by good macroeconomic data and strong investor interest, and China on the other, struggling to return to its previous growth figures in the face of a market that remains on the sidelines in a complicated geopolitical context and awaiting a government aid plan that has yet to arrive.

For the sake of clarity, this period can be divided into 2 time periods.

March to October

The rise in US interest rates has largely penalised companies in the renewable energy sector. In addition, a number of companies (Orsted, Siemens Energy, Nextera Energy) experienced operational problems which, from an operational point of view, were generally applicable to the sector as a whole, but which ultimately dragged down all the shares. Similarly, market anxiety has accentuated the discount between small to mid caps and large caps.

One market segment in particular stood out during this period: large-cap technology stocks. In fact, after a difficult year in 2022 in which multiple cutbacks were made, stocks performed extremely well, driven in particular by trends in artificial intelligence.

November to March:

The sharp fall in interest rates between the beginning of November and the end of December provided a major boost to the market, particularly for energy transition stocks, enabling the sector to post a very good performance, slightly outperforming its benchmark index, driven nonetheless by the rally in cyclical and large-cap technology stocks. The rally was short-lived, however, with a sharp reversal in early January, to the detriment of renewable stocks but with relatively little impact on technology companies. The various macroeconomic data released at the start of the year all highlighted the strength of the US economy and the persistence of inflation, all of which called into question the scenario of rapid rate cuts by central banks. Rates subsequently rose to 4.4% from 3.9% at the beginning of the year. Against this backdrop, large-cap technology stocks continued to perform well, but this time in tandem with more cyclical companies that benefit from greater exposure to the economy.

Fund management update

Launched on 21 June 2021, the CM-AM Global Climate Change fund finances international companies actively contributing to the climate transition. The fund is structured around 4 themes:
1) renewable energy/energy efficiency 2) sustainable mobility 3) preservation of ecosystems 4) agents of change.

The CM-AM Global Climate Change fund is an impact fund, according to article 9 of the SFDR regulation, which means 100% sustainable investment. CM-AM Global Climate Change

Over the period under review, from 31/03/2023 to 28/03/2024, the fund recorded a performance of -0.4%, -0.6% and -1.38% for the IC, S and RC units respectively. For comparison, the MSCI AC World denominated in euro, dividends reinvested, returned 23.9%.

The fund underperformed its benchmark for the following reasons:

- Exposure to energy transition companies

Because of its theme, the fund has been hit hard by the lack of interest in energy transition companies. Stocks fell sharply as a result of significant rises in interest rates, which put pressure on business models and valuations. At the same time, several companies in the sector experienced operational problems (Siemens Energy, Orsted, Nextera Energy), which created anxiety around the sector. Over the period, the MSCI ACWI Clean Energy Infrastructure index returned -5.5%, compared to the MSCI ACWI (USD), which returned +24.6%.

- Lack of exposure to US technology major caps

One of the major trends of the year was the explosion of AI through the deployment of ChatGPT, which benefited major technology companies. This craze has even spawned an expression, the "Magnificent 7", in reference to the 7 US companies whose share prices have benefited most from the AI trend. Over the period, the performance of these 7 companies was 67.8%. However, in our ESG database and up to August 2023, only 1 of these companies was investable according to our criteria, even though these companies already represented more than 14% of our benchmark index and achieved a performance of +67.8%.

- Overexposure to China

The fund also suffered from the underperformance of the Chinese market, to which we were overexposed due to our significant presence in the renewable energy value chain. The Chinese market was hit by the combination of growing geopolitical tensions with the United States and the fragility of its economy, which is struggling to return to past growth figures.

During the period we were able to develop the fund's investment philosophy, enabling us to significantly broaden our investment horizon and reduce our market bias. By considering drivers in the fight against global warming, such as electrification, we have been able to reduce our exposure to growth and rates, enabling us to maintain a performance in line with our index since mid-January despite rates having risen from 4.1% to 4.4%.

We remain confident in our approach and believe that current valuation levels in clean tech offer good opportunities, but we remain cautious because we are aware that for these stocks to work, we need interest rates to at least stabilise.

Over the period, the best contributors were:

- SABESP: A Brazilian water management company with a market capitalisation of \$10.5 billion. The company has benefited from a vast restructuring and cost management operation with the aim of being privatised in June 2024. Buoyed by the success of this plan, the share price rose by 71% over the period.

- General Electric: An emblematic \$190bn American conglomerate, the company has initiated a plan to spin off its various entities. The company's performance over the period was driven in particular by excellent results from its aerospace division, as well as good momentum in electrification for its energy business. Similarly, the run-up to the latest spin-off boosted share prices, prompting investors to ignore the traditional conglomerate discount.

- Cadence Design: A \$83.5bn design and simulation company for the semiconductor industry. The company has benefited fully from the AI boom and the geopolitical tensions that are pushing each country to increase its production capacity.

Among the main detractors from the company's performance were:

- Solaredge: a company that markets and produces inverters for the residential solar market, with a market capitalisation of \$3.5 billion. The company has been penalised by the crisis in the residential solar market, which has had a major impact on its growth prospects and margins.

- EDP Renovaveis, a leading Spanish company in the development and management of renewable energies, valued at €13.1bn. The company has been hit by the rise in interest rates, fears about its sector following the problems encountered by Orsted, and the fall in electricity prices in Europe in 2024, which has led analysts to revise future profits downwards.

- Yadea, a Chinese company worth HKD 42.5 billion, produces electric 2-wheelers, mainly in China, and also replaces batteries for these vehicles. Concerns about consumer health and the Chinese economy weighed on the share price, as did a strong lack of interest in the Chinese market.

Main movements

At the end of March 2023, the fund held 49 stocks. It is a fund of conviction that aims to hold between 40 and 60 stocks. The fund benefits from a cash position enabling it to strengthen certain positions that we feel have good potential and to add new stocks.

Among the positions that were sold, we would like to highlight:

- Enphase Energy, a US company that develops and manufactures microinverters for residential solar power, as well as batteries and charging points for electric vehicles. We sold the stock because we felt its valuation was too high, while at the same time the sector seemed to be going through a crisis.

- Orsted, the position was sold due to the company's inability to pass inflation on its entrants.

- LG Energy, a US financial company specialising in financing projects to combat climate change. The position was removed from the CM-AM Global Climate Change fund because the company's rate of return could be eroded by rising interest rates.

CM-AM Global Climate Change also initiated new positions, including:

- Alphabet, the parent company of Google, which specialises in information technology and online services. It develops products and services such as the Google search engine, the Android operating system and YouTube. The company was included in our portfolio as a result of changes in our carbon rating, and offers exposure to one of the world's largest technology companies, which owns a large number of data centres that are 100% powered by renewable energy.

- First Solar develops and manufactures solar panels. The company is the main beneficiary of Chinese panels in the United States.

- Nexttrackers, a company that designs and manufactures trackers for the solar industry, enabling panels to move according to the sun's cycles.

Outlook

The period was particularly difficult for the fund's theme, with a combination of falling growth estimates and falling multiples. Although it now seems safe to say that valuations in the sector have become very reasonable and appear to offer interesting opportunities, we remain cautious in the short term, given that the correlation with interest rates has never been so strong and that bottleneck problems could lead to further downward revisions in some stocks. The noise surrounding the various elections has also contributed to caution in the sector, although we believe that even in the event of a Republican victory, it is unlikely that the IRA will be dismantled in its entirety.

As a result, we continue to be overweight on the theme, but we are also holding other players in the fight against global warming that have a lower correlation with interest rates and a larger capitalisation (which investors are likely to favour in the event of market stress).

We have positioned our portfolio according to our analysis of the macroeconomy and the various sectors, giving short-term preference to companies with exposure to large-scale solar projects, water management and electrification. For the time being, we are avoiding exposure to hydrogen until we have more visibility over the ability of these companies to generate value, and we have a relatively controlled exposure to wind energy.

We remain biased towards industrials and utilities, as we believe these stocks are key to our theme and will benefit - from the greater resilience of the global economy in the case of industrials and - from lower interest rates in the case of utilities.

Extra-financial characteristics of the fund

CM-AM Global Climate Change invests in international companies listed on regulated markets that are actively involved, directly or indirectly, in the fight against global warming, the energy and climate transition and sustainable development.

As part of its management, the fund takes carbon scoring into account when selecting its stocks. The fund also produces a number of ex-post extra-financial indicators, including the temperature of the portfolio and its alignment with the Paris Agreement.

Breakdown by carbon score (% of total portfolio)

Carbon intensity in tonnes of CO2/M\$ turnover

Temperature measurement of the fund

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM GLOBAL CLIMATE CHANGE**

Legal entity identifier: **969500YJPA4USNPJBM20**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☒ It has made **sustainable investments with an environmental objective**: 100 %

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective**: %

It promoted **environmental and/or social (E/S) characteristics** and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 0 %

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

This financial product adopts a selective approach, eliminating 20% of the most carbon-intensive issuers from its investable universe using an internal carbon scoring model. Similarly, the companies selected for the portfolio operate in one of the eight "eco-activity" areas of the Greenfin label, which contribute to the decarbonisation of our economies, energy transition and sustainable development. The "eco-activities" areas are as follows: energy, construction, circular economy, industry, transport, information and communication technologies, agriculture (including forestry) and adaptation to climate change.

An ex-post analysis of the portfolio's temperature indicates its alignment with a warming scenario of 1.5°C by 2050. This measure should be seen in the context of a warming of 3°C for its benchmark index.

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are the carbon score, the carbon intensity (performance indicator 1), the breakdown of the portfolio by eco-activity and the proportion of sustainable investment.

- Carbon intensity (scope 1 and 2) was 86.46 tCO₂/M€ turnover at the end of the period. Compared with 108.8 tCO₂/M€ turnover for its benchmark index.

- The breakdown of a portfolio by eco-activity bracket is:
 - Type 1 issuers (50-100% of turnover in eco activities): 39.2% (min. 20% required)
 - Type 2 issuers (10-50% of turnover in eco activities): 47.6%
 - Type 3 issuers (0-10% of turnover from eco-businesses): 13.2% (maximum of 25% required)

- The proportion of sustainable investment is 100%, excluding liquid assets (cash and money market funds).

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

This financial product is designed to invest in a minimum number of companies and/or issuers identified as 'sustainable' according to Crédit Mutuel Asset Management's own internal methodology. The United Nations Sustainable Development Goals are used as a reference framework to determine which investments contribute to an environmental or social objective.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

As part of its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the main negative impacts that could cause significant harm and thus weaken the positive environmental and/or social contribution proposal, identified initially through the proportion of sales aligned with the Sustainable Development Goals (SDGs).

The potential for significant damage was assessed on the following basis:

- Sector exclusion rules concerning investment activities in sectors with high environmental and social risks, such as coal or mining.
- Normative exclusion rules concerning controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Consideration, through Crédit Mutuel Asset Management's proprietary ESG methodology and rating, of the Principal Adverse Impacts (PAIs).

All the PAI indicators (table 1, appendix 1 RTS) are taken into consideration here, either directly (indicator of violation of the United Nations Global Compact and OECD principles), or by using elements of Crédit Mutuel Asset Management's proprietary ESG score as a proxy.

In this case, each PAI was associated with a sub-pillar of the corresponding proprietary ESG score.

The Sustainable Investment model developed by Crédit Mutuel Asset Management has therefore made it possible to take into account the negative impacts and guiding principles of the OECD and the United Nations upstream of the investment, thus avoiding any exposure to a company or issuer identified as likely to cause significant environmental or social harm.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely: **01/04/2023–28/03/2024**

Major investments	Sector	% of assets	Country
XYLEM INC	Industrial	6.243	UNITED STATES OF AMERICA
NVIDIA CORP	Information technology	3.924	UNITED STATES OF AMERICA
SCHNEIDER ELECTRIC SE	Industrial	3.470	FRANCE
KURITA WATER INDUSTRIES LTD	Industrial	3.403	JAPAN
VINCI SA	Industrial	3.294	FRANCE
MICROSOFT CORP	Information technology	3.233	UNITED STATES OF AMERICA
CIA SANEAMENTO BASICO DO ESTADO DE SAO PAULO SABESP	Utilities	3.098	BRAZIL
CADENCE DESIGN SYSTEMS INC	Information technology	3.021	UNITED STATES OF AMERICA
FIRST SOLAR INC	Information technology	2.988	UNITED STATES OF AMERICA
REPUBLIC SERVICES INC	Industrial	2.931	UNITED STATES OF AMERICA

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- **of revenues** to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- **of capital expenditure** (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- **of operating expenses** (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

The financial product commits to a minimum of 100% sustainable investment (excluding liquid assets), as a proportion of the fund's total assets.

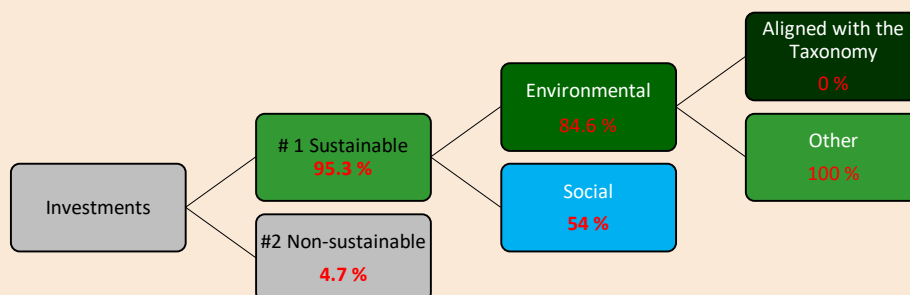

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **#1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Investments were made in the following sectors:

Industrial	44.3
Information technology	21.7
Utilities	12.9
Consumer Discretionary	6.8
Commodities	6.7
Health care	2.6
Communications services	1.7
Real estate	1.6

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 54%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of carbon selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;

o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM GLOBAL EMERGING MARKETS

Annual Report 2023-2024 (from 31/03/2023 to 28/03/2024)

Over the financial year, the fund was down -2.5% for the RC share, -1.5% for the IC share, -2.5% for the ER share and -1.6% for the S share. The fund underperformed its benchmark index, the MSCI Emerging Markets, which was up 8.5% (in euros, net dividend reinvested).

The fund underperformed its benchmark for the following reasons:

- The fund's growth orientation was penalised, as value outperformed growth by a very significant margin (+12.2% vs. +5.9% in DNR* euros).

- In terms of geographical positioning, the fund's overexposure to China (Hong Kong + domestic China at 31.4% vs. 27.7% for the index) penalised it, as China did not experience the expected recovery and large caps were the most heavily sold by investors. The fund's underexposure to India was a drawback (8.3% vs. 15.6% for the index). For the time being, the fund can only invest in the few Indian ADRs, large caps in two main sectors (banking and IT services), limiting the choice of stocks. Particularly as it is small and mid-caps that have been favoured by investors over the period. Under-exposure to Taiwan (7.9% vs. 15.5%), driven by the AI craze, had a negative impact on the fund's performance. On the other hand, the fund's overexposure to Brazil, Mexico and Indonesia and its underexposure to South Africa and Thailand contributed to performance.

- From a sector point of view, consumer discretionary stocks were detractors from performance, as were communication services and materials. Underweight positions in the information technology, energy, financials and business services sectors weighed on the fund's performance. The overweight position in industrials worked well.

- Among the worst contributors were almost all Chinese stocks. Consumer stocks suffered from the slower-than-expected recovery: Li Ning (-222bp in absolute*), China Tourism Group (-154bp), Yadea (-88bp), China Resources Beer (-71bp) et Yum China (-68bp). We also saw a lack of enthusiasm for climate transition stocks: Longshine Technology (-106bp), Longi Green Energy (-57bp), Samsung SDI (-65bp) et CATL (-31bp). The major Chinese and ASEAN technology stocks also had to contend with a lack of investor enthusiasm, despite improving financial results: Alibaba (-111bp), Tencent (-107bp) et Sea (-77bp).

- Latin American companies were among the top contributors, buoyed by a better macroeconomic environment and attractive valuations: MercadoLibre (+85bp), Globant (+91bp), Grupo GPS (+94bp), Walmart de Mexico (+79bp), Itau Unibanco (+85bp), Banorte (+72bp) et Raia Drogasil (+39bp). Taiwanese and Korean technology companies have benefited from the development of AI and the beginning of a recovery in the smartphone and memory markets: TSMC (+183bp), Samsung (+128bp) et SK Hynik (+85bp). Trip.com (+78bp), China's leading online travel company, Indian bank ICICI (+70bp), Indian conglomerate Reliance (+86bp) and Korean carmaker Hyundai Motor (+54bp) also stood out for their good execution.

The fund has a strong growth bias, aiming to capitalise on the dynamism of emerging markets. The weighted average sales growth of the companies in the fund for 2024 is estimated at +16% and earnings per share growth at +20%**.

The 5 investment themes defined for CM-AM Global Emerging Markets

are structural growth themes that can be found in all countries. The first, and most important, is the growth of the middle class. More than a billion people in these countries will join the middle class between 2018 and 2027 (which includes the impact of the covid pandemic). This is a formidable engine for growth. These new consumers have needs in terms of consumption, education and health. This first theme will influence three others: the development of infrastructure, the digitalisation of the economy and the emergence of leading companies. The fifth theme concerns natural resources (oil, metals, water, etc.), which are very present in these regions (see chart showing the breakdown of the fund by theme and by major region, based on the portfolio invested as at 29 March 2024).

Breakdown of the fund by investment theme

Breakdown of the fund by geographical area

Regarding the sustainability of the fund, a number of points should be highlighted:

- The fund is classified as article 8 under SFDR regulations and category 2 by the AMF.
- It must not hold more than 10% of class 1 companies according to the ESG methodology of Crédit Mutuel Asset Management's Responsible and Sustainable Finance division. As at 29 March 2024, the fund held 1% of its assets in class 1, meeting this criterion by a very wide margin.
- In addition, the fund must have a lower carbon intensity (tonnes of CO₂ emitted per €1 million turnover) than its benchmark index, the MSCI Emerging Markets. At 29 March 2024, the carbon intensity of CM-AM Global Emerging Markets was 67.5tCO₂/M€ turnover vs. 263.1tCO₂/M€ turnover for the index. The fund is therefore well within this criterion.
- The sustainable investment rate was 43.5%.

Legal entity identifier: **9695006UK3A2L84W0Z36**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The EU taxonomy is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**. This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?	
<input checked="" type="checkbox"/> <input type="checkbox"/> Yes	<input type="checkbox"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It has made sustainable investments with an environmental objective: %	<input checked="" type="checkbox"/> It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least <u>20</u> %
<input type="checkbox"/> of economic activities which are considered environmentally sustainable under the EU taxonomy	<input type="checkbox"/> with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy
<input type="checkbox"/> of economic activities which are not considered environmentally sustainable under the EU taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy
<input type="checkbox"/> It has made a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting a carbon intensity improvement approach (tonnes of CO2 emitted per €1 million of turnover). The carbon intensity of the portfolio (weighted average by asset weight) must therefore be lower than that of its benchmark index, the MSCI Emerging Markets. In addition, the fund may not hold more than 10% of its assets in ESG class 1 companies according to the methodology defined by Crédit Mutuel Asset Management's Responsible and Sustainable Finance division.

The carbon intensity of the financial product at the end of the financial year was 67,5 tCO2/m€ turnover. Therefore, the environmental characteristics pursued by the fund (via carbon intensity) have been achieved. At 31 March 2024, the percentage of holdings of ESG class 1 companies was 1.0%. The environmental and social characteristics pursued by the fund have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

- Carbon intensity
- Hold no more than 10% of companies with an ESG class of 1.

For funds with a sustainable investment objective: add the proportion of sustainable investment as a sustainability indicator.

- the proportion of sustainable investment (only for funds with a sustainable investment component)

The carbon intensity of the financial product at the end of the financial year was 67.5 tCO₂/€m of turnover, while its comparative index showed an intensity of 263.1 tCO₂/€m of turnover.

The percentage of holdings in ESG class 1 companies as at the end of March 2024 was 1.0%.

The environmental and social characteristics pursued by the fund have therefore been achieved.

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

N/A

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

N/A

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely: **31/03/2023–28/03/2024**

Major investments	Sector	% of assets	Country
TAIWAN SEMICONDUCTOR MANUFACTURING CO LTD	Information technology	5.7	TAIWAN
SAMSUNG ELECTRONICS CO LTD	Information technology	5.3	REPUBLIC OF KOREA
TENCENT HOLDINGS LIMITED	Communications services	4.5	CAYMAN ISLANDS
MERCADOLIBRE INC	Consumer Discretionary	4.1	UNITED STATES OF AMERICA
ICICI BANK LIMITED	Financial	3.9	INDIA
RELIANCE INDUSTRIES LTD	Energy	3.8	INDIA
GRUPO FINANCIERO BANORTE SAB DE CV	Financial	3.6	MEXICO
RAIA DROGASIL SA	Consumer Goods	3.5	BRAZIL
WAL-MART DE MEXICO SA DE CV	Consumer Goods	3.2	MEXICO
TAIWAN SEMICONDUCTOR MANUFACTURING CO LTD	Information technology	3.2	TAIWAN

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- of revenues to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- of capital expenditure (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- of operating expenses (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

For funds with a sustainable investment objective: The financial product commits to a minimum of 20% sustainable investment, as a proportion of the fund's total assets.

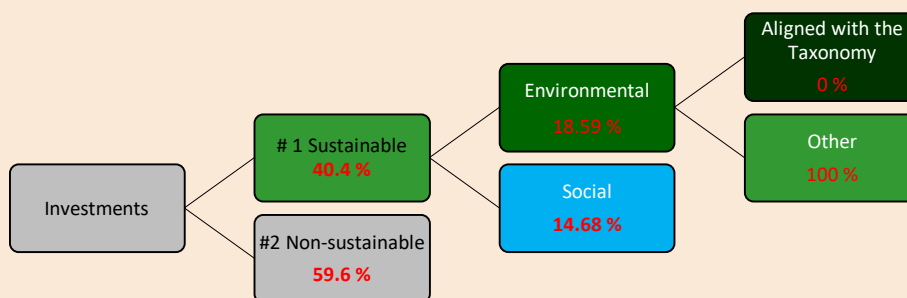

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Investments were made in the following sectors:

GICS sectors	% Share
Information technology	21.4
Consumer Discretionary	19.4
Financial	14.1
Industrial	12.7
Consumer Goods	12.6
Communications services	4.5
Energy	3.8
Utilities	0.8

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 14.68%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;

o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM EUROPE GROWTH

CM AM EUROPE GROWTH FUND

Financial year March 2024

The equity markets ended the 2023/24 financial year up (Stoxx 600 NR +15.01% S&P 500NR in € +30.15%, Nasdaq 100 NR in € +40.21%). Investors' pessimism and their positioning at the start of the year explain part of the very good performance of the equity markets, which ultimately masks a macroeconomic and geopolitical context that deteriorated slightly over the year.

At the level of the central banks, the tightening of monetary policy by most central banks to counter inflation continued for much of the year. The Fed raised interest rates by 100bp between early January and mid-July. While the FED expects rate cuts to take place during 2024, the ECB has postponed its statement pending signs of a slowdown in inflation.

On the geopolitical front, the conflict in the Middle East has continued to escalate, involving a number of countries, and remains a source of uncertainty for investors. The war between Russia and Ukraine is still going on, and trade tensions between the United States and China remain topical. The United States wants to tightly limit technological investment in China (chips, AI, quantum computing) between now and the 2024 elections. Biden approved the executive order to restrict US investment in certain Chinese technologies, citing national security concerns. Trump's tariffs on China are also not expected to change. China plans to regulate exports of graphite used in batteries to protect its national security, while the US wanted to halt deliveries of advanced chips. The EU has even agreed to join US efforts to protect its industries from cheap competition.

Moody's has downgraded China's credit rating to negative from stable. Meanwhile, domestic demand is showing signs of weakness, with an unexpected fall in imports in November. Finally, in Japan, inflation stabilised below +3.0% at the end of the year. The government revised its inflation forecasts upwards and now expects it to reach +2.5% for the next fiscal year.

On the European market, growth stocks and technology stocks in particular gained the most over the year, with SAP, for example, in the fund's top 10, up 56.85%. The leisure sector benefited from the continued easing of Chinese health measures and the opening of the border between Hong Kong and the rest of China. For example, the fund included Amadeus (+35.13% in 2023 but which has corrected since the start of the year, falling to -1.88% for the year), which offers solutions for issuing and managing airline tickets, for instance, but is also active in the hotel sector. The semiconductor sector performed well, benefiting from the hype surrounding artificial intelligence and the resulting potential demand. ASML, one of the fund's top 5 performers, rose by 59.5%, driven by its solid order book for 2025, reassuring the market. The fund is absent from the other players in the sector, given the lack of visibility on automotive and industrial demand, particularly for European players, and the associated risk of a correction.

The fund's biggest positive contributor is SAP (+58.12% over the period and 2.7% contribution to performance), Europe's number one software company, which presented better-than-expected results, demonstrating the momentum of its Cloud offering and providing reassurance about its medium-term objectives and the robustness of a business model that is becoming increasingly recurrent. Novo Nordisk, Asml and Schneider are the next three contributors. Novo, for example (up 64.06% over the year) raised its earnings targets three times, thanks largely to GLP1 in anti-obesity treatments.

Other stocks ended the year in the red, including Wordline (-70.65%) due to a slowdown in consumption, particularly in Germany, which had not been anticipated by management. Moreover, financial communications were disappointing, particularly with regard to a market investigation by the German regulator (BAFIN), which led Worldline to withdraw from certain clients deemed to be potentially at risk.

In healthcare, we increased our positions in Novo Nordisk, in line with the rebound in the share price, and in Lonza. We also initiated an investment in PUMA, whose change of management should lead to

a revival in sales momentum, particularly in Asia, and given the significant discount to its peers in relation to expected growth. We also strengthened our position in the tech sector with purchases of ASM Int during the last quarter, while reducing our exposure to IT services (Cap Gemini).

During the year, we initiated a position in Richemont and exited Kering in the consumer discretionary sector, preferring Richemont's fine jewellery model to Kering, which is suffering from a sharp deterioration in the image of its brands and the resulting sales growth. We exited BMW, Kerry and DHL Group (formerly Deutsche Post) as freight rates were being normalised in particular. Over the year, the fund recorded returns of 9.07% for the ER share, 9.88% for the IC share, 8.26% for the R share, 9.07% for the RC share and 9.50% for the S share.

In accordance with the management strategy set out in the prospectus, more than 75% of the fund was invested in securities eligible for the PEA (French equity savings plan).

Annex SFDR Annual Report (ex-post addendum)

Product name: CM-AM EUROPE GROWTH
Legal entity identifier: 969500HGIT8IEBFSS259

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 30 %

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 6.49/10 while its benchmark universe had a score of 5.34/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

The ESG score of the financial product is 6.49/10 an improvement of 6.39% over the period. This is due to the increased ESG efforts of portfolio companies combined with portfolio construction.

The ESG score remained higher than the ESG score of the benchmark universe, mainly because of our active selectivity approach, which aims to favour companies with good environmental, social and, of course, governance practices.

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

N/A

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

N/A

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting the **largest proportion of investments** of the financial product during the reference period, namely: **31/03/2023–28/03/2024**

Major investments	Sector	% of assets	Country
ASML HOLDING NV	Information technology	6.0	NETHERLANDS
SAP SE	Information technology	5.9	GERMANY
NOVO NORDISK AS	Health care	5.3	DENMARK
ESSILORLUXOTTICA SA	Health care	4.1	FRANCE
CM-AM CASH SRI		4.0	FRANCE
AIR LIQUIDE SA	Commodities	3.8	FRANCE
DASSAULT SYSTEMES	Information technology	3.6	FRANCE
EDENRED SA	Financial	3.1	FRANCE
SCHNEIDER ELECTRIC SE	Industrial	2.8	FRANCE
LVMH MOET HENNESSY LOUIS VUITTON SE	Consumer Discretionary	2.8	FRANCE

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- **of revenues** to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- **of capital expenditure** (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- **of operating expenses** (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

For funds with a sustainable investment objective: The financial product commits to a minimum of 30% sustainable investment, as a proportion of the fund's total assets.

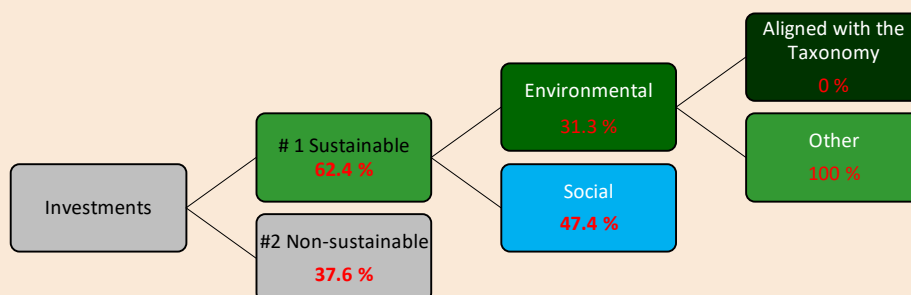

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Investments were made in the following sectors:

Health care	6.28
Information technology	6.75
Consumer Discretionary	6.07
Industrial	6.89
Commodities	6.58
Financial	6.36
Consumer Goods	6.80
Utilities	6.11
Communications services	7.26

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

1. Alignment of investments with the taxonomy, including sovereign bonds

1. Alignment of investments with the Taxonomy, excluding sovereign bonds

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 47.4%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The "do no material harm" principle applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088 and considers the European Union's criteria for environmentally sustainable economic activities

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2)
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- "Coal Developers": issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:

Annual coal production < 10 MT

Coal-based plants electricity capacity < 5 GW

Share of thermal coal in sales < 10%

Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM DOLLAR CASH

The year began with turbulence in the banking sector and with the US market under pressure. The Fed continued its rate hike cycle at a less aggressive pace. It raised its target range by 25 bp twice. In July, it stabilised at 5.25/5.50%. From July onwards, it will stabilise at 5.25/5.50%. The cycle's projections have been revised sharply, resulting in a clear inversion of the yield curve. The figures published show that the economy is still very robust and inflation remains high. The debt ceiling has been raised, averting another shutdown. Fitch subsequently downgraded the US by one notch to AA+. In October, a second international crisis erupted in the Middle East. Ukraine was no longer the sole focus of Western attention. On the domestic front, Mike Johnson, a Trump supporter, was elected Speaker of the House of Representatives, a seat that had been vacant since McCarthy's removal. At the end of the year, with US data still positive, the markets are planning to cut key rates. The swap curve corrected significantly from 6 months to 5.29% (losing 12bp). The 1Y is down 28bp to 5% and the 2Y is down 40bp to 4.37%. We enter 2024 with three issues in mind. The pace at which the Fed will cut rates. On the domestic front, the forthcoming presidential election and Trump's possible candidacy. Finally, on the international front, the development of conflicts in the Levant and Ukraine. Powell has given himself time before considering a cut in his key rate. The markets, for their part, were anticipating a faster pace of initial cuts. This led to marked volatility in interest rates, particularly short-term rates. Issue spreads narrowed significantly. The State Department announced the departure of V Nuland, number 2 at Foreign Affairs, embodying the anti-Russian hard line. Additional support credits for Ukraine were still blocked by the Lower House. At the end of March, the Fed left its key rate unchanged in the 5.25/5.50% range for the fifth time in a row.

The fund closed the year with assets of USD 467 million, up 47% on the USD 318 million of the previous year.

By maintaining a short average life, we were able to benefit from the rising interest rate cycle, as we indicated in the previous report. As the year ended, our sensitivity indicators remained low, although up on the previous year: WAL at 109 days and WAM at 92 days. We continued to favour high average asset quality. The turbulence of recent months has prompted us to maintain this view, with over 48% of the portfolio rated A and above. We also retain a majority of fixed-income securities, which are by nature less volatile than bonds.

The fund's performance, net of fees, over the year was 5.71% compared with 5.39% for Sofr.

Annex SFDR Annual Report (ex-post addendum)

Product name: **CM-AM DOLLAR CASH**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**. This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?	
<input checked="" type="checkbox"/> <input type="checkbox"/> Yes	<input type="checkbox"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It has made sustainable investments with an environmental objective: % <input type="checkbox"/> of economic activities which are considered environmentally sustainable under the EU taxonomy <input type="checkbox"/> of economic activities which are not considered environmentally sustainable under the EU taxonomy <input type="checkbox"/> It has made a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least <u>20</u> % <input type="checkbox"/> with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 6/10 while its benchmark universe had a score of 5.82/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

- ESG score.

The ESG score of the financial product is 6/10 an deterioration of 0.4 over the period.

Reduced carbon intensity over the financial year to 28.06 (tCO₂/M€ sales)

Human rights indicator: no controversy

The ESG score remained higher than the ESG score of the benchmark universe, mainly due to the selection and overweighting of issuers with a high

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

N/A

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

N/A

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

[Include the declaration for the financial products referred to in the first paragraph of Article 6 of Regulation (EU) 2020/852].

The EU taxonomy establishes a "do no harm" principle whereby taxonomy-aligned investments should not cause significant harm in accordance with the EU taxonomy objectives and is accompanied by specific EU criteria.

The principle of "not causing significant harm" only applies to investments underlying the financial product that do consider the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not consider the European Union's criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm as regards environmental or social objectives.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely: **31/03/2023–28/03/2024**

Major investments	Sector	% of assets	Country
ROQUETTE FRERES	Commodities	2.9	FRANCE
TOYOTA MOTOR FINANCE NETHERLANDS BV	Consumer Discretionary	2.7	NETHERLANDS
AUSTRALIA AND NEW ZEALAND BANKING GROUP LIMITED	Financial	2.7	AUSTRALIA
NTT FINANCE UK LIMITED	Financial	2.7	UNITED KINGDOM
MITSUBISHI UFJ TRUST & BANKING CORPORATION	Financial	2.7	UNITED KINGDOM
SONEPAR	Industrial	2.7	FRANCE
SUMITOMO MITSUI BANKING CORPORATION SYDNEY BRANCH	Financial	2.7	AUSTRALIA
BANK OF AMERICA EUROPE DAC	Financial	2.7	IRELAND
SAVENCIA SA	Consumer Goods	2.6	FRANCE
EUROCLEAR BANK SA NV	Financial	2.3	BELGIUM

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset Allocation describes the share of investments in specific assets.

Activities aligned with the taxonomy are expressed as a percentage:

- **of revenues** to reflect the share of revenues generated by green activities of the companies benefiting from the investments;

- **of capital expenditure** (CapEx) to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy

- **of operating expenses** (OpEx) to reflect the green operational activities of the companies benefiting from the investments.

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

For funds with a sustainable investment objective: The financial product commits to a minimum of 20% sustainable investment, as a proportion of the fund's total assets.

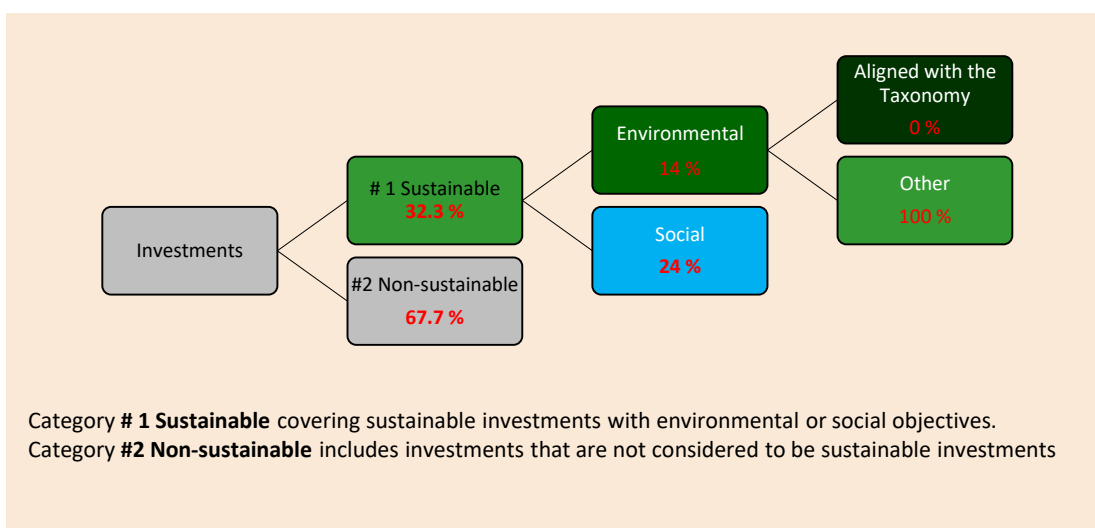

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

In which economic sectors have investments been made?

Investments were made in the following sectors:

GICS sectors	% Share
Financial	52.2
Consumer Discretionary	9.7
Consumer Goods	5.3
Commodities	5.2
Industrial	2.7
Utilities	2.6
Communications services	1.7
Health care	1.3

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 24%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

Sector policies

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM PIERRE

Management commentary

After a terrible year in 2022 for the listed property sector, 2023 looked set to be a year of transition. This was the case. The turnaround in interest rates in 2022 had sounded the death knell for asset valuations, which saw falls in company balance sheets. By the end of 2023, the values of the assets held had undergone a continuation of this correction. The most stressed companies first cut their dividends and then increased their capital. On the revenue side, 2023 was stable, with the inflationary effect of rents offsetting the rise in financing costs. In October 2023, expectations of interest rate cuts by central banks gave a boost to the sector, heralding the end of the rise in financing costs and the end of the fall in asset values.

These various factors have been reflected in the share prices of real estate companies, which still have discounts on their revalued net assets of between 30% and 40%. We do not expect asset values to fall by this amount in future revaluations. The latest transactions observed do not show such discounts. However, we remain cautious, as it is still difficult to anticipate rate cuts. The ECB's latest comments are increasingly supportive of a more accommodative monetary policy. This is clearly good news and a positive catalyst for the sector.

Up to October, the sector was impacted by falls in appraisal values, particularly for offices and shopping centres. We therefore reduced our positions in the first and second ring office segment (Icade). During the rebound at the end of the year, we reduced our positions in the German residential segment (Vonovia and LEG Immobilien). This segment remains the most heavily indebted.

The logistics segment held up well for the fund in the first part of the year, and we have maintained our weighting.

Klepierre remained our top pick for shopping centres in 2023. In the second half of the year, we returned to Unibail-Rodamco-Westfield on a massive scale.

Net absolute performance from 31/03/2023 to 28/03/2024:

The performance of the IC share (FR0014007M09) was +16.90% over the period. The RC share (FR0010444992) gained 15.93%. Lastly, the RD share (FR0000984221) rose by 15.93%.

Annex SFDR Annual Report (ex-post addendum)

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

☐ of economic activities which are considered environmentally sustainable under the EU taxonomy

☐ of economic activities which are not considered environmentally sustainable under the EU taxonomy

☐ It has made a minimum of **sustainable investments with a social objective:** __%

☒ It promoted **environmental and/or social (E/S) characteristics** and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 30 %

☐ with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

☒ with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

This financial product promotes environmental and social characteristics by adopting an ESG score improvement approach. The portfolio's ESG score (weighted average by asset weight) must therefore be better than that of its benchmark universe, minus the 20% of issuers with the lowest ESG scores.

The financial product's ESG score over the period was 6.31/10 while its benchmark universe had a score of 5.21/10. The environmental and social characteristics pursued by the fund (via the ESG score) have therefore been achieved.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are:

The ESG score of the financial product is 6.31/10 an improvement of 0.31 over the period.

The ESG score remained higher than the ESG score of the benchmark universe, for reasons relating in particular the integration of ESG criteria into the various stages of the management process. We select stocks with the best sustainable performance.

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

This financial product is designed to invest in a minimum (30%) number of companies and/or issuers identified as 'sustainable' according to Crédit Mutuel Asset Management's own internal methodology. The United Nations Sustainable Development Goals are used as a reference framework to determine which investments contribute to an environmental or social objective.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

As part of its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the main negative impacts that could cause significant harm and thus weaken the positive environmental and/or social contribution proposal, identified initially through the proportion of sales aligned with the Sustainable Development Goals (SDGs).

The potential for significant damage was assessed on the following basis:

- Sector exclusion rules concerning investment activities in sectors with high environmental and social risks, such as coal or mining.
- Normative exclusion rules concerning controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Consideration, through Crédit Mutuel Asset Management's proprietary ESG methodology and rating, of the Principal Adverse Impacts (PAIs).

All the PAI indicators (table 1, appendix 1 RTS) are taken into consideration here, either directly (indicator of violation of the United Nations Global Compact and OECD principles), or by using elements of Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In this case, each PAI was associated with a sub-pillar of the corresponding proprietary ESG score.

The Sustainable Investment model developed by Crédit Mutuel Asset Management has therefore made it possible to take into account the negative impacts and guiding principles of the OECD and the United Nations upstream of the investment, thus avoiding any exposure to a company or issuer identified as likely to cause significant environmental or social harm.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely:
01/04/2023–28/03/2024

Major investments	Sector	% of assets	Country
SEGRO PLC	Real estate	5.7	UNITED KINGDOM
VONOVIA SE	Real estate	5.6	GERMANY
LEG IMMOBILIEN SE	Real estate	5.5	GERMANY
MERLIN PROPERTIES SOCIMI SA	Real estate	4.6	SPAIN
GECINA	Real estate	4.5	FRANCE
MERCIALYS	Real estate	4.1	FRANCE
UNIBAIL-RODAMCO- WESTFIELD SE	Real estate	3.8	FRANCE
KLEPIERRE	Real estate	3.8	FRANCE
TAG IMMOBILIEN AG	Real estate	3.5	GERMANY
GRAINGER PLC	Real estate	3.4	UNITED KINGDOM

What was the proportion of sustainability-related investments?

What was the asset allocation?

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

The financial product commits to a minimum of 30% sustainable investment, as a proportion of the fund's total assets.

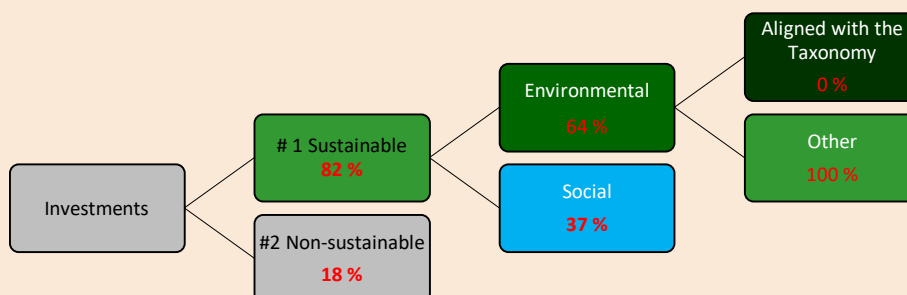

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Investments were made in the following sectors:

GICS sectors	% Share
Real estate	92.9
Consumer Discretionary	2.6
Industrial	1.5
Communications services	1.3

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

No

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, "sovereign bonds" include all sovereign exposures.

What was the proportion of investments made in transitional and enabling activities?

N/A

How has the percentage of investments aligned with the EU taxonomy changed compared to previous reporting periods?

N/A

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective were not aligned with the EU taxonomy, i.e. 100% (see asset allocation table).

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 37%.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any minimum environmental or social guarantees?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How has this financial product performed against the sustainable benchmark?

N/A

How did the designated index differ from a relevant broad market index?

N/A

How has this financial product performed in relation to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

N/A

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

• **Sectoral policies**

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

CM-AM EUROPE VALUE

• Management commentary

The excitement surrounding artificial intelligence, the banking panic in March, disappointment over China's recovery and ongoing conflicts (Ukraine, Middle East) drove the world's financial markets in 2023. Despite a slightly worsening macroeconomic and geopolitical backdrop as the year progressed, the major stock market indices remained in a "bull market" phase, with highs reached time and time again. Stubborn inflation and the continuing rise in interest rates also contributed to the prevailing volatility, without causing the indices to falter.

Over the year the European markets rose by more than 15%, with two distinct periods: from March to September 2023, a relatively stable period on the markets, followed by a major rebound from the end of October, buoyed by the first signs of a rate cut.

Over the 2nd half of the year, mid-caps and growth stocks in particular performed best, while value stocks gradually ran out of steam based on these expectations.

Over the year as a whole, the fund grew by more than 14%, driven by a strong contribution from the Financials (+6.7pts), Consumer Discretionary (3.3pts) and Industrials (2.8pts) sectors.

In more detail, the southern banks, which were strengthened over the period, posted the best performance, benefiting from the high interest rate environment (Unicredit +87.1%; Intesa +55.8%; Caixabank +34.7%). The Insurance segment also contributed, with both Axa (+31.2%) and its German counterpart Allianz (+37.4%).

Within Consumer Discretionary, the Automotive segment performed particularly well over the year, posting impressive performances: Stellantis +71.5%, Renault +25.4% and Michelin +32%. These stocks were boosted at the expense of equipment manufacturer Forvia, whose position was sold.

Industrial companies were also major contributors, irrespective of their end markets: St-Gobain (+42.5%), Siemens (+21.9%), Kion (+37.7%) and Spie (+33.8%). Siemens Energy and Alstom, which were present at the start of the year, were sold off after a succession of disappointments.

The geopolitical context was favourable for the Energy sector, which accounts for just over 8% of the fund. The rise in the price of oil has renewed investor interest in certain stocks: Totalenergies (+22.6%), Eni (+21%) and Technip Energie (+18.5%, recently initiated).

The Utilities sector was the only sector to make a negative contribution over the year (-0.5pts). Hopes of a first rate cut at the start of 2024 weighed most heavily: EDP -25.3%, Acciona Energias (-19.6%, out of the fund). Only Veolia is in positive territory (+10.4%).

Over the year as a whole, the fund's performance was up: +14.27% for C and D units 13.43% for RC units +15.13% for IC units +14.73% for S units

Annex SFDR Annual Report (ex-post addendum)

Product name: CM-AM EUROPE VALUE
Legal entity identifier: 969500NTVT4SYYBDNP39

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that it does not cause significant harm to either of these objectives and that the companies benefiting from investments follow good governance practices.

The **EU taxonomy** is a classification system established by Regulation (EU) 2020/852, which lists **environmentally sustainable economic activities**.

This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Sustainability indicators are used to measure the extent to which the sustainability objectives of this financial product are achieved.

Sustainable development objective

Did this financial product have a sustainable investment objective?

Yes

No

☐ It has made **sustainable investments with an environmental objective:** %

of economic activities which are considered environmentally sustainable under the EU taxonomy

of economic activities which are not considered environmentally sustainable under the EU taxonomy

It has made a minimum of **sustainable investments with a social objective:** __%

It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it has a proportion of sustainable investment of at least 30 %.

with an environmental objective in economic activities which are considered environmentally sustainable under the EU taxonomy

with an environmental objective in economic activities which are not considered environmentally sustainable under the EU taxonomy

with a social objective

It promoted E/S characteristics, but **did not make sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product achieved?

This financial product adopts a selective approach, eliminating 20% of the lowest-rated issuers on the internal ESG score from its investable universe. It also promotes environmental and social characteristics by aiming to outperform two sustainability indicators in relation to its ESG universe: the percentage of women on the board of directors and the number of human rights controversies.

How did the sustainability indicators perform?

The sustainability indicators used by this financial product are the ESG score, the percentage of women on the board of directors (performance indicator 1) and the number of human rights controversies (performance indicator 2), as well as the proportion of sustainable investments.

- The ESG score for the financial product is 6.76/10, an improvement on the previous period (6.5/10).
- The percentage of women on the Board of Directors is 42.1% (vs 42.9% previously)
- The number of human rights controversies remained at 0
- The proportion of sustainable investments at the end of the period was 71.2%, an improvement on 62.2% the previous year

... and compared with previous periods?

N/A

What were the objectives of the sustainable investments that the financial product is intended to achieve partially and how did the sustainable investment contribute to these objectives?

This financial product is designed to invest in a minimum number of companies and/or issuers identified as 'sustainable' according to Crédit Mutuel Asset Management's own internal methodology. The United Nations Sustainable Development Goals are used as a reference framework to determine which investments contribute to an environmental or social objective.

To what extent have the sustainable investments that the financial product has partially made not resulted in significant harm to an environmentally or socially sustainable investment objective?

How were the indicators for negative impacts accounted for?

Did the sustainable investments comply with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

As part of its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the main negative impacts that could cause significant harm and thus weaken the positive environmental and/or social contribution proposal, identified initially through the proportion of sales aligned with the Sustainable Development Goals (SDGs).

The potential for significant damage was assessed on the following basis:

- Sector exclusion rules concerning investment activities in sectors with high environmental and social risks, such as coal or mining.
- Normative exclusion rules concerning controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Consideration, through Crédit Mutuel Asset Management's proprietary ESG methodology and rating, of the Principal Adverse Impacts (PAIs).

All the PAI indicators (table 1, appendix 1 RTS) are taken into consideration here, either directly (indicator of violation of the United Nations Global Compact and OECD principles), or by using elements of Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In this case, each PAI was associated with a sub-pillar of the corresponding proprietary ESG score.

The Sustainable Investment model developed by Crédit Mutuel Asset Management has therefore made it possible to take into account the negative impacts and guiding principles of the OECD and the United Nations upstream of the investment, thus avoiding any exposure to a company or issuer identified as likely to cause significant environmental or social harm.

Principal adverse impacts are the most significant adverse impacts of investment decisions on sustainability factors related to environmental, social and labour issues, respect for human rights, and anti-corruption and bribery.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

How has this financial product dealt with the principal adverse impacts on sustainability factors?

Accounting for the Principal Adverse Impacts, in addition to calculating turnover contributing to the Sustainable Development Goals (SDGs), enabled management to determine whether an investment was sustainable or not (see previous question). The manager of the financial product also had access to the raw data relating to the sustainability indicators, via the ISS data provider. The main negative impacts were therefore considered both directly (through the use and monitoring of raw data) and indirectly (through integration into the proprietary methodology for determining sustainable investment).

What were this financial product's main investments?

The list includes investments constituting **the largest proportion of investments** of the financial product during the reference period, namely: **01/04/2023–29/03/2024**

Major investments	Sector	% of assets	Country
TOTALENERGIES SE	Energy	3.7 %	FRANCE
VINCI	Industrial	3.6 %	FRANCE
ELIS	Industrial	3.5 %	FRANCE
STELLANTIS	Consumer Discretionary	3.5 %	NETHERLANDS
DEUTSCHE TELEKOM	Communications services	3.4 %	GERMANY
AXA	Financial	3.4 %	FRANCE
ALLIANZ	Financial	3.3 %	GERMANY
RENAULT	Consumer Discretionary	3.1 %	FRANCE
SANOFI	Health care	3.0 %	FRANCE
SIEMENS	Industrial	2.9 %	GERMANY

What was the proportion of sustainability-related investments?

What was the asset allocation?

The table below shows the allocation between sustainable investments (environmental or social) and non-sustainable investments.

The financial product commits to a minimum of 30% sustainable investment, as a proportion of the fund's total assets.

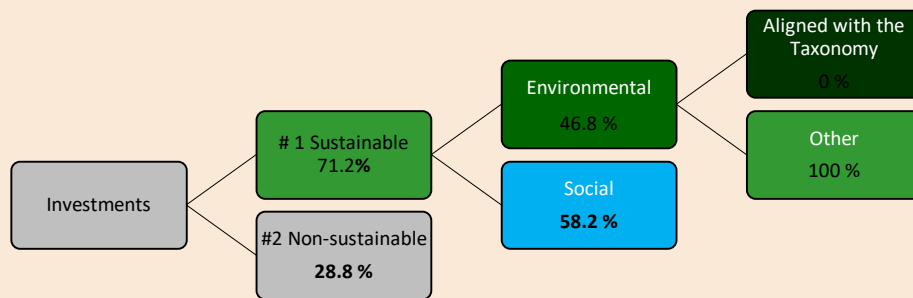

The indicator used to determine the percentage of sustainable investment is derived from a methodology specific to Crédit Mutuel Asset Management, which allows an investment to be qualified as 'sustainable'.

This methodology is divided into 3 stages:

- identification of companies and issuers whose sales contribute more than 5% to the achievement of Sustainable Development Objectives
- an assessment of the main negative impacts that could weaken the initial contribution proposal
- Assessment of good governance practices

This process enables companies and issuers to be classified as 'sustainable' or 'non-sustainable'.

Excluding ancillary liquidity and derivatives (authorised by the financial product's prospectus up to a maximum of 10% of the fund's total assets), all of the securities held (90%) are therefore considered 'sustainable' (according to the methodology described above).

Category **# 1 Sustainable** covering sustainable investments with environmental or social objectives.

Category **#2 Non-sustainable** includes investments that are not considered to be sustainable investments

In which economic sectors have investments been made?

Financial	22.8 %
Industrial	18.7 %
Consumer Discretionary	12.0 %
Commodities	9.2 %
Health care	8.6 %
Energy	8.5 %
Utilities	7.9 %
Consumer Goods	6.3 %
Communications services	6.0 %
Financial	22.8 %

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of activities aligned with the taxonomy of companies or issuers (turnover, CapEx, OpEx) is estimated by the providers of extra-financial data. As this data is not communicated directly by the companies or issuers (but extrapolated by external parties), and in accordance with the recommendations of the *Autorité des Marchés Financiers* (AMF), we have chosen not to publish estimates relating to the EU taxonomy.

None of our investments are therefore deemed to be aligned with the EU taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include emission limits and a switch entirely to renewable electricity or low-carbon fuels by the end of 2035.

As far as **nuclear energy** is concerned, the criteria include comprehensive rules on nuclear safety and waste management.

Enabling activities directly enable other activities to make a substantial contribution to the achievement of an environmental objective.

Transitional activities are activities for which low-carbon replacement solutions are not yet available and, among other things, whose greenhouse gas emission levels correspond to the best achievable performance.

Does the financial product invest in fossil gas and/or nuclear energy activities that comply with the UE taxonomy?

Yes:

In fossil gas

In nuclear energy

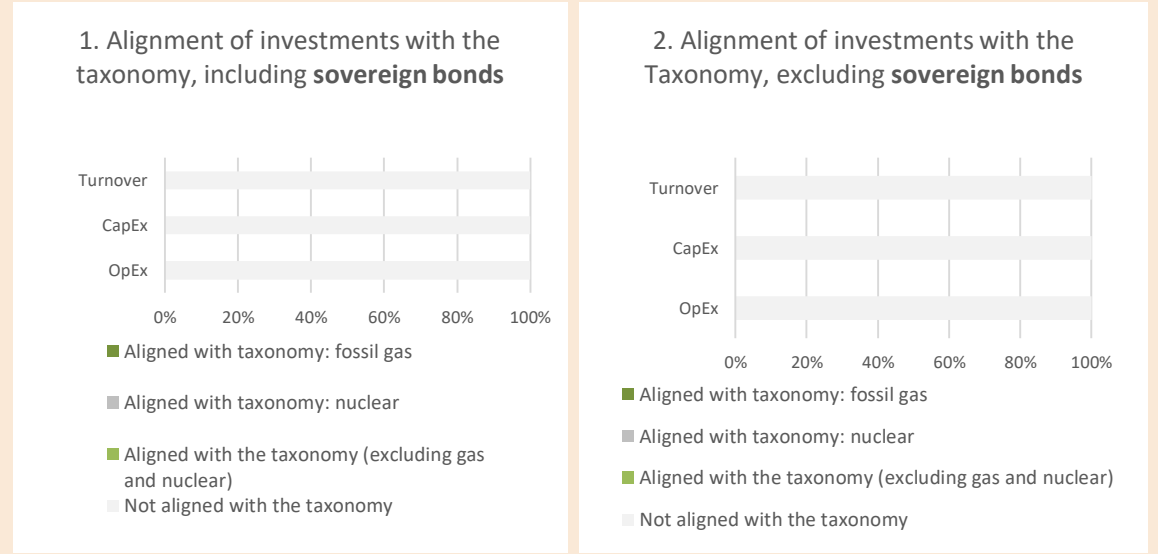

No

Activities aligned with the taxonomy are expressed as a percentage:

- **of revenue** to reflect the proportion of revenue from the green activities of the companies in which the financial product invests;
- **of capital expenditure (CapEx)** to show the green investments made by the companies in which the financial product has invested, e.g. for a transition to a green economy.
- **of operating expenditure (OpEx)** to reflect the green operational activities of the companies in which the financial product invests.

The two graphs below show (in green) the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.

* For the purposes of these graphs, “sovereign bonds” include all sovereign exposures.

● **How much of the investment was in transitional and enabling activities?**

N/A

● **What is the percentage of investments aligned with the EU taxonomy compared with previous reference periods?**

N/A

The symbol represents environmentally sustainable investments that **do not consider the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What was the proportion of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

100 %

What was the proportion of socially sustainable investments?

The share of socially sustainable investment was 58.2%.

What investments were included in the 'other' category, what was their purpose and did minimum environmental or social safeguards apply?

This financial product could invest, within the limits set out in the prospectus, in UCITS governed by French or foreign law. Wherever possible, the 'sustainable' characteristics of the underlying assets have been transparently identified; the assets have then been allocated to each of the categories. For the sake of coherence, the manager has taken care to select funds with an SRI label (or equivalent) and/or incorporating extra-financial or sustainability considerations, in order to ensure that environmental, social and governance considerations are taken account of and thus minimise the sustainability risks arising from exposure to the underlying funds.

A proportion of cash, held on an auxiliary basis, was used to ensure a liquidity reserve and to anticipate any movements linked to subscriptions/redemptions by holders. As it does not have any sustainability characteristics, cash has been included in the 'non sustainable' category. Wherever possible, the underlying assets of UCIs (particularly money market funds) have been transparently analysed and allocated between 'sustainable' and 'non-sustainable' categories according to Crédit Mutuel Asset Management's 'Sustainable Investment' model. In the same way, and where possible, certain derivatives transparently identified as 'non-sustainable' have also been included in these other 'non-sustainable' investments.

What measures have been taken to comply with environmental and/or social characteristics during the reference period?

A series of first-level controls is planned within the management teams. These ensure compliance with the sustainability constraints set out in the pre-contractual documentation. Second and third level controls complete the system.

The controls ensure that the ESG score is covered (minimum 90%) and that the principle of selectivity is respected (20% exclusion of the lowest-rated companies or issuers in the universe). For SRI-labelled funds, the checks also cover the coverage rates and performance of the two mandatory sustainability indicators adopted by the financial product.

Lastly, we check that the investment qualifies as a sustainable investment and that the minimum percentage stated in the pre-contractual documentation is complied with at all times.

How did this financial product perform against the benchmark?

How does the benchmark differ from a relevant broad market index?

This financial product does not have a benchmark for its financial performance. However, it does have a benchmark universe for its ESG performance. This universe is made up of European companies with a market capitalisation of over €500m that have an internal ESG rating (i.e. 1,300 stocks).

How did this financial product perform in relation to sustainability indicators designed to determine the alignment of the benchmark with the environmental or social characteristics being promoted?

- The ESG score of the financial product is 6.76/10, compared with 5.35 for its investable universe
- The number of human rights controversies was 0 at the end of the period, compared with 1 for its investment universe
- The percentage of women on the Board of Directors is 42.1%, compared with 39.0% for its investable universe

How has this financial product performed against the benchmark index?

N/A

How has this financial product performed against the broad market index?

N/A

Benchmarks are indices used to measure whether the financial product achieves sustainable investment objective

The Fund's investment strategy incorporates extra-financial criteria using a methodology developed by Crédit Mutuel Asset Management's extra-financial analysis department aimed at excluding stocks with the lowest environmental, social and governance ratings in order to reduce the impact of the sustainability risk to which the Fund is exposed and which is defined in the "Risk profile" section.

In its investment decisions, the management team endeavours to take account of the European Union's criteria for economic activities considered to be sustainable under the "Taxonomy" regulation (EU) 2020/852. The identification of issuers within the Fund whose activities are eligible for the Taxonomy is a key issue for Crédit Mutuel Asset Management. Work is under way to determine a minimum percentage of alignment with the Taxonomy.

The main negative impacts are also considered in the investment strategy.

Crédit Mutuel Asset Management applies the same principles to its entire range of Funds:

- a controversy-monitoring policy for detecting companies that become involved in controversies. Companies are thus excluded from the portfolio or maintained, depending on the results of the controversy analysis.
- a strict sectoral exclusion policy, particularly concerning controversial weapons,

These policies are available on Crédit Mutuel Asset Management's website.

The principle of "not causing significant harm" applies only to investments that qualify as sustainable investments within the meaning of the "SFDR" Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not account for the European Union's criteria for environmentally sustainable economic activities.

• **Sectoral policies**

As part of its strategic objectives, Crédit Mutuel Asset Management is gradually developing a range of sector policies, notably in line with Crédit Mutuel Alliance Fédérale's RSM (Social and Mutual Responsibility) policy (1). Details of the management company's sector policies are available on the Crédit Mutuel Asset Management website.

There are three levels of monitoring and control:

- by setting up a pre-trade control system to prevent the subscription of securities prohibited by the sector policies (2);
- by setting up a post-trade control system to identify the securities in the portfolio that are prohibited by the application of sector policies (excluding UCIs that use index replication as part of their structuring);
- through the CSR Committee (quarterly), which meets with the Executive Board to supervise and monitor the application of sector policies. In particular, this Committee is informed of the qualitative analyses carried out by the Responsible and Sustainable Finance Department on the issuers covered by the various sector policies.

Coal sector policy:

At the Portfolio Management Company Level (3) we have accounted for the financial year updates by the Urgewald NGO of the "GCEL" list (4) which is the benchmark for the deployment of our sector policy.

Several criteria are used to identify issuers involved in coal-related activities:

- Coal Developers (5): issuers developing coal mining capacity;
- and 4 other criteria associated with thresholds:
 - o Annual coal production < 10 MT;
 - o Coal-based plants electricity capacity < 5 GW;
 - o Share of thermal coal in sales < 10%;
 - o Share of coal in the energy mix < 10%.

The relative thresholds have been lowered from 20% to 10%.

The GCEL list now includes 3,731 issuers (parent companies and subsidiaries), of which 1,840 are identified as 'coal developers'.

During the year, the CSR Committee, which is responsible for governance and monitoring the application of our sector policies, has confirmed the 'authorised' status of 2 issuers on the GCEL list that are committed to a plan to phase out coal by 2030.

In total, the implementation of our sector policy results in the exclusion of 99.8% of issuers from the GCEL 2023 list. This high level of exclusion is explained, among other things, by the extension the ban on an issuer to the entire Group to which it belongs.

Defence and Security sector policy:

The Defence and Security sector policy has two components:

- Exclusion of companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction;
- Tracking controversies involving companies involved in military combat weapons.

With regard to activities linked to conventional weapons, Crédit Mutuel Asset Management's Responsible and Sustainable Finance division (FRd) is particularly vigilant with regard to companies involved in military combat weapons which are the subject of very severe controversy linked to defence and security activities. This analysis may lead to exclusion.

The application of the Defence and Security sector policy results in the exclusion of 137 issuers.

Hydrocarbon sector policy:

The hydrocarbon sector policy came into force on 1 January 2023, as part of the sector policies implemented within Crédit Mutuel Alliance Fédérale.

It provides for the freezing of holdings of issuers on the so-called 'GOGEL' list, produced by Urgewald, that do not meet the following thresholds:

- the proportion of unconventional oil and gas production exceeds 25% from 01/01/2023;

The Urgewald NGO's definition of the unconventional part of hydrocarbons is as follows:

- oil or shale gas,
- oil from tar sands,
- heavy and extra-heavy oil,
- deepwater oil,
- oil extracted in the Arctic,
- coalbed methane.

At 1 January 2023, application of the sector policy will result in the exclusion of 481 issuers out of a total of 789 listed in GOGEL 2022. The exclusion rate is therefore 61%.

(1) CSR policy adapted to the specific organisation of Crédit Mutuel Alliance Fédérale.

(2) Commissioning in the 2nd half of 2021.

(3) Management company.

(4) Updated in October every year.

(5) Development of new coal production capacity.

2. Financial results for the year

Aggregate net assets at 28/03/2024 were €8,066,273,742.80 compared with €7,542,964,379.77 at 31/03/2023.

The net assets of the CM-AM INSTITUTIONAL SHORT TERM sub-fund at 29/03/2024 were €306,348,916.62 compared with €486,593,022.61 at 31/03/2023:

	<u>Net assets</u>	<u>Number of shares</u>	<u>Net Asset Value</u>
<u>RD share</u>			
29/03/2024	€4,065,608.68	2,314.348542	€1,756.69

3. Intermediation fees

The report on intermediation fees provided for in the General Regulations of the *Autorité des Marchés Financiers* (French regulator) is available on the website: www.creditmutuel-am.eu and/or from CREDIT MUTUEL ASSET MANAGEMENT, 4 rue Gaillon, 75002 Paris.

4. The asset manager's policy on voting rights

In accordance with the General Regulations of the *Autorité des Marchés Financiers*, information on the voting policy and a report on this policy are available on the management company's website and/or at its registered office. The voting policy is an extension of the investment policy, the aim of which is to achieve consistent performance over the long term in line with the funds' management guidelines. It also considers the specific features of each country in terms of company law and corporate governance. Crédit Mutuel Asset Management's voting policy is based on the following principles:

- respect for the rights of minority shareholders and fairness among shareholders,
- transparency and quality of information provided to shareholders,
- clarity and balance of powers between management bodies,
- sustainability and integration of long-term corporate strategy,
- support for best practice in corporate governance. In employee share ownership funds, the voting rights attached to the company's shares are exercised by the Supervisory Board.

5. Procedure for selecting and assessing intermediaries and counterparties

The intermediaries selected are included on a list drawn up and reviewed at least once a year by the asset management company. The method used is an annual overall score for each intermediary, which determines whether or not they remain on the list of authorised intermediaries. The score obtained is based on specific factors and is considered decisive. In decreasing order of importance: the intermediary's commitment to the quantities to be traded and delivered, the quality of execution, responsiveness when receiving/placing orders, the number of settlement/delivery incidents, and the relevance of the information provided. Compliance with the negotiated rates is a condition of the intermediary's continued inclusion on the list.

6. Information on the Environmental, Social and Governance (ESG) criteria:

CM-AM INSTITUTIONAL SHORT TERM

Management of this fund is based on measurable objectives that consider extra-financial criteria, which are one of the components of management, but their weighting in the final decision is not defined at the outset. This consideration of extra-financial criteria is reflected in a rating or extra-financial indicator that is higher than that of the investment universe.

CM-AM GLOBAL GOLD

Management of this fund is based on measurable objectives that consider extra-financial criteria, which are one of the components of management, but their weighting in the final decision is not defined at the outset. This consideration of extra-financial criteria is reflected in a rating or extra-financial indicator that is higher than that of the investment universe.

CM-AM SUSTAINABLE PLANET

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

CM-AM INFLATION

Management of this fund is based on measurable objectives that consider extra-financial criteria, which are one of the components of management, but their weighting in the final decision is not defined at the outset. This consideration of extra-financial criteria is reflected in a rating or extra-financial indicator that is higher than that of the investment universe.

CM-AM GLOBAL LEADERS

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

CM-AM GREEN BONDS

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

CM-AM ENTREPRENEURS EUROPE

Management of this fund is based on measurable objectives that consider extra-financial criteria, which are one of the components of management, but their weighting in the final decision is not defined at the outset. This consideration of extra-financial criteria is reflected in a rating or extra-financial indicator that is higher than that of the investment universe.

CM-AM GLOBAL INNOVATION

Management of this fund is based on measurable objectives that consider extra-financial criteria, which are one of the components of management, but their weighting in the final decision is not defined at the outset. This consideration of extra-financial criteria is reflected in a rating or extra-financial indicator that is higher than that of the investment universe.

CM-AM HIGH YIELD 2024

Management of this fund is based on measurable objectives that consider extra-financial criteria, which are one of the components of management, but their weighting in the final decision is not defined at the outset. This consideration of extra-financial criteria is reflected in a rating or extra-financial indicator that is higher than that of the investment universe.

CM-AM SHORT TERM BONDS

Management of this fund is based on measurable objectives that consider extra-financial criteria, which are one of the components of management, but their weighting in the final decision is not defined at the outset. This consideration of extra-financial criteria is reflected in a rating or extra-financial indicator that is higher than that of the investment universe.

CM-AM CONVICTIONS EURO

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

CM-AM SMALL & MIDCAP EURO

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

CM-AM FLEXIBLE EURO

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

CM-AM CONVERTIBLES EURO

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

CM-AM GLOBAL CLIMATE CHANGE

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

CM-AM GLOBAL EMERGING MARKETS

Management of this fund is based on measurable objectives that consider extra-financial criteria, which are one of the components of management, but their weighting in the final decision is not defined at the outset. This consideration of extra-financial criteria is reflected in a rating or extra-financial indicator that is higher than that of the investment universe.

CM-AM EUROPE GROWTH

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

CM-AM DOLLAR CASH

Management of this fund is based on measurable objectives that consider extra-financial criteria, which are one of the components of management, but their weighting in the final decision is not defined at the outset. This consideration of extra-financial criteria is reflected in a rating or extra-financial indicator that is higher than that of the investment universe.

CM-AM PIERRE

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

CM-AM EUROPE VALUE

The management of this fund is based on measurable objectives that take account of extra-financial criteria. Management's commitment is significant and relates to one of the following approaches: a 'rating improvement' approach in relation to the investable universe, a 'selectivity' approach in relation to the investable universe, an 'improvement in an extra-financial indicator' approach in relation to the investable universe, or any other significant approach (including a combination of the above approaches) that is documented.

7. Remuneration policy

Crédit Mutuel Asset Management's remuneration policy is in line with the principles of Crédit Mutuel Alliance Fédérale (see Banque Fédérative du Crédit Mutuel website - Investor Relations - Financial/Regulated Information) while complying with regulatory requirements. Crédit Mutuel Alliance Fédérale has set up a single remuneration committee covering all its subsidiaries.

As a reminder, the remuneration policy applicable to investment fund managers is dictated by Directives 2014/91/EU of 23 July 2014 (UCITS V) and 2011/61/EU of 8 June 2011 known as the AIFM Directive, as well as their transposition texts.

A. Operational Process

The Remuneration Committee of Caisse Fédérale de Crédit Mutuel carries out an annual review of the principles of the remuneration policy and expresses its opinion on the proposals made by General Management after consultation with the Risk and Compliance Department.

For Crédit Mutuel Asset Management, remuneration is based in particular on the following criteria: the performance of the fund(s) managed by the employee, the individual's contribution to the company's activities and compliance with risk and compliance rules. For more information, please consult the Crédit Mutuel Asset Management website (in particular on compliance with the Sectoral Exclusion Policies and on compliance with the exclusion of controversial securities).

B. Identified staff

Crédit Mutuel Asset Management has identified risk-takers according to two criteria:

- Role and responsibility of the parties involved in determining the risk-takers within the Management Company and the Funds managed,
- Remuneration in order to determine which staff should be considered as risk-takers on the basis of their remuneration.

Identified staff include:

- the Chief Executive Officer, the Company Secretary, the Managing Director, the responsible managers, the Management divisions, the Responsible and Sustainable Finance division, the Legal and

Finance division, the Distributor Relations division, the Risk Management division, the Support Services division, the Human Resources division and the Compliance and Internal Control Officer (CICO) employees assigned to the management of collective investment activities at Crédit Mutuel Asset Management: the managers.

C. Remuneration

Certain Crédit Mutuel Asset Management identified staff receive discretionary bonuses in addition to their fixed remuneration. These are mainly fund managers and the Executive Board. In order to limit risk-taking, discretionary remuneration arrangements must take performance and risk into account. In all circumstances, risk management, ethical conduct and client interests must take precedence over financial performance.

Crédit Mutuel Asset Management may decide not to grant these discretionary bonuses if circumstances so justify. In particular, these individual bonuses may be reduced or even eliminated in certain circumstances, notably in the event of harm to customers' interests or a serious breach of ethics. The payment of a guaranteed bonus is exceptional, and applies only to the recruitment of a new member of staff and is limited to the first year.

In 2022, total gross remuneration paid to the 279 employees present during the year amounted to €18,813,105, including €1,282,750 in bonuses. Remuneration paid to employees with an impact on the management company's risk profile totalled €7,272,428.

Discretionary bonuses are paid in March of the year (n+1) when a view of the financial year (n) is available.

These bonuses are limited to an annual individual amount of €100,000 and are not deferred. As part of a review of the remuneration policy allowing for the payment of discretionary bonuses in excess of €100,000, Crédit Mutuel Asset Management will inform the AMF in advance and will bring its remuneration policy into line with the UCITS V and AIFM directives, in particular by setting out the conditions for spreading the payment over a minimum period of three years.

8. Information on how the overall risk is calculated

CM-AM INSTITUTIONAL SHORT TERM

The overall risk to derivative contracts is determined using the absolute value-at-risk method.

CM-AM GLOBAL GOLD

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM SUSTAINABLE PLANET

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM INFLATION

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM GLOBAL LEADERS

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM GREEN BONDS

The overall risk exposure to derivatives contracts is determined value-at-risk method.

CM-AM ENTREPRENEURS EUROPE

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM GLOBAL INNOVATION

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM HIGH YIELD 2024

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM SHORT TERM BONDS

The overall risk exposure to derivatives contracts is determined using the value-at-risk method.

CM-AM CONVICTIONS EURO

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM SMALL & MIDCAP EURO

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM FLEXIBLE EURO

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM CONVERTIBLES EURO

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM GLOBAL CLIMATE CHANGE

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM GLOBAL EMERGING MARKETS

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM EUROPE GROWTH

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM DOLLAR CASH

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM PIERRE

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM EUROPE VALUE

The overall risk exposure to derivatives contracts is determined using the commitment approach.

CM-AM INSTITUTIONAL SHORT TERM

The VaR shown in this table are calculated using the Monte Carlo method, with a 20-day horizon and a confidence interval of 99%.

II. APPROPRIATION OF DISTRIBUTABLE AMOUNTS

Consolidated net profit for the year, made up of net profit for the year of €74,586,912.39 and income equalisation adjustments of €8,409,697.95, amounts to €82,996,610.34. In accordance with the Articles of Association, we propose that you allocate these sums as follows:

- for the CM-AM SHORT TERM sub-fund, net income of €12,141,557.68, made up of net income for the year of €12,165,427.14, income equalisation adjustments of - €23,883.24 and retained earnings from the previous year of €13.78, i.e.:

IC share: Capitalisation of €2,091,789.53.

EI share: Capitalisation of €239,590.92.

RC share: Capitalisation of €9,648,927.26.

RD share: Partial distribution of €101,854.48, giving a total net dividend per share of €44.01.

RD share: €59,395.49 deferred.

In accordance with the General Tax Code, the following dividends were distributed over the last three financial years

Financial year 18/02/2022

RD share: No Distribution.

RC share: No Distribution.

IC share: No Distribution.

EI share: No Distribution.

Financial year 31/03/2022

RD share: €0.42, with no tax credit attached.

RC share: No Distribution.

IC share: No Distribution.

EI share: No Distribution.

Financial year 31/03/2023

RD share: €10.73, with no tax credit attached.

RC share: No Distribution.

IC share: No Distribution.

EI share: No Distribution.

- for the CM-AM GLOBAL GOLD sub-fund, a net loss of €708,018.54, made up of the net loss for the year of €1,401,127.40 and income equalisation adjustments of €693,108.86, i.e.:

ER share: Capitalisation of -€1,873.14.

IC share: Capitalisation of €12,050.96.

S share: Capitalisation of €15,012.21.

RC share: Capitalisation of -€733,208.57.

No dividends have been paid in the last three years.

- for the CM-AM SUSTAINABLE PLANET sub-fund, a net income of €1,063,549.13, made up of net income for the year of €3,258,549.58 and income equalisation adjustments of - €2,195,000.45, i.e.:

S share: Capitalisation of €182,969.02.

IC share: Capitalisation of €2,116.35.

RC share: Capitalisation of €878,463.76.

No dividends have been paid in the last three years.

- for the CM-AM INFLATION sub-fund, a net income of €499,128.02, made up of net income for the year of €560,329.55 and income equalisation adjustments of -€61,201.53, i.e.:

S share: Capitalisation of €30,595.94.

RC share: Capitalisation of €468,523.67.

IC share: Capitalisation of €8.41.

No dividends have been paid in the last three years.

- for the CM-AM GLOBAL LEADERS sub-fund, a net loss of €6,373,814.03, comprising a net loss for the year of €6,333,395.81 and income equalisation adjustments of -€40,418.22, i.e.:

IC share: Capitalisation of €10,879.03.

ER share: Capitalisation of -€134,684.30.

RC share: Capitalisation of -€6,167,597.53.

S share: Capitalisation of -€82,411.23.

No dividends have been paid in the last three years.

- for the CM-AM GREEN BONDS sub-fund, net income of €519,451.05, comprising net income for the financial year of €523,418.00 and income equalisation adjustments of - €3,966.95, i.e.:

RC share: Capitalisation of €29,854.84.

IC share: Capitalisation of €489,044.96.

S share: Capitalisation of €551.25.

No dividends have been paid in the last three years.

- for the CM-AM ENTREPRENEURS EUROPE sub-fund, a net loss of €700,166.83, made up of a net loss for the year of €675,233.34 and income equalisation adjustments of - €24,933.49, i.e.:

IC share: Capitalisation of €1,269.72.

S share: Capitalisation of €23,008.16.

RC share: Capitalisation of -€724,444.71.

No dividends have been paid in the last three years.

- for the CM-AM GLOBAL INNOVATION sub-fund, a net loss of €5,370,208.35, made up of a net loss for the year of €5,010,183.77 and income equalisation adjustments of -€360,024.58, i.e.:

S share: Capitalisation of -€309,686.32.

RC share: Capitalisation of -€4,986,264.99.

IC share: Capitalisation of -€74,257.04.

No dividends have been paid in the last three years.

- for the CM-AM HIGH YIELD 2024 sub-fund, net income of €3,684,814.83, comprising net income for the year of €4,622,673.15, income equalisation adjustments of -€938,070.09 and retained earnings from the previous year of €211.77, i.e.:

S share: Capitalisation of €1,372,205.42.

RC share: Capitalisation of €1,456,756.44.

IC share: Capitalisation of €786,068.23.

RD share: Partial distribution of €69,565.14, giving a total net dividend per share of €2.24.

RD share: €219.60 deferred.

In accordance with the General Tax Code, the following dividends were distributed over the last three financial years

Financial year 31/03/2021

S share: No Distribution.

RD share: €1.52, with no tax credit attached.

i.e.:

S share: Capitalisation of -€1,720,416.71.

IC share: Capitalisation of -€2,292,750.93.

ES share: Capitalisation of -€8,092.08.

RC share: Capitalisation of -€9,780,554.68.

No distributions of net capital gains have been made in the last three financial years.

• -€5,367,211.64 for the CM-AM GLOBAL EMERGING MARKETS sub-fund,

i.e.:

IC share: Capitalisation of -€193,066.56.

RC share: Capitalisation of -€4,581,062.24.

ER share: Capitalisation of -€41,424.40.

S share: Capitalisation of -€551,658.44.

No distributions of net capital gains have been made in the last three financial years.

• €40,533,430.86 for the CM-AM EUROPE GROWTH sub-fund,
i.e.:

S share: Capitalisation of €1,712,245.13.

R share: Capitalisation of €14,056.67.

IC share: Capitalisation of €17,620.99.

RC share: Capitalisation of €38,714,235.14.

ER share: Capitalisation of €75,272.93.

No distributions of net capital gains have been made in the last three financial years.

• \$596,774.46 for the CM-AM DOLLAR CASH sub-fund,
i.e.:

IC share: Capitalisation of \$596,774.46.

No distributions of net capital gains have been made in the last three financial years.

• -€7,397,088.73 for the CM- EUROPE PIERRE sub-fund,
i.e.:

RD share: Capitalisation of -€2,770,284.72.

RC share: Capitalisation of -€4,626,732.53.

IC share: Capitalisation of -€71.48.

No distributions of net capital gains have been made in the last three financial years.

• -€8,773,912.24 for the CM-AM EUROPE VALUE sub-fund,
i.e.:

IC share: Capitalisation of -€11,014.86.

RC share: Capitalisation of -€7,234,253.00.

RD share: Capitalisation of -€756,973.43.

S share: Capitalisation of -€770,817.71.

R share: Capitalisation of -€853.24.

No distributions of net capital gains have been made in the last three financial years.

We propose that these amounts be paid from 31/07/2024. All holders of dividend-paying shares in existence on that date will be entitled to the dividend.

III. RATIFICATION OF THE CO-OPTING OF A DIRECTOR

We ask you to ratify the appointment as director of Mrs Eliana DE ABREU to replace Ms. Claire BOURGEOIS, who has resigned.

Ms Eliana DE ABREU's term of office will expire at the end of the General Meeting called to approve the financial statements for the year ending on the last trading day of March 2026, i.e. for the remainder of her predecessor's term of office, in accordance with Article 15 of the Sicav's Articles of Association.

IV. CORPORATE GOVERNANCE

1. List of all the offices and positions held in any company by each director during the financial year (article L. 225-37-4-1° of the French Commercial Code)".

Ms. Claire BOURGEOIS

- Chairman of CM-AM SICAV

- Managing Director of CREDIT MUTUEL ASSET MANAGEMENT

- Permanent representative of UGEPAR SERVICES, member of the Board of Directors of CREDIT MUTUEL EPARGNE SALARIALE
- Permanent representative of IMPEX FINANCE, member of the Board of Directors of CREDIT MUTUEL INVESTMENT MANAGERS
- Member of the Board of Directors of EURO MUTUEL SICAV
- Permanent representative of CREDIT MUTUEL ASSET MANAGEMENT, Chairman of SICAV CM-AM SPREAD COURT TERME

Ms. Marie-Hélène BOURGEOIS,

- Permanent representative of UFIGESTION 2, member of the Board of Directors of the CM-AM SICAV
- Deputy Managing Director, 2nd Executive Officer of CREDIT MUTUEL INVESTMENT MANAGERS

Mr. Christophe VACCA GOYA

- Deputy Managing Director, 2nd executive officer of CREDIT MUTUEL ASSET MANAGEMENT
- Permanent representative of UGEPAR SERVICES, member of the Board of Directors of the CM-AM SICAV

Ms. Laurence LEBRUN

- Permanent representative of the company

2. Delegations of authority granted by the General Meeting of Shareholders in respect of capital increases

N/A

3. Agreements subject to prior authorisation by the Board of Directors

The SICAV has not entered into any agreements, either directly or through an intermediary, between a corporate officer or a shareholder holding more than 10% of the voting rights of a company and another company in which the corporate officer or shareholder directly or indirectly holds more than half of the capital, with the exception of agreements relating to current transactions and entered into under normal conditions.

4. STATEMENT OF REMUNERATION AND BENEFITS PAID TO EACH DIRECTOR

N/A

5. AMOUNT OF REMUNERATION AND BENEFITS OF ANY KIND PAID BY CONTROLLED COMPANIES TO EACH EXECUTIVE DIRECTOR

N/A

6. Terms of office of the Chief Executive Officer

There has been a change in the post of Chief Executive Officer. A meeting of the Board of Directors will be held after the General Meeting to approve the accounts for the financial year ending last March. The Board will decide whether the Chairman of the Board will continue to act as Chief Executive Officer.

The Board of Directors

TRANSPARENCY OF SECURITIES FINANCING TRANSACTIONS (SFTR)

**NOTES TO THE AGREGATED
FINANCIAL STATEMENTS OF THE UCITS UMBRELLA FUND
IN ACCORDANCE WITH CNC* NOTICE NO. 2005 - 08 OF 21 JUNE 2005**

- The method used to aggregate the accounts:

The balance sheet, off-balance sheet and income statement of an umbrella UCITS are drawn up by aggregating the sub-funds. Holdings of one sub-fund by another are eliminated from the balance sheet by reducing the "UCI units" and "Capital" items by the value of the units held.

- The currency used to aggregate the sub-funds: Euro
- The list of sub-funds, and for each of them, the accounting currency and the exchange rate used to aggregate the accounts: _

Net income (I - II + III - IV +/- V - VI)	12,141,543.90	3,069,279.78

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

RC unit:

For income: total accumulation

For capital gains and losses: total accumulation

RD Unit:

For income: distribution and/or capitalisation

For capital gains and losses: total accumulation

EI Unit:

For income: total accumulation

For capital gains and losses: total accumulation

IC Unit:

For income: total accumulation

For capital gains and losses: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

• Fixed management fees (maximum rate)

		Fixed management fees	Basis
RC	FR0007033477	Max. 0.5 % incl. tax including financial management fees: Max. 0.46 % incl. tax including operating costs and other services: Max. 0.04 % incl. tax	Net assets
RD	FR0010290924	Max. 0.5 % incl. tax including financial management fees: Max. 0.46 % incl. tax including operating costs and other services: Max. 0.04 % incl. tax	Net assets

EI	FR0013241452	Max. 0.8 % incl. tax including financial management fees: Max. 0.76 % incl. tax including operating costs and other services: Max. 0.04 % incl. tax	Net assets
IC	FR0014007LZ3	Max. 0.8 % incl. tax including financial management fees: Max. 0.76 % incl. tax including operating costs and other services: Max. 0.04 % incl. tax	Net assets

EI	FR0013241452	N/A
IC	FR0014007LZ3	N/A

- **Performance fee**

FR0007033477 RC unit

30% (incl. tax), of the return above the compounded €STR benchmark index + 0.15%, net of fixed management fees, even if this return is negative.

Basis: Net assets

(1) The performance fee is calculated using the indexed method.

The excess return to which the 30% tax-included rate applies is the difference between:

- the net asset value of the fund, net of fixed management fees, before taking the performance fee provision into account, and

- the value of a reference asset that has achieved a return equivalent to that of the benchmark index over the calculation period and with the same variations in subscriptions and redemptions as the fund:

(2) With effect from the fund's financial year beginning 01/04/2024, any underperformance of the fund in relation to the benchmark index must be offset before performance fees become payable. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) Each time a net asset value is calculated:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return underperforms in relation to the performance threshold, a reversal of the provision is made up to the limit of the provisions available.

(4) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year.

FR0010290924 RD unit

30% (incl. tax), of the return above the compounded €STR benchmark index + 0.15%, net of fixed management fees, even if this return is negative.

Basis: Net assets

(1) The performance fee is calculated using the indexed method.

The excess return to which the 30% tax-included rate applies is the difference between:

- the net asset value of the fund, net of fixed management fees, before taking the performance fee provision into account, and

- the value of a reference asset that has achieved a return equivalent to that of the benchmark index over the calculation period and with the same variations in subscriptions and redemptions as the fund:

(2) With effect from the fund's financial year beginning 01/04/2024, any underperformance of the fund in relation to the benchmark index must be offset before performance fees become payable. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) Each time a net asset value is calculated:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return underperforms in relation to the performance threshold, a reversal of the provision is made up to the limit of the provisions available.

(4) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year

FR0013241452 EI unit

30% (incl. tax), of the return above the compounded €STR benchmark index + 0.15%, net of fixed management fees, even if this return is negative.

Basis: Net assets

(1) The performance fee is calculated using the indexed method.

The excess return to which the 30% tax-included rate applies is the difference between:

- the net asset value of the fund, net of fixed management fees, before taking the performance fee provision into account, and

- the value of a reference asset that has achieved a return equivalent to that of the benchmark index over the calculation period and with the same variations in subscriptions and redemptions as the fund:

(2) With effect from the fund's financial year beginning 01/04/2024, any underperformance of the fund in relation to the benchmark index must be offset before performance fees become payable. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) Each time a net asset value is calculated:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return underperforms in relation to the performance threshold, a reversal of the provision is made up to the limit of the provisions available.

(4) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year

FR0014007LZ3 IC unit

30% (incl. tax), of the return above the compounded €STR benchmark index + 0.15%, net of fixed management fees, even if this return is negative.

Basis: Net assets

(1) The performance fee is calculated using the indexed method.

The excess return to which the 30% tax-included rate applies is the difference between:

- the net asset value of the fund, net of fixed management fees, before taking the performance fee provision into account, and

- the value of a reference asset that has achieved a return equivalent to that of the benchmark index over the calculation period and with the same variations in subscriptions and redemptions as the fund:

(2) With effect from the fund's financial year beginning 01/04/2024, any underperformance of the fund in relation to the benchmark index must be offset before performance fees become payable. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) Each time a net asset value is calculated:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return underperforms in relation to the performance threshold, a reversal of the provision is made up to the limit of the provisions available.

(4) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year.

The table below illustrates these principles based on example performance assumptions over a 19-year period:

	Net Over/Under performance *	Under performance to be offset the following year	Performance fee paid
YEAR 1	5%	0%	YES
YEAR 2	0%	0%	NO
YEAR 3	-5%	-5%	NO
YEAR 4	3%	-2%	NO
YEAR 5	2%	0%	NO
YEAR 6	5%	0%	NO
YEAR 7	5%	0%	YES
YEAR 8	-10%	-10%	NO
YEAR 9	2%	-8%	NO
YEAR 10	2%	-6%	NO
YEAR 11	2%	-4%	NO
YEAR 12	0%	0%**	NO
YEAR 13	2%	0%	YES
YEAR 14	-6%	-6%	NO
YEAR 15	2%	-4%	NO
YEAR 16	2%	-2%	NO
YEAR 17	-4%	-6%	NO
YEAR 18	0%	-4%***	NO
YEAR 19	5%	0%	YES

Notes on the example above

* Net over/under performance is defined here as the fund's performance above/below the benchmark return.

** The underperformance of year 12 to be carried forward to the following year (YEAR 13) is 0% (and not -4%) because the residual underperformance of year 8 which has not yet been compensated (-4%) is no longer relevant as the five-year period has elapsed (the underperformance of year 8 is compensated up to year 12).

*** The underperformance of year 18 to be carried forward to the following year (YEAR 19) is -4% (and not -6%) because the residual under performance of year 14 which has not yet been compensated (-2%) is no longer relevant insofar as the five-year period has elapsed (the underperformance of year 14 is compensated up to year 18).

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "Management costs borne by the FUND" table. Management fees are calculated on the basis of the average net assets at each net asset valuation and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and related fees and expenses arising from the sale of securities in the

fund's portfolio or from the purchase of securities made using funds obtained from the sale or redemption of securities or income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily opening price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Previous day's closing price

South-American exchanges: Previous day's closing price

If no quote for a given security can be obtained the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price:

The price used for valuation depends on where the security is listed:

European exchanges: Daily opening price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Previous day's closing price

South-American exchanges: Previous day's closing price

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Units in securitisation vehicles:

Valued at the first trading price of the day for securitisation vehicles listed on European markets.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.

- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Rules applicable until 31-03-2023:

NDS which when acquired have a residual maturity of less than three months are valued on a straight-line basis.

NDS that have a residual maturity of more than three months when acquired are valued:

At their market value until three months and one day prior to their maturity.

The difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

Exception: BTF (French negotiable fixed-rate discount Treasury bills) and BTAN (a coupon-bearing French government bond) are marked to market until maturity.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities that are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Rules applicable from 01-04-2023:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Opening market price of the day or previous day's clearing price.

- Futures contracts listed on North American exchanges are valued at: Closing price on previous day or clearing price on previous day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Opening market price of the day or previous day's clearing price.

- Options listed on North-American exchanges are valued using: Closing price on previous day or clearing price on previous day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information

The non-recurring costs of debt collection debts on behalf of the Fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Operating charges and fees for other services:

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

CHANGES IN NET ASSETS

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depositary	Other service providers
Max 0 to 0.20% incl. tax for equities Levy on each transaction	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.

- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information

The non-recurring costs of debt collection debts on behalf of the Fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Operating charges and fees for other services:

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

RC unit:

For income: total accumulation

For capital gains and losses: total accumulation

IC Unit:

For income: total accumulation

For capital gains and losses: total accumulation

S Unit:

For income: total accumulation

For capital gains and losses: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

• Fixed management fees (maximum rate)

		Fixed management fees	Basis
RC	FR0000444366	Max. 2 % incl. tax including financial management fees: Max. 1.95 % incl. tax including operating costs and other services: Max. 0.05 % incl. tax	Net assets

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

Additional information

The non-recurring costs of debt collection debts on behalf of the fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

RC unit:

For income: total accumulation

For capital gains and losses: total accumulation

S Unit:

For income: total accumulation

For capital gains and losses: total accumulation

IC Unit:

For income: total accumulation

For capital gains and losses: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

• Fixed management fees (maximum rate)

		Fixed management fees	Basis

Retrocessions

The policy for booking management fee retrocessions on target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

Retrocessions

The policy for booking management fee retrocessions on target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depositary	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.

- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

N/A

Additional information

The non-recurring costs of debt collection debts on behalf of the Fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Operating charges and fees for other services:

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

RC unit:

For income: total accumulation

For capital gains and losses: total accumulation

IC Unit:

For income: total accumulation

For capital gains and losses: total accumulation

S Unit:

For income: total accumulation

For capital gains and losses: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

• Fixed management fees (maximum rate)

		Fixed management fees	Basis
RC	FR0013266624	Max. 2.5 % incl. tax including financial management fees: Max. 2.45 % incl. tax including operating costs and other services: Max. 0.05 % incl. tax	Net assets

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
Max 0.35% incl. tax for equities Levy on each transaction	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information

The non-recurring costs of debt collection debts on behalf of the fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

1. Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

RC unit:

For income: total accumulation

For capital gains and losses: total accumulation

S Unit:

For income: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

• Fixed management fees (maximum rate)

		Fixed management fees	Basis
RC	FR0013298338	Max. 2.4 % incl. tax including financial management fees: Max. 2.29% incl. tax including operating costs and other services: Max. 0.11 % incl. tax	Net assets
S	FR0013298346	Max. 2.01 % incl. tax including financial management fees: Max. 1.9 % incl. tax including operating costs and other services: Max. 0.11 % incl. tax	Net assets
IC	FR0013529534	Max. 1.2 % incl. tax including financial management fees: Max. 1.09 % incl. tax including operating costs and other services: Max. 0.11 % incl. tax	Net assets

- **Indirect management fees (on funds)**

		Indirect management fees
RC	FR0013298338	N/A
S	FR0013298346	N/A
IC	FR0013529534	N/A

- **Performance fee**

FR0013298338 RC unit

15% (incl. tax) of the outperformance of the fund in excess of the benchmark, the MSCI AC WORD INDEX dividends reinvested

(1) The performance fee is calculated using the indexed method.

The excess return to which the rate of 15% (Incl. tax) applies is equal to the difference between:

- the net asset value of the fund before any provision for performance fees, and
- the value of a reference asset that has achieved a return that is equivalent to the higher of:
 - o the benchmark index (or other index if necessary) over the calculation period and with the same variations in subscriptions/redemptions as the fund
 - o a return of 0% relative to the most recent closing net asset value (or the first net asset value if the fund is in its first year).

(2) With effect from the financial year beginning 1 April 2022, any underperformance relative to the Fund's benchmark index must be offset before performance fees become payable. To this end, an extendible observation period of 1 to 5 rolling financial years is set up, with the calculation reset to zero each time a deduction is made from the outperformance fee

(3) Each time a net asset value is calculated:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.
- If the fund's return underperforms in relation to the performance threshold, a reversal of the provision is made up to the limit of the provisions available.

(4) The management company will be entitled to performance fees on units redeemed during the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually based on the last net asset value of the financial year.

FR0013298346 S unit

15% (incl. tax) of the outperformance of the fund in excess of the benchmark, the MSCI AC WORD INDEX dividends reinvested

(1) The performance fee is calculated using the indexed method.

The excess return to which the rate of 15% (Incl. tax) applies is equal to the difference between:

- the net asset value of the fund before any provision for performance fees, and
- the value of a reference asset that has achieved a return that is equivalent to the higher of:
 - o the benchmark index (or other index if necessary) over the calculation period and with the same variations in subscriptions/redemptions as the fund
 - o a return of 0% relative to the most recent closing net asset value (or the first net asset value if the fund is in its first year).

(2) With effect from the financial year beginning 1 April 2022, any underperformance relative to the Fund's benchmark index must be offset before performance fees become payable. To this end, an extendible observation period of 1 to 5 rolling financial years is set up, with the calculation reset to zero each time a deduction is made from the outperformance fee

(3) Each time a net asset value is calculated:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.
- If the fund's return underperforms in relation to the performance threshold, a reversal of the provision is made up to the limit of the provisions available.

(4) The management company will be entitled to performance fees on units redeemed during the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually based on the last net asset value of the financial year.

FR0013529534 IC unit

15% (incl. tax) of the outperformance of the fund in excess of the benchmark, the MSCI AC WORD INDEX dividends reinvested

(1) The performance fee is calculated using the indexed method.

The excess return to which the rate of 15% (Incl. tax) applies is equal to the difference between:

- the net asset value of the fund before any provision for performance fees, and
- the value of a reference asset that has achieved a return that is equivalent to the higher of:
 - o the benchmark index (or other index if necessary) over the calculation period and with the same variations in subscriptions/redemptions as the fund
 - o a return of 0% relative to the most recent closing net asset value (or the first net asset value if the fund is in its first year).

(2) With effect from the financial year beginning 1 April 2022, any underperformance relative to the Fund's benchmark index must be offset before performance fees become payable. To this end, an extendible observation period of 1 to 5 rolling financial years is set up, with the calculation reset to zero each time a deduction is made from the outperformance fee

(3) Each time a net asset value is calculated:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.
- If the fund's return underperforms in relation to the performance threshold, a reversal of the provision is made up to the limit of the provisions available.

(4) The management company will be entitled to performance fees on units redeemed during the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually based on the last net asset value of the financial year.

The table below illustrates these principles based on example performance assumptions over a 19-year period:

	Net Over/Under performance *	Under performance to be offset the following year	Performance fee paid
YEAR 1	5%	0%	YES
YEAR 2	0%	0%	NO
YEAR 3	-5%	-5%	NO
YEAR 4	3%	-2%	NO
YEAR 5	2%	0%	NO
YEAR 6	5%	0%	NO
YEAR 7	5%	0%	YES
YEAR 8	-10%	-10%	NO
YEAR 9	2%	-8%	NO
YEAR 10	2%	-6%	NO
YEAR 11	2%	-4%	NO
YEAR 12	0%	0%**	NO
YEAR 13	2%	0%	YES
YEAR 14	-6%	-6%	NO
YEAR 15	2%	-4%	NO
YEAR 16	2%	-2%	NO
YEAR 17	-4%	-6%	NO
YEAR 18	0%	-4%***	NO
YEAR 19	5%	0%	YES

Notes on the example above

* Net over/under performance is defined here as the fund's performance above/below the benchmark return.

** The underperformance of year 12 to be carried forward to the following year (YEAR 13) is 0% (and not -4%) because the residual underperformance of year 8 which has not yet been compensated (-4%) is no longer relevant as the five-year period has elapsed (the underperformance of year 8 is compensated up to year 12).

*** The underperformance of year 18 to be carried forward to the following year (YEAR 19) is -4% (and not -6%) because the residual under performance of year 14 which has not yet been compensated (-2%) is no longer relevant insofar as the five-year period has elapsed (the underperformance of year 14 is compensated up to year 18).

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.

- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information

The non-recurring costs of debt collection debts on behalf of the Fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

CHANGES IN NET ASSETS

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

RC unit:

For income: total accumulation

For capital gains and losses: total accumulation

RD Unit:

For income: distribution of net income

For capital gains and losses: total accumulation

S Unit:

For income: total accumulation

For capital gains and losses: total accumulation

IC Unit:

For income: total accumulation

For capital gains and losses: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

• Fixed management fees (maximum rate)

		Fixed management fees	Basis

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.

- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information

Further information regarding costs:

The non-recurring costs of debt collection debts on behalf of the Fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

Swing pricing mechanism:

The asset management company has introduced a method for adjusting the net asset value of the fund in order to protect the interests of investors in the fund by ensuring that only incoming (or outgoing) investors bear the cost of reorganising the portfolio in the event of large-scale subscriptions (or redemptions).

Swing pricing with a trigger threshold is a mechanism, governed by an internal procedure, by which the net asset value can be adjusted if the trigger threshold, referred to as the swing pricing threshold, is exceeded. This threshold is indicated as a percentage of the fund's net assets and is pre-established by the asset management company.

If, on the day of processing, the total number of net subscription/redemption orders from investors for all the fund's unit classes exceeds the swing pricing threshold, the adjustment mechanism is activated and the net asset value may be adjusted upwards or downwards. This adjusted net asset value is known as the "swung" net asset value.

The trigger threshold and readjustment cost parameters are determined by the asset management company and reviewed periodically. It also has the option of modifying them at any time, particularly in the event of a crisis on the financial markets.

If the fund issues several classes of units, the net asset value of each class of units is calculated separately, but the swing factor is the same for all classes of units and the mechanism applies to the fund as a whole.

The volatility of the Fund's net asset value may not solely reflect that of the securities held in the portfolio due to the application of swing pricing.

The "swung" net asset value is the only net asset value of the fund and the only one communicated to the fund's unitholders. However, if an outperformance fee is charged, it is calculated on the net asset value before application of the adjustment mechanism.

In accordance with regulatory provisions, the asset management company does not disclose the trigger level and ensures that this information remains confidential.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

IC unit class:

For income: total accumulation

For capital gains and losses: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

• Fixed management fees (maximum rate)

		Fixed management fees	Basis
IC	FR0013373206	Max. 0.5 % incl. tax including financial management fees: Max. 0.45 % incl. tax including operating costs and other services: Max. 0.05 % incl. tax	Net assets

• Indirect management fees (on funds)

		Indirect management fees
IC	FR0013373206	N/A

• Performance fee

FR0013373206 IC unit

N/A

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "Management costs borne by the FUND" table. Management fees are calculated on the basis of the average net assets at each net asset valuation and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and related fees and expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities made using funds obtained from the sale or redemption of securities or income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily opening price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Previous day's closing price

South-American exchanges: Previous day's closing price

If no quote for a given security can be obtained the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price:

The price used for valuation depends on where the security is listed:

European exchanges: Daily opening price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Previous day's closing price

South-American exchanges: Previous day's closing price

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Units in securitisation vehicles:

Valued at the first trading price of the day for securitisation vehicles listed on European markets.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Rules applicable until 31-03-2023:

NDS which when acquired have a residual maturity of less than three months are valued on a straight-line basis.

NDS that have a residual maturity of more than three months when acquired are valued:

At their market value until three months and one day prior to their maturity.

The difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

Exception: BTF and BTAN are marked to market until maturity.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities that are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Rules applicable from 01-04-2023:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Opening market price of the day or previous day's clearing price.
- Futures contracts listed on North American exchanges are valued at: Closing price on previous day or clearing price on previous day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Opening market price of the day or previous day's clearing price.
- Options listed on North-American exchanges are valued using: Closing price on previous day or clearing price on previous day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

CHANGES IN NET ASSETS

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

- **Performance fee**

FR0013384963 RC unit

15% (incl. tax) of the outperformance of the fund in excess of the benchmark, the EURO STOXX Net Return index

From 01/04/2022:

(1) The performance fee is calculated using the indexed method.

The performance supplement to which the 15% tax rate applies represents the difference between:

- the net asset value of the fund before any provision for performance fees, and
- the value of a benchmark asset that has achieved a performance equal to that of the index (or, where applicable, of the benchmark) over the calculation period and records the same variations linked to subscriptions/redemptions as the fund.

(2) With effect from the financial year beginning 1 April 2022, any underperformance of the SICAV in relation to the index is offset before outperformance fees become payable. To this end, an extendible observation period of 1 to 5 rolling financial years is set up, with the calculation reset to zero each time a deduction is made from the outperformance fee

(3) Each time a net asset value is calculated:

- In the event of outperformance in relation to the outperformance trigger threshold, a provision is set aside.
- In the event of underperformance in relation to the outperformance trigger threshold, a provision reversal is recorded up to the available provisions.

(4) The management company will be entitled to performance fees on units redeemed during the year.

(5) In the event of outperformance, the fee is payable annually on the last net asset value of the financial year.

FR001400K406 RC USD-H Unit

15% (incl. tax) of the outperformance of the fund in excess of the benchmark, the EURO STOXX Net Return index

(1) The performance fee is calculated using the indexed method.

The performance supplement to which the 15% tax rate applies represents the difference between:

- the net asset value of the fund before any provision for performance fees, and
- the value of a benchmark asset that has achieved a performance equal to that of the index (or, where applicable, of the benchmark) over the calculation period and records the same variations linked to subscriptions/redemptions as the fund.

(2) With effect from the financial year beginning 1 April 2022, any underperformance relative to the Fund's benchmark index must be offset before performance fees become payable.

To this end, an extendible observation period of 1 to 5 rolling financial years is set up, with the calculation reset to zero each time a deduction is made from the outperformance fee

(3) Each time a net asset value is calculated:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.
- If the fund's return underperforms in relation to the performance threshold, a reversal of the provision is made up to the limit of the provisions available.

(4) The management company will be entitled to performance fees on units redeemed during the year.

(5) In the event of outperformance, the fee is payable annually on the last net asset value of the financial year.

FR001400K414 IC USD-H Unit

N/A

The table below illustrates these principles based on example performance assumptions over a 19-year period:

	Net Over/Under performance *	Under performance to be offset the following year	Performance fee paid
YEAR 1	5%	0%	YES
YEAR 2	0%	0%	NO
YEAR 3	-5%	-5%	NO
YEAR 4	3%	-2%	NO
YEAR 5	2%	0%	NO
YEAR 6	5%	0%	NO
YEAR 7	5%	0%	YES
YEAR 8	-10%	-10%	NO
YEAR 9	2%	-8%	NO
YEAR 10	2%	-6%	NO
YEAR 11	2%	-4%	NO
YEAR 12	0%	0%**	NO
YEAR 13	2%	0%	YES
YEAR 14	-6%	-6%	NO
YEAR 15	2%	-4%	NO
YEAR 16	2%	-2%	NO
YEAR 17	-4%	-6%	NO
YEAR 18	0%	-4%***	NO
YEAR 19	5%	0%	YES

Notes on the example above

* Net over/under performance is defined here as the fund's performance above/below the benchmark return.

** The underperformance of year 12 to be carried forward to the following year (YEAR 13) is 0% (and not -4%) because the residual underperformance of year 8 which has not yet been compensated (-4%) is no longer relevant as the five-year period has elapsed (the underperformance of year 8 is compensated up to year 12).

*** The underperformance of year 18 to be carried forward to the following year (YEAR 19) is -4% (and not -6%) because the residual under performance of year 14 which has not yet been compensated (-2%) is no longer relevant insofar as the five-year period has elapsed (the underperformance of year 14 is compensated up to year 18).

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Share or units of UCITS, AIF and other funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.

- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

- **Performance fee**

FR0013384997 RC units

15% (incl. tax) of the outperformance of the fund in excess of the benchmark, the EURO STOXX Small Net Return index

Basis: net assets

From 01/04/2022:

(1) The performance fee is calculated using the indexed method.

The performance supplement to which the 15% tax rate applies represents the difference between:

- the net asset value of the fund before any provision for performance fees, and
- the value of a benchmark asset that has achieved a performance equal to that of the index (or, where applicable, of the benchmark) over the calculation period and records the same variations linked to subscriptions/redemptions as the fund.

(2) With effect from the financial year beginning 1 April 2022, any underperformance relative to the Fund's benchmark index must be offset before performance fees become payable. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) Each time a net asset value is calculated:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.
- If the fund's return underperforms in relation to the performance threshold, a reversal of the provision is made up to the limit of the provisions available.

(4) The management company will be entitled to performance fees on units redeemed during the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually based on the last net asset value of the financial year.

outperformance/underperformance is defined here as the fund's performance above/below the benchmark.

FR001400K422 IC USD-H Unit

N/A

The table below illustrates these principles based on example performance assumptions over a 19-year period:

	Net Over/Under performance *	Under performance to be offset the following year	Performance fee paid
YEAR 1	5%	0%	YES
YEAR 2	0%	0%	NO
YEAR 3	-5%	-5%	NO
YEAR 4	3%	-2%	NO
YEAR 5	2%	0%	NO
YEAR 6	5%	0%	NO
YEAR 7	5%	0%	YES
YEAR 8	-10%	-10%	NO
YEAR 9	2%	-8%	NO
YEAR 10	2%	-6%	NO
YEAR 11	2%	-4%	NO
YEAR 12	0%	0%**	NO
YEAR 13	2%	0%	YES
YEAR 14	-6%	-6%	NO
YEAR 15	2%	-4%	NO
YEAR 16	2%	-2%	NO
YEAR 17	-4%	-6%	NO
YEAR 18	0%	-4%***	NO
YEAR 19	5%	0%	YES

Notes on the example above

* Net over/under performance is defined here as the fund's performance above/below the benchmark return.

** The underperformance of year 12 to be carried forward to the following year (YEAR 13) is 0% (and not -4%) because the residual underperformance of year 8 which has not yet been compensated (-4%) is no longer relevant as the five-year period has elapsed (the underperformance of year 8 is compensated up to year 12).

*** The underperformance of year 18 to be carried forward to the following year (YEAR 19) is -4% (and not -6%) because the residual under performance of year 14 which has not yet been compensated (-2%) is no longer relevant insofar as the five-year period has elapsed (the underperformance of year 14 is compensated up to year 18).

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.

- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

N/A

Additional information

The non-recurring costs of debt collection debts on behalf of the fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Operating charges and fees for other services:

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

RC unit:

For income: total accumulation

For capital gains and losses: total accumulation

IC Unit:

For income: total accumulation

For capital gains and losses: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

Fixed management fees (maximum rate)

		Fixed management fees	Basis
RC	FR0013384336	Max. 2.2 % incl. tax including financial management fees: Max. 2 % incl. tax including operating costs and other services: Max. 0.2 % incl. tax	Net assets
IC	FR0013489390	Max. 1.1 % incl. tax including financial management fees: Max. 0.9 % incl. tax including operating costs and other services: Max. 0.2 % incl. tax	Net assets

Indirect management fees (on funds)

		Indirect management fees
RC	FR0013384336	N/A
IC	FR0013489390	N/A

Performance fee

FR0013384336 RC unit

15% (incl. tax) of the outperformance of the fund in excess of the benchmark, 50 % Compounded €STR + 50 % EURO STOXX Large Net Return

From 01/04/2022:

(1) The performance fee is calculated using the indexed method.

The performance supplement to which the 15% tax rate applies represents the difference between:

- the net asset value of the fund before any provision for performance fees, and
- the value of a benchmark asset that has achieved a performance equal to that of the index (or, where applicable, of the benchmark) over the calculation period and records the same variations linked to subscriptions/redemptions as the fund.

(2) With effect from the financial year beginning 1 April 2022, any underperformance relative to the Fund's benchmark index must be offset before performance fees become payable. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) Each time a net asset value is calculated:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.
- If the fund's return underperforms in relation to the performance threshold, a reversal of the provision is made up to the limit of the provisions available.

(4) The management company will be entitled to performance fees on units redeemed during the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually based on the last net asset value of the financial year.

FR0013489390 IC unit

N/A

The table below illustrates these principles based on example performance assumptions over a 19-year period:

	Net Over/Under performance *	Under performance to be offset the following year	Performance fee paid
YEAR 1	5%	0%	YES
YEAR 2	0%	0%	NO
YEAR 3	-5%	-5%	NO
YEAR 4	3%	-2%	NO
YEAR 5	2%	0%	NO
YEAR 6	5%	0%	NO
YEAR 7	5%	0%	YES
YEAR 8	-10%	-10%	NO
YEAR 9	2%	-8%	NO
YEAR 10	2%	-6%	NO
YEAR 11	2%	-4%	NO
YEAR 12	0%	0%**	NO
YEAR 13	2%	0%	YES
YEAR 14	-6%	-6%	NO
YEAR 15	2%	-4%	NO
YEAR 16	2%	-2%	NO
YEAR 17	-4%	-6%	NO
YEAR 18	0%	-4%***	NO
YEAR 19	5%	0%	YES

Notes on the example above

* Net over/under performance is defined here as the fund's performance above/below the benchmark return.

** The underperformance of year 12 to be carried forward to the following year (YEAR 13) is 0% (and not -4%) because the residual underperformance of year 8 which has not yet been compensated (-4%) is no longer relevant as the five-year period has elapsed (the underperformance of year 8 is compensated up to year 12).

*** The underperformance of year 18 to be carried forward to the following year (YEAR 19) is -4% (and not -6%) because the residual under performance of year 14 which has not yet been compensated (-2%) is no longer relevant insofar as the five-year period has elapsed (the underperformance of year 14 is compensated up to year 18).

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depositary	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Share or units of UCITS, AIF and other funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.

- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

RC unit:

For income: total accumulation

For capital gains and losses: total accumulation

IC Unit:

For income: total accumulation

For capital gains and losses: total accumulation

RD Unit:

For income: capitalisation and/or annual distribution and/or carry forward

For capital gains or losses: capitalisation and/or distribution and/or carry forward

S Unit:

For income: total accumulation

For capital gains and losses: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

Fixed management fees (maximum rate)

		Fixed management fees	Basis

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.

- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Rules applicable until 31-03-2023:

NDS which when acquired have a residual maturity of less than three months are valued on a straight-line basis.

NDS that have a residual maturity of more than three months when acquired are valued:

At their market value until three months and one day prior to their maturity.

The difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

Exception: BTF and BTAN are marked to market until maturity.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities that are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Rules applicable from 01-04-2023:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information

Further information regarding costs:

The non-recurring costs of debt collection debts on behalf of the Fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

Swing pricing mechanism:

The asset management company has introduced a method for adjusting the net asset value of the fund in order to protect the interests of investors in the fund by ensuring that only incoming (or outgoing) investors bear the cost of reorganising the portfolio in the event of large-scale subscriptions (or redemptions).

Swing pricing with a trigger threshold is a mechanism, governed by an internal procedure, by which the net asset value can be adjusted if the trigger threshold, referred to as the swing pricing threshold, is exceeded. This threshold is indicated as a percentage of the fund's net assets and is pre-established by the asset management company.

If, on the day of processing, the total number of net subscription/redemption orders from investors for all the fund's unit classes exceeds the swing pricing threshold, the adjustment mechanism is activated and the net asset value may be adjusted upwards or downwards. This adjusted net asset value is known as the "swung" net asset value.

The trigger threshold and readjustment cost parameters are determined by the asset management company and reviewed periodically. It also has the option of modifying them at any time, particularly in the event of a crisis on the financial markets.

If the fund issues several classes of units, the net asset value of each class of units is calculated separately, but the swing factor is the same for all classes of units and the mechanism applies to the fund as a whole.

The volatility of the Fund's net asset value may not solely reflect that of the securities held in the portfolio due to the application of swing pricing.

The "swung" net asset value is the only net asset value of the fund and the only one communicated to the fund's unitholders. However, if an outperformance fee is charged, it is calculated on the net asset value before application of the adjustment mechanism.

In accordance with regulatory provisions, the asset management company does not disclose the trigger level and ensures that this information remains confidential.

CHANGES IN NET ASSETS

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.

- Swaps with a residual life of more than three months are marked to market.

- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.

- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.

- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.

- Dividend swaps are recognised at their nominal value off the balance sheet.

- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information

The non-recurring costs of debt collection debts on behalf of the Fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depositary	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.

- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from

income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depositary	Other service providers
Max 0 to 0.10% incl. tax for equities Levy on each transaction	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in dollars, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

IC unit class:

For income: total accumulation

For capital gains and losses: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

Fixed management fees (maximum rate)

		Fixed management fees	Basis
IC	FR0000984254	Max. 0.598 % incl. tax including financial management fees: Max. 0.558 % incl. tax including operating costs and other services: Max. 0.04 % incl. tax	Net assets

Indirect management fees (on funds)

		Indirect management fees
IC	FR0000984254	N/A

Performance fee

FR0000984254 IC unit

N/A

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "Management costs borne by the FUND" table. Management fees are calculated on the basis of the average net assets at each net asset valuation and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and related fees and expenses arising from the sale of securities in the

fund's portfolio or from the purchase of securities made using funds obtained from the sale or redemption of securities or income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depository	Other service providers
N/A	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily opening price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Previous day's closing price

South-American exchanges: Previous day's closing price

If no quote for a given security can be obtained the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price:

The price used for valuation depends on where the security is listed:

European exchanges: Daily opening price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Previous day's closing price

South-American exchanges: Previous day's closing price

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Units in securitisation vehicles:

Valued at the first trading price of the day for securitisation vehicles listed on European markets.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Opening market price of the day or previous day's clearing price.
- Futures contracts listed on North American exchanges are valued at: Closing price on previous day or clearing price on previous day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Opening market price of the day or previous day's clearing price.
- Options listed on North-American exchanges are valued using: Closing price on previous day or clearing price on previous day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given**Guarantee received:**

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 15% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information

The non-recurring costs of debt collection debts on behalf of the Fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Operating charges and fees for other services:

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

Interim distributions for the year (VI)	0.00	0.00
Net income (I - II + III - IV +/- V - VI)	2,526,422.28	3,566,333.96

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

RD unit class:

For income: distribution

For capital gains and losses: total accumulation

RC Unit:

For income: total accumulation

For capital gains and losses: total accumulation

IC Unit:

For income: total accumulation

For capital gains and losses: total accumulation

Management and Operating fees

Management fees are set out in the information notice or Fund's full prospectus.

Fixed management fees (maximum rate)

		Fixed management fees	Basis
RD	FR0000984221	Max. 2 % incl. tax including financial management fees: Max. 1.89 % incl. tax including operating costs and other services: Max. 0.11 % incl. tax	Net assets

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depositary	Other service providers
On shares: 0.2392% incl. VAT from 0 EUR to 2,000,000 EUR 0.2196% incl. tax above - On the UCI: 0 % - On bonds: 0 % Levy on each transaction	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.
- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.

- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.

- Swaps with a residual life of more than three months are marked to market.

- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.

- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.

- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.

- Dividend swaps are recognised at their nominal value off the balance sheet.

- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information

The non-recurring costs of debt collection debts on behalf of the fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

ACCOUNTING POLICIES

The annual financial statements are presented in the form prescribed by ANC Regulation 2014-01 as amended (French Accounting Standards Authority).

Accounting information is presented in euros, the accounting currency of the Fund.

Revenue recognition

Financial accounts are stated at cost plus accrued interest, if any.

The fund recognises income using the “coupon encaissé” method (cash coupon method as per ANC no. 2020-07).

Accounting for portfolio inflows and outflows

Inflows and outflows of securities in the Fund's portfolio are recorded exclusive of costs.

Allocation of distributable amounts

Retrocessions

The policy for booking retrocession management fees to target UCIs holdings is decided by the management company.

These retrocessions are deducted from management fees. The costs actually borne by the Fund are shown in the "MANAGEMENT COSTS BORNE BY THE FUND" table. Management fees are calculated on the basis of the average net assets at each net asset value and cover the costs of financial and administrative management, valuation, custodian fees, statutory auditors' fees, etc. They do not include transaction costs.

Transaction Fees

Brokerage fees, commissions and costs relating to the sale of securities held in the collective portfolio and to the purchase of securities with proceeds either from the sale or redemption of securities or from income on assets held in the Fund are charged against the said assets and deducted from cash and cash equivalents.

Turnover fees	Allocation key (in %)		
	Management company	Depositary	Other service providers
Max 0 to 0.10% incl. tax for equities Levy on each transaction	100		

Valuation methods

At each valuation, the assets of the Fund are valued according to the following principles:

Listed equities and equivalent securities (both French and foreign):

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

Bonds and equivalent debt instruments (both French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on where the security is listed:

European exchanges: Daily closing price.

Asian exchanges: Daily closing price.

Australian exchanges: Daily closing price.

North-American exchanges: Daily closing price.

South-American exchanges: Daily closing price.

If a quote for a given security cannot be obtained, then the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as:

- a price from a price contributor
- an average price from two or more contributors
- a price calculated using an actuarial method, from a credit or other spread and a yield curve,
- etc.

Securities of the UCIT, AIF or investment funds in the portfolio:

These securities are valued on the basis of the Fund's most recent net asset value.

Securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

- Reverse repurchase agreements: Valued at the contractual value. The term will not exceed three months.
- Optional repurchase agreements: Contractual valuation, as the seller's repurchase of the shares is envisaged with sufficient certainty.

- Securities borrowing: Borrowed securities and the corresponding repayment obligation are valued at the market value of the securities concerned.

Temporary disposals of securities:

- Securities sold under repurchase agreements: Securities delivered under repurchase agreements are valued at their market price, while liabilities representing securities delivered under repurchase agreements are maintained at the value set out in the contract.
- Securities lending: Securities that are lent are valued at their market price. The securities are recovered by the Fund when the loan agreement expires.

Unlisted transferable securities:

Valuation using methods based on asset value and yield, including consideration of prices in recent significant transactions.

Negotiable debt securities:

Negotiable debt securities are marked to market.

Applicable market values:

- BTF/BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

Other negotiable debt securities for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using the yield to return method at a reference yield curve rate, which is adjusted to account for the issuer's intrinsic credit quality (credit spread of other).

Futures contracts

The market prices used to value futures contracts must correspond to the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Futures contracts listed on North American exchanges are valued at: Last price of the day or settlement price of the day.

Options:

The market prices used for options observe the same rule as those used to value futures contracts and their underlying securities:

- Options listed on European exchanges are valued using: Last price of the day or settlement price of the day.
- Options listed on North-American exchanges are valued using: Last price of the day or settlement price of the day.

Swaps:

- Swaps with a residual life of three months or less are valued on a straight-line basis.
- Swaps with a residual life of more than three months are marked to market.
- Index swaps are valued at the price given by the counterparty, and the management company independently monitors this valuation.
- When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts

These are transactions hedging portfolio securities denominated in a currency other than the accounting currency of the UCITS or AIF by borrowing in the same currency for the same amount. Forward currency transactions are valued at the interest rate of the foreign currency.

Valuation of off-balance sheet transactions

- Futures and forward contract commitments are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract commitments are valued at their nominal value, or lacking this at an equivalent amount.
- Option commitments are valued on the basis of the option's underlying equivalent. This translation involves multiplying the number of options by a delta. The delta value is determined using a Black-Scholes type mathematical model with the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet commitment reflects the economic nature of the transaction and not the position in the option transaction.
- Dividend swaps are recognised at their nominal value off the balance sheet.
- All swaps are recorded off the balance sheet at their nominal value.

Description of guarantees received or given

Guarantee received:

N/A

Guarantee given:

When engaging in over-the-counter derivative transactions and securities financing transactions, the Fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions, it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral collected must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.
- Transferability: Collateral must be transferable at all times.
- Valuation: All collateral collected must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.
- Issuer credit quality: All collateral must be of high quality, as determined by the asset management company.
- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,
- Correlation: the issuer of the collateral must be independent of the counterparty.
- Diversification: Exposure to any single issuer must not exceed 20% of net assets.
- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.
- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information

The non-recurring costs of debt collection debts on behalf of the fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

Operating costs and other services:

Actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the asset management company will pay the excess.

In addition, the management company may be required to make a provision for the maximum standard rate if the actual "operating and other service" costs are lower than the indicated rate.

SECOND RESOLUTION

The General Meeting notes that the sums available for distribution relating to the consolidated net income for the year amount to €82,996,610.34. These are made up of net income for the year of €74,586,912.39 and income equalisation adjustments of €8,409,697.95. It decided to allocate these sums as follows:

- for the CM-AM SHORT TERM sub-fund, net income of €12,141,557.68, made up of net income for the year of €12,165,427.14, income equalisation adjustments of -€23,883.24 and retained earnings from the previous year of €13.78, i.e.:

IC share: Capitalisation of €2,091,789.53.

EI share: Capitalisation of €239,590.92.

RC share: Capitalisation of €9,648,927.26.

RD share: Partial distribution of €101,854.48, giving a total net dividend per share of €44.01.

RD share: €59,395.49 deferred.

In accordance with Article 243 bis of the General Tax Code, the Board notes that the following dividends have been distributed over the last three financial years:

Financial year 18/02/2022

RD share: No Distribution.

RC share: No Distribution.

IC share: No Distribution.

EI share: No Distribution.

Financial year 31/03/2022

RD share: €0.42, with no tax credit attached.

RC share: No Distribution.

IC share: No Distribution.

EI share: No Distribution.

Financial year 31/03/2023

RD share: €10.73, with no tax credit attached.

RC share: No Distribution.

IC share: No Distribution.

EI share: No Distribution.

• for the CM-AM GLOBAL GOLD sub-fund, a net loss of €708,018.54, comprising net loss for the year of 1,401,127.40 and income equalisation adjustments of €693,108.86, i.e.:

ER share: Capitalisation of -€1,873.14.

IC share: Capitalisation of €12,050.96.

S share: Capitalisation of €15,012.21.

RC share: Capitalisation of -€733,208.57.

The General Meeting notes that no dividends have been paid in the last three years.

• for the CM-AM SUSTAINABLE PLANET sub-fund, a net income of €1,063,549.13, made up of net income for the year of €3,258,549.58 and income equalisation adjustments of -€2,195,000.45, i.e.:

S share: Capitalisation of €182,969.02.

IC share: Capitalisation of €2,116.35.

RC share: Capitalisation of €878,463.76.

The General Meeting notes that no dividends have been paid in the last three years.

• for the CM-AM INFLATION sub-fund, a net income of €499,128.02, made up of net income for the year of €560,329.55 and income equalisation adjustments of -€61,201.53, i.e.:

S share: Capitalisation of €30,595.94.

RC share: Capitalisation of €468,523.67.

IC share: Capitalisation of €8.41.

The General Meeting notes that no dividends have been paid in the last three years.

• for the CM-AM GLOBAL LEADERS sub-fund, a net loss of €6,373,814.03, comprising a net loss for the year of €6,333,395.81 and income equalisation adjustments of -€40,418.22, i.e.:

IC share: Capitalisation of €10,879.03.

ER share: Capitalisation of -€134,684.30.

RC share: Capitalisation of -€6,167,597.53.

S share: Capitalisation of -€82,411.23.

The General Meeting notes that no dividends have been paid in the last three years.

• for the CM-AM GREEN BONDS sub-fund, a net income of €519,451.05, comprising net income for the year of €523,418.00 and income equalisation adjustments of €-3,966.95, i.e.:

RC share: Capitalisation of €29,854.84.

IC share: Capitalisation of €489,044.96.

S share: Capitalisation of €551.25.

The General Meeting notes that no dividends have been paid in the last three years.

• for the CM-AM ENTREPRENEURS EUROPE sub-fund, a net loss of €700,166.83, made up of a net loss for the year of €675,233.34 and income equalisation adjustments of -€24,933.49, i.e.:

IC share: Capitalisation of €1,269.72.
S share: Capitalisation of €23,008.16.
RC share: Capitalisation of -€724,444.71.

The General Meeting notes that no dividends have been paid in the last three years.

- for the CM-AM GLOBAL INNOVATION sub-fund, a net loss of €5,370,208.35, made up of a net loss for the year of €5,010,183.77 and income equalisation adjustments of -€360,024.58, i.e.:

S share: Capitalisation of -€309,686.32.
RC share: Capitalisation of -€4,986,264.99.
IC share: Capitalisation of -€74,257.04.

The General Meeting notes that no dividends have been paid in the last three years.

- for the CM-AM HIGH YIELD 2024 sub-fund, net income of €3,684,814.83, comprising net income for the year of €4,622,673.15 and income equalisation adjustments of -€938,070.09, and retained earnings from the previous year of €211.77, i.e.:

S share: Capitalisation of €1,372,205.42.
RC share: Capitalisation of €1,456,756.44.
IC share: Capitalisation of €786,068.23.
RD share: Partial distribution of €69,565.14, giving a total net dividend per share of €2.24.
RD share: €219.60 deferred.

In accordance with Article 243 bis of the General Tax Code, the Board notes that the following dividends have been distributed over the last three financial years:

Financial year 31/03/2021

S share: No Distribution.
RD share: €1.52, with no tax credit attached.
RC share: No Distribution.
IC share: No Distribution.

Financial year 31/03/2022

S share: No Distribution.
RD share: €2.29, with no tax credit attached.
RC share: No Distribution.
IC share: No Distribution.

Financial year 31/03/2023

S share: No Distribution.
RD share: €2.18, with no tax credit attached.
RC share: No Distribution.
IC share: No Distribution.

- for the CM-AM SHORT TERM BONDS sub-fund, net income of €9,079,156.13, comprising net income for the year of €9,493,300.24 and income equalisation adjustments of -€414,144.11, i.e.:

IC share: Capitalisation of €9,079,156.13.

The General Meeting notes that no dividends have been paid in the last three years.

- for the CM-AM CONVICTIONS EURO sub-fund, net income of €9,260,448.11, made up of net income for the year of €8,634,813.08 and income equalisation adjustments of €625,635.03, i.e.:

IC share: Capitalisation of €1,603,209.33.
S share: Capitalisation of €2,028,697.53.
RC share: Capitalisation of €5,628,541.25.

The General Meeting notes that no dividends have been paid in the last three years.

- for the CM-AM SMALL & MIDCAP EURO sub-fund, net income of €715,141.48, consisting of net income for the year of €798,495.34 and income equalisation adjustments of -€83 353,86, i.e.:

RC share: Capitalisation of €11,960.50.

IC share: Capitalisation of €606,662.37.

S share: Capitalisation of €96,518.61.

The General Meeting notes that no dividends have been paid in the last three years.

• for the CM-AM FLEXIBLE EURO sub-fund, net income of €2,941,345.14, made up of net income for the financial year of €3,599,830.24 and income equalisation adjustments of -€658,485.10, i.e.:

RC share: Capitalisation of €2,941,316.61.

S share: Capitalisation of -€770,817.71.

R share: Capitalisation of -€853.24.

It notes that no amounts relating to net capital gains have been distributed over the last three financial years.

It resolves to pay these sums from 31/07/2024, with all holders of dividend-paying shares in existence on that date being entitled to receive them.

THIRD RESOLUTION

The General Meeting notes the report drawn up by the Statutory Auditor in accordance with Article L225-38 of the French Commercial Code and approves its conclusions.

FOURTH RESOLUTION

In accordance with Article 15 of the Articles of Association, the General Meeting ratifies the appointment as Director of Ms. Eliana DE ABREU for the remainder of the term of office of Ms. Claire BOURGEOIS, who has resigned. Ms. Eliana DE ABREU's term of office will expire at the end of the General Meeting called to approve the financial statements for the year ending on the last trading day of March 2026.

FIFTH RESOLUTION

The General Meeting gives full powers to the bearer of an original, copy or extract of these minutes to carry out all formalities required by law.

75002 Paris

Statutory auditor's report on the financial statements (Translated from French into English)

Financial year ended 28 March 2024

To the shareholders of SICAV CM-AM SICAV,

Opinion

Pursuant to the assignment entrusted to us by your Board of Directors, we have audited the accompanying financial statements of CM-AM SICAV, an undertaking for collective investment, which operates as an open-ended investment company (SICAV), for the year ended 28 March 2024.

We certify that the annual financial statements give a true and fair view of the results of operations for the year and of the financial position and assets of the SICAV at the end of that year, in accordance with the accounting rules and principles applicable in France.

Basis of opinion

Audit framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we collected was sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under the above standards are indicated in the section of this report entitled "The statutory auditor's responsibilities in auditing the annual financial statements".

Independence

We conducted our audit in accordance with the rules of independence set out in the French Commercial Code and in the Code of Ethics for Statutory Auditors, for the period from 1st April 2023 to the date on which our report was issued.

Justification of assessments

In accordance with the requirements of articles L.821-53 and R.821-180 of the French Commercial Code relating to the justification of our assessments, we bring to your attention the following matters which, in our professional opinion, were the most significant for the audit of the financial statements for the year.

These assessments were made in the context of our audit of the annual accounts taken as a whole and in the context of forming our audit opinion. We have therefore not expressed any opinions on elements of these annual accounts taken in isolation.

Complex derivatives are valued according to the methods described in the Fund's prospectus and in the notes thereto. We have familiarised ourselves with the independent valuation procedure in place within the management company and have verified that this procedure has been correctly applied.

Specific verifications

In accordance with professional standards applicable in France, we have also carried out the specific verifications required by law and regulations.

We have nothing to report with respect to the fair presentation and the conformity with the financial statements of the information given in the management report of the Board of Directors, and in the other documents addressed to the shareholders with respect to the financial position and the annual accounts.

We confirm that the section of the management report devoted to corporate governance contains the information required by Article L. 225-37-4 of the French Commercial Code.

Responsibilities of management and those charged with governance in respect of the annual accounts

It is the responsibility of management to prepare annual accounts that present a true and fair view in accordance with French GAAP (generally accepted accounting principles) and to implement the internal control procedures it deems necessary to prepare annual accounts that are free from material misstatement, whether due to fraud or error.

In preparing the annual financial statements, management is responsible for assessing the Fund's ability to continue as a going concern, for making the necessary going concern disclosures in the financial statements and for applying the going concern accounting principle, unless the Fund is to be liquidated or cease trading.

The annual financial statements were prepared by the Board of Directors.

Auditor's responsibilities with regard to the auditing of annual accounts

It is our responsibility to produce a report on the annual financial statements. Our objective is to obtain reasonable assurance that the annual financial statements taken as a whole do not contain material misstatements. Reasonable assurance represents a high level of assurance, but does not guarantee that an audit performed in accordance with professional standards of professional practice will reveal any material misstatement. Misstatements may be the result of fraud or error and are considered to be material if there is a reasonable chance that users of the financial statements might be influenced by them, taken individually or together, in their economic decisions.

As specified by article L.821-55 of the French Commercial Code, our role in certifying the accounts does not consist of guaranteeing the viability or quality of the management of your SICAV.

When conducting an audit in accordance with professional standards applicable in France, the statutory auditor uses its professional judgement throughout the audit. In addition:

- It identifies and assesses the risks of the annual financial statements containing material misstatements, whether these are the result of fraud or error, defines and implements audit procedures based on these risks, and gathers evidence that it believes is an adequate and appropriate basis for its opinion. The risk of non-detection of a material misstatement resulting from fraud is greater than that of a material misstatement resulting from error, as fraud may involve collusion, forgery, voluntary omissions, misrepresentation or circumvention of internal control.
- It familiarises itself with the internal control system relevant to the audit in order to define audit procedures that are appropriate to the circumstances, rather than to express an opinion on the effectiveness of internal control systems;
- It assesses the appropriateness of the accounting methods used and the reasonableness of the accounting estimates made by management, as well as the information relating to them provided in the annual accounts;

- It assesses the appropriateness of the management company applying the going concern accounting principle and, depending on the evidence collected, the existence or otherwise of material uncertainty linked to events or circumstances that are likely to jeopardise the Fund's ability to continue operating. This assessment is based on the evidence gathered before the date of the report, bearing in mind that subsequent circumstances or events could jeopardise the company's continued operation as a going concern. If the auditor decides that there is material uncertainty, it draws the attention of readers of the report to the information provided in the annual financial statements regarding this uncertainty or, if this information is not provided or is not relevant, it certifies the annual financial statements with reservations or refuses to certify;
- It assesses the overall presentation of the annual accounts and whether or not they reflect the underlying operations and events such that they give a true and fair view of them.

The Statutory Auditor
