AMUNDI MSCI WATER ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

SFDR information

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:
Amundi MSCI Water ESG Screened UCITS ETF

Legal entity identifier:
9695004Y3YNBCRB45L58

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
Yes	No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 50.58% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment objective of the product is to replicate an Index, which is based on a Parent Index. Each time the index was rebalanced, at least 20% of the components of the parent index were removed on the basis of sustainability criteria, including an Environmental, Social and Governance (“ESG”) rating.

The environmental and/or social characteristics promoted by this financial product are respected through monitoring the total net return of the MSCI ACWI IMI Water ESG Filtered index. The investment objective of the product is to replicate an index, which is based on a parent index. Each time the index was rebalanced, at least 20% of the components of the parent index were removed according to sustainability criteria based, among others, on Environmental, Social, and Governance (“ESG”) ratings.

AMUNDI MSCI WATER ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

As at the end of the period, the MSCI ESG score for the index is: **7,303**.

● *...and compared to previous periods?*

During the previous period, the benchmark index's MSCI ESG rating was 7.237

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments were to invest in companies that met two criteria:

1. follow best environmental and social practices; and
2. do not generate products and services that harm the environment and society.

The definition of a "best performing" company is based on a proprietary Amundi ESG methodology that is designed to measure a company's ESG performance. To be considered as the "best performing", a company must obtain the best rating among the top three (A, B or C, on a rating scale ranging from A to G) in its sector on at least one important environmental or social factor. Significant environmental and social factors are identified at the sector level. The identification of these factors is based on Amundi's ESG analysis framework, which combines extra-financial data with a qualitative analysis of the related sector and sustainability themes. Factors identified as material have a contribution of more than 10% to the overall ESG score. For the energy sector, for example, material factors are: emissions and energy, biodiversity and pollution, health and safety, local communities and human rights.

In order to contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticides, single-use plastic production) that are not compatible with these criteria.

The sustainable nature of an investment is assessed at the level of the investee company. Concerning external UCIs, the criteria for determining the sustainable investments that these underlying UCIs may hold and their objectives depend on each company's own management approach.

AMUNDI MSCI WATER ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that sustainable investments do not cause significant harm, Amundi uses two tests:

- The first “DNSH” (“Do No Significant Harm”) test is based on the monitoring of the mandatory indicators of the Main Negative Impacts in Annex 1, Table 1 of Delegated Regulation (EU) 2022/1288 when reliable data is available (for example, the GHG intensity or greenhouse gas intensity of beneficiary companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. The carbon intensity of beneficiary companies is not within the sector’s last decile). Amundi already considers specific indicators of the Main Negative Impacts in its exclusion policy as part of the Amundi Responsible Investment Policy (e.g. exposure to controversial weapons). These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the principles of the UN Global Compact, coal and tobacco.
- In addition to the specific sustainability factors covered by the first filter, Amundi has defined a second filter that does not consider the mandatory indicators of the Main Negative Impacts above, so as to verify that a company’s overall environmental or social performance is not worse than other companies in its sector, corresponding to an environmental or social score of E or higher according to Amundi’s ESG rating system.

Concerning external UCIs, the consideration of the “do no significant harm” principle and the impact of sustainable investments depends on each underlying UCI manager’s own methodologies.

How were the indicators for adverse impacts on sustainability factors taken into account?

As detailed above, the negative impact indicators were taken into account in the first DNSH filter (Do No Significant Harm):

This is based on the monitoring of the mandatory indicators of the Main Negative Impacts in Appendix 1, Table 1 of Delegated Regulation (EU) 2022/1288 when reliable data is available via the combination of the following indicators and specific thresholds or rules:

- has a CO2 intensity that is not within the last decile of companies in the sector (only applicable to high-intensity sectors), and
- has board diversity that is not within the last decile of companies in its sector, and
- is free from any controversy regarding working conditions and human rights
- is free from any controversy regarding biodiversity and pollution.

Amundi already takes into account the specific Negative Main Impacts in its exclusion policy as part of its Responsible Investment Policy. These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the principles of the United Nations Global Compact, coal and tobacco.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Yes. The OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights have been incorporated into Amundi’s ESG rating methodology. The proprietary ESG rating tool evaluates issuers using data available from data providers. For example, the model includes a dedicated criterion called “Community inclusion and Human rights” that is applied to all sectors in addition to other Human rights criteria, including socially responsible supply chains, working conditions and professional relations. In addition, we monitor controversies at least on

AMUNDI MSCI WATER ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

a quarterly basis, which includes companies identified for Human rights violations. When controversies arise, analysts assess the situation and apply a score to the controversy (using an exclusive, proprietary rating methodology) and determine the best steps to follow. Controversy scores are updated quarterly to track trends and remediation efforts.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The mandatory indicators of the Negative Main Impacts set out in Appendix 1, Table 1 of Delegated Regulation (EU) 2022/1288 were taken into account by implementing exclusion policies (normative and sectoral) and integrating ESG rating into the investment process, engagement and voting approaches:

- Exclusion: Amundi has defined normative exclusion rules, by activity and by sector, covering some of the main sustainability indicators listed in the “Disclosure” Regulation.
- Engagement: engagement is an ongoing and targeted process aimed at influencing companies’ activities or behaviour. The objective of the engagement can be divided into two categories: engaging an issuer to improve the way in which it integrates the environmental and social dimension and engaging an issuer to improve its impact on environmental, social and Human rights issues or other sustainability issues that are important to society and the global economy.
- Voting: Amundi’s voting policy relies on a holistic analysis of all long-term issues that may influence value creation, including material ESG issues (Amundi’s voting policy can be consulted on its website).
- Monitoring controversies: Amundi has developed a controversy monitoring system that relies on three external data providers to systematically monitor controversies and their level of severity. This quantitative approach is then enhanced by an in-depth assessment of each severe controversy conducted by ESG analysts and a periodic review of its developments. This approach applies to all Amundi funds.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period

Largest investments	Sector	% Assets	Country
XYLEM INC	Industry	9.02%	USA
REPUBLIC SERVICES INC	Industry	7.28%	USA
FERGUSON PLC NYSE	Industry	7.19%	USA
WASTE MANAGEMENT INC	Industry	7.07%	USA
GRACO INC	Industry	6.11%	USA

AMUNDI MSCI WATER ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

which is: from 01/11/2022 to 31/10/2023

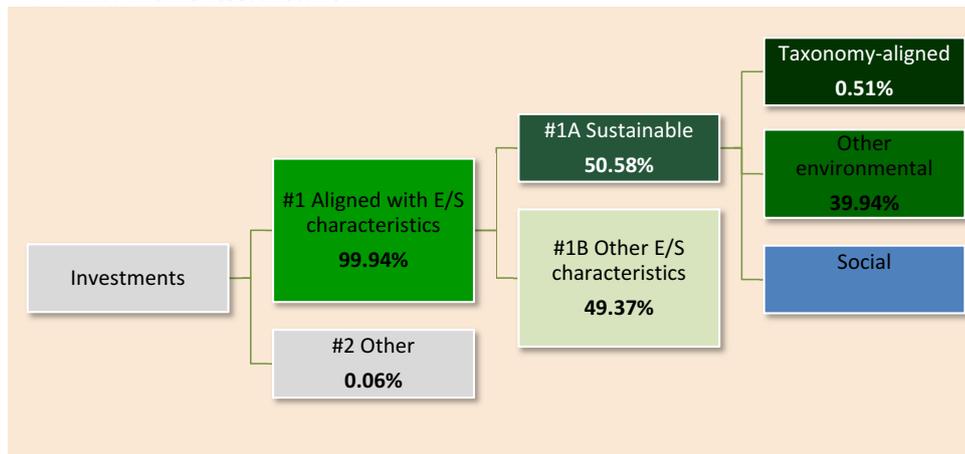

AMERICAN WATER WORKS	Utilities	5.92%	USA
GEBERIT AG-REG	Industry	5.87%	CHE
PENTAIR PLC	Industry	4.69%	USA
UNITED UTILI GRP PLC	Utilities	4.30%	GBR
SEVERN TRENT PLC	Utilities	3.97%	GBR
TETRA TECH INC	Industry	3.93%	USA
CLEAN HARBORS	Industry	3.92%	USA
FLOWSERVE CORP	Industry	2.36%	USA
WATTS WATER TECHNO-A	Industry	2.32%	USA
BADGER METER INC	Information technologies	1.99%	USA

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

AMUNDI MSCI WATER ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

Sectors	% Assets
Industry	74.97%
Utilities	21.73%
Information technologies	1.99%
Materials	1.26%
Liquid capital	0.06%

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund promotes both environmental and social characteristics. Although the fund does not commit to making Taxonomy-aligned investments, it nevertheless invested 0.51% in Taxonomy-aligned sustainable investments during the period under review. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the aforementioned objectives of the EU taxonomy is measured using data on turnover (or revenue) and/or the use of green bond proceeds.

Neither the fund's auditors nor a third party has verified the percentage alignment of the fund's investments with the EU taxonomy.

AMUNDI MSCI WATER ESG SCREENED UCITS ETF

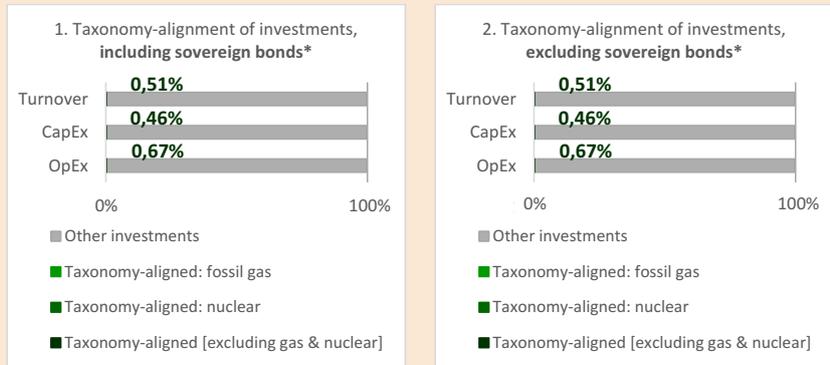

Subfund of the Sicav Multi Units France

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes:
- In fossil gas In nuclear energy
- No

Reliable data on alignment with the EU Taxonomy for fossil gas and nuclear energy was not available during the period.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Using data relating to turnover and/or the use of green bond proceeds as an indicator, 0.00% of the fund's investments were in transitional activities and 0.51% of investments were in enabling activities as at 31/10/2023. Neither the fund's auditors nor a third party has verified the percentage alignment of the fund's investments with the EU taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

AMUNDI MSCI WATER ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Alignment with the EU taxonomy was not reported during the previous period because no reliable data was available at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the Taxonomy was **39.94%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR but some of their activities are not aligned with Taxonomy standards, or data is not yet available for them to perform such an assessment.

What was the share of socially sustainable investments?

The product does not commit to a minimum share of socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash and/or other instruments held for liquidity and portfolio risk management purposes were included in category "#2 Other". For non-rated bonds and equities, minimum environmental and social guarantees are applied by filtering for controversial issues in relation to the principles of the United Nations Global Compact. Moreover, minimum environmental or social guarantees have not been defined.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. The binding elements of the index methodology ensure that environmental and/or social characteristics are met at each rebalancing date. The product strategy is also based on systematic exclusion policies (normative and sectoral) as described in more detail in Amundi's responsible investment policy.

AMUNDI MSCI WATER ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

How did this financial product perform compared to the reference benchmark?

Reference

benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error.

- **How does the reference benchmark differ from a broad market index?**

The MSCI ACWI IMI Water ESG Filtered Net Total Return index (the “Benchmark Index”) aims to represent the performance of securities having activities linked to the theme of water, such as water distribution, public utilities, and the supply of equipment related to water and water treatment. It excludes companies that are lagging behind in terms of the environmental, social, and governance (“ESG”) standards of the theme universe, based on their ESG rating.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. The product’s sustainability indicators are, consequently, generally aligned with those of the Index.

- **How did this financial product perform compared with the reference benchmark?**

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. Consequently, the product’s sustainability indicators showed an overall performance in line with that of the Index.

- **How did this financial product perform compared with the broad market index?**

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. A comparison of the index replicated by the product with its parent index is detailed under “How did the sustainability indicators perform?”.

Energy Climate Act (ECA)

Amundi MSCI Water ESG Screened UCITS ETF Acc

Annual
reporting

31/10/2023

Fund reporting Article 29 of the Energy-Climate Act (LEC - Loi énergie-climat)

This document lists the required information from funds exceeding €500 M in net assets under management pursuant to Article 29 of the LEC

The implementing decree relating to Article 29 of the Energy-Climate Act of 8 November 2019, which clarifies and strengthens the non-financial transparency measures for market participants, was published in the Official Journal of 27 May 2021.

As of the reporting date for the period, the portfolio's strategy did not take into consideration either the alignment of its assets under management with the long-term goals of Articles 2 and 4 of the Paris Agreement, which aim to hold the increase in the global average temperature to below 2°C above pre-industrial levels, or the alignment of its assets with the long-term goals relating to biodiversity in the Convention on Biological Diversity (CBD) adopted on 5 June 1992. However, Amundi has included non-financial indicators in its report that will allow it to evaluate the footprint on biodiversity of the assets held, as well as the portfolio's temperature score. The information, indicators, and methodologies described may change with time. While this report was prepared and reviewed with care and attention, Amundi and its data providers disclaim all liability for any errors or omissions that may be contained in this document, and disclaim all liability for losses or harm that may be suffered by a third party or organisation due to the use of the content of this report. Amundi has also included plans for continuous improvement in this report, including the identification of opportunities for improvement and information relating to corrective actions and strategic and operational changes it has made.

AMUNDI MSCI WATER ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Amundi MSCI Water ESG Screened UCITS ETF Acc

Annual reporting
31/10/2023

This document meets the requirements of Article 29 of the Energy-Climate Act of 8 November 2019 (called the "LEC") on non-financial reporting for market participants.

The document presents:

1. The portfolio's climate strategy, if it has a strategy of alignment with the temperature objectives of the Paris Agreement;
2. The portfolio's strategy on alignment with long-term biodiversity objectives;
3. The process for taking into account environmental, social, and governance criteria in risk management.

More information is available in Amundi's responsible investment policy and in our climate report, available on our website: <https://legroupe.amundi.com/documentation-esg>.

1. The strategy on alignment with the international goals on limiting global warming, provided for in the Paris Agreement

The fund's strategy does not consider the alignment of its assets with the long-term goals of Articles 2 and 4 of the Paris Agreement on limiting global warming.

The fund is labelled "SRI" (Socially Responsible Investment) and publishes an environmental performance indicator

The SRI label was created by the Ministry of the Economy and Finance in 2016 in order to make SRI products more visible to savers in France and Europe. The SRI Label is a single point of reference for both savers and professional investors, and distinguishes investment funds that implement robust socially responsible investment (SRI) methodologies that result in concrete, measurable results.

The fund reports on four performance indicators each month to assess the portfolio's ESG quality, including an environmental performance indicator, in particular in terms of the portfolio's carbon metrics. The fund also undertakes to achieve a better result than that of the benchmark index on 2 of the 4 indicators.

ESG reports are published on a monthly basis for open SRI funds. They compare the portfolio's ESG score to that of its benchmark index or the investment universe, which must achieve a better result than that of its starting benchmark index / universe. This information is supplemented with comments on the ESG performance of the issuers in the portfolio. Amundi also satisfies the European SRI Transparency Code each year. This code is designed and approved by the French Asset Management Association (Association Française de la Gestion Financière - AFG), the French Forum for Responsible Investment (Forum pour l'Investissement Responsable - FIR), and EUROSIF (the European Sustainable Investment Forum).

Non-financial indicators

Where appropriate, Amundi includes non-financial indicators to help evaluate the portfolio's temperature score.

Amundi uses three data providers to calculate the portfolios' temperature scores: Iceberg Data Lab, Trucost, and CDP. Their methodologies are similar, in that they all analyse historical data and/or the carbon reduction targets published by issuers in order to obtain an average temperature score.

However, there are a few appreciable differences between the three methodologies:

- All three providers analyse the issuer's ambition. But Trucost and Iceberg Data Lab include past emissions in their carbon trajectory estimates.
- Iceberg Data Lab is the only provider to pro-actively take issuer credibility into account. They analyse the actions implemented against the issuers' commitments.
- Many issuers have not yet published any carbon emission reduction targets. Accordingly, CDP has chosen to use a default trajectory of 3.2°C for these issuers.
- Trucost has developed a more precise methodology to aggregate the temperatures within a portfolio. Rather than use a weighted average, Trucost considers the carbon budgets of each company compared to a benchmark scenario in order to aggregate them within the portfolio.

Exclusion policies

Thermal coal exclusion policy

The burning of coal is the largest single contributor to climate change attributable to human activity. In 2016, Amundi established a sectoral policy dedicated to thermal coal, triggering the exclusion of certain companies and issuers. Since then, Amundi has progressively strengthened the rules and thresholds of its thermal coal policy each year.

Amundi excludes:

- Mining companies, utility companies, and transport infrastructures that develop authorised coal projects that are under construction, such as those defined on the list of coal developers established by Crédit Agricole,
- Companies whose coal projects are at the initial development stage, or that have been announced or proposed, or that have been pre-authorised, are monitored on a yearly basis.
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-based electricity production and coal mining companies with a threshold of between 20% and 50% of their total income and showing an insufficient trajectory (Amundi carries out an analysis to assess the quality of the exit plan);
- Companies that generate more than 20% of their income from thermal coal mining;
- Companies that extract 70 MT or more thermal coal annually with no intention of reducing these quantities.

The gradual elimination of coal is crucial to achieving the decarbonisation of our economies. That is why Amundi has undertaken to gradually eliminate thermal coal from its investments in OECD countries by 2030 and in other countries by 2040. In line with the UN's Sustainable Development Goals and the 2015 Paris agreements, this strategy is based on the research and recommendations of Crédit Agricole's Scientific Committee, which takes into account the energy scenarios produced by the IEA (International Energy Agency), the Climate Analysis Report, and the "Science-Based Targets".

Scope of the exclusion policy

This policy applies to all companies, but mainly affects mining companies, utilities, and transport infrastructure companies. This policy applies to all active management strategies and all passive ESG management strategies over which Amundi has full discretion, for the following entities of the Amundi Group: Amundi Asset Management, BFT IM, CPR AM, and SGG.

Using our position as an investor to motivate issuers to gradually abandon coal

Amundi has established a commitment to companies exposed thermal coal. We request that they publicly release a policy on the elimination of thermal coal in line with Amundi's 2030/2040 elimination calendar.

For companies:

- (i) Excluded from Amundi's active investment universe under our policy, and those
- (ii) Whose thermal coal policies are considered by Amundi to be behind schedule

Amundi's policy consists of voting against the discharge of the Council or the Management or against the re-election of the Chairman, the President, or certain Directors.

Exclusion policy concerning unconventional fossil fuels

Since 31 December 2022, Amundi also excludes companies whose activity is more than 30% exposed to the exploration and mining of unconventional oil and gas (covering "shale oil and gas" and "oil sands").

Case of ETFs and ESG index funds

All ETFs and ESG index funds implement Amundi's exclusion policy as far as possible (with the exception of highly concentrated indices).

Continuous improvement plan

Given the broad range of asset classes and world regions where Amundi invests on behalf of third parties, some of which do not yet have the analytical framework or data required to develop a strategy for alignment with the Paris Agreement, the implementation of such alignment strategies throughout all management activities remains a challenge.

In addition, Amundi is a third party asset management company. Its management activity is governed by contracts between Amundi and its clients, under which the investment objectives of the management portfolios delegated to Amundi by its clients are determined, particularly in terms of expected risk level, yield expectations, and requirements around diversification and sustainability preferences. We are required to obtain the agreement of our legal representatives before consenting to requirements linked to a trajectory of alignment with the Paris Agreement. That is why Amundi has launched a strategy of active dialogue with its clients, offering them the possibility of investing in products whose strategy incorporates characteristics for alignment with the goals of the Paris Agreement and counselling them in their decision-making.

1. Amundi's Climate Strategy in support of the carbon neutrality goals of the Paris Agreement

- since the end of 2020, the Board of Directors of the management company's parent company has incorporated social and environmental issues in its governance and analysed progress on a quarterly basis via key indicators linked to climate and ESG;
- the Board members held a one-day dedicated strategic seminar to define the strategy to be deployed and the practical directions for implementing the new "Ambition 2025" societal plan;
- a monthly ESG and Climate committee meeting presided by the CEO defines and validates the ESG and climate policy applicable to investments and steers the major strategic projects;
- commitments made in the framework of the Net Zero Asset Managers initiative, of which Amundi has been a signatory since July 2021:
 - a target of 18% of Amundi's assets under management Net Zero aligned by 2025 (i.e., this 18% will only be made up of funds and mandates with objectives compatible with a Net-Zero trajectory by 2050);
 - -30% carbon intensity (tCO₂e/€M of revenue) by 2025 and -60% by 2030 for all portfolios subject to the NZIF (Net Zero Investment Framework - Set of actions, metrics, and methodologies to help investors maximise their contribution to achieving the Net Zero alignment objective);
- by 2025, Amundi will also offer open transition funds towards the Net Zero 2050 objective across all major asset classes;
- achieve €20 billion in assets under "impact" funds (including funds making a positive contribution to the objectives of the Paris Agreement);
- strengthening of the targeted sectoral exclusion rules;
- Amundi invests significant resources to enable better consideration of climate issues in portfolio management:
 - significant increase in the size of its ESG team;
 - launch of ALTO* Sustainability, a technological analytics solution and decision-making support for investors on environmental and societal issues.

2. Actions taken and strategic and operational changes made in order to sustainably integrate climate into the strategy

- progressive inclusion of ESG objectives in the performance evaluations of salespersons and portfolio managers to make this dimension part of their variable remuneration. A climate and ESG training programme developed with Amundi experts for all staff so that each employee receives the appropriate training;
- implementation of a rating methodology using a "best-in-class" approach to evaluate issuers' transition efforts in relation to a Net Zero scenario. The stated objective of the portfolios concerned will be to have a better environmental transition profile than that of their reference investment universe by 2025;
- the transition to a low-carbon economy is one of the strategic directions of our engagement policy, and Amundi has committed to expanding the number of companies with which we engage in ongoing dialogue on the climate to 1,000 additional companies, with the objective that these companies will define credible strategies for reducing their carbon footprint, have them brought to a vote at their General Meetings, and have part of their managers' remuneration linked to these strategies.

Amundi will continue to develop its climate strategy in the years to come, using scientific reference scenarios and closely linked with the objectives of its clients, both by investing in solutions to accelerate the transition and by gradually aligning its portfolios with the 2050 neutrality objective.

2. The strategy on alignment with the long-term goals relating to biodiversity

The fund's strategy does not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992.

Non-financial indicators

The question of the impact of businesses on biodiversity is crucial. In 2022, Amundi was able to begin using data to calculate the biodiversity footprint of its portfolios.

The metric used to display the **biodiversity footprint** is **MSAppb*/bEUR** (1). It makes it possible to quantify the impact of a company's activities and value chain on its environment. An entity's biodiversity footprint is obtained by dividing the impact value (**MSA.ppb***) by the enterprise value to obtain the "**MSAppb*/bEUR**". To attribute a company's impact to a portfolio, this footprint is multiplied by the amount held in the portfolio.

To quantify the each company's impact on biodiversity, the upstream physical inventories necessary for conducting its activities are modelled from turnover by region and sector using the EXIOBASE input-output model. These physical flows generate pressure on biodiversity, which are modelled using the Commotools suite (raw materials analysis tool) developed by CDC Biodiversité. Finally, the **GLOBIO** (2) model translates these pressures into impacts using **MSA in %** (3) data on various ecosystems.

The output shows the impacts expressed in **MSA.km²** (4), the surface equivalent of MSA and key metric of the **GBS** (5) data. These impacts are divided into 4 "compartments" according to biome (terrestrial, freshwater aquatic) and temporality (static, dynamic). To reach an aggregated metric, the **MSA.km²** undergoes two types of normalisation:

- normalisation of the differential between the land (~130 million km²) and freshwater aquatic (~10 million km²) surface areas, through which we obtain an **MSAppb - MSA.km²** translated into parts per billion and expressed as a surface fraction of their respective biomes.
- normalisation of the differential between the static (produced from the initial state to today) and dynamic (produced over the financial year) impacts, through which we obtain an **MSAppb*** - "time integrated" metric, which integrates the static impact of the footprint for the year of analysis, amortising it over the time required to reconstitute biodiversity over the surface area in question (6).

This dual normalisation produces an indicator that takes into account all dimensions of the impact of a company's activities on biodiversity.

(1) MSAppb*/bEUR (BIA, Biodiversity Impacts Analytics – Carbone 4 Finance): aggregates both static and dynamic data from terrestrial and aquatic environments: static impacts result from the past accumulation of biodiversity losses; dynamic impacts represent impacts occurring during the relevant year. MSAppb* reduced to company value is equal to the biodiversity footprint of a company, MSA.ppb*/bEUR

(2) GLOBIO model: developed by a consortium created in 2003, composed of PBL, UNEP GRID-Arendal(13) and UNEP-WCMC. The model was created to calculate the impact of past, present, and future environmental pressures on biodiversity. It is based on pressure-impact relationships in scientific literature. GLOBIO does not use species data input to produce its results. Instead, spatial data is collected on the various environmental pressures and their impact on biodiversity is estimated. These pressures mainly come from the Integrated Model to Assess the Global Environment (IMAGE)

(3) MSA (GLOBIO): "Mean Species Abundance" is an indicator that shows the intactness of local biodiversity

(4) MSA.m2 (GBS): version of MSA% relating to surface area. A loss of 1 MSA.m2 is equivalent to 1m² of land take on a virgin natural ecosystem

(5) GBS (Global Biodiversity Score) model: expressed in a surface area metric as MSA.m2, was constructed by CDC Biodiversité. Calculating a company's biodiversity footprint via its GBS amounts to establishing a quantitative link between its activity and impacts on biodiversity. These impacts are the consequence of the contribution made by the company's economic activity to the various pressures that threaten biodiversity, which the CBD groups into five categories: habitat change, pollution, invasive alien species, climate change, and overexploitation

(6) The methodology considers that it takes 50 years for an ecosystem to return to its initial state.

Continuous improvement plan

The subject of biodiversity, which is intrinsically linked to that of climate change, occupies an increasingly important place in our societies, not just in research, but also economic considerations. Biodiversity is one of the themes of Amundi's ESG analysis. It is reflected in the methodological grid via the "Biodiversity & Pollution" criterion, and thus plays a part in the construction of issuer ESG ratings. Amundi is also particularly attentive to controversies linked to biodiversity. In 2022, Amundi continued its initiatives for a better integration of biodiversity into its internal analysis and investment processes. In addition, the subject was among the ESG Research team's top priority analysis themes in 2022, which resulted in the production of a ten-part series of research papers entitled "Biodiversity: it's time to protect our only home". The first two parts were published in 2022, while the following will be put on-line in 2023.

The subject of biodiversity is a particular focal point of the dialogue with the companies in which Amundi is invested. Following the campaigns on plastics launched in 2019, on the circular economy in 2020, and on biodiversity in 2021, Amundi strengthened its active dialogue in 2022 with companies, continuing its engagement campaign dedicated to biodiversity strategy in eight different sectors. Due to the limitations related to the data available on the subject, the first objective of this commitment is to establish an inventory of the consideration of biodiversity by the companies, then ask them to assess the responsiveness of their activities to this loss of biodiversity, and to manage the impact of their activities and products on biodiversity. In 2022, 119 companies engaged on their biodiversity strategy. As part of this engagement, Amundi provides recommendations, with the aim of better integrating these issues into their strategy. Amundi has more broadly strengthened shareholder dialogue around the preservation of natural capital. In 2022, 344 companies (a company may engage on several topics) were engaged through different programmes (including the promotion of a circular economy and better plastics management, the prevention of deforestation, and various subjects linked to such topics as the reduction of pollution or the sustainable management of water resources).

In 2022, Amundi continued its commitment to market initiatives and working groups dedicated to biodiversity. In 2021, Amundi joined the collective "Finance for Biodiversity Pledge" investor initiative and committed to collaboration and knowledge-sharing, active dialogue with companies, and to evaluating its impacts, setting objectives around biodiversity, and communicating them publicly by 2024. In addition, Amundi will produce an annual report on these portfolios' contribution to biodiversity objectives. In 2022, following the publication of its preliminary Nature-related Risk & Opportunity Management and Disclosure Framework, the TNFD (Taskforce on Nature-related Financial Disclosures) launched pilot groups to test the feasibility of this framework on various aspects. Amundi joined a pilot group led by UNEP-FI and CDC Biodiversité, intended to test the TNFD approach, and particularly the application of the GBS (Global Biodiversity Score) to financial institutions.

Amundi also aims to develop its investment policy in terms of biodiversity around several major themes, such as water or plastics, in order to strengthen engagement where necessary and exclude companies that are harmful to natural capital. An update to this policy will be published by 2024.

In terms of data, data analysis relating to the biodiversity indicator is now in place and biodiversity impact metrics are proposed for certain funds. At this stage, Amundi is not consolidating this data at asset manager or group level.

3. The process for taking into account environmental, social, and governance criteria in risk management

3.1 Identification of environmental, social, and governance risks

Amundi's Responsible Investment department constitutes a hub of expertise dedicated to the identification and assessment of risks and opportunities relating to ESG issues. This department provides the various group entities with ESG assessments of listed issuers along with climate data, used by portfolio managers.

The table below presents an overview of the various ESG risks identified by Amundi, the approach used to make assessments, and the data providers used to assess and manage the identified risks. These risks can result in several types of consequences, including but not limited to reputational risks, depreciation of asset values, litigation, or even portfolio under-performance.

Risk identified	Description	Amundi's assessment	Data provider used
Environmental Risks	Result from the way in which a company controls its direct and indirect environmental impact: energy consumption, reduction of greenhouse gas emissions, fight against resource depletion and protection of biodiversity, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Environment" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Social risks	Result from the way an issuer manages its human capital and its stakeholders (other than shareholders). This covers several notions: the social aspect linked to an issuer's human capital (accident prevention, employee training, respect for employee rights, etc.), those linked to human rights in general, and responsibilities towards stakeholders.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Social" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Governance risks	Result from the way the issuer manages its development or organises its operations and management bodies, which can potentially lead to unfair commercial practices, fraud or corruption, non-diverse management bodies, excessive remuneration, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Governance" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Risks of controversy	Possibility that an issuer or investment may be involved in controversies, litigation, or events that could harm its reputation or ability to make a profit. May include questioned business practices, violations of law, financial scandals, environmental or social problems, or other difficulties that could compromise the issuer's credibility or sustainability.	Proprietary methodology combining a quantitative filter to define the universe, then a qualitative evaluation of that universe. The latter evaluation produces a rating on a scale of 0 to 5 (5 being the worst rating). Controversies with a rating of 3 or more are considered serious.	RepRisk, MSCI, Sustainalytics

3.2 Risk and opportunity assessment

The environmental, social, and governance risks and opportunities presented in the table above are assessed via a proprietary ESG rating assigned to issuers by Amundi's Responsible Investment teams.

Rating of private issuers

Our ESG analysts are specialised by sector of activity. To identify the ESG criteria representing the risks and opportunities within each sector of activity, they are tasked with:

- Monitoring emerging and established ESG topics and trends in each sector;
- Assessing sustainability risks and opportunities as well as negative exposure to sustainability factors;
- Selecting the relevant indicators (KPI) and assigning to them the associated weightings.

Our ESG analysis methodology is based on a set of 38 criteria used to establish the ESG profile of each sector of activity. Among these 38 criteria, 17 are generic, and can be applied to companies in any sector of activity, and 21 are specific to the challenges of certain sectors.

The weighting of ESG criteria is a key element of ESG analysis. The weight attribution model is based on a materiality assessment, which can influence the value of a company through 4 vectors: regulation, reputation, the company's development model, and operational efficiency.

To weight ESG criteria, the ESG analyst considers the probability and extent of each vector's impact on the following 2 materialities (detailed in the table at the end of the section):

- 1st materiality: Ability of the company to anticipate and manage sustainable development risks and opportunities inherent to its industry and its particular circumstances;
- 2nd materiality: The management team's ability to manage the potential negative impact of their activities on sustainability factors.

This analytical approach via both materialities lets analysts prioritise risks by taking into account the particularities and events specific to each sector.

The weightings integrate the intensity of the risk incurred as well as its emerging or established nature and its time horizon. Thus, issues that are considered the most material receive the highest weight.

ESG ratings are calculated based on ESG criteria and weightings determined by analysts, who combine them with the ESG scores obtained from our external data providers. At each step of the calculation process, the scores are normalised as Z-scores. Z-scores are used to compare results to a "normal" population (difference of the issuer's score with the average score for the sector, in numbers of standard deviations). To distinguish best practices from worst practices at the sector level, each issuer is evaluated with a score that is scaled around the average for its sector. At the end of the process, each company is assigned an ESG score (between -3 and +3) and its equivalent on a scale from A to G, where A is the best score and G the worst. Grade D represents average scores (from -0.5 to +0.5); each letter corresponds to a standard deviation.

Each issuer receives only one ESG score, regardless of the chosen reference universe. The ESG score is therefore "sector-neutral", meaning that no sector is given more or less preference than another.

For the implementation of the SFDR regulation, Amundi has established a map of the environmental and social factors it deems material for different sectors. This map is presented in Amundi Asset Management's LEC 29 report.

		Regulation	Reputation	Development model	Operational effectiveness
1 st materiality	Ability of the company to anticipate and manage the risks and opportunities inherent to its industry and its particular circumstances in the area of sustainable development	✓	✓	✓	✓
2 nd materiality	The management team's ability to manage the potential negative impact of their activities on sustainability factors	✓		✓

Annual reporting
31/10/2023

Rating of sovereign issuers

The objective of the sovereign rating methodology is to assess the ESG performance of sovereign issuers. E, S, and G factors can all have an impact on a governments' ability to repay its debts in the medium to long term. They can also reflect how the country tackles the major sustainability issues that affect global stability. Amundi's methodology is based on around fifty ESG indicators deemed relevant by Amundi's ESG research to address sustainability risks and sustainability factors. Each indicator can combine multiple data points from different sources, including open international databases (such as those of the World Bank Group, the United Nations, etc.) or proprietary databases. Amundi has defined the weightings of each ESG indicator contributing to the final ESG scores and their various components (E, S, and G). The indicators come from an independent service provider. The indicators have been grouped into 8 categories to ensure greater clarity, with each category falling into one of the E, S or G pillars. Like the company ESG rating scale, the ESG score of issuers results in an ESG rating ranging from A to G.

3.3 Sustainability risk management

Amundi's approach to sustainability risk management is based on the following three pillars:

- An exclusion policy, which addresses the most important ESG risks;
- The integration of ESG ratings into investment processes, which provides a holistic understanding of the company and helps identify its particular ESG risks;
- A voting and engagement policy that helps trigger positive changes in the way companies manage their impact on essential topics related to sustainability, thus mitigating the associated risks.

3.4 Integration of sustainability risks into the entity's regular risk management framework

Sustainability risks are integrated into Amundi's internal control and risk management system.

For sustainability risk management, responsibilities are divided between:

- The first level of control, carried out directly by the management teams, and
- The second level, carried out by the risk management teams, which can constantly check the compliance of funds with their ESG objectives and constraints.

The Risk Department participates in Amundi's "Responsible Investment" governance system. They monitor compliance with regulatory requirements and risk management related to such topics.

The ESG rules are monitored by risk management teams in the same way as other management requirements. They are based on the same tools and procedures and cover our exclusion policies as well as eligibility criteria and fund-specific rules. These rules are automatically monitored using a proprietary monitoring tool. This tool can trigger:

- Pre-negotiation alerts or blocking alerts, for instance on exclusion policies;
- Post-trade alerts: managers are notified of possible overruns so as to be able to quickly rectify them.

The table below details the internal control system implemented by Amundi.

Diagram of the internal control system

Annual
reporting
31/10/2023

3.5 Frequency of risk management framework review

Our ESG analysts review the selection and weightings of Amundi's 38 criteria every 18 months for each sector of activity. This allows them to check whether the criteria and their weightings remain relevant. We continuously seek to improve our analysis by evaluating their materiality.

Amundi's Responsible Investment Policy is updated on a yearly basis.

3.6 Continuous improvement plan

Amundi strives to improve the assessment and integration of sustainability risks, including climate and environmental risks, in the management of its funds. The aim is to go from a qualitative approach to a more quantitative approach by identifying the key indicators that represent the most relevant impacts for portfolios, taking into account climate, environmental, social, and governance factors.

The project is structured in three stages:

- Define a list of sustainability risk indicators, focusing on material risks and their financial impacts on issuers;
- Gradually implement monitoring for these indicators, evaluating their results and defining limits on the basis of these indicators;
- Improve the ESG risk management framework, including the integration of indicators into risk strategies and investment restrictions.

Our current work consists of identifying the main sustainability risk factors and mapping them to issuers' financial variables. This work will end with the validation and approval of the new framework in line with Amundi's ESG governance.

The preliminary indicators considered include metrics to quantify the potential impacts of sustainability risks in terms of financial materiality and the use of "proxies" for reputational risk. The next step, planned for the second half of the current year, is to monitor the defined sustainability risk indicators and assess their impact on the managed portfolios. This monitoring will be used in discussions with the portfolio management teams and included in the various risk management reports. The final stage will focus on improving the ESG risk management framework and possibly setting internal risk alerts or limits based on the indicators. This stage is expected to be completed during the first half of 2025.

It should be noted that deadlines, indicators and implementation objectives may be subject to change throughout the project.

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Subfund features

Classification:

The Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF sub-fund (the “Sub-fund”) is an exchange-traded index-tracking UCITS fund.

Calculation and allocation of distributable amounts:

Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund’s investment objective is to give inverse exposure with daily 2x leverage (positive or negative) to the European equities market, by replicating the performance of the EURO STOXX 50® Daily Double Short index with gross dividends reinvested (the “Benchmark Index”), while minimising the tracking error between the Sub-fund’s performance and that of the Benchmark Index.

The expected ex-post tracking error under normal market conditions is 1%.

Benchmark index:

The Benchmark Index is the EURO STOXX 50® Daily Double Short strategy index with gross dividends reinvested (which means that the Benchmark Index’s performance includes the gross dividends paid by its underlying shares) denominated in euros (EUR).

The Benchmark Index is a strategy index designed by the global index provider Stoxx Ltd.

The Benchmark Index provides inverse daily exposure to the performance of the Euro Stoxx 50® Total Return index (the “Parent index”) with 2x leverage. Therefore, if the Parent Index decreases on a given day, the Sub-fund’s net asset value will increase by twice that amount that day, and conversely, if the Parent Index increases on a given day, the Sub-fund’s net asset value will decrease by twice that amount that day and investors will not benefit from the increase in the Parent Index.

The Parent Index is composed of the 50 largest stocks of the eurozone member countries. These stocks are selected on the basis of their market capitalisation, liquidity and sector representativeness. The Parent Index seeks to ensure that country and economic sector weightings reflect the eurozone’s economic structure as closely as possible.

The Benchmark Index’s daily performance is equivalent to the inverse of twice the daily performance of the Parent Index, plus the interest that is received daily on three times the Benchmark Index’s closing price, less the costs incurred from the short sale of the securities that make up the Parent Index.

The Benchmark Index is therefore used to short the Parent Index with 2x daily leverage.

A full description of the Benchmark Index and its construction methodology and information on its composition are available on the Internet at http://www.stoxx.com/download/indices/rulebooks/stoxx_strategy_guide.pdf

Benchmark Index publication

The closing price of the Benchmark Index is available on the Internet at www.stoxx.com

Pursuant to the provisions of the European Parliament and Council Regulation (EU) 2016/1011, of 8 June 2016, Stoxx Ltd, the administrator of the Benchmark Index, is registered in ESMA’s register of benchmark index administrators.

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The Benchmark Index’s composition will vary when the Parent Index is revised. The Parent Index is revised annually, in September.

The exact composition of the Benchmark Index and STOXX Ltd.’s rules for its revision are available on the Internet at www.stoxx.com/indices The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The Sub-fund's securities may consist of those that make up the Benchmark Index, as well as other international equities from all economic sectors, listed on all exchanges including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is shown to be justified by exceptional market conditions and in particular when certain securities are largely dominant and/or in the event of strong volatility that affects a financial instrument or securities linked to an economic sector represented in the Benchmark Index, particularly in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund may invest, in compliance with regulatory ratios, in global equities, in any economic sector and listed on any exchange, including small-cap exchanges. The aforementioned equities will be selected on the basis of the following:

- eligibility criteria, in particular:
 - their inclusion in major stock exchange indices or in the Benchmark Index
 - liquidity (must exceed a minimum daily trading volume and market capitalisation)
 - credit rating of the country where the issuer has its registered office (must have at least a minimum S&P or equivalent rating)
- diversification criteria, and in particular with respect to:
 - the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
 - geography
 - sector.

Investors may find more information on the above eligibility and diversification criteria, and in particular the list of eligible indices, on Amundi's website at www.amundi.com.

Investment in undertakings for collective investment in transferrable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the Sub-fund's net assets. The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is related to the Management Company. The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's equity assets (or of any other financial instrument or asset the Sub-fund may hold) for the value of the Benchmark Index (as described in subsection 1 of this section).

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

- Maximum proportion of assets under management for which total return swaps may be entered into: 100%.

- Expected proportion of assets under management for which total return swaps may be entered into: up to 100%.

A counterparty to derivative financial instruments (the "Counterparty") will have no discretion over the composition of the Sub-fund's portfolio or over the underlying assets of the derivative financial instruments.

When Société Générale is a counterparty to the aforementioned transactions involving derivative instruments, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

N/A. The manager shall not engage in any securities financing transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depositary. This collateral will therefore be included in the Sub-fund's assets.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

(a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price

(b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied

(c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;

(d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

(e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf.

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) trading in the market(s) in the Benchmark Index's underlying assets is suspended
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Daily leverage reset risk

Investors are inversely exposed to two times the daily change in the price or level of the Parent Index. Therefore, any gain in the underlying market will be inversely amplified and will imply a larger decrease in the Sub-fund's net asset value. The daily leverage reset in the underlying "double short" strategy index formula means that the Sub-fund's performance will not be equivalent to two times the inverse performance of the Parent Index for holding periods greater than one business day.

For example, if the Parent Index gains 10% on a given business day and then loses 5% the following business day, the Sub-fund's net asset value will decline by 12% (before the deduction of the applicable fees) over these two days, while the Parent Index will have gained 4.5% over the same period.

If the Parent Index loses 5% a day over two consecutive business days, it will have lost a total of 9.75%, while the Sub-fund will have gained a total of 21%, before the deduction of the applicable fees.

<u>Negative scenario 1</u>	The Parent Index rises and the leverage effect is negative and greater than 2				
	Parent index		Strategy index		
	performance day i	value day i	performance day i	value day i	leverage effect
		100		100	
Day 1	10%	110	-20%	80	x-2
Day 2	-5%	104.5	10%	88	x-2
Total return	4.50%		-12.00%		x-2.67

<u>Negative scenario 2</u>	The Parent Index falls and the leverage effect is negative and less than 2				
	Parent index		Strategy index		
	performance day i	value day i	performance day i	value day i	leverage effect
		100		100	
Day 1	-10%	90	20%	120	x-2
Day 2	6%	95.4	-12%	105.6	x-2
Total return	-4.60%		5.60%		x-1.22

Furthermore, if the Parent Index is highly volatile over a period of more than one day, the Sub-fund's net asset value may decline over this period even though the Parent Index has also declined.

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Total return	-0.25%		-1.00%		x4

- Risk that the investment objective may not be fully achieved

There is no guarantee of reaching the investment objective. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs.

- Risk of using derivative financial instruments

In order to secure the performance of the Benchmark Index and achieve its investment objective, the Sub-fund may enter into transactions involving over-the-counter derivative financial instruments (DFI), such as swaps. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

An "event that affects the index" may, for example, be any of the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted

vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking inverse exposure to increases or decreases in the European equities market, with daily 2x leverage.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their current cash requirements and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor.

Given the speculative nature of this Sub-fund it may not be suitable for investors with a medium to long-term investment horizon. "U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi EURO STOXX 50 Daily (-2x) Inverse UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark EURO STOXX 50 Double Short Index. The EURO STOXX 50 Double Short Index strategy index offers daily inverse exposure to the upward or downward movement of the Euro Stoxx 50[®] Total Return index, with a x2 leverage effect. The Euro Stoxx 50[®] index is comprised of the 50 largest shares belonging to eurozone member countries. These shares are selected for their market capitalisation, liquidity and sector representativeness. The index strives to respect a weighting by country and by economic sector reflecting the economic structure of the eurozone as much as possible.

From October 2022 to October 2023, the subfund performance is -24.82%. That of the benchmark of -24.88% with a tracking error of 0.03%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

Number of custodians	-
1 Denomination	-
Amount	-

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;

- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;

- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.60% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Subfund features

Classification:

Eurozone country equities

The Lyxor EURO STOXX 50 Daily (2x) Leveraged UCITS ETF sub-fund (the “Sub-fund”) will continuously maintain at least 60% exposure to one or more of the equity markets of one or more eurozone countries, and possibly to the French equity market.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund’s investment objective is to provide exposure with daily 2x leverage to the performance of European equities markets, whether positive or negative, by replicating the performance of the EURO STOXX 50® Daily Leverage Net Total Return index with gross dividends reinvested (the “Benchmark Index”) while minimising the tracking error between the Sub-fund’s performance and that of the Benchmark Index.

The expected ex-post tracking error under normal market conditions is 1%.

Benchmark index:

The Benchmark Index is the EURO STOXX 50® Daily Leverage Net Total Return strategy index with net dividends reinvested (which means that the Benchmark Index’s performance includes the net dividends paid by its underlying shares) denominated in euros (EUR).

The Benchmark Index is a strategy index designed by the global index provider Stoxx Ltd. It is calculated by Deutsche Börse AG.

The Benchmark Index is a strategy index that tracks the performance of the EURO STOXX 50® index (the “Parent Index”) with daily 2x leverage. The Benchmark Index’s daily performance is twice that of the Parent Index’s daily performance, less the borrowing costs that are necessary to obtain the 2x leverage. Therefore, when the Parent Index gains 2% on a given trading day, the Benchmark Index will gain 4% on that day, less the borrowing costs. Conversely, if the Parent Index falls 2% on a given trading day, the Benchmark Index will decline 4% on that day, less the borrowing costs.

The Parent Index is composed of the 50 largest stocks of the eurozone member countries. These stocks are selected on the basis of their market capitalisation, liquidity and sector representativeness. The Parent Index seeks to ensure that country and economic sector weightings reflect the eurozone’s economic structure as closely as possible.

A full description of the Benchmark Index and its construction methodology and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at www.stoxx.com/indices

The performance tracked is that of the index’s closing price in euros.

Benchmark Index publication

The closing price of the Benchmark Index is available on the Internet at www.stoxx.comwww.stoxx.com/indices

Pursuant to the provisions of European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, Stoxx Ltd, the administrator of the Benchmark Index is registered in ESMA’s register of benchmark index administrators.

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The Benchmark Index is not revised since it is a subset of the Parent Index, which is revised annually, usually in September. The Parent Index is revised annually, in September.

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

The exact composition of the Benchmark Index and STOXX Ltd.'s rules for its revision are available on the Internet at www.stoxx.com/indices. The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

The advantage of the "Leverage" strategy

The "Leverage" strategy (with a daily leverage effect) is a dynamic strategy that is applied to the Benchmark Index. By borrowing securities, it enables investors to double the effect of their investment, on a daily basis, in comparison with a "single" investment in the Parent Index. If the Benchmark Index rises, the gains on a given trading day are twice as much as obtained with an "unleveraged" investment in the Parent Index. Conversely, if the Benchmark Index falls, the loss on a given trading day will be twice as much, due to the multiplier effect of the leverage. This leverage effect also applies to the risks of this investment strategy.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The Sub-fund's securities may consist of those that make up the Benchmark Index, as well as other international equities from all economic sectors, listed on all exchanges including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

The Sub-fund will at all times invest at least 75% of its assets in companies with head offices in a Member State of the European Union or in another country that is a member of the European Economic Area and which has signed a tax convention with France that includes an administrative assistance clause for the purpose of fighting tax fraud and evasion. This minimum investment requirement qualifies the Sub-fund for French 'PEA' equity savings plans.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is shown to be justified by exceptional market conditions and in particular when certain securities are largely dominant and/or in the event of strong volatility that affects a financial instrument or securities linked to an economic sector represented in the Benchmark Index, particularly in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund will mainly invest in the equities that comprise the Benchmark Index. The aforementioned equities will be selected on the basis of the following:

- eligibility criteria, in particular:
 - their inclusion in major stock exchange indices or in the Benchmark Index
 - liquidity (must exceed a minimum daily trading volume and market capitalisation)
 - credit rating of the country where the issuer has its registered office (must have a least a minimum S&P or equivalent rating)
- diversification criteria, and in particular with respect to:
 - the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
 - geography

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

- sector.

Investors may find more information on the above eligibility and diversification criteria on Amundi's website at www.amundi.com.

Investment in undertakings for collective investment in transferrable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the Sub-fund's net assets. The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is related to the Management Company. The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's equity assets (or of any other financial instrument or asset the Sub-fund may hold) for the value of the Benchmark Index (as described in sub-section 1 of this section).

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

- Maximum proportion of assets under management for which total return swaps may be entered into: 100%.

- Expected proportion of assets under management for which total return swaps may be entered into: up to 100%.

A counterparty to derivative financial instruments (the "Counterparty") will have no discretion over the composition of the Sub-fund's portfolio or over the underlying assets of the derivative financial instruments.

When Société Générale is a counterparty to derivatives transactions, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depository.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

N/A. The manager shall not engage in any securities financing transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets.

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

(iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) trading in the market(s) in the Benchmark Index's underlying assets is suspended
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Daily leverage reset risk

Investors are exposed to twice the daily change in the price or level of the Parent Index. Therefore, any decrease in the underlying market will be amplified and will imply a larger decrease in the Sub-fund's net asset value. Since the 'leverage' index formula is reset daily the Sub-fund will not return twice as much as the Parent Index over a period of more than one trading day.

For example, if the Parent Index gains 10% on a given trading day and then declines 5% the following trading day 2, the Sub-fund will have gained 8% (before fees) over these two days, while the Parent Index will have risen 4.5% over this period.

If the Parent Index loses 5% a day over two consecutive trading days, the Sub-fund will have lost a total of 19% (before fees), while the Parent Index will have lost 9.75% over this period.

Negative example with Parent Index increasing

	Parent Index	Benchmark Index	Leverage effect
Day 1 return	+ 10%	+ 20%	x2
Day 2 return	- 5%	- 10%	x2
Total return	+4.5%	+8%	x1.78

Positive example with Parent Index falling

	Parent Index	Benchmark Index	Leverage effect
Day 1 return	- 5%	- 10%	x2
Day 2 return	- 5%	- 10%	x2
Total return	-9.75%	-19%	x1.95

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Furthermore, if the Parent Index is highly volatile over a period of more than one day, the Sub-fund's net asset value may even fall although the Parent Index rises over this period.

Example with inverse leverage

	Parent Index		Benchmark Index		Leverage effect
	Performance day i	Value day i	Performance day i	Value day i	
Day 1	20%	120	40%	140	x2
Day 2	-20%	96	-40%	84	x2
Day 3	30%	124.8	60%	134.4	x2
Day 4	-20%	99.84	-40%	80.64	x2
Day 5	10%	109.824	20%	96.768	x2
Total return	+ 9.82%		- 3.23%		x -0.33

- Risk that the investment objective may not be fully achieved

There is no guarantee of reaching the investment objective. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs.

- Risk of using derivative financial instruments

In order to secure the performance of the Benchmark Index and achieve its investment objective, the Sub-fund may enter into transactions involving over-the-counter derivative financial instruments (DFI), such as swaps. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

An "event that affects the index" may, for example, be any of the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking exposure to the equities of large eurozone companies.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

Subfund life on the year under review

On 11 october 2023, the fund changed its name from Lyxor EURO STOXX 50 Daily (2x) Leveraged UCITS ETF to Amundi EURO STOXX 50 Daily (2x) Leveraged UCITS ETF.

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi EURO STOXX 50 Daily (2x) Leveraged UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark EURO STOXX 50 Daily Leverage Index. The EURO STOXX 50 Daily Leverage Index strategy index is a subset of the Euro Stoxx® index. It measures the performance of 50 of the largest shares belonging to eurozone countries. Shares are selected for their market capitalisation, liquidity and sector representativeness. The index strives to respect a weighting by country and by economic sector reflecting the economic structure of the eurozone as much as possible. The weighting of each share in the index is adjusted according to its market capitalisation, based on the free float. Each share has a weighting in the index limited to 10%. An exhaustive description and the complete construction methodology of the EURO STOXX 50 Daily Leverage Index strategy index are available at www.stoxx.com.

From October 2022 to October 2023, the subfund performance is 26.09%. That of the benchmark of 25.50% with a tracking error of 0.27%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details

- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.40% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Subfund features

Classification:

The Lyxor EURO STOXX 50 Daily (-1x) Inverse UCITS ETF sub-fund (the “Sub-fund”) is an exchange-traded index-tracking UCITS fund.

Calculation and allocation of distributable amounts:

Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund’s investment objective is to provide inverse exposure to the daily performance of the European equities market, whether positive or negative, by replicating the performance of the EURO STOXX 50® Daily Short index with gross dividends reinvested (the “Benchmark Index”) while minimising the tracking error between the Sub-fund’s performance and that of the Benchmark Index.

The expected ex-post tracking error under normal market conditions is 1%.

Benchmark index:

The Benchmark Index is the EURO STOXX 50® Daily Double Short strategy index with gross dividends reinvested (which means that the Benchmark Index’s performance includes the gross dividends paid by its underlying shares) denominated in euros (EUR).

The Benchmark Index is a strategy index designed by the global index provider Stoxx Ltd.

The Benchmark Index provides inverse daily exposure to the performance of the Euro Stoxx 50® Total Return index (the “Parent index”). Therefore, if the Parent Index decreases on a given day, the Sub-fund's net asset value will increase that same day, and conversely, if the Parent Index increases on a given day, the Sub-fund's net asset value will decrease that same day and investors will not benefit from the increase in the Parent Index.

The Parent Index is composed of the 50 largest stocks of the eurozone member countries. These stocks are selected on the basis of their market capitalisation, liquidity and sector representativeness. The Parent Index seeks to ensure that country and economic sector weightings reflect the eurozone’s economic structure as closely as possible.

The Benchmark Index's daily performance is equivalent to the inverse of the daily performance of the Parent Index, plus the interest (at the EONIA rate) that is received daily on two times the Benchmark Index’s closing price, less the costs incurred from the short sale of the securities that make up the EURO STOXX 50® index.

The Benchmark Index is therefore used to short the Parent Index.

A full description and the complete methodology used to construct the Benchmark Index and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at www.stoxx.com/indices.

The performance tracked is that of the Benchmark Index's closing price.

Benchmark Index publication

The Benchmark Index is calculated daily at the closing price using the official closing price of the exchange where the securities that make up the index are traded. The Benchmark Index’s closing price is available on the Internet at www.stoxx.com/indices

Pursuant to the provisions of the European Parliament and Council Regulation (EU) 2016/1011, of 8 June 2016, Stoxx Ltd, the administrator of the Benchmark Index, is registered in ESMA’s register of benchmark index administrators.

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The composition of the Benchmark Index will vary when the Parent Index is revised.

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

The Parent Index is revised annually in September. The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The Sub-fund's securities may consist of those that make up the Benchmark Index, as well as other international equities from all economic sectors, listed on all exchanges including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is shown to be justified by exceptional market conditions and in particular when certain securities are largely dominant and/or in the event of strong volatility that affects a financial instrument or securities linked to an economic sector represented in the Benchmark Index, particularly in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund may invest, in compliance with regulatory ratios, in global equities, in any economic sector and listed on any exchange, including small-cap exchanges. The aforementioned equities will be selected on the basis of the following:

- eligibility criteria, in particular:
- their inclusion in major stock exchange indices or in the Benchmark Index
- liquidity (must exceed a minimum daily trading volume and market capitalisation)
- credit rating of the country where the issuer has its registered office (must have a least a minimum S&P or equivalent rating)
- diversification criteria, and in particular with respect to:
- the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
- geography
- sector.

Investors may find more information on the above eligibility and diversification criteria, and in particular the list of eligible indices, on Amundi's website at www.amundi.com.

Investment in undertakings for collective investment in transferrable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the Sub-fund's net assets. The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is related to the Management Company. The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's assets for the value of the Benchmark Index (as described in sub-section 1 of this section).

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

- Maximum proportion of assets under management for which total return swaps may be entered into: 100%.
- Expected proportion of assets under management for which total return swaps may be entered into: up to 100%.

A counterparty to derivative financial instruments (the "Counterparty") will have no discretion over the composition of the Sub-fund's portfolio or over the underlying assets of the derivative financial instruments.

When Société Générale is a counterparty to the aforementioned transactions involving derivative instruments, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depository.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

N/A. The manager shall not engage in any securities financing transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

(d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.

(e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) trading in the market(s) in the Benchmark Index's underlying assets is suspended
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation.

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Daily leverage reset risk

Investors are inversely exposed to the daily changes which affect the price or level of the Parent Index.

The daily reset in the exposure in the underlying "short" strategy index formula implies that the Sub-fund's performance will not be equivalent to the inverse performance of the Parent Index for holding periods greater than one trading day. This effectively reduces investor exposure to volatility.

For example, if the Parent Index gains 10% on a given business day and then loses 5% the following business day, the Sub-fund's net asset value will decline by 5.5% (before the deduction of the applicable fees) over these two days, while the Parent Index will have gained a total of 4.5%.

If the Parent Index loses 5% a day over two consecutive business days, it will have lost a total of 9.75%, while the Sub-fund will have gained a total of 10.25%, before the deduction of the applicable fees.

Negative scenario 1

The leverage effect is negative and is greater than 1 and the Parent Index increases

	Parent Index		Strategy index		leverage effect
	performance day i	value day i	performance day i	value day i	
		100		100	
Day 1	10%	110	-10%	90	x-1
Day 2	-8%	101.2	8%	97.2	x-1
Total return	1.20%		-2.80%		x-2.33

Negative scenario 2

The leverage effect is negative and is less than 1 and the Parent Index decreases

	Parent Index		Strategy index		leverage effect
	performance day i	value day i	performance day i	value day i	
		100		100	
Day 1	-10%	90	10%	110	x-1

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

	Parent Index		Strategy index		leverage effect
	performance day i	value day i	performance day i	value day i	
Day 2	6%	95.4	-6%	103.4	x-1
Total return	-4.60%		3.40%		x-0.74

Inverse leverage scenario

The leverage effect is positive over the period

	Parent Index		Strategy index		leverage effect
	performance day i	value day i	performance day i	value day i	
		100		100	
Day 1	5%	105	-5%	95	x-1
Day 2	-5%	99.75	5%	99.75	x-1
Total return	-0.25%		-0.25%		x1

Furthermore, if the Parent Index is highly volatile over a period of more than one day, the Sub-fund's net asset value may decline over this period even though the Parent Index has also declined.

- Risk that the investment objective may not be fully achieved

There is no guarantee of reaching the investment objective. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs.

- Risk of using derivative financial instruments

In order to secure the performance of the Benchmark Index and achieve its investment objective, the Sub-fund may enter into transactions involving over-the-counter derivative financial instruments (DFI), such as swaps. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

An "event that affects the index" may, for example, be any of the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking inverse exposure to the daily performance of the European equities market, whether positive or negative.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their current cash requirements and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor.

Given the speculative nature of this Sub-fund it may not be suitable for investors with a medium to long-term investment horizon. "U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi EURO STOXX 50 Daily (-1x) Inverse UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark EURO STOXX 50 Short Return Index. The EURO STOXX 50 Short Return Index offers daily inverse exposure to the upward or downward movement of the EURO STOXX 50® Total Return index. The index is comprised of the 50 largest shows belonging to eurozone member countries. These shares are selected for their market capitalisation, liquidity and sector representativeness. The index strives to respect a weighting by country and by economic sector reflecting the economic structure of the eurozone as much as possible. The index methodology is available at www.stoxx.com.

From October 2022 to October 2023, the subfund performance is -11.09%. That of the benchmark of -11.06% with a tracking error of 0.03%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

Number of custodians	-
1 Denomination	-

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.40% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Subfund features

Classification:

The Lyxor FTSE MIB Daily (-2x) Inverse (Xbear) UCITS ETF (the "Sub-fund") is an exchange-traded index-tracking UCITS fund.

Calculation and allocation of distributable amounts:

Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to provide inverse exposure with daily 2x leverage to the performance of the Italian equities markets, whether positive or negative, by replicating the performance of the FTSE MIB Daily Super Short Strategy RT Gross TR strategy index (the "Benchmark Index"), whether positive or negative and while minimising the tracking error between the Sub-fund's performance and that of the Benchmark Index.

The expected ex-post tracking error under normal market conditions is 1%.

Benchmark index:

The Benchmark Index is the FTSE MIB Daily Super Short Strategy RT Gross TR strategy index with gross dividends reinvested (which means that the Benchmark Index's performance includes the gross dividends paid by its underlying shares) denominated in EUR.

The Benchmark Index is a strategy index designed and maintained by FTSE.

The Benchmark Index provides inverse exposure, which is readjusted daily, to the performance of the Parent Index, whether positive or negative, and with 2x leverage. Therefore, if the Parent Index falls on one trading day, the Sub-fund's net asset value will rise by double that amount on that same day, and if the Parent Index rises on a trading day, the Sub-fund's net asset value will fall by double that amount on that day and shareholders will not be able to profit from the rise in the Parent Index.

The short positions taken on the Benchmark Index entail borrowing costs which are included in the Benchmark Index calculation methodology.

Thus, the Benchmark Index performance calculated on one trading day is equal to 2x the inverse performance of the Parent Index on that day, plus the cumulative interest received daily on three times the Benchmark Index's closing value, less the cost of short selling 2x the securities that underlie the Parent Index.

The Parent Index is free-float market capitalisation weighted and measures the performance of the 40 largest stocks on the Borsa Italiana exchange

A full description and the complete methodology used to construct the Benchmark Index and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at <http://www.ftse.com/products/indexmenu>

The performance tracked is that of the closing prices of the index equities.

Benchmark Index publication

The Benchmark Index is calculated daily at the official closing price of the exchanges where the index constituents are listed. The Benchmark Index is also calculated in real time every day that the Benchmark Index is published.

The Benchmark Index closing price is available on the index provider's website at <http://www.ftse.com/products/indexmenu>

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, FTSE International Limited, the administrator of the Benchmark Index, has until 31 December 2023 to apply to the competent authority for the necessary certification or registration.

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Benchmark Index composition and revision

The revision of the Benchmark Index's composition is dependent on the composition of the Parent Index. The Parent Index is revised quarterly.

The leverage factor used in the Benchmark Index calculation formula is reset daily. The consequences of this daily resetting are explained in the Benchmark Index and Risk Profile sections of this prospectus.

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

The exact composition of the Benchmark Index and the rules for its revision are available on the index provider's website at <http://www.ftse.com/products/indexmenu>.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The Sub-fund's securities may consist of those that make up the Benchmark Index, as well as other international equities from all economic sectors, listed on all exchanges including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index. This could be the case, for example, in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund will mainly invest in the equities that comprise the Benchmark Index. The aforementioned equities will be selected on the basis of the following:

- eligibility criteria, in particular:
 - their inclusion in major stock exchange indices or in the Benchmark Index
 - liquidity (must exceed a minimum daily trading volume and market capitalisation)
 - credit rating of the country where the issuer has its registered office (must have a least a minimum S&P or equivalent rating)
- diversification criteria, and in particular with respect to:
 - the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
 - geography
 - sector.

Investors may find more information on the above eligibility and diversification criteria on Amundi's website at www.amundi.com.

Investment in undertakings for collective investment in transferrable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the Sub-fund's net assets.

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is related to the Management Company.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's equity assets (or of any other financial instrument or asset the Sub-fund may hold) for the value of the Benchmark Index (as described in subsection 1 of this section).

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

A counterparty to derivative financial instruments (the "Counterparty") will have no discretion over the composition of the Sub-fund's portfolio or over the underlying assets of the derivative financial instruments.

- Maximum proportion of assets under management for which total return swaps may be entered into: 100%.

- Expected proportion of assets under management for which total return swaps may be entered into: up to 100%.

When Société Générale is a counterparty to the aforementioned transactions involving derivative instruments, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

N/A. The manager shall not engage in any securities financing transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depositary. This collateral will therefore be included in the Sub-fund's assets.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) trading in the market(s) in the Benchmark Index's underlying assets is suspended
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative Contract and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Daily leverage reset risk

Investors are inversely exposed to two times the daily change in the price or level of the Parent Index. Therefore, any gain in the underlying market will be inversely amplified and will imply a larger decrease in the Sub-fund's net asset value. The daily readjustment in the underlying 'double short' index formula implies that the Sub-fund's performance will not be equivalent to two times the inverse performance of the Parent Index exposure for holding periods greater than one business day. For example, if the Parent Index increases 10% on a given business day and then decreases 5% the following business day, the Sub-fund's net asset value will decline by 12% (before the deduction of fees) over these two days, while the Parent Index will have gained 4.5% over this period.

If the Parent Index falls 5% per day over two consecutive business days, it will have decreased a total of 9.75%, whereas the Sub-fund (before the deduction of fees) will have gained a total of 21%.

Negative scenario 1

The leverage effect is negative and greater than 2 and the Parent Index increases

	Parent index		Strategy index		leverage effect
	performance day i	value day i	performance day i	value day i	
		100		100	
Day 1	10%	110	-20%	80	x-2
Day 2	-5%	104.5	10%	88	x-2
Total return	4.50%		-12.00%		x-2.67

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Negative scenario 2

The leverage effect is negative and less than 2 and the Parent Index decreases

	Parent index		Strategy index		leverage effect
	performance day i	value day i	performance day i	value day i	
		100		100	
Day 1	-10%	90	20%	120	x-2
Day 2	6%	95.4	-12%	105.6	x-2
Total return	-4.60%		5.60%		x-1.22

Furthermore, if the Parent Index is highly volatile over a period of more than one day, the Sub-fund's net asset value may decline over this period even though the Parent Index has also declined.

Inverse leverage scenario

The leverage effect is positive over the period

	Parent index		Strategy index		leverage effect
	performance day i	value day i	performance day i	value day i	
		100		100	
Day 1	5%	105	-10%	90	x-2
Day 2	-5%	99.75	10%	99	x-2
Total return	-0.25%		-1.00%		x4

- Risk that the investment objective may not be fully achieved

There is no guarantee of reaching the investment objective. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs.

- Risk of using derivative financial instruments

In order to secure the performance of the Benchmark Index and achieve its investment objective, the Sub-fund may enter into transactions involving over-the-counter derivative financial instruments (DFI), such as swaps. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

An "event that affects the index" may, for example, be any of the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking inverse exposure with 2x leverage to the performance, whether positive or negative, of the Italian equities market and more specifically to the 40 largest stocks traded on the Borsa Italiana exchange.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their current cash requirements and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor.

Given this Sub-fund's speculative nature it may not be suitable for investors with a medium to long-term investment horizon. "U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi FTSE MIB Daily (-2x) Inverse UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark FTSE MIB Super Short Strategy RT Gross TR Index. The FTSE MIB Super Short Strategy RT Gross TR Index offers inverse exposure, adjusted upward or downward on a daily basis, to the FTSE MIB Gross TR index, with x2 leverage. As such, in the event of a decline in the FTSE MIB Gross TR index on a trading day, the net asset value of the fund will increase twice on the same trading day and, in the event of an increase in the FTSE MIB Gross TR index on a trading day, the fund's net asset value will fall twice on the same trading day and unitholders will not benefit from the increase in the FTSE MIB Gross TR index.

From October 2022 to October 2023, the subfund performance is -39.70%. That of the benchmark of -39.40% with a tracking error of 0.07%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

Number of custodians	-
1 Denomination	-

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details

- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

* During the year ended 10/31/2022, the composition of the portfolio was modified, as the use of temporary operations was discontinued.

This restructuring led to a significant change in the difference in the estimate on financial contracts between the two financial years (-59,464,041.44 euro), thus justifying the negative balance of capital at 10/31/2022.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI FTSE MIB DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.60% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Indication of accounting changes subject to special information to shareholders

- Changes made: None.
- Changes to occur: None.

Details and justification of changes in valuation and implementation procedures

None.

Details of the type of errors that have been corrected during the period

None.

Details of the rights and conditions attached to each share category

Acc share class: all distributable amounts are accumulated.

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Subfund features

Classification:

Eurozone country equities.

The Lyxor FTSE MIB Daily (2x) Leveraged UCITS ETF sub-fund (the "Sub-fund") will continuously maintain at least 60% exposure to one or more of the equity markets of one or more eurozone countries, and possibly to the French equity market.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

If a distribution is decided, the Board of Directors reserves the right to distribute distributable amounts one or more times a year and/or accumulate all or part of these amounts.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to provide exposure with daily 2x leverage to the performance of the Italian equities market, whether positive or negative, by replicating the performance of the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR strategy index with net dividends reinvested (the "Benchmark Index"), whether positive or negative and while minimising the tracking error between the Sub-fund's performance and that of the Benchmark Index.

The expected ex-post tracking error under normal market conditions is 1%.

Benchmark index:

The Benchmark Index is the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR strategy index with net dividends reinvested (which means that the Benchmark Index's performance includes the net dividends paid by its underlying shares) denominated in EUR.

The Benchmark Index is a strategy index designed and calculated by the international index provider FTSE and Borsa Italiana Spa.

The Benchmark Index is a strategy index that tracks the performance of the FTSE MIB Net Total Return index (the "Parent Index") with daily 2x leverage. The Benchmark Index's daily performance is twice that of the Parent Index's daily performance, less the borrowing costs that are necessary to obtain the 2x leverage. Therefore, when the Parent Index gains 2% on a given trading day, the Benchmark Index will gain 4% on that day, less the borrowing costs. Conversely, if the Parent Index falls 2% on a given trading day, the Benchmark Index will decline 4% on that day, less the borrowing costs.

The Parent Index is free-float market capitalisation weighted and measures the performance of the 40 largest stocks on the Borsa Italiana.

A full description and the complete methodology used to construct the Benchmark Index and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at <http://www.ftse.com/products/indexmenu>

The FTSE MIB Net Total Return index calculation methodology is available on the Internet at <http://www.ftse.com/products/indexmenu> The performance tracked is that of the closing prices of the index equities.

Benchmark Index publication

The Benchmark Index is calculated daily at the official closing price of the exchanges where the index constituents are listed. The Benchmark Index is also calculated in real time every day that the Benchmark Index is published.

The Benchmark Index closing price is available on the index provider's website at <http://www.ftse.com/products/indexmenu>

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, FTSE International Limited, the administrator of the Benchmark Index, has until 31 December 2023 to apply to the competent authority for the necessary certification or registration.

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The revision of the Benchmark Index's composition is dependent on the composition of the Parent Index. The Parent Index is revised quarterly.

The leverage factor used in the Benchmark Index calculation formula is reset daily. The consequences of this daily resetting are explained in the Benchmark Index and Risk Profile sections of this prospectus.

The exact composition of the Parent Index and Euronext's rules for revising this index and consequently the Benchmark Index, are available on the Internet at <http://www.ftse.com/products/indexmenu>

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

The advantage of the "Leverage" strategy

The "Leverage" strategy (with a daily leverage effect) is a dynamic strategy that is applied to the Benchmark Index. By borrowing securities, it enables investors to double the effect of their investment, on a daily basis, in comparison with a "single" investment in the Parent Index. If the Benchmark Index rises, the gain on a given day will be twice as much as with a "single" investment in the Parent Index. However, in a bear market the multiplier effect of the leverage also doubles losses on a daily basis. The daily multiplier effect also affects the risks of the overall investment strategy.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The Sub-fund's securities may consist of those that make up the Benchmark Index, as well as other international equities from all economic sectors, listed on all exchanges including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index. This could be the case, for example, in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund may invest, in compliance with regulatory ratios, in global equities, in any economic sector and listed on any exchange, including small-cap exchanges. The aforementioned equities will be selected on the basis of the following:

- eligibility criteria, in particular:
- their inclusion in major stock exchange indices or in the Benchmark Index
- liquidity (must exceed a minimum daily trading volume and market capitalisation)

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

- credit rating of the country where the issuer has its registered office (must have a least a minimum S&P or equivalent rating)
- diversification criteria, and in particular with respect to:
- the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
- geography
- sector.

The basket of equities held may be adjusted daily such that its value will generally be at least 100% of the Sub-fund's net assets. When necessary, this adjustment will be made to ensure that the market value of the swap contract mentioned above is less than or equal to zero, which will neutralise the counterparty risk arising from the swap.

Investors may find more information on the above eligibility and diversification criteria on Amundi's website at www.amundi.com.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is related to the Management Company.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's equity assets (or of any other financial instrument or asset the Sub-fund may hold) for the value of the Benchmark Index (as described in sub-section 1 of this section).

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

A counterparty to derivative financial instruments (the "Counterparty") will have no discretion over the composition of the Sub-fund's portfolio or over the underlying assets of the derivative financial instruments.

- Maximum proportion of assets under management for which total return swaps may be entered into: 100%.
- Expected proportion of assets under management for which total return swaps may be entered into: up to 100%.

When Société Générale is a counterparty to the aforementioned transactions involving derivative instruments, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

N/A. The manager shall not engage in any securities financing transactions.

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depositary. This collateral will therefore be included in the Sub-fund's assets.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) trading in the market(s) in the Benchmark Index's underlying assets is suspended
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Daily leverage reset risk

The Sub-fund may be exposed to a legal risk arising from a total return swap (TRS) agreement as indicated in EU Regulation NO. 2015/2365. In particular, any decrease in the underlying market will be amplified and will imply a larger decrease in the Sub-fund's net asset value. Since the leverage in the Benchmark Index formula is reset daily the Sub-fund will not return twice as much as the Parent Index over a period of more than one trading day. For example, if the Parent Index gains 10% on a given trading day and then declines 5% the following trading day 2, the Sub-fund will have gained 8% (before fees) over these two days, while the Parent Index will have risen 4.5% over this period.

If the Parent Index falls 5% per day over two consecutive business days, it will have decreased a total of 9.75%, whereas the Sub-fund (before the deduction of the applicable fees) will have declined a total of 19% over this same period.

Negative scenario 1

The leverage effect is greater than 2 and the Parent Index decreases

	Parent Index		Strategy Index		Leverage effect
	Performance day i	Value day i	Performance day i	Value day i	
		100		100	
Day 1	10%	110	20%	120	x2

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

	Parent Index		Strategy Index		
	Performance day i	Value day i	Performance day i	Value day i	Leverage effect
Day 2	-11%	97.9	-22%	93.6	x2
Total return	-2.10%		-6.40%		x3,05

Negative scenario 2

The leverage effect is less than 2 and the Parent Index increases

	Parent Index		Strategy Index		
	Performance day i	Value day i	Performance day i	Value day i	Leverage effect
		100		100	
Day 1	-5%	95	-10%	90	x2
Day 2	6%	100.7	12%	100.8	x2
Total return	0.70%		0.80%		x1,14

Moreover, if the Parent Index is highly volatile over a period of more than one day, the Sub-fund's net asset value may decline over this period even though the Parent Index has increased.

Inverse leverage scenario

The leverage effect is negative over the period

	Parent Index		Strategy Index		
	Performance day i	Value day i	Performance day i	Value day i	Leverage effect
		100		100	
Day 1	20%	120	40%	140	x2
Day 2	-16%	100.8	-32%	95.2	x2
Total return	0.80%		-4.80%		x-6

- Risk that the investment objective may not be fully achieved

There is no guarantee of reaching the investment objective. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs.

- Risk of using derivative financial instruments

In order to secure the performance of the Benchmark Index and achieve its investment objective, the Sub-fund may enter into transactions involving over-the-counter derivative financial instruments (DFI), such as swaps. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

An "event that affects the index" may, for example, be any of the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking inverse exposure to the 40 largest stocks traded on the Borsa Italiana exchange. The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Subfund life on the year under review

On 11 october 2023, the fund changed its name from Lyxor FTSE MIB Daily (2x) Leveraged UCITS ETF to Amundi FTSE MIB Daily (2x) Leveraged UCITS ETF.

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi FTSE MIB Daily (2x) Leveraged UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark FTSE MIB Leveraged RT Net-of-Tax Lux TR Index. The FTSE MIB Leveraged RT Net-of-Tax TR Index offers exposure with x2 leverage, adjusted upward or downward on a daily basis, to changes in the FTSE MIB Net Total Return index. As such, in the event of an increase in the FTSE MIB Net Total Return index on a trading day, the fund's net asset value will increase twice on the same trading day and, in the event of a decline in the FTSE MIB Net Total Return index on a trading day, the fund's net asset value will decrease twice on the same trading day.

From October 2022 to October 2023, the subfund performance is 52.46%. That of the benchmark of 51.86% with a tracking error of 0.36%.

The performance achieved over the period does not prejudice the future results of the subfund.

Main movements in the portfolio during the year

Securities	Movements ("Accounting currency")

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

* During the year ended 10/31/2022, the composition of the portfolio was modified, as the use of temporary operations was discontinued.

This restructuring led to a significant change in the difference in the estimate on financial contracts between the two financial years (-EUR 139,168,422.71), thus justifying the negative capital balance at 10/31/2022.

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.60% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Indication of accounting changes subject to special information to shareholders

- Changes made: None.
- Changes to occur: None.

Details and justification of changes in valuation and implementation procedures

None.

Details of the type of errors that have been corrected during the period

None.

Details of the rights and conditions attached to each share category

If a distribution is decided, the Board of Directors reserves the right to distribute distributable amounts one or more times a year and/or accumulate all or part of these amounts.

Subfund of the Sicav Multi Units France

Subfund features

Classification:

The Lyxor FTSE MIB Daily (-1x) Inverse (Bear) UCITS ETF sub-fund (the "Sub-fund") is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to provide inverse exposure to the performance of the Italian equities markets, whether positive or negative, by replicating the performance of the FTSE MIB Daily Short Strategy RT Gross TR strategy index with net dividends reinvested (the "Benchmark Index"), whether positive or negative and while minimising the tracking error between the Sub-fund's performance and that of the Benchmark Index.

The expected ex-post tracking error under normal market conditions is 1%.

Benchmark index:

The Benchmark Index is the FTSE MIB Daily Short Strategy RT Gross TR strategy index with gross dividends reinvested (which means that the Benchmark Index's performance includes the gross dividends paid by its underlying shares) denominated in EUR (the "Benchmark Index").

The Benchmark Index is a strategy index designed and calculated by the international index provider FTSE and Borsa Italiana Spa.

The Benchmark Index provides inverse exposure, which is reset daily, to increases and decreases in the Parent Index. Therefore, if the Parent Index decreases on a given day, the Sub-fund's net asset value will increase by the same amount that day, and conversely, if the Parent Index increases on a given day, the Sub-fund's net asset value will decrease by as much that day and investors will not benefit from the increase in the Parent Index.

The short positions taken on the Benchmark Index entail borrowing costs which are included in the Benchmark Index calculation methodology.

Thus, the Benchmark Index performance calculated on one trading day is equal to the inverse performance of the Parent Index on that day, together with interest received daily on 2x the previous Benchmark Index closing price less the cost of short positions for this trading day on the FTSE MIB index securities.

The Parent Index is free-float market capitalisation weighted and measures the performance of the 40 largest stocks on the Borsa Italiana.

A full description and the complete methodology used to construct the Benchmark Index and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at <http://www.ftse.com/products/indexmenu>

The performance tracked is that of the Benchmark Index's closing price denominated in euros.

Benchmark Index publication

The Benchmark Index is calculated daily at the official closing price of the exchanges where the index constituents are listed. The Benchmark Index is also calculated in real time every day that the Benchmark Index is published.

The Benchmark Index closing price is available on the index provider's website at <http://www.ftse.com/products/indexmenu>

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, FTSE International Limited, the administrator of the Benchmark Index, has until 31 December 2023 to apply to the competent authority for the necessary certification or registration.

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Benchmark Index composition and revision

The revision of the Benchmark Index's composition is dependent on the composition of the Parent Index. The Parent Index is revised quarterly.

The leverage factor used in the Benchmark Index calculation formula is reset daily. The consequences of this daily resetting are explained in the Benchmark Index and Risk Profile sections of this prospectus.

The exact composition of the Benchmark Index and Euronext's rules for revising the Benchmark Index are available on the index provider's website at <http://www.ftse.com/products/indexmenu>.

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The Sub-fund's securities may consist of those that make up the Benchmark Index, as well as other international equities from all economic sectors, listed on all exchanges including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index. This could be the case, for example, in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund may invest, in compliance with regulatory ratios, in global equities, in any economic sector and listed on any exchange, including small-cap exchanges. The aforementioned equities will be selected on the basis of the following:

- eligibility criteria, in particular:
- their inclusion in major stock exchange indices or in the Benchmark Index
- liquidity (must exceed a minimum daily trading volume and market capitalisation)
- credit rating of the country where the issuer has its registered office (must have a least a minimum S&P or equivalent rating)
- diversification criteria, and in particular with respect to:
- the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
- geography
- sector.

Investors may find more information on the above eligibility and diversification criteria on Amundi's website at www.amundi.com.

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Investment in undertakings for collective investment in transferrable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the Sub-fund’s net assets.

The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is related to the Management Company.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's equity assets (or of any other financial instrument or asset the Sub-fund may hold) for the value of the Benchmark Index (as described in sub-section 1 of this section).

To optimise the Sub-fund’s management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

A counterparty to derivative financial instruments (the “Counterparty”) will have no discretion over the composition of the Sub-fund’s portfolio or over the underlying assets of the derivative financial instruments.

- Maximum proportion of assets under management for which total return swaps may be entered into: 100%.

- Expected proportion of assets under management for which total return swaps may be entered into: up to 100%.

When Société Générale is a counterparty to the aforementioned transactions involving derivative instruments, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company’s conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

N/A. The manager shall not engage in any securities financing transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund’s counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund’s counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund’s account with the depositary. This collateral will therefore be included in the Sub-fund’s assets.

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

(iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) trading in the market(s) in the Benchmark Index's underlying assets is suspended
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Daily leverage reset risk

Investors are inversely exposed to the daily change in the price or level of the Parent Index.

The daily reset in the exposure in the underlying "short" strategy index formula implies that the Sub-fund's performance will not be equivalent to the inverse performance of the Parent Index for holding periods greater than one trading day. For example, if the Parent Index increases 10% on a given business day and then decreases 5% the following business day, the Sub-fund's net asset value will decline by 5.5% (before the deduction of the applicable fees) over these two days, while the Parent Index will have gained a total of 4.5%. If the Parent Index decreases 5% per day over two consecutive business days it will have decreased a total of 9.75%, while the Sub-fund will have gained a total of 10.25% over this period (before the deduction of the applicable fees).

Negative scenario 1

The Parent Index increases and the leverage effect is negative and greater than 1

	Parent Index		Strategy Index		Leverage effect
	Performance day i	Value day i	Performance day i	Value day i	
		100		100	
Day 1	10%	110	-10%	90	x-1
Day 2	-8%	101.2	8%	97.2	x-1
Total return	1.20%		-2.80%		x-2.33

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Negative scenario 2

The Parent Index decreases and the leverage effect is negative and less than 1

	Parent Index		Strategy Index		Leverage effect
	Performance day i	Value day i	Performance day i	Value day i	
		100		100	
Day 1	-10%	90	10%	110	x-1
Day 2	6%	95.4	-6%	103.4	x-1
Total return	-4.60%		3.40%		x-0.74

Furthermore, if the Parent Index is highly volatile over a period of more than one day, the Sub-fund's net asset value may decline over this period even though the Parent Index has also declined.

Inverse leverage scenario

The leverage effect is positive over the period

	Parent Index		Strategy Index		Leverage effect
	Performance day i	Value day i	Performance day i	Value day i	
		100		100	
Day 1	5%	105	-5%	95	x-1
Day 2	-5%	99.75	5%	99.75	x-1
Total return	-0.25%		-0.25%		x1

- Risk that the investment objective may not be fully achieved

There is no guarantee of reaching the investment objective. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs.

- Risk of using derivative financial instruments

In order to secure the performance of the Benchmark Index and achieve its investment objective, the Sub-fund may enter into transactions involving over-the-counter derivative financial instruments (DFI), such as swaps. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

An "event that affects the index" may, for example, be any of the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund will be inversely exposed to increases and decreases in the prices of Italian equities and more specifically to the 40 largest stocks listed on the Borsa Italiana.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their current cash requirements and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor.

Given this Sub-fund's speculative nature it may not be suitable for investors with a medium to long-term investment horizon. "U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

Subfund life on the year under review

On 11 october 2023, the fund changed its name from Lyxor FTSE MIB Daily (-1x) Inverse (Bear) UCITS ETF to Amundi FTSE MIB Daily (-1x) Inverse UCITS ETF.

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi FTSE MIB Daily (-1x) Inverse UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark FTSE MIB Short Strategy RT Gross TR Index. The FTSE MIB Short Strategy RT Gross TR Index offers inverse exposure, adjusted upward or downward on a daily basis, to the FTSE MIB Gross Total Return index. As such, in the event of a decline in the FTSE MIB Gross Total Return index on a trading day, the fund's net asset value will increase on the same trading day and, in the event of an increase in the FTSE MIB Gross Total Return index on a trading day, the fund's net asset value will fall on the same trading day and unitholders will not benefit from the increase in the FTSE MIB Gross Total Return index.

From October 2022 to October 2023, the subfund performance is -20.39%. That of the benchmark of -19.96% with a tracking error of 0.03%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI FTSE MIB DAILY (-1X) INVERSE UCITS ETF Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.60% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Indication of accounting changes subject to special information to shareholders

- Changes made: None.
- Changes to occur: None.

Details and justification of changes in valuation and implementation procedures

None.

Details of the type of errors that have been corrected during the period

None.

Details of the rights and conditions attached to each share category

Acc share class: all distributable amounts are accumulated.

Subfund features

Calculation and allocation of distributable amounts:

Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to provide inverse exposure to the daily performance, whether positive or negative, of German sovereign bonds having a residual maturity of 8.5 to 10.5 years, with daily 2x inverse leverage, by replicating the performance of the Solactive BTP Daily (-2x) Leveraged Index (the 'Benchmark Index'), denominated in euros (EUR), while minimising the tracking error between the Sub-fund's performance and that of its Benchmark Index.

The expected ex-post tracking error under normal market conditions is 0.50%.

Benchmark index:

The Benchmark Index is a strategy index developed by Solactive AG using a proprietary methodology. The Benchmark Index is calculated and maintained by Solactive AG.

The Benchmark Index provides inverse exposure, with daily 2x leverage, to the performance, whether positive or negative, of German sovereign bonds having a residual maturity of 8.5 to 10.5 years, of which Euro-Bund futures contracts are a representative indicator. Accordingly, if EUR-Bund futures fall on a given trading day, the Sub-fund's net asset value should rise twice as much that day, and if EUR-Bund futures rise on a given trading day, the Sub-fund's net asset value should fall by twice as much that day, and share-holders will not profit from the rise of Euro-Bund futures.

Euro-Bund futures are a representative indicator of the performance of German sovereign bonds having a residual maturity of 8.5 to 10.5 years. They are traded on Eurex. The methodology employed is available at www.eurexchange.com

The Benchmark Index's daily performance is the inverse of twice the performance of the Euro-Bund futures, plus the daily interest (at the benchmark rate) paid on the fixing of the previous day's Benchmark Index.

This index is therefore representative of a short position on Euro-Bund futures, with 2x leverage and daily adjustment. The index may be further adjusted during a trading session if it falls by more than 40%, i.e. if the absolute daily increase in Euro-Bund futures exceeds 20%.

The performance tracked is that of the Benchmark Index's closing fixing in euros.

Since the methodology used to calculate the Benchmark Index is not based on direct investment in Bunds but on indirect investment in futures, the Sub-fund's performance will be affected by the cost of 'rolling over' positions on these futures contracts every quarter.

Over time this could significantly diminish the Sub-fund's performance in comparison with the gross performance of the long positions on the underlyings of the aforementioned futures contracts, particularly in the case of a long-term investment in the Sub-fund.

A full description of the Benchmark Index and its construction methodology and information on its composition are available on the Internet at <https://www.solactive.com>.

Benchmark Index composition and revision

The Benchmark Index is rebalanced daily.

The frequency of the aforementioned adjustment could have an impact on the Sub-fund's costs and could therefore diminish its performance.

Benchmark index publication

The Benchmark Index is calculated daily using the official closing fixing of Euro-Bund futures at 5.15 pm. The Benchmark Index's fixing is available on the index provider's website at <https://www.solactive.com>.

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Pursuant to the provisions of European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, Solactive AG, the administrator of the Solactive BTP Daily (-2x) Leveraged Index, is registered in ESMA's register of benchmark index administrators.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The Benchmark Index is rebalanced daily.

The exact composition of the Benchmark Index and the rules for its revision are available on the index provider's website at <https://www.sgindex.fr/> The frequency of this rebalancing will have an impact on the Sub-fund's costs and could therefore diminish its performance.

Since the methodology used to calculate the Benchmark Index is not based on direct exposure to German government bonds (Bunds) but on indirect exposure via futures contracts, the Sub-fund's performance will be affected by the cost of 'rolling over' positions on these futures contracts each quarter.

Over time, this could significantly diminish the Sub-fund's performance in comparison with the gross performance of the short positions on the underlying of the aforementioned futures contracts, particularly in the case of a long-term investment in the Sub-fund's shares.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The securities in which the Sub-fund may invest may include those that make up the Benchmark Index, and may also include other securities from all economic sectors, listed on all financial markets, including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

Up to 20% of the Sub-fund's assets may be exposed to debt issued by a non-OECD country. This 20% limit can be increased to 35% for a single bond, when this is justified by exceptional market conditions and in particular when certain securities are largely dominant, or a debt issue is highly volatile, or a political and/or economic event has affected or may affect the estimated debt of an issuing country or its credit rating, or in any other event that is likely to affect the liquidity of a Benchmark Index security.

Notwithstanding the above, the securities guaranteed or issued by a given sovereign issuer may represent up to 35% of the assets, and 100% of the assets if the Sub-fund holds at least six issues none of which exceeds 30% of the assets, provided that these securities are financial instruments issued or guaranteed by an OECD Member State, the local authorities of a European Union Member State or a country that is a member of the European Economic Area.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

In accordance with regulatory ratios, the Sub-fund may invest in eurozone equities in all economic sectors and listed on any exchange, including small-cap exchanges. These securities will be bonds selected on the basis of the following criteria:

- eligibility criteria, in particular:

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- senior debt
- fixed maturity
- maximum residual maturity
- minimum issuance size
- minimum S&P or equivalent credit rating
- diversification criteria, and in particular with respect to:
 - the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
 - geography
 - sector.

Investors may find more information on the above eligibility and diversification criteria on Amundi's website at www.amundi.com.

Investment in undertakings for collective investment in transferrable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the Sub-fund's net assets. The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is related to the Management Company. The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's securities (or of any other financial instrument or asset the Sub-fund may hold) for the value of the Benchmark Index (as described in subsection 1 of this section).

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

A counterparty to derivative financial instruments (the "Counterparty") will have no discretion over the composition of the Sub-fund's portfolio or over the underlying assets of the derivative financial instruments.

- Maximum proportion of assets under management for which total return swaps may be entered into: 100%.
- Expected proportion of assets under management for which total return swaps may be entered into: up to 100%.

When Société Générale is a counterparty to the aforementioned transactions involving derivative instruments, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

7. Securities financing transactions

N/A. The manager shall not engage in any securities financing transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Interest rate risk

The price of a bond can be affected by unexpected changes in the level of interest rates, which in particular may modify the shape of the yield curve in particular. The bonds that make up the Benchmark Index are exposed to changes in interest rates. In general, the price of a bond rises when interest rates fall, and falls when interest rates rise.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) the market(s) in the Benchmark Index's underlying assets is (are) suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative Contract and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Daily double-short leverage reset risk

Investors are inversely exposed to two times the daily increase or decrease in the price of the Bund futures that underlie the Benchmark Index. Therefore, any gain in the underlying market will be inversely amplified and will result in a larger decrease in the Sub-fund's net asset value. Since the underlying 'double short' index formula is reset daily, the Sub-fund's performance will not be equivalent to two times the inverse performance of the Bund futures over periods of more than one business day. This effectively reduces investor exposure to volatility.

For example, if the Bund futures that underlie the Benchmark Index rise 10% on a given business day, and then fall 5% on the next business day, the Sub-fund will decline a total 12% over these two days (before the deduction of the applicable fees), whereas the Bund futures that underlie the Benchmark Index will have gained 4.50% over this period.

If the Bund futures that underlie the Benchmark Index fall 10% on a given business day and then rise 6% the following business day, the Sub-fund will gain 5.60% over these two days (before deduction of the applicable fees), whereas the Bund futures that underlie the Benchmark Index will have lost 4.60% over this period.

Accordingly, if the Bund futures that underlie the Benchmark Index gain 5% on a given business day and then fall 5% the following business day, the Sub-fund will lose 1% over these two days (before the deduction of the applicable fees),

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

while the Bund futures that underlie the Benchmark Index will have also declined over this period, but only by 0.25%

Negative scenario 1

The overall price of the Benchmark Index's underlyings increases and the leverage effect is negative and greater than 2

	Benchmark Index underlying		Strategy Index		Leverage effect
	Performance day i	Value day i	Performance day i	Value day i	
		100		100	
Day 1	10%	110	-20%	80	x-2
Day 2	-5%	104.5	10%	88	x-2
Total return	4.50%		-12.00%		x-2,67

Negative scenario 2

The overall price of the Benchmark Index's underlyings decreases and the leverage effect is negative and less than 2

	Benchmark Index underlying		Strategy Index		Leverage effect
	Performance day i	Value day i	Performance day i	Value day i	
		100		100	
Day 1	-10%	90	20%	120	x-2
Day 2	6%	95.4	-12%	105.6	x-2
Total return	-4.60%		5.60%		x-1,22

Furthermore, it is possible that if the Benchmark Index underlying is highly volatile over a period of more than one day the Sub-fund's net asset value may decline even though the Benchmark Index's underlying also declines over this period.

Inverse leverage scenario:

The leverage effect is positive over the period

	Benchmark Index underlying		Strategy Index		Leverage effect
	Performance day i	Value day i	Performance day i	Value day i	
		100		100	
Day 1	5%	105	-10%	90	x-2
Day 2	-5%	99.75	10%	99	x-2
Total return	-0.25%		-1.00%		x4

- Futures roll-over risk

Since the Benchmark Index consists of futures contracts on German government bonds (Bunds), maintaining this exposure requires that positions on these contracts be rolled over from one quarter to the next. This 'roll-over' involves transferring the position on a futures contract that is about to mature (and in any case before the contract expires) to a futures contract with a longer maturity.

When futures contracts are rolled over investors may be exposed to a potential loss or gain. In some market

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

configurations quarterly roll-over could systematically generate a loss and thus over time significantly diminish the Sub-fund's performance in comparison with the gross performance of the underlying of the aforementioned futures contracts, particularly in the case of a long-term investment in the Sub-fund's shares.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs:

- Risk of using derivative financial instruments

In order to achieve its investment objective, the Sub-fund can enter into over-the-counter derivative financial instruments ("DFI"), such as swaps, in order to achieve the performance of the Benchmark Index. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index,
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking inverse exposure to the performance, whether positive or negative and with daily 2x leverage, of German sovereign bonds having a residual maturity of 8.5 to 10.5 years.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor.

Given this Sub-fund's speculative nature it may not be suitable for investors with a medium to long-term investment horizon. "U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

Subfund life on the year under review

On 11 october 2023, the fund changed its name from LYXOR BUND DAILY (-2X) INVERSE UCITS ETF to AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF.

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi German Bund Daily (-2x) Inverse UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the Solactive Bund Daily (-2x) Inverse Index. The main objective of the Solactive Bund Daily (-2x) Inverse Index is to deliver twice the daily inverse performance of a portfolio of 10-year German government bonds by avoiding the costs associated with the use of physical bonds, namely the cost of borrowing securities and daily buy-sell spreads. The index combines a long position in a daily EONIA investment with a double short position in Bund futures, with the notional of the combination of these two positions rebalanced daily.

From October 2022 to October 2023, the subfund performance is 9.78%. That of the benchmark of 10.15% with a tracking error of 0.02%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI GERMAN BUND DAILY (-2X) INVERSE UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.20% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Indication of accounting changes subject to special information to shareholders

- Changes made: None.
- Changes to occur: None.

Details and justification of changes in valuation and implementation procedures

None.

Details of the type of errors that have been corrected during the period

None.

Details of the rights and conditions attached to each share category

Acc share class: all distributable amounts are accumulated.

Unit capitalisation ⁽²⁾	3.90	10.10	2.59	-2.42	-4.98

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

⁽²⁾ The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

Subfund creation date: September 6, 2018.

AMUNDI FTSE MIB UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Classification:

Eurozone equities.

The Lyxor FTSE MIB UCITS ETF sub-fund (the "Sub-fund") will continuously maintain at least 60% exposure to one or more of the equity markets of one or more eurozone countries, and possibly to the French equity market.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Dist share class: the Board of Directors reserves the right to distribute distributable amounts one or more times a year and/or accumulate all or part of these amounts. Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to replicate the performance, whether positive or negative, of the FTSE MIB™ Net Total Return (with net dividends reinvested) index denominated in euros (the "Benchmark Index") while minimising the tracking error between the Sub-fund's performance and that of its Benchmark Index.

The expected maximum ex-post tracking error under normal market conditions is 0.50%.

Benchmark index:

The Benchmark Index measures the performance of 40 stocks listed on the Italian stock exchange and aims to replicate the sector breakdown of the Italian stock market.

The Benchmark Index is a Net Total Return index which means that the Benchmark Index's performance includes the net dividends paid by its underlying shares.

The composition of the Benchmark Index is based on three criteria: free float, liquidity, and the representativeness of the market's main sectors as defined under the Industrial Classification Standard (ICB).

A full description and the complete methodology used to construct the Benchmark Index and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at: <http://www.ftse.com>

The performance tracked is that of the Benchmark Index's closing price.

Benchmark Index publication

The Benchmark Index's closing price is available on the FTSE's website at <http://www.ftse.com>

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, FTSE International Limited, the administrator of the Benchmark Index, has until 31 December 2023 to apply to the competent authority for the necessary certification or registration.

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The Benchmark Index is rebalanced quarterly.

The exact composition of the Benchmark Index and Euronext's rules for its revision by are available on its website at <http://www.ftse.com>

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will be exposed to the latter through “direct replication”, which means that the Sub-fund will invest mainly in a basket of assets composed of the securities that underlie the Benchmark Index and/or in financial instruments that are representative of all or some of the Benchmark Index securities.

The Sub-fund may also invest in derivative financial instruments (DFI). The DFI in which the Sub-fund may invest include, inter alia, futures contracts on indices or on all or some of the Benchmark Index components, and hedging swaps, in particular to minimise the Sub-fund’s tracking error.

When the Sub-fund holds cash, in accordance with the investment strategy (e.g. when using futures), the fund manager may, in the best interest of investors, deposit this cash with a credit institution or invest it in balance sheet assets and/or off balance sheet assets (as described below).

In order to optimise the direct replication method that is used to track the Benchmark Index, the Sub-fund, represented by its delegated asset manager, may decide to employ a “sampling” technique that consists in investing in a selection of representative Benchmark Index constituents in order to reduce the costs of investing directly in all of the various Benchmark Index constituents. This sampling technique could cause the Sub-fund to invest in a selection of representative Benchmark Index securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Index, and even to invest in securities that are not constituents of the Benchmark Index.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Index or sampling to limit replication costs) and on its consequences in terms of the assets in the Sub-fund’s portfolio, information on the updated composition of the basket of balance sheet assets in the Sub-fund’s portfolio is available on the page dedicated to the Sub-fund on Amundi’s website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

The Sub-fund will at all times invest at least 75% of its assets in companies that have their registered office in a Member State of the European Union or a country that is a member of the European Economic Area and which has signed a tax convention with France that includes an administrative assistance clause for the purpose of fighting tax fraud and evasion. Compliance with this minimum investment requirement makes the Sub-fund eligible for French 'PEA' equity savings plans.

The Sub-fund may invest up to 20% of its assets in the equities of a single issuer. This 20% limit may be increased to 35% for a single issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index, particularly in the event of a public offering affecting any of the securities that make up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments in the Benchmark Index.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund will mainly invest in the securities described below:

• Equities

The Sub-fund will mainly invest in the equities that comprise the Benchmark Index.

• Shares or units in other CIU or investment funds

The Sub-fund may invest up to 10% of its assets in the shares or units of the following collective investment undertakings (CIU) or investment funds:

- French and foreign UCITS that comply with Directive 2009/65/EC. The Sub-fund may invest in shares or units of UCITS that are managed by the Management Company or by a company that is related to the Management Company.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is affiliated with the Management Company.

3. Off-balance sheet assets (derivatives)

The Sub-fund may trade in derivatives subject to the following conditions:

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

• Eligible markets

- regulated
- organised
- over-the-counter

• Risks the Sub-fund may hedge or increase exposure to

- equity

• Purpose (all transactions must be consistent with the investment objective)

- hedging
- exposure

• Eligible instruments:

- futures: on equities and indices
- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- to hedge the overall portfolio against certain risks, securities, etc. (up to 100% of assets)
- to achieve synthetic exposure to assets or risks (up to 100% of assets)

The counterparties for the Sub-fund's OTC derivatives transactions will be selected in accordance with the Management Company's best-execution policy (including with the execution matrix for each type of asset shown in the Appendix). The aforementioned policy is available at www.amundi.com.

Counterparties to derivative financial instruments will have no discretion over the composition of the Sub-fund's investment portfolio, nor over the underlying assets of these derivative instruments, in accordance with regulatory limits and requirements.

When Crédit Agricole is a counterparty to DFI, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

The Sub-fund may use various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French monetary and financial code, including the temporary sale and repurchase of securities.

- Maximum proportion of assets under management for which securities financing transactions may be entered into: up to 25% of the Sub-fund's assets.
- Expected proportion of assets under management for which securities financing transactions may be entered into: 0% of the Sub-fund's assets.

For this purpose, the Management Company has appointed Société Générale as its intermediary (hereinafter the "Agent"). If transactions involving the temporary disposal of securities are engaged in, the Agent may be authorised to (i) lend securities, on the Sub-fund's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Sub-fund's behalf, any liquid assets received as collateral for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

When Société Générale S.A. is appointed as an Agent, it is not authorised to act as a counterparty to securities lending transactions. If securities are lent:

- the Sub-fund shall be entitled to all income from securities financing transactions, net of any direct and indirect operating fees/expenses.

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

- the aforementioned operating fees/expenses, which are incurred to manage the portfolio more efficiently, will be those borne by The Sub-fund's Management Company, the Agent (if applicable) and/or other intermediaries that are involved in these transactions.
- the direct and indirect operating fees/expenses will be calculated as a percentage of the Sub-fund's gross income. Information on direct and indirect operating fees/expenses and on the entities to which these fees/expenses are paid will be provided in the Sub-fund's annual report.
- income from the lending of securities will be paid to the Sub-fund after deduction of any direct and indirect operating fees/expenses that may be borne by the Agent and the Management Company. Since these direct and indirect operating expenses do not increase the Sub-fund's operating expenses they have been excluded from ongoing charges.

If necessary, the Sub-fund's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions
- the identity of the counterparty(ies) involved in these transactions
- the nature and amount of any collateral received to reduce the Sub-fund's counterparty risk, and;
- the income obtained from efficient portfolio management transactions during the relevant period and the direct and indirect operating cost/charges associated with these transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

(ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;

(iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;

(iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;

(vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) the market(s) in the Benchmark Index's underlying assets is (are) suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Risk of using derivative financial instruments:

The Sub-fund may invest in Derivative Financial Instruments ("DFI") traded over the counter or listed on an exchange, and in particular in futures and/or swaps for hedging purposes. These DFI involve various risks, such as counterparty risk, hedging disruption risk, Benchmark Index disruption risk, taxation risk, regulatory risk and liquidity risk. These risks may affect a derivative instrument directly and may result in a modification or even the premature termination of the DFI contract, which could adversely affect the Sub-fund's net asset value.

The risk of investing in DFI may be relatively high. Since the amount of money required to establish a position in a DFI may be much less than the exposure thus obtained, each transaction involves "leverage". A relatively small market movement may therefore have a very large potential positive or negative impact on the Sub-fund. The market value of DFI is highly volatile and they may therefore be subject to large variations.

The Sub-fund may invest in DFI traded over the counter. DFI traded over the counter may also be less liquid than transactions on an organised market, where the volumes traded are generally quite higher, and the prices of these DFI may therefore be more volatile.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative Contract and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

- Benchmark Index tracking risk

Replicating the performance of the Benchmark Index by investing in all of its constituents may prove to be very difficult to implement and costly. The Sub-fund manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Index, in proportions that differ from those of the Benchmark Index or even investing in securities that are not index constituents or in derivatives. The use of such optimisation techniques may increase the ex post tracking error and cause the Sub-fund to perform differently from the Benchmark Index.

- Risk of using efficient portfolio management techniques

If the Sub-fund's counterparty to an efficient portfolio management technique (hereinafter "EPMT") defaults, this may expose the Sub-fund to the risk that the value of the collateral it has received is less than the value of the assets the Sub-fund transferred to the counterparty to the EPMT. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as collateral and/or (iv) the illiquidity of the market in which the collateral received is listed. Investors should note that EPMT transactions may be entered into with same group as that of the Management Company/entities of the same group as that of the Management Company/entities of the same group as the Management Company.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs:

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index,
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking exposure to Italian equities.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least three years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

Subfund life on the year under review

On 11 October 2023, the fund changed its name from Lyxor FTSE MIB (DR) UCITS ETF to Amundi FTSE MIB UCITS ETF.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi FTSE MIB UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark FTSE MIB Net Total Return Index. The FTSE MIB Net Total Return Index aims to replicate the sectoral distribution of the Italian domestic market. The composition of the index is determined based on three criteria: free float, liquidity and representativeness of the main sectors of the Italian market. It is a free float market capitalisation weighted index. The index methodology is available at www.standardandpoors.com.

From October 2022 to October 2023, the performance of the Acc share / FR0014002H76 is 27.78%. That of the benchmark of 26.91% with a tracking error of 0.41%.

From October 2022 to October 2023, the performance of the Dist share / FR0010010827 is 27.77%. That of the benchmark of 26.91% with a tracking error of 0.41%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

The CIU will be able to use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the Monetary and Financial Code and in particular reverse transactions in financial securities.

- Maximum proportion of assets under management eligible for SFTs: up to 25% of the assets of the CIU.
- Expected share of assets under management eligible for SFTs: 10% of the assets of the CIU.

The total revenues generated by efficient portfolio management techniques shall be shared between the relevant compartment and the security lending agent. Each compartment receives 65% while the agent receives 35% of this income. All direct and indirect operational costs related to these operations are borne by the agent and have therefore been excluded from the financial management and administrative costs external to the management company.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details

- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

a) Exposure obtained through effective management techniques of the portfolio and derivative financial instruments

• Exposure obtained through effective management techniques:	28,794,903.85
- Securities lending:	28,794,903.85
- Securities borrowing:	-

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI FTSE MIB UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.
- Direct and indirect operating fees/expenses of securities financing transactions

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.35% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A
Direct and indirect operating fees/expenses of securities financing transactions	The income from these transactions	20% for the Management Company 15% for the Agent

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Indication of accounting changes subject to special information to shareholders

- Changes made: None.
- Changes to occur: None.

Details and justification of changes in valuation and implementation procedures

None.

Details of the type of errors that have been corrected during the period

Unit tax credit transferred to share holders (individuals) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	1.12	0.20	-10.68	-	-

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

AMUNDI IBEX 35 UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Classification:

Eurozone equities.

The Lyxor IBEX 35 (DR) UCITS ETF sub-fund (the “Sub-fund”) continuously maintains at least 60% exposure to the equity markets of one or more eurozone countries, including the French equity market.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Dist share class: the Board of Directors reserves the right to distribute distributable amounts one or more times a year and/or accumulate all or part of these amounts.

Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund’s investment objective is to replicate the performance, whether positive or negative, of the IBEX 35 Net Return index (with net dividends reinvested) index (the “Benchmark Index”) denominated in euros and the main Spanish stock market index, while minimising the tracking error between its performance and that of its Benchmark Index.

The expected ex-post tracking error under normal market conditions is 0.20%.

Benchmark index:

The Benchmark Index is an equity index that is calculated and published by Sociedad de Bolsas. The Benchmark Index is composed of 35 Spanish stocks selected on the basis of their liquidity.

The Benchmark Index is a Net Return index which means that the Benchmark Index’s performance includes the net dividends paid by its underlying shares.

A full description and the complete methodology used to construct the Benchmark Index and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at <http://www.bolsamadrid.es>

The performance tracked is that of the Benchmark Index's closing price.

Benchmark Index publication

The Benchmark Index is calculated daily at the official closing price of the exchanges where the index constituents are listed. The Benchmark Index is also calculated in real time every day that the Benchmark Index is published.

Real-time Benchmark Index values are available via Bloomberg and Reuters.

The closing price of the Benchmark Index is available on the Internet at <http://www.bolsamadrid.es>

Pursuant to the provisions of the European Parliament and Council Regulation (EU) 2016/1011, of 8 June 2016, Sociedad de Bolsas, the administrator of the Benchmark Index, is registered in ESMA’s register of benchmark index administrators.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The Benchmark Index is rebalanced quarterly.

The exact composition of the Benchmark Index and Sociedad de Bolsas’ rules for its revision by are available on its website at <http://www.bolsamadrid.es> The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will be exposed to the latter via a direct replication method that requires the Sub-fund to invest mainly in the securities that underlie the Benchmark Index and/or in financial instruments that are representative of all or some of the securities that underlie the Benchmark Index.

The sub-fund may also invest in derivative financial instruments (DFI). The DFI in which the Sub-fund may invest include, but are not limited to, futures on indices, futures on all or some of the Benchmark Index components, and hedging swaps, mainly to minimise the Sub-fund's tracking error.

In accordance with its investment strategy, the Sub-fund may hold cash (e.g. when using futures). In this case, the fund manager may, in the best interest of unit-holders, deposit this cash with a credit institution or invest it in balance-sheet assets and/or off-balance-sheet assets, as described below.

The Sub-fund may use various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French monetary and financial code and in particular temporarily dispose of securities subject to the requirements explained below.

To ensure transparency on the use of the direct index replication method (i.e. full replication of the Benchmark Index) and on its consequences in terms of the assets in the Sub-fund's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio is available on the page dedicated to the Sub-fund accessible on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is justified by exceptional market conditions and in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index. This could be the case, for example, in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

The Sub-fund will at all times invest at least 75% of its assets in companies that have their head office in a Member State of the European Union or in another country that is a member of the European Economic Area and which has signed a tax convention with France that includes an administrative assistance clause for the purpose of fighting tax fraud and evasion. This minimum investment requirement qualifies the Sub-fund for French 'PEA' equity savings plans.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund will mainly be invested in the following types of securities:

• Equities

The Sub-fund will be invested mainly in the equities that make up the Benchmark Index.

• The shares or units of other CIU or investment funds

The Sub-fund may invest up to 10% of its assets in the shares or units of the following collective investment undertakings (CIU) or investment funds:

- French and foreign UCITS that comply with Directive 2009/65/EC. The Sub-fund may invest in shares or units of UCITS that are managed by the Management Company or by a company that is related to the Management Company.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

3. Off-balance sheet assets (derivatives)

The Sub-fund may invest in the following DFI:

• Eligible markets:

- regulated

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

- organised
- over-the-counter
- Risks which the Sub-fund may seek to hedge or gain exposure to:
- equity
- Purpose (all transactions must be consistent with the investment objective)
- hedging
- exposure
- Types of instruments used:
- futures : on equities and indices
- forward exchange contracts
- Strategy for using derivatives to achieve the investment objective:
- overall hedging of the portfolio, or of certain risks, securities, etc. – up to 100% of net assets
- to achieve synthetic exposure to assets or risks (up to 100% of assets)

Counterparties to OTC derivatives traded by the Sub-fund will be selected in accordance with the Management Company's best-execution policies (including the "Order-execution by asset type" table referred to in the Appendix). The aforementioned policy is available at www.amundi.com

Counterparties to derivative financial instruments will have no discretion over the composition of the Sub-fund's investment portfolio, nor over the underlying assets of these derivative instruments, in accordance with regulatory limits and requirements.

When Crédit Agricole is a counterparty to DFI, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

Pursuant to its investment strategy, the Sub-fund may use various efficient portfolio management techniques in compliance with Article R214-18 of the French monetary and financial code, including securities financing transactions.

- Maximum proportion of assets under management for which securities financing transactions may be entered into: up to 25% of the Sub-fund's assets.
- Expected proportion of assets under management for which securities financing transactions may be entered into: up to 0% of the Sub-fund's assets.

For this purpose, the Management Company has appointed Société Générale as its intermediary (hereinafter the "Agent"). If transactions involving the temporary disposal of securities are engaged in, the Agent may be authorised to (i) lend securities, on the Sub-fund's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Sub-fund's behalf, any liquid assets received as collateral for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

When Société Générale S.A. is appointed as an Agent, it is not authorised to act as a counterparty to securities lending transactions. If securities are lent:

- The Sub-fund shall be entitled to all income from such temporary disposal of securities, net of any direct and indirect operating fees/expenses.
- These operating fees/expenses, which are incurred to manage the portfolio more efficiently, will be those borne by the Management Company, the Agent (if applicable) and/or any other intermediaries that are involved in these transactions.

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

- The direct and indirect operating fees/expenses will be calculated as a percentage of the Sub-fund's gross income. Information on direct and indirect operating fees/expenses and on the entities to which these fees/expenses are paid will be provided in the Sub-fund's annual report.
- Income from the lending of securities will be paid to the Sub-fund after deduction of any direct and indirect operating fees/expenses which may be borne by the Agent and the Management Company. Since these direct and indirect operating fees/expenses do not increase the Sub-fund's overall operating expenses they have been excluded from ongoing charges.

If necessary, the Sub-fund's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions
- the identity of the counterparty(ies) involved in these transactions
- the nature and amount of any collateral received to reduce the Sub-fund's counterparty risk, and;
- the income obtained from efficient portfolio management transactions during the relevant period and the direct and indirect operating fees/expenses associated with these transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund enters into securities financing transactions, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these transactions. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

(iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;

(iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;

(vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

(i) deposited with an authorised institution;

(ii) invested in high-quality government bonds;

(iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;

(iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments that comprise the Benchmark Index selected by the Management Company. These instruments are subject to market trends and contingencies.

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) the market(s) in the Benchmark Index's underlying assets is (are) suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Risk of using efficient portfolio management techniques

If the Sub-fund's counterparty to an efficient portfolio management technique (hereinafter "EPMT") defaults, this may expose the Sub-fund to the risk that the value of the collateral it has received is less than the value of the assets the Sub-fund transferred to the counterparty to the EPMT. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as collateral and/or (iv) the illiquidity of the market in which the collateral received is listed. Investors should note that EPMT transactions may be entered into with same group as that of the Management Company/entities of the same group as that of the Management Company/entities of the same group as the Management Company.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs:

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index,
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

- Risk of using derivative financial instruments

The Sub-fund may invest in Derivative Financial Instruments ("DFI") traded over the counter or listed on an exchange, and in particular in futures and/or swaps for hedging purposes. These DFI involve various risks, such as counterparty risk, hedging disruption risk, Benchmark Index disruption risk, taxation risk, regulatory risk and liquidity risk. These risks may affect a derivative instrument directly and may result in a modification or even the premature termination of the DFI contract, which could adversely affect the Sub-fund's net asset value.

The risk of investing in DFI may be relatively high. Since the amount of money required to establish a position in a DFI may be much less than the exposure thus obtained, each transaction involves "leverage". A relatively small market movement may therefore have a very large potential positive or negative impact on the Sub-fund.

The market value of DFI is highly volatile and they may therefore be subject to large variations.

The Sub-fund may invest in DFI traded over the counter. DFI traded over the counter may also be less liquid than transactions on an organised market, where the volumes traded are generally quite higher, and the prices of these DFI may therefore be more volatile.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking exposure to Spanish equity markets.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

Subfund life on the year under review

On 11 October 2023, the fund changed its name from Lyxor IBEX 35 (DR) UCITS ETF to Amundi IBEX 35 UCITS ETF.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi IBEX 35 UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark IBEX 35 Net Return Index. The IBEX 35 Net Return Index is an index comprised of the 35 most liquid shares traded on the Spanish market. It is weighted by market capitalisation and adjusted according to the liquidity of each company included in the index. The index methodology is available at www.bolsamadrid.es.

From October 2022 to October 2023, the performance of the Dist share / FR0010251744 is 17.84%. That of the benchmark of 17.33% with a tracking error of 0.21%.

The performance achieved over the period does not prejudice the future results of the subfund.

Main movements in the portfolio during the year

Securities	Movements ("Accounting currency")	
	Acquisitions	Transfers
IBERDROLA SA	19,889,764.28	26,779,363.55
BANCO SANTANDER SA	13,984,728.90	21,016,973.56
INDITEX	13,903,360.55	19,982,510.00
BANCO BILBAO VIZCAYA ARGENTA	10,320,537.10	14,391,418.55
CAIXABANK	9,283,681.74	12,047,463.91
AMADEUS IT GROUP SA	6,953,109.14	9,723,140.77
CELLNEX TELECOM S.A.	6,967,237.77	8,778,360.47
REPSOL	5,615,783.77	8,086,038.78
TELEFONICA SA	5,586,410.33	8,020,895.44
FERROVIAL SA	5,210,824.89	6,878,587.14

Transparency of securities financing transactions and the reuse of financial instruments under the SFTR regulation (in the UCI's accounting currency)

On October 31, the UCI does not have a securities position subject to SFTR regulation, ie repurchase agreement, securities or commodities loan, securities purchase, resale or sale transaction Purchase, Margin Call and Global Income Exchange (TRS). However, during the period, the mutual fund completed SFTR regulated securities financing transactions that earned 2,334.88€ plus income and 0.00€ rated costs.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details

- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

a) Exposure obtained through effective management techniques of the portfolio and derivative financial instruments

• Exposure obtained through effective management techniques:	-
- Securities lending:	-
- Securities borrowing:	-
- Reverse repurchase transactions:	-
- Repurchase transactions:	-
• Exposure of underlyings reached through derivative financial instruments:	5,416,500.00
- Currency forwards:	-
- Futures:	5,416,500.00
- Options:	-
- Swaps:	-

b) Identity of the counterparty(ies) to the effective portfolio management techniques and derivative financial instruments

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI IBEX 35 UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund
- direct and indirect operating fees/expenses of securities financing transactions/

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.30% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A
Direct and indirect operating fees/expenses of securities financing transactions	The amount of income from these transactions	20% for the Management Company 15% for the Agent.

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Classification:

Global equities.

The Lyxor MSCI Europe (DR) UCITS ETF sub-fund (the "Sub-fund") is continuously at least 60% exposed to a foreign equity market or to the equity markets of two or more countries, which may include the French market.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to replicate the performance, whether positive or negative, of the MSCI Europe Net Total Return Index with net dividends reinvested (the "Benchmark Index"), which is representative of mid-cap and large-cap companies listed on developed European equity markets and is denominated in euros (EUR), while minimising the tracking error between the Sub-fund's performance and that of its Benchmark Index.

The expected ex-post tracking error under normal market conditions is 0.50%.

Benchmark index:

The Benchmark Index is the MSCI Europe Net Total Return index (i.e. with net dividends reinvested), which means that the Benchmark Index's performance includes the net dividends paid by its underlying shares. This index is denominated in EUR.

The Benchmark Index is an equity index weighted by market capitalisation and adjusted for free-float. It is calculated and published by the international index provider MSCI.

The Benchmark Index has the same basic characteristics of all MSCI indices, which include:

- a) the universe of securities that comprise the Benchmark Index;
- b) free-float adjustment of index components;
- c) classification by sector based on the Global Industry Classification Standard (GICS) .

The Benchmark Index is representative of mid-cap and large-cap companies listed on developed European equity markets. It is composed exclusively of the securities of European countries and aims to include 85% of the free-float-adjusted market capitalisation of each country in the index and each group of European industries.

By targeting 85% of each country and of each industry group, the Benchmark Index will capture 85% of the total market capitalisation of the European markets, while also reflecting their economic diversity.

The MSCI methodology and calculation method are based on a variable number of companies in the Benchmark Index.

A full description of the Benchmark Index and its construction methodology and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at <http://www.msci.com>

The performance tracked is that of the Benchmark Index's closing price.

Benchmark Index publication

The official MSCI indices are calculated continuously from 9.00am to 5:30 pm (Paris time) for which MSCI calculates a closing price using the official closing prices of the constituent stocks.

The Benchmark Index is also calculated in real time every stock exchange trading day.

The closing price of the Benchmark Index is available on MSCI's website at www.msci.com.

Benchmark Index composition and revision

The Benchmark Index is rebalanced quarterly.

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

The exact composition of the Benchmark Index and MSCI's rules for its revision are available on the index provider's website at <http://www.msci.com>.

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, MSCI Limited, the administrator of the Benchmark Index, has until 31 December 2023 to apply to the competent authority for the necessary certification or registration.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will be exposed to the latter via a direct replication method that requires the Sub-fund to invest mainly in the securities that underlie the Benchmark Index and/or in financial instruments that are representative of all or some of the securities that underlie the Benchmark Index.

The sub-fund may also invest in derivative financial instruments (DFI). The DFI in which the Sub-fund may invest include, but are not limited to, futures on indices, futures on all or some of the Benchmark Index components, and hedging swaps, mainly to minimise the Sub-fund's tracking error.

In accordance with its investment strategy, the Sub-fund may hold cash (e.g. when using futures). In this case, the fund manager may, in the best interest of unit-holders, deposit this cash with a credit institution or invest it in balance-sheet assets and/or off-balance-sheet assets, as described below.

In order to optimise the direct replication method that is used to track the Benchmark Index, the Sub-fund, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Index constituents in order to reduce the costs of investing directly in all of the various Benchmark Index constituents. This sampling technique could cause the Sub-fund to invest in a selection of representative Benchmark Index securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Index, and even to invest in securities that are not constituents of the Benchmark Index.

To ensure transparency on the use of the direct index replication method (i.e. full replication of the Benchmark Index or sampling to limit replication costs) and on its consequences in terms of the assets in the Sub-fund's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio is available on the page dedicated to the Sub-fund accessible on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a single issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index, particularly in the event of a public offering affecting any of the securities that make up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments in the Benchmark Index.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund will mainly be invested in the following types of securities:

• Equities

The Sub-fund will be invested mainly in the equities that make up the Benchmark Index.

• The shares or units of other CIU or investment funds

The Sub-fund may invest up to 10% of its assets in the shares or units of the following collective investment undertakings (CIU) or investment funds:

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

- French and foreign UCITS that comply with Directive 2009/65/EC. The Sub-fund may invest in shares or units of UCITS that are managed by the Management Company or by a company that is related to the Management Company.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

3. Off-balance sheet assets (derivatives)

The Sub-fund may invest in the following DFI:

• Eligible markets:

- regulated
- organised
- over-the-counter

• Risks which the Sub-fund may seek to hedge or gain exposure to:

- equity

• Purpose (all transactions must be consistent with the investment objective)

- hedging
- exposure

• Types of instruments used:

- futures : on equities and indices
- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- overall hedging of the portfolio, or of certain risks, securities, etc. – up to 100% of net assets
- to achieve synthetic exposure to assets or risks (up to 100% of assets)

Counterparties to OTC derivatives traded by the Sub-fund will be selected in accordance with the Management Company's best-execution policies (including the "Order-execution by asset type" table referred to in the Appendix). The aforementioned policy is available at www.amundi.com.

Counterparties to derivative financial instruments will have no discretion over the composition of the Sub-fund's investment portfolio, nor over the underlying assets of these derivative instruments, in accordance with regulatory limits and requirements.

When Crédit Agricole is a counterparty to DFI, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depository.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

The Sub-fund may use various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale and purchase of securities.

• Possible types of transactions

- Securities borrowing and lending pursuant to the French monetary and financial code

• Purpose (all transactions must be consistent with the investment objective)

- Optimise the Sub-fund's income
- Maximum proportion of assets under management for which securities financing transactions may be entered into: up to 25% of the Sub-fund's assets.

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

- Expected proportion of assets under management for which securities financing transactions may be entered into: 0% of the Sub-fund's assets.

For this purpose, the Management Company has appointed Société Générale as its intermediary (hereinafter the "Agent"). If transactions involving the temporary disposal of securities are engaged in, the Agent may be authorised to (i) lend securities, on the Sub-fund's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Sub-fund's behalf, any liquid assets received as collateral for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

When Société Générale S.A. is appointed as an Agent, it is not authorised to act as a counterparty to securities lending transactions. If securities are lent:

- The Sub-fund shall be entitled to all income from securities financing transactions, net of any direct and indirect operating fees/expenses.
- These operating fees/expenses, which are incurred to manage the portfolio more efficiently, will be those borne by the Management Company, the Agent (if applicable) and/or any other intermediaries that are involved in these transactions.
- The direct and indirect operating fees/expenses will be calculated as a percentage of the Sub-fund's gross income. Information on direct and indirect operating fees/expenses and on the entities to which these expenses are paid will be provided in the Sub-fund's annual report.
- Income from the lending of securities will be paid to the Sub-fund after deduction of any direct and indirect operating fees/expenses which may be borne by the Agent and the Management Company. Since these direct and indirect operating fees/expenses do not increase the Sub-fund's overall operating expenses they have been excluded from ongoing charges.

If necessary, the Sub-fund's annual report will provide the following information:

- the risk exposure resulting from efficient portfolio management transactions
- the identity of the counterparty(ies) involved in these transactions
- the nature and amount of any collateral received to reduce the Sub-fund's counterparty risk; and
- the income obtained from efficient portfolio management transactions during the relevant period and the direct and indirect operating cost/charges associated with these transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund enters into securities financing transactions, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

(e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) the market(s) in the Benchmark Index's underlying assets is (are) suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative Contract and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

- Benchmark Index tracking risk

Replicating the performance of the Benchmark Index by investing in all of its constituents may prove to be very difficult to implement and costly. The Sub-fund manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Index, in proportions that differ from those of the Benchmark Index or even investing in securities that are not index constituents or in derivatives. The use of such optimisation techniques may increase the ex post tracking error and cause the Sub-fund to perform differently from the Benchmark Index.

- Risks of using efficient portfolio management techniques

The default of a counterparty to an efficient portfolio management technique (hereafter "EPMT") used by the Sub-fund could expose it to the risk that the value of the collateral it has received may be less than the value of the assets it has transferred to the counterparty to the EPMT transaction. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as collateral and/or (iv) the illiquidity of the market in which the collateral received is listed. Investors should note that EPMT transactions may be entered into with entities of the same group as that of the Management Company.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs:

- Risk of using derivative financial instruments

The Sub-fund may invest in Derivative Financial Instruments ("DFI") traded over the counter or listed on an exchange, and in particular in futures and/or swaps for hedging purposes. These DFI involve various risks, such as counterparty risk, hedging disruption risk, Benchmark Index disruption risk, taxation risk, regulatory risk and liquidity risk. These risks may affect a derivative instrument directly and may result in a modification or even the premature termination of the DFI contract, which could adversely affect the Sub-fund's net asset value.

The risk of investing in DFI may be relatively high. Since the amount of money required to establish a position in a DFI may be much less than the exposure thus obtained, each transaction involves "leverage". A relatively small market movement may therefore have a very large potential positive or negative impact on the Sub-fund.

The Sub-fund can enter into transactions involving derivative financial instruments (DFI) traded over the counter.

The Sub-fund may invest in DFI traded over the counter. DFI traded over the counter may also be less liquid than transactions on an organised market, where the volumes traded are generally quite higher, and the prices of these DFI may therefore be more volatile.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund.

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index,
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Currency risk associated with the Benchmark index

The Sub-fund is exposed to currency risk since the securities that underlie the Benchmark Index may be denominated in a different currency than the Benchmark Index, or be derivatives of securities that are denominated in a different currency than the Benchmark Index. Changes in exchange rates may therefore adversely impact the Sub-fund's Benchmark Index.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking exposure to European equity markets.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

AMUNDI MSCI EUROPE II UCITS ETF Subfund of the Sicav Multi Units France

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

“U.S. Persons” (as defined below - see “COMMERCIAL INFORMATION”) are not allowed to invest in this Sub-fund.

Subfund of the Sicav Multi Units France

Subfund life on the year under review

On 11 October 2023, the fund changed its name from Lyxor MSCI Europe (DR) UCITS ETF to Amundi MSCI Europe II UCITS ETF.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi MSCI Europe II UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark MSCI Europe Net Return EUR Index. The shares in the MSCI Europe Net Return EUR Index are selected to represent 85% of the market capitalisation of the Europe zone, while reflecting the economic diversity of this market. The index methodology is available at www.msci.com.

From October 2022 to October 2023, the performance of the Acc share / FR0010261198 is 8.33%. That of the benchmark of 8.22% with a tracking error of 0.18%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

“The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its ‘Guidelines on ETFs and other UCITS issues’);
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

Number of custodians	2
1 Denomination	CACEIS
1 Amount	58,747,171.00
2 Denomination	SOCIETE GENERALE
2 Amount	12,205,253.41

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

French Energy Transition for Green Growth Act (Article 173 of Act No. 2015-992) and Fund Compliance with criteria relating to environmental, social, and governance quality (ESG) objectives

AMUNDI's ESG analysis generates ESG ratings for over 13,000 companies worldwide on a scale ranging from A (for issuers with the best ESG practices) to G (for the worst practices). This analysis is complemented by a policy of active commitment among issuers, in particular on major challenges regarding sustainable development within their sectors.

AMUNDI uses a targeted exclusion policy based on global agreements such as the United Nations Global Compact and other conventions on human rights, the International Labour Organisation, and the environment. In all of its active management strategies, AMUNDI therefore excludes companies that are non-compliant with its ESG principles or international agreements and their transposition into national law:

- anti-personnel mines,
- cluster bombs,
- chemical weapons,
- biological weapons,
- depleted uranium weapons.

These issuers receive a "G" rating on the AMUNDI scale.

In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal

Since coal is the largest single contributor to climate change caused by human activity, in 2016 AMUNDI implemented a sectoral policy specific to thermal coal, resulting in the exclusion of certain companies and issuers. AMUNDI has progressively reinforced this coal exclusion policy every year since 2016. These commitments stem from the Crédit Agricole Group's climate strategy. In line with the UN's Sustainable Development Goals and the 2015 Paris Agreement, this strategy is based on the research and recommendations of a Scientific Committee, which takes into account the IEA's (International Energy Agency) energy scenarios, Climate Analytics, and Science-Based Targets. In 2020, as part of the update of its policy on the thermal coal sector, AMUNDI extended its coal mining exclusion policy, which now includes all companies developing or planning to develop new thermal coal mining capacity.

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity along the entire value chain (producers, extractors, power plants, transport infrastructure),
- Companies generating more than 25% of their income from thermal coal mining,
- Companies extracting 100 MT or more of thermal coal with no intention of reducing these quantities,

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

- All companies whose income from thermal coal mining and coal-fired power generation is over 50% of their total income before analysis, all coal-fired power generation and coal mining companies with a threshold between 25% and 50% and a deteriorated energy transition score.

Application in passive management:

• Passive ESG funds

- All ETF and ESG index funds (with the exception of highly-concentrated indices)
- implement AMUNDI's policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

- In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.
- Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.
- Consequently, AMUNDI's index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.
- At the same time, in the context of securities excluded from the "thermal coal policy" in AMUNDI's active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a "nay" vote on the management of the companies in question.

Tobacco

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to "E", on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates:

- Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).
- Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy.

For further information on how environmental (in particular climate change-related), social, and corporate governance (ESG) issues are taken into account in its investment policy, AMUNDI provides investors with the "Application of Article 173" report, available at <https://legroupe.amundi.com> (Legal Documentation section).

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its “Trading” subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The “Trading” subsidiary is responsible for researching a provider’s accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the “Trading” subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the “AIFM Directive”), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the “UCITS V Directive”). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 (“SFDR”), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives’ principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management’s headcount increased due to the integration of Lyxor’s employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some ‘carried interest’ was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the ‘executives and senior managers’ of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the ‘senior investment managers’ whose professional activities have a material impact on Amundi Asset Management’s risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its ‘Identified Staff’, that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee’s functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)
- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed

AMUNDI MSCI EUROPE II UCITS ETF Subfund of the Sicav Multi Units France

on the performance of a representative basket of AIFs and/or UCITS funds.

- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

d) Income and operating expenses related to effective management techniques

As part of the effective portfolio management techniques, the management company selected Amundi Intermediation to act as an intermediary for the effective management techniques processed by the CIU. The total revenues generated by efficient portfolio management techniques shall be shared between the relevant compartment and the security lending agent. Each compartment receives 65% while the agent receives 35% of this income. All direct and indirect operational costs related to these operations shall be borne by the staff member.

Amundi Intermediation is an entity linked to the management company.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI MSCI EUROPE II UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.
- The direct and indirect operational cost/charges of securities financing transactions.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.25% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A
Direct and indirect operating fees/expenses of securities financing transactions.	Income obtained from these transactions	20% for the Management Company 15% for the Agent

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Unit tax credit transferred to share holders (individuals) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	-	-	-	0.14	-

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

Energy Climate Act (ECA)

Amundi MSCI Europe II UCITS ETF Acc

Annual
reporting
31/10/2023

Fund reporting Article 29 of the Energy-Climate Act (LEC - Loi énergie-climat)

This document lists the required information from funds exceeding €500 M in net assets under management pursuant to Article 29 of the LEC

The implementing decree relating to Article 29 of the Energy-Climate Act of 8 November 2019, which clarifies and strengthens the non-financial transparency measures for market participants, was published in the Official Journal of 27 May 2021.

As of the reporting date for the period, the portfolio's strategy did not take into consideration either the alignment of its assets under management with the long-term goals of Articles 2 and 4 of the Paris Agreement, which aim to hold the increase in the global average temperature to below 2°C above pre-industrial levels, or the alignment of its assets with the long-term goals relating to biodiversity in the Convention on Biological Diversity (CBD) adopted on 5 June 1992. However, Amundi has included plans for continuous improvement in this report, including the identification of opportunities for improvement and information relating to corrective actions and strategic and operational changes it has made.

..

AMUNDI MSCI EUROPE II UCITS ETF

Amundi MSCI Europe II UCITS ETF Acc

Annual
reporting
31/10/2023

This document meets the requirements of Article 29 of the Energy-Climate Act of 8 November 2019 (called the "LEC") on non-financial reporting for market participants.

The document presents:

1. The portfolio's climate strategy, if it has a strategy of alignment with the temperature objectives of the Paris Agreement;
2. The portfolio's strategy on alignment with long-term biodiversity objectives;
3. The process for taking into account environmental, social, and governance criteria in risk management.

More information is available in Amundi's responsible investment policy and in our climate report, available on our website: <https://legroupe.amundi.com/documentation-esg>.

1. The strategy on alignment with the international goals on limiting global warming, provided for in the Paris Agreement

The portfolio's strategy does not consider the alignment of its assets with the long-term goals of Articles 2 and 4 of the Paris Agreement on limiting global warming.

Exclusion policies

In passive management, the fiduciary duty is to replicate an index as faithfully as possible. The manager therefore has limited flexibility, and is required to meet its contractual objectives to achieve passive exposure that is in line with its benchmark index. Amundi's funds/ETFs replicating the standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions. However, for securities that are excluded due to the application of the thermal coal policy to Amundi's active investment universe, but that could be present in passive non-ESG funds, Amundi has strengthened its engagement process and its voting actions where they could result in a vote against the discharge of the Board or of Management, or the re-election of the Chairman and certain Directors.

Continuous improvement plan

Given the broad range of asset classes and world regions where Amundi invests on behalf of third parties, some of which do not yet have the analytical framework or data required to develop a strategy for alignment with the Paris Agreement, the implementation of such alignment strategies throughout all management activities remains a challenge.

In addition, Amundi is a third party asset management company. Its management activity is governed by contracts between Amundi and its clients, under which the investment objectives of the management portfolios delegated to Amundi by its clients are determined, particularly in terms of expected risk level, yield expectations, and requirements around diversification and sustainability preferences. We are required to obtain the agreement of our legal representatives before consenting to requirements linked to a trajectory of alignment with the Paris Agreement. That is why Amundi has launched a strategy of active dialogue with its clients, offering them the possibility of investing in products whose strategy incorporates characteristics for alignment with the goals of the Paris Agreement and counselling them in their decision-making.

1. Amundi's Climate Strategy in support of the carbon neutrality goals of the Paris Agreement

- Since the end of 2020, the Board of Directors of the management company's parent company has incorporated social and environmental issues in its governance and analysed progress on a quarterly basis via key indicators linked to climate and ESG;
- The Board members held a one-day dedicated strategic seminar to define the strategy to be deployed and the practical directions for implementing the new "Ambition 2025" societal plan;
- A monthly ESG and Climate committee meeting presided by the CEO defines and validates the ESG and climate policy applicable to investments and steers the major strategic projects;
- Commitments made in the framework of the Net Zero Asset Managers initiative, of which Amundi has been a signatory since July 2021:
 - A target of 18% of Amundi's assets under management Net Zero aligned by 2025 (i.e., this 18% will only be made up of funds and mandates with objectives compatible with a Net-Zero trajectory by 2050);
 - -30% carbon intensity (tCO2e/€M of revenue) by 2025 and -60% by 2030 for all portfolios subject to the NZIF (Net Zero Investment Framework - Set of actions, metrics, and methodologies to help investors maximise their contribution to achieving the Net Zero alignment objective);
- By 2025, Amundi will also offer open transition funds towards the Net Zero 2050 objective across all major asset classes;
- Achieve €20 billion in assets on "impact" funds (including funds making a positive contribution to the objectives of the Paris Agreement);
- Strengthening of the targeted sectoral exclusion rules;
- Amundi invests significant resources to enable better consideration of climate issues in portfolio management:
 - Significant increase in the size of its ESG team;
 - Launch of ALTO* Sustainability, a technological analytics solution and decision-making support for investors on environmental and societal issues.

2. Actions taken and strategic and operational changes made in order to sustainably integrate climate into the strategy

- Progressive inclusion of ESG objectives in the performance evaluations of salespersons and portfolio managers to make this dimension part of their variable remuneration. A climate and ESG training programme developed with Amundi experts for all staff so that each employee receives the appropriate training;
- Implementation of a rating methodology using a "best-in-class" approach to evaluate issuers' transition efforts in relation to a Net Zero scenario. The stated objective of the portfolios concerned will be to have a better environmental transition profile than that of their reference investment universe by 2025;
- The transition to a low-carbon economy is one of the strategic directions of our engagement policy, and Amundi has committed to expanding the number of companies with which we engage in ongoing dialogue on the climate to 1,000 additional companies, with the objective that these companies will define credible strategies for reducing their carbon footprint, have them brought to a vote at their General Meetings, and have part of their managers' remuneration linked to these strategies.

Amundi will continue to develop its climate strategy in the years to come, using scientific reference scenarios and closely linked with the objectives of its clients, both by investing in solutions to accelerate the transition and by gradually aligning its portfolios with the 2050 neutrality objective.

2. The strategy on alignment with the long-term goals relating to biodiversity

The fund's strategy does not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992.

Continuous improvement plan

The subject of biodiversity, which is intrinsically linked to that of climate change, occupies an increasingly important place in our societies, not just in research, but also economic considerations. Biodiversity is one of the themes of Amundi's ESG analysis. It is reflected in the methodological grid via the "Biodiversity & Pollution" criterion, and thus plays a part in the construction of issuer ESG ratings. Amundi is also particularly attentive to controversies linked to biodiversity. In 2022, Amundi continued its initiatives for a better integration of biodiversity into its internal analysis and investment processes. In addition, the subject was among the ESG Research team's top priority analysis themes in 2022, which resulted in the production of a ten-part series of research papers entitled "Biodiversity: it's time to protect our only home". The first two parts were published in 2022, while the following will be put on-line in 2023.

The subject of biodiversity is a particular focal point of the dialogue with the companies in which Amundi is invested. Following the campaigns on plastics launched in 2019, on the circular economy in 2020, and on biodiversity in 2021, Amundi strengthened its active dialogue in 2022 with companies, continuing its engagement campaign dedicated to biodiversity strategy in eight different sectors. Due to the limitations related to the data available on the subject, the first objective of this commitment is to establish an inventory of the consideration of biodiversity by the companies, then ask them to assess the responsiveness of their activities to this loss of biodiversity, and to manage the impact of their activities and products on biodiversity. In 2022, 119 companies engaged on their biodiversity strategy. As part of this engagement, Amundi provides recommendations, with the aim of better integrating these issues into their strategy. Amundi has more broadly strengthened shareholder dialogue around the preservation of natural capital. In 2022, 344 companies (a company may engage on several topics) were engaged through different programmes (including the promotion of a circular economy and better plastics management, the prevention of deforestation, and various subjects linked to such topics as the reduction of pollution or the sustainable management of water resources).

In 2022, Amundi continued its commitment to market initiatives and working groups dedicated to biodiversity. In 2021, Amundi joined the collective "Finance for Biodiversity Pledge" investor initiative and committed to collaboration and knowledge-sharing, active dialogue with companies, and to evaluating its impacts, setting objectives around biodiversity, and communicating them publicly by 2024. In addition, Amundi will produce an annual report on these portfolios' contribution to biodiversity objectives. In 2022, following the publication of its preliminary Nature-related Risk & Opportunity Management and Disclosure Framework, the TNFD (Taskforce on Nature-related Financial Disclosures) launched pilot groups to test the feasibility of this framework on various aspects. Amundi joined a pilot group led by UNEP-FI and CDC Biodiversité, intended to test the TNFD approach, and particularly the application of the GBS (Global Biodiversity Score) to financial institutions.

Amundi also aims to develop its investment policy in terms of biodiversity around several major themes, such as water or plastics, in order to strengthen engagement where necessary and exclude companies that are harmful to natural capital. An update to this policy will be published by 2024.

In terms of data, data analysis relating to the biodiversity indicator is now in place and biodiversity impact metrics are proposed for certain funds. At this stage, Amundi is not consolidating this data at asset manager or group level.

3. The process for taking into account environmental, social, and governance criteria in risk management

3.1 Identification of environmental, social, and governance risks

Amundi's Responsible Investment department constitutes a hub of expertise dedicated to the identification and assessment of risks and opportunities relating to ESG issues. This department provides the various group entities with ESG assessments of listed issuers along with climate data, used by portfolio managers.

The table below presents an overview of the various ESG risks identified by Amundi, the approach used to make assessments, and the data providers used to assess and manage the identified risks. These risks can result in several types of consequences, including but not limited to reputational risks, depreciation of asset values, litigation, or even portfolio under-performance.

Risk identified	Description	Amundi's assessment	Data provider used
Environmental Risks	Result from the way in which a company controls its direct and indirect environmental impact: energy consumption, reduction of greenhouse gas emissions, fight against resource depletion and protection of biodiversity, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Environment" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Social risks	Result from the way an issuer manages its human capital and its stakeholders (other than shareholders). This covers several notions: the social aspect linked to an issuer's human capital (accident prevention, employee training, respect for employee rights, etc.), those linked to human rights in general, and responsibilities towards stakeholders.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Social" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Governance risks	Result from the way the issuer manages its development or organises its operations and management bodies, which can potentially lead to unfair commercial practices, fraud or corruption, non-diverse management bodies, excessive remuneration, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Governance" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Risks of controversy	Possibility that an issuer or investment may be involved in controversies, litigation, or events that could harm its reputation or ability to make a profit. May include questioned business practices, violations of law, financial scandals, environmental or social problems, or other difficulties that could compromise the issuer's credibility or sustainability.	Proprietary methodology combining a quantitative filter to define the universe, then a qualitative evaluation of that universe. The latter evaluation produces a rating on a scale of 0 to 5 (5 being the worst rating). Controversies with a rating of 3 or more are considered serious.	RepRisk, MSCI, Sustainalytics

3.2 Risk and opportunity assessment

The environmental, social, and governance risks and opportunities presented in the table above are assessed via a proprietary ESG rating assigned to issuers by Amundi's Responsible Investment teams.

Rating of private issuers

Our ESG analysts are specialised by sector of activity. To identify the ESG criteria representing the risks and opportunities within each sector of activity, they are tasked with:

- Monitoring emerging and established ESG topics and trends in each sector;
- Assessing sustainability risks and opportunities as well as negative exposure to sustainability factors;
- Selecting the relevant indicators (KPI) and assigning to them the associated weightings.

Our ESG analysis methodology is based on a set of 38 criteria used to establish the ESG profile of each sector of activity. Among these 38 criteria, 17 are generic, and can be applied to companies in any sector of activity, and 21 are specific to the challenges of certain sectors.

The weighting of ESG criteria is a key element of ESG analysis. The weight attribution model is based on a materiality assessment, which can influence the value of a company through 4 vectors: regulation, reputation, the company's development model, and operational efficiency.

To weight ESG criteria, the ESG analyst considers the probability and extent of each vector's impact on the following 2 materialities (detailed in the table at the end of the section):

- 1st materiality: Ability of the company to anticipate and manage sustainable development risks and opportunities inherent to its industry and its particular circumstances;
- 2nd materiality: The management team's ability to manage the potential negative impact of their activities on sustainability factors.

This analytical approach via both materialities lets analysts prioritise risks by taking into account the particularities and events specific to each sector.

The weightings integrate the intensity of the risk incurred as well as its emerging or established nature and its time horizon. Thus, issues that are considered the most material receive the highest weight.

ESG ratings are calculated based on ESG criteria and weightings determined by analysts, who combine them with the ESG scores obtained from our external data providers. At each step of the calculation process, the scores are normalised as Z-scores. Z-scores are used to compare results to a "normal" population (difference of the issuer's score with the average score for the sector, in numbers of standard deviations). To distinguish best practices from worst practices at the sector level, each issuer is evaluated with a score that is scaled around the average for its sector. At the end of the process, each company is assigned an ESG score (between -3 and +3) and its equivalent on a scale from A to G, where A is the best score and G the worst. Grade D represents average scores (from -0.5 to +0.5); each letter corresponds to a standard deviation.

Each issuer receives only one ESG score, regardless of the chosen reference universe. The ESG score is therefore "sector-neutral", meaning that no sector is given more or less preference than another.

For the implementation of the SFDR regulation, Amundi has established a map of the environmental and social factors it deems material for different sectors. This map is presented in Amundi Asset Management's LEC 29 report.

		Regulation	Reputation	Development model	Operational effectiveness
1 st materiality	Ability of the company to anticipate and manage the risks and opportunities inherent to its industry and its particular circumstances in the area of sustainable development	✓	✓	✓	✓
2 nd materiality	The management team's ability to manage the potential negative impact of their activities on sustainability factors	✓		✓	

Rating of sovereign issuers

The objective of the sovereign rating methodology is to assess the ESG performance of sovereign issuers. E, S, and G factors can all have an impact on a governments' ability to repay its debts in the medium to long term. They can also reflect how the country tackles the major sustainability issues that affect global stability. Amundi's methodology is based on around fifty ESG indicators deemed relevant by Amundi's ESG research to address sustainability risks and sustainability factors. Each indicator can combine multiple data points from different sources, including open international databases (such as those of the World Bank Group, the United Nations, etc.) or proprietary databases. Amundi has defined the weightings of each ESG indicator contributing to the final ESG scores and their various components (E, S, and G). The indicators come from an independent service provider. The indicators have been grouped into 8 categories to ensure greater clarity, with each category falling into one of the E, S or G pillars. Like the company ESG rating scale, the ESG score of issuers results in an ESG rating ranging from A to G.

3.3 Sustainability risk management

Amundi's approach to sustainability risk management is based on the following three pillars:

- An exclusion policy, which addresses the most important ESG risks;
- The integration of ESG ratings into investment processes, which provides a holistic understanding of the company and helps identify its particular ESG risks;
- A voting and engagement policy that helps trigger positive changes in the way companies manage their impact on essential topics related to sustainability, thus mitigating the associated risks.

3.4 Integration of sustainability risks into the entity's regular risk management framework

Sustainability risks are integrated into Amundi's internal control and risk management system.

For sustainability risk management, responsibilities are divided between:

- The first level of control, carried out directly by the management teams, and
- The second level, carried out by the risk management teams, which can constantly check the compliance of funds with their ESG objectives and constraints.

The Risk Department participates in Amundi's "Responsible Investment" governance system. They monitor compliance with regulatory requirements and risk management related to such topics.

The ESG rules are monitored by risk management teams in the same way as other management requirements. They are based on the same tools and procedures and cover our exclusion policies as well as eligibility criteria and fund-specific rules. These rules are automatically monitored using a proprietary monitoring tool. This tool can trigger:

- Pre-negotiation alerts or blocking alerts, for instance on exclusion policies;
- Post-trade alerts: managers are notified of possible overruns so as to be able to quickly rectify them.

The table below details the internal control system implemented by Amundi.

Diagram of the internal control system

3.5 Frequency of risk management framework review

Our ESG analysts review the selection and weightings of Amundi's 38 criteria every 18 months for each sector of activity. This allows them to check whether the criteria and their weightings remain relevant. We continuously seek to improve our analysis by evaluating their materiality.

Amundi's Responsible Investment Policy is updated on a yearly basis.

3.6 Continuous improvement plan

Amundi strives to improve the assessment and integration of sustainability risks, including climate and environmental risks, in the management of its funds. The aim is to go from a qualitative approach to a more quantitative approach by identifying the key indicators that represent the most relevant impacts for portfolios, taking into account climate, environmental, social, and governance factors.

The project is structured in three stages:

- Define a list of sustainability risk indicators, focusing on material risks and their financial impacts on issuers;
- Gradually implement monitoring for these indicators, evaluating their results and defining limits on the basis of these indicators;
- Improve the ESG risk management framework, including the integration of indicators into risk strategies and investment restrictions.

Our current work consists of identifying the main sustainability risk factors and mapping them to issuers' financial variables. This work will end with the validation and approval of the new framework in line with Amundi's ESG governance.

The preliminary indicators considered include metrics to quantify the potential impacts of sustainability risks in terms of financial materiality and the use of "proxies" for reputational risk. The next step, planned for the second half of the current year, is to monitor the defined sustainability risk indicators and assess their impact on the managed portfolios. This monitoring will be used in discussions with the portfolio management teams and included in the various risk management reports. The final stage will focus on improving the ESG risk management framework and possibly setting internal risk alerts or limits based on the indicators. This stage is expected to be completed during the first half of 2025.

It should be noted that deadlines, indicators and implementation objectives may be subject to change throughout the project.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Classification:

Global equities.

The Lyxor MSCI USA ESG (DR) UCITS ETF BROAD CB sub-fund (the "Sub-fund" is continuously at least 60% exposed to at least one foreign equity market or to the equity markets of two or more countries, which may include the French market.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Dist share class: the Board of Directors reserves the right to distribute distributable amounts one or more times a year and/or accumulate all or part of these amounts.

Acc and Monthly Hedged to EUR– Acc share classes: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to replicate the performance, whether positive or negative, of the MSCI USA ESG Broad CTB Select Net Total Return index (the "Benchmark Index"), denominated in US dollars (USD) and designed to meet the minimum requirements of the European Union Climate Transition Benchmarks ("EU CTB") required under the delegated acts supplementing Regulation (EU) 2019/2089 amending Regulation (EU) 2016/1011 while minimising the tracking error between the Sub-fund's performance and that of the Benchmark Index.

The Sub-fund has a sustainable investment objective within the meaning of Article 9 of the SFDR Regulation. The expected maximum ex-post tracking error under normal market conditions is 0.50%.

Benchmark index:

The Benchmark Index is the MSCI USA ESG Broad CTB Select Net Total Return index (i.e. with net dividends reinvested), which means that the Benchmark Index's performance includes the net dividends paid by its underlying shares.

The Benchmark Index is an equity index that is calculated and published by the international index provider MSCI. It has the following characteristics:

a) An investment universe identical to that of the MSCI USA Index (the "Parent Index"), including large and mid-cap stocks aiming to represent 85% of the free float-adjusted capitalisation of each industry group in the US market.

b) ESG screening is performed, as specified in the methodology, to exclude the following companies from the Investment Universe:

- Companies involved in controversial business activities, such as controversial weapons, nuclear weapons, tobacco, thermal coal or oil sands extraction. The exposure criteria differ for each of these activities in accordance with MSCI's methodology.

- Companies involved in serious ESG controversies, as determined by MSCI's ESG Controversies Score.

c) The index observes an optimisation process to select and weight the companies in the eligible universe.

This optimisation process aims to maximise exposure to companies with superior ESG scores while maintaining a risk/return profile near that of the Parent Index. The MSCI ESG rating methodology uses a rules-based methodology designed to measure a company's resilience to the long-term material ESG risks of its sector. It is based on the key ESG issues of a company's main business activity and the specific challenges of its sector, which may mean significant risks or opportunities for the company. The key ESG challenges are weighted in accordance with the impact and time horizon of the risk or opportunity. Key ESG issues include, for example, water stress, carbon emissions, human resources management and corporate ethics.

d) The following optimisation constraints are applied whenever the Benchmark Index is rebalanced:

- a target ex-ante tracking error relative to the Parent Index

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

- an average annual minimum reduction of the carbon intensity of 7% relative to the reference date of 1 March 2022
- exposure to sectors with high climate impact that is at least equivalent to the exposure of the Parent Index (as defined in the Benchmark Index methodology)
- a reduction of at least 30% of the average expected carbon intensity (as defined in the Benchmark Index methodology) relative to the Parent Index
- a green revenue ratio (as defined in the Benchmark Index methodology, the "Green Ratio") that is at least equivalent to that of the Parent Index. The Green Ratio is the weighted average of "green" revenue over the weighted average of revenue linked to fossile energies.

The Sub-Fund's ESG approach thus enables it to improve its average ESG indicators by at least 20% relative to the initial investment universe. The limits of the ESG approach are indicated in the Risk Profile section below. The ESG data covers over 90% of the eligible equities of the Benchmark Index.

Given its method of construction and methodology (as described above), the Benchmark Index differs from a broad market index and is aligned with the Sub-fund's sustainable investment objective.

The Index is a net total return index. A net total return index measures the performance of its components after including any dividends or other distributions and deducting any withholding tax.

The Index construction method (including the rules governing its re-weighting and the adjustment of its components) can be found on the MSCI website at www.msci.com.

Benchmark Index composition and revision

The Benchmark Indicator is revised quarterly in February, May, August and November to coincide with the quarterly revisions of the Parent Index on the same dates. Modifications are made at the end of February, May, August and November.

The Investment Universe and the Eligible Universe are updated during the quarterly reviews of the Benchmark Index. The exact composition of the Benchmark Index and MSCI's rules for its revision are available on MSCI's website at www.msci.com [Erreur ! Référence de lien hypertexte non valide](#).

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Benchmark Index publication

The Benchmark Index is published in real time on MSCI's website at <https://www.msci.com/>.

The Benchmark Index's closing price is available on MSCI's website at <https://www.msci.com/> <https://www.msci.com/>.

Pursuant to the provisions of European Parliament and Council Regulation (EU) 2016/1011, of 8 June 2016, the administrator of the Benchmark Index, is registered in ESMA's register of benchmark index administrators.

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring benchmark indices.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will be exposed to the latter through "direct replication", which means that the Sub-fund will invest mainly in a basket of assets composed of the securities that underlie the Benchmark Index and/or in financial instruments that are representative of all or some of the Benchmark Index securities.

The sub-fund may also use derivative financial instruments ("DFI"). The DFI in which the Sub-fund may invest include, inter alia, futures contracts on indices or on all or some of the Benchmark Index components, and hedging swaps, in particular to minimise the Sub-fund's tracking error.

When the Sub-fund holds cash, in accordance with the investment strategy (e.g. when using futures), the fund manager may, in the best interest of investors, deposit this cash with a credit institution or invest it in balance sheet assets and/or off balance sheet assets (as described below).

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

In order to optimise the direct replication method that is used to track the Benchmark Index, the Sub-fund, represented by the Management Company, may decide to employ a “sampling” technique that consists in investing in a selection of representative Benchmark Index constituents in order to reduce the costs of investing directly in all of the various Benchmark Index constituents. This sampling technique could cause the Sub-fund to invest in a selection of representative Benchmark Index securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Index, and even to invest in securities that are not constituents of the Benchmark Index.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Index or sampling to limit replication costs) and on its consequences in terms of the assets in the Sub-fund’s portfolio, information on the updated composition of the basket of ‘balance sheet’ assets in the Sub-fund’s portfolio is available on the page dedicated to the Sub-fund accessible on Amundi’s website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

Up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a single issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index, particularly in the event of a public offering affecting any of the securities that make up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments in the Benchmark Index.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund will mainly invest in the securities described below:

• Equities

The Sub-fund will mainly invest in the equities that comprise the Benchmark Index.

• Holding shares or units in other CIU or investment funds

The Sub-fund may invest up to 10% of its assets in the shares or units of the following collective investment undertakings (CIU) or investment funds:

- French and foreign UCITS that comply with Directive 2009/65/EC. The Sub-fund may invest in shares or units of UCITS that are managed by the Management Company or by a company that is related to the Management Company.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

3. Off-balance sheet assets (derivatives)

The Sub-fund may trade in derivatives subject to the following conditions:

• Eligible markets:

- regulated
- organised
- over-the-counter

• Risks to which Sub-fund may seek exposure

- equity

• Purpose (all transactions must be consistent with the investment objective)

- hedging
- exposure

• Eligible instruments:

- futures on equities and indices
- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- hedging of the overall portfolio, of certain risks, securities, etc. (up to 100% of assets)

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

- to achieve synthetic exposure to assets or risks (up to 100% of assets)

The counterparties for the Sub-fund's OTC derivatives transactions will be selected in accordance with the Management Company's best-execution policy (including with the execution matrix for each type of asset shown in the Appendix). The aforementioned policy is available at www.amundi.com.

Counterparties to derivative financial instruments will have no discretionary power over the composition of the Sub-fund's investment portfolio, nor over the underlying assets of these derivative instruments, in accordance with regulatory limits and requirements.

When Crédit Agricole is a counterparty to a DFI, a conflict-of-interests situation may arise between it and the Management Company. Such situations are governed by the Management Company's conflict-of-interests policy.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

The Sub-fund may use various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French monetary and financial code, including the temporary sale and repurchase of securities.

- Maximum proportion of assets under management for which securities financing transactions may be entered into: up to 25% of the Sub-fund's assets.
- Expected proportion of assets under management for which securities financing transactions may be entered into: 0% of the Sub-fund's assets.

For this purpose, the Management Company has appointed Société Générale as its intermediary (hereinafter the "Agent"). If transactions involving the temporary disposal of securities are engaged in, the Agent may be authorised to (i) lend securities, on the Sub-fund's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Sub-fund's behalf, any liquid assets received as collateral for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

When Société Générale S.A. is appointed as an Agent, it is not authorised to act as a counterparty to securities lending transactions. If securities are lent:

- The Sub-fund shall be entitled to all income from securities financing transactions, net of any direct and indirect operating fees/expenses.
- The aforementioned operating fees/expenses, which are incurred to manage the portfolio more efficiently, will be those borne by The Sub-fund's Management Company, the Agent (if applicable) and/or other intermediaries that are involved in these transactions.
- The direct and indirect operating fees/expenses will be calculated as a percentage of the Sub-fund's gross income. Information on direct and indirect operating fees/expenses and on the entities to which these fees/expenses are paid will be provided in the Sub-fund's annual report.
- Income from the lending of securities will be paid to the Sub-fund after deduction of any direct and indirect operating fees/expenses that may be borne by the Agent and the Management Company. Since these direct and indirect operating expenses do not increase the Sub-fund's operating expenses they have been excluded from ongoing charges.

If necessary, the Sub-fund's annual report will provide the following information:

- the risk exposure resulting from efficient portfolio management transactions
- the identity of the counterparty(ies) involved in these transactions
- the type and amount of collateral received by the Sub-fund to reduce counterparty risk
- the income obtained from efficient portfolio management transactions during the relevant period and the direct and indirect operating cost/charges associated with these transactions.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

(i) deposited with an authorised institution;

(ii) invested in high-quality government bonds;

(iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;

(iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating

- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) the market(s) in the Benchmark Index's underlying assets is (are) suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Risk of using derivative instruments

The Sub-fund may invest in Derivative Financial Instruments ("DFI") traded over the counter or listed on an exchange, and in particular in futures and/or swaps for hedging purposes. These DFI involve various risks, such as counterparty risk, hedging disruption risk, Benchmark Index disruption risk, taxation risk, regulatory risk and liquidity risk. These risks may affect a derivative instrument directly and may result in a modification or even the premature termination of the DFI contract, which could adversely affect the Sub-fund's net asset value.

The risk of investing in DFI may be relatively high. Since the amount of money required to establish a position in a DFI may be much less than the exposure thus obtained, each transaction involves "leverage". A relatively small market movement may therefore have a very large potential positive or negative impact on the Sub-fund. The market value of DFI is highly volatile and they may therefore be subject to large variations.

The Sub-fund may invest in DFI traded over the counter. DFI traded over the counter may also be less liquid than transactions on an organised market, where the volumes traded are generally quite higher, and the prices of these DFI may therefore be more volatile.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative Contract and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Benchmark Index tracking risk

Replicating the performance of the Benchmark Index by investing in all of its constituents may prove to be very difficult to implement and costly. The Sub-fund manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Index, in proportions that differ from those of the Benchmark Index or even investing in securities that are not index constituents or in derivatives. The use of such optimisation techniques may increase the ex post tracking error and cause the Sub-fund to perform differently from the Benchmark Index.

- Risk of using efficient portfolio management techniques

If the Sub-fund's counterparty to an efficient portfolio management technique (hereinafter "EPMT") defaults, this may expose the Sub-fund to the risk that the value of the collateral it has received is less than the value of the assets the Sub-fund transferred to the counterparty to the EPMT. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as collateral and/or (iv) the illiquidity of the market in which the collateral received is listed.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

Shareholders' attention is drawn to the fact that TGEPS may be entered into with entities belonging to the same group as the Management Company.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs:

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index,
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Currency risk associated with the Benchmark index

The Sub-fund is exposed to currency risk since the securities that underlie the Benchmark Index may be denominated in a different currency than the Benchmark Index, or be derivatives of securities that are denominated in a different currency than the Benchmark Index. Changes in exchange rates may therefore adversely impact the Sub-fund's Benchmark Index.

- Currency risk of the Dist and Acc share classes

These shares are exposed to currency risk since they are denominated in a different currency than the Benchmark Index. Changes in exchange rates may therefore cause the net asset value of these share classes to decrease, even if the value of the Benchmark Index increases.

- Monthly Hedged to EUR – Acc share class

To hedge the EUR currency risk of the Monthly Hedged to EUR – Acc share class vis-à-vis the currency of each of the securities that make up the Benchmark Index, the Sub-fund uses a hedging strategy that reduces the impact of a change in the exchange rate between each of these currencies and that of the share class. Given the monthly implementation of this hedging and the instruments employed, the hedging of currency risk is imperfect and the Sub-fund may be exposed to adverse market movements.

- Sustainability risks

In the context of sustainability risk management, the Management Company relies on the Benchmark Index, whose methodology integrates sustainability risks by optimising the investment universe in accordance with an ESG rating. This integration of these risks has a direct impact on the Benchmark Index's investment universe. However, there is no absolute assurance that all sustainability risks will be eliminated, and the occurrence of such risks may have an adverse impact on the value of the Benchmark Index's underlying assets. More information on the Benchmark Index methodology can be found on the Internet at <https://www.msci.com>. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus. Sustainability risks

- Controversy market risk

Companies which have met a benchmark index's selection criteria may suddenly and unexpectedly be affected by a serious controversy that could adversely affect the Sub-fund's net asset value. When these securities are components of the benchmark index, they are likely to be held until the next index rebalancing.

- EU CTB qualification risk

The Benchmark Index was designed to meet the minimum requirements of the EU CTB indices at each rebalancing date, which inter alia includes achieving a minimum average annual reduction of the carbon intensity of 7% relative to a reference date. This requirement is met using the average weighted figures over the entire period, including between two rebalancing dates during which the carbon emissions of companies may vary. Therefore, even if the Benchmark Index meets the minimum requirements of the EU CTB indices on each rebalancing date, the index may not necessarily maintain its eligibility due to the effect of the weighted averages between the rebalancing dates. Furthermore, since the absolute decarbonisation trajectory of the Benchmark Index is linked to the decarbonisation trajectory of the initial investment universe, some of the EU BTC requirements may not be achievable, particularly if all companies in the initial investment universe increase their carbon emissions.

- Optimisation process risk

The Benchmark Index methodology employs an optimisation process. The optimisation process does not always enable all requirements to be met simultaneously. The Benchmark Index methodology has prioritised its constraints to to minimise the risk of insolvency when two or more constraints cannot be satisfied. These constraints include the targeted tracking error between the Benchmark Index's performance and that of the Parent Index.

- Risk of using CO2 emissions data

The analysis of company CO2 emissions is partly based on self-reported data, models and estimates.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors subscribing to this sub-fund are seeking exposure to the US equity market.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

Subfund life on the year under review

Until 12/29/2022, the Lyxor MSCI USA ESG Broad CTB (DR) UCITS ETF fund was classified as Article 9 under the Taxonomy Regulation and since 12/30/2022 , this classification was changed from Article 9 to Article 8.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Lyxor MSCI USA ESG (DR) UCITS ETF is an ETF (exchange traded fund) compliant with the UCITS Directive. Its objective is to replicate, both upwards and downwards, the benchmark MSCI USA ESG Broad Select Net Total Return Index. This index has an investment universe identical to that of the MSCI USA index (parent index). It covers mid- and large-cap shares, with the aim of representing 85% of the market capitalisation, adjusted for the free float of each industrial group on the US market. An ESG filter is included in the investment universe to exclude companies exposed to controversial activities and/or major ESG controversies. An optimisation process is also implemented to maximise exposure to companies with the highest ESG scores while maintaining a risk/return profile close to that of the parent index. For more information on the index, please visit www.msci.com.

From October 2022 to October 2023, the performance of the Acc share / FR0011363423 is 1.65%. That of the benchmark of 1.77% with a tracking error of 0.05%.

From October 2022 to October 2023, the performance of the Dist share / FR0010296061 is 1.65%. That of the benchmark of 1.77% with a tracking error of 0.05%.

The performance achieved over the period does not prejudice the future results of the subfund.

Transparency of securities financing transactions and the reuse of financial instruments under the SFTR regulation (in the UCI's accounting currency)

Over the course of the reporting period, the UCI was not involved in any transactions governed by the Securities Financing Transactions Regulation (SFTR).

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

French Energy Transition for Green Growth Act (Article 173 of Act No. 2015-992) and Fund Compliance with criteria relating to environmental, social, and governance quality (ESG) objectives

AMUNDI's ESG analysis generates ESG ratings for over 13,000 companies worldwide on a scale ranging from A (for issuers with the best ESG practices) to G (for the worst practices). This analysis is complemented by a policy of active commitment among issuers, in particular on major challenges regarding sustainable development within their sectors.

AMUNDI uses a targeted exclusion policy based on global agreements such as the United Nations Global Compact and other conventions on human rights, the International Labour Organisation, and the environment. In all of its active management strategies, AMUNDI therefore excludes companies that are non-compliant with its ESG principles or international agreements and their transposition into national law:

- anti-personnel mines,
- cluster bombs,
- chemical weapons,
- biological weapons,
- depleted uranium weapons.

These issuers receive a "G" rating on the AMUNDI scale.

In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal

Since coal is the largest single contributor to climate change caused by human activity, in 2016 AMUNDI implemented a sectoral policy specific to thermal coal, resulting in the exclusion of certain companies and issuers. AMUNDI has progressively reinforced this coal exclusion policy every year since 2016. These commitments stem from the Crédit Agricole Group's climate strategy. In line with the UN's Sustainable Development Goals and the 2015 Paris Agreement, this strategy is based on the research and recommendations of a Scientific Committee, which takes into account the IEA's (International Energy Agency) energy scenarios, Climate Analytics, and Science-Based Targets. In 2020, as part of the update of its policy on the thermal coal sector, AMUNDI extended its coal mining exclusion policy, which now includes all companies developing or planning to develop new thermal coal mining capacity.

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity along the entire value chain (producers, extractors, power plants, transport infrastructure),
- Companies generating more than 25% of their income from thermal coal mining,
- Companies extracting 100 MT or more of thermal coal with no intention of reducing these quantities,

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

- All companies whose income from thermal coal mining and coal-fired power generation is over 50% of their total income before analysis, all coal-fired power generation and coal mining companies with a threshold between 25% and 50% and a deteriorated energy transition score.

Application in passive management:

• Passive ESG funds

- All ETF and ESG index funds (with the exception of highly-concentrated indices)
- implement AMUNDI's policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

- In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.
- Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.
- Consequently, AMUNDI's index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.
- At the same time, in the context of securities excluded from the "thermal coal policy" in AMUNDI's active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a "nay" vote on the management of the companies in question.

Tobacco

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to "E", on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates:

- Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).
- Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy.

For further information on how environmental (in particular climate change-related), social, and corporate governance (ESG) issues are taken into account in its investment policy, AMUNDI provides investors with the "Application of Article 173" report, available at <https://legroupe.amundi.com> (Legal Documentation section).

SFDR Regulations and Taxonomy:

Article 8 – Passive Portfolio Management – under the Taxonomy

In accordance with its investment objective and policy, the Fund promotes environmental characteristics within the meaning of Article 6 of the Taxonomy Regulation. It may partially invest in economic activities that contribute to one or more of the environmental objective(s) set out in Article 9 of the Taxonomy Regulation. However, the Fund does not currently make any commitment in terms of a minimum proportion.

The Taxonomy aims to identify economic activities considered to be environmentally sustainable. The Taxonomy identifies such activities according to their contribution to six major environmental objectives: (i) climate change mitigation, (ii) climate change adaptation, (iii) the sustainable use and protection of water and marine resources, (iv) the transition to a circular economy (waste, prevention and recycling) (v) pollution prevention and control, and (vi) the protection and restoration of biodiversity and ecosystems.

In order to determine an investment's degree of environmental sustainability, an economic activity is considered to be environmentally sustainable where it contributes substantially to one or more of the environmental objectives set out in the Taxonomy Regulation, where it does no significant harm (the "DNSH" principle) to one or more of these environmental objectives, where it is carried out in accordance with the minimum safeguards provided for in Article 18 of the Taxonomy Regulation and where it complies with the technical screening criteria established by the European Commission in accordance with the Taxonomy Regulation.

In accordance with the current iteration of the Taxonomy Regulation, the Asset Manager ensures that investments do no significant harm to any other environmental objective by implementing exclusion policies covering issuers with controversial environmental and/or social and/or governance practices.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

Notwithstanding the preceding, the Do No Significant Harm principle is applied solely to the underlying investments incorporating European Union criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Although the Fund may already hold investments in economic activities qualified as sustainable activities without currently undertaking to observe a minimum proportion, the Asset Manager is making every effort to disclose the proportion invested in sustainable activities as soon as it is reasonably possible after the entry into force of the Regulatory Technical Standards governing the content and presentation of disclosures in accordance with Articles 8(4), 9(6) and 11(5) of the Disclosure Regulation, as amended by the Taxonomy Regulation.

This effort will be gradually and continuously rolled out, incorporating the requirements of the Taxonomy Regulation in the investment process as soon as it is reasonably possible. As a result, a minimum degree of portfolio alignment with sustainable activities will be disclosed to investors at that time.

Until then, the degree of alignment with sustainable activities will not be disclosed to investors.

Once the data are fully available and the appropriate calculation methodologies finalised, the description of the proportion of underlying investments in sustainable activities will be disclosed to investors. This information, along with information on the proportion of enabling and transitional activities, will be indicated in a subsequent version of the prospectus.

Article 8 – Passive Portfolio Management – under Article 11 of SFDR

The subfund is classified in accordance with Article 8 of Regulation EU 2019/2088 known as “Disclosure” and aims to promote environmental and/or social characteristics.

During the period, the Manager of Sicav continuously promoted the environmental and/or social characteristics:

- Via the methodology of the replicated index which aims to obtain an ESG score higher than the ESG score of its parent index or of the universe eligible for the index, and.
- In its investment process, excluding all issuers mentioned in the exclusion list of the Responsible Investment Policy (unless specifically specified in the subfund Prospectus).

The compartment promotes the environmental characteristics as described in Article 8 of the Disclosure Regulation and may, during the relevant period, have partially invested in economic activities that have contributed to an environmental objective within the meaning of the Disclosure Regulation.

As required by Article 50 (2 SFDR) of COMMISSION DELEGATED REGULATION, information on the environmental or social characteristics promoted by the financial product is available in an annex to this report.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)
- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF Subfund of the Sicav Multi Units France

on the performance of a representative basket of AIFs and/or UCITS funds.

- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives
- account activity charges, which are charged to the Sub-fund.
- direct and indirect operating fees/expenses of securities financing transactions.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.25% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A
Direct and indirect operating fees/expenses of securities financing transactions	The income from these transactions	20% for the Management Company 15% for the Agent

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Unit distribution (including interim payments)*	-	-	-	-	-
Unit tax credit transferred to share holders (individuals) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	-	-	-	-	-

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

Appendix

SFDR information

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:
Lyxor MSCI USA ESG BROAD CTB (DR) UCITS ETF

Legal entity identifier:
9695000MFVWPCPJUA77

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
Yes	No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 37.68% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The product promoted environmental characteristics by reproducing, among other things, an index meeting the minimum standards of the "Climate Transition Benchmark (CTB) under Regulation (EU) 2019/2089 amending Regulation (EU) 2016/1011.

The Sub-fund promoted environmental and/or social characteristics by reproducing, among other things, an MSCI USA ESG Broad CTB Select Net Total Return index meeting the minimum standards of EU Climate Transition Benchmarks (EU CTBs) under Regulation (EU) 2019/2089 amending Regulation (EU) 2016/1011

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

As at the end of the period, the weighted average greenhouse gas (GHG) intensity ("WACI") of the index is 124.15

● **...and compared to previous periods?**

During the previous period, the weighted average greenhouse gas (GHG) intensity ("WACI") of the index was 143

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments were to invest in companies that met two criteria:

1. follow best environmental and social practices; and
2. do not generate products and services that harm the environment and society.

The definition of a "best performing" company is based on a proprietary Amundi ESG methodology that is designed to measure a company's ESG performance. To be considered as the "best performing", a company must obtain the best rating among the top three (A, B or C, on a rating scale ranging from A to G) in its sector on at least one important environmental or social factor. Significant environmental and social factors are identified at the sector level. The identification of these factors is based on Amundi's ESG analysis framework, which combines extra-financial data with a qualitative analysis of the related sector and sustainability themes. Factors identified as material have a contribution of more than 10% to the overall ESG score. For the energy sector, for example, material factors are: emissions and energy, biodiversity and pollution, health and safety, local communities and human rights.

In order to contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticides, single-use plastic production) that are not compatible with these criteria.

The sustainable nature of an investment is assessed at the level of the investee company. Concerning external UCIs, the criteria for determining the sustainable investments that these underlying UCIs may hold and their objectives depend on each company's own management approach.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that sustainable investments do not cause significant harm, Amundi uses two tests:

- The first "DNSH" ("Do No Significant Harm") test is based on the monitoring of the mandatory indicators of the Main Negative Impacts in Annex 1, Table 1 of Delegated Regulation (EU)

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

2022/1288 when reliable data is available (for example, the GHG intensity or greenhouse gas intensity of beneficiary companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. The carbon intensity of beneficiary companies is not within the sector's last decile). Amundi already considers specific indicators of the Main Negative Impacts in its exclusion policy as part of the Amundi Responsible Investment Policy (e.g. exposure to controversial weapons). These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the principles of the UN Global Compact, coal and tobacco.

- In addition to the specific sustainability factors covered by the first filter, Amundi has defined a second filter that does not consider the mandatory indicators of the Main Negative Impacts above, so as to verify that a company's overall environmental or social performance is not worse than other companies in its sector, corresponding to an environmental or social score of E or higher according to Amundi's ESG rating system.

Concerning external UCIs, the consideration of the "do no significant harm" principle and the impact of sustainable investments depends on each underlying UCI manager's own methodologies.

How were the indicators for adverse impacts on sustainability factors taken into account?

As detailed above, the negative impact indicators were taken into account in the first DNSH filter (Do No Significant Harm):

This is based on the monitoring of the mandatory indicators of the Main Negative Impacts in Appendix 1, Table 1 of Delegated Regulation (EU) 2022/1288 when reliable data is available via the combination of the following indicators and specific thresholds or rules:

- has a CO2 intensity that is not within the last decile of companies in the sector (only applicable to high-intensity sectors), and
- has board diversity that is not within the last decile of companies in its sector, and
- is free from any controversy regarding working conditions and human rights
- is free from any controversy regarding biodiversity and pollution.

Amundi already takes into account the specific Negative Main Impacts in its exclusion policy as part of its Responsible Investment Policy. These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the principles of the United Nations Global Compact, coal and tobacco.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

Yes. The OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights have been incorporated into Amundi's ESG rating methodology. The proprietary ESG rating tool evaluates issuers using data available from data providers. For example, the model includes a dedicated criterion called "Community inclusion and Human rights" that is applied to all sectors in addition to other Human rights criteria, including socially responsible supply chains, working conditions and professional relations. In addition, we monitor controversies at least on a quarterly basis, which includes companies identified for Human rights violations. When controversies arise, analysts assess the situation and apply a score to the controversy (using an exclusive, proprietary rating methodology) and determine the best steps to follow. Controversy scores are updated quarterly to track trends and remediation efforts.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The mandatory indicators of the Negative Main Impacts set out in Appendix 1, Table 1 of Delegated Regulation (EU) 2022/1288 were taken into account by implementing exclusion policies (normative and sectoral) and integrating ESG rating into the investment process, engagement and voting approaches:

- **Exclusion:** Amundi has defined normative exclusion rules, by activity and by sector, covering some of the main sustainability indicators listed in the "Disclosure" Regulation.
- **Engagement:** engagement is an ongoing and targeted process aimed at influencing companies' activities or behaviour. The objective of the engagement can be divided into two categories: engaging an issuer to improve the way in which it integrates the environmental and social dimension and engaging an issuer to improve its impact on environmental, social and Human rights issues or other sustainability issues that are important to society and the global economy.
- **Voting:** Amundi's voting policy relies on a holistic analysis of all long-term issues that may influence value creation, including material ESG issues (Amundi's voting policy can be consulted on its website).
- **Monitoring controversies:** Amundi has developed a controversy monitoring system that relies on three external data providers to systematically monitor controversies and their level of severity. This quantitative approach is then enhanced by an in-depth assessment of each severe controversy conducted by ESG analysts and a periodic review of its developments. This approach applies to all Amundi funds.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **from 01/11/2022 to 31/10/2023**

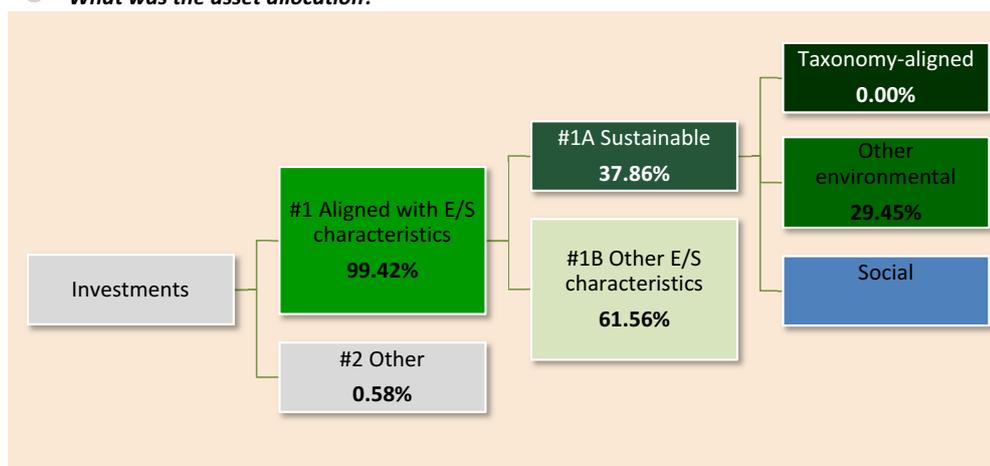

Largest investments	Sector	% Assets	Country
APPLE INC	Information technologies	7.27%	USA
MICROSOFT CORP	Information technologies	6.71%	USA
AMAZON.COM INC	Consumer discretionary	3.36%	USA
ALPHABET INC CLC	Communication services	2.87%	USA
NVIDIA CORP	Information technologies	2.84%	USA
META PLATFORMS INC-CLASS A	Communication services	1.68%	USA
TESLA INC	Consumer discretionary	1.56%	USA
UNITEDHEALTH GROUP INC	Healthcare	1.51%	USA
ELI LILLY & CO	Healthcare	1.48%	USA
VISA INC-CLASS A SHARES	Finance	1.16%	USA
JPMORGAN CHASE & CO	Finance	1.11%	USA
JOHNSON & JOHNSON	Healthcare	1.09%	USA
MASTERCARD INC-CL A	Finance	1.01%	USA
BROADCOM INC	Information technologies	0.98%	USA
MERCK & CO. INC.	Healthcare	0.96%	USA

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

Sectors	% Assets
<i>Information Technology</i>	29.97%
<i>Healthcare</i>	14.06%
<i>Finance</i>	12.21%
<i>Consumer discretionary</i>	10.11%
<i>Industry</i>	8.54%
<i>Communication services</i>	8.50%
<i>Consumer staples</i>	5.41%
<i>Energy</i>	3.25%
<i>Property</i>	3.00%
<i>Materials</i>	2.39%
<i>Utilities</i>	1.98%
<i>Other</i>	0.00%
<i>Liquid capital</i>	0.57%

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund promotes both environmental and social characteristics. Although the fund does not commit to making Taxonomy-aligned investments, it nevertheless invested 0.00% in Taxonomy-aligned sustainable investments during the period under review. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the aforementioned objectives of the EU taxonomy is measured using data on turnover (or revenue) and/or the use of green bond proceeds.

Neither the fund's auditors nor a third party has verified the percentage alignment of the fund's investments with the EU taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas
 - In nuclear energy
- No

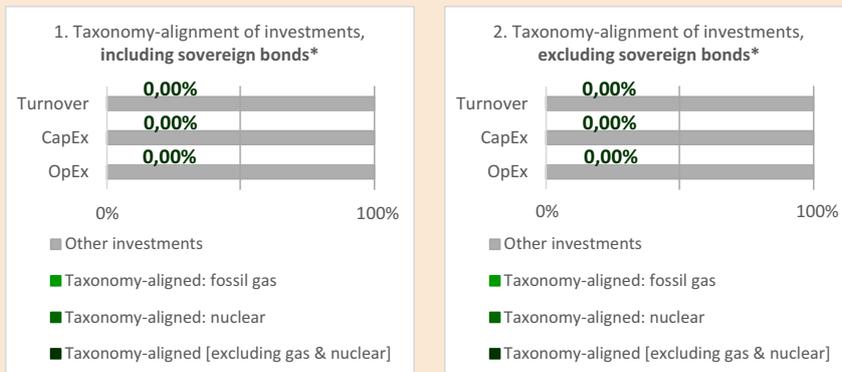

Reliable data on alignment with the EU Taxonomy for fossil gas and nuclear energy was not available during the period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Using data relating to turnover and/or the use of green bond proceeds as an indicator, 0.00% of the fund's investments were in transitional activities and 0.00% of investments were in enabling activities as at 31/10/2023. Neither the fund's auditors nor a third party has verified the percentage alignment of the fund's investments with the EU taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Alignment with the EU taxonomy was not reported during the previous period because no reliable data was available at the time.

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the Taxonomy was **29.45%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR but some of their activities are not aligned with Taxonomy standards, or data is not yet available for them to perform such an assessment.

What was the share of socially sustainable investments?

The product does not commit to a minimum share of socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash and/or other instruments held for liquidity and portfolio risk management purposes were included in category "#2 Other". For non-rated bonds and equities, minimum environmental and social guarantees are applied by filtering for controversial issues in relation to the principles of the United Nations Global Compact. Moreover, minimum environmental or social guarantees have not been defined.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. The binding elements of the index methodology ensure that environmental and/or social characteristics are met at each rebalancing date. The product strategy is also based on systematic exclusion policies (normative and sectoral) as described in more detail in Amundi's responsible investment policy.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error.

● *How does the reference benchmark differ from a broad market index?*

The MSCI USA ESG Broad CTB Select Net Total Return Index (the "Benchmark Index") denominated in US Dollars (USD) and designed to meet the minimum requirements for EU Climate Transition Benchmarks (EU CTBs) as required under the delegated acts that complete Regulation (EU) 2019/2089 amending Regulation (EU) 2016/1011, while minimising as far as possible the Tracking Error between the performance of the Subfund and that of its Benchmark Index.

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. The product's sustainability indicators are, consequently, generally aligned with those of the Index.

● ***How did this financial product perform compared with the reference benchmark?***

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. Consequently, the product's sustainability indicators showed an overall performance in line with that of the Index.

● ***How did this financial product perform compared with the broad market index?***

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. A comparison of the index replicated by the product with its parent index is detailed under "How did the sustainability indicators perform?".

Energy Climate Act (ECA)

Annual
reporting

31/10/2023

Fund reporting Article 29 of the Energy-Climate Act (LEC - Loi énergie-climat)

This document lists the required information from funds exceeding €500 M in net assets under management pursuant to Article 29 of the LEC

The implementing decree relating to Article 29 of the Energy-Climate Act of 8 November 2019, which clarifies and strengthens the non-financial transparency measures for market participants, was published in the Official Journal of 27 May 2021.

As of the reporting date for the period, the portfolio's strategy did not take into consideration either the alignment of its assets under management with the long-term goals of Articles 2 and 4 of the Paris Agreement, which aims to hold the increase in the global average temperature to below 2°C above pre-industrial levels, with a quantitative goal for the reduction of emissions by 2030.

At the end of the period, the fund did not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992. However, Amundi has included non-financial indicators in its report that will allow it to evaluate the footprint on biodiversity of the assets held. The information, indicators, and methodologies described may change with time. While this report was prepared and reviewed with care and attention, Amundi and its data providers disclaim all liability for any errors or omissions that may be contained in this document, and disclaim all liability for losses or harm that may be suffered by a third party or organisation due to the use of the content of this report. Amundi has also included plans for continuous improvement in this report, including the identification of opportunities for improvement and information relating to corrective actions and strategic and operational changes it has made.

Annual
reporting
31/10/2023

This document meets the requirements of Article 29 of the Energy-Climate Act of 8 November 2019 (called the "LEC") on non-financial reporting for market participants.

The document presents:

1. The portfolio's climate strategy, if it has a strategy of alignment with the temperature objectives of the Paris Agreement;
2. The portfolio's strategy on alignment with long-term biodiversity objectives;
3. The process for taking into account environmental, social, and governance criteria in risk management.

More information is available in Amundi's responsible investment policy and in our climate report, available on our website: <https://legroupe.amundi.com/documentation-esg>.

1. The strategy on alignment with the international goals on limiting global warming, provided for in the Paris Agreement

The fund belongs to Amundi's "Net Zero Ambition" product range and includes in its investment process objectives and restrictions aimed at offering institutional investors and individuals the opportunity to invest in the companies most likely to participate in the transition to a decarbonised economy by 2050, and promotes the following sustainability characteristics:

1. Portfolio emissions reduction targets in line with the demands of the Paris Agreement;
2. A minimum level of exposure to sectors with major climate issues compared to the reference universe;
3. Exclusion rules relating to climate issues specific to the fund.

Description of the index

This index's investment universe is identical to that of the MSCI USA index (parent index). It covers mid- and large-cap securities, with the goal of representing 85% of market capitalisation, adjusted for the free float of each industrial group on the US market. An ESG filter is integrated into the investment universe to exclude companies exposed to controversial activities and/or major ESG controversies. In addition, the ETF meets the minimum requirements of the EU regulation in terms of climate transition (EU CTB). Visit www.msci.com for more information on the index. See the Fund's KIID and prospectus for further information.

Exclusion policies

Thermal coal exclusion policy

The burning of coal is the largest single contributor to climate change attributable to human activity. In 2016, Amundi established a sectoral policy dedicated to thermal coal, triggering the exclusion of certain companies and issuers. Since then, Amundi has progressively strengthened the rules and thresholds of its thermal coal policy each year.

Amundi excludes:

- Mining companies, utility companies, and transport infrastructures that develop authorised coal projects that are under construction, such as those defined on the list of coal developers established by Crédit Agricole,
- Companies whose coal projects are at the initial development stage, or that have been announced or proposed, or that have been pre-authorised, are monitored on a yearly basis.
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-based electricity production and coal mining companies with a threshold of between 20% and 50% of their total income and showing an insufficient trajectory (Amundi carries out an analysis to assess the quality of the exit plan);
- Companies that generate more than 20% of their income from thermal coal mining;
- Companies that extract 70 MT or more thermal coal annually with no intention of reducing these quantities.

The gradual elimination of coal is crucial to achieving the decarbonisation of our economies. That is why Amundi has undertaken to gradually eliminate thermal coal from its investments in OECD countries by 2030 and in other countries by 2040. In line with the UN's Sustainable Development Goals and the 2015 Paris agreements, this strategy is based on the research and recommendations of Crédit Agricole's Scientific Committee, which takes into account the energy scenarios produced by the IEA (International Energy Agency), the Climate Analysis Report, and the "Science-Based Targets".

Scope of the exclusion policy

This policy applies to all companies, but mainly affects mining companies, utilities, and transport infrastructure companies. This policy applies to all active management strategies and all passive ESG management strategies over which Amundi has full discretion, for the following entities of the Amundi Group: Amundi Asset Management, BFT IM, CPR AM, and SGG.

Using our position as an investor to motivate issuers to gradually abandon coal

Amundi has established a commitment to companies exposed thermal coal. We request that they publicly release a policy on the elimination of thermal coal in line with Amundi's 2030/2040 elimination calendar.

For companies:

- (i) Excluded from Amundi's active investment universe under our policy, and those
- (ii) Whose thermal coal policies are considered by Amundi to be behind schedule

Amundi's policy consists of voting against the discharge of the Council or the Management or against the re-election of the Chairman, the President, or certain Directors.

Exclusion policy concerning unconventional fossil fuels

Since 31 December 2022, Amundi also excludes companies whose activity is more than 30% exposed to the exploration and mining of unconventional oil and gas (covering "shale oil and gas" and "oil sands").

Case of ETFs and ESG index funds

All ETFs and ESG index funds implement Amundi's exclusion policy as far as possible (with the exception of highly concentrated indices).

Annual
reporting
31/10/2023

Continuous improvement plan

1. Amundi's Climate Strategy in support of the carbon neutrality goals of the Paris Agreement

- since the end of 2020, the Board of Directors of the management company's parent company has incorporated social and environmental issues in its governance and analysed progress on a quarterly basis via key indicators linked to climate and ESG;
- the Board members held a one-day dedicated strategic seminar to define the strategy to be deployed and the practical directions for implementing the new "Ambition 2025" societal plan;
- a monthly ESG and Climate committee meeting presided by the CEO defines and validates the ESG and climate policy applicable to investments and steers the major strategic projects;
- commitments made in the framework of the Net Zero Asset Managers initiative, of which Amundi has been a signatory since July 2021:
 - a target of 18% of Amundi's assets under management Net Zero aligned by 2025 (i.e., this 18% will only be made up of funds and mandates with objectives compatible with a Net-Zero trajectory by 2050);
 - -30% carbon intensity (tCO₂e/€M of revenue) by 2025 and -60% by 2030 for all portfolios subject to the NZIF (Net Zero Investment Framework - Set of actions, metrics, and methodologies to help investors maximise their contribution to achieving the Net Zero alignment objective);
- by 2025, Amundi will also offer open transition funds towards the Net Zero 2050 objective across all major asset classes;
- achieve €20 billion in assets under "impact" funds (including funds making a positive contribution to the objectives of the Paris Agreement);
- strengthening of the targeted sectoral exclusion rules;
- Amundi invests significant resources to enable better consideration of climate issues in portfolio management:
 - significant increase in the size of its ESG team;
 - launch of ALTO* Sustainability, a technological analytics solution and decision-making support for investors on environmental and societal issues.

2. Actions taken and strategic and operational changes made in order to sustainably integrate climate into the strategy

- progressive inclusion of ESG objectives in the performance evaluations of salespersons and portfolio managers to make this dimension part of their variable remuneration. A climate and ESG training programme developed with Amundi experts for all staff so that each employee receives the appropriate training;
- implementation of a rating methodology using a "best-in-class" approach to evaluate issuers' transition efforts in relation to a Net Zero scenario. The stated objective of the portfolios concerned will be to have a better environmental transition profile than that of their reference investment universe by 2025;
- the transition to a low-carbon economy is one of the strategic directions of our engagement policy, and Amundi has committed to expanding the number of companies with which we engage in ongoing dialogue on the climate to 1,000 additional companies, with the objective that these companies will define credible strategies for reducing their carbon footprint, have them brought to a vote at their General Meetings, and have part of their managers' remuneration linked to these strategies.

Amundi will continue to develop its climate strategy in the years to come, using scientific reference scenarios and closely linked with the objectives of its clients, both by investing in solutions to accelerate the transition and by gradually aligning its portfolios with the 2050 neutrality objective.

2. The strategy on alignment with the long-term goals relating to biodiversity

The fund's strategy does not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992.

Non-financial indicators

The question of the impact of businesses on biodiversity is crucial. In 2022, Amundi was able to begin using data to calculate the biodiversity footprint of its portfolios.

The metric used to display the **biodiversity footprint** is **MSAppb*/bEUR** (1). It makes it possible to quantify the impact of a company's activities and value chain on its environment. An entity's biodiversity footprint is obtained by dividing the impact value (**MSA.ppb***) by the enterprise value to obtain the **'MSAppb*/bEUR'**. To attribute a company's impact to a portfolio, this footprint is multiplied by the amount held in the portfolio.

To quantify the each company's impact on biodiversity, the upstream physical inventories necessary for conducting its activities are modelled from turnover by region and sector using the EXIOBASE input-output model. These physical flows generate pressure on biodiversity, which are modelled using the Commotools suite (raw materials analysis tool) developed by CDC Biodiversité. Finally, the **GLOBIO** (2) model translates these pressures into impacts using **MSA In %** (3) data on various ecosystems.

The output shows the impacts expressed in **MSA.km²** (4), the surface equivalent of MSA and key metric of the **GBS** (5) data. These impacts are divided into 4 "compartments" according to biome (terrestrial, freshwater aquatic) and temporality (static, dynamic). To reach an aggregated metric, the **MSA.km²** undergoes two types of normalisation:

- normalisation of the differential between the land (~130 million km²) and freshwater aquatic (~10 million km²) surface areas, through which we obtain an **MSAppb - MSA.km²** translated into parts per billion and expressed as a surface fraction of their respective biomes.
- normalisation of the differential between the static (produced from the initial state to today) and dynamic (produced over the financial year) impacts, through which we obtain an **MSAppb*** - "time integrated" metric, which integrates the static impact of the footprint for the year of analysis, amortising it over the time required to reconstitute biodiversity over the surface area in question (6).

This dual normalisation produces an indicator that takes into account all dimensions of the impact of a company's activities on biodiversity.

(1) MSAppb*/bEUR (BIA, Biodiversity Impacts Analytics – Carbone 4 Finance): aggregates both static and dynamic data from terrestrial and aquatic environments: static impacts result from the past accumulation of biodiversity losses; dynamic impacts represent impacts occurring during the relevant year. MSAppb* reduced to company value is equal to the biodiversity footprint of a company, MSA.ppb*/bEUR

(2) GLOBIO model: developed by a consortium created in 2003, composed of PBL, UNEP GRID-Arendal(13) and UNEP-WCMC. The model was created to calculate the impact of past, present, and future environmental pressures on biodiversity. It is based on pressure-impact relationships in scientific literature. GLOBIO does not use species data input to produce its results. Instead, spatial data is collected on the various environmental pressures and their impact on biodiversity is estimated. These pressures mainly come from the Integrated Model to Assess the Global Environment (IMAGE)

(3) MSA (GLOBIO): "Mean Species Abundance" is an indicator that shows the intactness of local biodiversity

(4) MSA.m2 (GBS): version of MSA% relating to surface area. A loss of 1 MSA.m2 is equivalent to 1m² of land take on a virgin natural ecosystem

(5) GBS (Global Biodiversity Score) model: expressed in a surface area metric as MSA.m2, was constructed by CDC Biodiversité. Calculating a company's biodiversity footprint via its GBS amounts to establishing a quantitative link between its activity and impacts on biodiversity. These impacts are the consequence of the contribution made by the company's economic activity to the various pressures that threaten biodiversity, which the CBD groups into five categories: habitat change, pollution, invasive alien species, climate change, and overexploitation

(6) The methodology considers that it takes 50 years for an ecosystem to return to its initial state.

Annual reporting
31/10/2023

Continuous improvement plan

The subject of biodiversity, which is intrinsically linked to that of climate change, occupies an increasingly important place in our societies, not just in research, but also economic considerations. Biodiversity is one of the themes of Amundi's ESG analysis. It is reflected in the methodological grid via the "Biodiversity & Pollution" criterion, and thus plays a part in the construction of issuer ESG ratings. Amundi is also particularly attentive to controversies linked to biodiversity. In 2022, Amundi continued its initiatives for a better integration of biodiversity into its internal analysis and investment processes. In addition, the subject was among the ESG Research team's top priority analysis themes in 2022, which resulted in the production of a ten-part series of research papers entitled "Biodiversity: it's time to protect our only home". The first two parts were published in 2022, while the following will be put on-line in 2023.

The subject of biodiversity is a particular focal point of the dialogue with the companies in which Amundi is invested. Following the campaigns on plastics launched in 2019, on the circular economy in 2020, and on biodiversity in 2021, Amundi strengthened its active dialogue in 2022 with companies, continuing its engagement campaign dedicated to biodiversity strategy in eight different sectors. Due to the limitations related to the data available on the subject, the first objective of this commitment is to establish an inventory of the consideration of biodiversity by the companies, then ask them to assess the responsiveness of their activities to this loss of biodiversity, and to manage the impact of their activities and products on biodiversity. In 2022, 119 companies engaged on their biodiversity strategy. As part of this engagement, Amundi provides recommendations, with the aim of better integrating these issues into their strategy. Amundi has more broadly strengthened shareholder dialogue around the preservation of natural capital. In 2022, 344 companies (a company may engage on several topics) were engaged through different programmes (including the promotion of a circular economy and better plastics management, the prevention of deforestation, and various subjects linked to such topics as the reduction of pollution or the sustainable management of water resources).

In 2022, Amundi continued its commitment to market initiatives and working groups dedicated to biodiversity. In 2021, Amundi joined the collective "Finance for Biodiversity Pledge" investor initiative and committed to collaboration and knowledge-sharing, active dialogue with companies, and to evaluating its impacts, setting objectives around biodiversity, and communicating them publicly by 2024. In addition, Amundi will produce an annual report on these portfolios' contribution to biodiversity objectives. In 2022, following the publication of its preliminary Nature-related Risk & Opportunity Management and Disclosure Framework, the TNFD (Taskforce on Nature-related Financial Disclosures) launched pilot groups to test the feasibility of this framework on various aspects. Amundi joined a pilot group led by UNEP-FI and CDC Biodiversité, intended to test the TNFD approach, and particularly the application of the GBS (Global Biodiversity Score) to financial institutions.

Amundi also aims to develop its investment policy in terms of biodiversity around several major themes, such as water or plastics, in order to strengthen engagement where necessary and exclude companies that are harmful to natural capital. An update to this policy will be published by 2024.

In terms of data, data analysis relating to the biodiversity indicator is now in place and biodiversity impact metrics are proposed for certain funds. At this stage, Amundi is not consolidating this data at asset manager or group level.

3. The process for taking into account environmental, social, and governance criteria in risk management

3.1 Identification of environmental, social, and governance risks

Amundi's Responsible Investment department constitutes a hub of expertise dedicated to the identification and assessment of risks and opportunities relating to ESG issues. This department provides the various group entities with ESG assessments of listed issuers along with climate data, used by portfolio managers.

The table below presents an overview of the various ESG risks identified by Amundi, the approach used to make assessments, and the data providers used to assess and manage the identified risks. These risks can result in several types of consequences, including but not limited to reputational risks, depreciation of asset values, litigation, or even portfolio under-performance.

Risk identified	Description	Amundi's assessment	Data provider used
Environmental Risks	Result from the way in which a company controls its direct and indirect environmental impact: energy consumption, reduction of greenhouse gas emissions, fight against resource depletion and protection of biodiversity, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Environment" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Social risks	Result from the way an issuer manages its human capital and its stakeholders (other than shareholders). This covers several notions: the social aspect linked to an issuer's human capital (accident prevention, employee training, respect for employee rights, etc.), those linked to human rights in general, and responsibilities towards stakeholders.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Social" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Governance risks	Result from the way the issuer manages its development or organises its operations and management bodies, which can potentially lead to unfair commercial practices, fraud or corruption, non-diverse management bodies, excessive remuneration, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Governance" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Risks of controversy	Possibility that an issuer or investment may be involved in controversies, litigation, or events that could harm its reputation or ability to make a profit. May include questioned business practices, violations of law, financial scandals, environmental or social problems, or other difficulties that could compromise the issuer's credibility or sustainability.	Proprietary methodology combining a quantitative filter to define the universe, then a qualitative evaluation of that universe. The latter evaluation produces a rating on a scale of 0 to 5 (5 being the worst rating). Controversies with a rating of 3 or more are considered serious.	RepRisk, MSCI, Sustainalytics

3.2 Risk and opportunity assessment

The environmental, social, and governance risks and opportunities presented in the table above are assessed via a proprietary ESG rating assigned to issuers by Amundi's Responsible Investment teams.

Rating of private issuers

Our ESG analysts are specialised by sector of activity. To identify the ESG criteria representing the risks and opportunities within each sector of activity, they are tasked with:

- Monitoring emerging and established ESG topics and trends in each sector;
- Assessing sustainability risks and opportunities as well as negative exposure to sustainability factors;
- Selecting the relevant indicators (KPI) and assigning to them the associated weightings.

Our ESG analysis methodology is based on a set of 38 criteria used to establish the ESG profile of each sector of activity. Among these 38 criteria, 17 are generic, and can be applied to companies in any sector of activity, and 21 are specific to the challenges of certain sectors.

The weighting of ESG criteria is a key element of ESG analysis. The weight attribution model is based on a materiality assessment, which can influence the value of a company through 4 vectors: regulation, reputation, the company's development model, and operational efficiency.

To weight ESG criteria, the ESG analyst considers the probability and extent of each vector's impact on the following 2 materialities (detailed in the table at the end of the section):

- 1st materiality: Ability of the company to anticipate and manage sustainable development risks and opportunities inherent to its industry and its particular circumstances;
- 2nd materiality: The management team's ability to manage the potential negative impact of their activities on sustainability factors.

This analytical approach via both materialities lets analysts prioritise risks by taking into account the particularities and events specific to each sector.

The weightings integrate the intensity of the risk incurred as well as its emerging or established nature and its time horizon. Thus, issues that are considered the most material receive the highest weight.

ESG ratings are calculated based on ESG criteria and weightings determined by analysts, who combine them with the ESG scores obtained from our external data providers. At each step of the calculation process, the scores are normalised as Z-scores. Z-scores are used to compare results to a "normal" population (difference of the issuer's score with the average score for the sector, in numbers of standard deviations). To distinguish best practices from worst practices at the sector level, each issuer is evaluated with a score that is scaled around the average for its sector. At the end of the process, each company is assigned an ESG score (between -3 and +3) and its equivalent on a scale from A to G, where A is the best score and G the worst. Grade D represents average scores (from -0.5 to +0.5); each letter corresponds to a standard deviation.

Each issuer receives only one ESG score, regardless of the chosen reference universe. The ESG score is therefore "sector-neutral", meaning that no sector is given more or less preference than another.

For the implementation of the SFDR regulation, Amundi has established a map of the environmental and social factors it deems material for different sectors. This map is presented in Amundi Asset Management's LEC 29 report.

		Regulation	Reputation	Development model	Operational effectiveness
1 st materiality	Ability of the company to anticipate and manage the risks and opportunities inherent to its industry and its particular circumstances in the area of sustainable development	✓	✓	✓	✓
2 nd materiality	The management team's ability to manage the potential negative impact of their activities on sustainability factors	✓		✓	

LYXOR MSCI USA ESG BROAD CTB (DR) UCITS ETF

Subfund of the Sicav Multi Units France

Lyxor MSCI USA ESG BROAD CTB (DR) UCITS ETF - Acc

Annual reporting
31/10/2023

Rating of sovereign issuers

The objective of the sovereign rating methodology is to assess the ESG performance of sovereign issuers. E, S, and G factors can all have an impact on a governments' ability to repay its debts in the medium to long term. They can also reflect how the country tackles the major sustainability issues that affect global stability. Amundi's methodology is based on around fifty ESG indicators deemed relevant by Amundi's ESG research to address sustainability risks and sustainability factors. Each indicator can combine multiple data points from different sources, including open international databases (such as those of the World Bank Group, the United Nations, etc.) or proprietary databases. Amundi has defined the weightings of each ESG indicator contributing to the final ESG scores and their various components (E, S, and G). The indicators come from an independent service provider. The indicators have been grouped into 8 categories to ensure greater clarity, with each category falling into one of the E, S or G pillars. Like the company ESG rating scale, the ESG score of issuers results in an ESG rating ranging from A to G.

3.3 Sustainability risk management

Amundi's approach to sustainability risk management is based on the following three pillars:

- An exclusion policy, which addresses the most important ESG risks;
- The integration of ESG ratings into investment processes, which provides a holistic understanding of the company and helps identify its particular ESG risks;
- A voting and engagement policy that helps trigger positive changes in the way companies manage their impact on essential topics related to sustainability, thus mitigating the associated risks.

3.4 Integration of sustainability risks into the entity's regular risk management framework

Sustainability risks are integrated into Amundi's internal control and risk management system.

For sustainability risk management, responsibilities are divided between:

- The first level of control, carried out directly by the management teams, and
- The second level, carried out by the risk management teams, which can constantly check the compliance of funds with their ESG objectives and constraints.

The Risk Department participates in Amundi's "Responsible Investment" governance system. They monitor compliance with regulatory requirements and risk management related to such topics.

The ESG rules are monitored by risk management teams in the same way as other management requirements. They are based on the same tools and procedures and cover our exclusion policies as well as eligibility criteria and fund-specific rules. These rules are automatically monitored using a proprietary monitoring tool. This tool can trigger:

- Pre-negotiation alerts or blocking alerts, for instance on exclusion policies;
- Post-trade alerts: managers are notified of possible overruns so as to be able to quickly rectify them.

The table below details the internal control system implemented by Amundi.

Diagram of the internal control system

Annual
reporting
31/10/2023

3.5 Frequency of risk management framework review

Our ESG analysts review the selection and weightings of Amundi's 38 criteria every 18 months for each sector of activity. This allows them to check whether the criteria and their weightings remain relevant. We continuously seek to improve our analysis by evaluating their materiality.

Amundi's Responsible Investment Policy is updated on a yearly basis.

3.6 Continuous improvement plan

Amundi strives to improve the assessment and integration of sustainability risks, including climate and environmental risks, in the management of its funds. The aim is to go from a qualitative approach to a more quantitative approach by identifying the key indicators that represent the most relevant impacts for portfolios, taking into account climate, environmental, social, and governance factors.

The project is structured in three stages:

- Define a list of sustainability risk indicators, focusing on material risks and their financial impacts on issuers;
- Gradually implement monitoring for these indicators, evaluating their results and defining limits on the basis of these indicators;
- Improve the ESG risk management framework, including the integration of indicators into risk strategies and investment restrictions.

Our current work consists of identifying the main sustainability risk factors and mapping them to issuers' financial variables. This work will end with the validation and approval of the new framework in line with Amundi's ESG governance.

The preliminary indicators considered include metrics to quantify the potential impacts of sustainability risks in terms of financial materiality and the use of "proxies" for reputational risk. The next step, planned for the second half of the current year, is to monitor the defined sustainability risk indicators and assess their impact on the managed portfolios. This monitoring will be used in discussions with the portfolio management teams and included in the various risk management reports. The final stage will focus on improving the ESG risk management framework and possibly setting internal risk alerts or limits based on the indicators. This stage is expected to be completed during the first half of 2025.

It should be noted that deadlines, indicators and implementation objectives may be subject to change throughout the project.

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Classification:

Global equities.

The LYXOR MSCI World UCITS ETF sub-fund (the "Sub-fund") is continuously at least 60% exposed to a foreign equity market or to the equity markets of two or more countries, which may include the French market.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Dist. Monthly Hedged to EUR – Dist. and Monthly Hedged to USD – Dist share classes: The Board of Directors reserves the right to distribute distributable amounts one or more times a year and/or accumulate all or part of these amounts.

Acc share class, Monthly Hedged to EUR – Acc share class and I – EUR share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to replicate the performance, whether positive or negative, of the MSCI World Net Total Return index, i.e. with net dividends reinvested (the "Benchmark Index"), denominated in US dollars (USD), while minimising the tracking error between the Sub-fund's performance and that of the Benchmark Index.

The expected ex-post tracking error under normal market conditions is 0.50%.

Benchmark index:

The Benchmark Index is an equity index that is calculated and published by the global index provider MSCI.

It measures the aggregate performance of developed markets. On 31 January 2018, the MSCI World Index consisted of 1,649 stocks of the following 23 developed countries: Australia, Austria, Belgium, Canada, Denmark, Germany, Finland, France, Israel, Hong Kong, Ireland, Italy, Japan, The Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, The United Kingdom and The United States.

The Benchmark Index is built from a composite of the MSCI indices representing each of these 23 developed countries.

The Benchmark Index is a Net Total Return index which means that the Benchmark Index's performance includes the net dividends paid by its underlying shares.

The weighting of each stock in the Benchmark Index is adjusted in line with its free-floating market capitalisation. As a result the number of stocks in the Benchmark Index can change over time.

The MSCI methodology and calculation method assume a variable number of companies in the Benchmark Index.

A full description and the complete methodology used to construct the Benchmark Index and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at: www.msci.com.

The performance tracked is that of the Benchmark Index's closing price. The Benchmark Index is weighted by market capitalisation.

Benchmark Index publication

The official MSCI indices are calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark Index is also calculated in real time every stock exchange trading day.

The closing price of the Benchmark Index is available on MSCI's website at www.msci.com.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, MSCI Limited, the administrator of the Benchmark Index, has until 31 December 2023 to apply to the competent authority for the necessary certification or registration.

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The Benchmark Index is rebalanced quarterly.

The exact composition of the Benchmark Index and MSCI's rules for rebalancing the index are available on the Internet at www.msci.com. The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The Sub-fund's securities may consist of those that make up the Benchmark Index, as well as other international equities from all economic sectors, listed on all exchanges including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a single issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index, particularly in the event of a public offering affecting any of the securities that make up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments in the Benchmark Index.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund may invest, in compliance with regulatory ratios, in global equities, in any economic sector and listed on any exchange, including small-cap exchanges. The aforementioned equities will be selected on the basis of the following:

- eligibility criteria, in particular:
- their inclusion in major stock exchange indices or in the Benchmark Index
- liquidity (must exceed a minimum daily trading volume and market capitalisation)
- credit rating of the country where the issuer has its registered office (must have a least a minimum S&P or equivalent rating)
- diversification criteria, and in particular with respect to:
- the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
- geography
- sector.

Investors may find more information on the above eligibility and diversification criteria on Amundi's website at www.amundi.com.

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

Investment in undertakings for collective investment in transferrable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the Sub-fund’s net assets. The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's assets for the value of the Benchmark Index (as described in sub-section 1 of this section).

To optimise the Sub-fund’s management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

A counterparty to derivative financial instruments (the “Counterparty”) will have no discretion over the composition of the Sub-fund’s portfolio or over the underlying assets of the derivative financial instruments.

- Maximum proportion of assets under management for which total return swaps may be entered into: 100%.
- Expected proportion of assets under management for which total return swaps may be entered into: up to 100%.

When Société Générale is a counterparty to the aforementioned transactions involving derivative instruments, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company’s conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

N/A. The manager shall not engage in any securities financing transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund’s counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund’s counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund’s account with the depositary. This collateral will therefore be included in the Sub-fund’s assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty’s debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) the market(s) in the Benchmark Index's underlying assets is (are) suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative Contract and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs:

- Risk of using derivative financial instruments

In order to achieve its investment objective, the Sub-fund can enter into over-the-counter derivative financial instruments ("DFI"), such as swaps, in order to achieve the performance of the Benchmark Index. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index,
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Currency risk associated with the Benchmark index

The Sub-fund is exposed to currency risk since the securities that underlie the Benchmark Index may be denominated in a different currency than the Benchmark Index, or be derivatives of securities that are denominated in a different currency than the Benchmark Index. Changes in exchange rates may therefore adversely impact the Sub-fund's Benchmark Index.

- Currency risk of the Acc and Dist share classes

These shares are exposed to currency risk since they are denominated in a different currency than the Benchmark Index. Changes in exchange rates may therefore cause the net asset value of these share classes to decrease, even if the value of the Benchmark Index increases.

- Currency hedging risk of the I-EUR, Monthly Hedged to EUR – Acc and Monthly Hedged to USD – Dist share classes:

To hedge the EUR currency risk (respectively the US dollar risk) against the currency of each of the securities that make up the benchmark index for the I-EUR, Monthly Hedged to EUR – Dist shares (respectively for the Monthly Hedged USD – Dist shares), the Sub-fund will employ a hedging strategy that enables it to reduce the impact of a change in the exchange rate between the currency of each of the securities that make up the Benchmark Index and that of the relevant share class. However, given the monthly adjustment of the hedging and the hedging instruments employed this does not necessarily ensure zero exposure to adverse market movements that may decrease the net asset value of the share class. The cost of hedging currency risk will also decrease the net asset value of the I-EUR, Monthly Hedged EUR – Dist and Monthly Hedged USD – Dist shares.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors subscribing to this sub-fund are seeking exposure to international equity markets.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

AMUNDI MSCI WORLD II UCITS ETF Subfund of the Sicav Multi Units France

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

“U.S. Persons” (as defined below - see “COMMERCIAL INFORMATION”) are not allowed to invest in this Sub-fund.

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

Subfund life on the year under review

On 11 October 2023, the fund changed its name from Lyxor MSCI World UCITS ETF to Amundi MSCI World II UCITS ETF.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi MSCI World II UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark MSCI World Net Total Return USD Index. The shares in the MSCI World Net Total Return USD Index are selected to represent 85% of the global market capitalisation, while reflecting the economic diversity of this market. The index methodology is available at www.msci.com.

From October 2022 to October 2023, the performance of the Acc share / FR0014003IY1 is 3.43%. That of the benchmark of 3.31% with a tracking error of 0.01%.

From October 2022 to October 2023, the performance of the Monthly Hedged to EUR – Acc share / FR0014003N93 is 7.44%. That of the benchmark of 7.51% with a tracking error of 0.01%.

From October 2022 to October 2023, the performance of the Dist share / FR0010315770 is 3.42%. That of the benchmark of 3.31% with a tracking error of 0.001%.

From October 2022 to October 2023, the performance of the Monthly Hedged to USD - Dist share / FR0011669845 is 10.32%. That of the benchmark of 10.48% with a tracking error of 0.07%.

From October 2022 to October 2023, the performance of the Monthly Hedged to EUR - Dist share / FR0011660927 is 7.44%. That of the benchmark of 7.51% with a tracking error of 0.01%.

From October 2022 to October 2023, the performance of the I – EUR share / FR0013465804 is 7.44%. That of the benchmark of 7.51% with a tracking error of 0.01%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

French Energy Transition for Green Growth Act (Article 173 of Act No. 2015-992) and Fund Compliance with criteria relating to environmental, social, and governance quality (ESG) objectives

AMUNDI's ESG analysis generates ESG ratings for over 13,000 companies worldwide on a scale ranging from A (for issuers with the best ESG practices) to G (for the worst practices). This analysis is complemented by a policy of active commitment among issuers, in particular on major challenges regarding sustainable development within their sectors.

AMUNDI uses a targeted exclusion policy based on global agreements such as the United Nations Global Compact and other conventions on human rights, the International Labour Organisation, and the environment. In all of its active management strategies, AMUNDI therefore excludes companies that are non-compliant with its ESG principles or international agreements and their transposition into national law:

- anti-personnel mines,
- cluster bombs,
- chemical weapons,
- biological weapons,
- depleted uranium weapons.

These issuers receive a "G" rating on the AMUNDI scale.

In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal

Since coal is the largest single contributor to climate change caused by human activity, in 2016 AMUNDI implemented a sectoral policy specific to thermal coal, resulting in the exclusion of certain companies and issuers. AMUNDI has progressively reinforced this coal exclusion policy every year since 2016. These commitments stem from the Crédit Agricole Group's climate strategy. In line with the UN's Sustainable Development Goals and the 2015 Paris Agreement, this strategy is based on the research and recommendations of a Scientific Committee, which takes into account the IEA's (International Energy Agency) energy scenarios, Climate Analytics, and Science-Based Targets. In 2020, as part of the update of its policy on the thermal coal sector, AMUNDI extended its coal mining exclusion policy, which now includes all companies developing or planning to develop new thermal coal mining capacity.

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity along the entire value chain (producers, extractors, power plants, transport infrastructure),
- Companies generating more than 25% of their income from thermal coal mining,
- Companies extracting 100 MT or more of thermal coal with no intention of reducing these quantities,

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

- All companies whose income from thermal coal mining and coal-fired power generation is over 50% of their total income before analysis, all coal-fired power generation and coal mining companies with a threshold between 25% and 50% and a deteriorated energy transition score.

Application in passive management:

• Passive ESG funds

- All ETF and ESG index funds (with the exception of highly-concentrated indices)
- implement AMUNDI's policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

- In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.
- Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.
- Consequently, AMUNDI's index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.
- At the same time, in the context of securities excluded from the "thermal coal policy" in AMUNDI's active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a "nay" vote on the management of the companies in question.

Tobacco

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to "E", on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates:

- Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).
- Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy.

For further information on how environmental (in particular climate change-related), social, and corporate governance (ESG) issues are taken into account in its investment policy, AMUNDI provides investors with the "Application of Article 173" report, available at <https://legroupe.amundi.com> (Legal Documentation section).

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its “Trading” subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The “Trading” subsidiary is responsible for researching a provider’s accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the “Trading” subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the “AIFM Directive”), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the “UCITS V Directive”). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)
- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed

AMUNDI MSCI WORLD II UCITS ETF Subfund of the Sicav Multi Units France

on the performance of a representative basket of AIFs and/or UCITS funds.

- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.30% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Unit distribution (including interim payments)*	-	-	-	-	-
Unit tax credit transferred to share holders (individuals) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	-	-	-	-	-

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

Energy Climate Act (ECA)

Amundi MSCI World II UCITS ETF J

Annual
reporting

31/10/2023

Fund reporting Article 29 of the Energy-Climate Act (LEC - Loi énergie-climat)

This document lists the required information from funds exceeding €500 M in net assets under management pursuant to Article 29 of the LEC

The implementing decree relating to Article 29 of the Energy-Climate Act of 8 November 2019, which clarifies and strengthens the non-financial transparency measures for market participants, was published in the Official Journal of 27 May 2021.
As of the reporting date for the period, the portfolio's strategy did not take into consideration either the alignment of its assets under management with the long-term goals of Articles 2 and 4 of the Paris Agreement, which aim to hold the increase in the global average temperature to below 2°C above pre-industrial levels, or the alignment of its assets with the long-term goals relating to biodiversity in the Convention on Biological Diversity (CBD) adopted on 5 June 1992. However, Amundi has included plans for continuous improvement in this report, including the identification of opportunities for improvement and information relating to corrective actions and strategic and operational changes it has made.

AMUNDI MSCI WORLD II UCITS ETF

Subfund of the Sicav Multi Units France

Amundi MSCI World II UCITS ETF J

Annual
reporting
31/10/2023

This document meets the requirements of Article 29 of the Energy-Climate Act of 8 November 2019 (called the "LEC") on non-financial reporting for market participants.

The document presents:

1. The portfolio's climate strategy, if it has a strategy of alignment with the temperature objectives of the Paris Agreement;
2. The portfolio's strategy on alignment with long-term biodiversity objectives;
3. The process for taking into account environmental, social, and governance criteria in risk management.

More information is available in Amundi's responsible investment policy and in our climate report, available on our website: <https://legroupe.amundi.com/documentation-esg>.

1. The strategy on alignment with the international goals on limiting global warming, provided for in the Paris Agreement

The portfolio's strategy does not consider the alignment of its assets with the long-term goals of Articles 2 and 4 of the Paris Agreement on limiting global warming.

Exclusion policies

In passive management, the fiduciary duty is to replicate an index as faithfully as possible. The manager therefore has limited flexibility, and is required to meet its contractual objectives to achieve passive exposure that is in line with its benchmark index. Amundi's funds/ETFs replicating the standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions. However, for securities that are excluded due to the application of the thermal coal policy to Amundi's active investment universe, but that could be present in passive non-ESG funds, Amundi has strengthened its engagement process and its voting actions where they could result in a vote against the discharge of the Board or of Management, or the re-election of the Chairman and certain Directors.

Continuous improvement plan

Given the broad range of asset classes and world regions where Amundi invests on behalf of third parties, some of which do not yet have the analytical framework or data required to develop a strategy for alignment with the Paris Agreement, the implementation of such alignment strategies throughout all management activities remains a challenge.

In addition, Amundi is a third party asset management company. Its management activity is governed by contracts between Amundi and its clients, under which the investment objectives of the management portfolios delegated to Amundi by its clients are determined, particularly in terms of expected risk level, yield expectations, and requirements around diversification and sustainability preferences. We are required to obtain the agreement of our legal representatives before consenting to requirements linked to a trajectory of alignment with the Paris Agreement. That is why Amundi has launched a strategy of active dialogue with its clients, offering them the possibility of investing in products whose strategy incorporates characteristics for alignment with the goals of the Paris Agreement and counselling them in their decision-making.

1. Amundi's Climate Strategy in support of the carbon neutrality goals of the Paris Agreement

- Since the end of 2020, the Board of Directors of the management company's parent company has incorporated social and environmental issues in its governance and analysed progress on a quarterly basis via key indicators linked to climate and ESG;
- The Board members held a one-day dedicated strategic seminar to define the strategy to be deployed and the practical directions for implementing the new "Ambition 2025" societal plan;
- A monthly ESG and Climate committee meeting presided by the CEO defines and validates the ESG and climate policy applicable to investments and steers the major strategic projects;
- Commitments made in the framework of the Net Zero Asset Managers initiative, of which Amundi has been a signatory since July 2021:
 - A target of 18% of Amundi's assets under management Net Zero aligned by 2025 (i.e., this 18% will only be made up of funds and mandates with objectives compatible with a Net-Zero trajectory by 2050);
 - -30% carbon intensity (tCO₂e/€M of revenue) by 2025 and -60% by 2030 for all portfolios subject to the NZIF (Net Zero Investment Framework - Set of actions, metrics, and methodologies to help investors maximise their contribution to achieving the Net Zero alignment objective);
- By 2025, Amundi will also offer open transition funds towards the Net Zero 2050 objective across all major asset classes;
- Achieve €20 billion in assets on "impact" funds (including funds making a positive contribution to the objectives of the Paris Agreement);
- Strengthening of the targeted sectoral exclusion rules;
- Amundi invests significant resources to enable better consideration of climate issues in portfolio management:
 - Significant increase in the size of its ESG team;
 - Launch of ALTO* Sustainability, a technological analytics solution and decision-making support for investors on environmental and societal issues.

2. Actions taken and strategic and operational changes made in order to sustainably integrate climate into the strategy

- Progressive inclusion of ESG objectives in the performance evaluations of salespersons and portfolio managers to make this dimension part of their variable remuneration. A climate and ESG training programme developed with Amundi experts for all staff so that each employee receives the appropriate training;
- Implementation of a rating methodology using a "best-in-class" approach to evaluate issuers' transition efforts in relation to a Net Zero scenario. The stated objective of the portfolios concerned will be to have a better environmental transition profile than that of their reference investment universe by 2025;
- The transition to a low-carbon economy is one of the strategic directions of our engagement policy, and Amundi has committed to expanding the number of companies with which we engage in ongoing dialogue on the climate to 1,000 additional companies, with the objective that these companies will define credible strategies for reducing their carbon footprint, have them brought to a vote at their General Meetings, and have part of their managers' remuneration linked to these strategies.

Amundi will continue to develop its climate strategy in the years to come, using scientific reference scenarios and closely linked with the objectives of its clients, both by investing in solutions to accelerate the transition and by gradually aligning its portfolios with the 2050 neutrality objective.

2. The strategy on alignment with the long-term goals relating to biodiversity

The fund's strategy does not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992.

Continuous improvement plan

The subject of biodiversity, which is intrinsically linked to that of climate change, occupies an increasingly important place in our societies, not just in research, but also economic considerations. Biodiversity is one of the themes of Amundi's ESG analysis. It is reflected in the methodological grid via the "Biodiversity & Pollution" criterion, and thus plays a part in the construction of issuer ESG ratings. Amundi is also particularly attentive to controversies linked to biodiversity. In 2022, Amundi continued its initiatives for a better integration of biodiversity into its internal analysis and investment processes. In addition, the subject was among the ESG Research team's top priority analysis themes in 2022, which resulted in the production of a ten-part series of research papers entitled "Biodiversity: it's time to protect our only home". The first two parts were published in 2022, while the following will be put on-line in 2023.

The subject of biodiversity is a particular focal point of the dialogue with the companies in which Amundi is invested. Following the campaigns on plastics launched in 2019, on the circular economy in 2020, and on biodiversity in 2021, Amundi strengthened its active dialogue in 2022 with companies, continuing its engagement campaign dedicated to biodiversity strategy in eight different sectors. Due to the limitations related to the data available on the subject, the first objective of this commitment is to establish an inventory of the consideration of biodiversity by the companies, then ask them to assess the responsiveness of their activities to this loss of biodiversity, and to manage the impact of their activities and products on biodiversity. In 2022, 119 companies engaged on their biodiversity strategy. As part of this engagement, Amundi provides recommendations, with the aim of better integrating these issues into their strategy. Amundi has more broadly strengthened shareholder dialogue around the preservation of natural capital. In 2022, 344 companies (a company may engage on several topics) were engaged through different programmes (including the promotion of a circular economy and better plastics management, the prevention of deforestation, and various subjects linked to such topics as the reduction of pollution or the sustainable management of water resources).

In 2022, Amundi continued its commitment to market initiatives and working groups dedicated to biodiversity. In 2021, Amundi joined the collective "Finance for Biodiversity Pledge" investor initiative and committed to collaboration and knowledge-sharing, active dialogue with companies, and to evaluating its impacts, setting objectives around biodiversity, and communicating them publicly by 2024. In addition, Amundi will produce an annual report on these portfolios' contribution to biodiversity objectives. In 2022, following the publication of its preliminary Nature-related Risk & Opportunity Management and Disclosure Framework, the TNFD (Taskforce on Nature-related Financial Disclosures) launched pilot groups to test the feasibility of this framework on various aspects. Amundi joined a pilot group led by UNEP-FI and CDC Biodiversité, intended to test the TNFD approach, and particularly the application of the GBS (Global Biodiversity Score) to financial institutions.

Amundi also aims to develop its investment policy in terms of biodiversity around several major themes, such as water or plastics, in order to strengthen engagement where necessary and exclude companies that are harmful to natural capital. An update to this policy will be published by 2024.

In terms of data, data analysis relating to the biodiversity indicator is now in place and biodiversity impact metrics are proposed for certain funds. At this stage, Amundi is not consolidating this data at asset manager or group level.

3. The process for taking into account environmental, social, and governance criteria in risk management

3.1 Identification of environmental, social, and governance risks

Amundi's Responsible Investment department constitutes a hub of expertise dedicated to the identification and assessment of risks and opportunities relating to ESG issues. This department provides the various group entities with ESG assessments of listed issuers along with climate data, used by portfolio managers.

The table below presents an overview of the various ESG risks identified by Amundi, the approach used to make assessments, and the data providers used to assess and manage the identified risks. These risks can result in several types of consequences, including but not limited to reputational risks, depreciation of asset values, litigation, or even portfolio under-performance.

Risk identified	Description	Amundi's assessment	Data provider used
Environmental Risks	Result from the way in which a company controls its direct and indirect environmental impact: energy consumption, reduction of greenhouse gas emissions, fight against resource depletion and protection of biodiversity, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Environment" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Social risks	Result from the way an issuer manages its human capital and its stakeholders (other than shareholders). This covers several notions: the social aspect linked to an issuer's human capital (accident prevention, employee training, respect for employee rights, etc.), those linked to human rights in general, and responsibilities towards stakeholders.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Social" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Governance risks	Result from the way the issuer manages its development or organises its operations and management bodies, which can potentially lead to unfair commercial practices, fraud or corruption, non-diverse management bodies, excessive remuneration, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Governance" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Risks of controversy	Possibility that an issuer or investment may be involved in controversies, litigation, or events that could harm its reputation or ability to make a profit. May include questioned business practices, violations of law, financial scandals, environmental or social problems, or other difficulties that could compromise the issuer's credibility or sustainability.	Proprietary methodology combining a quantitative filter to define the universe, then a qualitative evaluation of that universe. The latter evaluation produces a rating on a scale of 0 to 5 (5 being the worst rating). Controversies with a rating of 3 or more are considered serious.	RepRisk, MSCI, Sustainalytics

3.2 Risk and opportunity assessment

The environmental, social, and governance risks and opportunities presented in the table above are assessed via a proprietary ESG rating assigned to issuers by Amundi's Responsible Investment teams.

Rating of private issuers

Our ESG analysts are specialised by sector of activity. To identify the ESG criteria representing the risks and opportunities within each sector of activity, they are tasked with:

- Monitoring emerging and established ESG topics and trends in each sector;
- Assessing sustainability risks and opportunities as well as negative exposure to sustainability factors;
- Selecting the relevant indicators (KPI) and assigning to them the associated weightings.

Our ESG analysis methodology is based on a set of 38 criteria used to establish the ESG profile of each sector of activity. Among these 38 criteria, 17 are generic, and can be applied to companies in any sector of activity, and 21 are specific to the challenges of certain sectors.

The weighting of ESG criteria is a key element of ESG analysis. The weight attribution model is based on a materiality assessment, which can influence the value of a company through 4 vectors: regulation, reputation, the company's development model, and operational efficiency.

To weight ESG criteria, the ESG analyst considers the probability and extent of each vector's impact on the following 2 materialities (detailed in the table at the end of the section):

- 1st materiality: Ability of the company to anticipate and manage sustainable development risks and opportunities inherent to its industry and its particular circumstances;
- 2nd materiality: The management team's ability to manage the potential negative impact of their activities on sustainability factors.

This analytical approach via both materialities lets analysts prioritise risks by taking into account the particularities and events specific to each sector.

The weightings integrate the intensity of the risk incurred as well as its emerging or established nature and its time horizon. Thus, issues that are considered the most material receive the highest weight.

ESG ratings are calculated based on ESG criteria and weightings determined by analysts, who combine them with the ESG scores obtained from our external data providers. At each step of the calculation process, the scores are normalised as Z-scores. Z-scores are used to compare results to a "normal" population (difference of the issuer's score with the average score for the sector, in numbers of standard deviations). To distinguish best practices from worst practices at the sector level, each issuer is evaluated with a score that is scaled around the average for its sector. At the end of the process, each company is assigned an ESG score (between -3 and +3) and its equivalent on a scale from A to G, where A is the best score and G the worst. Grade D represents average scores (from -0.5 to +0.5); each letter corresponds to a standard deviation.

Each issuer receives only one ESG score, regardless of the chosen reference universe. The ESG score is therefore "sector-neutral", meaning that no sector is given more or less preference than another.

For the implementation of the SFDR regulation, Amundi has established a map of the environmental and social factors it deems material for different sectors. This map is presented in Amundi Asset Management's LEC 29 report.

		Regulation	Reputation	Development model	Operational effectiveness
1 st materiality	Ability of the company to anticipate and manage the risks and opportunities inherent to its industry and its particular circumstances in the area of sustainable development	✓	✓	✓	✓
2 nd materiality	The management team's ability to manage the potential negative impact of their activities on sustainability factors	✓		✓

Subfund of the Sicav Multi Units France

Amundi MSCI World II UCITS ETF J

Annual reporting
31/10/2023

Rating of sovereign issuers

The objective of the sovereign rating methodology is to assess the ESG performance of sovereign issuers. E, S, and G factors can all have an impact on a governments' ability to repay its debts in the medium to long term. They can also reflect how the country tackles the major sustainability issues that affect global stability. Amundi's methodology is based on around fifty ESG indicators deemed relevant by Amundi's ESG research to address sustainability risks and sustainability factors. Each indicator can combine multiple data points from different sources, including open international databases (such as those of the World Bank Group, the United Nations, etc.) or proprietary databases. Amundi has defined the weightings of each ESG indicator contributing to the final ESG scores and their various components (E, S, and G). The indicators come from an independent service provider. The indicators have been grouped into 8 categories to ensure greater clarity, with each category falling into one of the E, S or G pillars. Like the company ESG rating scale, the ESG score of issuers results in an ESG rating ranging from A to G.

3.3 Sustainability risk management

Sustainability risks are integrated into Amundi's internal control and risk management system.

For sustainability risk management, responsibilities are divided between:

- The first level of control, carried out directly by the management teams, and
- The second level, carried out by the risk management teams, which can constantly check the compliance of funds with their ESG objectives and constraints.

The Risk Department participates in Amundi's "Responsible Investment" governance system. They monitor compliance with regulatory requirements and risk management related to such topics.

The ESG rules are monitored by risk management teams in the same way as other management requirements. They are based on the same tools and procedures and cover our exclusion policies as well as eligibility criteria and fund-specific rules. These rules are automatically monitored using a proprietary monitoring tool. This tool can trigger:

- Pre-negotiation alerts or blocking alerts, for instance on exclusion policies;
- Post-trade alerts: managers are notified of possible overruns so as to be able to quickly rectify them.

The table below details the internal control system implemented by Amundi.

Diagram of the internal control system

3.5 Frequency of risk management framework review

Our ESG analysts review the selection and weightings of Amundi's 38 criteria every 18 months for each sector of activity. This allows them to check whether the criteria and their weightings remain relevant. We continuously seek to improve our analysis by evaluating their materiality.

Amundi's Responsible Investment Policy is updated on a yearly basis.

Amundi's Responsible Investment Policy is updated on a yearly basis.

3.6 Continuous improvement plan

Amundi strives to improve the assessment and integration of sustainability risks, including climate and environmental risks, in the management of its funds. The aim is to go from a qualitative approach to a more quantitative approach by identifying the key indicators that represent the most relevant impacts for portfolios, taking into account climate, environmental, social, and governance factors.

The project is structured in three stages:

- Define a list of sustainability risk indicators, focusing on material risks and their financial impacts on issuers;
- Gradually implement monitoring for these indicators, evaluating their results and defining limits on the basis of these indicators;
- Improve the ESG risk management framework, including the integration of indicators into risk strategies and investment restrictions.

Our current work consists of identifying the main sustainability risk factors and mapping them to issuers' financial variables. This work will end with the validation and approval of the new framework in line with Amundi's ESG governance.

The preliminary indicators considered include metrics to quantify the potential impacts of sustainability risks in terms of financial materiality and the use of "proxies" for reputational risk. The next step, planned for the second half of the current year, is to monitor the defined sustainability risk indicators and assess their impact on the managed portfolios. This monitoring will be used in discussions with the portfolio management teams and included in the various risk management reports. The final stage will focus on improving the ESG risk management framework and possibly setting internal risk alerts or limits based on the indicators. This stage is expected to be completed during the first half of 2025.

It should be noted that deadlines, indicators and implementation objectives may be subject to change throughout the project.

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

Subfund features

Classification:

Global equities.

The Lyxor MSCI Emerging Markets UCITS ETF sub-fund (the "Sub-fund") is continuously at least 60% exposed to a foreign equity market or to the equity markets of two or more countries, which may include the French market.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Capitalization of all distributable amounts.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to replicate the performance, whether positive or negative, of the MSCI Emerging Markets Net Total Return (with net dividends reinvested) index (the "Benchmark Index"), denominated in United States dollars (USD), while minimising the tracking error between its performance and that of its Benchmark Index.

The expected ex-post tracking error under normal market conditions is 1%.

Benchmark index:

The Benchmark Index is an equity index that is calculated and published by the global index provider MSCI.

The Benchmark Index is exclusively composed of emerging market equities and has the same basic characteristics as the MSCI indices, which include adjustment of the market capitalisation of stocks in the index based on their free float and classification by sector using the Global Industry Classification Standard (GICS).

The Benchmark Index provides exposure to the following 24 emerging equity markets (as of 31 January 2018): Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Qatar, Russia, South Africa, South Korea, Taiwan, Thailand, Turkey and United Arab Emirates.

The objective of the Benchmark Index is to represent 85% of the free float-adjusted market capitalisation of each group of industries in the emerging markets.

By targeting 85% representation for each industry group, the Benchmark Index reflects 85% of the entire market capitalisation of the emerging markets, while also mirroring the economic diversity of these markets.

The Benchmark Index is a Net Total Return index which means that the Benchmark Index's performance includes the net dividends paid by its underlying shares. The MSCI methodology and calculation method assume a variable number of companies in the Benchmark Index.

A full description of the Benchmark Index and its construction methodology and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at www.msci.com

The performance tracked is that of the Benchmark Index's closing price.

Benchmark Index publication

The Benchmark Index is calculated daily at the official closing price of the exchanges where the index constituents are listed. The Benchmark Index is also calculated in real time every day that the Benchmark Index is published.

The closing price of the Benchmark Index is available on MSCI's website at www.msci.com.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the administrator of the Benchmark Index, has until 31 December 2023 to apply to the competent authority for the necessary certification or registration.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

Benchmark Index composition and revision

The Benchmark Index is rebalanced quarterly.

The Benchmark Index's composition and MSCI's rules for its rebalancing are available on the internet at www.msci.com

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The Sub-fund's securities may consist of those that make up the Benchmark Index, as well as other international equities from all economic sectors, listed on all exchanges including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a single issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index, particularly in the event of a public offering affecting any of the securities that make up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments in the Benchmark Index.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund may invest, in compliance with regulatory ratios, in global equities, in any economic sector and listed on any exchange, including small-cap exchanges. The aforementioned equities will be selected on the basis of the following:

- eligibility criteria, in particular:
- their inclusion in major stock exchange indices or in the Benchmark Index
- liquidity (must exceed a minimum daily trading volume and market capitalisation)
- credit rating of the country where the issuer has its registered office (must have a least a minimum S&P or equivalent rating)
- diversification criteria, and in particular with respect to:
- the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
- geography
- sector.

Investors may find more information on the above eligibility and diversification criteria on Amundi's website at www.amundi.com.

Investment in undertakings for collective investment in transferrable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the Sub-fund's net assets.

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title. The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is related to the Management Company.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's equity assets (or of any other financial instrument or asset the Sub-fund may hold) for the value of the Benchmark Index (as described in sub-section 1 of this section).

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

A counterparty to derivative financial instruments (the "Counterparty") will have no discretion over the composition of the Sub-fund's portfolio or over the underlying assets of the derivative financial instruments.

- Maximum proportion of assets under management for which total return swaps may be entered into: 100%.
- Expected proportion of assets under management for which total return swaps may be entered into: up to 100%.

When Société Générale is a counterparty to the aforementioned transactions involving derivative instruments, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

N/A. The manager shall not engage in any securities financing transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depositary. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability.

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Low Benchmark Index Diversification risk

The Benchmark Index to which investors are exposed covers a specific region, sector or investment strategy and therefore does not enable assets to be as broadly diversified as those of an index that is exposed to several regions, sectors or investment strategies. Exposure to such a less-diversified index may result in higher volatility than more diversified markets. Nevertheless, diversification rules of the UCITS Directive still apply to the Sub-fund's underlying assets at all times.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) the market(s) in the Benchmark Index's underlying assets is (are) suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Emerging Market Risk

The Sub-fund's exposure to emerging markets carries a greater risk of potential loss than an investment in traditional developed markets. Specifically, market operating and supervision rules for an emerging market may differ from standards applicable in developed markets. In particular, exposure to emerging markets can entail: increased market volatility, lower trading volumes, a risk of economic and/or political instability, an uncertain or unstable tax regime and/or regulatory environment, market closure risks, government restrictions on foreign investments, an interruption or limitation of convertibility or transferability of one of the currencies making up the Benchmark Index.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs:

- Risk of using derivative financial instruments

In order to achieve its investment objective, the Sub-fund can enter into over-the-counter derivative financial instruments ("DFI"), such as swaps, in order to achieve the performance of the Benchmark Index. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund.

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index,
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Currency risk associated with the Benchmark index

The Sub-fund is exposed to currency risk, as the underlying securities composing the Benchmark Index may be denominated in a currency different from the Benchmark Index, or be derived from securities denominated in a currency different to that of the Benchmark Index. Changes in exchange rates may therefore adversely affect the Sub-fund's Benchmark Index.

- Currency risk on the Acc and I – EUR share classes

These share class are exposed to currency risk since they are denominated in a different currency than the Benchmark Index. Changes in the exchange rate may therefore cause the net asset value of these share classes to decrease, even if the value of the Benchmark Index increases.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors subscribing to this sub-fund are seeking exposure to emerging equity markets.

AMUNDI MSCI EMERGING MARKETS III UCITS ETF Subfund of the Sicav Multi Units France

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

Subfund life on the year under review

On 11 october 2023, the fund changed its name from Lyxor MSCI Emerging Markets UCITS ETF to Amundi MSCI Emerging Markets III UCITS ETF EUR.

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The AMUNDI MSCI Emerging Markets III UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark MSCI Emerging Markets Net Total Return Index. The shares in the MSCI Emerging Markets Net Total Return Index are selected to represent 85% of the market capitalisation of the emerging countries region, while reflecting the economic diversity of this market. The index methodology is available at www.msci.com.

From October 2022 to October 2023, the performance of the Acc (EUR) share / FR0010429068 is 3.13%. That of the benchmark of 3.60% with a tracking error of 0.02%.

From October 2022 to October 2023, the performance of the Acc (USD) share / FR0010435297 is 10.29%. That of the benchmark of 10.80% with a tracking error of 0.02%.

From October 2022 to October 2023, the performance of the I – EUR (EUR) share / FR0013465796 is 3.12%. That of the benchmark of 3.60% with a tracking error of 0.02%.

The performance achieved over the period does not prejudice the future results of the subfund.

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

French Energy Transition for Green Growth Act (Article 173 of Act No. 2015-992) and Fund Compliance with criteria relating to environmental, social, and governance quality (ESG) objectives

AMUNDI's ESG analysis generates ESG ratings for over 13,000 companies worldwide on a scale ranging from A (for issuers with the best ESG practices) to G (for the worst practices). This analysis is complemented by a policy of active commitment among issuers, in particular on major challenges regarding sustainable development within their sectors.

AMUNDI uses a targeted exclusion policy based on global agreements such as the United Nations Global Compact and other conventions on human rights, the International Labour Organisation, and the environment. In all of its active management strategies, AMUNDI therefore excludes companies that are non-compliant with its ESG principles or international agreements and their transposition into national law:

- anti-personnel mines,
- cluster bombs,
- chemical weapons,
- biological weapons,
- depleted uranium weapons.

These issuers receive a "G" rating on the AMUNDI scale.

In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal

Since coal is the largest single contributor to climate change caused by human activity, in 2016 AMUNDI implemented a sectoral policy specific to thermal coal, resulting in the exclusion of certain companies and issuers. AMUNDI has progressively reinforced this coal exclusion policy every year since 2016. These commitments stem from the Crédit Agricole Group's climate strategy. In line with the UN's Sustainable Development Goals and the 2015 Paris Agreement, this strategy is based on the research and recommendations of a Scientific Committee, which takes into account the IEA's (International Energy Agency) energy scenarios, Climate Analytics, and Science-Based Targets. In 2020, as part of the update of its policy on the thermal coal sector, AMUNDI extended its coal mining exclusion policy, which now includes all companies developing or planning to develop new thermal coal mining capacity.

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity along the entire value chain (producers, extractors, power plants, transport infrastructure),
- Companies generating more than 25% of their income from thermal coal mining,
- Companies extracting 100 MT or more of thermal coal with no intention of reducing these quantities,

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

- All companies whose income from thermal coal mining and coal-fired power generation is over 50% of their total income before analysis, all coal-fired power generation and coal mining companies with a threshold between 25% and 50% and a deteriorated energy transition score.

Application in passive management:

• Passive ESG funds

- All ETF and ESG index funds (with the exception of highly-concentrated indices)
- implement AMUNDI's policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

- In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.
- Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.
- Consequently, AMUNDI's index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.
- At the same time, in the context of securities excluded from the "thermal coal policy" in AMUNDI's active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a "nay" vote on the management of the companies in question.

Tobacco

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to "E", on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates:

- Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).
- Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy.

For further information on how environmental (in particular climate change-related), social, and corporate governance (ESG) issues are taken into account in its investment policy, AMUNDI provides investors with the "Application of Article 173" report, available at <https://legroupe.amundi.com> (Legal Documentation section).

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 (“SFDR”), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives’ principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management’s headcount increased due to the integration of Lyxor’s employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some ‘carried interest’ was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the ‘executives and senior managers’ of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the ‘senior investment managers’ whose professional activities have a material impact on Amundi Asset Management’s risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its ‘Identified Staff’, that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee’s functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)
- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed

AMUNDI MSCI EMERGING MARKETS III UCITS ETF Subfund of the Sicav Multi Units France

on the performance of a representative basket of AIFs and/or UCITS funds.

- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

a) Exposure obtained through effective management techniques of the portfolio and derivative financial instruments

• Exposure obtained through effective management techniques:	-
- Securities lending:	-

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.55% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Unit capitalisation*

0.07 -0.44 -1.11 1.99 0.11

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

Energy Climate Act (ECA)

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Annual
reporting
31/10/2023

Fund reporting Article 29 of the Energy-Climate Act (LEC - Loi énergie-climat)

This document lists the required information from funds exceeding €500 M in net assets under management pursuant to Article 29 of the LEC

The implementing decree relating to Article 29 of the Energy-Climate Act of 8 November 2019, which clarifies and strengthens the non-financial transparency measures for market participants, was published in the Official Journal of 27 May 2021.

As of the reporting date for the period, the portfolio's strategy did not take into consideration either the alignment of its assets under management with the long-term goals of Articles 2 and 4 of the Paris Agreement, which aim to hold the increase in the global average temperature to below 2°C above pre-industrial levels, or the alignment of its assets with the long-term goals relating to biodiversity in the Convention on Biological Diversity (CBD) adopted on 5 June 1992. However, Amundi has included plans for continuous improvement in this report, including the identification of opportunities for improvement and information relating to corrective actions and strategic and operational changes it has made.

..

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Annual
reporting
31/10/2023

This document meets the requirements of Article 29 of the Energy-Climate Act of 8 November 2019 (called the "LEC") on non-financial reporting for market participants.

The document presents:

1. The portfolio's climate strategy, if it has a strategy of alignment with the temperature objectives of the Paris Agreement;
2. The portfolio's strategy on alignment with long-term biodiversity objectives;
3. The process for taking into account environmental, social, and governance criteria in risk management.

More information is available in Amundi's responsible investment policy and in our climate report, available on our website: <https://legroupe.amundi.com/documentation-esg>.

1. The strategy on alignment with the international goals on limiting global warming, provided for in the Paris Agreement

The portfolio's strategy does not consider the alignment of its assets with the long-term goals of Articles 2 and 4 of the Paris Agreement on limiting global warming.

Exclusion policies

In passive management, the fiduciary duty is to replicate an index as faithfully as possible. The manager therefore has limited flexibility, and is required to meet its contractual objectives to achieve passive exposure that is in line with its benchmark index. Amundi's funds/ETFs replicating the standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions. However, for securities that are excluded due to the application of the thermal coal policy to Amundi's active investment universe, but that could be present in passive non-ESG funds, Amundi has strengthened its engagement process and its voting actions where they could result in a vote against the discharge of the Board or of Management, or the re-election of the Chairman and certain Directors.

Continuous improvement plan

Given the broad range of asset classes and world regions where Amundi invests on behalf of third parties, some of which do not yet have the analytical framework or data required to develop a strategy for alignment with the Paris Agreement, the implementation of such alignment strategies throughout all management activities remains a challenge.

In addition, Amundi is a third party asset management company. Its management activity is governed by contracts between Amundi and its clients, under which the investment objectives of the management portfolios delegated to Amundi by its clients are determined, particularly in terms of expected risk level, yield expectations, and requirements around diversification and sustainability preferences. We are required to obtain the agreement of our legal representatives before consenting to requirements linked to a trajectory of alignment with the Paris Agreement. That is why Amundi has launched a strategy of active dialogue with its clients, offering them the possibility of investing in products whose strategy incorporates characteristics for alignment with the goals of the Paris Agreement and counselling them in their decision-making.

1. Amundi's Climate Strategy in support of the carbon neutrality goals of the Paris Agreement

- Since the end of 2020, the Board of Directors of the management company's parent company has incorporated social and environmental issues in its governance and analysed progress on a quarterly basis via key indicators linked to climate and ESG;
- The Board members held a one-day dedicated strategic seminar to define the strategy to be deployed and the practical directions for implementing the new "Ambition 2025" societal plan;
- A monthly ESG and Climate committee meeting presided by the CEO defines and validates the ESG and climate policy applicable to investments and steers the major strategic projects;
- Commitments made in the framework of the Net Zero Asset Managers initiative, of which Amundi has been a signatory since July 2021:
 - A target of 18% of Amundi's assets under management Net Zero aligned by 2025 (i.e., this 18% will only be made up of funds and mandates with objectives compatible with a Net-Zero trajectory by 2050);
 - -30% carbon intensity (tCO2e/€M of revenue) by 2025 and -60% by 2030 for all portfolios subject to the NZIF (Net Zero Investment Framework - Set of actions, metrics, and methodologies to help investors maximise their contribution to achieving the Net Zero alignment objective);
- By 2025, Amundi will also offer open transition funds towards the Net Zero 2050 objective across all major asset classes;
- Achieve €20 billion in assets on "impact" funds (including funds making a positive contribution to the objectives of the Paris Agreement);
- Strengthening of the targeted sectoral exclusion rules;
- Amundi invests significant resources to enable better consideration of climate issues in portfolio management:
 - Significant increase in the size of its ESG team;
 - Launch of ALTO* Sustainability, a technological analytics solution and decision-making support for investors on environmental and societal issues.

2. Actions taken and strategic and operational changes made in order to sustainably integrate climate into the strategy

- Progressive inclusion of ESG objectives in the performance evaluations of salespersons and portfolio managers to make this dimension part of their variable remuneration. A climate and ESG training programme developed with Amundi experts for all staff so that each employee receives the appropriate training;
- Implementation of a rating methodology using a "best-in-class" approach to evaluate issuers' transition efforts in relation to a Net Zero scenario. The stated objective of the portfolios concerned will be to have a better environmental transition profile than that of their reference investment universe by 2025;
- The transition to a low-carbon economy is one of the strategic directions of our engagement policy, and Amundi has committed to expanding the number of companies with which we engage in ongoing dialogue on the climate to 1,000 additional companies, with the objective that these companies will define credible strategies for reducing their carbon footprint, have them brought to a vote at their General Meetings, and have part of their managers' remuneration linked to these strategies.

Amundi will continue to develop its climate strategy in the years to come, using scientific reference scenarios and closely linked with the objectives of its clients, both by investing in solutions to accelerate the transition and by gradually aligning its portfolios with the 2050 neutrality objective.

2. The strategy on alignment with the long-term goals relating to biodiversity

The fund's strategy does not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992.

Continuous improvement plan

The subject of biodiversity, which is intrinsically linked to that of climate change, occupies an increasingly important place in our societies, not just in research, but also economic considerations. Biodiversity is one of the themes of Amundi's ESG analysis. It is reflected in the methodological grid via the "Biodiversity & Pollution" criterion, and thus plays a part in the construction of issuer ESG ratings. Amundi is also particularly attentive to controversies linked to biodiversity. In 2022, Amundi continued its initiatives for a better integration of biodiversity into its internal analysis and investment processes. In addition, the subject was among the ESG Research team's top priority analysis themes in 2022, which resulted in the production of a ten-part series of research papers entitled "Biodiversity: it's time to protect our only home". The first two parts were published in 2022, while the following will be put on-line in 2023.

The subject of biodiversity is a particular focal point of the dialogue with the companies in which Amundi is invested. Following the campaigns on plastics launched in 2019, on the circular economy in 2020, and on biodiversity in 2021, Amundi strengthened its active dialogue in 2022 with companies, continuing its engagement campaign dedicated to biodiversity strategy in eight different sectors. Due to the limitations related to the data available on the subject, the first objective of this commitment is to establish an inventory of the consideration of biodiversity by the companies, then ask them to assess the responsiveness of their activities to this loss of biodiversity, and to manage the impact of their activities and products on biodiversity. In 2022, 119 companies engaged on their biodiversity strategy. As part of this engagement, Amundi provides recommendations, with the aim of better integrating these issues into their strategy. Amundi has more broadly strengthened shareholder dialogue around the preservation of natural capital. In 2022, 344 companies (a company may engage on several topics) were engaged through different programmes (including the promotion of a circular economy and better plastics management, the prevention of deforestation, and various subjects linked to such topics as the reduction of pollution or the sustainable management of water resources).

In 2022, Amundi continued its commitment to market initiatives and working groups dedicated to biodiversity. In 2021, Amundi joined the collective "Finance for Biodiversity Pledge" investor initiative and committed to collaboration and knowledge-sharing, active dialogue with companies, and to evaluating its impacts, setting objectives around biodiversity, and communicating them publicly by 2024. In addition, Amundi will produce an annual report on these portfolios' contribution to biodiversity objectives. In 2022, following the publication of its preliminary Nature-related Risk & Opportunity Management and Disclosure Framework, the TNFD (Taskforce on Nature-related Financial Disclosures) launched pilot groups to test the feasibility of this framework on various aspects. Amundi joined a pilot group led by UNEP-FI and CDC Biodiversité, intended to test the TNFD approach, and particularly the application of the GBS (Global Biodiversity Score) to financial institutions.

Amundi also aims to develop its investment policy in terms of biodiversity around several major themes, such as water or plastics, in order to strengthen engagement where necessary and exclude companies that are harmful to natural capital. An update to this policy will be published by 2024.

In terms of data, data analysis relating to the biodiversity indicator is now in place and biodiversity impact metrics are proposed for certain funds. At this stage, Amundi is not consolidating this data at asset manager or group level.

3. The process for taking into account environmental, social, and governance criteria in risk management

3.1 Identification of environmental, social, and governance risks

Amundi's Responsible Investment department constitutes a hub of expertise dedicated to the identification and assessment of risks and opportunities relating to ESG issues. This department provides the various group entities with ESG assessments of listed issuers along with climate data, used by portfolio managers.

The table below presents an overview of the various ESG risks identified by Amundi, the approach used to make assessments, and the data providers used to assess and manage the identified risks. These risks can result in several types of consequences, including but not limited to reputational risks, depreciation of asset values, litigation, or even portfolio under-performance.

Risk identified	Description	Amundi's assessment	Data provider used
Environmental Risks	Result from the way in which a company controls its direct and indirect environmental impact: energy consumption, reduction of greenhouse gas emissions, fight against resource depletion and protection of biodiversity, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Environment" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Social risks	Result from the way an issuer manages its human capital and its stakeholders (other than shareholders). This covers several notions: the social aspect linked to an issuer's human capital (accident prevention, employee training, respect for employee rights, etc.), those linked to human rights in general, and responsibilities towards stakeholders.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Social" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Governance risks	Result from the way the issuer manages its development or organises its operations and management bodies, which can potentially lead to unfair commercial practices, fraud or corruption, non-diverse management bodies, excessive remuneration, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Governance" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Risks of controversy	Possibility that an issuer or investment may be involved in controversies, litigation, or events that could harm its reputation or ability to make a profit. May include questioned business practices, violations of law, financial scandals, environmental or social problems, or other difficulties that could compromise the issuer's credibility or sustainability.	Proprietary methodology combining a quantitative filter to define the universe, then a qualitative evaluation of that universe. The latter evaluation produces a rating on a scale of 0 to 5 (5 being the worst rating). Controversies with a rating of 3 or more are considered serious.	RepRisk, MSCI, Sustainalytics

3.2 Risk and opportunity assessment

The environmental, social, and governance risks and opportunities presented in the table above are assessed via a proprietary ESG rating assigned to issuers by Amundi's Responsible Investment teams.

Rating of private issuers

Our ESG analysts are specialised by sector of activity. To identify the ESG criteria representing the risks and opportunities within each sector of activity, they are tasked with:

- Monitoring emerging and established ESG topics and trends in each sector;
- Assessing sustainability risks and opportunities as well as negative exposure to sustainability factors;
- Selecting the relevant indicators (KPI) and assigning to them the associated weightings.

Our ESG analysis methodology is based on a set of 38 criteria used to establish the ESG profile of each sector of activity. Among these 38 criteria, 17 are generic, and can be applied to companies in any sector of activity, and 21 are specific to the challenges of certain sectors.

The weighting of ESG criteria is a key element of ESG analysis. The weight attribution model is based on a materiality assessment, which can influence the value of a company through 4 vectors: regulation, reputation, the company's development model, and operational efficiency.

To weight ESG criteria, the ESG analyst considers the probability and extent of each vector's impact on the following 2 materialities (detailed in the table at the end of the section):

- 1st materiality: Ability of the company to anticipate and manage sustainable development risks and opportunities inherent to its industry and its particular circumstances;
- 2nd materiality: The management team's ability to manage the potential negative impact of their activities on sustainability factors.

This analytical approach via both materialities lets analysts prioritise risks by taking into account the particularities and events specific to each sector.

The weightings integrate the intensity of the risk incurred as well as its emerging or established nature and its time horizon. Thus, issues that are considered the most material receive the highest weight.

ESG ratings are calculated based on ESG criteria and weightings determined by analysts, who combine them with the ESG scores obtained from our external data providers. At each step of the calculation process, the scores are normalised as Z-scores. Z-scores are used to compare results to a "normal" population (difference of the issuer's score with the average score for the sector, in numbers of standard deviations). To distinguish best practices from worst practices at the sector level, each issuer is evaluated with a score that is scaled around the average for its sector. At the end of the process, each company is assigned an ESG score (between -3 and +3) and its equivalent on a scale from A to G, where A is the best score and G the worst. Grade D represents average scores (from -0.5 to +0.5); each letter corresponds to a standard deviation.

Each issuer receives only one ESG score, regardless of the chosen reference universe. The ESG score is therefore "sector-neutral", meaning that no sector is given more or less preference than another.

For the implementation of the SFDR regulation, Amundi has established a map of the environmental and social factors it deems material for different sectors. This map is presented in Amundi Asset Management's LEC 29 report.

		Regulation	Reputation	Development model	Operational effectiveness
1 st materiality	Ability of the company to anticipate and manage the risks and opportunities inherent to its industry and its particular circumstances in the area of sustainable development	✓	✓	✓	✓
2 nd materiality	The management team's ability to manage the potential negative impact of their activities on sustainability factors	✓		✓	

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Subfund of the Sicav Multi Units France

AMUNDI MSCI EMERGING MARKETS III UCITS ETF

Annual reporting
31/10/2023

Rating of sovereign issuers

The objective of the sovereign rating methodology is to assess the ESG performance of sovereign issuers. E, S, and G factors can all have an impact on a governments' ability to repay its debts in the medium to long term. They can also reflect how the country tackles the major sustainability issues that affect global stability. Amundi's methodology is based on around fifty ESG indicators deemed relevant by Amundi's ESG research to address sustainability risks and sustainability factors. Each indicator can combine multiple data points from different sources, including open international databases (such as those of the World Bank Group, the United Nations, etc.) or proprietary databases. Amundi has defined the weightings of each ESG indicator contributing to the final ESG scores and their various components (E, S, and G). The indicators come from an independent service provider. The indicators have been grouped into 8 categories to ensure greater clarity, with each category falling into one of the E, S or G pillars. Like the company ESG rating scale, the ESG score of issuers results in an ESG rating ranging from A to G.

3.3 Sustainability risk management

Amundi's approach to sustainability risk management is based on the following three pillars:

- An exclusion policy, which addresses the most important ESG risks;
- The integration of ESG ratings into investment processes, which provides a holistic understanding of the company and helps identify its particular ESG risks;
- A voting and engagement policy that helps trigger positive changes in the way companies manage their impact on essential topics related to sustainability, thus mitigating the associated risks.

3.4 Integration of sustainability risks into the entity's regular risk management framework

Sustainability risks are integrated into Amundi's internal control and risk management system.

For sustainability risk management, responsibilities are divided between:

- The first level of control, carried out directly by the management teams, and
- The second level, carried out by the risk management teams, which can constantly check the compliance of funds with their ESG objectives and constraints.

The Risk Department participates in Amundi's "Responsible Investment" governance system. They monitor compliance with regulatory requirements and risk management related to such topics.

The ESG rules are monitored by risk management teams in the same way as other management requirements. They are based on the same tools and procedures and cover our exclusion policies as well as eligibility criteria and fund-specific rules. These rules are automatically monitored using a proprietary monitoring tool. This tool can trigger:

- Pre-negotiation alerts or blocking alerts, for instance on exclusion policies;
- Post-trade alerts: managers are notified of possible overruns so as to be able to quickly rectify them.

The table below details the internal control system implemented by Amundi.

Diagram of the internal control system

3.5 Frequency of risk management framework review

Our ESG analysts review the selection and weightings of Amundi's 38 criteria every 18 months for each sector of activity. This allows them to check whether the criteria and their weightings remain relevant. We continuously seek to improve our analysis by evaluating their materiality.

Amundi's Responsible Investment Policy is updated on a yearly basis.

3.6 Continuous improvement plan

Amundi strives to improve the assessment and integration of sustainability risks, including climate and environmental risks, in the management of its funds. The aim is to go from a qualitative approach to a more quantitative approach by identifying the key indicators that represent the most relevant impacts for portfolios, taking into account climate, environmental, social, and governance factors.

The project is structured in three stages:

- Define a list of sustainability risk indicators, focusing on material risks and their financial impacts on issuers;
- Gradually implement monitoring for these indicators, evaluating their results and defining limits on the basis of these indicators;
- Improve the ESG risk management framework, including the integration of indicators into risk strategies and investment restrictions.

Our current work consists of identifying the main sustainability risk factors and mapping them to issuers' financial variables. This work will end with the validation and approval of the new framework in line with Amundi's ESG governance.

The preliminary indicators considered include metrics to quantify the potential impacts of sustainability risks in terms of financial materiality and the use of "proxies" for reputational risk. The next step, planned for the second half of the current year, is to monitor the defined sustainability risk indicators and assess their impact on the managed portfolios. This monitoring will be used in discussions with the portfolio management teams and included in the various risk management reports. The final stage will focus on improving the ESG risk management framework and possibly setting internal risk alerts or limits based on the indicators. This stage is expected to be completed during the first half of 2025.

It should be noted that deadlines, indicators and implementation objectives may be subject to change throughout the project.

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Classification:

Global equities.

The Lyxor Japan (Topix) (DR) UCITS ETF sub-fund (the “Sub-fund”) is continuously at least 60% exposed to a foreign equity market or to the equity markets of two or more countries, which may include the French market.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Dist (EUR) share class, Dist (JPY) share class and Daily Hedged to EUR – Acc share class: The Board of Directors reserves the right to distribute distributable amounts one or more times a year and/or accumulate all or part of these amounts.

Daily Hedged to EUR – Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund’s investment objective is to replicate the performance, whether positive or negative, of the TOPIX® Gross Total Return (with gross dividends reinvested) index (the “Benchmark Index”) denominated in Japanese yen (JPY), while minimising the tracking error between the Sub-fund’s performance and that of its Benchmark Index.

The expected ex-post tracking error under normal market conditions is 0.50%.

Benchmark index:

The Benchmark Index is an equity index calculated and published by the Tokyo Stock Exchange.

- The Tokyo Stock Exchange, which is the main organised stock market in Japan, is divided into two Sections:
- The First Section consists of the largest listed companies in terms of market capitalisation.

The Second Section is dedicated to companies with smaller capitalisations or which are recently listed.

The Benchmark Index comprises all Japanese stocks listed in the First Section of the Tokyo Stock Exchange. Each Benchmark Index component is weighted by its stock market capitalisation.

The Benchmark Index is therefore particularly representative of the Japanese economy since it is comprised of a significant number of companies which have the largest capitalisations in the market.

The Benchmark Index is a Gross Total Return index which means that the Benchmark Index’s performance includes the gross dividends paid by its underlying shares.

A full description of the Benchmark Index and its construction methodology and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at <http://www.jpx.co.jp/english/>

The performance tracked is that of the Benchmark Index’s closing price in JPY.

Benchmark Index publication

The performance tracked is that of the Benchmark Index's closing price.

The Benchmark Index closing price is available on the index provider’s website at <http://www.jpx.co.jp/english/>

Pursuant to the provisions of European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the administrator of the Benchmark Index is registered in ESMA’s register of benchmark index administrators.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The Benchmark Index will be rebalanced whenever a Japanese firm enters or exits the First Trading section of the Tokyo Stock Exchange. The Benchmark Index is therefore not rebalanced periodically.

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

The exact composition of the Benchmark Index and the Tokyo Stock Exchange's rules for rebalancing the index are available on the Internet at <http://www.jpx.co.jp/english/>

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will be exposed to the latter via a direct replication method that requires the Sub-fund to invest mainly in the securities that underlie the Benchmark Index and/or in financial instruments that are representative of all or some of the securities that underlie the Benchmark Index.

The sub-fund may also invest in derivative financial instruments (DFI). The DFI in which the Sub-fund may invest include, but are not limited to, futures on indices, futures on all or some of the Benchmark Index components, and hedging swaps, mainly to minimise the Sub-fund's tracking error.

In accordance with its investment strategy, the Sub-fund may hold cash (e.g. when using futures). In this case, the fund manager may, in the best interest of unit- holders, deposit this cash with a credit institution or invest it in balance-sheet assets and/or off-balance-sheet assets, as described below.

In order to optimise the direct replication method that is used to track the Benchmark Index, the Sub-fund, represented by the Management Company, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Index constituents in order to reduce the costs of investing directly in all of the various Benchmark Index constituents. This sampling technique could cause the Sub-fund to invest in a selection of representative Benchmark Index securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Index, and even to invest in securities that are not constituents of the Benchmark Index.

To ensure transparency on the use of the direct index replication method (i.e. full replication of the Benchmark Index) and on its consequences in terms of the assets in the Sub-fund's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio is available on the page dedicated to the Sub-fund accessible on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

The website at www.amundi.com features a page dedicated to the Sub-fund, which among other things explains the direct index replication method selected, i.e. either full replication of the Benchmark Index or sampling to limit replication costs. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is justified by exceptional market conditions and in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index. This could be the case, for example, in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund will mainly be invested in the following types of securities:

• Equities

The Sub-fund will be invested mainly in the equities that make up the Benchmark Index.

• The shares or units of other CIU or investment funds

The Sub-fund may invest up to 10% of its assets in the shares or units of the following collective investment undertakings (CIU) or investment funds:

- French and foreign UCITS that comply with Directive 2009/65/EC. The Sub-fund may invest in shares or units of UCITS that are managed by the Management Company or by a company that is related to the Management Company.

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

3. Off-balance sheet assets (derivatives)

The Sub-fund may invest in the following DFI:

• Eligible markets:

- regulated
- organised
- over-the-counter

• Risks which the Sub-fund may seek to hedge or gain exposure to:

- equity

• Purpose (all transactions must be consistent with the investment objective)

- hedging
- exposure

• Types of instruments used:

- futures : on equities and indices
- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- overall hedging of the portfolio, or of certain risks, securities, etc. – up to 100% of net assets
- to achieve synthetic exposure to assets or risks (up to 100% of assets)

Counterparties to OTC derivatives traded by the Sub-fund will be selected in accordance with the Management Company's best-execution policies (including the "Order-execution by asset type" table referred to in the Appendix). The aforementioned policy is available at www.amundi.com.

Counterparties to derivative financial instruments will have no discretion over the composition of the Sub-fund's investment portfolio, nor over the underlying assets of these derivative instruments, in accordance with regulatory limits and requirements.

When Crédit Agricole is a counterparty to DFI, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

Pursuant to its investment strategy, the Sub-fund may use various efficient portfolio management techniques in compliance with Article R214-18 of the French monetary and financial code, including securities financing transactions.

- Maximum proportion of assets under management for which securities financing transactions may be entered into: up to 25%.
- Expected proportion of assets under management for which securities financing transactions may be entered into: 0% of the Sub-fund's assets.

For this purpose, the Management Company has appointed Société Générale as its intermediary (hereinafter the "Agent"). If transactions involving the temporary disposal of securities are engaged in, the Agent may be authorised to (i) lend securities, on the Sub-fund's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Sub-fund's behalf, any liquid assets received as collateral for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

When Société Générale S.A. is appointed as an Agent, it is not authorised to act as a counterparty to securities lending transactions. If securities are lent:

- The Sub-fund shall be entitled to all income from such temporary disposal of securities, net of any direct and indirect operating fees/expenses.
- These operating fees/expenses, which are incurred to manage the portfolio more efficiently, will be those borne by the Management Company, the Agent (if applicable) and/or any other intermediaries that are involved in these transactions.
- The direct and indirect operating fees/expenses will be calculated as a percentage of the Sub-fund's gross income. Information on direct and indirect operating fees/expenses and on the entities to which these fees/expenses are paid will be provided in the Sub-fund's annual report.
- Income from the lending of securities will be paid to the Sub-fund after deduction of any direct and indirect operating fees/expenses which may be borne by the Agent and the Management Company. Since these direct and indirect operating fees/expenses do not increase the Sub-fund's overall operating expenses they have been excluded from ongoing charges.

If necessary, the Sub-fund's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions
- the identity of the counterparty(ies) involved in these transactions
- the nature and amount of any collateral received to reduce the Sub-fund's counterparty risk, and;
- the income obtained from efficient portfolio management transactions during the relevant period and the direct and indirect operating fees/expenses associated with these transactions.

When Société Générale is a counterparty to an efficient portfolio management transaction, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund enters into securities financing transactions, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these transactions. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depositary. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Benchmark Index tracking risk

Replicating the performance of the Benchmark Index by investing in all of its constituents may prove to be very difficult to implement and costly. The Sub-fund manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Index, in proportions that differ from those of the Benchmark Index or even investing in securities that are not index constituents or in derivatives. The use of such optimisation techniques may increase the ex post tracking error and cause the Sub-fund to perform differently from the Benchmark Index.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) the market(s) in the Benchmark Index's underlying assets is (are) suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation.

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Risk of using efficient portfolio management techniques

If the Sub-fund's counterparty to an efficient portfolio management technique (hereinafter "EPMT") defaults, this may expose the Sub-fund to the risk that the value of the collateral it has received is less than the value of the assets the Sub-fund transferred to the counterparty to the EPMT. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as collateral and/or (iv) the illiquidity of the market in which the collateral received is listed. Investors should note that EPMT transactions may be entered into with same group as that of the Management Company/entities of the same group as that of the Management Company/entities of the same group as the Management Company.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Risk of using derivative financial instruments

The Sub-fund may invest in Derivative Financial Instruments ("DFI") traded over the counter or listed on an exchange, and in particular in futures and/or swaps for hedging purposes. These DFI involve various risks, such as counterparty risk, hedging disruption risk, Benchmark Index disruption risk, taxation risk, regulatory risk and liquidity risk. These risks may affect a derivative instrument directly and may result in a modification or even the premature termination of the DFI contract, which could adversely affect the Sub-fund's net asset value.

The risk of investing in DFI may be relatively high. Since the amount of money required to establish a position in a DFI may be much less than the exposure thus obtained, each transaction involves "leverage". A relatively small market movement may therefore have a very large potential positive or negative impact on the Sub-fund.

The market value of DFI is highly volatile and they may therefore be subject to large variations.

The Sub-fund may invest in DFI traded over the counter. DFI traded over the counter may also be less liquid than transactions on an organised market, where the volumes traded are generally quite higher, and the prices of these DFI may therefore be more volatile.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs:

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index,
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Currency risk of the Dist share class

This share class is exposed to currency risk since it is denominated in a different currency than the Benchmark Index. Changes in exchange rates may therefore cause the net asset value of this share class to decrease, even if the value of the Benchmark Index increases.

- Currency hedging risk

To hedge the EUR/JPY currency risk on the Daily Hedged EUR – Dist and Daily Hedged EUR – Acc shares, the Sub-fund uses a hedging strategy that reduces the impact of a change in the exchange rate between the Benchmark Index currency and that of the relevant share class. Given the daily implementation of this hedging and its imperfect nature, the Sub-fund may be exposed to adverse market movements and costs that reduce its net asset value.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking exposure to Japanese equity markets and more specifically to the financial performance of the largest Japanese stocks.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation.

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

Subfund life on the year under review

On 11 October 2023, the fund changed its name from Lyxor Japan (TOPIX) (DR) UCITS ETF to Amundi Japan TOPIX II UCITS ETF.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The AMUNDI Japan TOPIX II UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the Topix Total Return Index JPY benchmark index. The Topix Total Return Index JPY is comprised of all Japanese shares listed on the First Section of the Tokyo Stock Exchange. Each share is weighted according to its market capitalisation. The Topix Total Return Index JPY is therefore very representative of the Japanese economy, as it consists of a significant number of companies that are the largest capitalisations on the market. The index methodology is available at www.tse.or.jp/english.

From October 2022 to October 2023, the performance of the Dist (JPY) share / FR0010377028 is 18.88%. That of the benchmark of 19.81% with a tracking error of 0.20%.

From October 2022 to October 2023, the performance of the Dist (EUR) share / FR0010245514 is 9.09%. That of the benchmark of 9.95% with a tracking error of 0.20%.

From October 2022 to October 2023, the performance of the Daily Hedged to EUR - Dist share / FR0011475078 is 21.68%. That of the benchmark of 23.42% with a tracking error of 0.27%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

AMUNDI JAPAN TOPIX II UCITS ETF

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

French Energy Transition for Green Growth Act (Article 173 of Act No. 2015-992) and Fund Compliance with criteria relating to environmental, social, and governance quality (ESG) objectives

AMUNDI's ESG analysis generates ESG ratings for over 13,000 companies worldwide on a scale ranging from A (for issuers with the best ESG practices) to G (for the worst practices). This analysis is complemented by a policy of active commitment among issuers, in particular on major challenges regarding sustainable development within their sectors.

AMUNDI uses a targeted exclusion policy based on global agreements such as the United Nations Global Compact and other conventions on human rights, the International Labour Organisation, and the environment. In all of its active management strategies, AMUNDI therefore excludes companies that are non-compliant with its ESG principles or international agreements and their transposition into national law:

- anti-personnel mines,
- cluster bombs,
- chemical weapons,
- biological weapons,
- depleted uranium weapons.

These issuers receive a "G" rating on the AMUNDI scale.

In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal

Since coal is the largest single contributor to climate change caused by human activity, in 2016 AMUNDI implemented a sectoral policy specific to thermal coal, resulting in the exclusion of certain companies and issuers. AMUNDI has progressively reinforced this coal exclusion policy every year since 2016. These commitments stem from the Crédit Agricole Group's climate strategy. In line with the UN's Sustainable Development Goals and the 2015 Paris Agreement, this strategy is based on the research and recommendations of a Scientific Committee, which takes into account the IEA's (International Energy Agency) energy scenarios, Climate Analytics, and Science-Based Targets. In 2020, as part of the update of its policy on the thermal coal sector, AMUNDI extended its coal mining exclusion policy, which now includes all companies developing or planning to develop new thermal coal mining capacity.

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity along the entire value chain (producers, extractors, power plants, transport infrastructure),
- Companies generating more than 25% of their income from thermal coal mining,
- Companies extracting 100 MT or more of thermal coal with no intention of reducing these quantities,

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

- All companies whose income from thermal coal mining and coal-fired power generation is over 50% of their total income before analysis, all coal-fired power generation and coal mining companies with a threshold between 25% and 50% and a deteriorated energy transition score.

Application in passive management:

• Passive ESG funds

- All ETF and ESG index funds (with the exception of highly-concentrated indices)
- implement AMUNDI's policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

- In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.
- Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.
- Consequently, AMUNDI's index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.
- At the same time, in the context of securities excluded from the "thermal coal policy" in AMUNDI's active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a "nay" vote on the management of the companies in question.

Tobacco

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to "E", on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates:

- Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).
- Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy.

For further information on how environmental (in particular climate change-related), social, and corporate governance (ESG) issues are taken into account in its investment policy, AMUNDI provides investors with the "Application of Article 173" report, available at <https://legroupe.amundi.com> (Legal Documentation section).

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its “Trading” subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The “Trading” subsidiary is responsible for researching a provider’s accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the “Trading” subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the “AIFM Directive”), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the “UCITS V Directive”). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 (“SFDR”), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives’ principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management’s headcount increased due to the integration of Lyxor’s employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some ‘carried interest’ was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the ‘executives and senior managers’ of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the ‘senior investment managers’ whose professional activities have a material impact on Amundi Asset Management’s risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its ‘Identified Staff’, that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee’s functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)
- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

a) Exposure obtained through effective management techniques of the portfolio and derivative financial instruments

• Exposure obtained through effective management techniques:	4,906,940,410
- Securities lending:	-
- Securities borrowing:	-
- Reverse repurchase transactions:	-

d) Income and operating expenses related to effective management techniques

As part of the effective portfolio management techniques, the management company selected Amundi Intermediation to act as an intermediary for the effective management techniques processed by the CIU. The total revenues generated by efficient portfolio management techniques shall be shared between the relevant compartment and the security lending agent. Each compartment receives 65% while the agent receives 35% of this income. All direct and indirect operational costs related to these operations shall be borne by the staff member.

Amundi Intermediation is an entity linked to the management company.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund
- direct and indirect operating fees/expenses of securities financing transactions.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.45% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A
Direct and indirect operating fees/expenses of securities financing transactions	The amount of income from these transactions	20% for the Management Company 15% for the Agent.

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Unit capitalisation*

- - - -223.53 -

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

Energy Climate Act (ECA)

AMUNDI Japan TOPIX II UCITS ETF EUR Dist

Annual
reporting
31/10/2023

Fund reporting Article 29 of the Energy-Climate Act (LEC - Loi énergie-climat)

This document lists the required information from funds exceeding €500 M in net assets under management pursuant to Article 29 of the LEC

The implementing decree relating to Article 29 of the Energy-Climate Act of 8 November 2019, which clarifies and strengthens the non-financial transparency measures for market participants, was published in the Official Journal of 27 May 2021.
As of the reporting date for the period, the portfolio's strategy did not take into consideration either the alignment of its assets under management with the long-term goals of Articles 2 and 4 of the Paris Agreement, which aim to hold the increase in the global average temperature to below 2°C above pre-industrial levels, or the alignment of its assets with the long-term goals relating to biodiversity in the Convention on Biological Diversity (CBD) adopted on 5 June 1992. However, Amundi has included plans for continuous improvement in this report, including the identification of opportunities for improvement and information relating to corrective actions and strategic and operational changes it has made.

AMUNDI JAPAN TOPIX II UCITS ETF

AMUNDI Japan TOPIX II UCITS ETF EUR Dist

Annual
reporting
31/10/2023

This document meets the requirements of Article 29 of the Energy-Climate Act of 8 November 2019 (called the "LEC") on non-financial reporting for market participants.

The document presents:

1. The portfolio's climate strategy, if it has a strategy of alignment with the temperature objectives of the Paris Agreement;
2. The portfolio's strategy on alignment with long-term biodiversity objectives;
3. The process for taking into account environmental, social, and governance criteria in risk management.

More information is available in Amundi's responsible investment policy and in our climate report, available on our website: <https://legroupe.amundi.com/documentation-esg>.

1. The strategy on alignment with the international goals on limiting global warming, provided for in the Paris Agreement

The portfolio's strategy does not consider the alignment of its assets with the long-term goals of Articles 2 and 4 of the Paris Agreement on limiting global warming.

Exclusion policies

In passive management, the fiduciary duty is to replicate an index as faithfully as possible. The manager therefore has limited flexibility, and is required to meet its contractual objectives to achieve passive exposure that is in line with its benchmark index. Amundi's funds/ETFs replicating the standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions. However, for securities that are excluded due to the application of the thermal coal policy to Amundi's active investment universe, but that could be present in passive non-ESG funds, Amundi has strengthened its engagement process and its voting actions where they could result in a vote against the discharge of the Board or of Management, or the re-election of the Chairman and certain Directors.

Continuous improvement plan

Given the broad range of asset classes and world regions where Amundi invests on behalf of third parties, some of which do not yet have the analytical framework or data required to develop a strategy for alignment with the Paris Agreement, the implementation of such alignment strategies throughout all management activities remains a challenge.

In addition, Amundi is a third party asset management company. Its management activity is governed by contracts between Amundi and its clients, under which the investment objectives of the management portfolios delegated to Amundi by its clients are determined, particularly in terms of expected risk level, yield expectations, and requirements around diversification and sustainability preferences. We are required to obtain the agreement of our legal representatives before consenting to requirements linked to a trajectory of alignment with the Paris Agreement. That is why Amundi has launched a strategy of active dialogue with its clients, offering them the possibility of investing in products whose strategy incorporates characteristics for alignment with the goals of the Paris Agreement and counselling them in their decision-making.

1. Amundi's Climate Strategy in support of the carbon neutrality goals of the Paris Agreement

- Since the end of 2020, the Board of Directors of the management company's parent company has incorporated social and environmental issues in its governance and analysed progress on a quarterly basis via key indicators linked to climate and ESG;
- The Board members held a one-day dedicated strategic seminar to define the strategy to be deployed and the practical directions for implementing the new "Ambition 2025" societal plan;
- A monthly ESG and Climate committee meeting presided by the CEO defines and validates the ESG and climate policy applicable to investments and steers the major strategic projects;
- Commitments made in the framework of the Net Zero Asset Managers initiative, of which Amundi has been a signatory since July 2021:
 - A target of 18% of Amundi's assets under management Net Zero aligned by 2025 (i.e., this 18% will only be made up of funds and mandates with objectives compatible with a Net-Zero trajectory by 2050);
 - -30% carbon intensity (tCO₂e/€M of revenue) by 2025 and -60% by 2030 for all portfolios subject to the NZIF (Net Zero Investment Framework - Set of actions, metrics, and methodologies to help investors maximise their contribution to achieving the Net Zero alignment objective);
- By 2025, Amundi will also offer open transition funds towards the Net Zero 2050 objective across all major asset classes;
- Achieve €20 billion in assets on "impact" funds (including funds making a positive contribution to the objectives of the Paris Agreement);
- Strengthening of the targeted sectoral exclusion rules;
- Amundi invests significant resources to enable better consideration of climate issues in portfolio management:
 - Significant increase in the size of its ESG team;
 - Launch of ALTO* Sustainability, a technological analytics solution and decision-making support for investors on environmental and societal issues.

2. Actions taken and strategic and operational changes made in order to sustainably integrate climate into the strategy

- Progressive inclusion of ESG objectives in the performance evaluations of salespersons and portfolio managers to make this dimension part of their variable remuneration. A climate and ESG training programme developed with Amundi experts for all staff so that each employee receives the appropriate training;
- Implementation of a rating methodology using a "best-in-class" approach to evaluate issuers' transition efforts in relation to a Net Zero scenario. The stated objective of the portfolios concerned will be to have a better environmental transition profile than that of their reference investment universe by 2025;
- The transition to a low-carbon economy is one of the strategic directions of our engagement policy, and Amundi has committed to expanding the number of companies with which we engage in ongoing dialogue on the climate to 1,000 additional companies, with the objective that these companies will define credible strategies for reducing their carbon footprint, have them brought to a vote at their General Meetings, and have part of their managers' remuneration linked to these strategies.

Amundi will continue to develop its climate strategy in the years to come, using scientific reference scenarios and closely linked with the objectives of its clients, both by investing in solutions to accelerate the transition and by gradually aligning its portfolios with the 2050 neutrality objective.

2. The strategy on alignment with the long-term goals relating to biodiversity

The fund's strategy does not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992.

Continuous improvement plan

The subject of biodiversity, which is intrinsically linked to that of climate change, occupies an increasingly important place in our societies, not just in research, but also economic considerations. Biodiversity is one of the themes of Amundi's ESG analysis. It is reflected in the methodological grid via the "Biodiversity & Pollution" criterion, and thus plays a part in the construction of issuer ESG ratings. Amundi is also particularly attentive to controversies linked to biodiversity. In 2022, Amundi continued its initiatives for a better integration of biodiversity into its internal analysis and investment processes. In addition, the subject was among the ESG Research team's top priority analysis themes in 2022, which resulted in the production of a ten-part series of research papers entitled "Biodiversity: it's time to protect our only home". The first two parts were published in 2022, while the following will be put on-line in 2023.

The subject of biodiversity is a particular focal point of the dialogue with the companies in which Amundi is invested. Following the campaigns on plastics launched in 2019, on the circular economy in 2020, and on biodiversity in 2021, Amundi strengthened its active dialogue in 2022 with companies, continuing its engagement campaign dedicated to biodiversity strategy in eight different sectors. Due to the limitations related to the data available on the subject, the first objective of this commitment is to establish an inventory of the consideration of biodiversity by the companies, then ask them to assess the responsiveness of their activities to this loss of biodiversity, and to manage the impact of their activities and products on biodiversity. In 2022, 119 companies engaged on their biodiversity strategy. As part of this engagement, Amundi provides recommendations, with the aim of better integrating these issues into their strategy. Amundi has more broadly strengthened shareholder dialogue around the preservation of natural capital. In 2022, 344 companies (a company may engage on several topics) were engaged through different programmes (including the promotion of a circular economy and better plastics management, the prevention of deforestation, and various subjects linked to such topics as the reduction of pollution or the sustainable management of water resources).

In 2022, Amundi continued its commitment to market initiatives and working groups dedicated to biodiversity. In 2021, Amundi joined the collective "Finance for Biodiversity Pledge" investor initiative and committed to collaboration and knowledge-sharing, active dialogue with companies, and to evaluating its impacts, setting objectives around biodiversity, and communicating them publicly by 2024. In addition, Amundi will produce an annual report on these portfolios' contribution to biodiversity objectives. In 2022, following the publication of its preliminary Nature-related Risk & Opportunity Management and Disclosure Framework, the TNFD (Taskforce on Nature-related Financial Disclosures) launched pilot groups to test the feasibility of this framework on various aspects. Amundi joined a pilot group led by UNEP-FI and CDC Biodiversité, intended to test the TNFD approach, and particularly the application of the GBS (Global Biodiversity Score) to financial institutions.

Amundi also aims to develop its investment policy in terms of biodiversity around several major themes, such as water or plastics, in order to strengthen engagement where necessary and exclude companies that are harmful to natural capital. An update to this policy will be published by 2024.

In terms of data, data analysis relating to the biodiversity indicator is now in place and biodiversity impact metrics are proposed for certain funds. At this stage, Amundi is not consolidating this data at asset manager or group level.

3. The process for taking into account environmental, social, and governance criteria in risk management

3.1 Identification of environmental, social, and governance risks

Amundi's Responsible Investment department constitutes a hub of expertise dedicated to the identification and assessment of risks and opportunities relating to ESG issues. This department provides the various group entities with ESG assessments of listed issuers along with climate data, used by portfolio managers.

The table below presents an overview of the various ESG risks identified by Amundi, the approach used to make assessments, and the data providers used to assess and manage the identified risks. These risks can result in several types of consequences, including but not limited to reputational risks, depreciation of asset values, litigation, or even portfolio under-performance.

Risk identified	Description	Amundi's assessment	Data provider used
Environmental Risks	Result from the way in which a company controls its direct and indirect environmental impact: energy consumption, reduction of greenhouse gas emissions, fight against resource depletion and protection of biodiversity, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Environment" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Social risks	Result from the way an issuer manages its human capital and its stakeholders (other than shareholders). This covers several notions: the social aspect linked to an issuer's human capital (accident prevention, employee training, respect for employee rights, etc.), those linked to human rights in general, and responsibilities towards stakeholders.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Social" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Governance risks	Result from the way the issuer manages its development or organises its operations and management bodies, which can potentially lead to unfair commercial practices, fraud or corruption, non-diverse management bodies, excessive remuneration, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Governance" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Risks of controversy	Possibility that an issuer or investment may be involved in controversies, litigation, or events that could harm its reputation or ability to make a profit. May include questioned business practices, violations of law, financial scandals, environmental or social problems, or other difficulties that could compromise the issuer's credibility or sustainability.	Proprietary methodology combining a quantitative filter to define the universe, then a qualitative evaluation of that universe. The latter evaluation produces a rating on a scale of 0 to 5 (5 being the worst rating). Controversies with a rating of 3 or more are considered serious.	RepRisk, MSCI, Sustainalytics

3.2 Risk and opportunity assessment

The environmental, social, and governance risks and opportunities presented in the table above are assessed via a proprietary ESG rating assigned to issuers by Amundi's Responsible Investment teams.

Rating of private issuers

Our ESG analysts are specialised by sector of activity. To identify the ESG criteria representing the risks and opportunities within each sector of activity, they are tasked with:

- Monitoring emerging and established ESG topics and trends in each sector;
- Assessing sustainability risks and opportunities as well as negative exposure to sustainability factors;
- Selecting the relevant indicators (KPI) and assigning to them the associated weightings.

Our ESG analysis methodology is based on a set of 38 criteria used to establish the ESG profile of each sector of activity. Among these 38 criteria, 17 are generic, and can be applied to companies in any sector of activity, and 21 are specific to the challenges of certain sectors.

The weighting of ESG criteria is a key element of ESG analysis. The weight attribution model is based on a materiality assessment, which can influence the value of a company through 4 vectors: regulation, reputation, the company's development model, and operational efficiency.

To weight ESG criteria, the ESG analyst considers the probability and extent of each vector's impact on the following 2 materialities (detailed in the table at the end of the section):

- 1st materiality: Ability of the company to anticipate and manage sustainable development risks and opportunities inherent to its industry and its particular circumstances;
- 2nd materiality: The management team's ability to manage the potential negative impact of their activities on sustainability factors.

This analytical approach via both materialities lets analysts prioritise risks by taking into account the particularities and events specific to each sector.

The weightings integrate the intensity of the risk incurred as well as its emerging or established nature and its time horizon. Thus, issues that are considered the most material receive the highest weight.

ESG ratings are calculated based on ESG criteria and weightings determined by analysts, who combine them with the ESG scores obtained from our external data providers. At each step of the calculation process, the scores are normalised as Z-scores. Z-scores are used to compare results to a "normal" population (difference of the issuer's score with the average score for the sector, in numbers of standard deviations). To distinguish best practices from worst practices at the sector level, each issuer is evaluated with a score that is scaled around the average for its sector. At the end of the process, each company is assigned an ESG score (between -3 and +3) and its equivalent on a scale from A to G, where A is the best score and G the worst. Grade D represents average scores (from -0.5 to +0.5); each letter corresponds to a standard deviation.

Each issuer receives only one ESG score, regardless of the chosen reference universe. The ESG score is therefore "sector-neutral", meaning that no sector is given more or less preference than another.

For the implementation of the SFDR regulation, Amundi has established a map of the environmental and social factors it deems material for different sectors. This map is presented in Amundi Asset Management's LEC 29 report.

		Regulation	Reputation	Development model	Operational effectiveness
1 st materiality	Ability of the company to anticipate and manage the risks and opportunities inherent to its industry and its particular circumstances in the area of sustainable development	✓	✓	✓	✓
2 nd materiality	The management team's ability to manage the potential negative impact of their activities on sustainability factors	✓		✓	

AMUNDI JAPAN TOPIX II UCITS ETF

Subfund of the Sicav Multi Units France

AMUNDI Japan TOPIX II UCITS ETF EUR Dist

Annual reporting
31/10/2023

Rating of sovereign issuers

The objective of the sovereign rating methodology is to assess the ESG performance of sovereign issuers. E, S, and G factors can all have an impact on a governments' ability to repay its debts in the medium to long term. They can also reflect how the country tackles the major sustainability issues that affect global stability. Amundi's methodology is based on around fifty ESG indicators deemed relevant by Amundi's ESG research to address sustainability risks and sustainability factors. Each indicator can combine multiple data points from different sources, including open international databases (such as those of the World Bank Group, the United Nations, etc.) or proprietary databases. Amundi has defined the weightings of each ESG indicator contributing to the final ESG scores and their various components (E, S, and G). The indicators come from an independent service provider. The indicators have been grouped into 8 categories to ensure greater clarity, with each category falling into one of the E, S or G pillars. Like the company ESG rating scale, the ESG score of issuers results in an ESG rating ranging from A to G.

3.3 Sustainability risk management

Amundi's approach to sustainability risk management is based on the following three pillars:

- An exclusion policy, which addresses the most important ESG risks;
- The integration of ESG ratings into investment processes, which provides a holistic understanding of the company and helps identify its particular ESG risks;
- A voting and engagement policy that helps trigger positive changes in the way companies manage their impact on essential topics related to sustainability, thus mitigating the associated risks.

3.4 Integration of sustainability risks into the entity's regular risk management framework

Sustainability risks are integrated into Amundi's internal control and risk management system.

For sustainability risk management, responsibilities are divided between:

- The first level of control, carried out directly by the management teams, and
- The second level, carried out by the risk management teams, which can constantly check the compliance of funds with their ESG objectives and constraints.

The Risk Department participates in Amundi's "Responsible Investment" governance system. They monitor compliance with regulatory requirements and risk management related to such topics.

The ESG rules are monitored by risk management teams in the same way as other management requirements. They are based on the same tools and procedures and cover our exclusion policies as well as eligibility criteria and fund-specific rules. These rules are automatically monitored using a proprietary monitoring tool. This tool can trigger:

- Pre-negotiation alerts or blocking alerts, for instance on exclusion policies;
- Post-trade alerts: managers are notified of possible overruns so as to be able to quickly rectify them.

The table below details the internal control system implemented by Amundi.

Diagram of the internal control system

Annual
reporting
31/10/2023

3.5 Frequency of risk management framework review

Our ESG analysts review the selection and weightings of Amundi's 38 criteria every 18 months for each sector of activity. This allows them to check whether the criteria and their weightings remain relevant. We continuously seek to improve our analysis by evaluating their materiality.

Amundi's Responsible Investment Policy is updated on a yearly basis.

3.6 Continuous improvement plan

Amundi strives to improve the assessment and integration of sustainability risks, including climate and environmental risks, in the management of its funds. The aim is to go from a qualitative approach to a more quantitative approach by identifying the key indicators that represent the most relevant impacts for portfolios, taking into account climate, environmental, social, and governance factors.

The project is structured in three stages:

- Define a list of sustainability risk indicators, focusing on material risks and their financial impacts on issuers;
- Gradually implement monitoring for these indicators, evaluating their results and defining limits on the basis of these indicators;
- Improve the ESG risk management framework, including the integration of indicators into risk strategies and investment restrictions.

Our current work consists of identifying the main sustainability risk factors and mapping them to issuers' financial variables. This work will end with the validation and approval of the new framework in line with Amundi's ESG governance.

The preliminary indicators considered include metrics to quantify the potential impacts of sustainability risks in terms of financial materiality and the use of "proxies" for reputational risk. The next step, planned for the second half of the current year, is to monitor the defined sustainability risk indicators and assess their impact on the managed portfolios. This monitoring will be used in discussions with the portfolio management teams and included in the various risk management reports. The final stage will focus on improving the ESG risk management framework and possibly setting internal risk alerts or limits based on the indicators. This stage is expected to be completed during the first half of 2025.

It should be noted that deadlines, indicators and implementation objectives may be subject to change throughout the project.

AMUNDI CAC 40 UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Classification:

French equities.

The Lyxor CAC 40 (DR) UCITS ETF sub-fund (the “Sub-fund”) is continuously at least 60% exposed to the French equities market. The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Dist and J-EUR share classes: The Board of Directors reserves the right to distribute distributable amounts one or more times a year and/or accumulate all or part of these amounts.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund’s investment objective is to replicate the performance, whether positive or negative, of the CAC 40 GROSS TOTAL RETURN (with gross dividends reinvested) index (the “Benchmark Index”), denominated in euros, while minimising the tracking error between its performance and that of its Benchmark Index.

The expected ex-post tracking error under normal market conditions is 0.05%.

Benchmark index:

The Benchmark Index is a free-float market capitalisation-weighted index that measures the performance of the 40 largest stocks listed on the Euronext Paris market. The index constituents are selected for their large market capitalisation, sector representativeness and high trading volume.

The Benchmark Index is the main benchmark for the Paris stock market and its share prices are highly correlated with the overall market .

The Benchmark Index is a Gross Total Return index which means that the Benchmark Index’s performance includes the gross dividends paid by its underlying shares.

A full description of the Benchmark Index and its construction methodology and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at www.euronext.com/en.

The performance tracked is that of the Benchmark Index's closing price.

Benchmark Index publication

The Benchmark Index is calculated daily at the official closing price of the exchanges where the index constituents are listed. The Benchmark Index is also calculated in real time every day that the Benchmark Index is published.

The closing price of the Benchmark Index is available on the Internet at www.ftse.com: <https://www.euronext.com/>

Pursuant to the provisions of European Parliament and Council Regulation (EU) 2016/1011, of 8 June 2016, Euronext, the administrator of the Benchmark Index, is registered in ESMA’s register of benchmark index administrators.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The Benchmark Index is rebalanced quarterly.

The exact composition of the Benchmark Index and Euronext’s rules for revising its composition are available at <https://www.euronext.com/>

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Investment strategy:**1. Strategy employed**

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will be exposed to the latter via a direct replication method that requires the Sub-fund to invest mainly in the securities that underlie the Benchmark Index and/or in financial instruments that are representative of all or some of the securities that underlie the Benchmark Index.

The sub-fund may also invest in derivative financial instruments (DFI). The DFI in which the Sub-fund may invest include, but are not limited to, futures on indices, futures on all or some of the Benchmark Index components, and hedging swaps, mainly to minimise the Sub-fund's tracking error.

In accordance with its investment strategy, the Sub-fund may hold cash (e.g. when using futures). In this case, the fund manager may, in the best interest of unit-holders, deposit this cash with a credit institution or invest it in balance-sheet assets and/or off-balance-sheet assets, as described below.

The Sub-fund may use various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French monetary and financial code and in particular temporarily dispose of securities subject to the requirements explained below.

To ensure transparency on the use of the direct index replication method (i.e. full replication of the Benchmark Index) and on its consequences in terms of the assets in the Sub-fund's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio is available on the page dedicated to the Sub-fund accessible on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index. This could be the case, for example, in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

The Sub-fund is eligible for Equity Savings Plans (PEA). The Sub-fund will always comply with the asset constraints allowing it to be included in PEAs, namely the investing of more than 75% of its assets in shares of companies whose registered offices are in a European Union Member State, or in another State that is a party to the Agreement on the European Economic Area that has signed a tax treaty with France that contains an administrative assistance clause aimed at combating fraud and tax evasion.

The Sub-fund may be used as a vehicle for unit-linked life insurance policies. The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund will mainly be invested in the following types of securities:

• Equities

The Sub-fund will be invested mainly in the equities that make up the Benchmark Index.

• The shares or units of other CIU or investment funds

The Sub-fund may invest up to 10% of its assets in the shares or units of the following collective investment undertakings (CIU) or investment funds:

- French and foreign UCITS that comply with Directive 2009/65/EC. The Sub-fund may invest in shares or units of UCITS that are managed by the Management Company or by a company that is related to the Management Company.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

3. Off-balance sheet assets (derivatives)

The Sub-fund may invest in the following DFI:

• Eligible markets:

- regulated
- organised
- over-the-counter

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

• Risks which the Sub-fund may seek to hedge or gain exposure to:

- equity

• Purpose (all transactions must be consistent with the investment objective)

- hedging

- exposure

• Types of instruments used:

- futures : on equities and indices

- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- overall hedging of the portfolio, or of certain risks, securities, etc. – up to 100% of net assets

- to achieve synthetic exposure to assets or risks (up to 100% of assets)

Counterparties to OTC derivatives traded by the Sub-fund will be selected in accordance with the Management Company's best-execution policies (including the "Order-execution by asset type" table referred to in the Appendix). The aforementioned policy is available at www.amundi.com.

Counterparties to derivative financial instruments will have no discretion over the composition of the Sub-fund's investment portfolio, nor over the underlying assets of these derivative instruments, in accordance with regulatory limits and requirements.

When Crédit Agricole is a counterparty to DFI, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

Pursuant to its investment strategy, the Sub-fund may use various efficient portfolio management techniques in compliance with Article R214-18 of the French monetary and financial code, including securities financing transactions.

- Maximum proportion of assets under management for which securities financing transactions may be entered into: up to 25% of the Sub-fund's assets.

- Expected proportion of assets under management for which securities financing transactions may be entered into: 0% of the Sub-fund's assets

For this purpose, the Management Company has appointed Société Générale as its intermediary (hereinafter the "Agent"). If transactions involving the temporary disposal of securities are engaged in, the Agent may be authorised to (i) lend securities, on the Sub-fund's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Sub-fund's behalf, any liquid assets received as collateral for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

When Société Générale S.A. is appointed as an Agent, it is not authorised to act as a counterparty to securities lending transactions. If securities are lent:

- The Sub-fund shall be entitled to all income from such temporary disposal of securities, net of any direct and indirect operating fees/expenses.

- These operating fees/expenses, which are incurred to manage the portfolio more efficiently, will be those borne by the Management Company, the Agent (if applicable) and/or any other intermediaries that are involved in these transactions.

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

- The direct and indirect operating fees/expenses will be calculated as a percentage of the Sub-fund's gross income. Information on direct and indirect operating fees/expenses and on the entities to which these fees/expenses are paid will be provided in the Sub-fund's annual report.
- Income from the lending of securities will be paid to the Sub-fund after deduction of any direct and indirect operating fees/expenses which may be borne by the Agent and the Management Company. Since these direct and indirect operating fees/expenses do not increase the Sub-fund's overall operating expenses they have been excluded from ongoing charges.

If necessary, the Sub-fund's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions
- the identity of the counterparty(ies) involved in these transactions
- the nature and amount of any collateral received to reduce the Sub-fund's counterparty risk, and;
- the income obtained from efficient portfolio management transactions during the relevant period and the direct and indirect operating fees/expenses associated with these transactions.

When Société Générale is a counterparty to an efficient portfolio management transaction, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund enters into securities financing transactions, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

(ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;

(iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;

(iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;

(vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund for securities lending and repo transactions. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
 - The collateral's maturity (if applicable);
 - The credit rating of the collateral issuer (if applicable).
- A higher discount may be applied to collateral received in a currency other than the euro.

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;
- (iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

Risk profile:

The Sub-fund will invest mainly in the financial instruments that comprise the Benchmark Index selected by the Management Company. These instruments are subject to market trends and contingencies.

Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) the market(s) in the Benchmark Index's underlying assets is (are) suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Risk of using efficient portfolio management techniques

If the Sub-fund's counterparty to an efficient portfolio management technique (hereinafter "EPMT") defaults, this may expose the Sub-fund to the risk that the value of the collateral it has received is less than the value of the assets the Sub-fund transferred to the counterparty to the EPMT. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as collateral and/or (iv) the illiquidity of the market in which the collateral received is listed. Investors should note that EPMT transactions may be entered into with same group as that of the Management Company entities of the same group as that of the Management Company entities of the same group as the Management Company.

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs:

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index,
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) : the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Risk of using derivative financial instruments

The Sub-fund may invest in Derivative Financial Instruments ("DFI") traded over the counter or listed on an exchange, and in particular in futures and/or swaps for hedging purposes. These DFI involve various risks, such as counterparty risk, hedging disruption risk, Benchmark Index disruption risk, taxation risk, regulatory risk and liquidity risk. These risks may affect a derivative instrument directly and may result in a modification or even the premature termination of the DFI contract, which could adversely affect the Sub-fund's net asset value.

The risk of investing in DFI may be relatively high. Since the amount of money required to establish a position in a DFI may much less than the exposure thus obtained, each transaction involves "leverage". A relatively small market movement may therefore have a very large potential positive or negative impact on the Sub-fund.

The market value of DFI is highly volatile and they may therefore be subject to large variations.

The Sub-fund may invest in DFI traded over the counter. DFI traded over the counter may also be less liquid than transactions on an organised market, where the volumes traded are generally quite higher, and the prices of these DFI may therefore be more volatile

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund's Acc and Dist shares are available to all investors.

J-EUR shares are available to all investors but are more specifically intended for institutional investors. Investors in this Sub-fund are seeking exposure to the French equity market.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

Subfund life on the year under review

On 11 october 2023, the fund changed its name from Lyxor CAC 40 (DR) UCITS ETF to Amundi CAC 40 UCITS ETF.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi CAC 40 UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the benchmark CAC 40 Total Return Index. The CAC 40 Total Return Index is a free float-weighted index, measuring the performance of 40 shares listed on the Euronext Paris regulated market. Its purpose is to represent the performance of the French market. It is comprised of highly liquid shares selected from the top 100 capitalisations listed on the Euronext Paris regulated market. The index methodology is available at www.euronext.com.

From October 2022 to October 2023, the performance of the Acc share / FR0013380607 is 13.07%. That of the benchmark of 13.29% with a tracking error of 0.05%.

From October 2022 to October 2023, the performance of the Dist share / FR0007052782 is 13.06%. That of the benchmark of 13.29% with a tracking error of 0.05%.

From October 2022 to October 2023, the performance of the J-EUR share / FR0011122233 is 13.06%. That of the benchmark of 13.29% with a tracking error of 0.05%.

The performance achieved over the period does not prejudice the future results of the subfund.

Main movements in the portfolio during the year

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

Number of custodians	2
1 Denomination	SOCIETE GENERALE
1 Amount	106,247,552.39
2 Denomination	CACEIS
2 Amount	36,209,998.00

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

The CIU will be able to use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the Monetary and Financial Code and in particular reverse transactions in financial securities.

- Maximum proportion of assets under management eligible for SFTs: up to 25% of the assets of the CIU.
- Expected share of assets under management eligible for SFTs: 10% of the assets of the CIU.

The total revenues generated by efficient portfolio management techniques shall be shared between the relevant compartment and the security lending agent. Each compartment receives 65% while the agent receives 35% of this income. All direct and indirect operational costs related to these operations are borne by the agent and have therefore been excluded from the financial management and administrative costs external to the management company.

7. Revenues

	Securities Lending	Securities borrowing	Repurchase agreements	Reverse repos	TRS
OPC (absolute value)	26,182.06	-	-	-	-

Specific information

Proportion of investment of assets in securities or rights eligible for the PEA

The asset management company controls on a daily basis that the investments of the portfolio comply with the PEA regime regulatory requirements.

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

French Energy Transition for Green Growth Act (Article 173 of Act No. 2015-992) and Fund Compliance with criteria relating to environmental, social, and governance quality (ESG) objectives

AMUNDI's ESG analysis generates ESG ratings for over 13,000 companies worldwide on a scale ranging from A (for issuers with the best ESG practices) to G (for the worst practices). This analysis is complemented by a policy of active commitment among issuers, in particular on major challenges regarding sustainable development within their sectors.

AMUNDI uses a targeted exclusion policy based on global agreements such as the United Nations Global Compact and other conventions on human rights, the International Labour Organisation, and the environment. In all of its active management strategies, AMUNDI therefore excludes companies that are non-compliant with its ESG principles or international agreements and their transposition into national law:

- anti-personnel mines,
- cluster bombs,
- chemical weapons,
- biological weapons,
- depleted uranium weapons.

These issuers receive a "G" rating on the AMUNDI scale.

In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal

Since coal is the largest single contributor to climate change caused by human activity, in 2016 AMUNDI implemented a sectoral policy specific to thermal coal, resulting in the exclusion of certain companies and issuers. AMUNDI has progressively reinforced this coal exclusion policy every year since 2016. These commitments stem from the Crédit Agricole Group's climate strategy. In line with the UN's Sustainable Development Goals and the 2015 Paris Agreement, this strategy is based on the research and recommendations of a Scientific Committee, which takes into account the IEA's (International Energy Agency) energy scenarios, Climate Analytics, and Science-Based Targets. In 2020, as part of the update of its policy on the thermal coal sector, AMUNDI extended its coal mining exclusion policy, which now includes all companies developing or planning to develop new thermal coal mining capacity.

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity along the entire value chain (producers,

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

- extractors, power plants, transport infrastructure),
- Companies generating more than 25% of their income from thermal coal mining,
 - Companies extracting 100 MT or more of thermal coal with no intention of reducing these quantities,
 - All companies whose income from thermal coal mining and coal-fired power generation is over 50% of their total income before analysis, all coal-fired power generation and coal mining companies with a threshold between 25% and 50% and a deteriorated energy transition score.

Application in passive management:

• Passive ESG funds

- All ETF and ESG index funds (with the exception of highly-concentrated indices)
- implement AMUNDI's policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

- In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.
- Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.
- Consequently, AMUNDI's index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.
- At the same time, in the context of securities excluded from the "thermal coal policy" in AMUNDI's active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a "nay" vote on the management of the companies in question.

Tobacco

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to "E", on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates:

- Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).
- Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy.

For further information on how environmental (in particular climate change-related), social, and corporate governance (ESG) issues are taken into account in its investment policy, AMUNDI provides investors with the "Application of Article 173" report, available at <https://legroupe.amundi.com> (Legal Documentation section).

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its “Trading” subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The “Trading” subsidiary is responsible for researching a provider’s accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the “Trading” subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the “AIFM Directive”), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the “UCITS V Directive”). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 (“SFDR”), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives’ principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management’s headcount increased due to the integration of Lyxor’s employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some ‘carried interest’ was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the ‘executives and senior managers’ of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the ‘senior investment managers’ whose professional activities have a material impact on Amundi Asset Management’s risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its ‘Identified Staff’, that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee’s functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)
- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed

AMUNDI CAC 40 UCITS ETF Subfund of the Sicav Multi Units France

on the performance of a representative basket of AIFs and/or UCITS funds.

- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund
- direct and indirect operating fees/expenses of securities financing transactions.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net asset value	0.25% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net asset value	N/A
Direct and indirect operating fees/expenses of securities financing transactions	The amount of income from these transactions	20% for the Management Company 15% for the Agent.

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Unit distribution (including interim payments)*	-	-	-	-	-
Unit tax credit transferred to share holders (individuals) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	-	-	-	-	-

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

Unit distribution (including interim payments)*	-	-	-	-	-
Unit tax credit transferred to share holders (individuals) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	-	-	-	-	-

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

Energy Climate Act (ECA)

Amundi CAC 40 UCITS ETF Acc

Annual
reporting
31/10/2023

Fund reporting Article 29 of the Energy-Climate Act (LEC - Loi énergie-climat)

This document lists the required information from funds exceeding €500 M in net assets under management pursuant to Article 29 of the LEC

The implementing decree relating to Article 29 of the Energy-Climate Act of 8 November 2019, which clarifies and strengthens the non-financial transparency measures for market participants, was published in the Official Journal of 27 May 2021.

As of the reporting date for the period, the portfolio's strategy did not take into consideration either the alignment of its assets under management with the long-term goals of Articles 2 and 4 of the Paris Agreement, which aim to hold the increase in the global average temperature to below 2°C above pre-industrial levels, or the alignment of its assets with the long-term goals relating to biodiversity in the Convention on Biological Diversity (CBD) adopted on 5 June 1992. However, Amundi has included plans for continuous improvement in this report, including the identification of opportunities for improvement and information relating to corrective actions and strategic and operational changes it has made.

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

Amundi CAC 40 UCITS ETF Acc

Annual
reporting
31/10/2023

This document meets the requirements of Article 29 of the Energy-Climate Act of 8 November 2019 (called the "LEC") on non-financial reporting for market participants.

The document presents:

1. The portfolio's climate strategy, if it has a strategy of alignment with the temperature objectives of the Paris Agreement;
2. The portfolio's strategy on alignment with long-term biodiversity objectives;
3. The process for taking into account environmental, social, and governance criteria in risk management.

More information is available in Amundi's responsible investment policy and in our climate report, available on our website: <https://legroupe.amundi.com/documentation-esg>.

1. The strategy on alignment with the international goals on limiting global warming, provided for in the Paris Agreement

The portfolio's strategy does not consider the alignment of its assets with the long-term goals of Articles 2 and 4 of the Paris Agreement on limiting global warming.

Exclusion policies

In passive management, the fiduciary duty is to replicate an index as faithfully as possible. The manager therefore has limited flexibility, and is required to meet its contractual objectives to achieve passive exposure that is in line with its benchmark index. Amundi's funds/ETFs replicating the standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions. However, for securities that are excluded due to the application of the thermal coal policy to Amundi's active investment universe, but that could be present in passive non-ESG funds, Amundi has strengthened its engagement process and its voting actions where they could result in a vote against the discharge of the Board or of Management, or the re-election of the Chairman and certain Directors.

Continuous improvement plan

Given the broad range of asset classes and world regions where Amundi invests on behalf of third parties, some of which do not yet have the analytical framework or data required to develop a strategy for alignment with the Paris Agreement, the implementation of such alignment strategies throughout all management activities remains a challenge.

In addition, Amundi is a third party asset management company. Its management activity is governed by contracts between Amundi and its clients, under which the investment objectives of the management portfolios delegated to Amundi by its clients are determined, particularly in terms of expected risk level, yield expectations, and requirements around diversification and sustainability preferences. We are required to obtain the agreement of our legal representatives before consenting to requirements linked to a trajectory of alignment with the Paris Agreement. That is why Amundi has launched a strategy of active dialogue with its clients, offering them the possibility of investing in products whose strategy incorporates characteristics for alignment with the goals of the Paris Agreement and counselling them in their decision-making.

1. Amundi's Climate Strategy in support of the carbon neutrality goals of the Paris Agreement

- Since the end of 2020, the Board of Directors of the management company's parent company has incorporated social and environmental issues in its governance and analysed progress on a quarterly basis via key indicators linked to climate and ESG;
- The Board members held a one-day dedicated strategic seminar to define the strategy to be deployed and the practical directions for implementing the new "Ambition 2025" societal plan;
- A monthly ESG and Climate committee meeting presided by the CEO defines and validates the ESG and climate policy applicable to investments and steers the major strategic projects;
- Commitments made in the framework of the Net Zero Asset Managers initiative, of which Amundi has been a signatory since July 2021:
 - A target of 18% of Amundi's assets under management Net Zero aligned by 2025 (i.e., this 18% will only be made up of funds and mandates with objectives compatible with a Net-Zero trajectory by 2050);
- -30% carbon intensity (tCO₂e/€M of revenue) by 2025 and -60% by 2030 for all portfolios subject to the NZIF (Net Zero Investment Framework - Set of actions, metrics, and methodologies to help investors maximise their contribution to achieving the Net Zero alignment objective);
- By 2025, Amundi will also offer open transition funds towards the Net Zero 2050 objective across all major asset classes;
- Achieve €20 billion in assets on "impact" funds (including funds making a positive contribution to the objectives of the Paris Agreement);
- Strengthening of the targeted sectoral exclusion rules;
- Amundi invests significant resources to enable better consideration of climate issues in portfolio management:
 - Significant increase in the size of its ESG team;
 - Launch of ALTO* Sustainability, a technological analytics solution and decision-making support for investors on environmental and societal issues.

2. Actions taken and strategic and operational changes made in order to sustainably integrate climate into the strategy

- Progressive inclusion of ESG objectives in the performance evaluations of salespersons and portfolio managers to make this dimension part of their variable remuneration. A climate and ESG training programme developed with Amundi experts for all staff so that each employee receives the appropriate training;
- Implementation of a rating methodology using a "best-in-class" approach to evaluate issuers' transition efforts in relation to a Net Zero scenario. The stated objective of the portfolios concerned will be to have a better environmental transition profile than that of their reference investment universe by 2025;
- The transition to a low-carbon economy is one of the strategic directions of our engagement policy, and Amundi has committed to expanding the number of companies with which we engage in ongoing dialogue on the climate to 1,000 additional companies, with the objective that these companies will define credible strategies for reducing their carbon footprint, have them brought to a vote at their General Meetings, and have part of their managers' remuneration linked to these strategies.

Amundi will continue to develop its climate strategy in the years to come, using scientific reference scenarios and closely linked with the objectives of its clients, both by investing in solutions to accelerate the transition and by gradually aligning its portfolios with the 2050 neutrality objective.

2. The strategy on alignment with the long-term goals relating to biodiversity

The fund's strategy does not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992.

Continuous improvement plan

The subject of biodiversity, which is intrinsically linked to that of climate change, occupies an increasingly important place in our societies, not just in research, but also economic considerations. Biodiversity is one of the themes of Amundi's ESG analysis. It is reflected in the methodological grid via the "Biodiversity & Pollution" criterion, and thus plays a part in the construction of issuer ESG ratings. Amundi is also particularly attentive to controversies linked to biodiversity. In 2022, Amundi continued its initiatives for a better integration of biodiversity into its internal analysis and investment processes. In addition, the subject was among the ESG Research team's top priority analysis themes in 2022, which resulted in the production of a ten-part series of research papers entitled "Biodiversity: it's time to protect our only home". The first two parts were published in 2022, while the following will be put on-line in 2023.

The subject of biodiversity is a particular focal point of the dialogue with the companies in which Amundi is invested. Following the campaigns on plastics launched in 2019, on the circular economy in 2020, and on biodiversity in 2021, Amundi strengthened its active dialogue in 2022 with companies, continuing its engagement campaign dedicated to biodiversity strategy in eight different sectors. Due to the limitations related to the data available on the subject, the first objective of this commitment is to establish an inventory of the consideration of biodiversity by the companies, then ask them to assess the responsiveness of their activities to this loss of biodiversity, and to manage the impact of their activities and products on biodiversity. In 2022, 119 companies engaged on their biodiversity strategy. As part of this engagement, Amundi provides recommendations, with the aim of better integrating these issues into their strategy. Amundi has more broadly strengthened shareholder dialogue around the preservation of natural capital. In 2022, 344 companies (a company may engage on several topics) were engaged through different programmes (including the promotion of a circular economy and better plastics management, the prevention of deforestation, and various subjects linked to such topics as the reduction of pollution or the sustainable management of water resources).

In 2022, Amundi continued its commitment to market initiatives and working groups dedicated to biodiversity. In 2021, Amundi joined the collective "Finance for Biodiversity Pledge" investor initiative and committed to collaboration and knowledge-sharing, active dialogue with companies, and to evaluating its impacts, setting objectives around biodiversity, and communicating them publicly by 2024. In addition, Amundi will produce an annual report on these portfolios' contribution to biodiversity objectives. In 2022, following the publication of its preliminary Nature-related Risk & Opportunity Management and Disclosure Framework, the TNFD (Taskforce on Nature-related Financial Disclosures) launched pilot groups to test the feasibility of this framework on various aspects. Amundi joined a pilot group led by UNEP-FI and CDC Biodiversité, intended to test the TNFD approach, and particularly the application of the GBS (Global Biodiversity Score) to financial institutions.

Amundi also aims to develop its investment policy in terms of biodiversity around several major themes, such as water or plastics, in order to strengthen engagement where necessary and exclude companies that are harmful to natural capital. An update to this policy will be published by 2024.

In terms of data, data analysis relating to the biodiversity indicator is now in place and biodiversity impact metrics are proposed for certain funds. At this stage, Amundi is not consolidating this data at asset manager or group level.

3. The process for taking into account environmental, social, and governance criteria in risk management

3.1 Identification of environmental, social, and governance risks

Amundi's Responsible Investment department constitutes a hub of expertise dedicated to the identification and assessment of risks and opportunities relating to ESG issues. This department provides the various group entities with ESG assessments of listed issuers along with climate data, used by portfolio managers.

The table below presents an overview of the various ESG risks identified by Amundi, the approach used to make assessments, and the data providers used to assess and manage the identified risks. These risks can result in several types of consequences, including but not limited to reputational risks, depreciation of asset values, litigation, or even portfolio under-performance.

Risk identified	Description	Amundi's assessment	Data provider used
Environmental Risks	Result from the way in which a company controls its direct and indirect environmental impact: energy consumption, reduction of greenhouse gas emissions, fight against resource depletion and protection of biodiversity, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Environment" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Social risks	Result from the way an issuer manages its human capital and its stakeholders (other than shareholders). This covers several notions: the social aspect linked to an issuer's human capital (accident prevention, employee training, respect for employee rights, etc.), those linked to human rights in general, and responsibilities towards stakeholders.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Social" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Governance risks	Result from the way the issuer manages its development or organises its operations and management bodies, which can potentially lead to unfair commercial practices, fraud or corruption, non-diverse management bodies, excessive remuneration, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Governance" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Risks of controversy	Possibility that an issuer or investment may be involved in controversies, litigation, or events that could harm its reputation or ability to make a profit. May include questioned business practices, violations of law, financial scandals, environmental or social problems, or other difficulties that could compromise the issuer's credibility or sustainability.	Proprietary methodology combining a quantitative filter to define the universe, then a qualitative evaluation of that universe. The latter evaluation produces a rating on a scale of 0 to 5 (5 being the worst rating). Controversies with a rating of 3 or more are considered serious.	RepRisk, MSCI, Sustainalytics

3.2 Risk and opportunity assessment

The environmental, social, and governance risks and opportunities presented in the table above are assessed via a proprietary ESG rating assigned to issuers by Amundi's Responsible Investment teams.

Rating of private issuers

Our ESG analysts are specialised by sector of activity. To identify the ESG criteria representing the risks and opportunities within each sector of activity, they are tasked with:

- Monitoring emerging and established ESG topics and trends in each sector;
- Assessing sustainability risks and opportunities as well as negative exposure to sustainability factors;
- Selecting the relevant indicators (KPI) and assigning to them the associated weightings.

Our ESG analysis methodology is based on a set of 38 criteria used to establish the ESG profile of each sector of activity. Among these 38 criteria, 17 are generic, and can be applied to companies in any sector of activity, and 21 are specific to the challenges of certain sectors.

The weighting of ESG criteria is a key element of ESG analysis. The weight attribution model is based on a materiality assessment, which can influence the value of a company through 4 vectors: regulation, reputation, the company's development model, and operational efficiency.

To weight ESG criteria, the ESG analyst considers the probability and extent of each vector's impact on the following 2 materialities (detailed in the table at the end of the section):

- 1st materiality: Ability of the company to anticipate and manage sustainable development risks and opportunities inherent to its industry and its particular circumstances;
- 2nd materiality: The management team's ability to manage the potential negative impact of their activities on sustainability factors.

This analytical approach via both materialities lets analysts prioritise risks by taking into account the particularities and events specific to each sector.

The weightings integrate the intensity of the risk incurred as well as its emerging or established nature and its time horizon. Thus, issues that are considered the most material receive the highest weight.

ESG ratings are calculated based on ESG criteria and weightings determined by analysts, who combine them with the ESG scores obtained from our external data providers. At each step of the calculation process, the scores are normalised as Z-scores. Z-scores are used to compare results to a "normal" population (difference of the issuer's score with the average score for the sector, in numbers of standard deviations). To distinguish best practices from worst practices at the sector level, each issuer is evaluated with a score that is scaled around the average for its sector. At the end of the process, each company is assigned an ESG score (between -3 and +3) and its equivalent on a scale from A to G, where A is the best score and G the worst. Grade D represents average scores (from -0.5 to +0.5); each letter corresponds to a standard deviation.

Each issuer receives only one ESG score, regardless of the chosen reference universe. The ESG score is therefore "sector-neutral", meaning that no sector is given more or less preference than another.

For the implementation of the SFDR regulation, Amundi has established a map of the environmental and social factors it deems material for different sectors. This map is presented in Amundi Asset Management's LEC 29 report.

		Regulation	Reputation	Development model	Operational effectiveness
1 st materiality	Ability of the company to anticipate and manage the risks and opportunities inherent to its industry and its particular circumstances in the area of sustainable development	✓	✓	✓	✓
2 nd materiality	The management team's ability to manage the potential negative impact of their activities on sustainability factors	✓		✓	

AMUNDI CAC 40 UCITS ETF

Subfund of the Sicav Multi Units France

Amundi CAC 40 UCITS ETF Acc

Annual reporting
31/10/2023

Rating of sovereign issuers

The objective of the sovereign rating methodology is to assess the ESG performance of sovereign issuers. E, S, and G factors can all have an impact on a governments' ability to repay its debts in the medium to long term. They can also reflect how the country tackles the major sustainability issues that affect global stability. Amundi's methodology is based on around fifty ESG indicators deemed relevant by Amundi's ESG research to address sustainability risks and sustainability factors. Each indicator can combine multiple data points from different sources, including open international databases (such as those of the World Bank Group, the United Nations, etc.) or proprietary databases. Amundi has defined the weightings of each ESG indicator contributing to the final ESG scores and their various components (E, S, and G). The indicators come from an independent service provider. The indicators have been grouped into 8 categories to ensure greater clarity, with each category falling into one of the E, S or G pillars. Like the company ESG rating scale, the ESG score of issuers results in an ESG rating ranging from A to G.

3.3 Sustainability risk management

Amundi's approach to sustainability risk management is based on the following three pillars:

- An exclusion policy, which addresses the most important ESG risks;
- The integration of ESG ratings into investment processes, which provides a holistic understanding of the company and helps identify its particular ESG risks;
- A voting and engagement policy that helps trigger positive changes in the way companies manage their impact on essential topics related to sustainability, thus mitigating the associated risks.

3.4 Integration of sustainability risks into the entity's regular risk management framework

Sustainability risks are integrated into Amundi's internal control and risk management system.

For sustainability risk management, responsibilities are divided between:

- The first level of control, carried out directly by the management teams, and
- The second level, carried out by the risk management teams, which can constantly check the compliance of funds with their ESG objectives and constraints.

The Risk Department participates in Amundi's "Responsible Investment" governance system. They monitor compliance with regulatory requirements and risk management related to such topics.

The ESG rules are monitored by risk management teams in the same way as other management requirements. They are based on the same tools and procedures and cover our exclusion policies as well as eligibility criteria and fund-specific rules. These rules are automatically monitored using a proprietary monitoring tool. This tool can trigger:

- Pre-negotiation alerts or blocking alerts, for instance on exclusion policies;
- Post-trade alerts: managers are notified of possible overruns so as to be able to quickly rectify them.

The table below details the internal control system implemented by Amundi.

Diagram of the internal control system

Annual
reporting
31/10/2023

3.5 Frequency of risk management framework review

Our ESG analysts review the selection and weightings of Amundi's 38 criteria every 18 months for each sector of activity. This allows them to check whether the criteria and their weightings remain relevant. We continuously seek to improve our analysis by evaluating their materiality.

Amundi's Responsible Investment Policy is updated on a yearly basis.

3.6 Continuous improvement plan

Amundi strives to improve the assessment and integration of sustainability risks, including climate and environmental risks, in the management of its funds. The aim is to go from a qualitative approach to a more quantitative approach by identifying the key indicators that represent the most relevant impacts for portfolios, taking into account climate, environmental, social, and governance factors.

The project is structured in three stages:

- Define a list of sustainability risk indicators, focusing on material risks and their financial impacts on issuers;
- Gradually implement monitoring for these indicators, evaluating their results and defining limits on the basis of these indicators;
- Improve the ESG risk management framework, including the integration of indicators into risk strategies and investment restrictions.

Our current work consists of identifying the main sustainability risk factors and mapping them to issuers' financial variables. This work will end with the validation and approval of the new framework in line with Amundi's ESG governance.

The preliminary indicators considered include metrics to quantify the potential impacts of sustainability risks in terms of financial materiality and the use of "proxies" for reputational risk. The next step, planned for the second half of the current year, is to monitor the defined sustainability risk indicators and assess their impact on the managed portfolios. This monitoring will be used in discussions with the portfolio management teams and included in the various risk management reports. The final stage will focus on improving the ESG risk management framework and possibly setting internal risk alerts or limits based on the indicators. This stage is expected to be completed during the first half of 2025.

It should be noted that deadlines, indicators and implementation objectives may be subject to change throughout the project.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Classification:

Eurozone country equities.

The Lyxor Euro Stoxx 50 (DR) UCITS ETF sub-fund (the "Sub-fund") continuously maintains at least 60% exposure to one or more of the equity markets of one or more eurozone countries, which may include France.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Acc, K-EUR, J-EUR, Daily Hedged to USD – Dist, Daily Hedged to GBP – Dist and Daily Hedged to CHF – Dist share classes: The Board of Directors reserves the right to distribute distributable amounts one or more times a year and/or accumulate all or part of these amounts.

Acc share class, Daily Hedged to USD - Acc, Daily Hedged to GBP - Acc and Daily Hedged to CHF - Acc: All distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to replicate the performance, whether positive or negative, of the EURO STOXX 50® NET RETURN index, (with net dividends reinvested) index (the "Benchmark Index"), denominated in euros and representative of 50 eurozone blue chips stocks, while minimising the tracking error between its performance and that of its Benchmark Index.

The expected ex-post tracking error under normal market conditions is 0.50%.

Benchmark index:

The Benchmark Index is a subset of the EURO STOXX index. It is composed of the eurozone's 50 largest stocks, which are selected on the basis of their market capitalisation, high liquidity and representativeness of an economic sector. The Benchmark Index seeks to weight these equities by country and by economic sector such that they reflect the structure of the eurozone's economy as faithfully as possible.

Benchmark Index publication

The Benchmark Index's composition is revised annually.

The Benchmark Index is a Net Return index which means that the Benchmark Index's performance includes the net dividends paid by its underlying shares.

A full description and the complete methodology used to construct the Benchmark Index and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at <http://www.stoxx.com/indices>

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Pursuant to the provisions of the European Parliament and Council Regulation (EU) 2016/1011, of 8 June 2016, Stoxx Ltd, the administrator of the Benchmark Index, is registered in ESMA's register of benchmark index administrators.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The performance tracked is that of the Benchmark Index's closing price. The complete methodology is available at www.stoxx.com/indices/

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will be exposed to the latter via a direct replication method that requires the Sub-fund to invest mainly in the securities that underlie the Benchmark Index and/or in financial instruments that are representative of all or some of the securities that underlie the Benchmark Index.

The sub-fund may also invest in derivative financial instruments (DFI). The DFI in which the Sub-fund may invest include, but are not limited to, futures on indices, futures on all or some of the Benchmark Index components, and hedging swaps, mainly to minimise the Sub-fund's tracking error.

In accordance with its investment strategy, the Sub-fund may hold cash (e.g. when using futures). In this case, the fund manager may, in the best interest of unit-holders, deposit this cash with a credit institution or invest it in balance-sheet assets and/or off-balance-sheet assets, as described below.

In order to optimise the direct replication method that is used to track the Benchmark Index, the Sub-fund, represented by the Management Company, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Index constituents in order to reduce the costs of investing directly in all of the various Benchmark Index constituents. This sampling technique could cause the Sub-fund to invest in a selection of representative Benchmark Index securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Index, and even to invest in securities that are not constituents of the Benchmark Index.

To ensure transparency on the use of the direct index replication method (i.e. full replication of the Benchmark Index or sampling to limit replication costs) and on its consequences in terms of the assets in the Sub-fund's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio is available on the page dedicated to the Sub-fund accessible on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

The Sub-fund will at all times invest at least 75% of its assets in companies with head offices in a Member State of the European Union or in another country that is a member of the European Economic Area and which has signed a tax convention with France that includes an administrative assistance clause for the purpose of fighting tax fraud and evasion. This minimum investment requirement qualifies the Sub-fund for French 'PEA' equity savings plans.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is justified by exceptional market conditions and in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index. This could be the case, for example, in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund will mainly be invested in the following types of securities:

• Equities

The Sub-fund will be invested mainly in the equities that make up the Benchmark Index.

• The shares or units of other CIU or investment funds

The Sub-fund may invest up to 10% of its assets in the shares or units of the following collective investment undertakings (CIU) or investment funds:

- French and foreign UCITS that comply with Directive 2009/65/EC. The Sub-fund may invest in shares or units of UCITS that are managed by the Management Company or by a company that is related to the Management Company.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

3. Off-balance sheet assets (derivatives)

On an ancillary basis, the Sub-fund may engage in transactions involving derivative financial instruments (DFI) traded on a regulated market or over the counter.

Counterparties to derivative financial instruments will have no discretion over the composition of the Sub-fund's investment portfolio, nor over the underlying assets of these derivative instruments, in accordance with regulatory limits and requirements.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

When Crédit Agricole is a counterparty to DFI, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

Pursuant to its investment strategy, the Sub-fund may use various efficient portfolio management techniques in compliance with Article R214-18 of the French monetary and financial code, including securities financing transactions.

- Maximum proportion of assets under management for which securities financing transactions may be entered into: up to 25%.
- Expected proportion of assets under management for which securities financing transactions may be entered into: 0% of the Sub-fund's assets.

For this purpose, the Management Company has appointed Société Générale as its intermediary (hereinafter the "Agent"). If transactions involving the temporary disposal of securities are engaged in, the Agent may be authorised to (i) lend securities, on the Sub-fund's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Sub-fund's behalf, any liquid assets received as collateral for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

When Société Générale S.A. is appointed as an Agent, it is not authorised to act as a counterparty to securities lending transactions. If securities are lent:

- The Sub-fund shall be entitled to all income from securities financing transactions, net of any direct and indirect operating fees/expenses.
- These operating fees/expenses, which are incurred to manage the portfolio more efficiently, will be those borne by the Management Company, the Agent (if applicable) and/or any other intermediaries that are involved in these transactions.
- The direct and indirect operating fees/expenses will be calculated as a percentage of the Sub-fund's gross income. Information on direct and indirect operating fees/expenses and on the entities to which these expenses are paid will be provided in the Sub-fund's annual report.
- Income from the lending of securities will be paid to the Sub-fund after deduction of any direct and indirect operating fees/expenses which may be borne by the Agent and the Management Company. Since these direct and indirect operating fees/expenses do not increase the Sub-fund's overall operating expenses they have been excluded from ongoing charges.

If necessary, the Sub-fund's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions
- the identity of the counterparty(ies) involved in these transactions
- the nature and amount of any collateral received to reduce the Sub-fund's counterparty risk, and;
- the income obtained from efficient portfolio management transactions during the relevant period and the direct and indirect operating fees/expenses associated with these transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund enters into securities financing transactions, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these transactions. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) Collateral must be immediately enforceable by The Sub-fund's Management Company without informing the counterparty and without its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

(ii) invested in high-quality government bonds;

(iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time;

(iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Capital risk

The capital invested is not guaranteed. As a consequence, investor's capital is at risk. Investors therefore may not recover all or part of their initial investment, particularly if the benchmark index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Benchmark Index tracking risk

Replicating the performance of the Benchmark Index by investing in all of its constituents may prove to be very difficult to implement and costly.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

The Sub-fund manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Index, in proportions that differ from those of the Benchmark Index or even investing in securities that are not index constituents or in derivatives. The use of such optimisation techniques may increase the ex post tracking error and cause the Sub-fund to perform differently from the Benchmark Index.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) the market(s) in the Benchmark Index's underlying assets is (are) suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Risk of using efficient portfolio management techniques

If the Sub-fund's counterparty to an efficient portfolio management technique (hereinafter "EPMT") defaults, this may expose the Sub-fund to the risk that the value of the collateral it has received is less than the value of the assets the Sub-fund transferred to the counterparty to the EPMT. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as collateral and/or (iv) the illiquidity of the market in which the collateral received is listed. Investors should note that EPMT transactions may be entered into with same group as that of the Management Company/entities of the same group as that of the Management Company/entities of the same group as the Management Company.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Risk of using derivative financial instruments

The Sub-fund may invest in Derivative Financial Instruments ("DFI") traded over the counter or listed on an exchange, and in particular in futures and/or swaps for hedging purposes. These DFI involve various risks, such as counterparty risk, hedging disruption risk, Benchmark Index disruption risk, taxation risk, regulatory risk and liquidity risk. These risks may affect a derivative instrument directly and may result in a modification or even the premature termination of the DFI contract, which could adversely affect the Sub-fund's net asset value.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

The risk of investing in DFI may be relatively high. Since the amount of money required to establish a position in a DFI may be much less than the exposure thus obtained, each transaction involves "leverage". A relatively small market movement may therefore have a very large potential positive or negative impact on the Sub-fund.

The market value of DFI is highly volatile and they may therefore be subject to large variations.

The Sub-fund may invest in DFI traded over the counter. DFI traded over the counter may also be less liquid than transactions on an organised market, where the volumes traded are generally quite higher, and the prices of these DFI may therefore be more volatile.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved. Indeed, no asset or financial instrument allows for a continuous and automatic replication of the Benchmark Index, particularly if one or more of the following risks occurs:

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index,
- iv) The index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

- Currency hedging risk of the Daily Hedged to USD – Acc and Dist share classes

To hedge the USD/EUR currency risk on the Daily Hedged to USD – Dist and Daily Hedged to USD – Acc share classes, the Sub-fund uses a hedging strategy that reduces the impact of a change in the exchange rate between the Benchmark Index currency and the share class currency. Given the daily implementation of this hedging and its imperfect nature, the Daily Hedged to USD – Dist and Daily Hedged to USD – Acc share classes may be exposed to adverse market movements and costs that reduce their net asset value.

- Currency hedging risk of the Daily Hedged to GBP – Acc and Dist share classes

To hedge the GBP/EUR currency risk on the Daily Hedged to GBP – Dist and Daily Hedged to GBP – Acc share classes, the Sub-fund uses a hedging strategy that reduces the impact of a change in the exchange rate between the Benchmark Index currency and the share class currency. Given the daily implementation of this hedging and its imperfect nature, the Daily Hedged to GBP – Dist and Daily Hedged to GBP – Acc share classes may be exposed to adverse market movements and costs that reduce their net asset value.

- Currency hedging risk of the Daily Hedged to CHF – Acc and Dist share classes

To hedge the CHF/EUR currency risk on the Daily Hedged to CHF – Dist and Daily Hedged to CHF – Acc share classes, the Sub-fund uses a hedging strategy that reduces the impact of a change in the exchange rate between the Benchmark Index currency and the share class currency. Given the daily implementation of this hedging and its imperfect nature, the Daily Hedged to CHF – Dist and Daily Hedged to CHF – Acc share classes may be exposed to adverse market movements and costs that reduce their net asset value.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

The J-EUR and K-EUR share classes are intended for institutional investors, which must initially invest at least 100,000 euros.

K-EUR and J-EUR class shareholders must hold at least 100,000 euros worth of shares at each Net Asset Value date or redeem all of their K-EUR and/or J-EUR shares.

Investors in this Sub-fund are seeking exposure to eurozone equity markets.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

Subfund life on the year under review

On 11 october 2023, the fund changed its name from Lyxor EURO STOXX 50 (DR) UCITS ETF to Amundi EURO STOXX 50 II UCITS ETF.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The AMUNDI EURO STOXX 50 II UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the EURO STOXX 50 Net Return EUR benchmark index. The EURO STOXX 50 Net Return EUR index is comprised of the 50 largest shares belonging to eurozone member countries. These shares are selected for their market capitalisation, liquidity and sector representativeness. The index strives to respect a weighting by country and by economic sector reflecting the economic structure of the eurozone as much as possible. The index methodology is available at www.stoxx.com.

From October 2022 to October 2023, the performance of the Acc share / FR0007054358 is 15.65%. That of the benchmark of 15.12% with a tracking error of 0.17%.

From October 2022 to October 2023, the performance of the Daily Hedged to CHF - Acc share / FR0012399731 is 13.25%. That of the benchmark of 13.12% with a tracking error of 0.22%.

From October 2022 to October 2023, the performance of the Daily Hedged to GBP - Acc share / FR0012399772 is 17.29%. That of the benchmark of 17.07% with a tracking error of 0.19%.

From October 2022 to October 2023, the performance of the Daily Hedged to USD - Acc share / FR0012399806 is 18.52%. That of the benchmark of 18.36% with a tracking error of 0.24%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

The CIU will be able to use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the Monetary and Financial Code and in particular reverse transactions in financial securities.

- Maximum proportion of assets under management eligible for SFTs: up to 25% of the assets of the CIU.
- Expected share of assets under management eligible for SFTs: 10% of the assets of the CIU.

The total revenues generated by efficient portfolio management techniques shall be shared between the relevant compartment and the security lending agent. Each compartment receives 65% while the agent receives 35% of this income. All direct and indirect operational costs related to these operations are borne by the agent and have therefore been excluded from the financial management and administrative costs external to the management company.

7. Revenues

OPC (absolute value)	26,102.65	-	-	-	-

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

French Energy Transition for Green Growth Act (Article 173 of Act No. 2015-992) and Fund Compliance with criteria relating to environmental, social, and governance quality (ESG) objectives

AMUNDI's ESG analysis generates ESG ratings for over 13,000 companies worldwide on a scale ranging from A (for issuers with the best ESG practices) to G (for the worst practices). This analysis is complemented by a policy of active commitment among issuers, in particular on major challenges regarding sustainable development within their sectors.

AMUNDI uses a targeted exclusion policy based on global agreements such as the United Nations Global Compact and other conventions on human rights, the International Labour Organisation, and the environment. In all of its active management strategies, AMUNDI therefore excludes companies that are non-compliant with its ESG principles or international agreements and their transposition into national law:

- anti-personnel mines,
- cluster bombs,
- chemical weapons,
- biological weapons,
- depleted uranium weapons.

These issuers receive a "G" rating on the AMUNDI scale.

In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal

Since coal is the largest single contributor to climate change caused by human activity, in 2016 AMUNDI implemented a sectoral policy specific to thermal coal, resulting in the exclusion of certain companies and issuers. AMUNDI has progressively reinforced this coal exclusion policy every year since 2016. These commitments stem from the Crédit Agricole Group's climate strategy. In line with the UN's Sustainable Development Goals and the 2015 Paris Agreement, this strategy is based on the research and recommendations of a Scientific Committee, which takes into account the IEA's (International Energy Agency) energy scenarios, Climate Analytics, and Science-Based Targets. In 2020, as part of the update of its policy on the thermal coal sector, AMUNDI extended its coal mining exclusion policy, which now includes all companies developing or planning to develop new thermal coal mining capacity.

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity along the entire value chain (producers, extractors, power plants, transport infrastructure),
- Companies generating more than 25% of their income from thermal coal mining,
- Companies extracting 100 MT or more of thermal coal with no intention of reducing these quantities,

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

- All companies whose income from thermal coal mining and coal-fired power generation is over 50% of their total income before analysis, all coal-fired power generation and coal mining companies with a threshold between 25% and 50% and a deteriorated energy transition score.

Application in passive management:

• Passive ESG funds

- All ETF and ESG index funds (with the exception of highly-concentrated indices)
- implement AMUNDI's policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

- In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.
- Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.
- Consequently, AMUNDI's index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.
- At the same time, in the context of securities excluded from the "thermal coal policy" in AMUNDI's active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a "nay" vote on the management of the companies in question.

Tobacco

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to "E", on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates:

- Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).
- Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy.

For further information on how environmental (in particular climate change-related), social, and corporate governance (ESG) issues are taken into account in its investment policy, AMUNDI provides investors with the "Application of Article 173" report, available at <https://legroupe.amundi.com> (Legal Documentation section).

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its “Trading” subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The “Trading” subsidiary is responsible for researching a provider’s accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the “Trading” subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the “AIFM Directive”), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the “UCITS V Directive”). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 (“SFDR”), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives’ principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management’s headcount increased due to the integration of Lyxor’s employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some ‘carried interest’ was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the ‘executives and senior managers’ of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the ‘senior investment managers’ whose professional activities have a material impact on Amundi Asset Management’s risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its ‘Identified Staff’, that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee’s functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)
- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed

AMUNDI EURO STOXX 50 II UCITS ETF Subfund of the Sicav Multi Units France

on the performance of a representative basket of AIFs and/or UCITS funds.

- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated. .

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes, etc.) and any account activity charges that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund
- direct and indirect operating fees/expenses of securities financing transactions

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net assets	0.20% per annum
Maximum indirect charges (management charges and fees)	Net assets	N/A
Account activity charge	Charge on each transaction	N/A
Incentive fee	Net assets	N/A
Direct and indirect operating fees/expenses of securities financing transactions	The amount of income from these transactions	20% for the Management Company 15% for the Agent.

⁽¹⁾ Includes all fees and expenses, except for transaction expenses, incentive fees and fees relating to investments in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Unit tax credit transferred to share holders (individuals) ⁽¹⁾

- - - - -

Unit capitalisation*

1.05 1.80 3.00 - 2.23

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

Appendix

Energy Climate Act (ECA)

AMUNDI EURO STOXX 50 II UCITS ETF

Annual
reporting
31/10/2023

Fund reporting Article 29 of the Energy-Climate Act (LEC - Loi énergie-climat)

This document lists the required information from funds exceeding €500 M in net assets under management pursuant to Article 29 of the LEC

The implementing decree relating to Article 29 of the Energy-Climate Act of 8 November 2019, which clarifies and strengthens the non-financial transparency measures for market participants, was published in the Official Journal of 27 May 2021.

As of the reporting date for the period, the portfolio's strategy did not take into consideration either the alignment of its assets under management with the long-term goals of Articles 2 and 4 of the Paris Agreement, which aim to hold the increase in the global average temperature to below 2°C above pre-industrial levels, or the alignment of its assets with the long-term goals relating to biodiversity in the Convention on Biological Diversity (CBD) adopted on 5 June 1992. However, Amundi has included plans for continuous improvement in this report, including the identification of opportunities for improvement and information relating to corrective actions and strategic and operational changes it has made.

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

AMUNDI EURO STOXX 50 II UCITS ETF

Annual
reporting
31/10/2023

This document meets the requirements of Article 29 of the Energy-Climate Act of 8 November 2019 (called the "LEC") on non-financial reporting for market participants.

The document presents:

1. The portfolio's climate strategy, if it has a strategy of alignment with the temperature objectives of the Paris Agreement;
2. The portfolio's strategy on alignment with long-term biodiversity objectives;
3. The process for taking into account environmental, social, and governance criteria in risk management.

More information is available in Amundi's responsible investment policy and in our climate report, available on our website: <https://legroupe.amundi.com/documentation-esg>.

1. The strategy on alignment with the international goals on limiting global warming, provided for in the Paris Agreement

The portfolio's strategy does not consider the alignment of its assets with the long-term goals of Articles 2 and 4 of the Paris Agreement on limiting global warming.

Exclusion policies

In passive management, the fiduciary duty is to replicate an index as faithfully as possible. The manager therefore has limited flexibility, and is required to meet its contractual objectives to achieve passive exposure that is in line with its benchmark index. Amundi's funds/ETFs replicating the standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions. However, for securities that are excluded due to the application of the thermal coal policy to Amundi's active investment universe, but that could be present in passive non-ESG funds, Amundi has strengthened its engagement process and its voting actions where they could result in a vote against the discharge of the Board or of Management, or the re-election of the Chairman and certain Directors.

Continuous improvement plan

Given the broad range of asset classes and world regions where Amundi invests on behalf of third parties, some of which do not yet have the analytical framework or data required to develop a strategy for alignment with the Paris Agreement, the implementation of such alignment strategies throughout all management activities remains a challenge.

In addition, Amundi is a third party asset management company. Its management activity is governed by contracts between Amundi and its clients, under which the investment objectives of the management portfolios delegated to Amundi by its clients are determined, particularly in terms of expected risk level, yield expectations, and requirements around diversification and sustainability preferences. We are required to obtain the agreement of our legal representatives before consenting to requirements linked to a trajectory of alignment with the Paris Agreement. That is why Amundi has launched a strategy of active dialogue with its clients, offering them the possibility of investing in products whose strategy incorporates characteristics for alignment with the goals of the Paris Agreement and counselling them in their decision-making.

1. Amundi's Climate Strategy in support of the carbon neutrality goals of the Paris Agreement

- Since the end of 2020, the Board of Directors of the management company's parent company has incorporated social and environmental issues in its governance and analysed progress on a quarterly basis via key indicators linked to climate and ESG;
- The Board members held a one-day dedicated strategic seminar to define the strategy to be deployed and the practical directions for implementing the new "Ambition 2025" societal plan;
- A monthly ESG and Climate committee meeting presided by the CEO defines and validates the ESG and climate policy applicable to investments and steers the major strategic projects;
- Commitments made in the framework of the Net Zero Asset Managers initiative, of which Amundi has been a signatory since July 2021:
 - A target of 18% of Amundi's assets under management Net Zero aligned by 2025 (i.e., this 18% will only be made up of funds and mandates with objectives compatible with a Net-Zero trajectory by 2050);
 - -30% carbon intensity (tCO₂e/€M of revenue) by 2025 and -60% by 2030 for all portfolios subject to the NZIF (Net Zero Investment Framework - Set of actions, metrics, and methodologies to help investors maximise their contribution to achieving the Net Zero alignment objective);
- By 2025, Amundi will also offer open transition funds towards the Net Zero 2050 objective across all major asset classes;
- Achieve €20 billion in assets on "impact" funds (including funds making a positive contribution to the objectives of the Paris Agreement);
- Strengthening of the targeted sectoral exclusion rules;
- Amundi invests significant resources to enable better consideration of climate issues in portfolio management:
 - Significant increase in the size of its ESG team;
 - Launch of ALTO* Sustainability, a technological analytics solution and decision-making support for investors on environmental and societal issues.

2. Actions taken and strategic and operational changes made in order to sustainably integrate climate into the strategy

- Progressive inclusion of ESG objectives in the performance evaluations of salespersons and portfolio managers to make this dimension part of their variable remuneration. A climate and ESG training programme developed with Amundi experts for all staff so that each employee receives the appropriate training;
- Implementation of a rating methodology using a "best-in-class" approach to evaluate issuers' transition efforts in relation to a Net Zero scenario. The stated objective of the portfolios concerned will be to have a better environmental transition profile than that of their reference investment universe by 2025;
- The transition to a low-carbon economy is one of the strategic directions of our engagement policy, and Amundi has committed to expanding the number of companies with which we engage in ongoing dialogue on the climate to 1,000 additional companies, with the objective that these companies will define credible strategies for reducing their carbon footprint, have them brought to a vote at their General Meetings, and have part of their managers' remuneration linked to these strategies.

Amundi will continue to develop its climate strategy in the years to come, using scientific reference scenarios and closely linked with the objectives of its clients, both by investing in solutions to accelerate the transition and by gradually aligning its portfolios with the 2050 neutrality objective.

2. The strategy on alignment with the long-term goals relating to biodiversity

The fund's strategy does not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992.

Continuous improvement plan

The subject of biodiversity, which is intrinsically linked to that of climate change, occupies an increasingly important place in our societies, not just in research, but also economic considerations. Biodiversity is one of the themes of Amundi's ESG analysis. It is reflected in the methodological grid via the "Biodiversity & Pollution" criterion, and thus plays a part in the construction of issuer ESG ratings. Amundi is also particularly attentive to controversies linked to biodiversity. In 2022, Amundi continued its initiatives for a better integration of biodiversity into its internal analysis and investment processes. In addition, the subject was among the ESG Research team's top priority analysis themes in 2022, which resulted in the production of a ten-part series of research papers entitled "Biodiversity: it's time to protect our only home". The first two parts were published in 2022, while the following will be put on-line in 2023.

The subject of biodiversity is a particular focal point of the dialogue with the companies in which Amundi is invested. Following the campaigns on plastics launched in 2019, on the circular economy in 2020, and on biodiversity in 2021, Amundi strengthened its active dialogue in 2022 with companies, continuing its engagement campaign dedicated to biodiversity strategy in eight different sectors. Due to the limitations related to the data available on the subject, the first objective of this commitment is to establish an inventory of the consideration of biodiversity by the companies, then ask them to assess the responsiveness of their activities to this loss of biodiversity, and to manage the impact of their activities and products on biodiversity. In 2022, 119 companies engaged on their biodiversity strategy. As part of this engagement, Amundi provides recommendations, with the aim of better integrating these issues into their strategy. Amundi has more broadly strengthened shareholder dialogue around the preservation of natural capital. In 2022, 344 companies (a company may engage on several topics) were engaged through different programmes (including the promotion of a circular economy and better plastics management, the prevention of deforestation, and various subjects linked to such topics as the reduction of pollution or the sustainable management of water resources).

In 2022, Amundi continued its commitment to market initiatives and working groups dedicated to biodiversity. In 2021, Amundi joined the collective "Finance for Biodiversity Pledge" investor initiative and committed to collaboration and knowledge-sharing, active dialogue with companies, and to evaluating its impacts, setting objectives around biodiversity, and communicating them publicly by 2024. In addition, Amundi will produce an annual report on these portfolios' contribution to biodiversity objectives. In 2022, following the publication of its preliminary Nature-related Risk & Opportunity Management and Disclosure Framework, the TNFD (Taskforce on Nature-related Financial Disclosures) launched pilot groups to test the feasibility of this framework on various aspects. Amundi joined a pilot group led by UNEP-FI and CDC Biodiversité, intended to test the TNFD approach, and particularly the application of the GBS (Global Biodiversity Score) to financial institutions.

Amundi also aims to develop its investment policy in terms of biodiversity around several major themes, such as water or plastics, in order to strengthen engagement where necessary and exclude companies that are harmful to natural capital. An update to this policy will be published by 2024.

In terms of data, data analysis relating to the biodiversity indicator is now in place and biodiversity impact metrics are proposed for certain funds. At this stage, Amundi is not consolidating this data at asset manager or group level.

3. The process for taking into account environmental, social, and governance criteria in risk management

3.1 Identification of environmental, social, and governance risks

Amundi's Responsible Investment department constitutes a hub of expertise dedicated to the identification and assessment of risks and opportunities relating to ESG issues. This department provides the various group entities with ESG assessments of listed issuers along with climate data, used by portfolio managers.

The table below presents an overview of the various ESG risks identified by Amundi, the approach used to make assessments, and the data providers used to assess and manage the identified risks. These risks can result in several types of consequences, including but not limited to reputational risks, depreciation of asset values, litigation, or even portfolio under-performance.

Risk identified	Description	Amundi's assessment	Data provider used
Environmental Risks	Result from the way in which a company controls its direct and indirect environmental impact: energy consumption, reduction of greenhouse gas emissions, fight against resource depletion and protection of biodiversity, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Environment" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Social risks	Result from the way an issuer manages its human capital and its stakeholders (other than shareholders). This covers several notions: the social aspect linked to an issuer's human capital (accident prevention, employee training, respect for employee rights, etc.), those linked to human rights in general, and responsibilities towards stakeholders.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Social" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Governance risks	Result from the way the issuer manages its development or organises its operations and management bodies, which can potentially lead to unfair commercial practices, fraud or corruption, non-diverse management bodies, excessive remuneration, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Governance" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Risks of controversy	Possibility that an issuer or investment may be involved in controversies, litigation, or events that could harm its reputation or ability to make a profit. May include questioned business practices, violations of law, financial scandals, environmental or social problems, or other difficulties that could compromise the issuer's credibility or sustainability.	Proprietary methodology combining a quantitative filter to define the universe, then a qualitative evaluation of that universe. The latter evaluation produces a rating on a scale of 0 to 5 (5 being the worst rating). Controversies with a rating of 3 or more are considered serious.	RepRisk, MSCI, Sustainalytics

3.2 Risk and opportunity assessment

The environmental, social, and governance risks and opportunities presented in the table above are assessed via a proprietary ESG rating assigned to issuers by Amundi's Responsible Investment teams.

Rating of private issuers

Our ESG analysts are specialised by sector of activity. To identify the ESG criteria representing the risks and opportunities within each sector of activity, they are tasked with:

- Monitoring emerging and established ESG topics and trends in each sector;
- Assessing sustainability risks and opportunities as well as negative exposure to sustainability factors;
- Selecting the relevant indicators (KPI) and assigning to them the associated weightings.

Our ESG analysis methodology is based on a set of 38 criteria used to establish the ESG profile of each sector of activity. Among these 38 criteria, 17 are generic, and can be applied to companies in any sector of activity, and 21 are specific to the challenges of certain sectors.

The weighting of ESG criteria is a key element of ESG analysis. The weight attribution model is based on a materiality assessment, which can influence the value of a company through 4 vectors: regulation, reputation, the company's development model, and operational efficiency.

To weight ESG criteria, the ESG analyst considers the probability and extent of each vector's impact on the following 2 materialities (detailed in the table at the end of the section):

- 1st materiality: Ability of the company to anticipate and manage sustainable development risks and opportunities inherent to its industry and its particular circumstances;
- 2nd materiality: The management team's ability to manage the potential negative impact of their activities on sustainability factors.

This analytical approach via both materialities lets analysts prioritise risks by taking into account the particularities and events specific to each sector.

The weightings integrate the intensity of the risk incurred as well as its emerging or established nature and its time horizon. Thus, issues that are considered the most material receive the highest weight.

ESG ratings are calculated based on ESG criteria and weightings determined by analysts, who combine them with the ESG scores obtained from our external data providers. At each step of the calculation process, the scores are normalised as Z-scores. Z-scores are used to compare results to a "normal" population (difference of the issuer's score with the average score for the sector, in numbers of standard deviations). To distinguish best practices from worst practices at the sector level, each issuer is evaluated with a score that is scaled around the average for its sector. At the end of the process, each company is assigned an ESG score (between -3 and +3) and its equivalent on a scale from A to G, where A is the best score and G the worst. Grade D represents average scores (from -0.5 to +0.5); each letter corresponds to a standard deviation.

Each issuer receives only one ESG score, regardless of the chosen reference universe. The ESG score is therefore "sector-neutral", meaning that no sector is given more or less preference than another.

For the implementation of the SFDR regulation, Amundi has established a map of the environmental and social factors it deems material for different sectors. This map is presented in Amundi Asset Management's LEC 29 report.

		Regulation	Reputation	Development model	Operational effectiveness
1 st materiality	Ability of the company to anticipate and manage the risks and opportunities inherent to its industry and its particular circumstances in the area of sustainable development	✓	✓	✓	✓
2 nd materiality	The management team's ability to manage the potential negative impact of their activities on sustainability factors	✓		✓	

Rating of sovereign issuers

The objective of the sovereign rating methodology is to assess the ESG performance of sovereign issuers. E, S, and G factors can all have an impact on a governments' ability to repay its debts in the medium to long term. They can also reflect how the country tackles the major sustainability issues that affect global stability. Amundi's methodology is based on around fifty ESG indicators deemed relevant by Amundi's ESG research to address sustainability risks and sustainability factors. Each indicator can combine multiple data points from different sources, including open international databases (such as those of the World Bank Group, the United Nations, etc.) or proprietary databases. Amundi has defined the weightings of each ESG indicator contributing to the final ESG scores and their various components (E, S, and G). The indicators come from an independent service provider. The indicators have been grouped into 8 categories to ensure greater clarity, with each category falling into one of the E, S or G pillars. Like the company ESG rating scale, the ESG score of issuers results in an ESG rating ranging from A to G.

3.3 Sustainability risk management

Amundi's approach to sustainability risk management is based on the following three pillars:

- An exclusion policy, which addresses the most important ESG risks;
- The integration of ESG ratings into investment processes, which provides a holistic understanding of the company and helps identify its particular ESG risks;
- A voting and engagement policy that helps trigger positive changes in the way companies manage their impact on essential topics related to sustainability, thus mitigating the associated risks.

3.4 Integration of sustainability risks into the entity's regular risk management framework

Sustainability risks are integrated into Amundi's internal control and risk management system.

For sustainability risk management, responsibilities are divided between:

- The first level of control, carried out directly by the management teams, and
- The second level, carried out by the risk management teams, which can constantly check the compliance of funds with their ESG objectives and constraints.

The Risk Department participates in Amundi's "Responsible Investment" governance system. They monitor compliance with regulatory requirements and risk management related to such topics.

The ESG rules are monitored by risk management teams in the same way as other management requirements. They are based on the same tools and procedures and cover our exclusion policies as well as eligibility criteria and fund-specific rules. These rules are automatically monitored using a proprietary monitoring tool. This tool can trigger:

- Pre-negotiation alerts or blocking alerts, for instance on exclusion policies;
- Post-trade alerts: managers are notified of possible overruns so as to be able to quickly rectify them.

The table below details the internal control system implemented by Amundi.

Diagram of the internal control system

AMUNDI EURO STOXX 50 II UCITS ETF

Subfund of the Sicav Multi Units France

AMUNDI EURO STOXX 50 II UCITS ETF

Annual
reporting
31/10/2023

3.5 Frequency of risk management framework review

Our ESG analysts review the selection and weightings of Amundi's 38 criteria every 18 months for each sector of activity. This allows them to check whether the criteria and their weightings remain relevant. We continuously seek to improve our analysis by evaluating their materiality.

Amundi's Responsible Investment Policy is updated on a yearly basis.

3.6 Continuous improvement plan

Amundi strives to improve the assessment and integration of sustainability risks, including climate and environmental risks, in the management of its funds. The aim is to go from a qualitative approach to a more quantitative approach by identifying the key indicators that represent the most relevant impacts for portfolios, taking into account climate, environmental, social, and governance factors.

The project is structured in three stages:

- Define a list of sustainability risk indicators, focusing on material risks and their financial impacts on issuers;
- Gradually implement monitoring for these indicators, evaluating their results and defining limits on the basis of these indicators;
- Improve the ESG risk management framework, including the integration of indicators into risk strategies and investment restrictions.

Our current work consists of identifying the main sustainability risk factors and mapping them to issuers' financial variables. This work will end with the validation and approval of the new framework in line with Amundi's ESG governance.

The preliminary indicators considered include metrics to quantify the potential impacts of sustainability risks in terms of financial materiality and the use of "proxies" for reputational risk. The next step, planned for the second half of the current year, is to monitor the defined sustainability risk indicators and assess their impact on the managed portfolios. This monitoring will be used in discussions with the portfolio management teams and included in the various risk management reports. The final stage will focus on improving the ESG risk management framework and possibly setting internal risk alerts or limits based on the indicators. This stage is expected to be completed during the first half of 2025.

It should be noted that deadlines, indicators and implementation objectives may be subject to change throughout the project.

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Calculation and allocation of distributable amounts:

Acc share class: all distributable amounts are reinvested.

Dist share class: the Board of Directors reserves the right to accumulate and/or distribute all or part of income in one or more annual distributions. Net capital gains will be accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's objective is to replicate the performance, whether positive or negative, of the FTSE MTS Eurozone Government Bond IG (Mid Price) Index (Ex-CNO Etrix) (the "Benchmark Index") denominated in euros (EUR), while minimising the tracking error between the Sub-fund's performance and that of its Benchmark Index.

The expected ex-post tracking error under normal market conditions is 0.05%.

Benchmark index:

The Benchmark Index is a "Total Return" index (i.e. all coupons detached by the Benchmark Index constituents are reinvested in the Benchmark Index).

The Benchmark Index is composed of bonds issued by the governments of the eurozone countries, weighted by country and representing a full spectrum of maturities. To be eligible for inclusion in the Benchmark Index, bonds must meet the following criteria:

- (i) They must pay a fixed rate of interest on a principal amount that will be fully repaid upon maturity, be denominated in euros, be non-convertible and incorporate no options.
- (ii) They must have been issued by a Eurozone Member State selected by FTSE MTS from the list of countries having been attributed an Investment Grade credit rating by at least two of the three credit rating agencies, Standard & Poor's, Moody's and Fitch.
- (iii) They must be traded on the MTS platform.
- (iv) The minimum bond issuance size is two billion euros.

The performance tracked is that of the Benchmark Index's closing price at 5:15 pm CET.

Benchmark Index publication

The Benchmark Index's closing price is available on the Internet at <http://www.ftserussell.com/>.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the administrator of the Benchmark Index, has until 31 December 2023 to apply to the competent authority for the necessary certification or registration.

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Benchmark Index composition and revision

The Benchmark Index's composition is revalued and rebalanced monthly.

A full description of the Benchmark Index and its construction methodology and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at <http://www.ftserussell.com/>.

The frequency of rebalancing does not affect the cost of implementing the investment strategy.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The Sub-fund's securities will be mainly global equities, in all economic sectors and listed in all markets, including small-cap exchanges.

The Sub-fund will at all times invest at least 75% of its assets in the equities of companies with head offices in a Member State of the European Union or in another country that is a member of the European Economic Area and which has signed a tax convention with France that includes an administrative assistance clause for the purpose of fighting tax fraud and evasion. This minimum investment requirement qualifies the Sub-fund for French 'PEA' equity savings plans.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund is available on the page dedicated to the Sub-fund accessible on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

Up to 20% of the Sub-fund's assets may be exposed to debt issued by a given OECD country. This 20% limit can be increased to 35% for a single bond, when this is justified by exceptional market conditions and in particular when certain securities are largely dominant, or a debt issue is highly volatile, or a political and/or economic event has affected or may affect the estimated debt of an issuing country or its credit rating, or in any other event that is likely to affect the liquidity of a Benchmark Index security.

Notwithstanding the above, exposure to securities guaranteed or issued by a given issuer can account for up to 35% of assets and up to 100% if the Sub-fund is exposed to at least six issues of which none exceeds 30% of assets, provided that these securities are financial instruments issued or guaranteed by an OECD Member State, the local authorities of a European Union Member State or a country that is a member of the European Economic Area. The above-mentioned securities must be financial instruments issued or guaranteed by a Member State of the OECD, a local authority of a Member State of the European Union or of a country that is a party to the Agreement on the European Economic Area.

Sub-fund's targeted interest-rate sensitivity	Between 5 and 10
Currency of the securities to which the Sub-fund is exposed:	EUR: from 0% to 100% of net assets Other: from 0% to 100% of net assets.
Currency risk to which the Sub-fund is exposed:	10% maximum of net assets.
Geographic regions of the issuers of the securities to which the Sub-fund is exposed	Eurozone: 0% to 100% of net assets Emerging countries: 0% to 100% of net assets

The asset manager by delegation currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

In compliance with the ratios indicated in the applicable regulations, the Sub-fund may invest in global equities in all economic sectors and listed on all exchanges including small-cap exchanges.

The aforementioned equities will be selected on the basis of the following:

- eligibility criteria, in particular:
- their inclusion in a major stock exchange index
- liquidity (must exceed a minimum daily trading volume and market capitalisation)
- credit rating of the country where the issuer has its registered office (must have a least a minimum S&P or equivalent rating)

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

- diversification criteria, in particular regarding:
- the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R.214-21 of the French Monetary and Financial Code)
- geographic
- sector.

Investors may find more information on the above eligibility and diversification criteria on Amundi's website at www.amundi.com.

Investment in undertakings for collective investment in transferrable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the Sub-fund's net assets. The Sub-fund may invest in the shares of UCITS managed by the Management Company or by a company that is related to the Management Company. The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

To optimise the Sub-fund's management and achieve its investment objective, the asset manager reserves the right to use other financial instruments, in compliance with regulations.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's assets (or the value of any other financial instrument the Sub-fund may hold) for the value of the Benchmark Index (as described in sub-section 1 of this section).

- Maximum proportion of assets under management for which total return swaps may be entered into: 100% of assets under management.
- Expected proportion of assets under management for which total return swaps may be entered into: up to 100% of assets under management.

To optimise the Sub-fund's management and achieve its investment objective, the manager reserves the right to use derivative financial instruments, other than index-linked swaps, in compliance with regulations.

A counterparty to derivative financial instruments (the "Counterparty") will have no discretion over the composition of the Sub-fund's portfolio or over the underlying assets of the derivative instruments.

When Société Générale is a counterparty to the aforementioned transactions involving derivative instruments, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Temporary purchases and disposals of securities

N/A. The manager shall not engage in any temporary purchases or sales of securities.

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depositary. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price.
- (b) Collateral must be valued at its mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount or "haircut" is applied.
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance.
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) The Sub-fund's Management Company must be able to enforce this collateral in full and at any time, without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) the shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- the nature of the collateral asset;
- the collateral's maturity (if applicable);

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

- the credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged. At the manager's discretion, cash collateral may either be:

(i) deposited with an authorised institution;

(ii) invested in high-quality government bonds;

(iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the Accrued interest at any time.

(iv) invested in short-term money-market funds as defined in the guidelines for a common definition of European money-market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the Acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating

- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Capital risk

The capital invested is not guaranteed. Investors therefore may not recover all or part of their initial investment, particularly in the event that the Benchmark Index posts a negative return over the investment period.

- Interest rate risk

The price of a bond or other debt security is affected by changes in interest rates. The price of most debt securities increases when interest rates decline and decreases when interest rates rise. Bonds with relatively long maturities (which is the case of those in the Benchmark Index) are more sensitive to changes in interest rates and are therefore more volatile investments than debt securities with shorter maturities.

- Credit risk

The Sub-fund could be adversely affected by a lowering of the credit rating of one or more issuers of a bond in the Benchmark Index. This could mean a higher risk that such an issuer might default and could decrease the bond's value.

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). The Sub-fund is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materializes it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares may deviate from the Sub-fund's indicative net asset value. The liquidity of the Sub-fund's shares on an exchange may be adversely affected by a suspension of or disruption in market operation, such as one of the following events:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) trading in the market(s) in the Benchmark Index's underlying assets is suspended
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Currency risk associated with listing exchanges

The Sub-fund may be listed on an exchange or multilateral trading facility in a currency that is not the currency of the Benchmark Index. Investors who purchase shares in the Sub-fund in a currency that is not that of the Benchmark index are exposed to currency risk. As a result, due to changes in exchange rates the value of an investment that is made in a currency other than that of the Benchmark Index may decrease even though the value of the Benchmark Index increases.

- Risk that the investment objective is not fully achieved

There is no guarantee that the investment objective will be achieved, as no asset or financial instrument can ensure that the Benchmark Index will be automatically and continuously replicated, particularly in the event of one or more of the following risks:

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

- Risk of using derivative financial instruments:

In order to achieve its investment objective, the Sub-fund can enter into transactions involving over-the-counter derivative financial instruments ("DFI"), such as swaps, in order to replicate the performance of the Benchmark Index. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk due to a change in tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in a tax regime that applies to the Sub-fund's underlying assets could affect the Sub-fund's tax treatment. As a result, in case of a discrepancy between the estimated and effective tax treatment applied to the Sub-fund and/or to the Sub-fund's counterparty to the DFI, the net asset value of the Sub-fund may be affected.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index
- iv) the index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk involving a Benchmark Index constituent

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument or transaction based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

Eligible investors and typical investor profile:

The Sub-fund is available to all investors.

Investors in this Sub-fund are seeking exposure to the performance, whether positive or negative, of the investment grade eurozone bond segment.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements at present and for the next five years, and their willingness to take on risk or adopt a more cautious approach. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund life on the year under review

On 11 October 2023, the fund changed its name from Lyxor PEA Obligations d'État Euro UCITS ETF to Amundi PEA Obligations d'État Euro UCITS ETF.

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi PEA Obligations d'état Euro UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the MTS Mid Price InvG Ex-CNO Etrix All Maturity (EUR) benchmark index. The MTS Mid Price InvG Ex-CNO Etrix All Maturity (EUR) index measures the performance of the most representative and most liquid government bonds in the eurozone. The MTS Mid Price InvG Ex-CNO Etrix All Maturity (EUR) index is now calculated in real time using market prices from the MTS trading platform. The index methodology is available at www.mtsindices.com

From October 2022 to October 2023, the performance of the Acc share / FR0013346681 is -2.65%. That of the benchmark of -2.08% with a tracking error of 0.005%.

The performance achieved over the period does not prejudice the future results of the subfund.

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

Number of custodians	-
1 Denomination	-

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Proportion of investment of assets in securities or rights eligible for the PEA

The asset management company controls on a daily basis that the investments of the portfolio comply with the PEA regime regulatory requirements.

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a "G" rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI's policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI's index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the "thermal coal policy" in AMUNDI's active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a "nay" vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to "E", on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI's policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Temporary purchases and disposals of securities are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.

Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.

The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated..

Accounting method for trading expenses

Trading expenses are excluded in the initial cost of the transaction.

AMUNDI PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Subfund of the Sicav Multi Units France

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees (brokerage, stock market taxes etc.) and any account activity charge that may be charged, generally by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- Incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives
- Account activity fees charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Asset management fees and administration fees that are external to the Management Company ⁽¹⁾	Net asset value	0.40% per annum
Maximum indirect charges (management charges and fees)	Net asset value	N/A
Account activity charge	Charge on each transaction	N/A
Incentive fee	Net asset value	N/A

⁽¹⁾ Include all fees/expenses except for transaction expenses, incentive fees and fees associated with investment in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Indication of accounting changes subject to special information to shareholders

- Changes made: None.
- Changes to occur: None.

Details and justification of changes in valuation and implementation procedures

None.

Details of the type of errors that have been corrected during the period

None.

Details of the rights and conditions attached to each share category

Acc share class: all distributable amounts are reinvested.

Dist share class: the Board of Directors reserves the right to accumulate and/or distribute all or part of income in one or more annual distributions. Net capital gains will be accumulated.

Unit capitalisation*

-0.06 -0.62 -1.72 1.56 -2.37

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

AMUNDI MSCI GREECE UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Classification:

Eurozone equities.

The Sub-fund will continuously maintain at least 60% exposure to one or more of the equity markets of one or more eurozone countries, and possibly to the French equity market.

The Sub-fund is a UCITS ETF type index tracker.

Calculation and allocation of distributable amounts:

The Management Company reserves the right to accumulate and/or distribute all or part of distributable income in one or more annual distributions.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to replicate the performance, whether positive or negative, of the MSCI Greece IMI + Coca-Cola 20-35 Net Total Return Index denominated in EUR (the "Benchmark Index"), while minimising the tracking error between the Sub-fund's performance and that of the Benchmark Index.

The expected ex-post tracking error under normal market conditions is 0.3%.

Benchmark index:

Description

The Benchmark Index is a "net dividends reinvested" index, which means that the Benchmark Index's performance includes the dividends paid by its underlying shares.

The Benchmark Index is an equity index weighted by market capitalisation and adjusted for free-float. It is calculated and published by the international index provider MSCI Inc.

It is composed of the equities of companies that are domiciled and/or listed in Greece and which MSCI Limited classifies as small-cap, mid-cap or large-cap on the basis of its criteria. The Benchmark Index is representative of the stock-market performance of companies that are domiciled and/or listed in Greece. It accounts for approximately 99% of the free-float adjusted market capitalisation of the universe of companies that are domiciled and/or listed in Greece.

The MSCI methodology and calculation method assume a variable number of companies in the Benchmark Index.

A full description and the complete methodology used to construct the Benchmark Index and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at www.msci.com

The performance tracked is that of the Benchmark Index's closing price.

Benchmark Index composition and revision

The Benchmark Index is revised quarterly.

The exact composition of the Benchmark Index and the rules for index composition revision are available on the Internet at www.msci.com

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Benchmark Index publication

The value of the Benchmark Index and the list of its constituents are available on MSCI's website at www.msci.com.

The Benchmark Index is calculated daily at the official closing price of the exchanges where the index constituents are listed. The Benchmark Index is calculated in real time every stock exchange trading day.

The Benchmark Index is available through Reuters and Bloomberg.

The closing price of the Benchmark Index is available on MSCI's website at www.msci.com.

The administrator of the Benchmark Index is MSCI Limited.

AMUNDI MSCI GREECE UCITS ETF

Subfund of the Sicav Multi Units France

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the administrator of the Benchmark Index, has until 31 December 2023 to apply to the competent authority for the necessary certification or registration.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The securities in the Sub-fund's portfolio may include those that make up the Benchmark Index and other global equities across all economic sectors and listed on all exchanges including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

The Sub-fund will at all times invest at least 75% of its assets in companies that have their head office in a Member State of the European Union or in another country that is a member of the European Economic Area and which has signed a tax convention with France that includes an administrative assistance clause for the purpose of fighting tax fraud and evasion. This minimum investment requirement qualifies the Sub-fund for French 'PEA' equity savings plans.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is shown to be justified by exceptional market conditions and in particular when certain securities are largely dominant and/or in the event of strong volatility that affects a financial instrument or securities linked to an economic sector represented in the Benchmark Index, particularly in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

In accordance with regulatory ratios, the Sub-fund's portfolio may include global equities across all economic sectors and listed on any exchange, including "small-cap" exchanges.

The aforementioned equities will be selected on the basis of the following:

- eligibility criteria and in particular:
- their inclusion in a major stock exchange index or in the Benchmark Index
- liquidity (must exceed a minimum daily trading volume and market capitalisation)
- credit rating of the country where the issuer has its registered office (must have a least a minimum S&P or equivalent rating)
- diversification criteria, and in particular with respect to:
- the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
- geography

AMUNDI MSCI GREECE UCITS ETF

Subfund of the Sicav Multi Units France

- sector

Investors may find more information on the above eligibility and diversification criteria, and in particular the list of eligible indices, on Amundi's website at www.amundi.com.

Investment in undertakings for collective investment in transferrable securities ("UCITS") that comply with the Directive is limited to 10% of the Sub-fund's net assets. The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law. The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is related to the Management Company.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use OTC index-linked swaps that swap the value of the Sub-fund's assets (or the value of any other financial instrument or asset the Sub-fund may hold) for the value of the components of the Benchmark Index (as described in sub-section 1 of this section).

- Maximum proportion of assets under management for which total return swaps (TRS) may be entered into: 100%.

- Expected proportion of assets under management for which total return swaps (TRS) may be entered into: up to 100%.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

When Crédit Agricole is a counterparty to DFI, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

A counterparty to derivative financial instruments (the "Counterparty") will have no discretion over the composition of the Sub-fund's investment portfolio, nor over the underlying assets of these derivative instruments.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

N/A. The manager shall not engage in any securities financing transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

AMUNDI MSCI GREECE UCITS ETF

Subfund of the Sicav Multi Units France

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

(f) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price

(g) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied

(h) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;

(i) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.

(j) The Sub-fund's Management Company must be able to enforce this collateral in full and at any time, without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong;

- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

(i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;

(iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;

(iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;

(vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's management company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;

AMUNDI MSCI GREECE UCITS ETF

Subfund of the Sicav Multi Units France

(ii) invested in high-quality government bonds;

(iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the accrued interest at any time;

(iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. a TRS or an EPMT), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com see our website at www.amundi.com.

Risk profile:

The Sub-fund will mainly invest in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equities are more volatile than Fixed Income markets where it is possible to estimate revenues for a certain period of time under the same macroeconomic conditions.

- Capital risk

The capital invested is not guaranteed. Investors therefore may not recover all or part of their initial investment, particularly in the event that the Benchmark Index posts a negative return over the investment period.

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volumes, to execute trades associated with the replication of the Benchmark Index may also adversely affect share subscription, conversion and redemptions.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares or units may deviate from the Sub-fund's indicative net asset value. The liquidity of the Sub-fund's shares on an exchange may be adversely affected by a suspension of or disruption in market operation, such as one of the following events:

AMUNDI MSCI GREECE UCITS ETF

Subfund of the Sicav Multi Units France

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) trading in the market(s) in the Benchmark Index's underlying assets is suspended
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to the risk that a counterparty with which the Sub-fund has entered into a contract or transaction may go bankrupt or default on a settlement or other obligation. The Sub-fund is mainly exposed to counterparty risk resulting from the use of derivative financial instruments (DFI) traded over the counter with any counterparty. In compliance with UCITS regulations, exposure to counterparty risk cannot exceed 10% of the Sub-fund's total assets per counterparty.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Emerging Market Risk

The Sub-fund's exposure to emerging markets carries a greater risk of potential loss than an investment in traditional developed markets. Specifically, market operating and supervision rules for an emerging market may differ from standards applicable in developed markets. In particular, exposure to emerging markets can entail: increased market volatility, lower trading volumes, a risk of economic and/or political instability, an uncertain or unstable tax regime and/or regulatory environment, market closure risks, government restrictions on foreign investments, an interruption or limitation of convertibility or transferability of one of the currencies included in the Benchmark Index.

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved, since there is no asset or financial instrument that enables the continuous and automatic replication of the benchmark index, particularly if one or more of the following risks occurs:

- Risk of using derivative financial instruments

In order to achieve its investment objective, the Sub-fund may enter into over-the-counter derivative financial instruments ("DFI"), such as swaps, in order to achieve the performance of the Benchmark Index. These derivatives involve various risks, such as counterparty risk, hedging disruption, index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in a tax regime that applies to the Sub-fund's underlying assets could affect the tax treatment of the Sub-fund. In such an event, a discrepancy between the Sub-fund's estimated taxation and the taxation that is actually applied to the Sub-fund (and/or to its DFI counterparty) may adversely affect the Sub-fund's net asset value.

AMUNDI MSCI GREECE UCITS ETF

Subfund of the Sicav Multi Units France

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index
- iv) the index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) The Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index.

- Low Benchmark Index diversification risk

Since the index to which investors are exposed represents a given region, sector and strategy it may provide less diversification of assets in comparison with a broader Benchmark Index that is exposed to several regions, sectors or strategies. Exposure to such a less-diversified index may result in higher volatility than in more diversified markets. Nevertheless, diversification rules of the UCITS Directive still apply to the Sub-fund's underlying assets at all times.

- Risk of investing mid-cap companies:

The Sub-fund is exposed to medium-capitalisation companies and more specifically to the equity securities of medium and intermediate size enterprises, which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply than those of large-cap stocks. The Sub-fund's net asset value could behave similarly and therefore fall more sharply than that of a similar investment in large-capitalisation equities.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking exposure to the performance of the Greek "equity" market, whether positive or negative.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation.

AMUNDI MSCI GREECE UCITS ETF Subfund of the Sicav Multi Units France

To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

“U.S. Persons” (as defined below - see “COMMERCIAL INFORMATION”) are not allowed to invest in this Sub-fund.

Subfund life on the year under review

On 11 October 2023, the fund changed its name from Lyxor MSCI Greece UCITS ETF to Amundi MSCI Greece UCITS ETF.

AMUNDI MSCI GREECE UCITS ETF

Subfund of the Sicav Multi Units France

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi MSCI Greece UCITS ETF is an ETF (exchange traded fund) compliant with the UCITS Directive. Its objective is to replicate the MSCI Greece IMI + Coca-Cola 20-35 Net Total Return index. This index aims to represent the performance of large, mid and small caps on the Greek market, which cover around 99% of the Greek equity universe. This index also includes Coca-Cola HBC CDI. The weighting of the index's largest share is limited to 35%. The other shares comprising the indices are limited to 20%. The index methodology is available at www.msci.com.

From October 2022 to October 2023, the subfund performance is 37.18%. That of the benchmark of 38.60% with a tracking error of 0.04%.

The performance achieved over the period does not prejudice the future results of the subfund.

Main movements in the portfolio during the year

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

Number of custodians	-
1 Denomination	-

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

AMUNDI MSCI GREECE UCITS ETF

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

AMUNDI MSCI GREECE UCITS ETF

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

AMUNDI MSCI GREECE UCITS ETF Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Units and shares in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.

The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated.

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI MSCI GREECE UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes etc.) and any account activity charge that may be charged, in general by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Asset management fees and administrative fees that are external to the Management Company (auditor, depositary, fund distribution and legal fees) ⁽¹⁾	Net asset value	0.45% annual
Maximum indirect expenses (management expenses and fees)	Net asset value	N/A
Incentive fee	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A

⁽¹⁾ Includes all fees and expenses except for transaction expenses, incentive fees and fees associated with investment in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Indication of accounting changes subject to special information to shareholders

- Changes made: None.
- Changes to occur: None.

Details and justification of changes in valuation and implementation procedures

None.

Details of the type of errors that have been corrected during the period

None.

Details of the rights and conditions attached to each share category

The Management Company reserves the right to accumulate and/or distribute all or part of distributable income in one or more annual distributions.

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Classification:

Global equities.

The Sub-fund is continuously at least 60% exposed to at least one foreign equity market or to the equity markets of two or more countries, which may include the French market.

The Sub-fund is a UCITS ETF type index tracker.

Calculation and allocation of distributable amounts:

For the Acc (EUR) and Acc (USD) share classes: All distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to replicate the performance, whether positive or negative, of the MSCI India Net Total Return Index (the "Benchmark Index"), denominated in US dollars (USD), while minimising the tracking error between the Sub-fund's performance and that of its Benchmark Index.

The expected ex-post tracking error under normal market conditions is 0.01%.

Benchmark index:

The Benchmark Index is a "net dividends reinvested" index, which means that the Benchmark Index's performance includes the dividends paid by its underlying shares.

The Benchmark Index is an equity index weighted by market capitalisation and adjusted for free-float. It is calculated and published by the international index provider MSCI Inc.

The Benchmark Index is composed exclusively of mid-cap and large-cap Indian equity securities and features the basic characteristics of MSCI indices, which include free-float adjustment of the market capitalisation of the Benchmark Index constituents and sector classification in accordance with the Global Industry Classification Standard (GICS).

The Benchmark Index seeks to represent 85% of the free-float adjusted market capitalisation of each major industry group in the Indian market.

By targeting 85% representation for each industry group, the Benchmark Index accounts for 85% of the total market capitalisation of the Indian market, while also representing its economic diversity.

The MSCI methodology and calculation method assume a variable number of companies in the Benchmark Index.

A full description of the Benchmark Index and its construction methodology and information on the composition and respective weightings of the Benchmark Index components are available on the Internet at www.msci.com.

The performance tracked is that of the Benchmark Index's closing price.

Benchmark Index composition and revision

The Benchmark Index is revised quarterly.

The exact composition of the Benchmark Index and MSCI's rules for rebalancing the index are available on the Internet at www.msci.com www.msci.com

The frequency with which the Benchmark Index is rebalanced does not affect the cost of implementing the Investment Strategy.

Benchmark Index publication

The value of the Benchmark Index and the list of its constituents are available on MSCI's website at www.msci.com.

The Benchmark Index is calculated daily at the official closing price of the exchanges where the index constituents are listed. The Benchmark Index is calculated in real time every stock exchange trading day.

The Benchmark Index is available through Reuters and Bloomberg.

The closing price of the Benchmark Index is available on MSCI's website at www.msci.com.

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

The administrator of the Benchmark Index is MSCI Limited.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the administrator of the Benchmark Index, has until 31 December 2023 to apply to the competent authority for the necessary certification or registration.

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used that specifies the measures to be implemented if an index is substantially modified or is no longer provided.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange the value of the Sub-fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for the value of the securities that underlie the Benchmark Index.

The securities in the Sub-fund's portfolio may include those that make up the Benchmark Index, as well as other global equities across all economic sectors and listed on all exchanges including small-cap exchanges.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralised.

Information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio and the value of the swap contract concluded by the Sub-fund, is available on the page dedicated to the Sub-fund on Amundi's website at www.amundi.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20% of the Sub-fund's assets may be exposed to equities issued by the same entity. This 20% limit may be increased to 35% for a given issuing entity when this is shown to be justified by exceptional market conditions and in particular when certain securities are largely dominant and/or in the event of strong volatility that affects a financial instrument or securities linked to an economic sector represented in the Benchmark Index, particularly in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the Benchmark Index's financial instruments.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

In accordance with regulatory ratios, the Sub-fund may invest in global equities in all economic sectors and listed on any exchange, including small-cap exchanges. The aforementioned equities will be selected on the basis of the following:

eligibility criteria and in particular:

- their inclusion in a major stock exchange index or in the Benchmark Index
- liquidity (must exceed a minimum daily trading volume and market capitalisation)
- credit rating of the country where the issuer has its registered office (must have a least a minimum S&P or equivalent rating) diversification criteria, and in particular with respect to:
- the issuer (application of investment ratios to assets that qualify for UCITS, pursuant to Art. R214-21 of the French monetary and financial code)
- geographic
- sector

Investors may find more information on the above eligibility and diversification criteria, and in particular the list of eligible indices, on Amundi's website at www.amundi.com

Investment in undertakings for collective investment in transferrable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the Sub-fund's net assets.

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

The fund manager will not invest in the shares or units of alternative investment funds (AIF) or other investment funds that were formed under a foreign law. The Sub-fund may invest in the units or shares of UCITS managed by the Management Company or by a company that is related to the Management Company.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other instruments within the regulatory limits.

3. Off-balance sheet assets (derivatives)

The Sub-fund will use derivative instruments and in particular OTC index-linked swaps that swap the value of the Sub-fund's assets (or the value of any other financial instrument or asset the Sub-fund may hold) for the value of the Benchmark Index (as described in sub-section 1 of this section).

- Maximum proportion of assets under management for which total return swaps (TRS) may be entered into: 100%.
- Expected proportion of assets under management for which total return swaps (TRS) may be entered into: up to 100%.

To optimise the Sub-fund's management and achieve its investment objective, the fund manager reserves the right to use other financial instruments in compliance with regulations, such as derivative instruments other than index-linked swaps.

When Crédit Agricole is a counterparty to DFI, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

Counterparties to derivative financial instruments will have no discretion over the composition of the Sub-fund's investment portfolio, nor over the underlying assets of these derivative instruments, in accordance with regulatory limits and requirements.

4. Securities with embedded derivatives

N/A.

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow cash to a maximum of 10% of its net asset value, mainly in order to optimise its cash management.

7. Securities financing transactions

N/A. The Sub-fund shall not engage in any securities financing transactions.

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with these swaps. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depositary. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) All collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price
- (b) This collateral must be valued at the mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount is applied
- (c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance;
- (d) The collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.
- (e) The Sub-fund's Management Company must be able to enforce this collateral in full and at any time, without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong;

such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets. Subject to the above conditions, the Sub-fund may take collateral in the following forms:

- (i) Cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- (iv) The shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity;
- (vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's management company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset;
- The collateral's maturity (if applicable);
- The credit rating of the collateral issuer (if applicable).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged

At the manager's discretion, cash collateral may either be:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund is able to withdraw the total amount of its cash collateral and the accrued interest at any time;

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

(iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. a TRS or an EPMT), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating
- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Emerging Market Risk

The Sub-fund's exposure to emerging markets carries a greater risk of potential loss than an investment in traditional developed markets. Specifically, market operating and supervision rules for an emerging market may differ from standards applicable in developed markets. In particular, exposure to emerging markets can entail: increased market volatility, lower trading volumes, a risk of economic and/or political instability, an uncertain or unstable tax regime and/or regulatory environment, market closure risks, government restrictions on foreign investments, an interruption or limitation of convertibility or transferability of one of the currencies included in the Benchmark Index.

- Counterparty risk

The Sub-fund is exposed to the risk that a counterparty with which the Sub-fund has entered into a contract or transaction may go bankrupt or default on a settlement or other obligation. The Sub-fund is in particular exposed to counterparty risk resulting from the use of derivative financial instruments (DFI) traded over the counter with any counterparty. In compliance with UCITS regulations, exposure to counterparty risk, cannot exceed 10% of the Sub-fund's total assets per counterparty.

- Capital risk

The capital invested is not guaranteed. Investors therefore may not recover all or part of their initial investment, particularly in the event that the Benchmark Index posts a negative return over the investment period.

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to wide bid/offer spreads. An inability, due to low trading volume, to execute the trades required to replicate the Benchmark Index may also adversely affect the subscription, conversion or redemption of shares or units.

- Low Benchmark Index diversification risk

The Benchmark Index to which investors are exposed applies to a specific region, sector or strategy, which may provide a smaller diversification of assets when compared to a broader index exposed to several regions, sectors or strategies. Exposure to such a less-diversified index may result in higher volatility than more diversified markets. Nevertheless, diversification rules of the UCITS Directive still apply to the Sub-fund's underlying assets at all times.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) trading in the market(s) in the Benchmark Index's underlying assets is suspended
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Risk that the investment objective is only partially achieved

There is no guarantee that the investment objective will be achieved, as no asset or financial instrument can ensure that the Benchmark Index will be automatically and continuously replicated, particularly in the event of one or more of the following risks:

- Risk of using derivative financial instruments

In order to secure the Benchmark Index returns and achieve its investment objective, the Sub-fund can enter into transactions involving over-the-counter derivative financial instruments (DFI), such as swaps. These derivatives involve various risks, such as counterparty risk, hedging disruption, index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These DFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Index disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect a DFI and may require an adjustment of the DFI transaction or even its premature termination, which could adversely affect the Sub-fund's net asset value.

- Collateral management risks

Operational risk

The Sub-fund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in EU Regulation No. 2015/2365.

Operational risk is the risk of a direct or indirect loss resulting from various factors (e.g. human error, fraud, malice, IT system failure and/or an external event), which could adversely affect the Sub-fund and/or investors. The Management Company implements various controls and procedures to mitigate operational risk.

Legal risk

The Sub-fund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction, as indicated in EU Regulation No. 2015/2365.

- Risk of a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in a tax regime that applies to the Sub-fund's underlying assets could affect the tax treatment of the Sub-fund.

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

In such an event, a discrepancy between the Sub-fund's estimated taxation and the taxation that is actually applied to the Sub-fund (and/or to its DFI counterparty) may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index
- iv) the index provider makes a material change in the Benchmark Index calculation formula or method (other than a minor modification such as an adjustment to the Benchmark Index's underlying components or their respective weightings) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) The Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

- Corporate action risk

A planned corporate action that has an impact on one of the Benchmark Index's underlying equities may be unexpectedly modified or terminated and thus have a quite different impact from that initially expected on the basis of the official announcement. Since the Sub-fund's valuation of this corporate action is based on this initial announcement, an unexpected change could adversely affect the Sub-fund's net asset value. The Sub-fund's performance may also deviate from that of the Benchmark Index if the Sub-fund's treatment of the corporate action differs from the treatment specified in the Benchmark Index's methodology.

- Currency risk associated with the Benchmark index

The Sub-fund is exposed to currency risk since the securities that underlie the Benchmark Index may be denominated in a different currency than the Benchmark Index, or be derivatives of securities that are denominated in a different currency than the Benchmark Index. Changes in exchange rates may therefore adversely impact the Sub-fund's Benchmark Index.

- Currency risk of the Acc-(EUR) share class

This share class is exposed to currency risk since it is denominated in a different currency than the Benchmark Index. Changes in exchange rates may therefore cause the net asset value of this share class to decrease, even if the value of the Benchmark Index increases.

- Sustainability risks

The Fund does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the Fund's investments. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

Investors in this Sub-fund are seeking exposure to the "Indian equity" market.

AMUNDI MSCI INDIA II UCITS ETF Subfund of the Sicav Multi Units France

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") are not allowed to invest in this Sub-fund.

Subfund life on the year under review

On 11 october 2023, the fund changed its name from Lyxor MSCI India UCITS ETF to Amundi MSCI India II UCITS ETF.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi MSCI India II UCITS ETF is an ETF compliant with the UCITS Directive that seeks to replicate the performance of the MSCI Emerging Markets India Net TR (USD) benchmark index. Shares in the MSCI Emerging Markets India Net TR (USD) Index are selected to represent 85% of the country's market capitalisation, while reflecting the economic diversity of this market. The index methodology is available at www.msci.com.

From October 2022 to October 2023, the performance of the Acc-(EUR) share / FR0010361683 is -3.92%. That of the benchmark of -2.61% with a tracking error of 0.02%.

From October 2022 to October 2023, the performance of the Acc-(USD) share / FR0010375766 is 2.75%. That of the benchmark of 4.16% with a tracking error of 0.02%.

The performance achieved over the period does not prejudice the future results of the subfund.

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

Securities lending and repurchase agreements:

For securities lending transactions and repurchase agreements, Amundi Asset Management has entrusted Amundi Intermédiation, acting on behalf of the UCITS, with the following responsibilities: selecting counterparties, ordering the implementation of market agreements, monitoring counterparty risk, performing qualitative and quantitative monitoring of collateralisation (dispersion checks, ratings, liquid assets), repurchase agreements and securities lending. Income generated from these transactions is paid into the UCITS. Costs generated by these transactions are incurred by the UCITS. Charges by Amundi Intermédiation must not exceed 50% of the income generated by these transactions.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

French Energy Transition for Green Growth Act (Article 173 of Act No. 2015-992) and Fund Compliance with criteria relating to environmental, social, and governance quality (ESG) objectives

AMUNDI's ESG analysis generates ESG ratings for over 13,000 companies worldwide on a scale ranging from A (for issuers with the best ESG practices) to G (for the worst practices). This analysis is complemented by a policy of active commitment among issuers, in particular on major challenges regarding sustainable development within their sectors.

AMUNDI uses a targeted exclusion policy based on global agreements such as the United Nations Global Compact and other conventions on human rights, the International Labour Organisation, and the environment. In all of its active management strategies, AMUNDI therefore excludes companies that are non-compliant with its ESG principles or international agreements and their transposition into national law:

- anti-personnel mines,
- cluster bombs,
- chemical weapons,
- biological weapons,
- depleted uranium weapons.

These issuers receive a "G" rating on the AMUNDI scale.

In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal

Since coal is the largest single contributor to climate change caused by human activity, in 2016 AMUNDI implemented a sectoral policy specific to thermal coal, resulting in the exclusion of certain companies and issuers. AMUNDI has progressively reinforced this coal exclusion policy every year since 2016. These commitments stem from the Crédit Agricole Group's climate strategy. In line with the UN's Sustainable Development Goals and the 2015 Paris Agreement, this strategy is based on the research and recommendations of a Scientific Committee, which takes into account the IEA's (International Energy Agency) energy scenarios, Climate Analytics, and Science-Based Targets. In 2020, as part of the update of its policy on the thermal coal sector, AMUNDI extended its coal mining exclusion policy, which now includes all companies developing or planning to develop new thermal coal mining capacity.

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity along the entire value chain (producers, extractors, power plants, transport infrastructure),
- Companies generating more than 25% of their income from thermal coal mining,
- Companies extracting 100 MT or more of thermal coal with no intention of reducing these quantities,

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

- All companies whose income from thermal coal mining and coal-fired power generation is over 50% of their total income before analysis, all coal-fired power generation and coal mining companies with a threshold between 25% and 50% and a deteriorated energy transition score.

Application in passive management:

• Passive ESG funds

- All ETF and ESG index funds (with the exception of highly-concentrated indices)
- implement AMUNDI's policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

- In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.
- Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.
- Consequently, AMUNDI's index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.
- At the same time, in the context of securities excluded from the "thermal coal policy" in AMUNDI's active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a "nay" vote on the management of the companies in question.

Tobacco

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to "E", on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates:

- Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).
- Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy.

For further information on how environmental (in particular climate change-related), social, and corporate governance (ESG) issues are taken into account in its investment policy, AMUNDI provides investors with the "Application of Article 173" report, available at <https://legroupe.amundi.com> (Legal Documentation section).

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 (“SFDR”), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives’ principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management’s headcount increased due to the integration of Lyxor’s employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some ‘carried interest’ was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the ‘executives and senior managers’ of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the ‘senior investment managers’ whose professional activities have a material impact on Amundi Asset Management’s risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its ‘Identified Staff’, that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee’s functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)
- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed

AMUNDI MSCI INDIA II UCITS ETF Subfund of the Sicav Multi Units France

on the performance of a representative basket of AIFs and/or UCITS funds.

- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Shares and units in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.

The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM Reuters fixing rates published on the day the Sub-fund's net asset value is calculated.

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees cover all the costs invoiced directly to the Sub-fund, except for transaction expenses, which include intermediary fees and expenses (brokerage, stock market taxes etc.) and any account activity charge that may be charged, in general by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below) :

- Incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives;
- account activity charges, which are charged to the Sub-fund.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Asset management fees and administrative fees that are external to the Management Company (auditor, depositary, fund distribution and legal fees) including tax ⁽¹⁾	Net asset value	0.85% annual
Incentive fee	Net asset value	N/A
Account activity charge	Charged on each transaction	N/A

⁽¹⁾ Includes all fees and expenses except for transaction expenses, incentive fees and fees associated with investment in UCITS.

- - - - -

Unit tax credit transferred to share holders (individuals) ⁽¹⁾

- - - - -

Unit capitalisation*

-1.93 4.00 2.48 1.57 1.33

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

Annual
reporting

31/10/2023

Fund reporting Article 29 of the Energy-Climate Act (LEC - Loi énergie-climat)

This document lists the required information from funds exceeding €500 M in net assets under management pursuant to Article 29 of the LEC

The implementing decree relating to Article 29 of the Energy-Climate Act of 8 November 2019, which clarifies and strengthens the non-financial transparency measures for market participants, was published in the Official Journal of 27 May 2021.
As of the reporting date for the period, the portfolio's strategy did not take into consideration either the alignment of its assets under management with the long-term goals of Articles 2 and 4 of the Paris Agreement, which aim to hold the increase in the global average temperature to below 2°C above pre-industrial levels, or the alignment of its assets with the long-term goals relating to biodiversity in the Convention on Biological Diversity (CBD) adopted on 5 June 1992. However, Amundi has included plans for continuous improvement in this report, including the identification of opportunities for improvement and information relating to corrective actions and strategic and operational changes it has made.

Subfund of the Sicav Multi Units France

Amundi MSCI India II UCITS ETF EUR Acc

Annual
reporting
31/10/2023

This document meets the requirements of Article 29 of the Energy-Climate Act of 8 November 2019 (called the "LEC") on non-financial reporting for market participants.

The document presents:

1. The portfolio's climate strategy, if it has a strategy of alignment with the temperature objectives of the Paris Agreement;
2. The portfolio's strategy on alignment with long-term biodiversity objectives;
3. The process for taking into account environmental, social, and governance criteria in risk management.

More information is available in Amundi's responsible investment policy and in our climate report, available on our website: <https://legroupe.amundi.com/documentation-esg>.

1. The strategy on alignment with the international goals on limiting global warming, provided for in the Paris Agreement

The portfolio's strategy does not consider the alignment of its assets with the long-term goals of Articles 2 and 4 of the Paris Agreement on limiting global warming.

Exclusion policies

In passive management, the fiduciary duty is to replicate an index as faithfully as possible. The manager therefore has limited flexibility, and is required to meet its contractual objectives to achieve passive exposure that is in line with its benchmark index. Amundi's funds/ETFs replicating the standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions. However, for securities that are excluded due to the application of the thermal coal policy to Amundi's active investment universe, but that could be present in passive non-ESG funds, Amundi has strengthened its engagement process and its voting actions where they could result in a vote against the discharge of the Board or of Management, or the re-election of the Chairman and certain Directors.

Continuous improvement plan

Given the broad range of asset classes and world regions where Amundi invests on behalf of third parties, some of which do not yet have the analytical framework or data required to develop a strategy for alignment with the Paris Agreement, the implementation of such alignment strategies throughout all management activities remains a challenge.

In addition, Amundi is a third party asset management company. Its management activity is governed by contracts between Amundi and its clients, under which the investment objectives of the management portfolios delegated to Amundi by its clients are determined, particularly in terms of expected risk level, yield expectations, and requirements around diversification and sustainability preferences. We are required to obtain the agreement of our legal representatives before consenting to requirements linked to a trajectory of alignment with the Paris Agreement. That is why Amundi has launched a strategy of active dialogue with its clients, offering them the possibility of investing in products whose strategy incorporates characteristics for alignment with the goals of the Paris Agreement and counselling them in their decision-making.

1. Amundi's Climate Strategy in support of the carbon neutrality goals of the Paris Agreement

- Since the end of 2020, the Board of Directors of the management company's parent company has incorporated social and environmental issues in its governance and analysed progress on a quarterly basis via key indicators linked to climate and ESG;
- The Board members held a one-day dedicated strategic seminar to define the strategy to be deployed and the practical directions for implementing the new "Ambition 2025" societal plan;
- A monthly ESG and Climate committee meeting presided by the CEO defines and validates the ESG and climate policy applicable to investments and steers the major strategic projects;
- Commitments made in the framework of the Net Zero Asset Managers initiative, of which Amundi has been a signatory since July 2021:
 - A target of 18% of Amundi's assets under management Net Zero aligned by 2025 (i.e., this 18% will only be made up of funds and mandates with objectives compatible with a Net-Zero trajectory by 2050);
 - -30% carbon intensity (tCO₂e/€M of revenue) by 2025 and -60% by 2030 for all portfolios subject to the NZIF (Net Zero Investment Framework - Set of actions, metrics, and methodologies to help investors maximise their contribution to achieving the Net Zero alignment objective);
- By 2025, Amundi will also offer open transition funds towards the Net Zero 2050 objective across all major asset classes;
- Achieve €20 billion in assets on "impact" funds (including funds making a positive contribution to the objectives of the Paris Agreement);
- Strengthening of the targeted sectoral exclusion rules;
- Amundi invests significant resources to enable better consideration of climate issues in portfolio management:
 - Significant increase in the size of its ESG team;
 - Launch of ALTO* Sustainability, a technological analytics solution and decision-making support for investors on environmental and societal issues.

2. Actions taken and strategic and operational changes made in order to sustainably integrate climate into the strategy

- Progressive inclusion of ESG objectives in the performance evaluations of salespersons and portfolio managers to make this dimension part of their variable remuneration. A climate and ESG training programme developed with Amundi experts for all staff so that each employee receives the appropriate training;
- Implementation of a rating methodology using a "best-in-class" approach to evaluate issuers' transition efforts in relation to a Net Zero scenario. The stated objective of the portfolios concerned will be to have a better environmental transition profile than that of their reference investment universe by 2025;
- The transition to a low-carbon economy is one of the strategic directions of our engagement policy, and Amundi has committed to expanding the number of companies with which we engage in ongoing dialogue on the climate to 1,000 additional companies, with the objective that these companies will define credible strategies for reducing their carbon footprint, have them brought to a vote at their General Meetings, and have part of their managers' remuneration linked to these strategies.

Amundi will continue to develop its climate strategy in the years to come, using scientific reference scenarios and closely linked with the objectives of its clients, both by investing in solutions to accelerate the transition and by gradually aligning its portfolios with the 2050 neutrality objective.

2. The strategy on alignment with the long-term goals relating to biodiversity

The fund's strategy does not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992.

Continuous improvement plan

The subject of biodiversity, which is intrinsically linked to that of climate change, occupies an increasingly important place in our societies, not just in research, but also economic considerations. Biodiversity is one of the themes of Amundi's ESG analysis. It is reflected in the methodological grid via the "Biodiversity & Pollution" criterion, and thus plays a part in the construction of issuer ESG ratings. Amundi is also particularly attentive to controversies linked to biodiversity. In 2022, Amundi continued its initiatives for a better integration of biodiversity into its internal analysis and investment processes. In addition, the subject was among the ESG Research team's top priority analysis themes in 2022, which resulted in the production of a ten-part series of research papers entitled "Biodiversity: it's time to protect our only home". The first two parts were published in 2022, while the following will be put on-line in 2023.

The subject of biodiversity is a particular focal point of the dialogue with the companies in which Amundi is invested. Following the campaigns on plastics launched in 2019, on the circular economy in 2020, and on biodiversity in 2021, Amundi strengthened its active dialogue in 2022 with companies, continuing its engagement campaign dedicated to biodiversity strategy in eight different sectors. Due to the limitations related to the data available on the subject, the first objective of this commitment is to establish an inventory of the consideration of biodiversity by the companies, then ask them to assess the responsiveness of their activities to this loss of biodiversity, and to manage the impact of their activities and products on biodiversity. In 2022, 119 companies engaged on their biodiversity strategy. As part of this engagement, Amundi provides recommendations, with the aim of better integrating these issues into their strategy. Amundi has more broadly strengthened shareholder dialogue around the preservation of natural capital. In 2022, 344 companies (a company may engage on several topics) were engaged through different programmes (including the promotion of a circular economy and better plastics management, the prevention of deforestation, and various subjects linked to such topics as the reduction of pollution or the sustainable management of water resources).

In 2022, Amundi continued its commitment to market initiatives and working groups dedicated to biodiversity. In 2021, Amundi joined the collective "Finance for Biodiversity Pledge" investor initiative and committed to collaboration and knowledge-sharing, active dialogue with companies, and to evaluating its impacts, setting objectives around biodiversity, and communicating them publicly by 2024. In addition, Amundi will produce an annual report on these portfolios' contribution to biodiversity objectives. In 2022, following the publication of its preliminary Nature-related Risk & Opportunity Management and Disclosure Framework, the TNFD (Taskforce on Nature-related Financial Disclosures) launched pilot groups to test the feasibility of this framework on various aspects. Amundi joined a pilot group led by UNEP-FI and CDC Biodiversité, intended to test the TNFD approach, and particularly the application of the GBS (Global Biodiversity Score) to financial institutions.

Amundi also aims to develop its investment policy in terms of biodiversity around several major themes, such as water or plastics, in order to strengthen engagement where necessary and exclude companies that are harmful to natural capital. An update to this policy will be published by 2024.

In terms of data, data analysis relating to the biodiversity indicator is now in place and biodiversity impact metrics are proposed for certain funds. At this stage, Amundi is not consolidating this data at asset manager or group level.

3. The process for taking into account environmental, social, and governance criteria in risk management

3.1 Identification of environmental, social, and governance risks

Amundi's Responsible Investment department constitutes a hub of expertise dedicated to the identification and assessment of risks and opportunities relating to ESG issues. This department provides the various group entities with ESG assessments of listed issuers along with climate data, used by portfolio managers.

The table below presents an overview of the various ESG risks identified by Amundi, the approach used to make assessments, and the data providers used to assess and manage the identified risks. These risks can result in several types of consequences, including but not limited to reputational risks, depreciation of asset values, litigation, or even portfolio under-performance.

Risk identified	Description	Amundi's assessment	Data provider used
Environmental Risks	Result from the way in which a company controls its direct and indirect environmental impact: energy consumption, reduction of greenhouse gas emissions, fight against resource depletion and protection of biodiversity, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Environment" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Social risks	Result from the way an issuer manages its human capital and its stakeholders (other than shareholders). This covers several notions: the social aspect linked to an issuer's human capital (accident prevention, employee training, respect for employee rights, etc.), those linked to human rights in general, and responsibilities towards stakeholders.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Social" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Governance risks	Result from the way the issuer manages its development or organises its operations and management bodies, which can potentially lead to unfair commercial practices, fraud or corruption, non-diverse management bodies, excessive remuneration, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Governance" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Risks of controversy	Possibility that an issuer or investment may be involved in controversies, litigation, or events that could harm its reputation or ability to make a profit. May include questioned business practices, violations of law, financial scandals, environmental or social problems, or other difficulties that could compromise the issuer's credibility or sustainability.	Proprietary methodology combining a quantitative filter to define the universe, then a qualitative evaluation of that universe. The latter evaluation produces a rating on a scale of 0 to 5 (5 being the worst rating). Controversies with a rating of 3 or more are considered serious.	RepRisk, MSCI, Sustainalytics

3.2 Risk and opportunity assessment

The environmental, social, and governance risks and opportunities presented in the table above are assessed via a proprietary ESG rating assigned to issuers by Amundi's Responsible Investment teams.

Rating of private issuers

Our ESG analysts are specialised by sector of activity. To identify the ESG criteria representing the risks and opportunities within each sector of activity, they are tasked with:

- Monitoring emerging and established ESG topics and trends in each sector;
- Assessing sustainability risks and opportunities as well as negative exposure to sustainability factors;
- Selecting the relevant indicators (KPI) and assigning to them the associated weightings.

Our ESG analysis methodology is based on a set of 38 criteria used to establish the ESG profile of each sector of activity. Among these 38 criteria, 17 are generic, and can be applied to companies in any sector of activity, and 21 are specific to the challenges of certain sectors.

The weighting of ESG criteria is a key element of ESG analysis. The weight attribution model is based on a materiality assessment, which can influence the value of a company through 4 vectors: regulation, reputation, the company's development model, and operational efficiency.

To weight ESG criteria, the ESG analyst considers the probability and extent of each vector's impact on the following 2 materialities (detailed in the table at the end of the section):

- 1st materiality: Ability of the company to anticipate and manage sustainable development risks and opportunities inherent to its industry and its particular circumstances;
- 2nd materiality: The management team's ability to manage the potential negative impact of their activities on sustainability factors.

This analytical approach via both materialities lets analysts prioritise risks by taking into account the particularities and events specific to each sector.

The weightings integrate the intensity of the risk incurred as well as its emerging or established nature and its time horizon. Thus, issues that are considered the most material receive the highest weight.

ESG ratings are calculated based on ESG criteria and weightings determined by analysts, who combine them with the ESG scores obtained from our external data providers. At each step of the calculation process, the scores are normalised as Z-scores. Z-scores are used to compare results to a "normal" population (difference of the issuer's score with the average score for the sector, in numbers of standard deviations). To distinguish best practices from worst practices at the sector level, each issuer is evaluated with a score that is scaled around the average for its sector. At the end of the process, each company is assigned an ESG score (between -3 and +3) and its equivalent on a scale from A to G, where A is the best score and G the worst. Grade D represents average scores (from -0.5 to +0.5); each letter corresponds to a standard deviation.

Each issuer receives only one ESG score, regardless of the chosen reference universe. The ESG score is therefore "sector-neutral", meaning that no sector is given more or less preference than another.

For the implementation of the SFDR regulation, Amundi has established a map of the environmental and social factors it deems material for different sectors. This map is presented in Amundi Asset Management's LEC 29 report.

		Regulation	Reputation	Development model	Operational effectiveness
1 st materiality	Ability of the company to anticipate and manage the risks and opportunities inherent to its industry and its particular circumstances in the area of sustainable development	✓	✓	✓	✓
2 nd materiality	The management team's ability to manage the potential negative impact of their activities on sustainability factors	✓		✓	

AMUNDI MSCI INDIA II UCITS ETF

Subfund of the Sicav Multi Units France

Amundi MSCI India II UCITS ETF EUR Acc

Annual reporting
31/10/2023

Rating of sovereign issuers

The objective of the sovereign rating methodology is to assess the ESG performance of sovereign issuers. E, S, and G factors can all have an impact on a governments' ability to repay its debts in the medium to long term. They can also reflect how the country tackles the major sustainability issues that affect global stability. Amundi's methodology is based on around fifty ESG indicators deemed relevant by Amundi's ESG research to address sustainability risks and sustainability factors. Each indicator can combine multiple data points from different sources, including open international databases (such as those of the World Bank Group, the United Nations, etc.) or proprietary databases. Amundi has defined the weightings of each ESG indicator contributing to the final ESG scores and their various components (E, S, and G). The indicators come from an independent service provider. The indicators have been grouped into 8 categories to ensure greater clarity, with each category falling into one of the E, S or G pillars. Like the company ESG rating scale, the ESG score of issuers results in an ESG rating ranging from A to G.

3.3 Sustainability risk management

Amundi's approach to sustainability risk management is based on the following three pillars:

- An exclusion policy, which addresses the most important ESG risks;
- The integration of ESG ratings into investment processes, which provides a holistic understanding of the company and helps identify its particular ESG risks;
- A voting and engagement policy that helps trigger positive changes in the way companies manage their impact on essential topics related to sustainability, thus mitigating the associated risks.

3.4 Integration of sustainability risks into the entity's regular risk management framework

Sustainability risks are integrated into Amundi's internal control and risk management system.

For sustainability risk management, responsibilities are divided between:

- The first level of control, carried out directly by the management teams, and
- The second level, carried out by the risk management teams, which can constantly check the compliance of funds with their ESG objectives and constraints.

The Risk Department participates in Amundi's "Responsible Investment" governance system. They monitor compliance with regulatory requirements and risk management related to such topics.

The ESG rules are monitored by risk management teams in the same way as other management requirements. They are based on the same tools and procedures and cover our exclusion policies as well as eligibility criteria and fund-specific rules. These rules are automatically monitored using a proprietary monitoring tool. This tool can trigger:

- Pre-negotiation alerts or blocking alerts, for instance on exclusion policies;
- Post-trade alerts: managers are notified of possible overruns so as to be able to quickly rectify them.

The table below details the internal control system implemented by Amundi.

Diagram of the internal control system

3.5 Frequency of risk management framework review

Our ESG analysts review the selection and weightings of Amundi's 38 criteria every 18 months for each sector of activity. This allows them to check whether the criteria and their weightings remain relevant. We continuously seek to improve our analysis by evaluating their materiality.

Amundi's Responsible Investment Policy is updated on a yearly basis.

3.6 Continuous improvement plan

Amundi strives to improve the assessment and integration of sustainability risks, including climate and environmental risks, in the management of its funds. The aim is to go from a qualitative approach to a more quantitative approach by identifying the key indicators that represent the most relevant impacts for portfolios, taking into account climate, environmental, social, and governance factors.

The project is structured in three stages:

- Define a list of sustainability risk indicators, focusing on material risks and their financial impacts on issuers;
- Gradually implement monitoring for these indicators, evaluating their results and defining limits on the basis of these indicators;
- Improve the ESG risk management framework, including the integration of indicators into risk strategies and investment restrictions.

Our current work consists of identifying the main sustainability risk factors and mapping them to issuers' financial variables. This work will end with the validation and approval of the new framework in line with Amundi's ESG governance.

The preliminary indicators considered include metrics to quantify the potential impacts of sustainability risks in terms of financial materiality and the use of "proxies" for reputational risk. The next step, planned for the second half of the current year, is to monitor the defined sustainability risk indicators and assess their impact on the managed portfolios. This monitoring will be used in discussions with the portfolio management teams and included in the various risk management reports. The final stage will focus on improving the ESG risk management framework and possibly setting internal risk alerts or limits based on the indicators. This stage is expected to be completed during the first half of 2025.

It should be noted that deadlines, indicators and implementation objectives may be subject to change throughout the project.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Subfund features

Classification:

Global equities.

The Lyxor MSCI New Energy (DR) UCITS ETF sub-fund is continuously at least 60% exposed to a foreign equity market or to the equity markets of two or more countries, which may include the French market.

The Sub-fund is a UCITS ETF index-tracker.

Calculation and allocation of distributable amounts:

Dist share class: If a distribution is decided, the Management Company reserves the right to distribute distributable amounts one or more times a year and/or accumulate all or part of these amounts.

Acc share class: All distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is to replicate the performance, whether positive or negative, of the MSCI ACWI IMI New Energy ESG Filtered Net Total Return (the "Benchmark Index"), denominated in US dollars (USD), while minimising the tracking error between its performance and that of its Benchmark Index.

The Benchmark Index aims to represent the performance of stocks whose activities are related to the development of new products and services in the sectors of alternative energy sources, energy efficiency, batteries and smart grid technologies.

It excludes companies that lag behind the theme universe in environmental, social and governance ("ESG") terms, including on the basis of an ESG rating. The Sub-fund promotes environmental and/or social characteristics, pursuant to Article 8 of the SFDR Regulation.

The expected maximum ex-post tracking error under normal market conditions is 2.00%.

Benchmark index:

The Benchmark Index is the MSCI ACWI IMI New Energy ESG Filtered Net Total Return index (with net dividends reinvested, which means that its performance includes the net dividends paid by its underlying equities).

The Benchmark Index is an equity index that is calculated and published by the international index provider MSCI. It has the following characteristics:

a) An investment universe identical to that of the MSCI ACWI Investable Market Index (IMI) (the "Parent Index"), including large, mid and small cap stocks from of developed and emerging countries.

b) The Benchmark selects ("the Selected Universe") companies from the Parent Index whose analysis reveals a high exposure to activities such as :

- alternative sources of energy
- energy efficiency
- batteries
- smart grid technologies.

This analysis is based on a "combined relevance score" (as defined by MSCI) which takes into account the revenues related to these activities. Sectoral filters apply.

c) The following is then applied to the companies of the Selected Universe:

- An ESG filter that excludes:

o Companies involved in controversial business activities, such as controversial weapons, conventional weapons, nuclear weapons, civilian firearms, tobacco, thermal coal, oil sands or which do not comply with the UN Global Compact.

o Companies involved in serious ESG controversies, as determined by MSCI's ESG Controversies Score.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

o Companies without an MSCI ESG rating or controversy score are not included in the list.

- A geographical filter

d) A "Filtered Universe" is then determined:

- By following a best-in-class approach that focuses on the companies with the highest ESG ratings within their industry and excludes those in the bottom quartile, as determined by MSCI's industry-specific ESG rating.

The MSCI ESG rating methodology uses a rules-based methodology designed to measure a company's resilience to the long-term material ESG risks of its sector. It is based on extra-financial ESG criteria that take into account a company's core business and the issues that are specific to its sector and which may generate represent risks or opportunities. The key ESG challenges are weighted in accordance with the impact and time horizon of the risk or opportunity. ESG criteria include, for example, water stress, carbon emissions, human resources management and corporate ethics.

The Sub-Fund thus observes an ESG approach that is underpinned by a strong commitment to eliminate at least 20% of the issuers from the initial investment universe. The limits of the ESG approach are indicated in the Risk Profile section below.

The ESG data covers over 90% of the eligible equities of the Benchmark Index. Non ESG rated companies are excluded from the index selection process;

- By applying a liquidity and size filter

e) The index weights the companies in the Screened Universe using the MSCI Adaptive Capped Index methodology and then adjusts these weightings on the basis of the maximum exposure criteria.

f) Iterative downweighting ensures that the carbon intensity and weighted average board independence score of the index are lower and higher respectively than those of the MSCI ACWI IMI New Energy Select Index.

The environmental and/or social characteristics promoted by the Sub-fund are implemented by the MSCI ESG rating methodology, as described above.

For more information on the general and specific environmental, social and governance (ESG) objectives of the Fund, please refer to the Fund's Transparency Code available at <https://www.amundi.com/>.

The Benchmark Index is a net total return index. A net total return index measures the performance of its components after including any dividends or other distributions and deducting any withholding tax.

The method used to construct the Benchmark Index and the rules that govern its re-weighting and updating can be found on MSCI's website at www.msci.com

Benchmark index composition and revision

The Benchmark Index is reviewed semi-annually in May and November, when the Parent Index is reviewed. Modifications are made the end of May and November. The Eligible Universe and the Selected Universe are updated during the semi-annual Benchmark Index reviews.

The exact composition of the Benchmark Index and MSCI's rules for its revision are available on MSCI's website at www.msci.com.

The frequency of the aforementioned rebalancing does not affect the cost of implementing the Investment Strategy.

Benchmark index publication

The Benchmark Index is calculated daily using the official closing prices of the exchanges where the underlying stocks are listed. The Benchmark Index is also calculated in real time every stock exchange trading day.

The Benchmark Index's closing price is available at <https://www.msci.com/>.

Pursuant to the provisions of European Parliament and Council Regulation (EU) 2016/1011, of 8 June 2016, the administrator of the Benchmark Index, is registered in ESMA's register of benchmark index administrators.

Pursuant to European Parliament and Council Regulation 2016/1011 of 8 June 2016, the Management Company has a procedure for monitoring benchmark indices.

Investment strategy:

1. Strategy employed

The Sub-fund will comply with the investment rules of the European Directive 2009/65/EC of 13 July 2009.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

To achieve the highest possible correlation with the performance of the Benchmark Index, the Sub-fund will be exposed to the latter via a direct replication method that requires the Sub-fund to invest mainly in the securities that underlie the Benchmark Index and/or in financial instruments that are representative of all or some of the securities that underlie the Benchmark Index.

The sub-fund may also invest in derivative financial instruments (DFI). The DFI in which the Sub-fund may invest include, but are not limited to, futures on indices, futures on all or some of the Benchmark Index components, and hedging swaps, mainly to minimise the Sub-fund's tracking error.

In accordance with its investment strategy, the Sub-fund may hold cash (e.g. when using futures). In this case, the fund manager may, in the best interest of unit-holders, deposit this cash with a credit institution or invest it in balance-sheet assets and/or off-balance-sheet assets, as described below.

In order to optimise the direct replication method that is used to track the Benchmark Index, the Sub-fund, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Index constituents in order to reduce the costs of investing directly in all of the various Benchmark Index constituents. This sampling technique could cause the Sub-fund to invest in a selection of representative Benchmark Index securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Index, and even to invest in securities that are not constituents of the Benchmark Index.

The Sub-fund also reserves the right to invest in debt instruments or over-the-counter derivatives including swaps, futures and CFD, mainly for the purpose of gaining exposure to securities traded in emerging markets that are constituents of the Benchmark index and which could be particularly expensive and/or complex to invest in.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Index or sampling to limit replication costs) and on its consequences in terms of the assets in the Sub-fund's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Sub-fund's portfolio is available on the page dedicated to the Sub-fund accessible on Amundi's website at www.amundi.com.

The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

The Sub-fund may invest up to 20% of its assets in the shares in the same issuing entity. This 20% limit may be increased to 35% for a given issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark Index. This could be the case, for example, in the event of a public offering that substantially affects a Benchmark Index security or in the event of a significant drop in the liquidity of one or more of the financial instruments that underlie the Benchmark Index.

The manager currently intends to invest mainly in the assets indicated below.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund will mainly be invested in the following types of securities:

• Equities

The Sub-fund will be invested mainly in the equities that make up the Benchmark Index.

• The shares or units of other CIU or investment funds

The Sub-fund may invest up to 10% of its assets in the shares or units of the following collective investment undertakings (CIU) or investment funds:

- French and foreign UCITS that comply with Directive 2009/65/EC. The Sub-fund may invest in shares or units of UCITS that are managed by the Management Company or by a company that is related to the Management Company.

When the Sub-fund receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

3. Off-balance sheet assets (derivatives)

The Sub-fund may invest in the following DFI:

• Eligible markets:

- regulated
- organised

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

- over-the-counter

• Risks which the Sub-fund may seek to hedge or gain exposure to:

- equity

• Purpose (all transactions must be consistent with the investment objective)

- hedging

- exposure

• Types of instruments used:

- futures : on equities and indices

- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- overall hedging of the portfolio, or of certain risks, securities, etc. – up to 100% of net assets

- to achieve synthetic exposure to assets or risks (up to 100% of assets)

Counterparties to OTC derivatives traded by the Sub-fund will be selected in accordance with the Management Company's best-execution policies (including the "Order-execution by asset type" table referred to in the Appendix). The aforementioned policy is available at www.amundi.com.

- Maximum proportion of assets under management for which total return swaps (TRS) may be entered into: up to 10%.

- Expected proportion of assets under management for which total return swaps (TRS) may be entered into: up to 0%.

In the event of the default of a counterparty to a total return swap (TRS) or of the premature termination of a TRS, the Sub-fund may be exposed to the performance of its balance sheet assets until it enters into a new TRS with another counterparty. In such an event, the Sub-fund could suffer losses and/or may have to bear fees/expenses that could adversely affect its capacity to achieve its investment objective. When the Sub-fund enters into two or more TRS with one or more counterparties, the aforementioned risks apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

Counterparties to derivative financial instruments will have no discretion over the composition of the Sub-fund's investment portfolio, nor over the underlying assets of these derivative instruments, in accordance with regulatory limits and requirements.

When Crédit Agricole is a counterparty to DFI, conflict-of-interests situations may arise between the Management Company and Crédit Agricole. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

4. Securities with embedded derivatives

• Risks that the fund manager seeks to mitigate:

- Equity

• Purpose (all transactions must be consistent with the investment objective)

- Exposure

- Other type (specify)

• Types of instruments used: EMTN.

• Strategies involving the use of embedded derivatives to achieve the investment objective: derivatives will be used on an ancillary basis (up to a maximum of 10% of net assets).

5. Cash deposits

In order to optimise its cash management, the Sub-fund may deposit funds representing up to 20% of its net assets with lending institutions that belong to the same group as the depositary.

6. Cash borrowing

The Sub-fund may temporarily borrow up to 10% of its net assets.

7. Securities financing transactions

The manager shall not engage in any securities financing transactions.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

8. Collateral

Whenever the investment strategy exposes the Sub-fund to counterparty risk, and in particular when the Sub-fund uses over-the-counter swaps, the Sub-fund may accept eligible securities as collateral to reduce the counterparty risk associated with swaps and securities financing transactions. The portfolio of collateral received may be adjusted daily to ensure that its value is at least sufficient to cover the Sub-fund's counterparty risk in most cases. The purpose of this adjustment is to neutralise the Sub-fund's counterparty risk.

The Sub-fund will have full title to all collateral received, which will be deposited in the Sub-fund's account with the depository. This collateral will therefore be included in the Sub-fund's assets. If a counterparty defaults on an obligation, the Sub-fund may dispose of the assets received from the counterparty in respect of the secured transaction to pay off the counterparty's debt to the Sub-fund.

All collateral the Sub-fund receives for this purpose must comply with the applicable laws and regulations, with respect in particular to the liquidity and valuation of the collateral, the credit-worthiness of securities issuers, risk exposure correlation and the risks of collateral management and enforceability. The collateral received must in particular meet the following criteria.

(a) collateral must be of high quality, be highly liquid and tradable on a regulated market or on a multilateral trading facility, with transparent pricing to enable the collateral to be rapidly sold near its estimated price.

(b) collateral must be valued at its mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount or "haircut" is applied.

(c) collateral must be issued by an entity that is independent from the counterparty and must not be highly correlated with the counterparty's financial performance.

(d) the collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer not exceeding 20% of the Sub-fund's net asset value.

(e) the Sub-fund's Management Company must be able to enforce this collateral in full and at any time, without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Sub-fund may accept a basket of securities collateral that increases its exposure to a single issuer to more than 20% of its net asset value provided that:

- such securities collateral is issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and;
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-fund's assets.

Subject to the above conditions, the Sub-fund may take collateral in the following forms:

(i) cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments;

(ii) bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;

(iii) shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;

(iv) shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below

(v) bonds issued or guaranteed by first-class issuers offering sufficient liquidity;

(vi) equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Sub-fund's management company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- the nature of the collateral asset
- the maturity of the asset provided as collateral (if relevant)

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

- the credit rating of the issuer of the asset provided as collateral (if relevant).

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged. At the manager's discretion, cash collateral may either be:

(i) deposited with an authorised institution

(ii) invested in high-quality government bonds

(iii) used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the fund may recover the full cash amount at any time with accrued interest

(iv) invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the acceptance of non-cash collateral.

If the counterparty defaults on a securities financing transaction (i.e. an over-the-counter swap of securities and/or a repurchase agreement), the Sub-fund may be forced to sell the collateral received for this transaction under unfavourable market conditions and suffer a loss. If the Sub-fund is allowed to reinvest the cash collateral it has received, a loss could be suffered if the value of the securities purchased using this cash collateral declines.

Counterparty selection policy:

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when the intermediary may enter into financial contracts (DFI and securities financing transactions) on the Sub-fund's behalf. Counterparties to financial contracts and financial intermediaries are rigorously selected among well-known and reputable counterparties and intermediaries on the basis of various criteria.

The Risk Management function analyses the credit quality of these counterparties and also takes the following types of criteria into consideration when determining the initial universe of authorised counterparties:

- qualitative criteria, based on Standard and Poors' LT credit rating

- quantitative criteria, based on the LT CDS spread (e.g. absolute criteria, volatility and benchmark group comparison)

All subsequent counterparties must be validated by the Counterparties Committee, which is composed of the AM and Middle-Office managers, the CICO and the head of the Risk Management function. When a counterparty no longer meets any given criterion, the Counterparty Committee will meet to decide on the measures to be taken.

In addition to the above, the Management Company observes its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, see our website at www.amundi.com.

Risk profile:

The Sub-fund will invest mainly in the financial instruments selected by the Management Company. These instruments are subject to market trends and contingencies. Investors in the Sub-fund will mainly be exposed to the following risks:

- Equity risk

The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure or in the economic conditions of the market in which the security is traded. Equity markets are more volatile than fixed income markets, where under stable macroeconomic conditions income over a given period of time can be estimated with reasonable accuracy.

- Low Benchmark Index diversification risk

The Benchmark Index to which investors are exposed covers a specific region, sector or investment strategy and therefore does not enable assets to be as broadly diversified as those of an index that is exposed to several regions, sectors or investment strategies. Exposure to such a less-diversified Benchmark Index may result in higher volatility than more diversified markets. Nevertheless, diversification rules of the UCITS Directive still apply to the Sub-fund's underlying assets at all times.

- Capital risk

The capital invested is not guaranteed. Investors therefore may not recover all or part of their initial investment, particularly in the event that the Benchmark Index posts a negative return over the investment period.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

- Liquidity risk (primary market)

The Sub-fund's liquidity and/or value may be adversely affected if, when the Sub-fund or a counterparty to a derivative financial instrument (DFI) is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. An inability, due to low trading volumes, to execute trades associated with the replication of the Benchmark Index may also adversely affect share subscription, conversion and redemptions.

- Benchmark Index tracking risk

Replicating the performance of the Benchmark Index by investing in all of its constituents may prove to be extremely difficult or costly. The Sub-fund manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Index, in proportions that differ from those of the Benchmark Index or even investing in securities that are not index constituents or in derivatives. The use of such optimisation techniques may increase the ex post tracking error and cause the Sub-fund to perform differently from the Benchmark Index.

- Liquidity risk (secondary market)

The price of the Sub-fund's listed shares may deviate from the Sub-fund's indicative net asset value. The liquidity of shares or units traded on a given exchange may be adversely affected by a suspension in trading for various reasons, for example:

- i) the calculation of the Benchmark Index is suspended or stopped
- ii) trading in the market(s) in the Benchmark Index's underlying assets is suspended
- iii) an exchange cannot obtain or calculate the Sub-fund's indicative net asset value
- iv) a market maker fails to comply with an exchange's rules
- v) an exchange's IT, electronic or other system fails.

- Counterparty risk

The Sub-fund is exposed to counterparty risk in particular, as a result of its use of over-the-counter derivative contracts (hereafter "OTC Derivative Contracts") and/or efficient portfolio management techniques (hereafter "EPMT"). It is exposed to the risk that a counterparty with which it has entered into an OTC Derivative Contract and/or an EPMT may go bankrupt or default on a settlement or other obligation. If a counterparty defaults, the OTC Derivative Contract and/or the EPMT may be terminated and the Sub-fund may, if necessary, enter into another OTC Derivative and/or EPMT with another counterparty, at the market conditions at the time of this default. If this risk materialises it could result in a loss and have an impact on the Sub-fund's ability to achieve its investment objective. In compliance with the regulations that apply to UCITS funds, exposure to counterparty risk may not exceed 10% of the Sub-fund's total assets per counterparty.

- Risk of using efficient portfolio management techniques

If the Sub-fund's counterparty to an efficient portfolio management technique (hereinafter "EPMT") defaults, this may expose the Sub-fund to the risk that the value of the collateral it has received is less than the value of the assets the Sub-fund transferred to the counterparty to the EPMT. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as collateral and/or (iv) the illiquidity of the market in which the collateral received is listed. Investors should note that EPMT transactions may be entered into with same group as that of the Management Company/entities of the same group as that of the Management Company.

- Collateral management risks

- Operational Risk

The Sub-fund could be exposed to the operational risk of processing deficiencies or errors on the part of the various parties involved in managing the collateral for securities financing transactions and/or total return swaps (TRS). This risk arises only when managing collateral for securities financing transactions and/or total return swaps (TRS), as indicated in EU Regulation 2015/2365.

- Legal risk

The Sub-fund may be exposed to a legal risk arising from securities financing transactions as indicated in EU Regulation No. 2015/2365.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

- Risk that the investment objective may not be fully achieved

There is no guarantee that the investment objective will be achieved, as no asset or financial instrument can ensure that the Benchmark Index will be automatically and continuously replicated, particularly in the event of one or more of the following risks.

- Risk of using derivative financial instruments

The Sub-fund may invest in Derivative Financial Instruments ("DFI") traded over the counter or listed on an exchange, and in particular in futures and/or swaps for hedging purposes. Ces IFT peuvent impliquer une série de risques, vus au niveau du contrat et notamment (mais non exclusivement) les suivants : These DFI involve various risks, such as counterparty risk, hedging disruption risk, Benchmark Index disruption risk, taxation risk, regulatory risk and liquidity risk. These risks may affect a derivative instrument directly and may result in a modification or even the premature termination of the DFI contract, which could adversely affect the Sub-fund's net asset value.

The risk of investing in DFI may be relatively high. Since the amount of money required to establish a position in a DFI may much less than the exposure thus obtained, each transaction involves "leverage". A relatively small market movement may therefore have a very large potential positive or negative impact on the Sub-fund.

The market value of DFI is highly volatile and they may therefore be subject to large variations.

The Sub-fund may invest in DFI traded over the counter. DFI traded over the counter may also be less liquid than transactions on an organised market, where the volumes traded are generally quite higher, and the prices of these DFI may therefore be more volatile.

- Risk due to a change in the tax regime

A change in the tax regime of a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed could adversely affect the taxation of investors. In such an event, the Sub-fund manager shall not be liable to any investor with respect to any payment that may have to be made to a competent tax authority.

- Risk of a change in the taxation of the Sub-fund's underlying assets

A change in the taxation of the Sub-fund's underlying assets could adversely affect the taxation of the Sub-fund. In such an event a discrepancy between the estimated taxation and the actual taxation of the Sub-fund and/or of the Sub-fund's DFI counterparty may adversely affect the Sub-fund's net asset value.

- Regulatory risk affecting the Sub-fund

In the event of a change in the regulatory regime in a jurisdiction where the Sub-fund is domiciled, authorised for sale or listed, the subscription, conversion or redemption of shares or units may be adversely affected.

- Regulatory risk affecting the Sub-fund's underlying assets

In the event of a change in the regulations that govern the Sub-fund's underlying assets, the Sub-fund's net asset value and the subscription, conversion or redemption of shares or units may be adversely affected.

- Benchmark Index disruption risk

If an event adversely affects the Benchmark Index, the Sub-fund manager may be required, as provided for by law, to suspend the subscription and redemption of the Sub-fund's shares or units. The calculation of the Sub-fund's net asset value could also be adversely affected.

If the disruption of the Benchmark Index persists, the Sub-fund manager will determine an appropriate course of action, which could decrease the Sub-fund's net asset value.

A 'Benchmark Index event' includes but is not limited to the following situations:

- i) the Benchmark Index is deemed to be inaccurate or does not reflect actual market developments
- ii) the Benchmark Index is permanently cancelled by the index provider
- iii) the index provider is unable to indicate the level or value of the Benchmark Index
- iv) the index provider makes a material change in the formula for or the method of calculating the Benchmark Index (other than a minor modification such as an adjustment to the Benchmark Index's underlying assets or the respective weightings among its components) which the Sub-fund cannot effectively replicate at a reasonable cost
- v) a Benchmark Index component becomes illiquid because it is no longer traded on a regulated market or because its trading over-the-counter (e.g. bonds) is disrupted
- vi) the Benchmark Index components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark Index's performance.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

- Corporate action risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark Index, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-fund based its valuation of the corporate action (and/or on which the Sub-fund's counterparty to a derivative financial instrument based its valuation of the corporate action) can adversely affect the Sub-fund's net asset value, particularly if the Sub-fund's treatment of the corporate event differs from that of the Benchmark Index methodology.

- Currency risk associated with the Benchmark index

The Sub-fund is exposed to currency risk, as the underlying securities composing the Benchmark Index may be denominated in a currency different from the Benchmark Index, or be derived from securities denominated in a currency different to that of the Benchmark Index. Changes in exchange rates may therefore adversely affect the Sub-fund's Benchmark Index.

- Sustainability risks

In managing sustainability risks, the Management Company relies on the Benchmark Index administrator's methodology, by which sustainability risks are integrated through the investment in the shares of companies that obtain a significant share of their revenue from activities that are considered to promote the energy transition. This integration of these risks has a direct impact on the Benchmark Index's investment universe. However, there is no absolute assurance that all sustainability risks will be eliminated, and the occurrence of such risks may have an adverse impact on the value of the Benchmark Index's underlying assets. More information on the Benchmark Index methodology can be found on the website at <https://www.euronext.com> and <https://www.sgindex.com>. Additional information may be found in the "Sustainability Disclosures" section of the Prospectus.

- ESG methodology risk

Benchmark indices that include ESG criteria generally use a best-in-class approach or a rating-improvement approach relative to the initial investment universe. Given this initial investment universe, it is possible that issuers with low ESG ratings may be included in the index, while still meeting the criteria of the index methodology approaches.

- Controversy market risk

Companies which have met a benchmark index's selection criteria may suddenly and unexpectedly be affected by a serious controversy that could adversely affect the Sub-fund's net asset value. When these securities are components of the benchmark index, they are likely to be held until the next index rebalancing.

- ESG score calculation risk

Most ESG scores and ratings are defined in relative terms, by comparing an issuer to a peer group. Therefore, issuers perceived by the market as having poor ESG practices could potentially be rated well if the other issuers in its peer group have even poorer ESG practices. ESG scores and ratings are calculated by an external provider which uses its own data, models and estimates and various sources of information that may vary with each issuer. The analysis is largely based on qualitative and quantitative data that are provided by the companies themselves and is therefore dependent on the quality of this information. Although constantly improving, corporate ESG reporting is still patchy and heterogeneous. The reliability, quality and accuracy of ESG data can sometimes limit the scope of ESG-based investment. Risk of the sustainable nature of the investment

The Benchmark Index methodology does not guarantee the sustainable nature of the investment made, but simply selects the equities of companies that obtain over 40% of their revenue in one or more of the three business sectors mentioned in the "Benchmark Index" section below, and which comprise activities that are considered to promote the ecological transition.

Eligible investors and typical investor profile:

The Sub-fund is available to all investors.

Investors subscribing to this sub-fund are seeking exposure to the equity markets of companies carrying out, for their main source of revenue, activities concerning the renewable energy sector.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF Subfund of the Sicav Multi Units France

All investors are therefore asked to consider their specific situation with the help of their usual investment advisor. The recommended minimum investment period is at least five years.

“U.S. Persons” (as defined below - see “COMMERCIAL INFORMATION”) are not allowed to invest in this Fund.

Subfund life on the year under review

On 11 October 2023, the fund changed its name from Lyxor MSCI New Energy ESG Filtered (DR) UCITS ETF to Amundi MSCI New Energy ESG Screened UCITS ETF.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The Amundi MSCI New Energy ESG Screened UCITS ETF is an ETF (exchange traded fund) compliant with the UCITS Directive. Its objective is to replicate, both upwards and downwards, the MSCI ACWI IMI New Energy ESG Filtered benchmark index. This index aims to represent the performance of companies operating in the alternative energy, energy efficiency, batteries and smart grid sectors. The index is designed on a best-in-class ESG approach; companies in the lowest quartile by sector-adjusted ESG rating are excluded from the investment universe. Companies exposed to controversial activities and/or major ESG controversies and those that do not comply with the commitments of the United Nations Global Compact are also excluded from the index. For more information on the index, please visit www.msci.com.

From October 2022 to October 2023, the performance of the Acc share / FR0014002CG3 is -35.21%. That of the benchmark of -34.87% with a tracking error of 0.11%.

From October 2022 to October 2023, the performance of the Dist share / FR0010524777 is -35.21%. That of the benchmark of -34.87% with a tracking error of 0.11%.

The performance achieved over the period does not prejudice the future results of the subfund.

Main movements in the portfolio during the year

4. Data on the reuse of guarantees (collateral)

"The regulations governing UCITS forbid the reuse of collateral securities. Cash collateral received is:

- reinvested in short-term money market funds (as defined by ESMA in its 'Guidelines on ETFs and other UCITS issues');
- placed on deposit;
- reinvested in high-quality long-term government bonds;
- reinvested in high-quality short-term government bonds; or
- used for the purpose of reverse repurchase transactions.

The maximum proportion of received collateral that may be reused is 0% in the case of securities and 100% in the case of cash.

The effective usage amounts to 0% for collateral securities and 100% for cash collateral.

5. Retention of Guarantees Received by the Mutual Fund in Securities Financing Transactions and Global Return Swaps

6. Retention of Guarantees Provided by the Mutual Fund in SFT Transactions and Global Return Swaps

Amundi Asset Management undertakes to do business with a limited number of depositaries, selected to ensure the adequate custody of securities received and cash.

7. Revenue and cost data for each type of securities financing transaction and total return swap

The CIU will be able to use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the Monetary and Financial Code and in particular reverse transactions in financial securities.

- Maximum proportion of assets under management eligible for SFTs: up to 25% of the assets of the CIU.
- Expected share of assets under management eligible for SFTs: 10% of the assets of the CIU.

The total revenues generated by efficient portfolio management techniques shall be shared between the relevant compartment and the security lending agent. Each compartment receives 65% while the agent receives 35% of this income. All direct and indirect operational costs related to these operations are borne by the agent and have therefore been excluded from the financial management and administrative costs external to the management company.

Specific information

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor's Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details
- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

French Energy Transition for Green Growth Act (Article 173 of Act No. 2015-992) and Fund Compliance with criteria relating to environmental, social, and governance quality (ESG) objectives

AMUNDI's ESG analysis generates ESG ratings for over 13,000 companies worldwide on a scale ranging from A (for issuers with the best ESG practices) to G (for the worst practices). This analysis is complemented by a policy of active commitment among issuers, in particular on major challenges regarding sustainable development within their sectors.

AMUNDI uses a targeted exclusion policy based on global agreements such as the United Nations Global Compact and other conventions on human rights, the International Labour Organisation, and the environment. In all of its active management strategies, AMUNDI therefore excludes companies that are non-compliant with its ESG principles or international agreements and their transposition into national law:

- anti-personnel mines,
- cluster bombs,
- chemical weapons,
- biological weapons,
- depleted uranium weapons.

These issuers receive a "G" rating on the AMUNDI scale.

In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal

Since coal is the largest single contributor to climate change caused by human activity, in 2016 AMUNDI implemented a sectoral policy specific to thermal coal, resulting in the exclusion of certain companies and issuers. AMUNDI has progressively reinforced this coal exclusion policy every year since 2016. These commitments stem from the Crédit Agricole Group's climate strategy. In line with the UN's Sustainable Development Goals and the 2015 Paris Agreement, this strategy is based on the research and recommendations of a Scientific Committee, which takes into account the IEA's (International Energy Agency) energy scenarios, Climate Analytics, and Science-Based Targets. In 2020, as part of the update of its policy on the thermal coal sector, AMUNDI extended its coal mining exclusion policy, which now includes all companies developing or planning to develop new thermal coal mining capacity.

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity along the entire value chain (producers, extractors, power plants, transport infrastructure),
- Companies generating more than 25% of their income from thermal coal mining,
- Companies extracting 100 MT or more of thermal coal with no intention of reducing these quantities,

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

- All companies whose income from thermal coal mining and coal-fired power generation is over 50% of their total income before analysis, all coal-fired power generation and coal mining companies with a threshold between 25% and 50% and a deteriorated energy transition score.

Application in passive management:

• Passive ESG funds

- All ETF and ESG index funds (with the exception of highly-concentrated indices)
- implement AMUNDI's policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

- In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.
- Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.
- Consequently, AMUNDI's index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.
- At the same time, in the context of securities excluded from the "thermal coal policy" in AMUNDI's active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a "nay" vote on the management of the companies in question.

Tobacco

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to "E", on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates:

- Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).
- Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy.

For further information on how environmental (in particular climate change-related), social, and corporate governance (ESG) issues are taken into account in its investment policy, AMUNDI provides investors with the "Application of Article 173" report, available at <https://legroupe.amundi.com> (Legal Documentation section).

SFDR Regulations and Taxonomy:

Article 8 – Passive Portfolio Management – under the Taxonomy

In accordance with its investment objective and policy, the Fund promotes environmental characteristics within the meaning of Article 6 of the Taxonomy Regulation. It may partially invest in economic activities that contribute to one or more of the environmental objective(s) set out in Article 9 of the Taxonomy Regulation. However, the Fund does not currently make any commitment in terms of a minimum proportion.

The Taxonomy aims to identify economic activities considered to be environmentally sustainable. The Taxonomy identifies such activities according to their contribution to six major environmental objectives: (i) climate change mitigation, (ii) climate change adaptation, (iii) the sustainable use and protection of water and marine resources, (iv) the transition to a circular economy (waste, prevention and recycling) (v) pollution prevention and control, and (vi) the protection and restoration of biodiversity and ecosystems.

In order to determine an investment's degree of environmental sustainability, an economic activity is considered to be environmentally sustainable where it contributes substantially to one or more of the environmental objectives set out in the Taxonomy Regulation, where it does no significant harm (the "DNSH" principle) to one or more of these environmental objectives, where it is carried out in accordance with the minimum safeguards provided for in Article 18 of the Taxonomy Regulation and where it complies with the technical screening criteria established by the European Commission in accordance with the Taxonomy Regulation.

In accordance with the current iteration of the Taxonomy Regulation, the Asset Manager ensures that investments do no significant harm to any other environmental objective by implementing exclusion policies covering issuers with controversial environmental and/or social and/or governance practices.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Notwithstanding the preceding, the Do No Significant Harm principle is applied solely to the underlying investments incorporating European Union criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Although the Fund may already hold investments in economic activities qualified as sustainable activities without currently undertaking to observe a minimum proportion, the Asset Manager is making every effort to disclose the proportion invested in sustainable activities as soon as it is reasonably possible after the entry into force of the Regulatory Technical Standards governing the content and presentation of disclosures in accordance with Articles 8(4), 9(6) and 11(5) of the Disclosure Regulation, as amended by the Taxonomy Regulation.

This effort will be gradually and continuously rolled out, incorporating the requirements of the Taxonomy Regulation in the investment process as soon as it is reasonably possible. As a result, a minimum degree of portfolio alignment with sustainable activities will be disclosed to investors at that time.

Until then, the degree of alignment with sustainable activities will not be disclosed to investors.

Once the data are fully available and the appropriate calculation methodologies finalised, the description of the proportion of underlying investments in sustainable activities will be disclosed to investors. This information, along with information on the proportion of enabling and transitional activities, will be indicated in a subsequent version of the prospectus.

Article 8 – Passive Portfolio Management – under Article 11 of SFDR

The subfund is classified in accordance with Article 8 of Regulation EU 2019/2088 known as “Disclosure” and aims to promote environmental and/or social characteristics.

During the period, the Manager of Sicav continuously promoted the environmental and/or social characteristics:

- Via the methodology of the replicated index which aims to obtain an ESG score higher than the ESG score of its parent index or of the universe eligible for the index, and.
- In its investment process, excluding all issuers mentioned in the exclusion list of the Responsible Investment Policy (unless specifically specified in the subfund Prospectus).

The compartment promotes the environmental characteristics as described in Article 8 of the Disclosure Regulation and may, during the relevant period, have partially invested in economic activities that have contributed to an environmental objective within the meaning of the Disclosure Regulation.

As required by Article 50 (2 SFDR) of COMMISSION DELEGATED REGULATION, information on the environmental or social characteristics promoted by the financial product is available in an annex to this report.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 (“SFDR”), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives’ principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management’s headcount increased due to the integration of Lyxor’s employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some ‘carried interest’ was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the ‘executives and senior managers’ of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the ‘senior investment managers’ whose professional activities have a material impact on Amundi Asset Management’s risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its ‘Identified Staff’, that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee’s functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)
- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF Subfund of the Sicav Multi Units France

on the performance of a representative basket of AIFs and/or UCITS funds.

- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities. Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value.

If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Shares and units in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM Reuters fixing rates published on the day the Sub-fund's net asset value is calculated.

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees include expenses that are charged directly to the Sub-fund, except for transaction expenses. Transaction expenses include intermediary fees (brokerage, stock market taxes etc.) and any transaction fee that may be charged, and usually by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- Incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives
- Account activity fees charged to the Sub-fund.
- the direct and indirect operational fees/expenses of securities financing transactions.

For more information on the fees and expenses that are charged to the Sub-fund, see the Statistics section of the Key Investor Information Document (KIID).

Fees charged to the Sub-fund	Base	Maximum charge
Investment management and administrative fees that are external to the Management Company, including tax ⁽¹⁾	Net assets	0.60% annual
Maximum indirect expenses (management expenses and fees)	Net assets	N/A
Account activity charge	Charged on each transaction	N/A
Incentive fee	Net assets	N/A
The direct and indirect operational fees/expenses of securities financing transactions.	The income from these transactions	20% for the Management Company 15% for the Agent

⁽¹⁾ Includes all fees and expenses except for transaction expenses, incentive fees and fees associated with investment in UCITS.

Accounting currency

The Sub-fund's accounts are kept in euros.

Net asset value	11.8635	18.3113	22.3313	-	-
Unit distribution net capital gains and losses (including interim payments)	-	-	-	-	-
Unit distribution (including interim payments)*	-	-	-	-	-
Unit tax credit transferred to share holders (individuals) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	-1.55	2.39	0.17	-	-

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

SFDR information

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:
Amundi MSCI New Energy ESG Screened UCITS ETF

Legal entity identifier:
9695008U08BHDZBWYFV02

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
Yes	No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment objective of the product is to replicate an Index, which is based on a Parent Index. Each time the index was rebalanced, at least 20% of the components of the parent index were removed on the basis of sustainability criteria, including an Environmental, Social and Governance (“ESG”) rating.

The environmental and/or social characteristics promoted by this financial product are satisfied through monitoring the total net return of the MSCI ACWI IMI New Energy ESG index. The investment objective of the product is to replicate an index, which is based on a parent index. Each time the index was rebalanced, at least 20% of the components of the parent index were removed according to sustainability criteria based, among others, on Environmental, Social, and Governance (“ESG”) ratings.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

As at the end of the period, the MSCI ESG score for the index is: **7,074**.

● **...and compared to previous periods?**

During the previous period, the benchmark index's MSCI ESG rating was 6.953

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments were to invest in companies that met two criteria:

1. follow best environmental and social practices; and
2. do not generate products and services that harm the environment and society.

The definition of a “best performing” company is based on a proprietary Amundi ESG methodology that is designed to measure a company's ESG performance. To be considered as the “best performing”, a company must obtain the best rating among the top three (A, B or C, on a rating scale ranging from A to G) in its sector on at least one important environmental or social factor. Significant environmental and social factors are identified at the sector level. The identification of these factors is based on Amundi's ESG analysis framework, which combines extra-financial data with a qualitative analysis of the related sector and sustainability themes. Factors identified as material have a contribution of more than 10% to the overall ESG score. For the energy sector, for example, material factors are: emissions and energy, biodiversity and pollution, health and safety, local communities and human rights.

In order to contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticides, single-use plastic production) that are not compatible with these criteria.

The sustainable nature of an investment is assessed at the level of the investee company. Concerning external UCIs, the criteria for determining the sustainable investments that these underlying UCIs may hold and their objectives depend on each company's own management approach.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

To ensure that sustainable investments do not cause significant harm, Amundi uses two tests:

- The first “DNSH” (“Do No Significant Harm”) test is based on the monitoring of the mandatory indicators of the Main Negative Impacts in Annex 1, Table 1 of Delegated Regulation (EU) 2022/1288 when reliable data is available (for example, the GHG intensity or greenhouse gas intensity of beneficiary companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. The carbon intensity of beneficiary companies is not within the sector’s last decile). Amundi already considers specific indicators of the Main Negative Impacts in its exclusion policy as part of the Amundi Responsible Investment Policy (e.g. exposure to controversial weapons). These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the principles of the UN Global Compact, coal and tobacco.
- In addition to the specific sustainability factors covered by the first filter, Amundi has defined a second filter that does not consider the mandatory indicators of the Main Negative Impacts above, so as to verify that a company’s overall environmental or social performance is not worse than other companies in its sector, corresponding to an environmental or social score of E or higher according to Amundi’s ESG rating system.

Concerning external UCIs, the consideration of the “do no significant harm” principle and the impact of sustainable investments depends on each underlying UCI manager’s own methodologies.

How were the indicators for adverse impacts on sustainability factors taken into account?

As detailed above, the negative impact indicators were taken into account in the first DNSH filter (Do No Significant Harm):

This is based on the monitoring of the mandatory indicators of the Main Negative Impacts in Appendix 1, Table 1 of Delegated Regulation (EU) 2022/1288 when reliable data is available via the combination of the following indicators and specific thresholds or rules:

- has a CO2 intensity that is not within the last decile of companies in the sector (only applicable to high-intensity sectors), and
- has board diversity that is not within the last decile of companies in its sector, and
- is free from any controversy regarding working conditions and human rights
- is free from any controversy regarding biodiversity and pollution.

Amundi already takes into account the specific Negative Main Impacts in its exclusion policy as part of its Responsible Investment Policy. These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the principles of the United Nations Global Compact, coal and tobacco.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Yes. The OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights have been incorporated into Amundi’s ESG rating methodology. The proprietary ESG rating tool evaluates issuers using data available from data providers. For example, the model includes a dedicated criterion called “Community inclusion and Human rights” that is applied to all sectors in addition to other Human rights criteria, including socially responsible supply chains, working conditions and professional relations. In addition, we monitor controversies at least on a quarterly basis, which includes companies identified for Human rights violations. When controversies arise, analysts assess the situation and apply a score to the controversy (using an exclusive, proprietary rating methodology) and determine the best steps to follow. Controversy scores are updated quarterly to track trends and remediation efforts.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The mandatory indicators of the Negative Main Impacts set out in Appendix 1, Table 1 of Delegated Regulation (EU) 2022/1288 were taken into account by implementing exclusion policies (normative and sectoral) and integrating ESG rating into the investment process, engagement and voting approaches:

- **Exclusion:** Amundi has defined normative exclusion rules, by activity and by sector, covering some of the main sustainability indicators listed in the “Disclosure” Regulation.
- **Engagement:** engagement is an ongoing and targeted process aimed at influencing companies’ activities or behaviour. The objective of the engagement can be divided into two categories: engaging an issuer to improve the way in which it integrates the environmental and social dimension and engaging an issuer to improve its impact on environmental, social and Human rights issues or other sustainability issues that are important to society and the global economy.
- **Voting:** Amundi’s voting policy relies on a holistic analysis of all long-term issues that may influence value creation, including material ESG issues (Amundi’s voting policy can be consulted on its website).
- **Monitoring controversies:** Amundi has developed a controversy monitoring system that relies on three external data providers to systematically monitor controversies and their level of severity. This quantitative approach is then enhanced by an in-depth assessment of each severe controversy conducted by ESG analysts and a periodic review of its developments. This approach applies to all Amundi funds.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **from 01/11/2022 to 31/10/2023**

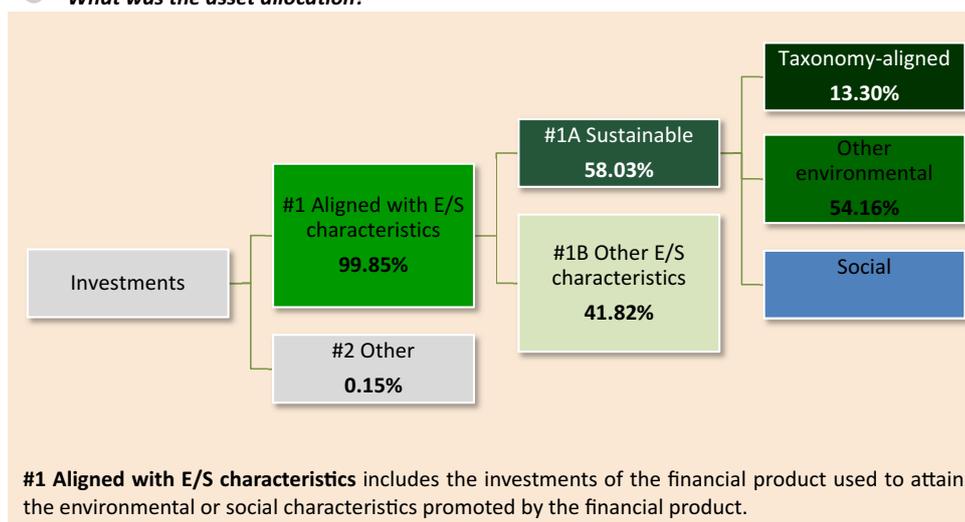

Largest investments	Sector	% Assets	Country
PG & E CORP	Utilities	5.41%	USA
EDISON INTERNATIONAL	Utilities	5.09%	USA
SCHNEIDER ELECT SE	Industry	4.74%	USA
VESTAS WIND SYSTEMS A/S	Industry	3.96%	DNK
FIRST SOLAR INC	Information technologies	3.85%	USA
LG ENERGY SOLUTION	Industry	3.50%	KOR
ALBEMARLE CORP	Materials	3.43%	USA
SAMSUNG SDI CO LTD	Information technologies	3.06%	KOR
ORSTED A/S	Utilities	2.87%	DNK
ENPHASEENERGY INC	Information technologies	2.70%	USA
REDEIA CORP SA	Utilities	2.63%	ESP
CONTEMPORARY AMPEREX TECHN-A NTH-SZSE	Industry	2.58%	CHN
VERBUND AG	Utilities	2.46%	AUT
VONTIER CORP	Information technologies	1.91%	USA
SIEMENS ENERGY AG	Industry	1.86%	DEU

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sectors	% Assets
Utilities	33.52%
Industry	28.62%
Information technologies	20.80%
Materials	16.91%
Forex	-0.00%
Liquid capital	0.15%

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund promotes both environmental and social characteristics. Although the fund does not commit to making Taxonomy-aligned investments, it nevertheless invested 13.30% in Taxonomy-aligned sustainable investments during the period under review. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the aforementioned objectives of the EU taxonomy is measured using data on turnover (or revenue) and/or the use of green bond proceeds.

Neither the fund's auditors nor a third party has verified the percentage alignment of the fund's investments with the EU taxonomy.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

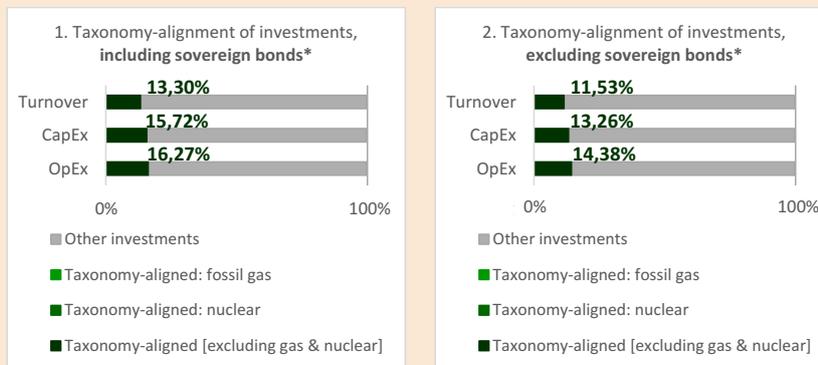

Subfund of the Sicav Multi Units France

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes:
- In fossil gas In nuclear energy
- No

Reliable data on alignment with the EU Taxonomy for fossil gas and nuclear energy was not available during the period.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Using data relating to turnover and/or the use of green bond proceeds as an indicator, 0.00% of the fund's investments were in transitional activities and 9.11% of investments were in enabling activities as at 31/10/2023. Neither the fund's auditors nor a third party has verified the percentage alignment of the fund's investments with the EU taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Alignment with the EU taxonomy was not reported during the previous period because no reliable data was available at the time.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the Taxonomy was **54.16%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR but some of their activities are not aligned with Taxonomy standards, or data is not yet available for them to perform such an assessment.

What was the share of socially sustainable investments?

The product does not commit to a minimum share of socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash and/or other instruments held for liquidity and portfolio risk management purposes were included in category “#2 Other”. For non-rated bonds and equities, minimum environmental and social guarantees are applied by filtering for controversial issues in relation to the principles of the United Nations Global Compact. Moreover, minimum environmental or social guarantees have not been defined.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. The binding elements of the index methodology ensure that environmental and/or social characteristics are met at each rebalancing date. The product strategy is also based on systematic exclusion policies (normative and sectoral) as described in more detail in Amundi's responsible investment policy.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

How did this financial product perform compared to the reference benchmark?

Reference

benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error.

- ***How does the reference benchmark differ from a broad market index?***

The Benchmark Index aims to represent the performance of securities having activities linked to the development of new products and services in the alternative energy source, energy efficiency, battery, and intelligent network technology sectors. It excludes companies that are lagging behind in terms of the environmental, social, and governance (“ESG”) standards of the theme universe, notably based on their ESG rating.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. The product’s sustainability indicators are, consequently, generally aligned with those of the Index.

- ***How did this financial product perform compared with the reference benchmark?***

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. Consequently, the product’s sustainability indicators showed an overall performance in line with that of the Index.

- ***How did this financial product perform compared with the broad market index?***

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. A comparison of the index replicated by the product with its parent index is detailed under “How did the sustainability indicators perform?”.

Energy Climate Act (ECA)

Amundi MSCI New Energy ESG Screened UCITS ETF Acc

Annual
reporting

31/10/2023

Fund reporting Article 29 of the Energy-Climate Act (LEC - Loi énergie-climat)

This document lists the required information from funds exceeding €500 M in net assets under management pursuant to Article 29 of the LEC

The implementing decree relating to Article 29 of the Energy-Climate Act of 8 November 2019, which clarifies and strengthens the non-financial transparency measures for market participants, was published in the Official Journal of 27 May 2021.

As of the reporting date for the period, the portfolio's strategy did not take into consideration either the alignment of its assets under management with the long-term goals of Articles 2 and 4 of the Paris Agreement, which aim to hold the increase in the global average temperature to below 2°C above pre-industrial levels, or the alignment of its assets with the long-term goals relating to biodiversity in the Convention on Biological Diversity (CBD) adopted on 5 June 1992. However, Amundi has included non-financial indicators in its report that will allow it to evaluate the footprint on biodiversity of the assets held, as well as the portfolio's temperature score. The information, indicators, and methodologies described may change with time. While this report was prepared and reviewed with care and attention, Amundi and its data providers disclaim all liability for any errors or omissions that may be contained in this document, and disclaim all liability for losses or harm that may be suffered by a third party or organisation due to the use of the content of this report. Amundi has also included plans for continuous improvement in this report, including the identification of opportunities for improvement and information relating to corrective actions and strategic and operational changes it has made.

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Amundi MSCI New Energy ESG Screened UCITS ETF Acc

Annual
reporting
31/10/2023

This document meets the requirements of Article 29 of the Energy-Climate Act of 8 November 2019 (called the "LEC") on non-financial reporting for market participants.

The document presents:

1. The portfolio's climate strategy, if it has a strategy of alignment with the temperature objectives of the Paris Agreement;
2. The portfolio's strategy on alignment with long-term biodiversity objectives;
3. The process for taking into account environmental, social, and governance criteria in risk management.

More information is available in Amundi's responsible investment policy and in our climate report, available on our website: <https://legroupe.amundi.com/documentation-esg>.

1. The strategy on alignment with the international goals on limiting global warming, provided for in the Paris Agreement

The fund's strategy does not consider the alignment of its assets with the long-term goals of Articles 2 and 4 of the Paris Agreement on limiting global warming.

The fund is labelled "SRI" (Socially Responsible Investment) and publishes an environmental performance indicator

The SRI label was created by the Ministry of the Economy and Finance in 2016 in order to make SRI products more visible to savers in France and Europe. The SRI Label is a single point of reference for both savers and professional investors, and distinguishes investment funds that implement robust socially responsible investment (SRI) methodologies that result in concrete, measurable results.

The fund reports on four performance indicators each month to assess the portfolio's ESG quality, including an environmental performance indicator, in particular in terms of the portfolio's carbon metrics. The fund also undertakes to achieve a better result than that of the benchmark index on 2 of the 4 indicators.

ESG reports are published on a monthly basis for open SRI funds. They compare the portfolio's ESG score to that of its benchmark index or the investment universe, which must achieve a better result than that of its starting benchmark index / universe. This information is supplemented with comments on the ESG performance of the issuers in the portfolio. Amundi also satisfies the European SRI Transparency Code each year. This code is designed and approved by the French Asset Management Association (Association Française de la Gestion Financière - AFG), the French Forum for Responsible Investment (Forum pour l'Investissement Responsable - FIR), and EUROSIF (the European Sustainable Investment Forum).

Non-financial indicators

Where appropriate, Amundi includes non-financial indicators to help evaluate the portfolio's temperature score.

Amundi uses three data providers to calculate the portfolios' temperature scores: Iceberg Data Lab, Trucost, and CDP. Their methodologies are similar, in that they all analyse historical data and/or the carbon reduction targets published by issuers in order to obtain an average temperature score.

However, there are a few appreciable differences between the three methodologies:

- All three providers analyse the issuer's ambition. But Trucost and Iceberg Data Lab include past emissions in their carbon trajectory estimates.
- Iceberg Data Lab is the only provider to pro-actively take issuer credibility into account. They analyse the actions implemented against the issuers' commitments.
- Many issuers have not yet published any carbon emission reduction targets. Accordingly, CDP has chosen to use a default trajectory of 3.2°C for these issuers.
- Trucost has developed a more precise methodology to aggregate the temperatures within a portfolio. Rather than use a weighted average, Trucost considers the carbon budgets of each company compared to a benchmark scenario in order to aggregate them within the portfolio.

Exclusion policies

Thermal coal exclusion policy

The burning of coal is the largest single contributor to climate change attributable to human activity. In 2016, Amundi established a sectoral policy dedicated to thermal coal, triggering the exclusion of certain companies and issuers. Since then, Amundi has progressively strengthened the rules and thresholds of its thermal coal policy each year.

Amundi excludes:

- Mining companies, utility companies, and transport infrastructures that develop authorised coal projects that are under construction, such as those defined on the list of coal developers established by Crédit Agricole,
- Companies whose coal projects are at the initial development stage, or that have been announced or proposed, or that have been pre-authorised, are monitored on a yearly basis.
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-based electricity production and coal mining companies with a threshold of between 20% and 50% of their total income and showing an insufficient trajectory (Amundi carries out an analysis to assess the quality of the exit plan);
- Companies that generate more than 20% of their income from thermal coal mining;
- Companies that extract 70 MT or more thermal coal annually with no intention of reducing these quantities.

The gradual elimination of coal is crucial to achieving the decarbonisation of our economies. That is why Amundi has undertaken to gradually eliminate thermal coal from its investments in OECD countries by 2030 and in other countries by 2040. In line with the UN's Sustainable Development Goals and the 2015 Paris agreements, this strategy is based on the research and recommendations of Crédit Agricole's Scientific Committee, which takes into account the energy scenarios produced by the IEA (International Energy Agency), the Climate Analysis Report, and the "Science-Based Targets".

Scope of the exclusion policy

This policy applies to all companies, but mainly affects mining companies, utilities, and transport infrastructure companies. This policy applies to all active management strategies and all passive ESG management strategies over which Amundi has full discretion, for the following entities of the Amundi Group: Amundi Asset Management, BFT IM, CPR AM, and SGG.

Using our position as an investor to motivate issuers to gradually abandon coal

Amundi has established a commitment to companies exposed thermal coal. We request that they publicly release a policy on the elimination of thermal coal in line with Amundi's 2030/2040 elimination calendar.

For companies:

- (i) Excluded from Amundi's active investment universe under our policy, and those
- (ii) Whose thermal coal policies are considered by Amundi to be behind schedule

Amundi's policy consists of voting against the discharge of the Council or the Management or against the re-election of the Chairman, the President, or certain Directors.

Exclusion policy concerning unconventional fossil fuels

Since 31 December 2022, Amundi also excludes companies whose activity is more than 30% exposed to the exploration and mining of unconventional oil and gas (covering "shale oil and gas" and "oil sands").

Case of ETFs and ESG index funds

All ETFs and ESG index funds implement Amundi's exclusion policy as far as possible (with the exception of highly concentrated indices).

Continuous improvement plan

Given the broad range of asset classes and world regions where Amundi invests on behalf of third parties, some of which do not yet have the analytical framework or data required to develop a strategy for alignment with the Paris Agreement, the implementation of such alignment strategies throughout all management activities remains a challenge.

In addition, Amundi is a third party asset management company. Its management activity is governed by contracts between Amundi and its clients, under which the investment objectives of the management portfolios delegated to Amundi by its clients are determined, particularly in terms of expected risk level, yield expectations, and requirements around diversification and sustainability preferences. We are required to obtain the agreement of our legal representatives before consenting to requirements linked to a trajectory of alignment with the Paris Agreement. That is why Amundi has launched a strategy of active dialogue with its clients, offering them the possibility of investing in products whose strategy incorporates characteristics for alignment with the goals of the Paris Agreement and counselling them in their decision-making.

1. Amundi's Climate Strategy in support of the carbon neutrality goals of the Paris Agreement

- since the end of 2020, the Board of Directors of the management company's parent company has incorporated social and environmental issues in its governance and analysed progress on a quarterly basis via key indicators linked to climate and ESG;
- the Board members held a one-day dedicated strategic seminar to define the strategy to be deployed and the practical directions for implementing the new "Ambition 2025" societal plan;
- a monthly ESG and Climate committee meeting presided by the CEO defines and validates the ESG and climate policy applicable to investments and steers the major strategic projects;
- commitments made in the framework of the Net Zero Asset Managers initiative, of which Amundi has been a signatory since July 2021:
 - a target of 18% of Amundi's assets under management Net Zero aligned by 2025 (i.e., this 18% will only be made up of funds and mandates with objectives compatible with a Net-Zero trajectory by 2050);
 - -30% carbon intensity (tCO₂e/€M of revenue) by 2025 and -60% by 2030 for all portfolios subject to the NZIF (Net Zero Investment Framework - Set of actions, metrics, and methodologies to help investors maximise their contribution to achieving the Net Zero alignment objective);
- by 2025, Amundi will also offer open transition funds towards the Net Zero 2050 objective across all major asset classes;
- achieve €20 billion in assets under "impact" funds (including funds making a positive contribution to the objectives of the Paris Agreement);
- strengthening of the targeted sectoral exclusion rules;
- Amundi invests significant resources to enable better consideration of climate issues in portfolio management:
 - significant increase in the size of its ESG team;
 - launch of ALTO* Sustainability, a technological analytics solution and decision-making support for investors on environmental and societal issues.

2. Actions taken and strategic and operational changes made in order to sustainably integrate climate into the strategy

- progressive inclusion of ESG objectives in the performance evaluations of salespersons and portfolio managers to make this dimension part of their variable remuneration. A climate and ESG training programme developed with Amundi experts for all staff so that each employee receives the appropriate training;
- implementation of a rating methodology using a "best-in-class" approach to evaluate issuers' transition efforts in relation to a Net Zero scenario. The stated objective of the portfolios concerned will be to have a better environmental transition profile than that of their reference investment universe by 2025;
- the transition to a low-carbon economy is one of the strategic directions of our engagement policy, and Amundi has committed to expanding the number of companies with which we engage in ongoing dialogue on the climate to 1,000 additional companies, with the objective that these companies will define credible strategies for reducing their carbon footprint, have them brought to a vote at their General Meetings, and have part of their managers' remuneration linked to these strategies.

Amundi will continue to develop its climate strategy in the years to come, using scientific reference scenarios and closely linked with the objectives of its clients, both by investing in solutions to accelerate the transition and by gradually aligning its portfolios with the 2050 neutrality objective.

2. The strategy on alignment with the long-term goals relating to biodiversity

The fund's strategy does not take into consideration the alignment of its assets under management with the long-term goals linked to biodiversity featured in the Convention on Biological Diversity adopted on 5 June 1992.

Non-financial indicators

The question of the impact of businesses on biodiversity is crucial. In 2022, Amundi was able to begin using data to calculate the biodiversity footprint of its portfolios.

The metric used to display the **biodiversity footprint** is **MSAppb*/bEUR** (1). It makes it possible to quantify the impact of a company's activities and value chain on its environment. An entity's biodiversity footprint is obtained by dividing the impact value (**MSA.ppb***) by the enterprise value to obtain the "**MSAppb*/bEUR**". To attribute a company's impact to a portfolio, this footprint is multiplied by the amount held in the portfolio.

To quantify the each company's impact on biodiversity, the upstream physical inventories necessary for conducting its activities are modelled from turnover by region and sector using the EXIOBASE input-output model. These physical flows generate pressure on biodiversity, which are modelled using the Commotools suite (raw materials analysis tool) developed by CDC Biodiversité. Finally, the **GLOBIO** (2) model translates these pressures into impacts using **MSA in %** (3) data on various ecosystems.

The output shows the impacts expressed in **MSA.km²** (4), the surface equivalent of MSA and key metric of the **GBS** (5) data. These impacts are divided into 4 "compartments" according to biome (terrestrial, freshwater aquatic) and temporality (static, dynamic). To reach an aggregated metric, the **MSA.km²** undergoes two types of normalisation:

- normalisation of the differential between the land (~130 million km²) and freshwater aquatic (~10 million km²) surface areas, through which we obtain an **MSAppb - MSA.km²** translated into parts per billion and expressed as a surface fraction of their respective biomes.
- normalisation of the differential between the static (produced from the initial state to today) and dynamic (produced over the financial year) impacts, through which we obtain an **MSAppb*** - "time integrated" metric, which integrates the static impact of the footprint for the year of analysis, amortising it over the time required to reconstitute biodiversity over the surface area in question (6).

This dual normalisation produces an indicator that takes into account all dimensions of the impact of a company's activities on biodiversity.

(1) MSAppb*/bEUR (BIA, Biodiversity Impacts Analytics – Carbone 4 Finance): aggregates both static and dynamic data from terrestrial and aquatic environments: static impacts result from the past accumulation of biodiversity losses; dynamic impacts represent impacts occurring during the relevant year. MSAppb* reduced to company value is equal to the biodiversity footprint of a company, MSA.ppb*/bEUR

(2) GLOBIO model: developed by a consortium created in 2003, composed of PBL, UNEP GRID-Arendal(13) and UNEP-WCMC. The model was created to calculate the impact of past, present, and future environmental pressures on biodiversity. It is based on pressure-impact relationships in scientific literature. GLOBIO does not use species data input to produce its results. Instead, spatial data is collected on the various environmental pressures and their impact on biodiversity is estimated. These pressures mainly come from the Integrated Model to Assess the Global Environment (IMAGE)

(3) MSA (GLOBIO): "Mean Species Abundance" is an indicator that shows the intactness of local biodiversity

(4) MSA.m2 (GBS): version of MSA% relating to surface area. A loss of 1 MSA.m2 is equivalent to 1m² of land take on a virgin natural ecosystem

(5) GBS (Global Biodiversity Score) model: expressed in a surface area metric as MSA.m2, was constructed by CDC Biodiversité. Calculating a company's biodiversity footprint via its GBS amounts to establishing a quantitative link between its activity and impacts on biodiversity. These impacts are the consequence of the contribution made by the company's economic activity to the various pressures that threaten biodiversity, which the CBD groups into five categories: habitat change, pollution, invasive alien species, climate change, and overexploitation

(6) The methodology considers that it takes 50 years for an ecosystem to return to its initial state.

Continuous improvement plan

The subject of biodiversity, which is intrinsically linked to that of climate change, occupies an increasingly important place in our societies, not just in research, but also economic considerations. Biodiversity is one of the themes of Amundi's ESG analysis. It is reflected in the methodological grid via the "Biodiversity & Pollution" criterion, and thus plays a part in the construction of issuer ESG ratings. Amundi is also particularly attentive to controversies linked to biodiversity. In 2022, Amundi continued its initiatives for a better integration of biodiversity into its internal analysis and investment processes. In addition, the subject was among the ESG Research team's top priority analysis themes in 2022, which resulted in the production of a ten-part series of research papers entitled "Biodiversity: it's time to protect our only home". The first two parts were published in 2022, while the following will be put on-line in 2023.

The subject of biodiversity is a particular focal point of the dialogue with the companies in which Amundi is invested. Following the campaigns on plastics launched in 2019, on the circular economy in 2020, and on biodiversity in 2021, Amundi strengthened its active dialogue in 2022 with companies, continuing its engagement campaign dedicated to biodiversity strategy in eight different sectors. Due to the limitations related to the data available on the subject, the first objective of this commitment is to establish an inventory of the consideration of biodiversity by the companies, then ask them to assess the responsiveness of their activities to this loss of biodiversity, and to manage the impact of their activities and products on biodiversity. In 2022, 119 companies engaged on their biodiversity strategy. As part of this engagement, Amundi provides recommendations, with the aim of better integrating these issues into their strategy. Amundi has more broadly strengthened shareholder dialogue around the preservation of natural capital. In 2022, 344 companies (a company may engage on several topics) were engaged through different programmes (including the promotion of a circular economy and better plastics management, the prevention of deforestation, and various subjects linked to such topics as the reduction of pollution or the sustainable management of water resources).

In 2022, Amundi continued its commitment to market initiatives and working groups dedicated to biodiversity. In 2021, Amundi joined the collective "Finance for Biodiversity Pledge" investor initiative and committed to collaboration and knowledge-sharing, active dialogue with companies, and to evaluating its impacts, setting objectives around biodiversity, and communicating them publicly by 2024. In addition, Amundi will produce an annual report on these portfolios' contribution to biodiversity objectives. In 2022, following the publication of its preliminary Nature-related Risk & Opportunity Management and Disclosure Framework, the TNFD (Taskforce on Nature-related Financial Disclosures) launched pilot groups to test the feasibility of this framework on various aspects. Amundi joined a pilot group led by UNEP-FI and CDC Biodiversité, intended to test the TNFD approach, and particularly the application of the GBS (Global Biodiversity Score) to financial institutions.

Amundi also aims to develop its investment policy in terms of biodiversity around several major themes, such as water or plastics, in order to strengthen engagement where necessary and exclude companies that are harmful to natural capital. An update to this policy will be published by 2024.

In terms of data, data analysis relating to the biodiversity indicator is now in place and biodiversity impact metrics are proposed for certain funds. At this stage, Amundi is not consolidating this data at asset manager or group level.

3. The process for taking into account environmental, social, and governance criteria in risk management

3.1 Identification of environmental, social, and governance risks

Amundi's Responsible Investment department constitutes a hub of expertise dedicated to the identification and assessment of risks and opportunities relating to ESG issues. This department provides the various group entities with ESG assessments of listed issuers along with climate data, used by portfolio managers.

The table below presents an overview of the various ESG risks identified by Amundi, the approach used to make assessments, and the data providers used to assess and manage the identified risks. These risks can result in several types of consequences, including but not limited to reputational risks, depreciation of asset values, litigation, or even portfolio under-performance.

Risk identified	Description	Amundi's assessment	Data provider used
Environmental Risks	Result from the way in which a company controls its direct and indirect environmental impact: energy consumption, reduction of greenhouse gas emissions, fight against resource depletion and protection of biodiversity, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Environment" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Social risks	Result from the way an issuer manages its human capital and its stakeholders (other than shareholders). This covers several notions: the social aspect linked to an issuer's human capital (accident prevention, employee training, respect for employee rights, etc.), those linked to human rights in general, and responsibilities towards stakeholders.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Social" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Governance risks	Result from the way the issuer manages its development or organises its operations and management bodies, which can potentially lead to unfair commercial practices, fraud or corruption, non-diverse management bodies, excessive remuneration, etc.	Proprietary rating from A to G, established on the basis of an analysis framework (criteria and weighting) of risks and opportunities linked to the "Governance" pillar, specific to each sector of activity. A G rating represents the highest risk.	MSCI, Moody's ESG Solutions, ISS ESG, Sustainalytics
Risks of controversy	Possibility that an issuer or investment may be involved in controversies, litigation, or events that could harm its reputation or ability to make a profit. May include questioned business practices, violations of law, financial scandals, environmental or social problems, or other difficulties that could compromise the issuer's credibility or sustainability.	Proprietary methodology combining a quantitative filter to define the universe, then a qualitative evaluation of that universe. The latter evaluation produces a rating on a scale of 0 to 5 (5 being the worst rating). Controversies with a rating of 3 or more are considered serious.	RepRisk, MSCI, Sustainalytics

Annual reporting
31/10/2023

3.2 Risk and opportunity assessment

The environmental, social, and governance risks and opportunities presented in the table above are assessed via a proprietary ESG rating assigned to issuers by Amundi's Responsible Investment teams.

Rating of private issuers

Our ESG analysts are specialised by sector of activity. To identify the ESG criteria representing the risks and opportunities within each sector of activity, they are tasked with:

- Monitoring emerging and established ESG topics and trends in each sector;
- Assessing sustainability risks and opportunities as well as negative exposure to sustainability factors;
- Selecting the relevant indicators (KPI) and assigning to them the associated weightings.

Our ESG analysis methodology is based on a set of 38 criteria used to establish the ESG profile of each sector of activity. Among these 38 criteria, 17 are generic, and can be applied to companies in any sector of activity, and 21 are specific to the challenges of certain sectors.

The weighting of ESG criteria is a key element of ESG analysis. The weight attribution model is based on a materiality assessment, which can influence the value of a company through 4 vectors: regulation, reputation, the company's development model, and operational efficiency.

To weight ESG criteria, the ESG analyst considers the probability and extent of each vector's impact on the following 2 materialities (detailed in the table at the end of the section):

- 1st materiality: Ability of the company to anticipate and manage sustainable development risks and opportunities inherent to its industry and its particular circumstances;
- 2nd materiality: The management team's ability to manage the potential negative impact of their activities on sustainability factors.

This analytical approach via both materialities lets analysts prioritise risks by taking into account the particularities and events specific to each sector.

The weightings integrate the intensity of the risk incurred as well as its emerging or established nature and its time horizon. Thus, issues that are considered the most material receive the highest weight.

ESG ratings are calculated based on ESG criteria and weightings determined by analysts, who combine them with the ESG scores obtained from our external data providers. At each step of the calculation process, the scores are normalised as Z-scores. Z-scores are used to compare results to a "normal" population (difference of the issuer's score with the average score for the sector, in numbers of standard deviations). To distinguish best practices from worst practices at the sector level, each issuer is evaluated with a score that is scaled around the average for its sector. At the end of the process, each company is assigned an ESG score (between -3 and +3) and its equivalent on a scale from A to G, where A is the best score and G the worst. Grade D represents average scores (from -0.5 to +0.5); each letter corresponds to a standard deviation.

Each issuer receives only one ESG score, regardless of the chosen reference universe. The ESG score is therefore "sector-neutral", meaning that no sector is given more or less preference than another.

For the implementation of the SFDR regulation, Amundi has established a map of the environmental and social factors it deems material for different sectors. This map is presented in Amundi Asset Management's LEC 29 report.

		Regulation	Reputation	Development model	Operational effectiveness
1 st materiality	Ability of the company to anticipate and manage the risks and opportunities inherent to its industry and its particular circumstances in the area of sustainable development	✓	✓	✓	✓
2 nd materiality	The management team's ability to manage the potential negative impact of their activities on sustainability factors	✓		✓	

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Amundi MSCI New Energy ESG Screened UCITS ETF Acc

Annual reporting
31/10/2023

Rating of sovereign issuers

The objective of the sovereign rating methodology is to assess the ESG performance of sovereign issuers. E, S, and G factors can all have an impact on a governments' ability to repay its debts in the medium to long term. They can also reflect how the country tackles the major sustainability issues that affect global stability. Amundi's methodology is based on around fifty ESG indicators deemed relevant by Amundi's ESG research to address sustainability risks and sustainability factors. Each indicator can combine multiple data points from different sources, including open international databases (such as those of the World Bank Group, the United Nations, etc.) or proprietary databases. Amundi has defined the weightings of each ESG indicator contributing to the final ESG scores and their various components (E, S, and G). The indicators come from an independent service provider. The indicators have been grouped into 8 categories to ensure greater clarity, with each category falling into one of the E, S or G pillars. Like the company ESG rating scale, the ESG score of issuers results in an ESG rating ranging from A to G.

3.3 Sustainability risk management

Amundi's approach to sustainability risk management is based on the following three pillars:

- An exclusion policy, which addresses the most important ESG risks;
- The integration of ESG ratings into investment processes, which provides a holistic understanding of the company and helps identify its particular ESG risks;
- A voting and engagement policy that helps trigger positive changes in the way companies manage their impact on essential topics related to sustainability, thus mitigating the associated risks.

3.4 Integration of sustainability risks into the entity's regular risk management framework

Sustainability risks are integrated into Amundi's internal control and risk management system.

For sustainability risk management, responsibilities are divided between:

- The first level of control, carried out directly by the management teams, and
- The second level, carried out by the risk management teams, which can constantly check the compliance of funds with their ESG objectives and constraints.

The Risk Department participates in Amundi's "Responsible Investment" governance system. They monitor compliance with regulatory requirements and risk management related to such topics.

The ESG rules are monitored by risk management teams in the same way as other management requirements. They are based on the same tools and procedures and cover our exclusion policies as well as eligibility criteria and fund-specific rules. These rules are automatically monitored using a proprietary monitoring tool. This tool can trigger:

- Pre-negotiation alerts or blocking alerts, for instance on exclusion policies;
- Post-trade alerts: managers are notified of possible overruns so as to be able to quickly rectify them.

The table below details the internal control system implemented by Amundi.

Diagram of the internal control system

AMUNDI MSCI NEW ENERGY ESG SCREENED UCITS ETF

Subfund of the Sicav Multi Units France

Amundi MSCI New Energy ESG Screened UCITS ETF Acc

Annual
reporting
31/10/2023

3.5 Frequency of risk management framework review

Our ESG analysts review the selection and weightings of Amundi's 38 criteria every 18 months for each sector of activity. This allows them to check whether the criteria and their weightings remain relevant. We continuously seek to improve our analysis by evaluating their materiality.

Amundi's Responsible Investment Policy is updated on a yearly basis.

3.6 Continuous improvement plan

Amundi strives to improve the assessment and integration of sustainability risks, including climate and environmental risks, in the management of its funds. The aim is to go from a qualitative approach to a more quantitative approach by identifying the key indicators that represent the most relevant impacts for portfolios, taking into account climate, environmental, social, and governance factors.

The project is structured in three stages:

- Define a list of sustainability risk indicators, focusing on material risks and their financial impacts on issuers;
- Gradually implement monitoring for these indicators, evaluating their results and defining limits on the basis of these indicators;
- Improve the ESG risk management framework, including the integration of indicators into risk strategies and investment restrictions.

Our current work consists of identifying the main sustainability risk factors and mapping them to issuers' financial variables. This work will end with the validation and approval of the new framework in line with Amundi's ESG governance.

The preliminary indicators considered include metrics to quantify the potential impacts of sustainability risks in terms of financial materiality and the use of "proxies" for reputational risk. The next step, planned for the second half of the current year, is to monitor the defined sustainability risk indicators and assess their impact on the managed portfolios. This monitoring will be used in discussions with the portfolio management teams and included in the various risk management reports. The final stage will focus on improving the ESG risk management framework and possibly setting internal risk alerts or limits based on the indicators. This stage is expected to be completed during the first half of 2025.

It should be noted that deadlines, indicators and implementation objectives may be subject to change throughout the project.

PLANET MONDE

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Calculation and allocation of distributable amounts:

Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a passively managed index-tracking fund.

The Sub-fund's investment objective is identical to that of the MASTER FUND as described in the section entitled "INFORMATION CONCERNING THE MASTER FUND".

The Sub-fund's performance will differ from that of the MASTER FUND due to the fees and charges to which the Sub-fund is subject and/or any liquid assets it may hold.

Benchmark index:

There is no relevant benchmark index given the investment techniques employed.

INFORMATION CONCERNING THE MASTER FUND

INVESTMENT OBJECTIVE:

The MASTER FUND's investment objective is to achieve capital growth by capturing the performance of different global asset classes by investing in listed tracker funds (UCITS ETFs), while maintaining an average annual volatility of approximately 7%.

THE MASTER FUND BENCHMARK INDEX:

There is no benchmark index that is relevant for this Sub-fund.

ELIGIBILITY OF THE MASTER FUND

According to the investment objective and policy described above, the MASTER FUND may invest more than 50% of its net assets in the units or shares of other UCITS.

Investment strategy:

1. Strategy employed

Since the Sub-fund is a feeder fund of the MASTER FUND, it has a regulatory obligation to invest at least 85% of its assets in the MASTER FUND's units, with the objective of investing almost 100% of its net assets in the MASTER FUND's units.

The Sub-fund may hold liquid assets on an ancillary basis.

An overview of the MASTER FUND's investment strategy is provided below.

OVERVIEW OF THE MASTER FUND'S INVESTMENT STRATEGY

PLEASE NOTE: IN THIS SECTION ENTITLED "OVERVIEW OF THE MASTER FUND'S INVESTMENT STRATEGY", THE TERM "MANAGEMENT COMPANY" REFERS TO THE MASTER FUND'S MANAGEMENT COMPANY.

THE MASTER FUND'S INVESTMENT POLICY

1. The MASTER FUND's investment process

The MASTER FUND will invest mainly in a portfolio of UCITS ETF index tracker funds that are traded on a regulated market.

The MASTER FUND's investment strategy is based on a proprietary methodology and tools developed by the Management Company, which are used to systematically assess the prospective long-term returns and risks of the main global asset classes (equities, bonds, commodities and currency), by geographic region, economic sector and investment theme. This provides diversified and flexible exposure through an active and discretionary investment process that is executed in two phases:

(i) The initial construction of an optimum "strategic portfolio" for the MASTER FUND, which aims for long-term performance without taking short-term market trends into consideration. The following process is observed in constructing this portfolio:

PLANET MONDE

Subfund of the Sicav Multi Units France

1. Short-, medium- and long-term macroeconomic scenarios are determined for money-market rates, corporate profits and inflation in the relevant geographic regions.

2. The projected medium- and long-term returns of the main asset classes are assessed on the basis of these macroeconomic scenarios and asset purchase prices. This assessment is made using conventional valuation models for these asset classes, which the Management Company has developed and enhanced.

3. These projected returns are used to calculate the optimum "strategic portfolio" for the MASTER FUND based on investment fundamentals over a medium- or long-term horizon. For this calculation, the Management Company uses bespoke analysis tools it has developed (financial scenario generators and dynamic portfolio optimisers).

(ii) The adjustment of this strategic portfolio, if necessary, in accordance with the Management Company's opinions on short-term trends in financial markets and their corresponding risks.

This formal investment process thus results in an allocation that consists of investment vehicles that are representative of the asset classes selected to compose the "strategic portfolio", which is a result of the positions taken with medium- and long-term perspectives (and is therefore exposed to the fundamental value of the underlying financial markets) and of purely tactical positions which seek to take advantage of the short-term dynamics of the various asset classes.

This process does not provide for the use of financial futures to obtain over-exposure. The MASTER FUND does not use leverage.

Investors should note that the MASTER FUND's proportional exposure to its asset classes may vary considerably in accordance with their cycle of over- and under- valuation.

Up to 100% of the MASTER FUND's assets will be exposed to the shares or units of UCITS and in particular to exchange-traded tracker funds. The MASTER FUND may also invest up to 30% of its assets in the shares or units of French or foreign alternative investment funds ("AIF") that meet the four criteria specified in Article R 214-13 of the French Monetary and Financial Code.

Maximum exposure limits:

- Exposure to the equity share class may range from 0% to 80% of the MASTER FUND's assets, with exposure to small-cap and mid-cap equities limited to 20% of assets
- Exposure to the bond share class may range from 0% to 80% of the MASTER FUND's assets, with exposure to high-yield (speculative) bonds limited to 30% of assets
- Exposure to the commodities asset class may range from 0% to 30% of the MASTER FUND's assets
- Exposure to the interest-rate asset class may range from 0% to 30% of the MASTER FUND's assets
- Exposure to the emerging countries asset class may range from 0% to 20% of the MASTER FUND's assets
- the MASTER FUND will not be exposed directly to the commodities asset class, but may be exposed thereto indirectly (e.g. via an index or a fund's units or shares)
- The MASTER FUND may be exposed to currency, equity, bond and two-tier interest-rate risks, which combined may in some cases represent up to 100% of the MASTER FUND's assets:

1. Any directly-held securities or shares or units of an UCITS and/or AIF the fund may acquire that are denominated in another currency than the euro may not exceed 30% of the MASTER FUND's assets; and

2. Any currency risk to which the UCITS and/or AIF in which the MASTER FUND invests are exposed will not be subject to restrictions in the MASTER FUND.

The Management Company may also use derivative financial instruments traded on regulated or over-the-counter markets. The asset manager may use these instruments to hedge currency risk. Transactions involving derivatives and securities with embedded derivatives will be used to hedge currency risk and shall not exceed 100% of the MASTER FUND's assets.

The risk exposure targetted for the MASTER FUND naturally depends on the configuration of the various asset class markets and their prospective returns. The Management Company believes however that the MASTER FUND's volatility will average about 7%, which is similar to that of a balanced portfolio composed of 50% equities and 50% bonds.

Some asset classes are characterised by specific risks, such as exposure to small-cap equities, emerging countries or high-yield bonds.

2. Balance sheet assets (excluding embedded derivatives)

• Holding shares or units in other CIU or investment funds

The MASTER FUND will invest up to 100% of its assets in UCITS and in particular exchange-traded index trackers. Funds that comply with Directive 2009/65/CE (the UCITS Directive) may represent up to 100% of assets.

These UCITS may be traded on Euronext Paris S.A.'s the NextTrack segment or on other organised markets. Market makers are committed to maintaining a bid/ask spread on these UCITS to ensure a minimum level of liquidity.

The MASTER FUND may also invest up to 30% of its total net assets in alternative investment funds that meet the four criteria of Article R 214-13 of the French Monetary and Financial Code.

The Management Company may invest in investment funds that are managed by the Management Company, by an affiliated compays, and/or by an entity of the Crédit Agricole group.

• Equities

To optimise the MASTER FUND's management and achieve its investment objective, the manager reserves the right to use other financial instruments in compliance with regulations. The MASTER FUND may invest in baskets of equities.

• Debt securities

To optimise the MASTER FUND's management and achieve its investment objective, the manager reserves the right to use other financial instruments in compliance with regulations. The MASTER FUND may invest in exchange traded notes (ETN).

The MASTER FUND will not engage in total return swaps.

3. Off-balance sheet assets (derivatives)

To achieve its investment objective, the MASTER FUND may engage in derivatives transactions subject to the following conditions:

Eligible markets:

- regulated
- organised
- over-the-counter

Risks to which the MASTER FUND may seek or hedge exposure:

- equity
- interest-rate
- currency
- credit

Purpose (all transactions must be consistent with the investment objective)

- hedging
- exposure

Eligible instruments:

- options
- forward exchange contracts

Strategy for using derivatives to achieve the investment objective:

- to hedge the overall portfolio or specific currency, interest-rate, equity or bond risks (up to 100% of net assets).
- to achieve synthetic exposure to assets or risks (up to 100% of assets)

In executing its investment strategy, the MASTER FUND will use forward exchange contracts to expose the fund to currency pairs.

For unit classes that are not denominated in EUR, the MASTER FUND will also enter into forward exchange contracts between the unit class currency and the EUR to cover all or part of the unit class's specific currency risk as effectively as possible over the life of the MASTER FUND.

The MASTER FUND may also use listed equity and/or bond options to hedge or increase exposure.

4. Securities with embedded derivatives used by the MASTER FUND

N/A.

5. Cash deposits made by the MASTER FUND

In order to optimise its cash management, the MASTER FUND may deposit funds representing up to 20% of its net assets with lending institutions.

6. Cash borrowings by the MASTER FUND

The MASTER FUND may temporarily borrow up to 10% of the value its net assets, mainly in order to optimise its cash management.

7. Securities financing transactions entered into by the MASTER FUND

The MASTER FUND will not engage in any securities financing transactions.

8. Use of collateral by the MASTER FUND

Whenever the investment strategy employed exposes the MASTER FUND to counterparty risk, and in particular when the MASTER FUND uses forward exchange contracts and/or engages in securities financing transactions (the fund will not engage in these transactions), the MASTER FUND may receive collateral in the form of securities and/or cash to reduce the counterparty risk of these transactions.

The MASTER FUND will have full title to all collateral received, which will be deposited in the MASTER FUND's account with the depository. This collateral will therefore be included in the MASTER FUND's assets. If the counterparty defaults on its obligation, the MASTER FUND may dispose of the assets received from the counterparty to pay off the counterparty's debt to the MASTER FUND in respect of the secured transaction.

All collateral the MASTER FUND receives for this purpose must comply with the applicable laws and regulations, with respect in particular to liquidity, valuation, the credit-worthiness of securities issuers, correlation, and the risks of collateral management and enforceability. All collateral received must in particular meet the following criteria:

- (a) The collateral received must be of good quality, meet the minimum liquidity requirements specified by the Management Company's Risks department, and be traded on a regulated market or a multilateral trading facility with transparent pricing to enable the collateral to be sold rapidly at a price that is near its previously estimated value.
- (b) collateral must be valued at its mark-to-market price at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount or "haircut" is applied.
- (c) collateral must not exceed the correlation limits set by the Management Company's Risks department, which are calculated on derivatives contracts in compliance with EMIR regulations;
- (d) collateral must be sufficiently diversified in terms of country, market and issuer, with exposure to any single issuer limited to 20% of the MASTER FUND's net asset value;
- (e) collateral must be immediately enforceable by the MASTER FUND's Management Company without informing the counterparty and without its approval.

Subject to the above conditions, the MASTER FUND may accept the following forms of collateral:

- 1) cash and cash-equivalent assets, which for example include short-term bank deposits and balances and money-market instruments
- 2) bonds issued or guaranteed by an OECD Member State, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with
- 3) shares or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating;
- 4) shares or units of CIU that invest mainly in the bonds and/or equities indicated in (5) and (6) below
- 5) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity [and which have a credit rating of at least BBB- by S&P and/or Fitch, or an equivalent rating by Moody's
- 6) shares admitted for trading or traded on a regulated market of an EU Member State, on a securities exchange of an OECD Member State, or on a securities exchange of a non-OECD country provided that the conditions of points (a) to (e) above are fully met and that these shares are a component of a leading stock index.

Collateral discount policy

The MASTER FUND's Management Company shall apply a discount to the collateral accepted by the Sub-fund. The amount of these discounts will depend mainly on the following:

- the nature of the collateral asset
- the maturity of the asset provided as collateral (if relevant)
- the credit rating of the issuer of the asset provided as collateral (if relevant).

A higher discount may be applied to collateral received in a currency other than the euro.

Reinvestment of collateral

Non-cash collateral will not be sold, reinvested or pledged. At the manager's discretion, cash collateral may either be:

- deposited with an authorised institution
- invested in high-quality government bonds;
- invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

All cash collateral that is reinvested must be invested in a diversified manner in compliance with the rules that apply to the acceptance of non-cash collateral.

Risk profile:

Shareholders' money will be invested mainly in units of the MASTER FUND.

The Sub-fund's risk profile is identical to that of the MASTER FUND (which is indicated below).

The MASTER FUND's risk profile

Capital risk

The principal invested in the MASTER FUND is not guaranteed. Unit-holders may therefore lose all or part of their initial investment.

Risk that the MASTER FUND will not achieve its investment objective

There can be no guarantee that the MASTER FUND will achieve its investment objective. There is no certainty that the Management Company will be able to allocate the MASTER FUND's assets profitably and the MASTER FUND may suffer losses even though some financial markets are posting positive returns.

Equity risk

The MASTER FUND may be directly or indirectly exposed to equities. The price of an equity security can increase or decrease in accordance with changes in the issuer's risk exposure, in the economic conditions of the market in which the security is traded, and in investor expectations. Equity markets historically show more price volatility than do interest-rate markets. In particular, the MASTER FUND may be exposed to small-cap and medium-cap companies, which may increase market and liquidity risks. These price variations may decrease the MASTER FUND's net asset value.

Currency risk

The MASTER FUND may be exposed to currency risk as a result of its direct or indirect exposure to assets that are not denominated in euros. Fluctuations in the exchange rates of these currencies with respect to the euro may therefore adversely affect the MASTER FUND'S net asset value.

Interest-rate risk

The price of a bond or other debt security is dependent on changes in interest rates. In general, the price of a bond rises when interest rates fall, and falls when interest rates rise. Interest-rate risk is generally higher for long-term or long-maturity investments. Changes in interest rates may therefore increase or decrease the MASTER FUND's net asset value.

Credit risk

If the issuer of a debt security (including convertible bonds) to which the MASTER FUND is directly or indirectly exposed is no longer able to meet its debt obligations, the value of this security may decrease, and thus decrease the MASTER FUND's net asset value.

The deterioration of the credit quality of one or more issuers of debt securities to which the MASTER FUND is directly or indirectly exposed may decrease the value of the securities and therefore adversely affect the MASTER FUND. The MASTER FUND may in particular be exposed to speculative bonds with non-investment grade ratings. If an issuer of such a bond defaults or becomes insolvent, its bonds may be exposed to a risk of loss that is higher than the risk to which a bond with a higher credit rating is exposed.

Risk of using derivatives

The MASTER FUND may use Financial Contracts, including forward contracts, listed and OTC options and swaps. Exposure to such Financial Contracts may involve considerable risk. Since the amount of money required to establish a position in a Financial Contract may be much less than the exposure obtained under the contract, each transaction involves "leverage". The market value of a Financial Contract is quite volatile and may therefore vary considerably. Contracts traded over the counter may also be less liquid than transactions on an organised market, where the volumes traded are generally quite high, and the prices of these contracts may be more volatile. These variations of value and price may therefore adversely affect the MASTER FUND's net asset value.

Investment in non-investment grade securities (i.e. speculative or "high-yield" bonds)

The MASTER FUND will be exposed to speculative or "high-yield" bonds with non-investment grade ratings or which have not been rated by a credit rating agency but which are deemed to be equivalent in quality to bonds with a non-investment grade rating. If an issuer of such a bond defaults or becomes insolvent, its bonds may be exposed to a risk of loss of income and/or principal that is higher than the risk to which a bond with comparable characteristics but with a higher credit rating is exposed. The market value of the Sub-fund's bonds may therefore be more volatile.

Counterparty risk

The MASTER FUND is particularly exposed to counterparty risk as a result of its use of over-the-counter derivatives contracts and efficient portfolio management transactions. The Sub-fund is exposed to the risk that a counterparty with which the Sub-fund has entered into a contract or transaction may go bankrupt or default on a settlement or other obligation. If the counterparty defaults, the Financial Contract may be terminated prematurely and the MASTER FUND may have to enter into another contract with a third-party counterparty, at the market conditions that prevail at that time. This risk could cause losses for the MASTER FUND and prevent it from achieving its investment objective. In compliance with the regulations that apply to FCP funds, exposure to counterparty risk may not exceed 10% of the fund's total assets per counterparty.

Risk of exposure to emerging and developing markets

Exposure to emerging markets entails a greater risk of loss than does investment in developed markets, for example due to the higher volatility of emerging markets and the greater risk of economic and/or political instability.

Commodities risk

Commodity markets are often exposed to greater and more variable risks than are other financial markets. The price of a commodity may therefore be highly volatile and adversely affect the MASTER FUND's performance.

Sustainability risks

The MASTER FUND does not integrate sustainability factors in its investment decision-making process, and is exposed to sustainability risks. The occurrence of such risks could have an adverse impact on the value of the MASTER FUND's investments. Additional information may be found in the "Sustainability Disclosures" section of the MASTER FUND's Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

The Sub-fund is intended for investors who have relatively little aversion to risk. The level of risk exposure depends mainly on the market configurations of the asset classes and their prospective returns.

Investors should therefore note that the proportional exposure to the MASTER FUND's asset classes may vary considerably in accordance with their cycle of over- and under-valuation.

The amount that it is reasonable to invest in this Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, and their cash requirements at present and for the next three years, as well as whether or not they wish to take risks or prefer a cautious investment approach.

PLANET MONDE Subfund of the Sicav Multi Units France

Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks. All investors are therefore asked to consider their specific situation with the help of their usual investment advisor.

The recommended minimum investment period is at least three years.

"U.S. Persons" (as this term is defined in the COMMERCIAL INFORMATION section below) are prohibited from investing in the Sub-fund.

Subfund life on the year under review

None.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

2022 ended on a positive note for risky assets, but was characterised by significant volatility month to month. In both Europe and the United States, inflation figures suggested to investors that inflation had peaked and the central banks would therefore be slowing down their rate hikes. But the central banks of the developed countries concluded otherwise at their December meetings. Inflation figures were still far too high for the central banks to show more flexibility.

Investors were, therefore, generally pessimistic at the end of 2022, due to fears around the various economies, which generally explains the lack of risk and larger share of cash in their portfolios. Low growth levels combined with high inflation raised fears around a risk of major recession in Europe and the US. Added to that was the risk of a major energy crisis in Europe, linked to geopolitical tensions and the war between Russia and Ukraine.

2023 started off well, however, with improvements in the most risky assets. In Europe, the mild weather allowed Europe to avoid an energy crisis, and the relaxing of China's zero-Covid policy and reopening of its economy allowed the markets to begin a fairly unexpected rally until mid-March.

Then, March was shaken by the Silicon Valley Bank bankruptcy and the takeover of Credit Suisse, which raised fears around the health of the banking sector and its potential consequences for growth. The credit markets suffered from the write-down of Credit Suisse's AT1 debt. Spreads were generally wider in the Investment Grade and High-Yield categories. Euro-denominated debt securities under-performed US debt securities. The stock markets recovered at the end of the month when these concerns faded away. The idea of seeing a resilient US economy in the face of continuous interest rate hikes by the central banks injected optimism into the markets. For their part, the emerging markets continued growing in the wake of China's reopening. But risky assets were mostly buoyed by themes associated with artificial intelligence throughout the second quarter of 2023. By comparison, the FANG+ Index, which measures the five largest capitalisations, grew by 25.1% during the second quarter, while the S&P 500 only grew by 8.7% over the same period.

From August to the end of period, the markets entered a new bearish phase, as investors grew accustomed to the notion that interest rates would remain high longer than they had originally anticipated. But investor confidence was also dampened by concerns around the nature of the Chinese recovery, fears that high petrol prices could further feed inflation, and the growing number of indications that the world economy was slowing.

Overall, the period was positive for risky assets in both Europe and the US. The Eurostoxx rose by 12.26%, while the S&P 500 rose by 8.31%, and the NASDAQ by 16.96%. The positive performance of the Japanese markets, bolstered by the feeling that Japan was exiting a deflation cycle, should also be noted. Finally, the Chinese market grew by 18.01% over the period, following the end of its zero-Covid policy.

In keeping with the central banks' restrictive and standardisation policies, long-term rates rose by 88 bps for the US 10-year and by 66 bps for the German Bund. However, we saw a redoubled inversion of the yield curve in Europe as the German two-year grew by 108 bps. This was not the case in the US, where the curve steepened, with the US two-year only gaining 60 bps.

For the credit portion, the rising rates offered opportunities both on high-yield and investment-grade, with European credit outperforming US credit.

As for currency, we saw a rebound in the euro vis-à-vis the dollar following the BCE's adjustment of its rate hike cycle to better sync with that of the US Federal Reserve. The EURUSD thus rose by 7.01% over the period.

Finally, it should be noted that the commodities market experienced a sharp drop in energy-related commodity (gas and electricity) prices, but also a rise in petrol prices due to decreased production from the producing countries.

PLANET MONDE

Subfund of the Sicav Multi Units France

Over the period, the Planet Monde fund fell by 1.13%. The recurrent interest rate hikes negatively impacted performance. The equities bucket partially mitigated the loss associated with the rate hikes. For all that, the fund pursued a prudent approach over the year, thus retaining a low level of risk. Over the short-to-medium term, the duration that has been built up over the years should start to bear fruit, since inflation has already fallen off considerably.

From october 2022 to october 2023, the subfund performance is -1.13%.

The performance achieved over the period does not prejudge the future results of the subfund.

Main movements in the portfolio during the year

Securities	Movements ("Accounting currency")	
	Acquisitions	Transfers
LYXOR PLANET Z	4,677,009.52	3,691,712.79

Transparency of securities financing transactions and the reuse of financial instruments under the SFTR regulation (in the UCI's accounting currency)

Over the course of the reporting period, the UCI was not involved in any transactions governed by the Securities Financing Transactions Regulation (SFTR).

Specific information

- The legal documentation of the sub-fund provides that it is invested in units (or shares, if any) of its master UCI in full and permanently and indicates, for indirect costs, the maximum subscription and redemption commission rates, and management fees for this master UCI.

In accordance with the regulations and over the past period, the master UCI has in practice presented rates consistent with those mentioned in the information notice and included in the “Management fees” paragraph.

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor’s Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details

- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

Voting right

Since the sub-fund is a feeder fund (that is to say, invested in full and permanently in units of a single master UCI, and incidentally in liquidity), the voting policy of its master fund should be considered.

You can refer to this policy and to the relative voting rights exercise report on the Management Company’s website: www.amundi.com, “about Amundi”.

SFDR Regulations and Taxonomy:

Article 6

The fund does not promote sustainable investment in its portfolio management strategy.

The investments underlying this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

PLANET MONDE

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

PLANET MONDE

Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

None.

Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. The Management Company nevertheless reserves the right to value these instruments at their market price if they are particularly sensitive to any market risks (interest rate risk, etc. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. The Management Company nevertheless reserves the right to value these instruments at their market price if they are particularly sensitive to any market risks (interest rate risk, etc. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Shares and units in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM / Reuters fixing rates on the day the Sub-fund's net asset value is calculated.

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is accounted for using the cash-basis method.

PLANET MONDE

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees and charges cover all the costs invoiced directly to the Sub-fund, except for transaction expenses. Transaction expenses include intermediary fees (brokerage, stock market taxes etc.) and any transaction fee that may be charged, usually by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives
- transaction fees, which are charged to the Sub-fund.

For more information on the fees or expenses that are charged to the Sub-fund, see the Fees and Charges section of the Key Investor Information Document (KIID).

Fees charged to the SUB-FUND	Base	Maximum charge
Investment management fees and administrative fees that are external to the Management Company (auditor, depositary, fund distribution and legal fees) including tax ⁽¹⁾	Net asset value	1.20% incl. tax p.a
Maximum indirect management fees (management fees and charges) ⁽²⁾	Net asset value	1.10% incl. tax p.a
Incentive fee	Net asset value	N/A
Transaction fee	Charged on each transaction	N/A

⁽¹⁾ includes all fees and charges except for transaction expenses, incentive fees and fees associated with investment in UCITS or alternative investment funds.

⁽²⁾ includes the maximum indirect management fees (i.e. management fees and charges) charged to the MASTER FUND.

Fees charged to the MASTER FUND	Base	Maximum charge
Investment management fees and administrative fees that are external to the Management Company (auditor, depositary, fund distribution and legal fees) including tax ⁽¹⁾	Net asset value	0.1% incl. tax
Maximum indirect management fees (management fees and charges)	Net asset value	1.00% incl. tax p.a
Incentive fee	Net asset value	N/A
Turnover fee:	Charged on each transaction	0.10% incl. tax on the UCITS ETF units 0.10% incl. tax on ETN 0.10% incl. tax on equity baskets

Unit capitalisation ⁽²⁾	-2.19	-1.58	-0.17	0.63	-0.34

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.

⁽²⁾ The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

Subfund creation date: July 19, 2019.

1 Règles & méthodes comptables

Les comptes annuels sont présentés sous la forme prévue par le règlement ANC n° 2014-01, modifié.

Le compte de résultat a été établi sur la période du 1er janvier 2023 au 31 octobre 2023.

Règles d'évaluation

Les actifs du FCP sont évalués conformément aux lois et règlements en vigueur, et plus particulièrement aux règles définies par le règlement du Comité de la Réglementation Comptable n°2014-01 du 14 janvier 2014 relatif au plan comptable des organismes de placement collectif à capital variable.

Les instruments financiers négociés sur un marché réglementé sont évalués au cours de clôture constaté la veille du jour de calcul de la valeur liquidative. Lorsque ces instruments financiers sont négociés sur plusieurs marchés réglementés en même temps, le cours de clôture retenu est celui constaté sur le marché réglementé sur lequel ils sont principalement négociés.

Toutefois, les instruments financiers suivants, en l'absence de transactions significatives sur un marché réglementé, sont évalués selon les méthodes spécifiques suivantes :

- les titres de créances négociables (« TCN ») dont la durée de vie résiduelle à l'acquisition est inférieure ou égale à 3 mois sont évalués en étalant de façon linéaire sur la durée de vie résiduelle la différence entre la valeur d'acquisition et la valeur de remboursement. La société de gestion se réserve néanmoins la possibilité d'évaluer ces titres à la valeur actuelle en cas de sensibilité particulière aux risques de marché (taux, ...). Le taux retenu est celui des émissions de titres équivalents affecté de la marge de risque liée à l'émetteur ;
- les TCN dont la durée de vie résiduelle à l'acquisition est supérieure à 3 mois mais dont la durée de vie résiduelle à la date d'arrêt de la valeur liquidative est égale ou inférieure à 3 mois sont évalués en étalant de façon linéaire sur la durée de vie résiduelle la différence entre la dernière valeur actuelle retenue et la valeur de remboursement. La société de gestion se réserve néanmoins la possibilité d'évaluer ces titres à la valeur actuelle en cas de sensibilité particulière aux risques de marché (taux, ...). Le taux retenu est celui des émissions de titres équivalents affecté de la marge de risque liée à l'émetteur ;
- les TCN dont la durée de vie résiduelle à la date d'arrêt de la valeur liquidative est supérieure à 3 mois sont évalués à la valeur actuelle. Le taux retenu est celui des émissions de titres équivalents affecté de la marge de risque liée à l'émetteur.
- Les instruments financiers à terme fermes négociés sur des marchés organisés sont évalués au cours de compensation de la veille du jour de calcul de la valeur liquidative. Les instruments financiers à terme conditionnels négociés sur des marchés organisés sont évalués à leur valeur de marché constatée la veille du jour de calcul de la valeur liquidative. Les instruments financiers à terme fermes ou conditionnels de gré à gré sont évalués au prix donné par la contrepartie de l'instrument financier.

La société de gestion réalise de manière indépendante un contrôle de cette évaluation.

- Les dépôts sont évalués à leur valeur nominale, majorée des intérêts courus qui s'y rattachent.
- Les acquisitions et cessions temporaires de titres sont évaluées au prix du marché.
- Les parts et actions d'organismes de placement collectif sont évaluées à la dernière valeur liquidative connue au jour de calcul de la valeur liquidative du FCP.
- Les parts et actions de fonds d'investissement de droit étranger sont évaluées à la dernière valeur d'actif net unitaire connue au jour de calcul de la valeur liquidative du FCP.

Les instruments financiers négociés sur un marché réglementé dont le cours n'a pas été constaté ou dont le cours a été corrigé sont évalués à leur valeur probable de négociation sous la responsabilité de la société de gestion.

Les cours de change retenus pour l'évaluation des instruments financiers libellés dans une devise différente de la devise de référence du FCP sont les cours de change diffusés par le fixing WM Reuters la veille du jour d'arrêt de la valeur liquidative du FCP.

Méthode de comptabilisation des frais de négociation

La méthode retenue est celle des frais inclus.

Méthode de comptabilisation des revenus des valeurs à revenu fixe

La méthode retenue est celle du coupon encaissé.

Méthodes d'évaluation des engagements hors-bilan

Les opérations de hors-bilan sont évaluées à la valeur d'engagement.

La valeur d'engagement pour les contrats à terme fermes est égale au cours (en devise de l'opc) multiplié par le nombre de contrats multiplié par le nominal.

La valeur d'engagement pour les opérations conditionnelles est égale au cours du titre sous-jacent (en devise de l'opc) multiplié par le nombre de contrats multiplié par le delta multiplié par le nominal du sous-jacent.

La valeur d'engagement pour les contrats d'échange est égale au montant nominal du contrat (en devise de l'opc).

Frais de fonctionnement et de gestion

Ces frais recouvrent tous les frais facturés directement au FCP, à l'exception des frais de transactions. Les frais de transaction incluent les frais d'intermédiation (courtage, impôts de bourse, etc.) et la commission de mouvement, le cas échéant, qui peut être perçue notamment par le dépositaire et la société de gestion. Aux frais de fonctionnement et de gestion peuvent s'ajouter :

- des commissions de surperformance. Celles-ci rémunèrent la société de gestion dès lors que le FCP a dépassé ses objectifs.

Elles sont donc facturées au FCP ;

- des commissions de mouvement facturées au FCP ;

- des coûts liés aux opérations d'acquisition et cession temporaires de titres. Pour plus de précision sur les frais effectivement facturés au FCP, se reporter à la rubrique Frais du Document d'Information Clé pour l'Investisseur (DICI) suite à sa mise à jour annuelle.

Détermination du taux monétaire de référence (ci-après « Indice de Référence ») en fonction de la devise de la Part :

Devise de la Part	Indice de Référence
EUR	€STR
USD	Fed Funds
GBP	SONIA
CHF	SARON
SEK	STIBOR 1M
NOK	NIBOR 1M

Période de cristallisation de la commission de surperformance :

La période de cristallisation, à savoir la fréquence à laquelle la Commission de surperformance provisionnée le cas échéant, doit être payée à la société de gestion est de douze mois et coïncidera avec la date de clôture du FCP. Ces éventuelles Commission de surperformance seront prélevées à chaque début d'année civile.

Période de référence de la performance :

La période de référence de la performance est la période au cours de laquelle la performance est mesurée et comparée à celle de l'Indice de Référence augmentée de +2% (sur une base annuelle).

Calcul des frais de gestion variables (commission de surperformance)

La Commission de surperformance est basée sur la comparaison entre la performance du FCP, nette de frais de gestion, et celle de l'Indice de Référence augmentée de +2% (sur une base prorata temporis).

La Commission de surperformance est calculée et prélevée par la Société de gestion selon les modalités suivantes :

La Commission de surperformance est égale à 10% maximum de l'écart constaté le dernier jour ouvré de chaque année calendaire (date de cristallisation) entre la performance annuelle du FCP et celle de l'Indice de Référence augmentée de +2% (sur une base prorata temporis) à condition que la performance du FCP soit en conformité avec le principe du high water mark décrit ci-dessous.

Principe du High Water Mark : Toute sous-performance par rapport à la performance de l'Indice de Référence augmenté de +2% (sur une base prorata temporis) depuis le lancement du FCP doit être compensée avant que des commissions de surperformance ne deviennent exigibles.

La Commission de surperformance n'est donc définitivement perçue que si la performance du FCP à la date de cristallisation considérée est supérieure à la performance de l'Indice de Référence augmentée de +2% (sur une base prorata temporis) depuis le dernier prélèvement de la Commission de surperformance (période de référence de la performance), comme précisé ci-après.

La Commission de surperformance du FCP est calculée selon le principe suivant :

- si à la date de cristallisation considérée, l'écart entre la performance du FCP et la performance de l'Indice de Référence augmentée de +2% (sur une base prorata temporis), calculé depuis la dernière date de cristallisation à laquelle une commission de surperformance a été prélevée est positif, une commission de surperformance sera versée à la Société de Gestion et représentera 10% maximum de cet écart.
- si à la date de cristallisation considérée, l'écart entre la performance du FCP et la performance de l'Indice de Référence augmentée de +2% (sur une base prorata temporis), calculé depuis la dernière date de cristallisation à laquelle une commission de surperformance a été prélevée est négatif, aucune commission de surperformance ne sera prélevée.

Le calcul de la commission de surperformance s'effectue sur la base du montant de l'actif net sur lequel la performance a été réalisée ainsi que des souscriptions et des rachats effectués sur le FCP.

La commission de surperformance fait l'objet d'un provisionnement à chaque calcul de valeur liquidative.

Dans le cas de sous-performance, la provision pour commission de surperformance est réajustée par le biais de reprises sur provision plafonnées à hauteur des dotations.

Dans le cas d'un rachat, la quote-part de la provision pour Commission de surperformance sera cristallisée et restera en conséquence acquise à la Société de gestion.

LYXOR GREEN BOND INDICIEL

Subfund of the SICAV Multi Units France

Management company:

AMUNDI ASSET MANAGEMENT

Delegated management accounting title:

SOCIETE GENERALE

Custodian:

SOCIETE GENERALE

Statutory auditor:

PRICEWATERHOUSECOOPERS AUDIT

Subfund features

Calculation and appropriation of distributable amounts:

Acc share class: all distributable amounts are accumulated.

Investment objective:

The Sub-fund is a feeder fund of a passively managed Luxembourg fund of which the benchmark index is the Solactive Green Bond EUR USD IG index.

The Sub-fund's investment objective is identical to that of the MASTER FUND as described in the section entitled "INFORMATION CONCERNING THE MASTER FUND".

The Sub-fund's performance will differ from that of the MASTER FUND due to the fees and charges to which the Sub-fund is subject and/or any liquid assets it may hold.

The Sub-fund's objective is sustainable investment within the meaning of Article 9 of the SFDR Regulation.

Benchmark index:

Given that the Sub-fund's investment objective consists in investing in the shares of the MASTER FUND, the appropriate benchmark index for the Sub-Fund is the MASTER FUND's benchmark index.

INFORMATION CONCERNING THE MASTER FUND

INVESTMENT OBJECTIVE

The investment objective of MULTI UNITS LUXEMBOURG - Lyxor Green Bond (DR) UCITS ETF is to track the performance, whether positive or negative, of the Solactive Green Bond EUR USD IG Index (the "Index") denominated in euros, and thus gain exposure to the green bond market, while minimising the volatility of the difference between the Sub-Fund's return and that of the Index (the "Tracking Error").

For Monthly Hedged share classes, the Sub-Fund will also use a monthly currency-hedge strategy, in order to minimise the impact of the evolution of each respective share class currency against currencies of each Index Component.

The expected maximum ex-post tracking error under normal market conditions is 0.50%.

THE MASTER FUND BENCHMARK INDEX

The Index's objectives

The Index is representative of the performance of green bonds issued by investment grade entities and denominated in euros and US dollars. Green bonds are issued to finance projects that have a positive impact on the environment.

Index construction method

To be included in the Index, a bond must be a "green bond" in accordance with the Climate Bonds Initiative and meet specific criteria in respect of issuance amount (at least 300 million outstanding), maturity (at least one year), credit rating (only investment grade bonds are eligible) and the currency of denomination (only bonds denominated in EUR and USD are eligible).

The Climate Bonds Initiative is a non-profit organisation that promotes large-scale investments that serve to build a low-carbon, climate-resilient economy (more information is available at <http://www.climatebonds.net/> <http://www.climatebonds.net/>). The Climate Bonds Initiative has developed and adopted the following criteria to determine the eligibility of green bonds for inclusion in the Index:

i) Environmentally-themed (self-labelled) bonds: to be eligible, green bonds must be publicly declared by their issuers to be beneficial to the environment as indicated by a specific label. Some of the most common labels are 'green', 'climate conscience', 'climate', 'environmental', 'carbon', 'sustainability' and 'ESG' (environment, social and governance). The issuer must use the label or description in a public document for the label to be valid (e.g. in a press release, a public statement, the bond prospectus or offering document).

ii) Eligible bond structures, which include:

- Asset-linked structures (or "use of proceeds" bonds), where the bond sale proceeds are used to finance eligible green projects; and

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

- Asset-backed structures, which consist of:

(a) Project Bonds, which are eligible if backed by a green project and the bond sale proceeds are used solely to finance that same green project; and

b) Securitised Bonds, which are eligible if their sale proceeds are used to finance green projects or assets.

iii) Use of proceeds: Issuers must commit to use all bond sale proceeds (less any mandatory bond arrangement fees) to finance eligible green projects or assets. For example, if more than 5% of the proceeds are used for 'general corporate purposes' or for a project that is not considered to be green, the bond will not be eligible for inclusion.

iv) Adherence to the Climate Bonds Taxonomy: the proceeds of an eligible green bond must be used to finance eligible green assets or projects that are generally associated with one of the following sectors (as described in the Climate Bonds Taxonomy):

- Renewable and alternative energies

- Energy efficiency

- Low carbon transport

- Sustainable water

- Waste, recycling and pollution

- Sustainable agriculture and forestry

- Climate-resilient infrastructure and climate adaptation.

As described in more detail in the "Climate Bonds Taxonomy", some areas of the above sectors may be excluded, such as reducing energy consumption for fossil fuel extraction activities (in the energy efficiency category), or a landfill project without gas capture (in the waste category). In such cases the associated bonds will not be eligible for inclusion in the Index.

More information is available at <http://www.climatebonds.net/> and <https://www.climatebonds.net/standard/taxonomy>.

The MASTER FUND observes a substantial and engaging non-financial approach that promotes and has positive impacts on the energy and ecological transition. This approach involves continuously investing at least 90% of the Sub-fund's net assets in the Index's green bonds. To be eligible for the Index, green bonds must meet the aforementioned criteria of the Climate Bonds Initiative.

The MASTER FUND has obtained the Greenfin label.

Given its methodology and method of construction (as described above), the Index is consistent with the MASTER FUND's sustainable investment objective and is significantly different from a broad market index.

The limitations of the MASTER FUND's non-financial approach are described in the "Risk profile" section below.

Four requirements must be met before a green bond may be included in the Index: it must serve to finance an environmental project, its structure is seen to be sound, its use of proceeds is confirmed, and the green projects or assets to be funded are considered to comply with the Climate Bonds Initiative taxonomy. More information is available at <http://www.climatebonds.net/> <http://www.climatebonds.net/>.

The Index is market-value weighted, which means that the weight of each component is proportional to the bond's outstanding issuance amount. The Index is established using prices provided by Solactive and third-party sources. The Index is calculated daily and is constructed, administered and managed by Solactive..

The Index components are reviewed and reweighted monthly on the last business day of the month. The frequency of this reweighting increases the costs of achieving the investment objective. This rebalancing of the Index may in particular increase transaction costs.

The Index is a "total return" index (i.e., interest paid by its components is reinvested in the index).

The Index construction method, the rules that govern its reweighting and the adjustment of its components, and their impact on investment costs are described in detail at <https://www.solactive.com//www.euronext.com//www.solactive.com>.

Additional information on the Benchmark Index

More information on the Index, its composition, calculation method, periodic review and rebalancing, and overall design methodology is available at <https://www.solactive.com>:

[//www.solactive.com](https://www.solactive.com). For further information on the Index, you may refer to sub-section B 'Investments made by index sub-funds' of Section I "Investment objectives / Investment powers and restrictions" of this Prospectus, and to APPENDIX F - THE BENCHMARK INDICES REGULATION.

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

Investment strategy:

1. Strategy employed

Since the Sub-fund is a feeder fund of the MASTER FUND, it has a regulatory obligation to invest at least 85% of its assets in the MASTER FUND's units, with the objective of investing almost 100% of its net assets in the MASTER FUND's units.

The Sub-fund may hold liquid assets on an ancillary basis.

An overview of the MASTER FUND's investment strategy is provided below.

OVERVIEW OF THE MASTER FUND'S INVESTMENT STRATEGY

PLEASE NOTE: IN THIS SECTION ENTITLED "OVERVIEW OF THE MASTER FUND'S INVESTMENT STRATEGY", THE TERM "MANAGEMENT COMPANY" REFERS TO THE MASTER FUND'S MANAGEMENT COMPANY.

THE MASTER FUND'S INVESTMENT POLICY

1. The MASTER FUND's investment process

The MASTER FUND may use direct replication to achieve its investment objective. This involves investing directly in a portfolio of transferable securities or other eligible assets that will typically comprise the constituents of the financial index as set out in the relevant Appendix to the present Prospectus. It shall comply with the investment limits set out in the Prospectus.

To optimise this Direct Replication method, the MASTER FUND may use a "sampling" technique, which consists in investing in a representative selection of the financial index's constituents as shown in the relevant Appendix of this Prospectus.

This sampling technique enables a Sub-Fund to invest in a selection of transferable securities that are representative of the financial index, as shown in the relevant Appendix to this Prospectus, in proportions that do not reflect their weight in the financial index, and may even invest in securities that are not constituents of the financial index.

Using the Direct Replication method, the MASTER FUND may also, to a limited extent and mainly to achieve the objectives set forth under points (i) and (ii) below, engage in transactions involving derivative financial instruments (DFI), including futures, OTC swaps, hedging swaps, forward contracts, non-deliverable forwards, and spot forex transactions, in order to:

- Reduce tracking error, or*
- Optimise cash management, or*
- Reduce transaction costs or invest in illiquid securities or securities which are unavailable for market or regulatory reasons, or*
- Help achieve the investment objective, for example by investing more efficiently in the financial index or in its components, or*
- For any other reason the Administrators believe may be beneficial to the MASTER FUND.*

If the MASTER FUND enters into a DFI contract, the counterparty to the latter must be a first class financial institution that specialises in that type of transaction. Such counterparty shall have no discretion over the composition of the MASTER FUND's portfolio or over the assets that underlie the derivative financial instruments.

To ensure transparency on the use of the Direct Replication method (whether the financial index is fully replicated or a sampling technique is used to limit replication costs) and on its impact on the assets held in the MASTER FUND's portfolio, investors may obtain up-to-date information on the MASTER FUND's assets on the page dedicated to the MASTER FUND on Amundi's website at www.amundi.com. The frequency of updates and/or the date on which the above information is updated are also provided on the aforementioned page.

The MASTER FUND may also, on an ancillary basis, hold cash and cash-equivalent assets within the limits set forth in this Prospectus. Specific investment restrictions

The MASTER FUND will not invest more than 10% of its assets in the units or shares of other UCITS funds. No investment will be made in non-UCITS funds.

More information on the Sub-fund's investment policy may be found in THE MASTER FUND's prospectus, in the "Investment restrictions" sub-section of section E (INVESTMENT TECHNIQUES), Chapter I / Investment objectives / Investment powers and restrictions.

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

INVESTMENT TECHNIQUES

The MASTER FUND will engage in no repurchase, reverse repurchase or buy-sell back transactions. It may engage in securities lending and borrowing transactions to a maximum of 25% of net assets.

Risk profile:

Shareholders' money will be invested mainly in units of the MASTER FUND.

The Sub-fund's risk profile is identical to that of the MASTER FUND (which is indicated below).

The MASTER FUND's risk profile

Capital risk

The principal invested in the MASTER FUND is not guaranteed. Shareholders may therefore lose all or part of their initial investment.

Risk that the MASTER FUND will not achieve its investment objective

There can be no guarantee that the MASTER FUND will achieve its investment objective. There is no certainty that the Management Company will be able to allocate the MASTER FUND's assets profitably and the MASTER FUND may suffer losses even though some financial markets are posting positive returns.

Securities lending risk

Regarding securities lending transactions, investors must be aware that (A) in the event of default by the borrower of the securities lent by the MASTER FUND, if the Lending Agent does not return the securities or compensate the MASTER FUND pursuant to the indemnity clauses set forth in the Contract with the Lending Agent there is a risk that the collateral received will be realised at a lower value than that of the securities lent, whether due to incorrect valuation, unfavourable market developments, a deterioration of the issuer's credit rating, or the illiquidity of the market in which the collateral is traded; that (B) the reinvestment of cash collateral may (i) create leverage with inherent risks and the risks of loss and/or volatility, (ii) entail a market risk that incompatible with the MASTER FUND's objectives, or (iii) generate a return that is less than the amount of the collateral to be returned; and that (C) the late return of the securities lent may impede the MASTER FUND's ability to fulfil its delivery obligations when selling the securities.

Low diversification risk

Investors may be exposed to an index or strategy that is based on a limited number of underlying securities and/or which represents a specific region/sector/strategy and which may not benefit from as much diversification as a broader index/strategy that is exposed to more than one region/sector/strategy and/or a larger number of underlying securities. This may mean higher volatility than a diversified index/strategy and a higher risk of illiquidity if liquidity decreases or of the suspension of trading in one or more components of the index or strategy.

Risks related to sampling and optimisation techniques

It may be costly and difficult to replicate the performance of the Index/strategy by investing in each of its components. Some components may not be traded due to, for example, international embargoes or market trading suspensions. The Sub-Fund Manager may therefore use optimisation and/or sampling techniques. These sampling techniques consist of investing in a selection of representative components of the Index/strategy (and not in all securities), and in proportions that differ from those of the Index/strategy. Regarding optimisation techniques, the Sub-Fund may invest in securities other than Index/strategy components and in derivatives. The use of these techniques may increase in the ex-post tracking error and cause the Sub-fund's performance to deviate from that of the Index/strategy.

Liquidity risk of the MASTER FUND on the primary market

The MASTER FUND's liquidity and/or value may be adversely affected in the event that the MASTER FUND (or a counterparty to a derivative financial instrument transaction) rebalances its exposure and the underlying financial markets are closed, if transactions are restricted, or if bid/ask spreads are abnormally large. The inability to execute orders due to low trading volume may also disrupt the subscription, conversion or redemption of Shares.

Secondary market liquidity risk

Investors are invited to consult section V of the main part of this prospectus: "Secondary Market for UCITS ETF Share Classes/Funds".

Currency risk

The MASTER FUND may be exposed to currency risk if (i) the Benchmark Index/strategy components are denominated in a currency other than that of the investor's Share Class, or if (ii) a Share Class of the MASTER FUND is listed on an exchange and/or on a multilateral trading facility in a currency other than that of the Benchmark Index/strategy components. Investors may therefore be exposed to fluctuations in the exchange rate between the currency of their investment and that of each Benchmark Index/strategy component. These fluctuations may adversely affect the performance of the Shareholder's investment.

Investors should be aware that when their investment currency is not the Benchmark Index's base currency, the performance of their investment may differ from that of the Benchmark Index due to exchange rate fluctuations. For example, the performance of a Shareholder's investment may be negative although the value of the Benchmark Index has increased.

Share Class currency hedging risk

To fully or partially hedge the currency risk of a hedged Share Class, the MASTER FUND may use a hedging strategy to try to reduce the impact of fluctuations of the Share Class's currency relative to those of some or all of the Benchmark Index/strategy components. However, the MASTER FUND's hedging strategy may be imperfect due to the frequency of reweighting and the instruments used. The Share Class's Net Asset Value may therefore be adversely affected by increases or decreases in exchange rates. Furthermore, hedging costs may also decrease a Share Class's Net Asset Value. The use of a currency hedging strategy for a given Share Class may significantly limit the ability of its shareholders to benefit from the appreciation of one or more currencies of the Benchmark/strategy components relative to the Share Class's currency.

Interest-rate risk

The price of a bond or other debt security is dependent on changes in interest rates. In general, the price of a bond rises when interest rates fall, and falls when interest rates rise. Interest-rate risk is generally higher for long-term or long-maturity investments. Changes in interest rates may therefore increase or decrease the MASTER FUND's net asset value.

Credit risk

If the issuer of a debt security (including convertible bonds) to which the MASTER FUND is directly or indirectly exposed is no longer able to meet its debt obligations, the value of this security may decrease, and thus decrease the MASTER FUND's net asset value. The deterioration of the credit quality of one or more issuers of debt securities to which the MASTER FUND is directly or indirectly exposed may decrease the value of the securities and therefore adversely affect the MASTER FUND. The MASTER FUND may in particular be exposed to speculative bonds with non-investment grade ratings. If an issuer of such a bond defaults or becomes insolvent, its bonds may be exposed to a risk of loss that is higher than the risk to which a bond with a higher credit rating is exposed.

Risk of using derivatives

The MASTER FUND may use Financial Contracts, including forward contracts, listed and OTC options and swaps. Exposure to such Financial Contracts may involve considerable risk. Since the amount of money required to establish a position in a Financial Contract may be much less than the exposure obtained under the contract, each transaction involves "leverage". The market value of a Financial Contract is quite volatile and may therefore vary considerably. Contracts traded over the counter may also be less liquid than transactions on an organised market, where the volumes traded are generally quite higher, and the prices of these contracts may consequently be more volatile. These variations of value and price may therefore adversely affect the MASTER FUND's net asset value.

Counterparty risk

The MASTER FUND is particularly exposed to counterparty risk as a result of its use of over-the-counter derivatives contracts and efficient portfolio management transactions. It is exposed to the risk that a counterparty with which it has entered into a contract or transaction may go bankrupt or default on a settlement or other obligation. If the counterparty defaults, the Financial Contract may be terminated prematurely and the MASTER FUND may have to enter into another contract with a third-party counterparty, at the market conditions that prevail at that time. This risk could cause losses for the MASTER FUND and prevent it from achieving its investment objective. In compliance with the regulations that apply to FCP funds, exposure to counterparty risk may not exceed 10% of the fund's total assets per counterparty.

Collateral management risk

The counterparty risk arising from investments in OTC derivative financial instruments is generally mitigated by the transfer or pledging of collateral to the MASTER FUND. However, transactions may not be fully collateralised. Fees and returns to which the MASTER FUND is entitled may not be backed by collateral. If a counterparty defaults, the MASTER FUND may be obliged to sell non-cash collateral at the prevailing market price. In such a case, the MASTER FUND could incur a loss due to, inter alia, inadequate valuation or monitoring of the collateral, unfavourable market movements, a deterioration in the credit rating of the collateral issuer, or illiquidity in the market on which the collateral is traded. Difficulty in selling collateral may delay or restrict the MASTER FUND's ability to satisfy redemption orders.

Risk of exposure to emerging and developing markets

Exposure to emerging markets entails a greater risk of loss than does investment in developed markets, for example due to the higher volatility of emerging markets and the greater risk of economic and/or political instability.

Controversy risk

Companies that have met the Index selection criteria, and which have therefore been included in the Index, may be unexpectedly or suddenly affected by a serious controversial event that has an adverse impact on their market value and consequently on the MASTER FUND's performance. This can happen when a company's previously undiscovered activities or practices are suddenly brought to light, which may trigger negative investor sentiment and reduced market value. When such a company is a component of the Index, it may remain in the Index and therefore continue to be held by the MASTER FUND until the next scheduled rebalancing. When the Index excludes this company, the price of its securities may have already fallen and not yet recovered, and the MASTER FUND may therefore sell these securities at a relatively low price.

The limitations of the non-financial approach

The MASTER FUND's non-financial approach is largely based on third-party data which may be incomplete, inaccurate or unavailable from time to time. The Management Company is therefore dependent on the quality and reliability of this information. Investments in green bonds may also induce sector biases in the global bond market.

Sustainability risk

In order to manage the MASTER FUND's sustainability risks, the Management Company relies on the Index administrator, Solactive, which integrates sustainability risks via the Index methodology described above. This integration of these risks has a direct impact on the Index's investment universe. However, there is no absolute assurance that all sustainability risks will be eliminated, and the occurrence of such risks may have an adverse impact on the value of the Index's underlying assets. More information on the Index methodology can be found at <https://www.solactive.com/https://www.solactive.com>. Additional information may be also found in the "Sustainability Disclosures" section of the MASTER FUND's Prospectus.

Eligible investors and typical investor profile:

The Sub-fund is open to all investors.

The Sub-fund is intended for investors who have relatively little aversion to risk. The level of risk exposure depends mainly on the market configurations of the asset classes and their prospective returns.

Investors should therefore note that the proportional exposure to the MASTER FUND's asset classes may vary considerably in accordance with their cycle of over- and under-valuation.

The amount that can be reasonably invested in the Sub-fund depends on each investor's personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, and their cash requirements at present and for the next three years, as well as whether or not they wish to take risks or prefer a cautious investment approach.

Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to this Sub-fund's risks. All investors are therefore asked to consider their specific situation with the help of their usual investment advisor.

The recommended minimum investment period is at least three years.

"U.S. Persons" (as this term is defined in the COMMERCIAL INFORMATION section below) are prohibited from investing in the Sub-fund.

Subfund life on the year under review

None.

Management report of the directors board

Ladies and gentlemen,

We have gathered you at a general meeting to report on the activity of your company during its fiscal year 2023 and to submit for your approval the accounts closed at October 31, 2023. Before the presentation of the accounts, a brief presentation will be made to you on the economic situation and the management policy of the subfund during this fiscal year.

The LYXOR GREEN BOND INDICIEL aims to track the Solactive Green Bond EUR USD IG Index, a benchmark of EUR and USD denominated investment-grade green bonds issued by sovereigns, supranationals, development banks and corporates. Green bonds are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts. The index constituents are labelled green bonds defined as eligible for index inclusion by the Climate Bonds Initiative, an independent not-for-profit organisation dedicated to the promotion of investments for a low carbon and climate-resilient economy. Details of the index methodology may be found on www.solactive.com. Lyxor ETFs are efficient investment vehicles listed on exchange that offer transparent, liquid and low-cost exposure to the underlying benchmark index.

From October 2022 to October 2023, the subfund performance is -1.76%. That of the benchmark of -0.81% with a tracking error of 0.08%.

The performance achieved over the period does not prejudice the future results of the subfund.

Main movements in the portfolio during the year

Securities	Movements ("Accounting currency")	
	Acquisitions	Transfers
MULTI UNITS LUXEMBOURG LYXOR GREEN BD UCITS ETF	1,392,497.85	66,754.37

Transparency of securities financing transactions and the reuse of financial instruments under the SFTR regulation (in the UCI's accounting currency)

Over the course of the reporting period, the UCI was not involved in any transactions governed by the Securities Financing Transactions Regulation (SFTR).

Specific information

- The legal documentation of the sub-fund provides that it is invested in units (or shares, if any) of its master UCI in full and permanently and indicates, for indirect costs, the maximum subscription and redemption commission rates, and management fees for this master UCI.

In accordance with the regulations and over the past period, the master UCI has in practice presented rates consistent with those mentioned in the information notice and included in the “Management fees” paragraph.

Group funds

Details of the financial instruments held by the Fund which are issued by the Fund Manager or its associates will be found in the Auditor’s Report for the latest financial period (enclosed herein) under the following headings:

- 3. Further details

- 3.9.3. Group financial instruments held in the portfolio in the annual financial statements for the year ended, attached below.

Calculation of overall risk

• Method for calculating the amount committed

Futures are recognised at their market value as off-balance sheet commitments, at the settlement price. Options are converted into their underlying equivalent. OTC interest rate swaps are valued on the basis of the nominal value, plus or minus the corresponding estimation difference.

Voting right

Since the sub-fund is a feeder fund (that is to say, invested in full and permanently in units of a single master UCI, and incidentally in liquidity), the voting policy of its master fund should be considered.

You can refer to this policy and to the relative voting rights exercise report on the Management Company’s website: www.amundi.com, “about Amundi”.

SFDR Regulations and Taxonomy:

Article 8 – Passive Portfolio Management – under the Taxonomy

In accordance with its investment objective and policy, the Fund promotes environmental characteristics within the meaning of Article 6 of the Taxonomy Regulation. It may partially invest in economic activities that contribute to one or more of the environmental objective(s) set out in Article 9 of the Taxonomy Regulation. However, the Fund does not currently make any commitment in terms of a minimum proportion.

The Taxonomy aims to identify economic activities considered to be environmentally sustainable. The Taxonomy identifies such activities according to their contribution to six major environmental objectives: (i) climate change mitigation, (ii) climate change adaptation, (iii) the sustainable use and protection of water and marine resources, (iv) the transition to a circular economy (waste, prevention and recycling) (v) pollution prevention and control, and (vi) the protection and restoration of biodiversity and ecosystems.

In order to determine an investment’s degree of environmental sustainability, an economic activity is considered to be environmentally sustainable where it contributes substantially to one or more of the environmental objectives set out in the Taxonomy Regulation, where it does no significant harm (the “DNSH” principle) to one or more of these environmental objectives, where it is carried out in accordance with the minimum safeguards provided for in Article 18 of the Taxonomy Regulation and where it complies with the technical screening criteria established by the European Commission in accordance with the Taxonomy Regulation.

In accordance with the current iteration of the Taxonomy Regulation, the Asset Manager ensures that investments do no significant harm to any other environmental objective by implementing exclusion policies covering issuers with controversial environmental and/or social and/or governance practices.

Notwithstanding the preceding, the Do No Significant Harm principle is applied solely to the underlying investments incorporating European Union criteria for environmentally sustainable economic activities.

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

The investments underlying the remaining portion of this financial product do not incorporate European Union criteria for environmentally sustainable economic activities.

Although the Fund may already hold investments in economic activities qualified as sustainable activities without currently undertaking to observe a minimum proportion, the Asset Manager is making every effort to disclose the proportion invested in sustainable activities as soon as it is reasonably possible after the entry into force of the Regulatory Technical Standards governing the content and presentation of disclosures in accordance with Articles 8(4), 9(6) and 11(5) of the Disclosure Regulation, as amended by the Taxonomy Regulation.

This effort will be gradually and continuously rolled out, incorporating the requirements of the Taxonomy Regulation in the investment process as soon as it is reasonably possible. As a result, a minimum degree of portfolio alignment with sustainable activities will be disclosed to investors at that time.

Until then, the degree of alignment with sustainable activities will not be disclosed to investors.

Once the data are fully available and the appropriate calculation methodologies finalised, the description of the proportion of underlying investments in sustainable activities will be disclosed to investors. This information, along with information on the proportion of enabling and transitional activities, will be indicated in a subsequent version of the prospectus.

Article 8 – Passive Portfolio Management – under Article 11 of SFDR

The subfund is classified in accordance with Article 8 of Regulation EU 2019/2088 known as “Disclosure” and aims to promote environmental and/or social characteristics.

During the period, the Manager of Sicav continuously promoted the environmental and/or social characteristics:

- Via the methodology of the replicated index which aims to obtain an ESG score higher than the ESG score of its parent index or of the universe eligible for the index, and.
- In its investment process, excluding all issuers mentioned in the exclusion list of the Responsible Investment Policy (unless specifically specified in the subfund Prospectus).

The compartment promotes the environmental characteristics as described in Article 8 of the Disclosure Regulation and may, during the relevant period, have partially invested in economic activities that have contributed to an environmental objective within the meaning of the Disclosure Regulation.

As required by Article 50 (2 SFDR) of COMMISSION DELEGATED REGULATION, information on the environmental or social characteristics promoted by the financial product is available in an annex to this report.

Regulatory information

Broker and counterparty selection procedure

Our Asset Manager and its "Trading" subsidiary attach great importance to the selection of our transaction service providers, both in terms of brokers and counterparties.

Its selection methods are as follows:

- Brokers are selected by geographical area, then by business line. Counterparties are selected by sector.
- Brokers and counterparties are given a quarterly internal rating. The divisions of our company involved in the rating process are directly concerned by the services provided by brokers and counterparties. Our company's "Trading" subsidiary organises and determines this rating on the basis of scores given by each team manager concerned according to the following criteria:

For teams of portfolio managers, financial analysts, and strategists:

- General business relationship, understanding of needs, relevance of contacts,
- Quality of market and opportunity advice, following of this advice,
- Quality of research and publications,
- Investment universes covered, on-site meetings with companies and their management teams.

For trader teams:

- Quality of staff, market knowledge, and information about companies, confidentiality,
- Price quote,
- Quality of execution, and
- Quality of transaction processing, connectivity, technical expertise, and responsiveness.

Our company's 'Compliance' and 'Middle Office' divisions have veto power.

Accreditation of a new transaction service provider (broker or counterparty)

The "Trading" subsidiary is responsible for researching a provider's accreditation and obtaining approval from the Risk and Compliance divisions. Once the transaction service provider (broker or counterparty) has been approved, it is rated during the following quarter.

Oversight committees for transaction service providers (brokers and counterparties)

These oversight committees meet every quarter, under the aegis of the Head of the "Trading" subsidiary.

Their objectives are as follows:

- Approve the services provided during the period under review and the new providers selected for the following quarter,
- Decide which service providers will belong to a group that will be entrusted with a certain number of transactions,
- Define prospects for business.

With this in mind, the oversight committees review statistics and ratings assigned to each service provider and make the resulting decisions.

Brokerage Fee Report

A brokerage fee report is made available to unitholders, and can be consulted online at: www.amundi.com.

Fund compliance with environmental, social, and governance quality (ESG) criteria

AMUNDI uses targeted exclusion rules as a basis of its fiduciary responsibility. They are applied in all active management strategies and consist in excluding companies that are not compliant with either our own ESG policies or the international agreements and internationally-recognised or national regulatory frameworks. These targeted exclusions are implemented subject to compliance with the applicable laws and regulations, unless otherwise stipulated in dedicated products or services contracts.

AMUNDI excludes the following activities:

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

All direct investment in companies involved in the production, sale, or storage of, or services for, anti-personnel mines or cluster bombs, pursuant to the Ottawa Treaty and the Oslo Convention on Cluster Munitions;

Companies that produce, store, or sell chemical, biological, and/or depleted-uranium weapons;

Companies that seriously and repeatedly violate one or more of the Ten Principles of the UN Global Compact without implementing credible corrective measures.

These issuers receive a “G” rating on the AMUNDI scale. In addition, AMUNDI implements specific sectoral exclusions targeting the coal and tobacco industries. These sectoral exclusions apply to all active management strategies that give AMUNDI full discretion over its portfolio management.

Coal Policy

AMUNDI excludes:

- Companies developing or planning to develop new thermal coal capacity within the entire value chain (producers, extractors, power plants, transport infrastructure);

Companies whose income is over 25% the result of thermal coal mining;

- Companies that extract 100 MT or more thermal coal annually with no intention of reducing these quantities;
- All companies that derive over 50% of their total income before analysis from thermal coal mining and coal-fired power generation;
- All coal-fired power generation and coal mining companies with a threshold of 25% to 50% and a deteriorated energy transition score

Application in passive management:

• Passive ESG funds

All ETF and ESG index funds (with the exception of highly-concentrated indices) implement AMUNDI’s policy of excluding the coal sector wherever possible.

• Passive non-ESG funds

In passive management, it is a fiduciary duty to replicate an index as faithfully as possible.

Limited flexibility is afforded to portfolio managers, which are required to meet contractual objectives to achieve passive management that is entirely in line with the requested benchmark index.

Consequently, AMUNDI’s index funds and ETFs that replicate standard (non-ESG) benchmark indices cannot systematically apply sectoral exclusions.

At the same time, in the context of securities excluded from the “thermal coal policy” in AMUNDI’s active investment universe but that may be present in non-ESG passive funds, AMUNDI has reinforced its voting and commitment activities, which may translate to a “nay” vote on the management of the companies in question.

Tobacco policy

Since 2018, AMUNDI has limited its ESG ratings for tobacco companies to “E”, on a scale of A to G (with G-rated companies excluded), in order to take account of concerns, not just around public health, but also the human rights violations, poverty, environmental consequences, and considerable economic cost associated with tobacco, evaluated at over \$1,000 billion per year worldwide, according to World Health Organisation estimates. The reason for this limit is to penalise investment in this type of company, which must be offset by investment in more virtuous companies. AMUNDI’s policy applies to the entire the tobacco sector, including suppliers, cigarette manufacturers, and distributors.

In May 2020, AMUNDI became a signatory to the Tobacco-Free Finance Pledge, thereby reinforcing its tobacco exclusion policy. AMUNDI implements the following rules:

Exclusion rules: companies manufacturing finished tobacco products are excluded (application thresholds: income of over 5%).

Limitation rules: Companies involved in the manufacture, supply, and distribution of tobacco are limited to an ESG rating of E (on a scale of A to G) (thresholds: income of over 10%).

Further information on how AMUNDI takes ESG criteria into account is available at <https://legroupe.amundi.com>

* Active management: excluding indexed funds and ETFs subject to constraints by their benchmark index

Remuneration policy

1. Remuneration policy and practices of the AIFM/Management company

The remuneration policy implemented by Amundi Asset Management is compliant with the rules in terms of remuneration specified in the Directive 2011/61/UE of the European Parliament and of the Council of June 8th 2011 on Alternative Investment Fund Managers (the "AIFM Directive"), and in the Directive 2014/91/UE of July 23rd 2014 on undertakings for collective investment in transferable securities (the "UCITS V Directive"). These rules, about remuneration policies and practices, have for objective to promote sound and effective risk management of fund managers and the funds they manage.

Moreover, the remuneration policy is compliant with Regulation (EU) 2019/2088 ("SFDR"), integrating sustainability risk and ESG criteria in Amundi control framework, with responsibilities spread between the first level of controls performed by the Investment teams and second level of controls performed by the Risk teams, that can verify the compliance with ESG objectives and constraints of a fund at all time.

This policy is incorporated within the framework of the remuneration policy of Amundi reviewed each year by its Remuneration Committee. The latter checked the application of the remuneration policy in relation to the 2021 fiscal year, its compliance with the AIFM/UCITS Directives' principles and approved the policy applicable for the 2022 exercise at its meeting held on February 1st 2022.

In 2022, the implementation of the Amundi remuneration policy was subject to an internal, central and independent audit, driven by the Amundi Internal Audit.

1.1 Amounts of remuneration paid by the Management companies to its employees

In 2022, Amundi Asset Management's headcount increased due to the integration of Lyxor's employees.

During fiscal year 2022, the total amount of compensation (including fixed, deferred and non-deferred variable compensation) paid by Amundi Asset Management to its employees (1 673 employees at December 31st 2022) is EUR 202 172 869. This amount is split as follows:

- Total amount of fixed remuneration paid by Amundi Asset Management in 2022: EUR 134 493 396, which represents 67% of the total amount of compensation paid by Amundi Asset Management to its staff, were in the form of fixed remuneration.
- Total amount of variable compensation deferred and non-deferred paid by Amundi Asset Management in 2022: EUR 67 679 473, which represents 33% of the total amount of compensation paid by Amundi Asset Management to its staff, were in this form. The entire staff is eligible for variable compensation.

Additionally, some 'carried interest' was paid by Amundi AM with respect to fiscal year 2022, and is taken into account in the total amount of bonus referred to here above.

Of the total amount of remuneration (fixed and variable compensation deferred and non-deferred) paid during the fiscal year, EUR 19 393 477 were paid to the 'executives and senior managers' of Amundi Asset Management (31 employees at December 31st 2022), and EUR 16 540 119 were paid to the 'senior investment managers' whose professional activities have a material impact on Amundi Asset Management's risk profile (50 employees at December 31st 2022).

1.2 Alignment of remuneration policy and practices with risk profile of the AIFs/UCITS

The Amundi Group has adopted and implemented remuneration policy and practices compliant with the latest norms, rules, and guidelines issued from the regulatory authorities for its management companies (AIFM/UCITS).

The Amundi Group has also identified all of its 'Identified Staff', that include all the employees of the Amundi Group having a decision authority on the UCITS/AIFM management companies or the UCITS/AIFs managed and consequently likely to have a significant impact on the performance or the risk profile.

The variable remuneration awarded to the Amundi Group staff takes into account the performance of the employee, its business unit and the Amundi Group as a whole, and is based on quantitative and qualitative criteria as well as the respect of sound risk management rules.

The criteria taken into account for performance assessment and remuneration award depends on the nature of the employee's functions :

1. Management and selection of AIFs/UCITS functions

Quantitative criteria:

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

- IR/Sharpe over 1, 3, 5 years
- Gross/absolute/relative performance of the investment strategies (based on GIPS composites) over 1, 3, 5 years, outlook mainly focused on 1 year, adjusted with long-term figures (3,5 years)
- Performance risk adjusted based on IR/Sharpe over 1, 3, 5 years
- Competitive positioning through Morningstar rankings
- Net inflows / Successful requests for proposals, mandates
- Performance fees generation
- ESG rating of the funds according to different providers when applicable (Morningstar, CDP...)
- Respect of ESG beat the benchmark, ESG exclusion policies and climate transition index

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Quality of management
- Innovation/product development
- Collaboration/Sharing of best practices
- Commercial engagement – including the ESG component of commercial effort and flows
- ESG
 - o Compliance with ESG policy and participation to the ESG and net-zero offering
 - o Integration of ESG into investment processes
 - o Capacity to promote and project ESG knowledge internally and externally
 - o Extent of proposition and innovation in the ESG space
 - o Demonstrates capacity to manage well the combination of risk return and ESG (the risk and ESG adjusted return)

2. Sales and marketing functions

Quantitative criteria:

- Net inflows, notably on ESG and impact denominated products
- Revenues
- Gross Inflows
- Client base development and retention; product mix
- Number of commercial activities per year, notably prospection activities
- Number of clients approached on their net zero strategy

Qualitative criteria:

- Compliance with risk policy, compliance and legal rules
- Joint consideration of Amundi's interests and of client's interests
- Securing/developing the business
- Client satisfaction
- Quality of management
- Cross-functional approach and sharing of best practices
- Entrepreneurial spirit
- Capacity to explain and promote ESG policies and capabilities as well as solutions of the firm

3. Control and support functions

For control and support functions, performance assessment and remuneration award are independent from the performance of the business they oversee.

Common criteria taken into account are:

- Mainly criteria related to the meeting of objectives linked to their functions (risk management, quality of controls, completion of projects, tools and systems improvement etc.)

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

- When financial criteria are used, these are mainly related to management/ optimization of expenses.

The above-mentioned performance criteria, and specifically those applicable to Identified staff in charge of the management of AIFs/UCITS, comply with the applicable regulation as well as to the AIF's/UCITS investment policy. These internal rules of Amundi Group contribute to a sound and effective risk management.

Furthermore, Amundi Group has adopted and implemented, for its entire staff, measures aiming to align remuneration with long-term performance and risks in order to avoid conflicts of interest.

In this respect, notably:

- The deferral policy has been adapted to comply with the AIFM and UCITS V Directives' requirements.
- The deferred portion of variable compensation for identified staff members is awarded at 100% in instruments indexed on the performance of a representative basket of AIFs and/or UCITS funds.
- The actual payment of the deferred portion is linked to the financial situation of Amundi Group, to the continued employment within the group and to a sound and effective risk management over the vesting period.

Effective portfolio management techniques and derivative financial instruments

None.

1 Accounting rules and methods

The financial statements are presented in the form provided by the regulation ANC No. 2014-01, amended.

Valuation rules

The Sub-fund's assets are valued in accordance with applicable laws and regulations and most notably Regulation No. 2014-01 of 14 January 2014 of the Comité de la Réglementation Comptable (the Accounting Regulations Committee), which applies to the chart of accounts for undertakings for collective investment in transferable securities.

Financial instruments traded on a regulated market are valued at the closing price recorded on the day prior to the calculation of the net asset value. If these financial instruments are traded on several regulated markets at the same time, the closing price used is that recorded on the regulated market on which they are principally traded.

However, in the absence of significant trading on a regulated market, the following financial instruments are valued using the following methods:

- Negotiable debt securities ("NDS") with a remaining life upon acquisition that is less than or equal to three months are valued by applying the difference between the acquisition value and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life of more than three months upon acquisition but less than or equal to three months at the net asset value calculation date are valued by applying the difference between the most recent valuation and the redemption value on a straight-line basis over the remaining life. However, the Management Company reserves the right to value these securities at their current value if it deems that they are particularly exposed to market risks (interest rates, etc). The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer;
- NDS with a remaining life at the net asset value calculation date that exceeds three months are valued at their current value. The rate applied is that of issues of equivalent securities adjusted by the risk margin relating to the issuer.
- Financial futures traded on organised markets are valued at the clearing price on the day prior to the calculation of the net asset value. Options traded on organised markets are valued at their market price on the day prior to the calculation of the net asset value. Forward contracts and over-the-counter options are valued at the price quoted by the counterparty. The Management Company monitors these prices independently.
- Bank deposits are valued at their nominal value plus accrued interest.
- Warrants, short and medium-term notes (bons de caisse), promissory notes and mortgage notes are valued under the Management Company's responsibility at their most likely trading value.
- Securities financing transactions are valued at the market price.
- Shares and units in UCITS under French law are valued at the last known net asset value on the day the Sub-fund's net asset value is calculated.
- Shares and units in foreign investment funds are valued at the last known unitary net asset value at the date the Sub-fund's net asset value is calculated.
- Financial instruments traded on a regulated market and for which no price has been quoted or whose price has been corrected, are valued under the Management Company's responsibility at their most likely trading value.
- The exchange rates used to value financial instruments denominated in a currency other than the Sub-fund's base currency are the WM Reuters fixing rates published on the day the Sub-fund's net asset value is calculated.

Accounting method for trading expenses

Trading expenses are excluded from the initial cost of transactions.

Accounting method for income from fixed-income securities

Income from fixed-income securities is recognised on a cash basis.

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

Methods for evaluating off-balance sheet commitments

Off-balance sheet commitments are evaluated at their commitment value.

The commitment value for futures contracts is equal to the price (in the currency of the UCIT) multiplied by the number of contracts multiplied by the nominal amount.

The commitment value for options contracts is equal to the price of the underlying security (in the currency of the UCIT) multiplied by the number of contracts multiplied by the delta multiplied by the nominal amount of the underlying security.

The commitment value for swap contracts is equal to the nominal amount of the contract (in the currency of the UCIT).

Operating and management costs

These fees include expenses that are charged directly to the Sub-fund, except for transaction expenses. Transaction expenses include intermediary fees (brokerage, stock market taxes etc.) and any transaction fee that may be charged, usually by the depositary or the Management Company.

For this Sub-fund the following fees may be charged in addition to the operating and management fees (see table below):

- incentive fees, which the Sub-fund pays to the Management Company when the Sub-fund exceeds its objectives
- account activity charges, which are charged to the Sub-fund.

For more information on the fees or expenses that are charged to the Sub-fund, see the Fees and Charges section of the Key Investor Information Document (KIID).

Fees charged to the SUB-FUND	Base	Maximum charge
Asset management fees and administration fees that are external to the Management Company (auditor, depositary, fund distribution and legal fees) including tax ⁽¹⁾	Net assets	0.45% incl. tax per annum
Maximum indirect management fees (management fees and charges) ⁽²⁾	Net assets	0.4% incl. tax per annum
Incentive fee	Net assets	N/A
Account activity charge	Charged on each transaction	N/A

⁽¹⁾ includes all fees and charges except for transaction expenses, incentive fees and fees associated with investment in UCITS or alternative investment funds.

⁽²⁾ includes the maximum indirect management fees (i.e. management fees and charges) charged to the MASTER FUND.

Fees charged to the MASTER FUND	Base	Maximum charge
Asset management fees and administration fees that are external to the Management Company (auditor, depositary, fund distribution and legal fees) including tax ⁽¹⁾	Net assets	0.4% incl. tax per annum

Appendix

SFDR information

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The product promoted environmental and/or social characteristics by reproducing, among other things, an index composed of bonds qualified as “green bonds” according to MSCI ESG research.

The Sub-fund promoted the promotion of environmental and/or social characteristics by reproducing, among other things, a Solactive Green Bond EUR USD IG index meeting the minimum standards for EU Paris-Aligned Benchmarks (PAB) under Regulation (EU) 2019/2089 amending Regulation (EU) 2016/1011.

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

As of the end of the period, the portfolio holds **99.24%** green bonds.

● *...and compared to previous periods?*

During the previous period, the nominal green bond value for the benchmark index was 67.69%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments were to invest in companies that met two criteria:

1. follow best environmental and social practices; and
2. do not generate products and services that harm the environment and society.

The definition of a “best performing” company is based on a proprietary Amundi ESG methodology that is designed to measure a company’s ESG performance. To be considered as the “best performing”, a company must obtain the best rating among the top three (A, B or C, on a rating scale ranging from A to G) in its sector on at least one important environmental or social factor. Significant environmental and social factors are identified at the sector level. The identification of these factors is based on Amundi’s ESG analysis framework, which combines extra-financial data with a qualitative analysis of the related sector and sustainability themes. Factors identified as material have a contribution of more than 10% to the overall ESG score. For the energy sector, for example, material factors are: emissions and energy, biodiversity and pollution, health and safety, local communities and human rights.

In order to contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticides, single-use plastic production) that are not compatible with these criteria.

The sustainable nature of an investment is assessed at the level of the investee company. Concerning external UCIs, the criteria for determining the sustainable investments that these underlying UCIs may hold and their objectives depend on each company’s own management approach.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

To ensure that sustainable investments do not cause significant harm, Amundi uses two tests:

- The first “DNSH” (“Do No Significant Harm”) test is based on the monitoring of the mandatory indicators of the Main Negative Impacts in Annex 1, Table 1 of Delegated Regulation (EU) 2022/1288 when reliable data is available (for example, the GHG intensity or greenhouse gas intensity of beneficiary companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. The carbon intensity of beneficiary companies is not within the sector’s last decile). Amundi already considers specific indicators of the Main Negative Impacts in its exclusion policy as part of the Amundi Responsible Investment Policy (e.g. exposure to controversial weapons). These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the principles of the UN Global Compact, coal and tobacco.
- In addition to the specific sustainability factors covered by the first filter, Amundi has defined a second filter that does not consider the mandatory indicators of the Main Negative Impacts above, so as to verify that a company’s overall environmental or social performance is not worse than other companies in its sector, corresponding to an environmental or social score of E or higher according to Amundi’s ESG rating system.

Concerning external UCIs, the consideration of the “do no significant harm” principle and the impact of sustainable investments depends on each underlying UCI manager’s own methodologies.

How were the indicators for adverse impacts on sustainability factors taken into account?

As detailed above, the negative impact indicators were taken into account in the first DNSH filter (Do No Significant Harm):

This is based on the monitoring of the mandatory indicators of the Main Negative Impacts in Appendix 1, Table 1 of Delegated Regulation (EU) 2022/1288 when reliable data is available via the combination of the following indicators and specific thresholds or rules:

- has a CO2 intensity that is not within the last decile of companies in the sector (only applicable to high-intensity sectors), and
- has board diversity that is not within the last decile of companies in its sector, and
- is free from any controversy regarding working conditions and human rights
- is free from any controversy regarding biodiversity and pollution.

Amundi already takes into account the specific Negative Main Impacts in its exclusion policy as part of its Responsible Investment Policy. These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the principles of the United Nations Global Compact, coal and tobacco.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Yes. The OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights have been incorporated into Amundi's ESG rating methodology. The proprietary ESG rating tool evaluates issuers using data available from data providers. For example, the model includes a dedicated criterion called "Community inclusion and Human rights" that is applied to all sectors in addition to other Human rights criteria, including socially responsible supply chains, working conditions and professional relations. In addition, we monitor controversies at least on a quarterly basis, which includes companies identified for Human rights violations. When controversies arise, analysts assess the situation and apply a score to the controversy (using an exclusive, proprietary rating methodology) and determine the best steps to follow. Controversy scores are updated quarterly to track trends and remediation efforts.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The mandatory indicators of the Negative Main Impacts set out in Appendix 1, Table 1 of Delegated Regulation (EU) 2022/1288 were taken into account by implementing exclusion policies (normative and sectoral) and integrating ESG rating into the investment process, engagement and voting approaches:

- **Exclusion:** Amundi has defined normative exclusion rules, by activity and by sector, covering some of the main sustainability indicators listed in the "Disclosure" Regulation.
- **Engagement:** engagement is an ongoing and targeted process aimed at influencing companies' activities or behaviour. The objective of the engagement can be divided into two categories: engaging an issuer to improve the way in which it integrates the environmental and social dimension and engaging an issuer to improve its impact on environmental, social and Human rights issues or other sustainability issues that are important to society and the global economy.
- **Voting:** Amundi's voting policy relies on a holistic analysis of all long-term issues that may influence value creation, including material ESG issues (Amundi's voting policy can be consulted on its website).
- **Monitoring controversies:** Amundi has developed a controversy monitoring system that relies on three external data providers to systematically monitor controversies and their level of severity. This quantitative approach is then enhanced by an in-depth assessment of each severe controversy conducted by ESG analysts and a periodic review of its developments. This approach applies to all Amundi funds.

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **from 01/11/2022 to 31/10/2023**

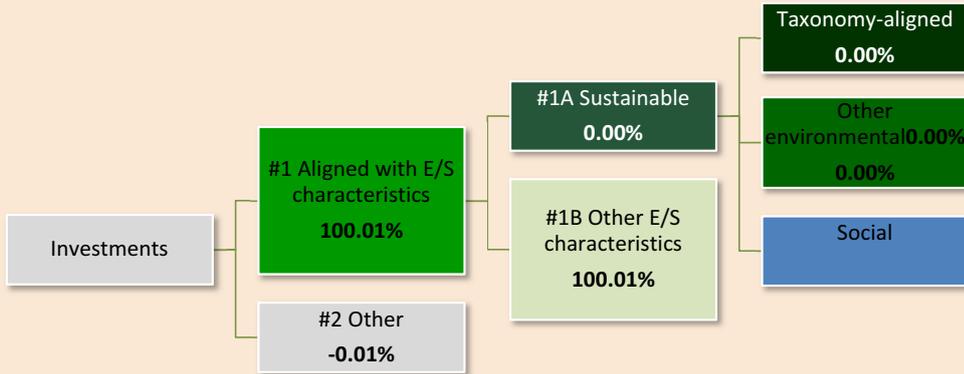

Largest investments	Sector	% Assets	Country
LYX GREEN BOND	Funds	100.01%	LUX

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

● **In which economic sectors were the investments made?**

Sectors	% Assets
Funds	100.01%
Liquid capital	-0.01%

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund promotes both environmental and social characteristics. Although the fund does not commit to making Taxonomy-aligned investments, it nevertheless invested 0.00% in Taxonomy-aligned sustainable investments during the period under review. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the aforementioned objectives of the EU taxonomy is measured using data on turnover (or revenue) and/or the use of green bond proceeds.

Neither the fund's auditors nor a third party has verified the percentage alignment of the fund's investments with the EU taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes:
- In fossil gas In nuclear energy
- No

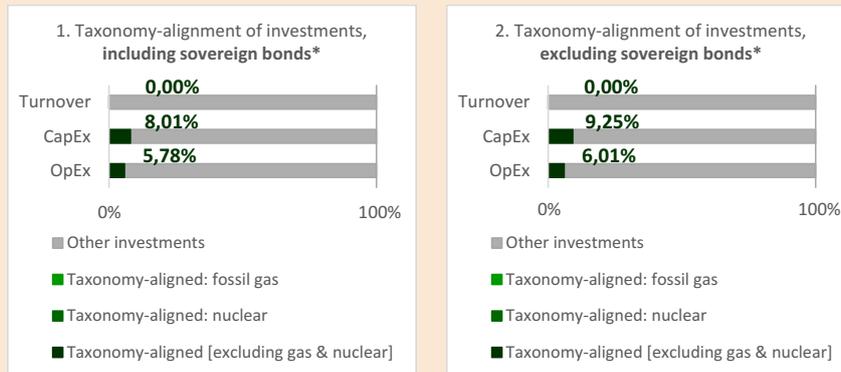

Reliable data on alignment with the EU Taxonomy for fossil gas and nuclear energy was not available during the period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Using data relating to turnover and/or the use of green bond proceeds as an indicator, 0.00% of the fund's investments were in transitional activities and 0.00% of investments were in enabling activities as at 31/10/2023. Neither the fund's auditors nor a third party has verified the percentage alignment of the fund's investments with the EU taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Alignment with the EU taxonomy was not reported during the previous period because no reliable data was available at the time.

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the Taxonomy was **0.00%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR but some of their activities are not aligned with Taxonomy standards, or data is not yet available for them to perform such an assessment.

What was the share of socially sustainable investments?

The product does not commit to a minimum share of socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash and/or other instruments held for liquidity and portfolio risk management purposes were included in category “#2 Other”. For non-rated bonds and equities, minimum environmental and social guarantees are applied by filtering for controversial issues in relation to the principles of the United Nations Global Compact. Moreover, minimum environmental or social guarantees have not been defined.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. The binding elements of the index methodology ensure that environmental and/or social characteristics are met at each rebalancing date. The product strategy is also based on systematic exclusion policies (normative and sectoral) as described in more detail in Amundi's responsible investment policy.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error.

● *How does the reference benchmark differ from a broad market index?*

To be included in the Index, a bond must be deemed a “green bond” under the Climate Bonds Initiative and meet specific criteria linked to the size of the bond issue (minimum 300 million in assets), its maturity (at least one year), rating (only “investment grade” bonds are eligible), and currency denomination (only bonds denominated in EUR and USD are eligible).

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

LYXOR GREEN BOND INDICIEL

Subfund of the Sicav Multi Units France

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. The product's sustainability indicators are, consequently, generally aligned with those of the Index.

● ***How did this financial product perform compared with the reference benchmark?***

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. Consequently, the product's sustainability indicators showed an overall performance in line with that of the Index.

● ***How did this financial product perform compared with the broad market index?***

This product is passively managed. Its investment strategy is to replicate the Index while minimising the associated tracking error. A comparison of the index replicated by the product with its parent index is detailed under "How did the sustainability indicators perform?".

Report of the Board of Directors of the SICAV

Lyxor Green Bond (DR) UCITS ETF - Acc aims to track the Solactive Green Bond EUR USD IG Index, a benchmark of EUR and USD denominated investment-grade green bonds issued by sovereigns, supranationals, development banks and corporates. Green bonds are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts. The index constituents are labelled green bonds defined as eligible for index inclusion by the Climate Bonds Initiative, an independent not-for-profit organisation dedicated to the promotion of investments for a low carbon and climate-resilient economy. Details of the index methodology may be found on www.solactive.com. Lyxor ETFs are efficient investment vehicles listed on exchange that offer transparent, liquid and low-cost exposure to the underlying benchmark index.

Audit report

To the Board of Directors of
Multi Units Luxembourg

Our opinion

In our opinion, the accompanying financial statements give a true and fair view of the financial position of Lyxor Green Bond (DR) UCITS ETF (the “Master UCITS”) as of 31 October 2023, and of the results of its operations and changes in its net assets for the period from 1 January 2023 to 31 October 2023 in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

What we have audited

The financial statements of the Master UCITS comprise:

- the statement of net assets as at 31 October 2023;
- the schedule of investments as at 31 October 2023;
- the statement of operations and changes in net assets for the period from 1 January 2023 to 31 October 2023;
- the notes to the financial statements which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (Law of 23 July 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the “Commission de Surveillance du Secteur Financier” (CSSF). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the “Responsibilities of the “Réviseur d’Entreprises Agréé” for the audit of the financial statements” section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Master UCITS in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements. We have fulfilled our other ethical responsibilities under those ethical requirements.

Emphasis of matter - Basis of accounting and restriction on distribution and use

We draw attention to Note 2 to the financial statements, which describes the basis of accounting. The financial statements are prepared in the context of Article 81(2) of the amended Law of 17 December 2010, and solely under the terms and conditions set in, the “Information Sharing Agreement” dated 20 July 2021 signed between us and PricewaterhouseCoopers Audit SAS (“PwC France”). As a result, the financial statements may not be suitable for another purpose. Our report is intended solely for the Board of Directors of the Master UCITS, PwC France and Management of Multi Units France (the Feeder UCITS). We do not accept any responsibility to any other party to whom it may be distributed. Our opinion is not modified in respect of this matter.

Responsibilities of the Board of Directors of the Master UCITS for the financial statements

The Board of Directors of the Master UCITS is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Master UCITS determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Master UCITS is responsible for assessing the Master UCITS’s ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Master UCITS either intends to liquidate the Master UCITS or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the “Réviseur d’Entreprises Agréé” for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law dated 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law dated 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Master UCITS's internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Master UCITS;
- conclude on the appropriateness of the Board of Directors of the Master UCITS's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Master UCITS's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our audit report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our audit report. However, future events or conditions may cause the Master UCITS to cease to continue as a going concern;
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Notes to the financial statements

1 - General

MULTI UNITS LUXEMBOURG (the "Fund") was incorporated on March 29, 2006 under Luxembourg laws as a *Société d'Investissement à Capital Variable* ("SICAV") for an unlimited period of time. The Fund is governed by the Provisions of Part I of the Luxembourg law of December 17, 2010, as amended relating to Undertakings for Collective Investment. The Articles of Incorporation were deposited with the *Registre du Commerce et des Sociétés* of Luxembourg and have been published in the *Mémorial C, Recueil des Sociétés et Associations* (the "Mémorial") on April 14, 2006. The Articles of Incorporation have been amended for the last time on January 28, 2014 and were published in the Mémorial on April 4, 2014.

The Fund is registered with the *Registre du Commerce et des sociétés* of Luxembourg under number B 115.129. The Fund aims to provide investors with professionally managed Sub-Funds investing in a wide range of transferable securities and money market instruments in order to achieve an optimum return from capital invested while reducing investment risk through diversification.

In addition, the Fund aims to provide investors with professionally managed index Sub-Funds whose objective is to replicate the composition of a certain financial index recognised by the Luxembourg supervisory authority.

As at October 31, 2023, the following Sub-Fund acts as Master of Feeder, as described below:

Feeder	Master
Multi Units France - Lyxor Green Bond Indiciel	Multi Units Luxembourg - Lyxor Green Bond (DR) UCITS ETF

Detailed Share Classes active as at October 31, 2023 are listed in the "Statistical information" and description of Shares Classes are disclosed in the latest prospectus.

2 - Significant accounting policies

2.1 Presentation of financial statements

The financial statements of the Fund are prepared and presented in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

The financial statements are prepared in the context of article 81(2) of the amended law of 17 December 2010, and solely under the terms and conditions set in the "Information Sharing Agreement" dated 20 July 2021 signed between PricewaterhouseCoopers Paris and PricewaterhouseCoopers Luxembourg.

2.2 Valuation of investment in securities

2.2.1 Securities listed on a recognised stock exchange or dealt in on any other regulated market that operates regularly, is recognised and is open to the public, are valued at their last available closing prices, or, in the event that there should be several such markets, on the basis of their last available closing prices on the main market for the relevant security.

2.2.2 In the event that the last available closing price does not, in the opinion of the Board of Directors, truly reflect the fair market value of such securities, the value is defined by the Board of Directors based on the reasonably foreseeable sales proceeds determined prudently and in good faith.

2.2.3 Securities not listed or traded on a stock exchange or not dealt in on another regulated market are valued on the basis of the probable sales proceeds determined prudently and in good faith by the Board of Directors.

2.2.4 In case of short term instruments which have a maturity of less than 90 days, the value of the instrument based on the net acquisition cost, is gradually adjusted to the repurchase price thereof. In the event of the material changes in market conditions, the valuation basis of the investment is adjusted to the new market yields.

2.2.5 Investments in open-ended UCIs are valued on the basis of the last available net asset value of the units or shares of such UCIs.

2.2.6 All other securities and other assets are valued at fair market value as determined in good faith pursuant to procedures established by the Board of Directors.

Notes to the financial statements (continued)

2.3 Net realised gains or losses resulting from investments

The realised gains or losses resulting from the sales of investments are calculated on an average cost basis.

2.4 Foreign exchange translation

The accounts of each Sub-Fund are maintained in the reference currency of the Sub-Fund and the financial statements are expressed in that currency.

The acquisition cost of securities expressed in a currency other than the reference currency is translated into the reference currency at the exchange rates prevailing on the date of purchase.

Income and expenses expressed in other currencies than the reference currency are converted at exchange rates ruling at the transaction date.

Assets and liabilities expressed in other currencies than the reference currency are converted at exchange rates ruling at the period end.

The realised or unrealised gains and losses on foreign exchange are recognised in the Statement of Operations and Changes in Net Assets in determining the increase or decrease in net assets.

2.5 Forward foreign exchange contracts

Net change in unrealised profits and losses on forward foreign exchange contracts are valued on the basis of forward exchange rates prevailing at the relevant valuation date and are included in the Statement of Operations and Changes in Net Assets.

Forward foreign exchange contracts are disclosed in the Statement of Net Assets under the item "Net unrealised profit/loss on forward foreign exchange contracts".

Net change in unrealised profits and losses and net realised gain/loss are recorded in the Statement of Operations and Changes in Net Assets.

2.6 Income

Dividends are credited to income on the date upon which the relevant securities are first listed as ex-dividend. Interest income is accrued on a daily basis.

2.7 Other income

Amounts of other income in the Statement of Operations and Changes in Net Assets include mainly fees on redemptions/subscriptions.

3 - Management fees

A management fee is payable monthly in arrears to the Management Company in compensation for its services. Such fee was payable monthly and is set for the period under review at the following rates of the Net Asset Value (inclusive of VAT):

The Management fees rates applicable at October 31, 2023, are as follows :

Sub-Funds	Class of shares	Management fees p.a.
MULTI UNITS LUXEMBOURG - Lyxor Green Bond (DR) UCITS ETF	Class Acc	0.25%
	Class Dist	0.25%
	Class Monthly Hedged to CHF - Acc	0.30%
	Class Monthly Hedged to EUR - Acc	0.30%
	Class Monthly Hedged to GBP - Dist	0.30%

Notes to the financial statements (continued)

4 - Depositary, Administrative, Registrar Agent and other fees

As Administrative Agent, Société Générale Luxembourg is entitled to receive fees and commissions for its services rendered to the Sub-Funds. Such fees are payable by the Management Company out of the Total Fee it receives to cover structural costs.

As Depositary, Société Générale Luxembourg is entitled to receive a fee for its services rendered to the Sub-Fund. Such fee is payable by the Management Company out of the Total Fee it receives from the Fund.

As Registrar and Transfer Agent, Société Générale Luxembourg is entitled to receive fees and commissions for its services rendered to the Sub-Fund. Such fees are payable by the Management Company out of the Total Fee it receives from the Fund.

5 - Taxation

The amended Law of December 17, 2010 lays down that Sub-Funds of umbrella UCIs established under the Law of December 20, 2002 are exempted of the *taxe d'abonnement* if they comply with following conditions stated in the article 175 e):

- whose securities are listed or dealt in on a stock exchange or another market which is regulated, operates regularly and is recognised and open to the public;
- whose exclusive object is to replicate the performance of one or several indices.

Considering that all classes of shares of all Sub-Funds of the Fund described in the Prospectus comply with the conditions required by the article 175 e) of the amended Law of December 17, 2010, the Board of Directors decided, by a Circular Resolution dated December 31, 2010, that all Sub-Funds and their classes of shares are exempted of the *taxe d'abonnement* as from January 1, 2011.

The Fund is not liable to any Luxembourg tax other than a once-and-for-all tax of EUR 1250 that was paid upon incorporation. Investment income from dividends and interest received by the Fund may be subject to withholding taxes at varying rates. Such withholding taxes are usually not recoverable.

6 - Dividend distribution

During the period ended October 31, 2023, no dividends have been distributed.

7 - Exchange rates

The following exchange rates have been used for the preparation of these financial statements:

1 EUR =	0.96195	CHF	1 EUR =	0.87105	GBP
1 EUR =	1.05700	USD
