

The background features a large, abstract geometric design composed of various shades of blue and white. The design includes sharp, angular shapes that overlap, creating a sense of depth and movement. The colors range from deep navy blue to light sky blue, with white highlights and shadows that define the facets of the geometric forms.

Man Funds plc

(An Investment Company with
Variable Capital)

Report and Financial Statements for the year ended
31 December 2024

Information in respect of name changes

Effective 23 July 2024, the following sub-fund changed its name:

Original Name	New Name
Man GLG RI Global Sustainable Growth	Man RI Global Sustainable Future

Effective 11 November 2024, the following sub-funds changed their names:

Original Name	New Name
Man GLG Global Convertibles	Man Global Convertibles

Performance table

For each of the sub-funds that form a part of Man Funds plc, details of their performance returns during the financial year ending 31 December 2024 are tabulated below.

The individual share classes for which we have reported the performance figures on this page have been selected by the respective investment managers, as their investment manager commentaries throughout this section of the financial statements best reflect the performance of these particular share classes.

To an extent, the investment managers' reports also incorporate their views and analysis on the other share classes belonging to their portfolios, however the performance return for these other share classes during the financial year may differ to what is reported in this sub-section of the financial statements.

Further details of the returns generated for all other share classes belonging to the various sub-funds of Man Funds plc can be found in the Directors' report.

For any sub-funds which launched part way throughout the financial year, the information tabulated below represents performance from the date of launch to 31 December 2024.

Performance data is shown net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of management fees and any applicable performance fees for the share classes referenced in the performance table above. Other share classes may charge higher fees.

For further details regarding the specific management and performance fee rates chargeable by each sub-fund (and their various share classes), please refer to Note 8 of the financial statements.

Market Summary

The global convertible bond (CB) market experienced a tale of two halves in 2024. After a subdued performance in the first half of the year, the second half saw a robust recovery. This rebound was driven by US rate cut expectations following lower-than-anticipated inflation prints and Donald Trump's victory in the US presidential election in November, which sparked optimism around pro-growth policies.

While broader fixed-income markets faced headwinds in 2024, convertible bonds stood out as a resilient asset class. High-yield (HY) bonds, in contrast, underwent significant spread tightening, leaving CB spreads (yield differences) at relatively attractive levels by year-end. The macroeconomic background remained supportive for convertibles though the asset class is positioned to mitigate the downside in the event of a negative shock.

Overall, we believe in the current environment CBs can offer investors an attractive mix of yield, downside mitigation and upside equity market participation.

Performance Review

Against this backdrop, Man Global Convertibles returned 7.44%¹ over the period, underperforming against the FTSE Global Focus Convertible Bond Hedged (USD) Index benchmark², which returned 8.62%.

Performance was driven by market attribution though regional attribution, sector attribution and stock selection were also positive contributors. On a sector level, gains were led by positioning in Financials, stock selection in Consumer Discretionary and a combination of positioning and stock selection in Real Estate. Conversely, positioning and stock selection in Industrials detracted from performance.

At a regional level, gains were led by positioning and stock selection in Asia ex Japan and positioning in the US while stock selection in Japan weighed on performance. On a relative basis, the top-performing single-name contributor was an overweight in Coinbase Global, whilst overweights in Saipem and Sofi Technology also contributed positively. Conversely, the largest single-name detractors were an overweight in MicroStrategy and Wolfspeed.

The Sub-Fund's exposure to stock market movements stood at 40% at the end of the year versus the benchmark index at 41%. The average yield-to-maturity/price (YTM/P), which reflects the fund's potential return from its bonds, was -0.89% at year-end, while the benchmark read -1.55%.

Global convertible bond new issuance totalled just under \$120 billion in 2024. Refinancings (refis), where companies issue new bonds to replace existing debt, made up the majority of proceeds from new corporate bond (CB) deals globally this year (36%). This was followed by stock buybacks (12%), where companies purchase their own shares to reduce the number available in the market, a trend largely driven by Chinese mega-cap tech firms. Overall, it was one of the strongest years on record for new bond issuance activity.

Future outlook

We believe positive momentum observed in late 2024 is likely to continue in 2025, with the asset class expected to continue benefitting from favourable US policies. Default rates are also expected to remain below HY levels in 2025, supporting the asset class's risk-adjusted return potential. However, inflation and rate expectations remain key risks to monitor, as Trump's pro-growth policies could stoke inflationary pressures, potentially altering the trajectory of interest rates.

The primary market is expected to remain active in 2025 with the asset class continuing to benefit from sector/issuer diversification and a steady improvement in credit quality as crossover issuers seek to tap the CB market to lower their interest expense. On top, refinancing activity is likely to remain elevated given the significant COVID-era "debt maturity wall" – a large amount of debt issued during the COVID era that is set to mature soon, that still looms across fixed income markets.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. They are intended to provide a comparative indication of particular asset classes, investment sectors, or financial markets more widely ("market backdrop"). Unless indicated otherwise, the investment process of the Fund is independent of these indices/measures.

¹ Performance data is shown for Man Global Convertibles DL USD share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.35% management fees. Other share classes may charge higher fees.

² The FTSE Global Focus Convertible Bond Hedged (USD) Index is an official benchmark for the fund.

Market summary

There are decades where nothing happens, and there are years where decades happen. 2024 was one of those years for Japan. The Japanese market was finally able to surpass the bubble-high seen in December 1989, corporate governance change accelerated again, the Bank of Japan (BoJ) raised base rates for the first time in 17 years (with inflation and wage hikes at decade highs), the yen fell to a 34-year low against the US dollar, and the ruling Liberal Democratic Party (LDP) suffered its second-worst defeat in its history.

The outperformance of Japanese equities continued through the first half of 2024. February saw the Nikkei 225 Index finally surpass the December 1989 high before pushing through 40,000 in March. The market fell back a little in April, marking the first monthly decline in 2024. From mid-June the market began to rally once again, with the Nikkei hitting another all-time high in mid-July. The second half of July, however, was defined by a risk-off rotation for global markets. A distinct move away from momentum, that saw a change in leadership for the first time in many months. Until this point, a notable feature of the Japanese market had been its narrow breadth, defined by a select few semiconductor-related and mega cap Value1 stocks. August and September were defined by uncharacteristic volatility following central bank decisions and messaging, as well as political events in Japan. In response to a surprisingly hawkish BoJ meeting at the end of July and some underlying concerns around the US economy, the first three trading days of August saw TOPIX¹ fall over 20%, the biggest three day drop since the market opened in 1950. After a strong fourth quarter, the year-end level for the Nikkei of 39,894 set an all-time high, eclipsing the 1989 record of 38,915. This marked a good recovery after volatility over the summer months. Momentum was the stand-out factor for the year, and once again outperformed Value, Growth and Quality in the final quarter.

One of the most notable events of 2024, and a significant moment for the corporate governance movement, occurred in August with a surprise announcement by Canada's Alimentation Couche-Tard that it was making an unsolicited bid for Seven & i Holdings². The bid, which would represent the largest foreign takeover of a Japanese company ever, was rejected in September, and in October the offer was increased by 20%. Seven & i responded with arguably the best form of takeover defence, namely a plan to increase their value, and revealed a significant change to their business structure. In November, a possible MBO led by the founding Ito family was announced. If it proceeds, the management buy-out would be the largest in history (\$58bn).

Another equally important event was in the auto sector where Honda and Nissan announced plans to work towards a merger in 2026. It could eventually include Mitsubishi Motors too (where Nissan has a 24% stake). This merger will create an 8 million unit per year auto group putting its size amongst the world's largest. It effectively means there are now two auto groups in Japan, the other being led by Toyota (they already hold stakes in Subaru, Mazda and Suzuki). Foxconn (aka Hon Hai) appears to have been the catalyst for the deal as they were looking to approach Nissan for a takeover. Along with the merger announcement, Honda also disclosed plans for a ¥1.1tn buyback (23.7% of shares outstanding), a clear show of strength by the company.

A key focus for the market was on the direction and pace of change of Japan's monetary policy. In March, the BoJ raised rates for the first time in 17 years, exiting their negative interest rate policy and removing the yield curve control policy. Rates were again raised at the July meeting (reaching 0.25%), with the future pace of bond buying reduced. However, in a global context, Japanese rates remain very low, and throughout the year the BoJ seemed to show indecision on wanting to normalise policy quickly versus taking their time and waiting for more economic data. This put immense pressure on the yen which depreciated to a 34-year low against the dollar. A weak yen is often seen as positive for Japanese corporates overall; however, an excessively weak currency undermines business and investor confidence. The weak currency also had a negative impact on Japanese individual consumption due to imported inflation, although decade-high wage hikes are now starting to feed through. As of the end of 2024, consensus is split between a hike in January and March. January may prove too soon as there will be a limited amount of new data released by then, but waiting until March invites more pressure in the FX markets. A clearer message in 2025 would be a welcome positive catalyst.

As well as uncertainty around monetary policy, this was also evident within politics, both in Japan and overseas. In September, Shigeru Ishiba was elected to be leader of the ruling LDP, and therefore became Prime Minister. He was seen as a relative outsider and in the past had been associated with an anti-Abenomics image. The newly appointed Prime Minister announced a snap election for October 27th, a decision that he would come to regret. The LDP recorded the second worst result in their history, with the LDP-Komeito coalition losing its majority. In the end, a minority coalition government was formed which will necessitate working with smaller parties on a piecemeal basis for future legislation. November's market direction was largely dictated by results of the US election. Exporters and autos suffered due to the threat of tariffs and protectionist policies under a Trump administration, financials rallied on expectations the BoJ may have more room to raise rates, and the pharma sector fell on the appointment of Robert F. Kennedy Jr as US health secretary.

Performance review

Against this backdrop, Man Japan CoreAlpha Equity returned 22.30%¹ over the period, overperforming against the TOPIX Total return benchmark by 1.85%² and underperforming against the Russell/Nomura Large Cap Value Total Return benchmark by -5.78%².

As mentioned, momentum was a key factor in 2024. The dominance of Top Cap Value stocks was reflected in changes to portfolio positioning in the first half of the year. Through 2023 small positions were maintained in "core" Value stocks, but with their continued strength through the start of 2024, gains were taken on these names in a contrarian manner. Proceeds were reallocated into the domestic reflation theme and economically defensive names, a notable area of weakness in the market through the start of 2024. A position in Japan's largest telecom carrier was started, and existing holdings in a retailer, another telecom name and a pharma company were also added to. With the volatility over summer, an underweight position in mega cap value stocks was generally beneficial to performance, as was the increased exposure to domestic and defensive sectors. Over the second half of the year, gains were taken on the financial sector as stocks benefited from expectations for BoJ policy normalisation, and from defensive areas which held up relatively well given unstable markets. After a period of strong outperformance, the banks may appear more appealing and contrarian than 12 months ago, and we have moved to a small underweight position, marking the first time the strategy has been underweight the sector since 2008. Advantage was taken of the weaker markets to reinvest into some Top Cap Value names (an auto company and two trading houses) and to increase the quality of cyclicals. Other contrarian opportunities were also added to, this included smaller auto makers, real estate stocks, as well as China and semiconductor-related cyclicals.

¹ Performance data is shown for Man Japan CoreAlpha Fund Professional Accumulation Class D share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 0.75% management fees. Other share classes may charge higher fees.

² The TOPIX Total return and the Russell/Nomura Large Cap Value Total Return are official benchmarks for this Fund. Please consult the prospectus or KIID for more information.

Man Japan CoreAlpha Equity - Annual Report Commentary (continued)

Key areas of interest for the strategy going into 2025 are autos (already in play with potential industry consolidation), real estate (we anticipate the BoJ keeps policy loose with the base rate unlikely to reach 1% quickly), asset managers (a continued shift from cash to investment in Japan), global cyclicals and selected China plays, and semiconductor related names (these latter areas are cycle-related). The environment for corporate governance improvement and activist involvement looks set to continue. Names which may benefit from this include Panasonic, Kyocera, Sony, Softbank Group and Mitsubishi Electric.

Future outlook

The market environment for Value investing in Japan remains supportive. Despite some volatility in the second half of 2024, the long-term positive structural changes in Japan continue; corporate governance improvement and wage hikes/inflation. The biggest opportunities we see for 2025 include a continued improvement in corporate governance, a cyclical recovery in China-related and semiconductor markets, a further shift from cash to investments by households, and the potential for the major public pension funds to increase their domestic equity allocation. Key risks include a market where momentum continues winning, and uncertainty over BoJ and political policies.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Market summary

While expectations for the number of rate cuts in 2024 moderated in the first quarter, markets continued to soar to all time highs. A strong momentum rally led developed equity markets higher to begin 2024, as the sharp momentum inflection felt in December quickly reversed. Technology and growth stocks in general were once again in favor particularly within the US and Taiwan. Market exuberance did not materialize in all equity markets however, as China's slowing growth continued to weigh on emerging markets despite the country's efforts to stimulate economic activity. Global equity markets remained elevated in February, surging on the combination of strong economic data and a constructive corporate earnings season in the US. Global equities finished the first quarter on a strong note, buoyed by a solid fundamental backdrop, strong corporate earnings and a US Federal Reserve still leaning towards rate cuts in the back half of the year. Emerging market equities failed to keep pace with their developed market counterparts as the strong rally driven by China in February faltered in March.

Aside from the temporary meme stock frenzy in May, investors were generally cautious during the second quarter of 2024. Election surprises in Mexico, India and France unnerved markets, while the impending US election, stubborn inflation and diminishing hopes for rate cuts were further reasons investors stayed on the sidelines. From a market concentration perspective, the quarter saw a picture similar to what we observed one year prior, in the second quarter of 2023. For the second quarter of 2024, the hit rate (or the percentage of index constituents outperforming the overall index) for the MSCI World Index was 34%, similar to the second quarter of 2023, and the lowest in the last decade with only about a third of names outperforming the MSCI World. With 40% of the world population heading to the polls for major elections in 2024, political risk was on every investor's mind. Within emerging markets, closely watched elections in Taiwan and South Korea earlier this year turned out to be uneventful with outcomes in line with expectations and a likely continuity of previous policies. The surprises came from Mexico, India and South Africa in the second quarter.

In Q3 2024, the long-awaited Fed rate cut finally occurred. In spite of the market volatility, the MSCI World Index returned 6.4% for the third quarter, with 4.5% of the returns driven by changes in earnings expectations and the rest from multiple expansion. From a P/E multiple perspective, the Index was 18.2x at the end of the third quarter, a touch higher than the 17.9x observed at end of the second quarter. Both Barra value and momentum underperformed, and the rotation in factor performance, evidenced by the volatility of factor monthly returns, did not help. There was no shortage of market volatility in July, as investors expressed uncertainty about the future payoff of AI related themes and how quickly those may manifest in company earnings. Weaker than expected inflation data in the US and continued slowing growth in China also impacted markets. Equity markets then experienced a significant rotation during the first week in August as renewed fears of a hard landing and resulting global recession drove risk assets lower to open the month, only to stage a rebound by month end as the MSCI World finished up 2.6%. The late September China policy boost added to market volatility in EM in particular, triggering a massive momentum reversal on the heels of the Chinese equity market rally.

Volatility maintained center stage in October, as risk assets gave back gains made in the prior month. Continued worries over slowing growth in addition to US election outcomes weighed on global developed markets, as the MSCI World Index gave back -1.98%. After a robust rally in Chinese equities in September, emerging markets more broadly fell back to earth as the MSCI Emerging Markets Index dropped -4.5% on the heels of a stronger dollar. In November, US equity markets rallied on the heels of the presidential election, with the S&P 500 Index jumping 5.9%. While European markets also benefitted from the general risk-on backdrop, emerging market equities significantly underperformed, hit by the continued US dollar rally as well as concerns over potential tariffs from the incoming administration. As the post-election equity rally started to run out of steam in the US in December, the Fed's hawkish remarks on December 18th sent equities down, with the S&P 500 down almost 3% on the day, while US yields jumped. Emerging markets fared better, supported by a risk rally in China in early December. In South Korea, the last month of the year was marked by political chaos, with President Yoon announcing martial law before withdrawing it a few hours later on December 4th. His impeachment by the National Assembly quickly followed, as well as the impeachment of his former prime minister, acting as interim president. The political crisis added to existing investor concerns about the country's economy and slowing growth, weighing further on the country's stock market.

For 2024 overall, within developed markets, the MSCI World Index was up 18.7% and the S&P 500 Index was up 25.0% in USD. Elsewhere in developed markets, the MSCI Japan Index was up 20.7% in JPY and MSCI Europe Index was up 8.6% in euros for the period. Within Emerging Markets, the MSCI Emerging Markets Index gained 7.5% in USD and the MSCI China A Index was up 11.7% in USD during the year.

Performance review

Against this backdrop, Man Systematic Emerging Markets Equity (the 'Fund') returned 13.54%¹ net-of-fees over the period and outperformed its benchmark by 6.04%².

Man seeks to add value through a fundamentally driven, quantitative, bottom-up stock selection process. Stocks are selected based on the output of our quantitative investment models. The Fund had positive model performance overall for the year-to-date period. The Value Academic+ model produced the most positive returns, follow by the Momentum Academic+, Factor Selection, Informed Investor, Quality, Value Innovation, and Momentum Innovation models.

Stock selection was positive, led by positive stock selection within Industrials and Consumer Discretionary. Sector allocation was also positive for the period with an underweight to the Consumer Staples and Materials sectors contributing.

Stock selection among countries contributed to performance. Stock selection was the most positive in South Korea and India. The Fund's country allocation was negative for the period. An overweight to South Korea and Thailand detracted.

At the security level, the Fund's top three contributors were a South Korean Industrials firm, a Chinese Consumer Discretionary firm and a UAE Real Estate firm. The Fund's top three detractors were a South Korean Information Technology firm, Brazilian Energy company, and a Taiwanese Information Technology firm.

¹ Performance data is shown for Man Systematic Emerging Markets Equity D USD share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.90% management and other fees. Other share classes may charge higher fees.

² MSCI EM (USD, NDTR) is an official benchmark for the Fund. Please consult the Prospectus or KIID/KID for more information.

Future outlook

Looking further ahead in 2025, geopolitical risks remain front and center. In the US, the new administration that formally took office in January will almost undoubtedly impact the dynamics of the war in Ukraine and the conflict in the Middle East as well as many matters in the US and abroad. The threats of tariffs, if enacted, could seriously impact China's main sources of growth and limit the government's ability to lift the economy out of its negative spiral. In the US alone, tariffs could make already stubborn inflation even stickier and affect interest rate expectations, impacting the US dollar, and therefore, emerging markets. With this in mind, we will not rest on our laurels, but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead. Our process continues to focus on idiosyncratic, bottom-up stock selection, as we aim to be increasingly agnostic to the overall market environment by focusing on continued research and development in order to build well diversified portfolios that can navigate market inflections and volatility.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Market summary

The year 2024 was shaped by a confluence of key themes, including elections, geopolitical tensions, continued repricing of growth and inflation risks, and evolving monetary policy expectations. A major challenge for EM stemmed from the U.S. Federal Reserve ('Fed'), which delayed rate cuts and priced in a shallower easing cycle than the market had initially anticipated. This dynamic contributed to an 8% appreciation of the USD over the year. In core rates, U.S. Treasury (UST) 10-year yields ended the year at 4.68%, up 0.69% year-on-year (YoY). Yields ranged from a high of 4.70% on April 25, driven by robust economic activity growth and opinion polls suggesting a likely Republican victory in the November election, to a low of 3.62% on September 16, as weaker economic data and a narrowing in the polls influenced market sentiment.

Emerging Markets (EM) Debt sovereign local currency (LC) lost -2.4%. LC losses were driven by currency (FX) depreciation (-7.3%), the increased in local yields (-0.3%), and only partially offset by interest carry (Interest carry refers to the income earned from holding a security) (+5.6%). The USD rally exerted significant pressure on EM currencies. EM local yields rose by 0.20% YoY to 6.39% as markets recalibrated expectations for rate cuts in both the US and EM. Nevertheless, local bonds outperformed core rates, with the spread to 5-year UST narrowing by 0.33% to 2.01%. Country wise, South Africa (+13.7%) and the Dominican Republic (+7.5%) were top performers, as strong interest carry and price returns outweighed the drag from currency depreciation. Conversely, Brazil (-22.2%), Mexico (-15.5%), and Colombia (-10.9%) were the weakest performers, hit by a combination of fiscal imbalances and idiosyncratic risks. For the MXN, political factors such as local judicial reforms and the impact from potential tariffs that may be enforced by the Trump administration on Mexico, were a drag throughout the year.

Emerging Market (EM) local bond funds continued to lose assets under management (AUM) for the third consecutive year with outflows reaching -USD11.4 billion in 2024.

EM central banks delivered fewer rate cuts in 2024 than markets had initially anticipated. This was primarily due to the U.S. Fed delaying its own rate cuts and a slower-than-expected disinflation process in many EM regions. As 2025 approached, policy divergence among EM central banks became more pronounced. Those more sensitive to Fed policy and currency pressures either delayed or reversed their easing cycles, while others, driven by domestic conditions, pursued further rate cuts.

Geopolitical risks, including the ongoing conflicts in Ukraine and the Middle East, and EM elections added further complexity in 2024. In Turkey, the March municipal elections saw the opposition exceed expectations, with President Erdogan's AKP falling to second place for the first time since 2002. Following the vote, economic policy became the primary focus, as no further elections are scheduled until 2028. In South Africa, the ANC lost its 30-year parliamentary majority in May, creating prolonged uncertainty as delays in forming President Cyril Ramaphosa's coalition cabinet fuelled political unease. In Mexico, Claudia Sheinbaum's unexpectedly strong victory in June, representing the ruling party, led markets to price in risks associated with AMLO's reform agenda. Meanwhile, in India, elections held the same month forced Prime Minister Modi's government into a coalition after it failed to secure a parliamentary majority, adding to market volatility. In Romania, political instability deepened after the Constitutional Court annulled the first round of presidential elections in December due to widespread irregularities, mandating a re-run.

Performance review

Against this backdrop, Man Global Emerging Markets Local Currency Rates returned -3.73%¹ over the period, underperforming the benchmark by -1.35%².

Gross relative performance was +0.14%, driven positively by the CE underweight, interest carry from cash exposures, and the off-benchmark long DWE UST position. These contributions helped offset the negative impact of having less exposure to local rates and the corresponding loss of interest income.

In currencies, the lower exposure to weaker currencies like the Colombian Peso (COP, down 14.3%), Chilean Peso (CLP, down 9.7% by March), Polish Zloty (PLN, down 2.0% after adding the position), Egyptian Pound (EGP, the worst-performing emerging market currency, down 24.1% in January), Mexican Peso (MXN, down 17.8% by late October), and Brazilian Real (BRL, down 15.0% by mid-year) contributed the most to positive returns. These gains helped balance out the negative impact of having less exposure to stronger currencies like the Chinese Yuan (CNY), Thai Baht (THB, the second-best performer in 2024 with a 0.4% gain), and Malaysian Ringgit (MYR, the best performer in 2024 with a 2.8% gain).

In local rates, the underweights in outperformers China and Thailand (where average local yields declined 0.90% and 0.44%, respectively, to 1.69% and 2.34%) and the overweight in Mexico (which underperformed as average local yields increased 1.23% in 2024 to 10.3%) were the largest detractors.

Future outlook

With policy action in the US and China likely to set the tone in the coming months, the EM asset class faces several uncertainties over the coming quarter.

Local real yields for JPM GBI-EM countries remain attractive in many cases, but the overall yield differential to U.S. yields, at 2.01% (0.33% tighter in 2024), is at historical lows, offering minimal cushion against further U.S. yield increases. Tariffs and currency depreciation have reduced the scope for future EM monetary easing, leading to less synchronized policy actions as central banks balance changing U.S. financial conditions, domestic stability concerns, and varying trade exposures.

¹ Performance data is shown for Man GLG Global Emerging Markets Local Currency Rates Class D C USD share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.34% management fees. Other share classes may charge higher fees.

² JP Morgan GBI-EM Global Diversified Composite is an official benchmark for this Fund. Please read the Prospectus and KIID for more information.

Man Global Emerging Markets Local Currency Rates - Annual Report Commentary (continued)

EM FX valuations have selectively improved in recent months, with current account balances reaching equilibrium for the JPM GBI-EM index countries. EM FX has weakened 7.3% in nominal terms in 2024, helping reduce the overvaluation of some higher yielding currencies amid lower EM inflation. Valuations may become even more attractive before rebounding, as risk sentiment is likely to deteriorate in early 2025, driven by uncertainty over the priorities and timeframes of the incoming U.S. administration.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Market Summary

The year 2024 was shaped by a confluence of key themes, including elections, geopolitical tensions, continued repricing of growth and inflation risks, and evolving monetary policy expectations. A major challenge for Emerging Markets ('EM') stemmed from the U.S. Federal Reserve ('Fed'), which delayed rate cuts and priced in less aggressive rate cuts than the market had initially anticipated. This dynamic contributed to an 8% appreciation of the USD over the year.¹ In core rates, U.S. Treasury (UST) 10-year yields ended the year at 4.68%, up 0.69% year-on-year (YoY). Yields ranged from a high of 4.70% on April 25, driven by robust economic activity growth and opinion polls suggesting a likely Republican victory in the November election, to a low of 3.62% on September 16, as weaker economic data and a narrowing in the polls influenced market sentiment.

EM sovereign and quasi-sovereign hard currency (HC) debt delivered a 5.7% gain, despite large issuance levels and unfavourable flow dynamics.²

Positive performance was driven by a 6.0% spread return (return from narrowing yield differences), supported by sovereign spread tightening and carry, partially offset by -0.3% Treasury losses due to rising core yields. The J.P. Morgan Emerging Markets Bond Index Global ("EMBIG")'s average yield increased by 0.38% year-on-year (YoY) to 7.59%, while the average sovereign spread (adjusted for Venezuela's inclusion) tightened significantly by 0.83% YoY to 2.36%. The High Yield ("HY") segment significantly outperformed, returning 13.5% compared to Investment Grade's ("IG") modest 0.4% gain.³ This outperformance was fuelled by stronger spread returns and the absence of Treasury losses, thanks to HY's shorter duration (High-Yield (HY) bonds typically have a shorter average time to maturity or are less sensitive to changes in interest rates compared to other bonds). HY spreads tightened by 0.68% to 5.79%, while IG spreads closed unchanged YoY at 1.19%. Performance by rating category underscored this dynamic, with CCC-C rated debt delivering a +58.9% return, while BBB-rated (-0.1%) and NR debt (-3.3%) segments underperformed. The dispersion of returns across issuers was notable, ranging from triple-digit gains in Lebanon (+118.4%) and Argentina (+103.1%), to meaningful losses in Venezuela (- 5.7%), Senegal (-4.4%), and Colombia (-1.8%).

EM bond funds continued to lose assets under management (AUM) with HC Bond outflows reaching USD18.6bn in 2024, across HC, for the third consecutive year.⁴

EM HC sovereign issuance rebounded in 2024, reaching USD 532bn, up from USD 364bn in 2023.⁴ The recovery was led by EM investment-grade (IG) sovereigns, which accounted for two-thirds of total issuance at USD 332bn (+41% YoY).⁵ High yield (HY) issuers also saw significant growth, with issuance rising to USD 142bn (+61% YoY), while unrated issuers contributed USD 58bn (+41% YoY). This resurgence was supported by the resolution of several long-standing debt restructurings, including Zambia's (2020 default), Ghana's and Sri Lanka's (both 2022 defaults), and Ukraine's restructuring of conventional bonds.

Geopolitical risks, including the ongoing conflicts in Ukraine and the Middle East, and EM elections added further complexity in 2024. In Türkiye, the March municipal elections saw the opposition exceed expectations, with President Erdogan's the Justice and Development Party (AKP) falling to second place for the first time since 2002. Following the vote, economic policy became the primary focus, as no further elections are scheduled until 2028. In South Africa, the African National Congress (ANC) political party lost its 30-year parliamentary majority in May, creating prolonged uncertainty as delays in forming President Cyril Ramaphosa's coalition cabinet fuelled political unease. In Mexico, Claudia Sheinbaum's unexpectedly strong victory in June, representing the ruling party, led markets to price in risks associated with Andrés Manuel López Obrador (65th president of Mexico from 2018-2024) reform agenda. Meanwhile, in India, elections held the same month forced Prime Minister Modi's government into a coalition after it failed to secure a parliamentary majority, adding to market volatility. Elsewhere, Mozambique experienced severe post-election unrest after opposition leader Venâncio Mondlane rejected the October 9 results. In Romania, political instability deepened after the Constitutional Court annulled the first round of presidential elections in December due to widespread irregularities, mandating a re-run. In South Korea, a political crisis escalated in December after President Yoon Suk Yeol declared martial law. The National Assembly impeached Yoon, and a court issued an arrest warrant, but his detention was blocked by supporters and security forces, sparking mass protests. With new elections potentially six months away, the crisis remains unresolved.

Performance Review

Against this backdrop, Man Global Emerging Markets Bond returned 4.90%⁶ over the period, underperforming the benchmark⁷ by - 0.83%. The majority of the net underperformance occurred in August, September, and November, driven by underweights in both duration and credit spread duration, particularly in B & Below-rated issuers. These positions detracted as core rates rallied and EM high-yield spreads tightened during those months.

¹ USD: U.S. dollar. Its performance is measured by the Bloomberg Dollar Spot index (BBDXY Index).

² EMD HC returns and statistics are measured by J.P. Morgan EMBI Global Composite (JPM EMBIG) family of indexes and statistics, respectively. Certain indices/measures mentioned on this page have been provided for information purposes only. They are intended to provide a comparative indication of particular asset classes, investment sectors, or financial markets more widely ("market backdrop"). Unless indicated otherwise, the investment process of the Fund is independent of these indices/measures.

³ Investment grade refers to bonds that have been rated by established credit rating agencies as having a relatively low risk of default, and thus are rated BBB- or Baa3, or higher. High yield bonds are debt securities rated below BBB- or Baa3 by established credit rating agencies. HY bonds typically offer higher coupons than IG bonds.

⁴ Source: EPFR Global, J.P. Morgan, Bloomberg as of January 3, 2025.

⁵ Source: Bloomberg and Man Group Database calculations as of December 31, 2024; Excludes zero coupon bonds and issues of US\$300mm USD-equivalent or less.

⁶ Performance data is based on the USD Institutional share class (Man GLG Global Emerging Markets Bond Class D C USD). Performance data is shown for net of a representative 1.48% fee per annum (1.25% management fee, plus 0.23% other charges) with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Other share classes may charge higher fees. The representative portfolio may not be open to certain investors and may not be available in all jurisdictions.

⁷ The J.P. Morgan Emerging Markets Bond Index Global (JPM EMBIG) is a reference benchmark for this Fund. Please consult the prospectus or KIID for more information.

Man Global Emerging Markets Bond - Annual Report Commentary (continued)

However, these losses were offset by positive attribution generation in other periods, as well as positive contributions from interest carry on cash exposures and off-benchmark U.S. Treasury holdings. The UST exposure served as a hedge against underweights in IG countries in Asia and the Middle East, which were trading at rich valuations.

Country wise, the largest sources of alpha were Ecuador (overweight until March, when it was a top performer, and reduced to zero weight in May and June, when it was among the worst performers), underweights in underperformers such as Venezuela (the bottom performer last year), Qatar, and China, as well as active exposure management in Panama as valuations fluctuated to reflect the downgrade risk to high yield.

Conversely, the largest detractors from performance were security selection in Mexico and underweights in HY outperformers such as Pakistan, Argentina (from September onward, when it was amongst top performer countries), Turkey, and El Salvador.

Future outlook

With policy action in the US and China likely to set the tone in the coming months, the EM asset class faces several uncertainties over the coming quarter.

In HC, high absolute yield levels obscure tight valuations, with future gains dependent on further declines in UST yields. The JPM EMBIG spread is at 2.97%, 0.22% tighter in 2024 and near historically tight levels after absorbing much of the repricing in UST. However, this figure understates the true extent of tightening due to Venezuela's inclusion in the benchmark in 2024Q2. Excluding Venezuela, the EMBIG spread is 2.36%, 0.83% tighter in 2024 and at historical lows. Risks are skewed toward wider spreads, driven by a global growth slowdown despite China's stimulus efforts, increased volatility in core rates, geopolitical tensions, and the risk of a trade war, raising the likelihood of a hard landing. Additionally, with slowing nominal growth and elevated interest rates, most EM economies are expected to see rising public debt ratios in 2025 after declines in 2022–23.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Pan-European Equity Growth - Annual Report Commentary

Market Summary

The period under review was characterised by falling inflation levels, central bank policy, snap parliamentary elections in France, geopolitical tensions, and most recently Trump's victory in the US presidential election. Negative absolute and relative performance over the calendar second half, when the Fund reversed gains made during a strong first half, was a key contributing factor to the relative decline.

Performance review

Against this backdrop, Man Pan-European Equity Growth delivered a 3.94%¹ return over the period, underperforming against the MSCI Europe Total Return Net Dividend (EUR, NDTR) benchmark, which returned 8.59%.

Last year saw half the portfolio contribute positively to the Fund's relative performance, and half contribute negatively. Both in terms of number of positions and the value they represented of the portfolio, the Fund was approximately evenly split between winners and losers.

Weighing in on the negative side was the extent of large active position L'Oréal's share price decline of 24%, a name which cost the Fund close to two percentage points of performance. On top of this the Fund suffered from its relatively high exposure to the semiconductor and luxury goods industries, and its zero exposure to the banking sector which enjoyed material outperformance in 2024. These relative performance headwinds were only partially offset by the strong share price gains enjoyed by core holdings Arm (+64%), SAP (+69%) and Ferrari (+35%), for example. It was thus a frustrating year for the Fund, and we are sorry that it was unable to build upon the relative gains achieved in 2023.

But we remain confident about the portfolio and its scope to deliver positive returns from here, in keeping with the Fund's track record. This confidence is based upon the proven staying power of its constituents, companies which, despite an uncertain global economic outlook, we believe look set to deliver earnings growth over the coming five years.

Novo Nordisk was the Fund's largest holding for most of 2024 and has been an important positive contributor to the Fund's performance over the last five years since we initiated the position in March 2019. But the share price fell by 18% in December in response to the market's disappointment with the CagriSema phase 3 trial data, leaving the share price down by 11% for the calendar year. CagriSema's obesity trial demonstrated average weight loss of 20.4% after 68 weeks. This compared with Novo Nordisk's expectation of 25% and competitor Eli Lilly's now on-the-market Zepbound which recorded average weight loss of 20.9% in its phase 3 trial. Weight reduction of 20.4% is still significant, was clearly above Wegovy's 14.9% weight loss, and is competitive with (but not better than) Zepbound. It should be noted that Novo Nordisk and Eli Lilly are still only just beginning to develop the obesity market, a critical condition that affects close to one billion people in the world today, which is associated with over 200 comorbidities and costs the US economy alone over \$1 trillion each year. Both Wegovy and Zepbound are today's two leading treatments, thanks to their efficacy and documented safety profiles. We believe that Wegovy and CagriSema (to be filed this year for approval) will be formidable treatments with which Novo Nordisk can jointly lead the development of the obesity market. They have the potential to be transformational for society, with the largest challenge being Novo Nordisk's ability to satisfy demand for them. Already one-fifth of revenues (but based upon only two million patients), we see Novo Nordisk's obesity franchise acting as the company's leading growth engine in the coming years.

L'Oréal was the largest detractor to Fund performance in 2024, on account of the size of the position (beginning last year at 8.1% of the Fund) and the extent of its 24% share price decline which almost wiped out all the share price gains of calendar 2023 when the position was one of the Fund's lead positive contributors. Third quarter revenues saw a deceleration to 3.4% growth on the back of sales in North Asia (27% of sales for the nine months) falling by 6.5% on a like-for-like basis, as both mainland China and Asian travel retail came in below expectations. With the fourth quarter always having a greater bias towards China (11/11 remains a significant selling event), and the low likelihood of consumer confidence improving in the short-term, the region could repeat its drag effect on Group sales, making it likely that L'Oréal's sales grow by less than 5% on a like-for-like basis for the full year 2024. We still expect both FY24 and FY25 to be better years for L'Oréal's sales and profits, with FY25 likely to be underpinned by the company's "beauty stimulus plan", as it rolls out a new wave of innovations. While our short-term expectations for the share price are grounded, it remains a core position with our long-term thesis firmly intact.

Although there was a fair degree of portfolio activity last year, there were no material changes to the overall shape of the portfolio. The Fund finished the year with 25 holdings, three less than a year ago, while the split between Established Leaders/Emerging Winners was relatively stable at 95%/5% versus 93%/7% at the end of 2023. Adyen is the only "Emerging Winner" holding today.

Five positions were sold outright, these being Delivery Hero, Rémy-Cointreau, Nestlé, AstraZeneca and Diageo. Of these, Nestlé was the most significant as it represented 4.1% of the Fund at the end of 2023. It was sold because we concluded that its organic growth had become too reliant upon like-for-like price increases and that a rebound in volume and mix (RIG) would require greater investments which might partially reverse the margin gains of the last few years. This we believe was the right decision and saved the Fund some negative performance. The disposal of Rémy-Cointreau has also been vindicated so far.

Future outlook

We believe that the portfolio's earnings prospects and its more attractive valuation profile leave the Fund well positioned ahead of both 2025 and the next five years. Europe is out of favour today, but the team is confident that investors will gravitate again towards the region's high-quality companies and world-class businesses that are strongly equipped to navigate the challenges presented by today's uncertain environment. Each position is in the portfolio because we believe its formidable competitive strengths will act as the driver of its profits' trajectory in the coming five years and beyond. Of course, some companies will fall short, but we believe there is ample scope for others to over-achieve. With European equity sentiment surely now unfairly depressed, and the Fund just having experienced a tough year of performance, we go into the new year with the strong belief that 2025 can be the staging post for solid performance over the coming years.

Market summary

The period under review was characterised by falling inflation levels, central bank policy, geopolitical tensions, and most recently Trump's victory in the US presidential election.

Stock selection was the key driver of the negative relative return, with more than half of the positions in the portfolio underperforming the index. Some of these were particularly costly, most notably Adobe, Idexx Laboratories and Sika. Moreover, with the European region materially lagging the return of the US equity market in 2024, the European bias of the portfolio acted as an additional drag on Fund performance. The strong share performance of holdings such as Nvidia (+171%), SAP (+69%) and Arm (+64%) were unable to compensate for these headwinds.

Performance review

Against this backdrop, Man RI Global Sustainable Future returned 4.9%¹ over the period, a significant underperformance of 13.7% versus the benchmark² index.

Novo Nordisk was the Fund's largest holding for most of 2024 and has been an important positive contributor to the Fund's performance over the last five years. But the share price fell by 18% in December in response to the market's disappointment with the CagriSema phase 3 trial data, leaving the share price down by 11% for the calendar year.

Adobe was the largest detractor to Fund performance in 2024, on account of the size of the position (beginning last year at 6% of the Fund) and the extent of its 26% share price decline. The incremental monetisation of generative AI (GenAI) features is taking longer than expected because of Adobe's strategy of proliferating their tools to a wider userbase before increasing pricing, given the backdrop of increased competition. We subsequently reduced our position in Adobe significantly.

IDEXX was the second largest detractor to Fund performance in 2024 with a share price decline of 25%. US veterinary visit trends remained in negative low-single digit territory throughout 2024 with no notable sequential improvements owed to persistent inflationary pressure on pet owner wallets and staffing shortages in veterinary practices. This led to organic revenue growth below the Company's target which relies on positive low-single digit vet visit growth. We remain convinced of IDEXX's competitive strengths and best-in-class diagnostic portfolio which will maintain its position as one of the leaders in diagnostic solutions for the pet healthcare industry.

SAP's share price rose by 69% during 2024, making it an important positive contributor to the Fund's return last year. The share price rise of last year was in recognition of the accelerating pace with which SAP is developing its cloud-based software revenues, to the extent that they now represent half of Group sales. Although we await the fourth quarter revenues of SAP, FY24 looks likely to have been an important proof point for the business at a difficult time for the global economy. SAP's shift to the cloud strikes us as being unstoppable, with the outlook for sales growth acceleration and margin improvement today much clearer than has been the case for a number of years.

July 2024 saw the Fund adopt an Article 9 classification under the EU's transparency framework, the Sustainable Finance Disclosure Regulation (SFDR). The SFDR classification upgrade required changes to the Fund's investment objective and investment policy and the Fund was renamed 'Man RI Global Sustainable Future'.³ In anticipation of the new classification, we divested those positions which were not classified as sustainable investments: L'Oréal and EssilorLuxottica both failed to comply with the hazardous waste limits of the framework, while Linde was divested due to the level of its carbon emissions.

The Fund finished the year with an unchanged number of 30 positions. Nine new names replaced nine divested positions over the course of the year. This helped improve the regional balance of the portfolio, with European companies now accounting for half of the Fund compared to their two-thirds exposure at the end of 2023.

Future outlook

We believe that the portfolio's earnings prospects and its more attractive valuation profile leave the Fund well positioned ahead of both 2025 and the next five years.

Each position is in the portfolio because we believe its formidable competitive strengths will act as the driver of its profits' trajectory in the coming five years and beyond. Of course, some companies will fall short, but we believe there is ample scope for others to over-achieve.

After a frustrating year, we remain confident in the scope of the portfolio to deliver returns in an uncertain and challenging macro and geopolitical environment. This confidence is based upon the proven staying power of its constituents.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Market summary

While expectations for the number of rate cuts in 2024 moderated in the first quarter, markets continued to soar to all time highs. A strong momentum rally led developed equity markets higher to begin 2024, as the pronounced shift in momentum felt in December quickly reversed. Technology and growth stocks in general were once again in favor particularly within the US and Taiwan. Market exuberance did not materialize in all equity markets however, as China's slowing growth continued to weigh on emerging markets despite the country's efforts to stimulate economic activity. Global equity markets remained elevated in February, surging on the combination of strong economic data and a constructive corporate earnings season in the US. Global equities finished the first quarter on a strong note, buoyed by a solid fundamental backdrop, strong corporate earnings and a US Federal Reserve still leaning towards rate cuts in the back half of the year. Emerging market equities failed to keep pace with their developed market counterparts as the strong rally driven by China in February faltered in March.

Aside from the temporary meme stock frenzy in May, investors were generally cautious during the second quarter of 2024. Election surprises in Mexico, India and France unnerved markets, while the impending US election, stubborn inflation and diminishing hopes for rate cuts were further reasons investors stayed on the sidelines. From a market concentration perspective, the quarter saw a picture similar to the what we observed one year prior, in the second quarter of 2023. For the second quarter of 2024, the hit rate (or the percentage of index constituents outperforming the overall index) for the MSCI World Index was 34%, similar to the second quarter of 2023, and the lowest in the last decade with only about a third of names outperforming the MSCI World. With 40% of the world population heading to the polls for major elections in 2024, political risk was on every investor's mind. Within emerging markets, closely watched elections in Taiwan and South Korea earlier this year turned out to be uneventful with outcomes in line with expectations and a likely continuity of previous policies. The surprises came from Mexico, India and South Africa in the second quarter.

In Q3 2024, the long-awaited Fed rate cut finally occurred. In spite of the market volatility, the MSCI World Index returned 6.4% for the third quarter, with 4.5% of the returns driven by changes in earnings expectations and the rest from multiple expansion. From a P/E multiple perspective, the Index was 18.2x at the end of the third quarter, a touch higher than the 17.9x observed at end of the second quarter. Both Barra value and momentum underperformed, and the rotation in factor performance, evidenced by the volatility of factor monthly returns, did not help. There was no shortage of market volatility in July, as investors expressed uncertainty about the future payoff of AI related themes and how quickly those may manifest in company earnings. Weaker than expected inflation data in the US and continued slowing growth in China also impacted markets. Equity markets then experienced a significant rotation during the first week in August as renewed fears of a hard landing and resulting global recession drove risk assets lower to open the month, only to stage a rebound by month end as the MSCI World finished up 2.6%. The late September China policy boost added to market volatility in EM in particular, triggering a massive momentum reversal on the heels of the Chinese equity market rally.

Volatility maintained center stage in October, as risk assets gave back gains made in the prior month. Continued worries over slowing growth in addition to US election outcomes weighed on global developed markets, as the MSCI World Index gave back -1.98%. After a robust rally in Chinese equities in September, emerging markets more broadly fell back to earth as the MSCI Emerging Markets Index dropped -4.5% on the heels of a stronger dollar. In November, US equity markets rallied on the heels of the presidential election, with the S&P 500 Index jumping 5.9%. While European markets also benefitted from the general risk-on backdrop, emerging market equities significantly underperformed, hit by the continued US dollar rally as well as concerns over potential tariffs from the incoming administration. As the post-election equity rally started to run out of steam in the US in December, the Fed's hawkish remarks on December 18th sent equities down, with the S&P 500 down almost 3% on the day, while US yields jumped. Emerging markets fared better, supported by a risk rally in China in early December. In South Korea, the last month of the year was marked by political chaos, with President Yoon announcing martial law before withdrawing it a few hours later on December 4th. His impeachment by the National Assembly quickly followed, as well as the impeachment of his former prime minister, acting as interim president. The political crisis added to existing investor concerns about the country's economy and slowing growth, weighing further on the country's stock market.

For 2024 overall, within developed markets, the MSCI World Index was up 18.7% and the S&P 500 Index was up 25.0% in USD. Elsewhere in developed markets, the MSCI Japan Index was up 20.7% in JPY and MSCI Europe Index was up 8.6% in euros for the period. Within Emerging Markets, the MSCI Emerging Markets Index gained 7.5% in USD and the MSCI China A Index was up 11.7% in USD during the year.

Performance review

Against this backdrop, Man Systematic Europe RI Climate (the 'Fund') returned 6.19%¹ over the period and underperformed the benchmark by 2.4%².

Overall model performance for the Fund was positive for the year to date, with mixed performance from the three main models. The Fundamental Themes Model was positive, with the Valuation and Industry Dynamics signals producing the most positive returns. The ESG model produced positive returns, with all three E, S, and G signals positive. The Climate model was down for the period driven mainly by the Stranded Assets signal.

From a sector perspective, stock selection was positive while sector allocation was negative. Stock selection within the Consumer Staples and Industrials sectors contributed the most, while selection within Information Technology and Health Care sectors detracted the most. Within sector allocation, an underweight to the Financials sector detracted from performance.

From a country perspective, positive stock selection contributed to returns. Most notable was the positive selection in Norway and Portugal. The Fund's country allocation was negative, with an overweight in Portugal and Finland detracting from performance.

From an individual stock standpoint, the Fund's overweight holdings in a Norwegian Industrial firm, an underweight to a Swiss Consumer Staples firm, an overweight to a Danish Consumer Discretionary were the most significant contributors. The three stocks that detracted the most to performance were overweight in a Finnish Energy firm, a French Technology firm and a Danish Health Care company.

¹ Performance data is shown for Man Systematic Europe RI Climate D C EUR share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.70% management fees plus other fee. Other share classes may charge higher fees.

² MSCI Europe (EUR, NDTR) is an official benchmark for the Fund. Please consult the Prospectus or KIID/KID for more information.

Future outlook

Looking further ahead in 2025, geopolitical risks remain front and center. In the US, the new administration that formally took office in January will likely impact the dynamics of the war in Ukraine and the conflict in the Middle East as well as many matters in the US and abroad. The threats of tariffs, if enacted, could seriously impact China's main sources of growth and limit the government's ability to lift the economy out of its negative spiral. In the US alone, tariffs could make already stubborn inflation even stickier and affect interest rate expectations, impacting the US dollar, and therefore, emerging markets. With this in mind, we will not rest on our laurels, but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead. Our process continues to focus on idiosyncratic, bottom-up stock selection, as we aim to be increasingly agnostic to the overall market environment by focusing on continued research and development in order to build well diversified portfolios that can navigate market inflections and volatility.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Within Emerging Markets, the MSCI Emerging Markets Index gained 7.5% in USD and the MSCI China A Index was up 11.7% in USD during the year.

Performance review

Against this backdrop, Man Systematic China A Equity (the 'Fund') returned 21.39%¹ net-of-fees and outperformed its benchmark² by 2.23%.

Man seeks to add value through a fundamentally driven, quantitative, bottom-up stock selection process. Stocks are selected based on the output of our quantitative investment models. The Fund's model performance was positive overall for the year-to-date period. The Value Academic+, model was the best performing model followed by positive performance from the Quality, Factor Selection, Value Innovation, Momentum Academic+ and Momentum Innovation. Informed Investor was the neutral for the year.

Stock selection was positive, led by positive stock selection within the Information Technology and Materials sectors. Sector allocation was also positive neutral for the period. An underweight to the Consumer Staples sector contributed, while an overweight to the Materials sector detracted.

At the security level, the Fund's top three contributors were Energy, Health Care and Information Technology firms. The Fund's three largest detractors were one Information Technology firm and two Industrials firms.

¹ Performance data is shown for Man Systematic China A Equity D C EUR share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 2.2% management fees plus other fee. Other share classes may charge higher fees.

² The MSCI China A Index is an official benchmark for the Fund. Please consult the Prospectus or KIID/KID for more information.

Future outlook

Looking further ahead in 2025, geopolitical risks remain front and center. In the US, the new administration that formally took office in January will almost undoubtedly impact the dynamics of the war in Ukraine and the conflict in the Middle East as well as many matters in the US and abroad. The threats of tariffs, if enacted, could seriously impact China's main sources of growth and limit the government's ability to lift the economy out of its negative spiral. Market summary

MSCI Asia ex Japan ended 12% higher in 2024, the index's best return in four years, as stable global economic growth, signs of a more coordinated China policy response, and sustained momentum in AI-related stocks came together to support share prices in the region. The year began with high expectations that a Fed pivot would be beneficial for economies in Asia, reflected in futures markets pricing six cuts over the course of the year. In fact, it took until September for a Fed pivot to come to fruition, as job growth in the US remained strong and inflation proved stickier-than-expected. As financial conditions remained restrictive, local trends were the main drivers of share prices over the year, with caution, followed by optimism, surrounding China's economy, and enthusiasm around the use cases for AI, being the key trends in markets.

Performance review

Against this backdrop, Man Global Convertibles returned 22.26%¹ over the period. Positive excess returns over the benchmark² which returned 19.43% were predominately driven by stock selection, led by strong performance in companies listed in the region's two major markets, China and India. This was partially offset by the underweight to Taiwan, the region's best performing market, and weak performance in our healthcare positions. Risk and return contributions were once again overwhelmingly dictated by idiosyncratic factors, in line with our expectations of the portfolio.

The key individual contributors to performance were:

- **Xiaomi** - a consumer technology manufacturer benefitting from strong EV penetration in China and a growing share in the global smartphone market, was the standout relative performer over the year. The company reported strong quarterly results led by margin expansion of its EV range and on-going strength within its core smartphone business, supporting the stock in the second half of the year.
- **Mahindra & Mahindra** - an Indian autos company specialising in tractors and commercial vehicles, was a key winner from earlier in the period. A combination of strong results and competitive positioning within the SUV segment helped spur share price gains of over 65% during the first half of the year, with the stock witnessing modest gains since then.
- **Qifu Technology** - a consumer financing platform geared to the recovery in China, performed well since initiation in the third quarter. The stock witnessed large earnings upgrades on expectations of funding cost tailwinds, alongside improvements in loan origination announced during its Q3 results.

The key individual detractors to performance were:

- **Parade Technologies** - an integrated circuits supplier for consumer electronics, was a material detractor in the first quarter on concerns around market share losses, despite a positive backdrop for the global tech sector. We remain invested and believe the company can capitalise on AI-adoption in PC and smartphones that we anticipate during 2025.
- **Airtac** - a pneumatic equipment supplier focused on the adoption of automation in Chinese manufacturing, suffered as a result of the weakness in manufacturing activity over the year.
- **Innovent Biologics** - a biopharma company that produces the GLP-1 weight loss drug, suffered heavy selling pressure in October following news of a related-party transaction involving the founder and CEO. The stock has partially recovered after termination of the deal, supported by strength of the underlying business.

Future outlook

We retain our positive stance on the region despite the uncertainty associated with Trump's election victory. In China, we believe it is important to look past the potential short-term volatility arising from policy uncertainty and concerns around trade, and focus on the direction of travel, which in our view, reflects a strong resolve from policymakers to turnaround the economy. The prospect of structural reform in China is supported by the additional regional boosts, such as lower interest rates and the anticipation of a new tech product cycle, which together, reinforces our conviction in the opportunity set for Asia ex Japan.

Man Systematic US High Yield - Annual Report Commentary

Market summary

Over 2024, the ICE BofA US High Yield Index returned +8.20% in total return and +5.10% in excess of Treasuries, with credit markets benefiting from significant spread compression and rates tailwinds amid evolving fiscal and economic policy dynamics.

The first half of 2024 set a constructive tone for credit markets. In Q1, spreads tightened meaningfully as dovish Fed guidance and expectations of mid-year rate cuts fueled demand for high-yield assets. While January began the year off cautiously, February and March saw improving sentiment as investors sought carry exposure, driving credit spreads tighter. In Q2, credit markets demonstrated resilience despite early inflationary pressures and rising commodity prices. Sentiment improved as inflation moderated in May and June, and confidence in rate-cut prospects strengthened.

The second half of 2024 saw continued spread compression alongside shifting macroeconomic dynamics. In Q3, slowing inflation, weaker economic data, and dovish Fed policy—including the first rate cut since 2020—steepened the yield curve and fueled demand for risk assets, culminating in credit spreads tightening further. In Q4, spreads further compressed to 274bps by November—a historical tight not seen since 2007—driven by the US election results and an additional Fed rate cut. While December featured a steepening yield curve and marginal widening in credit spreads, the impact was limited, and spreads remained historically tight, ending the year positively for credit markets.

	Q1-2024	Q2-2024	Q3-2024	Oct-24	Nov-24	Dec-24	Q4-2024
S&P500	10.56%	4.28%	5.89%	-0.91%	5.87%	-2.38%	2.41%

B (H0A2)	1.48%	1.03%	4.54%	-0.45%	1.11%	-0.32%	0.34%
CCC and Below (H0A3)	3.22%	0.18%	11.55%	0.62%	1.63%	0.19%	2.45%

Performance review

Against this backdrop, Man Systematic US High Yield (the 'Fund') returned 9.47%¹ net-of-fees and outperformed its benchmark² by 1.27%.

Man seeks to add value through a fundamentally driven, quantitative, bottom-up bond selection process. Bonds are selected based on the output of our quantitative investment models. The Fund had positive performance overall in FY 2024 in all five of our model pillars, with the Value pillar producing the most positive returns, followed by the Momentum, Factor Selection, Quality, and Informed Investor pillars. Positive performance in the Value pillar spanned both relative and alternative value signals. In the Momentum pillar, both credit and equity cross-asset models were in favor during the period. Within Factor Selection, our dynamic model allocation, non-linear model combination, and style momentum signals were all additive. The Quality pillar was driven by strength in probability of default and asset volatility signals, while debt sustainability model performance was mixed. Lastly, within Informed Investor, credit informed blends outperformed while equity informed blends detracted.

¹ Performance data is shown for Man Systematic US High Yield I USD share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 0.40% management fees. Other share classes may charge higher fees.

² ICE BofA US High Yield Index (USD, TR) is an official benchmark for the Fund. Please consult the Prospectus or KIID/KID for more information.

Man Systematic US High Yield - Annual Report Commentary (continued)

Looking at the return contributions by sector and rating helps to identify the main thematic drivers of performance. In terms of sectors, Retail and Services were top contributors to active Fund returns, owing to positive selection effects. On the other hand, Technology & Electronics and Media detracted the most for the period, due to weak selection in both. With respect to credit ratings, contributions over the period were broadly positive. Outperformance in the BBB, BB, single-B and CCC & below buckets were all attributable to positive selection.

Future outlook

Looking further ahead in 2025, geopolitical risks remain front and center. In the US, the new administration that formally took office in January will almost undoubtedly impact the dynamics of the war in Ukraine and the conflict in the Middle East as well as many matters in the US and abroad. The threats of tariffs, if enacted, could seriously impact China's main sources of growth and limit the government's ability to lift the economy out of its negative spiral. In the US alone, tariffs could make already stubborn inflation even stickier and affect interest rate expectations, impacting the US dollar, and therefore, emerging markets.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Global Investment Grade Opportunities - Annual Report Commentary

Market summary

2024 was an eventful year for risk assets, punctuated by increasing geopolitical affairs and market volatility, amidst a series of global rate cuts as policy makers seemingly engineered the coveted soft landing.

At the onset, sticky inflation dominated the narrative as developed economies continued to post strong economic data. This coupled with high energy prices diminished rate cut expectations, particularly in the US, hurting government bonds.

June marked a significant shift, as the European Central Bank cut rates by 0.25% with the Bank of England also trimming their base rate by 0.25% for the first time in the following month. However, perhaps the most notable move in monetary policy, was the Federal Reserve's 0.50% rate cut in September, sparking a risk-on rally at the end of Q3. The long-awaited cut was the first of three over 2024, with December's final 0.25% cut being of a much more hawkish nature, after two consecutive upticks in CPI serving as a reminder that inflation had not quite been tamed.

Changing political regimes and geopolitical affairs also played a key role in shaping markets over the year. Escalations in the Middle East continued and nearly 50% of the global population headed for the polls in 2024 - which saw a record 60+ general elections. A new era for British politics began as the UK ushered in its first Labour government in 14 years, while Donald Trump's election victory and the Republican sweep sparked a strong rally in riskier assets across the Atlantic. Central European politics was not short of its own volatility as French Prime Minister Michel Barnier's government collapsed after just three months while German Chancellor Olaf Scholz lost his own vote of confidence at the back end of the year.

Against this backdrop, credit markets produced positive returns over 2024, with global high yield's return of 8.9%¹ outperforming investment grade which generated 3.4% as higher yielding assets generated strong income returns, while defaults remained moderately low. There was divergence across regional winners and losers, as Europe led investment grade performance while Sterling saw the strongest performance across high yield, with spreads tightening² over 1.60%. US credit tightened from already stretched levels post the Trump win. From a sector point of view, real estate outperformed across the credit quality spectrum while capital goods and automotives lagged.

Performance review

Against this backdrop, Man Global Investment Grade Opportunities returned 10.68%³ over the period, outperforming the benchmark by 8.58%⁴.

Outperformance has been predominantly driven by security selection and sector allocation decisions.

Key contributors

As most of our investors will know, idiosyncratic decisions are the driving force behind active returns for our portfolios. The main contributors included:

- United Kingdom – Bank: 0.85%
- Central Europe – Real Estate: 0.75%
- Central Europe – Bank: 0.52%
- Central Europe – Real Estate: 0.47%
- Eastern Europe – Real Estate: 0.46%

Key detractors

- United States – Insurance: -0.02%
- United States – Materials: -0.01%
- United States – Financial Services: -0.01%
- Canada – Financial Services: -0.01%

Outlook

The market is continuing to grapple with a tug-of-war between attractive yields and tight spreads⁵. The election of Trump prompted a revival of animal spirits and a remarkable rally in credit, with the US investment grade markets touching an all-time tight of 0.73%. We assume spread tightening from here will be limited, leaving passive investors with, at best, a carry opportunity set. Wider spreads in the coming year would likely subject these investors to losses.

¹ Source: Bloomberg

² Spread tightening refers to a reduction in the difference (or "spread") between the yields of two types of bonds, typically comparing riskier bonds (like corporate or emerging market bonds) to safer bonds (like U.S. Treasuries).

³ Performance data is shown for Man Global Investment Grade Opportunities D H EUR share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.45% management plus other fees. Other share classes may charge higher fees.

⁴ ICE BofA Global Large Cap Corporate Index is an official benchmark for this Fund. Please consult the Prospectus or Key Investor Information Document ('KIID') for more information.

⁵ Spread tightening refers to a reduction in the difference (or "spread") between the yields of two types of bonds, typically comparing riskier bonds (like corporate or emerging market bonds) to safer bonds (like U.S. Treasuries).

Man Global Investment Grade Opportunities - Annual Report Commentary (continued)

While we do not yet know US policy specifics, a series of themes for investment grade credit in 2025 are emerging. Beginning with tariffs, talk of 20% taxes on non-Chinese imports into the US could simply be a negotiating tactic, but higher levels than those in place today are expected. We have been heavily underweight automotives and broader manufacturers for over a year due to the overvaluation of cyclical sectors. The outcome for services is less clear, but we continue to favour financials, particularly in Europe, where we believe the profitability of certain banks will remain healthy despite an uptick in loan book losses.

Another important theme is deregulation. Earlier this year, the UK opted to water down proposed banking regulations in a bid to support growth. The new US government could opt to weaken antitrust rules while a soft landing could incentivise companies to be even more aggressive with their balance sheets, both of which could heighten animal spirits and spur heightened levels of mergers and acquisitions (M&A).

At this point in the cycle, we believe it remains prudent to have a low credit beta compared to the wider markets, while still focusing on selecting securities which can provide a higher carry than standard market benchmarks. We aim to not take significant active duration views, but due to the supply-demand imbalance between increasing government debt issuance coupled with modest appetite from investors, we could see more volatility going forward from the rates market, particularly in longer-dated securities.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Man China Equity - Annual Report Commentary

Market summary

MSCI China 10/40 ended 18.25% higher in 2024. This was the index's first positive return in four years as stable global economic growth and signs of a more coordinated policy response came together to support stock prices across A and H-share markets¹. Despite this more constructive backdrop, the index trailed global equities for most of the year; the exception being a brief period in early October after a broad stimulus package was unveiled by policymakers, leading to the largest monthly rally in MSCI China since 2008. However, outperformance was ultimately short-lived as focus shifted towards the US election and a Trump win brought about fresh tariff concerns for both China and the broader region during the fourth quarter.

Performance review

Against this backdrop, Man China Equity delivered a positive net return of 17.04%² over the period, underperforming the reference benchmark³ by 1.21%. The Fund ended the year in a disappointing note, having gone into December ahead of MSCI China 10/40 by almost 40bps. While stock selection has remained a positive contributor throughout the year, sector allocation was once again a drag and the main driver behind underperformance. This was most prominent in the underweight to financials, which offset outperformance communication services and consumer discretionary holdings.

The key contributors to relative performance at a stock-level were:

- East Money Information: reached all-time highs on equity market support and news monthly new account openings on the Shanghai Stock Exchange reached its third highest month on record in November.
- Qifu Technology: supported by a strong Q3 earnings led by improvements in loan origination.
- Xiaomi: benefitted from strong EV penetration in domestically and a growing share in the global smartphone market.

The key detractors to relative performance at a stock-level were:

- Parade Technologies: was a material detractor in the first quarter on concerns around market share losses, despite a positive backdrop for the global tech sector.
- Inovance Technologies: faced pressure on profits due to tougher competition across its product lines.
- Weichai Power: weakened together with the industry-wide slowdown in heavy-duty truck sales.

Future outlook

We retain our positive stance on China despite the uncertainty associated with Trump's election victory. In our view, it is important to look past the potential short-term volatility arising from policy uncertainty and concerns around trade, and focus on the direction of travel, which in our view, reflects a strong resolve from policymakers to turnaround the economy.

The reluctance of policymakers to utilise leverage and investment-led spending, which was so prevalent under China's old economic model, means doing so is likely to involve structural reform to reduce the impact of its high savings rate. In this respect, we anticipate further reform to the social security system given the low levels of welfare support in China relative to its level of per capita income. These measures should provide a boost to consumption by reducing the burden on urban migrants - roughly a third of the total working population - to save for social security benefits. Additionally, anticipated land reform measures, which aim to relax restrictions on the use of residential farmland, offers China's mass rural population an opportunity to commercialise rural land. If executed correctly, both these initiatives could help deliver material upside to consumption.

As of period-end, the portfolio held overweight positions in real estate, utilities, and consumer discretionary and underweight positions in financials, communication services, and energy.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Dynamic Income and Man Euro Corporate Bond - Annual Report Commentary (continued)

Man Euro Corporate Bond

Against this backdrop, Man Euro Corporate Bond returned 14.06%¹ over the period, outperforming the ICE BofA Euro Corporate Index (EUR, Hedged) benchmark by 9.40%. Performance has been predominantly driven by sector allocation and security selection decisions.

Key contributors

As most of our investors will know, idiosyncratic decisions are the driving force behind returns for our portfolios. The main contributors included:

- Central Europe – Real Estate: 0.77%
- United Kingdom – Financial Services: 0.72%
- United Kingdom – Insurance: 0.58%
- Central Europe – Bank: 0.57%
- Eastern Europe – Real Estate: 0.55%

Key detractors

- United Kingdom – Bank: -0.07%
- United Kingdom – Bank: -0.03%

Future outlook

The market is continuing to grapple with a tug-of-war between attractive yields and limited room for further price gains. The election of Trump prompted a revival of animal spirits and a remarkable rally in credit, with the US investment grade markets touching an all-time high of 0.73%¹. We assume spread tightening from here will be limited, leaving passive investors with, at best, a carry opportunity set. Wider spreads in the coming year would subject these investors to losses.

While we do not yet know US policy specifics, a series of themes for credit in 2025 are emerging. Beginning with additional tariffs of 10% on Chinese imports into the US, but higher levels than those in place today are expected. We have been heavily underweight automobiles and broader manufacturers for over a year due to the overvaluation of cyclical sectors. The outcome for services is less clear, but we continue to favour financials, particularly in Europe, where we believe the profitability of certain banks will remain healthy despite an uptick in loan book losses.

Another important theme is deregulation. Earlier this year, the UK opted to water down proposed banking regulations in a bid to support growth. The new US government could opt to weaken antitrust rules while a soft landing could incentivise companies to be even more aggressive with their balance sheets, both of which could heighten animal spirits and spur heightened levels of mergers and acquisitions (M&A).

Higher-for-longer typically equates to rising defaults in sub-investment grade credit. However, there are several factors which may keep bankruptcies in check. Firstly, a resilient US economy may give issuers the revenue streams they require to offset higher borrowing costs. Secondly, fundamentals remain robust – both leverage and interest rate coverage ratios are at mid-cycle levels. Finally, the quality of the market has been improving over the years as more highly indebted firms opt to finance themselves in the leveraged loan markets, which are experiencing higher levels of default than fixed-rate high yield for the first time ever.

At this point in the cycle, we believe it remains prudent to have a focus on higher-quality credit investments compared to the wider markets, while still focusing on selecting securities which can provide a higher carry than standard market benchmarks. We aim to avoid making significant predictions about interest rate movements, but due to the supply-demand imbalance between increasing government debt issuance coupled with modest appetite from investors, we could see more volatility going forward from the rates market, particularly in longer-dated securities.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. They are intended to provide a comparative indication of particular asset classes, investment sectors, or financial markets more widely ("market backdrop"). Returns are calculated net of 1.24% management fees. Other share classes may charge higher fees.

Market summary

Robust GDP growth, controlled inflation, ample liquidity, declining default rates, stable corporate credit fundamentals, favourable technical conditions in the market, and supportive government policies contributed to another strong year J.P. Morgan Asia Credit Index ("JACI") in 2024. The index added 5.7% last year led by a 15.2% return in HY which was supported by a 4.2% return from the IG sector. Both Asia IG and Asia HY outperformed their global Developed Markets and Emerging Markets counterparts for the year as a result of stronger spread tightening and lower rate sensitivity. Asia default rates have also significantly reduced from 10% in 2023 to 4.7% and continued to improve. Technicals were robust, with the Asia credit market experiencing its third year of net redemptions in 2024, equivalent to about 4% of the total JACI market capitalization.

Fund Performance

The Fund delivered a net return of 8.09%¹ over this period, outperforming its underlying benchmark² by 2.37%. Outperformance was primarily driven by effective top-down allocation, prudent individual credit selection, and a dynamic duration strategy. Strategic positions to improving credit stories in Japan and Australia, an overweight in stable Hong Kong credits, an underweight in underperforming sectors in China, and a focus on the renewable energy sector in India were among our key successes during the year. Additionally, we reduced exposure to high-quality government and government-backed bonds with narrow yields, prioritising opportunities in improving/turnaround stories of sovereign and corporate credits.

The three largest detractors in the fund were our relative underweight in CCC-rated Pakistan sovereign bonds, which rallied on support from the IMF and a stabilisation of its finances, the underweight in a Chinese large-scale developer that is facing significant liquidity issues but has avoided default, and our position in a HK real estate developer, which has suffered from a management reshuffle, contagion from poor sentiment in real estate, and liquidity issues. Our underweight in duration sensitive names such as Korean and Indonesia quasi-sovereigns, which detracted slightly, was more than offset in our overweight in BBB and BB corporates which rallied on credit spread compression.

Future outlook

Whilst we are mindful of the potential for increased interest-rate volatility, geopolitical uncertainty and the risk of trade tariffs, we believe the current credit cycle in Asia remains robust; credits are enjoying strong fundamentals and a liquid financing environment with attractive all-in yields. Hence, we believe a dynamic credit focused strategy that can capture dislocations and identify opportunities through active bottom-up sector and security selection can continue to deliver performance in 2025.

Credit fundamentals remain solid, and we are sanguine about the outlook, even after a strong performance in 2024. Moody's predicts that the three countries with the highest real GDP growth rate will all be from Asia (i.e. India, Indonesia, and China). Furthermore, Asia Pacific (ex. Japan) sovereigns registered the lowest percentage of downgrade/review ratings in 2024 amongst all EM regions. Weaker sovereigns in Asia, namely Pakistan and Sri Lanka, have successfully completed their debt restructuring in 2024 and both countries are on a positive rating trajectory.

Turning to sector specifics, we expect Asian financials to outperform Asian non-financials and prefer sectors focused on domestic consumption as we believe they are more likely to be supported by governments' easing measures and less impacted by potential trade tariffs. From a regional point of view, we continue to favour Japanese credits and India's growth story. We believe Japanese insurance companies will benefit from interest rate movement and favourable economic momentum. India's growth story remains intact and expect more new bond issues to fund the country's growth in infrastructure and non-bank financial company sectors.

Potential trade tariffs and geopolitical risks are major overhangs to global credit and Asia is no exception. However, we believe the market has already factored in a greater impact on Asian credit compared to its peers, while issuers in Asia have more capacity to absorb shocks due to their strong credit metrics, more favourable bond demand/supply dynamics, and governments committed to provide a liquid policy environment. We anticipate that credit-spread volatility may present further opportunities in 2025 and look forward to capturing these dislocations.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Global Climate Transition Impact Bond - Annual Report Commentary

Market summary

2024 was a positive year for global credit markets. While inflation remained stickier-than-anticipated, a resilient economic backdrop, characterised by strong growth and low default rates, supportive technicals, and a more accommodative monetary stance from major central banks helped deliver positive total returns for fixed income investors.

The ICE BofA Green Bond Index (USD Hedged) rose 4% over the year, helped by a slight 0.19% narrowing in the gap between green bond yields and market benchmarks, along with a small 0.08% drop in overall bond yields¹. The performance difference between green bonds and regular bonds (known as vanilla bonds, which are standard, straightforward bonds without any special features) also became smaller over the year, as green bonds outperformed the broader market for the second year in a row. Issuer trends also remained strong, signalling companies continued commitment to green financing. After a record amount of green bonds were issued in the first half of the year, this trend continued over the second half of 2024, with \$447bn of debt issued overall, the largest calendar year of issuance in history.

Performance review

Against this backdrop, The Man Global Climate Transition Impact Bond Fund launching in late-January, produced a positive² return of 5.65% over the period. Positive excess returns over the benchmark³ which returned 3.94%, were driven by a combination of asset allocation and security selection, which was offset partially by the drag from duration exposures. The overweight to corporate bonds was a positive contributor as corporates outperformed sovereigns and the BBB segment outperformed AAAs. The excess returns over the index, which is dominated by lower yielding and more duration-sensitive sovereign and quasi-sovereign issuers was an additional driver of outperformance.

It was particularly pleasing to see significant outperformance in utilities, given the large portfolio weighting and high climate impact generated by the sector. Top contributors within the complex included a position in one of the four largest integrated electricity gentailers⁴, which benefitted from meaningful spread tightening following improvements in cash flow, profitability, and leverage metrics. The bonds were trading at an attractive valuation relative to other utilities, despite displaying an already strong credit profile due to its competitive positioning and government-backing. As the bond rallied over the year, we decided to reduce exposure to harvest profits, recycling the proceeds into new ideas.

Another important contributor within the sector was a green energy operator which saw its Sustainability-Linked Bonds ('SLBs') rally after step-up coupons relating to its greenhouse emission targets were triggered in late-April. The company had committed to very ambitious emissions targets linked to its 2027 bonds, which it narrowly missed due to the ongoing energy crisis in Europe, with an emergency government decree forcing the company to increase its gas production. This led to an additional 0.25% step-up in coupon for bondholders. The reason for the miss was well-telegraphed by the company and its climate targets are still intact, meaning the SLB trigger saw the credit subsequently rally. Over USD10bn of this issuer's outstanding bonds were affected, the largest amount the market has ever seen to be triggered by a climate KPI miss.

There were two main detractors to relative performance. Firstly, the overweight position in French credits during the early part of the year, which suffered due to political turmoil that widened credit spreads and dampened sentiment. And secondly, the underperformance of a supranational credit focused on Africa, impacted by macroeconomic challenges and weaker-than-expected growth in those regions. We continue to see value in the bond issue as it addresses the funding needs of ESG projects of some of the most underprivileged countries in the world, and presents one of the widest credit spreads of liquid and publicly traded AA-rated credit instruments.

Future outlook

We remain constructive around the opportunity set for active green bond investing looking at the backdrop for 2025. While the spotlight has recently been on the impact of Trump's policymaking, particularly with respect to boosting US fossil fuel production and revoking green subsidies, we believe the impact on the green bond complex will be relatively benign. This is due to a combination of factors, ranging from the current narrow focus on offshore wind to the limited presence the US has in the overall green bond market.

Furthermore, we continue to see evidence of a continued embrace of green energy initiatives from US corporations, which is at odds with state policy.

Additionally, yields for green bonds remain attractive at current levels, both relative to the overall investment grade universe and its own history. A common argument against considering green bonds over traditional fixed income used to be the "greenium effect⁵". However we believe this trend is closing, as interest rates have normalised and the index has become more diversified.

Indices definitions

CBOE Volatility Index (VIX index)	Index measuring the market's expectation of future volatility. The VIX Index is based on options of the S&P 500® Index, considered the leading indicator of the broad U.S. stock market. The VIX Index is recognised as the world's premier gauge of U.S. equity market volatility. For more information go to http://www.cboe.com/vix
FTSE 100 Index	The FTSE 100 is a market-capitalisation weighted index of UK-listed blue chip companies. The index is part of the FTSE UK Index Series and is designed to measure the performance of the 100 largest companies traded on the London Stock Exchange that pass screening for size and liquidity. For more information go to https://www.ftserussell.com/index-series/index-spotlights/uk-equity-indices .
ICE BofA Index	The ICE BofA Index is a series of market-capitalisation weighted indices designed to measure the performance of various fixed-income markets. These indices are constructed by the Intercontinental Exchange (ICE) and Bank of America (BoFA), spanning a wide range of bond types, including corporate, government, and municipal bonds. The indices are commonly used as benchmarks by investors and portfolio managers. For more information, go to https://www.theice.com/market-data/indices .
JP Morgan Emerging Market Bond Index Global (EMBI Global)	The J.P. Morgan Emerging Markets Bond Index Global ("EMBI Global") is a traditional, market capitalisation weighted index belonging to the JPMorgan Emerging Market Bond Index (EMBI), which are a set of three bond indices to track bonds in emerging markets operated by J P Morgan. The EMBI Global tracks total returns for traded external debt instruments in the emerging markets and is an expanded version of the JPMorgan EMBI+. As with the EMBI+, the EMBI Global includes U.S dollar-denominated Brady bonds, loans, and Eurobonds with an outstanding face value of at least \$500 million. It covers more of the eligible instruments than the EMBI+ by relaxing somewhat the strict EMBI+ limits on secondary market trading liquidity. Additionally, the EMBI Global defines emerging markets countries with a combination of World Bank-defined per capita income brackets and each country's debt-restructuring history. This criteria allows the EMBI global to include a number of higher-rated countries. For more information go to www.jpmorgan.com
JP Morgan Government Bond Index Emerging Market Global Diversified (EMBI Global Diversified)	The index is a comprehensive Emerging Markets debt benchmark that tracks local currency bonds issued by emerging market governments. EMBI Global Diversified is positioned as the investable benchmark that includes only those countries that are accessible by most of the international investor base. The diversification methodology limits the weights of the larger index countries by only including a specified portion of those countries' eligible current face amounts of debt outstanding, thus providing a more even distribution of weights across the countries in the index. The index belongs to the JPMorgan Emerging Market Bond Index (EMBI) family of indices for which returns and statistics are available from December 1993. For more information go to www.jpmorgan.com
MSCI All Country World Index (MSCI ACWI)	The MSCI ACWI Index, MSCI's flagship global equity index, is designed to represent performance of the full opportunity set of large- and mid-cap stocks across 23 developed and 27 emerging markets. As of November 2020, it covers more than 3,000 constituents across 11 sectors and approximately 85% of the free float-adjusted market capitalisation in each market. The index is built using MSCI's Global Investable Market Index (GIMI) methodology, which is designed to take into account variations reflecting conditions across regions, market cap. Sizes, sectors, style segments and combinations. For more information go to www.msci.com
MSCI Emerging Markets Index	The MSCI Emerging Markets Index captures large and mid cap representation across 24 Emerging Markets (EM) countries*. With 1,136 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation in each country. For more information go to www.msci.com
MSCI Europe Index	The MSCI Europe Index captures large and mid cap representation across 15 Developed Markets (DM) countries in Europe*. With 442 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation across the European Developed Markets equity universe. For more information go to www.msci.com
MSCI Europe ex UK Index	The MSCI Europe ex UK Index captures large and mid cap representation across 14 Developed Markets countries in Europe. With 345 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation across European Developed Markets excluding the UK. For more information go to www.msci.com
MSCI World Index	The MSCI World Index captures large and mid cap representation across 23 Developed Markets (DM) countries*. With 1,634 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation in each country. For more information go to www.msci.com
Russell/Nomura Large Cap value Index	The Russell/Nomura Large Cap Index contains the top 85% value stocks of the Russell/Nomura Total Market Index in terms of float-adjusted market cap
Russell/Nomura Total Market Index	The Russell /Nomura Total Market Index is a Japan Equity index consisting of the top 1,000 stocks by market cap excluding stable shareholdings covering the top 98% of all stocks listed on all Japan's stock exchanges in terms of float-adjusted market cap. For more information go to www.ftse.com
S&P 500	Index is a widely recognised gauge of the U.S. equities market. This index is an unmanaged capitalisation-weighted index consisting of 500 of the largest capitalisation U.S. common stocks. The returns of the S&P 500 include the reinvestment of dividends. For more information go to https://eu.spindices.com/
Tokyo Stock Price Index (TOPIX)	Capitalisation-weighted index of all companies listed on the First Section of the Tokyo Stock Exchange. This is a measure of the overall trend in the stock market, and is used as a benchmark for investment in japan stocks. For more information go to https://www.jpix.co.jp/english/markets/indices/topix/

GLOSSARY

Active management	Active management is the use of a human element, such as a single manager, co-managers or a team of managers, to actively manage a fund's portfolio. Active managers rely on analytical research, forecasts, and their own judgement and experience in making investment decisions on what securities to buy, hold and sell. The opposite of active management is passive management, better known as "indexing".
Ancillary assets	Assets which are not the main assets of a company.
Appreciation	An increase in the market value of an asset, such as a stock, bond, commodity or piece of real estate, or in the value of one currency with respect to another. The opposite of depreciation.
Asset	Any item of economic value owned by an individual or corporation, especially that which could be converted to cash. Examples are cash, securities, accounts receivable, inventory, office equipment, real estate, a car, and other property. On a balance sheet, assets are equal to the sum of liabilities, common stock, preferred stock, and retained earnings.
Asset class	An asset class is a group of securities that exhibits similar characteristics, behaves similarly in the marketplace and is subject to the same laws and regulations. The three main asset classes are equities, or stocks; fixed income, or bonds; and cash equivalents, or money market instruments. Some investment professionals add real estate, commodities, and increasingly, cryptocurrencies such as Bitcoin, to the asset class mix.
Balance of payments	Statement of a country's net financial transactions with other countries over a defined period of time.
Balance sheet	Financial statement that provides a snapshot of what a company owns and owes, as well as the amount invested by shareholders.
Bankers' acceptance	A bankers' acceptance (BA) is a short-term credit investment created by a non-financial firm and guaranteed by a bank to make payment. Acceptances are traded at discounts from face value in the secondary market.
Benchmark	A standard against which the performance of a fund can be measured and compared (e.g. a stock market index such as the FTSE 100 or an interest rate, such as LIBOR).
Blue Chip company	The stock of a major company with a record of strong earnings, reliable dividend payments and steady share price performance. Blue chips are normally the largest capitalised stocks in a particular market and among the most widely traded.
Bond	A debt instrument issued for a period of more than one year with the purpose of raising capital by borrowing. Generally, a bond is a promise to repay the principal along with interest (coupons) on a specified date (maturity). Some bonds do not pay interest, but all bonds require a repayment of principal. When an investor buys a bond, he/she becomes a creditor of the issuer.
Buyback	A buyback, also known as a share repurchase, is when a company buys its own outstanding shares to reduce the number of shares available on the open market. Companies buy back shares for a number of reasons, such as to increase the value of remaining shares available by reducing the supply or to prevent other shareholders from taking a controlling stake.
Cash Equivalents	Cash equivalents are investments securities that are for short-term investing, and they have high credit quality and are highly liquid. These securities have a low-risk, low-return profile and include Treasury bills, certificates of deposit, bankers' acceptances, commercial papers and other money market instruments.
Certificates of deposit (CDs)	Interest-bearing certificate issued by a bank to a depositor. Interest is paid at maturity.
Collective investment scheme	A type of investment scheme that involves collecting money from different investors and then combining all the money collected to fund the investment.
Compound interest	Earning interest on interest, or, more precisely, the interest earned on the sum of the principal amount and the interest already accumulated. A return on an investment is compounded if it takes into account compound interest, i.e. the interest is reinvested.

GLOSSARY (continued)

Commercial paper	A type of borrowing by companies and institutions in the form of loans where lenders do not have the right to take the assets of the borrower if they fail to repay. These loans are given for a period of a year or less.
Commodity	A good produced in bulk. Many commodities, such as coffee, meat and grain, and raw materials such as metals and oil, are traded on local, regional and/or international markets called commodity exchanges, either on a spot basis or through futures contracts, which allow the purchase or sale of a commodity at a predetermined price on a particular date in the future.
Common stock	See <i>Ordinary shares</i>
Consumer staples	Consumer staples are essential products, such as food, beverages, tobacco and household items. Consumer staples are goods that people are unable or unwilling to cut out of their budgets regardless of their financial situation (Investopedia).
Convertible bond	A bond issued by a company that has a set maturity date and pays interest in the form of a coupon. It has features of both a bond and stock and its valuation reflects both types of investments. It gives the holder the option to convert the bond into a specific number of shares of the issuing company – in other words, it has an 'embedded option'.
Corporate Bond	A bond issued by a company.
Coupon	A term used to refer to the interest paid by a bond. It derives from the fact that bonds used to be issued as bearer documents (i.e. certificates which do not identify the owner) with dated coupons attached to them. These were cut off the document when the payment of the interest was due and taken to a paying agent for the interest to be paid.
Country risk	<p>Country risk is a term for the risks involved when someone invests in a particular country.</p> <p>Country risk varies from one country to the next, and can include political risk, exchange-rate risk, economic risk, and transfer risk. In particular, country risk denotes the risk that a foreign government will default on its bonds or other financial commitments. In a broader sense, country risk is the degree to which political and economic unrest affect the securities of issuers doing business in a particular country.</p>
Credit rating	Ratings issued by credit ratings agencies which represent the agency's evaluation of qualitative and quantitative information for a company or government. Ratings are used to rank companies and governments on the probability of them defaulting on their obligations (i.e. to repay their debts).
Credit risk	<p>Usually used when referring to investment in bonds, credit risk is the risk of a loss deriving from the inability of the issuer of a bond to make the interest payments and repay the capital at the end of the life of the bond in full and as scheduled.</p> <p>'Triple A' or 'investment grade rated' are assessed as being the lowest credit risk while non-investment grade bonds - also known as high-yield debt (or 'junk bonds') - are assessed as the highest credit risk.</p> <p>The higher the credit risk, the higher the interest rate the borrower will have to attract lenders.</p>
Currency forward	A binding contract in the foreign exchange market that locks in the exchange rate for the purchase or sale of a currency on a future date. A currency forward is essentially a hedging tool that does not involve any upfront payment.
Current account (Balance of payment current account)	Movements of money into and out of a country, relating to trade between private individuals, for example workers sending money to their families in another country. The current account includes the visible balance of trade (the net difference between exports and imports of merchandise goods) and the invisible trade balance (payments and receipts for services such as shipping, banking and tourism).
Debt security	Debt security refers to a debt instrument, such as a government bond, corporate bond, certificate of deposit (CD), municipal bond or preferred stock, that can be bought or sold between two parties and has basic terms defined, such as notional amount (amount borrowed), interest rate, and maturity and renewal date.
Deflation	Deflation is the general decline in prices for goods and services occurring when the inflation rate falls below 0%. Deflation happens naturally when the money supply of an economy is fixed. In times of deflation, the purchasing power of currency and wages are higher than they otherwise would have been.
Derivatives	Financial contracts such as futures, options and various securities that offer 'synthetic' access to an underlying asset such as a commodity, stock market or fixed income security. The price movements of a derivative generally follow the price movements of the underlying asset but derivatives generally require only small amounts of capital (margin) to gain exposure to the underlying asset.

GLOSSARY (continued)

Developed markets	Countries that have sound, well-established economies with a high level of economic growth and security. They are therefore thought to offer safer, more stable investment opportunities than developing markets.
Dividend	A dividend is the distribution of reward from a portion of company's earnings, and is paid to a class of its shareholders. Dividends are decided and managed by the company's board of directors, though they must be approved by the shareholders through their voting rights. Dividends can be issued as cash payments, as shares of stock, or other property, though cash dividends are the most common.
Dividend yield	See <i>Yield (3rd definition)</i>
Earnings per Share (EPS)	Profit, net of tax and dividends to preferred shareholders, divided by the total amount of ordinary shares outstanding. Most income statements include a calculation of earnings per share. This calculation tells you how much money shareholders would receive for each share of stock they own if the company distributed all of its net income for the period. In reality, however, companies would not distribute all of their earnings. Usually they reinvest them in the business.
Emerging markets	Emerging market is a term use to describe a developing country, in which investment would be expected to achieve higher returns but be accompanied by greater risk. Global index providers sometimes include in this category relatively wealthy countries whose economies are still considered underdeveloped from a regulatory point of view.
Equity	An ownership right representing an interest in a company.
Equity Swaps	An equity swap is an arrangement made in a futures contract whereby differences in settlement are made through cash payments, rather than by the delivery of physical goods or securities. This is generally an easier method of settlement, because both losses and gains are paid in cash. Equity swaps provide investors with the all the benefits and risks of owning a security without actually owning it.
Equity-linked security	A type of debt instrument whereby the return is linked to the performance of a group of underlying stocks or equities that are also linked to the security.
EPS	See <i>Earnings per share</i>
Exchange Traded Funds (ETFs)	Index-tracking funds that can be traded on exchanges just like a stock – so they combine the diversified holdings of a fund with the low cost and tradability of a share.
Exposure	Exposure (or market exposure) refers to the currency amount of funds, or percentage of a portfolio, invested in a particular type of security, market sector or industry, which is usually expressed as a percentage of total portfolio holdings. It represents the amount an investor can lose from the risks unique to a particular investment.
External account	See <i>Current account</i>
Financial Derivative instruments	See <i>Derivatives</i>
Fixed income	Term used to denote bonds and other debt instruments, because they normally pay a fixed interest rate.
Foreign exchange	Foreign exchange is the exchange of one currency for another or the conversion of one currency into another currency. Foreign exchange also refers to the global market where currencies are traded virtually around the clock.
Forward contract	A forward contract is a customised contract between two counterparties to buy or sell a specific asset on a future date at an agreed price. As opposed to stocks and bonds, a forward contract is a derivative instrument, the value of which depends on an underlying asset. Unlike standard futures contracts, forward contracts are not traded on a centralised exchange and are highly customisable.
Free Cash Flow (FCF)	The cash a company has after all outgoings, including dividends, debt payments, tax, operating costs and capital expenditure.
Fund Sector	Funds are into sectors to facilitate comparisons between funds with similar investment objectives and types of investment.
Futures contract	An agreement to buy or sell a stated amount of a security, currency or commodity at a specific future date and at a pre-agreed price.
GDP	See <i>Gross Domestic Product</i>

GLOSSARY (continued)

GNP	See <i>Gross National Product</i>
Government Bond	Bonds issued by a government.
Gross Domestic Product (GDP)	The total value of an economy's domestic output of goods and services, which is one of the key indicators of economic growth with GNP.
Gross National Product (GNP)	Same as GDP except that it adds what a country earns from overseas investments and subtracts what foreigners earn in a country and send back home.
Index	An index is a portfolio of stocks, chosen according to simple, pre-defined rules, and designed to capture a particular investment style.
Inflation	Rate at which the general level of prices for goods and services is rising and, consequently, the purchasing power of currency is falling.
Interest rate	Interest rate is the amount charged, expressed as a percentage of principal, by a lender to a borrower for the use of assets. Interest rates are typically noted on an annual basis, known as the annual percentage rate (APR). The assets borrowed could include cash, consumer goods, and large assets such as a vehicle or building.
Liquidity	A relative term to describe the speed at which an asset or assets can be converted into cash (liquidated) and vice versa.
Liquid asset	A liquid asset is an asset that can be converted into cash speedily, with little impact to the price received in the open market. Liquid assets include money market instruments and government bonds.
Listed	In relation to the shares of a company, or some funds, when those shares have been accepted for trading on an exchange they are referred to as 'listed' investments. The exchange will have 'listing requirements', which all companies/funds must meet before they are 'accepted for listing'. The opposite of listed is over-the-counter.
Local currency	The most commonly form of currency used in a country. This usually encompasses the national currency of the country.
Long position	A security that is bought in expectation that it will rise in value.
Market capitalisation	Market value of a company's issued share capital – in other words, the number of shares multiplied by the current price of those shares on the stock market. Companies are ranked as large-cap, mid-cap and small-cap depending on their market capitalisation (market cap), though the actual criteria for classification depend on the market concerned.
Maturity date	The maturity date is the date on which the principal amount of a debt instrument becomes due and is repaid to the investor and interest payments stop.
Money market instruments	Instruments used by government and companies and others who wish to borrow money for short periods, usually less than a year. They are also called short term debt instruments. They include certificates of deposit, commercial paper and short term gilts.
Municipal Bond	A bond issued by a state or local government (or related entities) in the US to cover capital expenditures.
Option	A derivative instrument that gives the holder the right, without obligation, to buy (call) or sell (put) a security or asset at a fixed price within a specified period or at a particular future date.
Ordinary shares	Securities (called common stock in the US) that confer ownership in a publicly listed company. Holders are entitled to the dividends declared by the company and have the right to vote on the appointment of directors and other important matters. However they rank below holders of preferred shares.
Over the counter (OTC)	Generally refers to a stock (but can also refers to other financial instruments) that is not listed on an exchange and traded via a dealer network.
Overvalued	When a share price or market is trading at levels above those justified by fundamentals.
Overweight	Investment portfolio that holds an excess amount of a particular security when compared to the security's weight in the underlying benchmark portfolio. Actively managed portfolios will make a security overweight when doing so allows the portfolio to achieve excess returns. Overweight can also refer to an investment analyst's opinion that the security will outperform its industry, its sector or the entire market.

GLOSSARY (continued)

Passive management	Passive management is a style of management where a fund's portfolio mirrors a market index. Passive management is the opposite of active management. Passive management is also referred to as "passive strategy," "passive investing" or "index investing."
P/B Ratio	See <i>Price-to-Book Ratio</i>
Preference shares	Also called preferred shares. Shares that entitle the holder to a fixed-rate dividend, paid before any dividend is distributed to holders of ordinary shares.
Preferred stock	See <i>Preference shares</i>
Price-to-Book Ratio (P/B ratio)	The P/B ratio reflects the value that market participants attach to a company's equity relative to its book value (total assets minus total liabilities) of equity. A stock's market value is a forward-looking metric that reflects a company's future cash flows. The book value of equity is an accounting measure based on the historic cost principle, and reflects past issuances of equity, augmented by any profits or losses, and reduced by dividends and share buybacks. The higher the ratio, the higher the premium the market is willing to pay for the company above its hard assets. A low ratio may signal a good investment opportunity, but it could also mean something is fundamentally wrong with the company. The ratio is less meaningful for some types of companies, such as those in technology sectors. This is because such companies have hidden assets such as intellectual property which are of great value, but not reflected in the book value.
Primary market	The market for new securities issues. In the primary market the security is purchased directly from the issuer.
Quantitative analysis	Quantitative analysis (QA) is a technique that seeks to understand behaviour by using mathematical and statistical modelling, measurement, and research. Quantitative analysts aim to represent a given reality in terms of a numerical value. Quantitative analysis is employed for several reasons, including measurement, performance evaluation or valuation of a financial instrument, and predicting real-world events, such as changes in a country's gross domestic product (GDP).
Quantitative easing (QE)	Quantitative easing is an unconventional monetary policy in which a central bank purchases government securities or other securities from the market in order to lower interest rates and increase the money supply. Quantitative easing increases the money supply by flooding financial institutions with capital in an effort to promote increased lending and liquidity. When short-term interest rates are at or approaching zero, and when the printing of new banknotes isn't an option, quantitative easing can be considered.
Quantitative trading	A form of investing in which computers are used to sort through financial data and identify predictable patterns. Quantitative traders take advantage of modern technology, mathematics and the availability of comprehensive databases for making rational trading decisions to identify trading opportunities.
Reference index	An index used as a benchmark for performance comparison purposes but which is not a formal benchmark as per fund's prospectus.
Return on capital	The profit on an investment in relation to the amount invested which is not considered as a taxable event and not taxed as income.
Risk-adjusted return	Risk-adjusted return defines an investment's return by measuring how much risk is involved in producing that return, which is generally expressed as a number or rating. Risk-adjusted returns are applied to individual securities, investment funds and portfolios.
Secondary market	A market in which an investor purchases a security from another investor rather than the issuer, subsequent to the original issuance in the primary market.
Sector	A sector is an area of the economy in which businesses share the same or a related product or service. It can also be thought of as an industry or market that shares common operating characteristics. Dividing an economy into different pieces allows for more in-depth analysis of the economy as a whole.
Share	See <i>Equity</i>
Short position	Fund managers use this technique to borrow a security and then sell it with the intention of buying it back for less when the price falls. The position profits if the security falls in value. Within UCITS funds, derivatives – such as equity swaps – can be used to simulate a short position.
Security	A general term for stocks, bonds, options, subscription rights, warrants and other tradable investments that confer a right to income or ownership.
Sovereign debt	Sovereign debt is a central government's debt. It is debt issued by the national government in a foreign currency in order to finance the issuing country's growth and development. The stability of the issuing government can be provided by the country's sovereign credit ratings which help investors weigh risks when assessing sovereign debt investments.
Sovereign risk	See <i>Country Risk</i>

GLOSSARY (continued)

Stock	See <i>Equity</i>
Stock option	The right to buy or sell a particular stock at a given price on or after a certain date. Stock options are often used as an employee incentive at start-ups or large public companies.
Swap	An exchange of streams of payments between two parties, typically in order to reduce interest rate or currency risk.
Synthetic	Term given to financial instruments that are created artificially by simulating other instruments with different cash flow patterns. Synthetic products are structured to suit the cash flow needs of the investor. They are created in the form of a contract and, therefore, given the name "synthetic".
Transferable security	Any security that can be traded in the capital markets.
Treasury bill (T-bill)	A Treasury Bill (T-Bill) is a short-term debt obligation backed by the Treasury Department of the U.S. government with a maturity of less than one year, sold in denominations of \$1,000 up to a maximum purchase of \$5 million on non-competitive bids. T-bills have various maturities and are issued at a discount from par. Investors do not receive regular interest payments but a T-Bill does include interest, reflected in the amount it pays when it matures.
Total output	The total amount of goods and services produced within an economy.
Total return	Total return is the full return on an investment over a given period, including the income generated from dividend, interest or rental payments, and any gains or losses from a change in the asset's market value. This is normally expressed as a percentage of the purchase cost, annualised if the period is less than a year.
Undervalued	When a share price or market is trading at levels below those justified by fundamentals.
Underweight	An underweight portfolio does not hold a sufficient amount of a particular security when compared to the weight of that security held in the underlying benchmark portfolio. Underweight can also refer to an analyst's opinion regarding the future performance of a security in scenarios where it is expected to underperform.
Volatility	The extent to which the price of a security or commodity, or the level of a market, interest rate or currency, changes over time. High volatility implies rapid and large upward and downward movements over a relatively short period of time; low volatility implies much smaller and less frequent changes in value.
Warrant	A financial instrument, normally attached to a bond or other security, that entitles the holder to purchase a certain amount of ordinary shares at a fixed price for a period of years or to perpetuity. The price at which the underlying shares can be bought or sold is referred to as the exercise price or strike price.
Yield	<ol style="list-style-type: none"> 1. The annual rate of return on an investment, expressed as a percentage. 2. For bonds and notes, the coupon rate divided by the market price. This is not an accurate measure of total return, since it does not factor in capital gains. 3. For securities, the annual dividends divided by the purchase price. This is not an accurate measure of total return, since it does not factor in capital gains. here, also called dividend yield or current yield.

The Directors of Man Funds plc (the "Fund") herewith submit their annual report together with the audited financial statements for the year ended 31 December 2024.

Principal activities and review of the development of the business

The Fund was incorporated as an investment company with variable capital and with segregated liability between sub-funds under the laws of Ireland as a public limited company on 1 August 1996 under registration number 252520. The Fund has been authorised by the Central Bank of Ireland (the "Central Bank") as an Undertaking for Collective Investment in Transferable Securities ("UCITS"), pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, (as amended), (the "UCITS Regulations") and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank UCITS Regulations"). The Fund is structured as an umbrella fund with segregated liability between sub-funds (each a "Portfolio"), and as at 31 December 2024 the Fund was comprised of nineteen Portfolios and of which seventeen were in operation, as follows:

- Man Global Convertibles;
- Man Japan CoreAlpha Equity;
- Man Systematic Emerging Markets Equity;
- Man Global Emerging Markets Local Currency Rates;
- Man Global Emerging Markets Bond;
- Man Pan-European Equity Growth;
- Man RI Global Sustainable Growth;
- Man Systematic Europe RI Climate;
- Man Systematic China A Equity;
- Man GLG Strategic Bond; (ceased operations on 23 December 2024);
- Man Asia (Ex Japan) Equity;
- Man Systematic US High Yield;
- Man Global Investment Grade Opportunities;
- Man China Equity;
- Man GLG Sustainable Strategic Income (ceased operations on 17 May 2024);

Significant events during the year

Prospectus

A new Supplement for the GLG Partners LP Portfolios was issued on 24 April 2024 to the Prospectus dated 1 December 2022. The amendments to the Prospectus reflected additional share classes "IU", "DY" and "IX", and their fee structures.

An addendum to the Man Numeric Supplement dated 25 August 2023 was issued on 26 April 2024. The amendments to the Supplement reflected the management fee changes with respect to Man Systematic US High Yield and Man Systematic China A Equity.

A new Supplement for the GLG Partners LP Portfolios was issued on 7 May 2024 to the Prospectus dated 1 December 2022. The amendment to the Prospectus reflected the inclusion of investment in mortgage-backed securities and asset-backed securities for Man Global Investment Grade Opportunities.

A further addendum to the Man Numeric Supplement dated 25 August 2023 was issued dated 16 May 2024. The amendments reflected the additional management fee changes with respect to Man Systematic US High Yield and Man Systematic China A Equity.

A new Supplement for the GLG Partners LP Portfolios was issued on 23 July 2024 to the Prospectus dated 1 December 2022. The amendments to the Prospectus reflected the change in name of Man GLG RI Global Sustainable Growth to Man RI Global Sustainable Future. It also reflected the change from Article 8 to Article 9 for SFDR Reporting purposes.

An updated Prospectus was issued dated 11 November 2024 along with updated Supplements to the GLG Partners LP Portfolios, GLG LLC Portfolios and Numeric Investors LLC Portfolios also dated 11 November 2024. The updates reflected the Portfolios name changes as disclosed previously in the financial statements along with other general prospectus updates.

A new Supplement for the GLG Partners LP Portfolios was issued on 13 December 2024 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected the launch of a new sub-fund, Man Emerging Markets Corporate Credit Opportunities which commenced operations on 6 January 2024.

Fund closures

Man GLG Strategic Bond and Man GLG Sustainable Strategic Income ceased their operations on 23 December 2024 and 17 May 2024 respectively.

Fund launches

Man Global Climate Transition Impact Bond commenced its operations on 23 January 2024.

Share classes

For detailed information on new share classes launched during the year please refer to Note 21.

The Directors, Investment Managers and the Manager acknowledge the current crisis in Ukraine and all applicable Russian related sanctions. The Investment Manager has reviewed positions held across the strategy for any Russian and Ukrainian exposure. Appropriate action was taken by the relevant Investment Manager to reduce or remove certain direct exposures to Russia where necessary and the situation is under ongoing review. As at 30 June 2024, the Fund did not have any exposures to Russian holdings.

The ongoing political instability in the region is an additional risk factor which is being monitored and could impact the valuation of the Fund's assets after the year end.

Furthermore, there were no other significant events during the year ended 31 December 2024.

Subsequent events since the year end

A new sub-fund, Man Emerging Markets Corporate Credit Opportunities commenced its operations on 6 January 2024.

A new Supplement for the GLG Partners LP Portfolios was issued on 3 March 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected the removal of China from the Business Day definition for Man Asia (ex Japan) Equity and Man China Equity.

Subsequent events since the year end (continued)

A new Supplement for the GLG Partners LP Portfolios was issued on 11 March 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected a change with respect to Man Global Climate Transition Impact Bond to reflect that the coal exclusion which is applied in respect of the Portfolio does not apply in respect of investments in green, transition, or sustainable bonds.

A new Supplement for the GLG LLC Portfolios was issued on 18 March 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected the approval of a new sub-fund, Man Global Resources Equity, which at the date of approval of these financial statements has not yet launched.

Man RI Global Sustainable Future ceased its operations on 24 March 2025.

Following the end of the year, the US government introduced a 10% minimum tariff on most imported goods, along with higher reciprocal tariffs on a broad range of countries. This led to significant uncertainty regarding the economic outlook, as market participants scrambled to assess the potential impacts on both growth and inflation. Consequently, equity markets experienced a severe correction, although they partially recovered some of the losses thereafter. The AIFM will continue to monitor the situation closely.

There have been no other subsequent events since the year end that impact the Fund and require disclosure in the financial statements.

Investment objectives

The Fund's investment objectives are as stated in Note 1 to the audited financial statements. Investment in the Fund carries with it a degree of risk including but not limited to the risks referred to in Note 6 to the financial statements. For a more detailed description of the risks associated with investment in the Fund, please refer to the Prospectus.

Directors and Secretary

The Directors and Secretary during the year and up to 28 April 2025 are listed on page 3. Unless indicated, they served for the entire financial year.

Directors' and Secretary's interests

Neither the Directors, nor their families, nor the Secretary (Matsack Trust Limited), nor the Investment Managers had any interests in the Shares of the Fund during the year ended 31 December 2024, with the exception of 29,998 Subscriber Shares held by Man Asset Management (Ireland) Limited. Directors' remuneration is disclosed in Note 9 of these financial statements.

Directors' responsibilities

The Directors are responsible for preparing the Directors' Report and the financial statements in accordance with Irish law.

Irish company law requires the Directors to prepare financial statements giving a true and fair view of the state of affairs of the Fund and the profit or loss of the Fund for each financial year. Under that law the Directors have elected to prepare the financial statements in accordance with International Financial Reporting Standards ("IFRS") as adopted by the European Union.

Under company law, the Directors must not approve the financial statements unless they are satisfied that they give a true and fair view of the assets, liabilities and financial position of the company as at the financial year end date and of the profit or loss of the Fund for the financial year and otherwise comply with the Companies Act 2014 (as amended).

In preparing these financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and accounting estimates that are reasonable and prudent;
- state whether the financial statements have been prepared in accordance with applicable accounting standards and identify the standards in question and note the effects and the reasons for any material departure from those standards; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Fund will continue in business. The financial statements are prepared on going concern basis. We do note that the following sub-funds individually ceased operations during the year; Man GLG Strategic Bond and Man GLG Sustainable Strategic Income ceased operations on 23 December 2024 and 17 May 2024, respectively and are therefore not prepared on a going concern basis.

The Directors are responsible for ensuring that the Fund keeps or causes to be kept adequate accounting records which correctly explain and record the transactions of the company, enable at any time the assets, liabilities, financial position and profit or loss of the Fund to be determined with the reasonable accuracy, enable them to ensure that the financial statements and Directors' report comply with the Companies Acts 2014 and enable these financial statements to be audited. They are also responsible for safeguarding the assets of the Fund and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

Legislation in Ireland governing the preparation and dissemination of financial statements may differ from legislation in other jurisdictions.

Accounting records

The Directors are responsible for ensuring that proper accounting records as outlined in Section 281 to 285 of the Companies Act 2014 (as amended) are kept by the Fund. To achieve this, the Directors have appointed BNY Mellon Fund Services (Ireland) Designated Activity Company, an experienced third party fund administrator to ensure that the requirements of Section 281 to 285 of the Companies Act 2014 (as amended) are complied with. The books and accounting records are maintained at the Administrator's office at One Dockland Central, Guild Street, IFSC, Dublin 1, Ireland.

Independent Auditor

The Independent Auditor, Deloitte Ireland LLP will continue in office in accordance with Sections 383 (2) of the Companies Act 2014 (as amended).

Corporate governance

The European Communities (Directive 2006/46/EC) Regulations (S.I. 450 of 2009 and S.I. 83 of 2010) (the "Regulations") requires the inclusion of a corporate governance statement in the Directors' Report.

Although there is no specific statutory corporate governance code applicable to Irish collective investment schemes, the Fund is subject to corporate governance practices imposed by:

- i. The Irish Companies Act 2014 which is available for inspection at the registered office of the Fund;
- ii. The Articles of Association of the Fund which are available for inspection at the registered office of the Fund; and
- iii. The Central Bank in their UCITS Notices and Guidance Notes which can be obtained from the Central Bank website at: <https://www.centralbank.ie/regulation/industry-market-sectors/funds/ucits> and are available for inspection at the registered office of the Fund.

The Board of Directors is responsible for establishing and maintaining adequate internal control and risk management systems of the Fund in relation to the financial reporting process. Such systems are designed to manage rather than eliminate the risk of error or fraud in achieving the Fund's financial reporting objectives and can only provide reasonable and not absolute assurance against material misstatement or loss.

The Board of Directors has procedures in place to ensure all relevant books of account are properly maintained and are readily available, including production of annual financial statements. The annual financial statements of the Fund are required to be approved by the Board of Directors of the Fund and the annual financial statements of the Fund are required to be filed with the Central Bank. The statutory financial statements are required to be audited by independent auditors who report annually to the board on their findings.

The Board evaluates and discusses significant accounting and reporting issues as the need arises.

The convening and conduct of shareholders' meetings are governed by the Articles of Association of the Fund and the Companies Acts. Although the Directors may convene an extraordinary general meeting of the Fund at any time, the Directors are required to convene an annual general meeting of the Fund within twelve months of the date of the previous annual general meeting. Shareholders representing not less than ninety-five per cent of the paid up share capital of the Fund may also request the directors to convene a shareholders' meeting. Not less than twenty one days' notice of every annual general meeting and any meeting convened for the passing of a special resolution must be given to shareholders and fourteen days' notice must be given in the case of any other general meeting unless the auditors of the Fund and all the shareholders of the Fund entitled to attend and vote agree to shorter notice.

Two members present either in person or by proxy constitute a quorum at a general meeting.

The Fund may from time to time by ordinary resolution increase the share capital by such amount and/or number as the resolution may prescribe.

The Fund may also by ordinary resolution:

- 1) consolidate all or any of its share capital into Shares of larger amount;
- 2) subject to the provision of the Companies Acts subdivide its Shares, or any of them, into Shares of smaller amount or value and provide for any of such Shares resulting from such sub-division to have, as compared with the others, any such preferred, deferred or other rights or be subject to any such restrictions as the Fund has power to attach to unissued or new Shares;
- 3) cancel any Shares which, at the date of the passing of the resolution, have not been taken or agreed to be taken by any person and reduce the amount of its authorised share capital by the amount of the Shares so cancelled; or
- 4) re-denominate the currency of any class of Shares.

Every holder of participating shares or non-participating shares present in person or by proxy who votes on a show of hands is entitled to one vote. On a poll, every holder of participating shares present in person or by proxy is entitled to one vote in respect of each share held by him and every holder of non-participating shares is entitled to one vote in respect of all non-participating shares held by him.

Shareholders may resolve to sanction an ordinary resolution or special resolution at a shareholders' meeting. An ordinary resolution of the Fund requires a simple majority of the votes cast by the shareholders voting in person or by proxy at the meeting at which the resolution is proposed. A special resolution of the Fund requires a majority of not less than seventy five per cent of the shareholders present in person or by proxy and voting in general meeting in order to pass a special resolution including a resolution to amend the Articles of Association.

Unless otherwise determined by an ordinary resolution of the Fund in general meeting, the number of Directors may not be less than one nor more than ten. Currently the Board of Directors of the Fund is composed of four Directors, being those listed in the corporate information in these financial statements.

The business of the Fund is managed by the Directors, who exercise all such powers of the Fund as are not by the Companies Act 2014 (as amended) ("Act") or by the Articles of Association of the Fund required to be exercised by the Fund in general meeting.

A Director may, and the company secretary of the Fund on the requisition of a Director will, at any time summon a meeting of the Directors. Questions arising at any meeting of the Directors are determined by a majority of votes. In the case of an equality of votes, the chairperson shall not have a casting vote and the resolution shall fail. The quorum necessary for the transaction of business at a meeting of the Directors is two.

The Board has adopted the voluntary Irish Funds (IF) Corporate Governance Code for Irish Domiciled Collective Investment Schemes and Management Companies, issued 14 December 2011 (the "Code"), with effect from 31 December 2012. The Board has reviewed and assessed the measures included in the Code and considers its corporate governance practices and procedures since the adoption of the Code as consistent therewith.

The Directors are satisfied that they act independently and in the interests of the Fund as a whole and have determined that Samantha McConnell, Ronan Daly and Bronwyn Wright are independent directors, as defined in the IF Code.

The Directors acknowledge that they are responsible for securing the company's compliance with the relevant obligations as set out in section 225 of the Companies Act 2014 (as amended).

Corporate governance (continued)

The Directors confirm that:

- 1) A compliance policy document has been drawn up that sets out policies, that in our opinion are appropriate to the company, respecting compliance by the company with its relevant obligations.
- 2) appropriate arrangements or structures are in place that are, in our opinion, designed to secure material compliance with the company's relevant obligations; and
- 3) during the financial year, the arrangements or structures referred to in (2) have been reviewed.

The Directors confirm that during the financial year end 31 December 2024:

- a. so far as the Directors are aware, there is no relevant audit information of which the company's statutory auditors are unaware; and
- b. the Directors have taken all steps that ought to have been taken by the Directors in order to make themselves aware of any relevant audit information and to establish that the company's auditors are aware of that information.

Audit Committee

The Board of Directors has decided it was not necessary to constitute an audit committee given the frequency of the meetings of the Board throughout the year and the size of the Board of Directors. Instead, it is deemed more appropriate that the entirety of the Board of Directors carry out the activities that would otherwise be carried out by an audit committee.

Custody and title risk

The Depositary is under a duty to take into custody such financial instruments that can be held in custody and to hold such assets of each Portfolio of the Fund on behalf of its shareholders. The Central Bank of Ireland requires the Depositary to hold separately the non-cash assets of each Portfolio and to maintain sufficient records to clearly identify the nature and amount of all assets that it holds the ownership of each asset and where the documents of title to such assets are physically located. When the Depositary employs a sub-custodian the Depositary retains responsibility for the assets of the Portfolio saved where it has discharged itself of liability in accordance with the relevant EU Directive.

However, it should be noted that not all jurisdictions have the same rules and regulations as Ireland regarding the custody of assets and the recognition of the interests of a beneficial owner such as a Portfolio. Therefore, in such jurisdictions, there is a risk that if a Sub-Custodian becomes bankrupt or insolvent, the Portfolio's beneficial ownership of the assets held by such Sub-Custodian may not be recognised and consequently the creditors of the Sub-Custodian may seek to have recourse to the assets of the Portfolio. In those jurisdictions where the Portfolio's beneficial ownership of its assets is ultimately recognised, the Portfolio may suffer delay and cost in recovering those assets. The Portfolios may invest in markets where custodial and/or settlement systems are not fully developed, the assets of a Portfolio which are traded in such markets and which have been entrusted to sub-custodians, in circumstances where the use of such sub-custodians is necessary, may be exposed to risk in circumstances whereby the Depositary will have no liability.

CRS Data Protection Information Notice

The Board hereby confirms that it intends to take such steps as may be required to satisfy any obligations imposed by (a) the OECD's Standard for Automatic Exchange of Financial Account Information in Tax Matters ("the Standard"), which therein contains the Common Reporting Standard ("CRS"), as applied in Ireland by means of the relevant international legal framework and Irish tax legislation and (ii) EU Council Directive 2014/107/EU, amending Directive 2011/16/EU as regards mandatory automatic exchange information in the field of taxation ("DAC2"), as applied in Ireland by means of the relevant Irish tax legislation, so as to ensure compliance or deemed compliance (as the case may be) with the Standard/CRS and the DAC2.

In this regard, the Manager on behalf of the Fund is obliged under Section 891F and Section 891G of the Irish Taxes Consolidation Act, 1997 (as amended) and regulations made pursuant to those sections to collect certain information about each shareholder's tax arrangements (and also collect information in relation to relevant Controlling Persons of specific shareholders).

In certain circumstances, the Manager on behalf of the Fund may be legally obliged to share this information and other financial information with respect to a shareholder's interests in the Portfolio with the Irish Revenue Commissioners (and, in particular situations, also share information in relation to relevant Controlling Persons of specific shareholders). In turn, and to the extent the account has been identified as a Reportable Account, the Irish Revenue Commissioners will exchange this information with the country of residence of the Reportable Person(s) in respect of that Reportable Account.

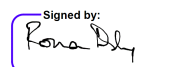

In particular, information that may be reported in respect of a shareholder (and relevant Controlling Persons, if applicable) includes name, address, date of birth, place of birth, account number, account balance or value at year end (or, if the account was closed during such year, the balance or value at the date of closure of the account), any payments (including redemption and dividend/interest payments) made with respect to the account during the calendar year, tax residency(ies) and tax identification number(s).

Connected party transactions

The Directors are satisfied that there are arrangements in place to ensure that transactions carried out with connected parties of the Portfolio are carried out as if negotiated at arm's length and any such transactions are in the best interests of the shareholders of the Portfolio. The Directors are satisfied that any transactions entered into with connected parties during the year complied with the aforementioned obligation.

On behalf of the Board

REPORT FROM THE DEPOSITARY TO THE SHAREHOLDERS

For the period from 1 January 2024 to 31 December 2024 (the “**Period**”)

The Bank of New York Mellon SA/NV, Dublin Branch (the “**Depository**” “**us**”, “**we**”, or “**our**”) has enquired into the conduct of Man Funds plc (the “**Company**”) for the Period, in its capacity as Depositary to the Company.

This report including the opinion has been prepared for and solely for the shareholders in the Company, in accordance with our role as Depositary to the Company and for no other purpose. We do not, in giving this opinion, accept or assume responsibility for any other purpose or to any other person to whom this report is shown.

Responsibilities of the Depositary

Our duties and responsibilities are outlined in Regulation 34 of the of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 (S.I. No 352 of 2011), as amended (the “**Regulations**”).

Our report shall state whether, in our opinion, the Company has been managed in that period in accordance with the provisions of the Company’s constitutional documentation and the Regulations. It is the overall responsibility of the Company to comply with these provisions. If the Company has not been so managed, we as Depositary must state in what respects it has not been so managed and the steps which we have taken in respect thereof.

Basis of Depositary Opinion

The Depositary conducts such reviews as it, in its reasonable opinion, considers necessary in order to comply with its duties and to ensure that, in all material respects, the Company has been managed (i) in accordance with the limitations imposed on its investment and borrowing powers by the provisions of its constitutional documentation and the appropriate regulations and (ii) otherwise in accordance with the Company’s constitutional documentation and the appropriate regulations.

Opinion

In our opinion, the Company has been managed during the Period, in all material respects:

- (i) in accordance with the limitations imposed on the investment and borrowing powers of the Company by the constitutional documentation and the Regulations; and
- (ii) otherwise in accordance with the provisions of the constitutional documentation and the Regulations.

For and on behalf of The Bank of New York Mellon SA/NV, Dublin Branch,

1. General

Man Funds plc (the “Fund”) was incorporated as an investment company with variable capital and with segregated liability between sub-funds under the laws of Ireland as a public limited company on 1 August 1996 under registration number 252520. The Fund has been authorised by the Central Bank of Ireland (the “Central Bank”) as an Undertaking for Collective Investment in Transferable Securities (“UCITS”), pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, (as amended), (the “UCITS Regulations”) and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the “Central Bank UCITS Regulations”). As at 31 December 2024 and 31 December 2023, Man Japan CoreAlpha Equity Class I H USD is listed on the Luxembourg Stock Exchange. The Fund’s investment managers are GLG Partners LP for Man GLG Portfolios, GLG LLC for GLG LLC Portfolios and Numeric Investors LLC for Man Numeric Portfolios (the “Investment Managers”). The Fund’s registered office is at 70 Sir John Rogerson’s Quay, Dublin 2, Ireland. The Fund has no employees.

The Fund is structured as an umbrella fund with segregated liability between sub-funds (each a “Portfolio”) which means that different Portfolios may be created from time to time by the Directors with the approval of the Central Bank. Each Portfolio will be represented by a different series of Redeemable Participating Shares and will be invested in accordance with the investment objectives and policies applicable to such Portfolio. As at 31 December 2024 the Fund was comprised of nineteen Portfolios, of which seventeen were in operation:

Man GLG Portfolios

- Man Global Convertibles;
- Man Japan CoreAlpha Equity;
- Man Pan-European Equity Growth;
- Man RI Global Sustainable Future;
- Man GLG Strategic Bond (ceased operations on 23 December 2024);
- Man Asia (ex Japan) Equity;
- Man Global Investment Grade Opportunities;
- Man China Equity;
- Man GLG Sustainable Strategic Income (ceased operations on 17 May 2024);
- Man Dynamic Income;
- Man Asia Credit Opportunities;
- Man Euro Corporate Bond; and
- Man Global Climate Transition Impact Bond (launched on 23 January 2024).

Man Numeric Portfolios

- Man Systematic Emerging Markets Equity;
- Man Systematic Europe RI Climate;
- Man Systematic China A Equity; and
- Man Systematic US High Yield.

GLG LLC Portfolios

- Man Global Emerging Markets Local Currency Rates and
- Man Global Emerging Markets Bond.

As at 31 December 2024 the following Portfolios were registered with the Swiss Financial Market Supervisory Authority (“FINMA”):

- Man Global Convertibles;
- Man Japan CoreAlpha Equity;
- Man Systematic Emerging Markets Equity;
- Man Global Emerging Markets Local Currency Rates;
- Man Global Emerging Markets Bond;
- Man Pan-European Equity Growth;
- Man RI Global Sustainable Future;
- Man Systematic Europe RI Climate;
- Man Systematic China A Equity;
- Man GLG Strategic Bond (ceased operations on 23 December 2024);
- Man Asia (ex Japan) Equity;
- Man Systematic US High Yield;
- Man Global Investment Grade Opportunities;
- Man China Equity;
- Man GLG Sustainable Strategic Income (ceased operations on 17 May 2024);
- Man Dynamic Income;
- Man Asia Credit Opportunities;
- Man Euro Corporate Bond; and
- Man Global Climate Transition Impact Bond (launched on 23 January 2024).

All Classes of Redeemable Participating Shares are together referred to as the “Redeemable Participating Shares” or “Shares”.

1. General (continued)

The investment objectives and policies of each active Portfolio are detailed below.

Man Global Convertibles

Man Global Convertibles' investment objective is to achieve compounded appreciation of the investor's capital through investing globally in an actively managed portfolio of convertible bonds, convertible preference shares, debt securities, warrants and other equity-linked securities, which may include but are not limited to such instruments as stock options and equity swaps, with less volatility than a portfolio of the underlying equities in the international securities markets.

As at 31 December 2024, Classes D USD, D H EUR, DL USD, DL H EUR, DL H GBP, DW H EUR, I USD, I H EUR, I H GBP, IL USD, IL H EUR, IM USD, IM H EUR, IM H GBP and IU H EUR and were in operation.

Man Japan CoreAlpha Equity

Man Japan CoreAlpha Equity's investment objective is to provide a high total return for a suitable long term appreciation of the investor's capital. The Portfolio invests primarily in securities of issuers in Japan or of issuers which derive a substantial part of their revenues from activities in Japan.

As at 31 December 2024, Classes D EUR, D EUR G Dist, D JPY, D USD, D H CHF, D H EUR, D H GBP, D H USD, DW C EUR, DW H EUR, I EUR, I EUR Dist, I GBP, I JPY, I JPY Dist, I SEK, I USD, I USD Dist, I H CHF, I H EUR, I H EUR Dist, I H GBP, I H GBP Dist, I H USD, I H USD Dist, IXX EUR, IXX JPY, IXX H CHF, IXX H EUR, IXX H EUR Dist, IXX H GBP Dist, IXX H USD and IXX H USD Dist were in operation.

Class I H USD is listed on the Luxembourg Stock Exchange.

Man Systematic Emerging Markets Equity

Man Systematic Emerging Markets Equity's investment objective is to earn a return on investment greater than the returns available from investments in the MSCI Emerging Markets Index. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric Emerging Markets strategy which involves taking long positions in relation to issuers primarily in emerging markets throughout the world, that represent, in the judgement of Numeric, an opportunity for short-term investment gains.

As at 31 December 2024, Classes D EUR, D USD, DW H EUR, I EUR, I GBP, I JPY, I SEK, I USD, IMU USD and IXX GBP were in operation.

Man Global Emerging Markets Local Currency Rates

Man Global Emerging Markets Local Currency Rates' investment objective is to achieve a return over the long term primarily through investment in a portfolio of emerging markets local currency bonds, foreign exchange forwards and/or other derivatives. The Portfolio primarily invests in bonds and currency forwards.

As at 31 December 2024, Classes D C EUR, D C USD, DW C EUR, I C EUR, I C GBP, I C SEK, I C USD, I C USD Dist, I H EUR Dist and I H GBP were in operation.

Man Global Emerging Markets Bond

Man Global Emerging Markets Bond's investment objective is to achieve a return in all market conditions primarily through investment in emerging market fixed income securities directly, or indirectly via the use of derivatives. The Portfolio primarily invests in bonds.

As at 31 December 2024, Classes D C EUR, D C USD, DW H EUR, I C EUR, I C SEK, I C USD, I F USD, I H EUR, I H GBP and IF H EUR were in operation.

Man Pan-European Equity Growth

Man Pan-European Equity Growth's investment objective is to provide medium to long term capital appreciation. The Portfolio is a concentrated long-only fund which invests in European companies across all market capitalisations.

As at 31 December 2024, Classes D C EUR, D C USD, DF C EUR, DV C USD, DV H USD, DW C EUR, I C CHF, I C EUR, I C SEK, I C USD, IF C EUR and IV C USD were in operation.

Man RI Global Sustainable Growth

Man RI Global Sustainable Growth's investment objective is to provide long term capital appreciation and outperform its reference benchmark over the long-term. The Portfolio is a concentrated long-only fund which invests in global companies across all market capitalisations.

As at 31 December 2024, Classes I USD, I C EUR, I C GBP, I C SEK, IU FH NOK and I H (BRL) USD were in operation.

Man Systematic Europe RI Climate

The Man Systematic Europe RI Climate's investment objective is to earn a return on investment greater than the returns available from investments in the MSCI Europe Index. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric European Core strategy. The strategy involves taking long positions in relation to issuers in the countries included in the MSCI Europe Index, and in the judgement of Numeric, represent an opportunity for short-term investment gains.

The Portfolio will be constrained to have approximately 50% less carbon intensity than the benchmark and will have overall projected carbon emissions that are aligned with the 2 degrees Celsius target (as set in the Paris Agreement of 12 December 2015). Stocks are selected using a combination of three primary model groups: 1) Climate; 2) Environmental, Social and Governance ("ESG"); and 3) Fundamental Investment Themes.

As at 31 December 2024, Classes D C EUR, I C EUR, I C GBP, I C SEK and I C USD were in operation.

1. General (continued)

Man Systematic China A Equity

Man Systematic China A Equity's investment objective is to earn a return on investment greater than the returns available from investments in the MSCI China A Net Return Index USD. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select equity securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric China strategy. The strategy involves taking long positions in relation to issuers in China, that represent, in the judgement of Numeric, an opportunity for investment gains in respect of China A Shares.

As at 31 December 2024, Classes D C EUR, D H EUR, I USD, I C EUR, I C GBP and I C SEK were in operation.

Man GLG Strategic Bond

Man Strategic Bond's investment objective was to provide a total return for investors, with a monthly income and the potential for capital growth. The Portfolio sought to achieve its objective by allocating all or substantially all of its assets in accordance with a long only strategy by investing all or part of the net proceeds of Shares in (i) transferable securities; (ii) exchange traded and OTC financial derivative instruments; and (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

The Portfolio ceased operations on 23 December 2024.

Man Asia (ex Japan) Equity

Man Asia (ex Japan) Equity's investment objective is to provide medium to long-term capital appreciation. The Portfolio will seek to achieve its objective by allocating all or substantially all of its net proceeds of Shares in (i) transferable securities (ii) exchange-traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents. At least 51% of the value of the Portfolio will be invested on an ongoing basis in holdings in equity securities that are authorised for official trading on a stock exchange or included in an organised market.

As at 31 December 2024, Classes D USD, DW C EUR, I USD, I C CHF, I C EUR, I C GBP, IF USD Dist A, IF C EUR, IF C EUR Dist A, IF C GBP and IF C GBP Dist A and were in operation.

Man Systematic US High Yield

The Portfolio's investment objective is to earn a return on investment greater than the returns available from investments in the ICE BAML US High Yield Index. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric U.S. High Yield strategy (the "US High Yield Strategy"). The strategy involves taking long positions primarily in US dollar denominated high yield corporate bonds listed or traded on recognised markets in the US.

As at 31 December 2024, Class I USD was in operation.

Man Global Investment Grade Opportunities

Man Global Investment Grade Opportunities' investment objective is to provide income and capital growth over the medium to long term. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

As at 31 December 2024, Classes D USD, D USD Dist, D H CHF, D H EUR, D H SGD, DU USD, DV USD, DW USD, DW H EUR, DY H EUR, DYV USD, DYV USD Dist, I EUR Dist, I USD, I USD Dist, I H BRL USD, I H CHF, I H EUR, I H EUR Dist, I H GBP, I H GBP Dist, IF EUR Dist, IF USD Dist, IF H EUR, IF H GBP, IF H GBP Dist, IV USD, IYV USD and IYV USD Dist were in operation.

Man China Equity

Man China Equity's investment objective is to provide medium to long-term capital appreciation. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange-traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents. At least 51% of the value of the Portfolio will be invested on an ongoing basis in holdings in equity securities that are authorised for official trading on a stock exchange or included in an organised market.

As at 31 December 2024, Classes I USD, I C EUR, I C GBP, IF USD and IF C EUR were in operation.

Man GLG Sustainable Strategic Income

Man Sustainable Strategic Income's investment objective was to provide a long term total return to investors through investing in bonds of companies and countries that are aligned with the UN Sustainable Development Goals (the "SDGs") with a particular focus on climate change mitigation and climate change adaption. The Portfolio sought to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

The Portfolio ceased operations on 17 May 2024.

1. General (continued)

Man Dynamic Income

Man Dynamic Income's investment objective is to provide income and capital growth over a medium to long-term period by investing predominantly in bonds issued by companies and governments worldwide. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

As at 31 December 2024, D USD, D USD Dist, D H CHF, D H EUR, D H SGD, DV USD, DW USD, DYV USD, I USD, I USD Dist, I USD G Dist, I H CHF, I H EUR, I H GBP, I H GBP Dist, I H SGD Dist, IF USD, IF H CHF, IF H EUR, IF H GBP, IU USD, IX H GBP and IYV USD were in operation.

Man Asia Credit Opportunities

Man Asia Credit Opportunities' investment objective is to provide an absolute return to investors through investing in diversified portfolio of predominantly Asian securities. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) money market instruments, (iii) exchange traded and OTC financial derivative instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

As at 31 December 2024, Class I USD, I H EUR, IF USD, IF H EUR and IF H GBP were in operation.

Man Euro Corporate Bond

Man Euro Corporate Bond's investment objective is to provide income and capital growth over the medium and long term. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange traded and OTC financial derivative instruments (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

As at 31 December 2024, D EUR, DY H SEK, I EUR, I EUR Dist, I H USD and IF EUR were in operation.

Man Global Climate Transition Impact Bond

Man Global Climate Transition Impact Bond's sustainable investment objective is to support the financing of climate solutions with a view to contributing to the decarbonisation of the global economy and the mitigation of and/or adaptation to the adverse impact of climate change, while providing a long-term total return to investors.

As at 31 December 2024, Class D H EUR, I USD, I H EUR, IF USD and IF H EUR were in operation.

2. Material accounting policies

(a) Accounting convention

The financial statements are prepared in accordance with International Financial Reporting Standards ("IFRS") as adopted by the European Union ("EU"). The financial statements have been prepared on a historical cost basis except for financial assets and liabilities at fair value through profit or loss that have been measured based on fair value.

(b) Changes in accounting policy and disclosure

The accounting policies adopted in the preparation of the audited financial statements are consistent with those followed in the preparation of the Fund's financial statements for the year ended 31 December 2023.

New standards, interpretations and amendments adopted by the Fund:

There were no recent accounting pronouncements applicable to the Fund in the current year.

At the date of authorisation of the financial statements there were a number of other standards and interpretations which were in issue but not yet effective. Management anticipates that the adoption of these standards and interpretations in future periods will have no material impact on the financial statements of the Fund.

(c) Use of accounting judgements and estimates

The preparation of financial statements in accordance with IFRS requires management to make judgements, estimates and assumptions that affect the amounts reported and disclosures made in these financial statements and accompanying notes, including certain valuation assumptions. Uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities in the future.

(d) Going concern

Management has made an assessment of the Fund's ability to continue as a going concern and are satisfied that the Fund has resources to continue in business for a period of at least 12 months beyond the date these financial statements are available to be issued. Furthermore, the management is not aware of any material uncertainties that may cast significant doubt upon the Fund's ability to continue as a going concern; therefore, the financial statements are prepared on a going concern basis.

(e) Interest income and expense

Interest income and expense is recognised in the statement of comprehensive income as it accrues, on an effective interest rate basis.

(f) Dividend income and dividend expense on short securities

Dividend income from financial assets at fair value through profit or loss is recognised in the statement of comprehensive income within dividends when the Fund's right to receive payments is established. Dividend income is recognised gross of withholding tax, if any. Dividend expense is recognised on the ex-dividend date.

2. Material accounting policies (continued)

(g) Financial assets and liabilities at fair value through profit or loss

For Net Asset Value ("NAV") purposes, the valuation of financial assets and liabilities is calculated in accordance with the Prospectus. For financial statements purposes, financial assets and liabilities have been valued in accordance with IFRS using the policies outlined below.

At 31 December 2024 and 31 December 2023, there are no material differences between these valuation methodologies.

In accordance with International Financial Reporting Standard IFRS 9 *Financial Instruments: Classification and Measurement*, the Fund classifies its financial assets and liabilities at initial recognition into the categories of financial assets and financial liabilities as discussed below.

Under IFRS 9, a financial asset is classified as measured at: amortised cost, fair value through other comprehensive income ("FVOCI") or fair value through profit or loss ("FVTPL"). The classification of financial assets under IFRS 9 is based on the business model in which a financial asset is managed and on its contractual cash flow characteristics.

In evaluating the classification of its financial assets, the Fund has considered the following:

- Whether it is held within a business model whose objective is to hold assets only to collect contractual cash flows ("business model test"); and
- Whether its contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest ("SPPI test").

Both the business model test and SPPI test must be met in order to account for a financial asset at amortised cost or FVOCI. If both tests are not met the financial asset must be measured at FVTPL.

The Fund classifies its investments based on both the Fund's business model for managing those financial assets and the contractual cash flow characteristics of the financial assets. The portfolio of financial assets is managed and performance is evaluated on a fair value basis. The Fund is primarily focused on fair value information and uses that information to assess the assets' performance and to make decisions. The Fund has not taken the option to irrevocably designate any ASCOTs, corporate bonds, convertible bonds, common stock, credit default swaps, equity swaps, future contracts, forward currency contracts, government bonds, interest rate swaps, mortgage-backed securities, repurchase agreements and total return swaps as fair value through other comprehensive income.

The contractual cash flows of the Fund's debt securities are solely principal and interest, however, these securities are neither held for the purpose of collecting contractual cash flows nor held both for collecting contractual cash flows and for sale. The collection of contractual cash flows is only incidental to achieving the Fund's business model's objective.

The Fund recognises a financial asset or a financial liability when, and only when, it becomes a party to the contractual provisions of the instrument. Regular-way purchases and sales of investments are recognised on the trade date, which is the date on which the Fund commits to purchase or sell the asset. Financial assets and liabilities at fair value through profit or loss are initially recognised at fair value. All transaction costs for such instruments are recognised directly in the statement of comprehensive income.

After initial measurement, the Fund measures financial instruments, which are classified as at fair value through profit or loss, at their fair values.

The fair value of financial instruments traded in active markets (such as publicly traded derivatives and exchange traded securities) is based on quoted market prices at the statement of financial position date.

In circumstances where the last traded price is not within the bid-ask spread, management will determine the point within the bid-ask spread that is most representative of fair value.

The Directors have appointed an Independent Pricing Committee ("IPC") to undertake certain services concerning the valuation policies and procedures relating to the Fund. The IPC is an independent body set up to: (1) establish a pricing matrix (a table which lays out a pricing source for certain assets and liabilities) which the Directors have adopted for the Fund and which is used by the Administrator to calculate the value of the assets and liabilities held by the Fund; and (2) to establish the prices of any positions held in the Fund that do not have an independently ascertainable value as per the pricing matrix. In addition, the IPC provides general governance and oversight of the valuation process.

The Fund may from time to time invest in financial instruments or securities that are not traded in an active market (for example over-the-counter ("OTC") derivatives and private placements of both equities and fixed income securities). These financial instruments are valued at their fair value in the manner described in subsequent accounting policies.

Any exchange traded derivative instruments (including, but not limited to, options and futures) dealt in on a market are valued at the settlement price on the relevant valuation day for such instruments on such a market. If the settlement price is not available, their probable realisation value shall be determined with care and in good faith by the Fund.

Investments are derecognised when the rights to receive cash flows have expired or the Fund has transferred substantially all of the risks and rewards of ownership.

(h) Securities sold short

The Fund may sell securities short. A short sale is a transaction in which the Fund sells a security it does not own. The proceeds received for short sales are recorded as liabilities and the Fund records an unrealised gain or loss to the extent of the difference between the proceeds received and the value of the open short position. The Fund records a realised gain or loss when the short position is closed. By entering into short sales, the Fund bears the market risk of an unfavourable change in the price of the security sold short in excess of the proceeds received. Short sales expose the Fund to potentially unlimited liability.

2. Material accounting policies (continued)

(i) Offsetting financial instruments

Financial assets and liabilities are offset and the net amount reported in the statement of financial position when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis or realise the assets and settle the liabilities simultaneously. As at 31 December 2024 and 31 December 2023, no financial assets and liabilities are offset in the statement of financial position. Please refer to Note 5.

(j) Derivatives

The Fund may trade in derivative financial instruments whose values are based upon an underlying asset, index, currency or interest rate. The net unrealised gains or losses, rather than contracts or notional amounts, represents the approximate future cash flows from trading.

The Fund is engaged in asset swapped convertible option transactions, equity swaps, forward currency contracts, futures contracts, option contracts, swap contracts, credit default swaps, interest rate swaps and total return swaps.

- Asset swapped convertible option transactions ("ASCOTs")

An asset swapped convertible option transaction ("ASCOTs"), is an option on a convertible bond that is used to separate a convertible bond into its two components: a bond and an option to acquire stock. When the bond is stripped of its conversion feature, the holder has a bond featuring fairly stable returns on debt, and a volatile, but potentially very valuable option.

- Equity swaps

Equity swaps are recorded on the trade date basis and are valued based on the difference between the notional long/short position of the underlying equity security calculated from a reference price on the date of entering into the swap and the market value at the date of closing the trade, or the reporting date if prior to terminating the swap. The difference between the initial recognition amount and the market value of the open equity swaps is reflected as financial assets and liabilities at fair value through profit or loss in the statement of financial position and as net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. Realised gains or losses are recognised on the closing or trade date of the swap and are included in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

- Forward currency contracts

Forward currency contracts are recorded on the trade date and are valued at the applicable foreign exchange rates on the last business day of the year. The difference between the fair value of the original contract amount and the fair value of the open forward currency contract position is reflected as financial assets or liabilities in the statement of financial position and as net gain/(loss) on the financial assets at fair value through profit or loss in the statement of comprehensive income. Realised gains or losses are recognised on the maturity or trade date of the contract and are included in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

- Futures contracts

Futures contracts are recorded on the trade date and are valued at the last traded price on the last business day of the year. The difference between the original contract amount and the fair value of the open futures position is reflected as financial assets or financial liabilities at fair value through profit or loss in the statement of financial position and as net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. Realised gains or losses are recognised on the closing or trade date of the contract and are included in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

- Option contracts

The Fund may invest in option contracts. An option contract gives the owner the right, but not the obligation, to buy ("call option") or to sell ("put option") a specified item at a fixed price during a specified year for a non-refundable fee ("premium"). The maximum loss to a buyer of an option is the loss of the premium. The writer of a call option has to bear the risk of an unfavourable change in the value underlying the option and, unless an offsetting long position is owned, the theoretical loss is unlimited. The loss to the writer of a put option is limited to the exercise price of the option, versus the premium collected on its sale. Option contracts are held at fair value with reference to quoted market prices, when available, or based on pricing models that consider the time value of money, volatility and the current market and contractual prices of the underlying financial instruments.

- Swap contracts

Swap contracts are contractual agreements between two parties to exchange streams of payments over time based on specified notional amounts. The swap contracts are valued at an amount equal to the gain or loss that would be realised if the position was closed out on the valuation date. The Fund's main swap contracts consist of credit default swaps, interest rate swaps and total return swaps.

Swap contracts are marked-to-market daily and changes in value are recorded as unrealised gain/(loss). When a swap contract is terminated, the Fund will record a realised gain/(loss) equal to the difference between the proceeds from (or cost of) the closing transaction and the Fund's basis in the contract, if any. Swap transactions involve, to varying degrees, elements of credit and market risk in excess of the amounts recognised in the statement of financial position. Such risks involve the possibility that there will be no liquid market for these agreements, that the counterparty to the agreements may default on its obligation to perform or disagree as to the meaning of the contractual terms in the agreements, and that there may be unfavourable changes in interest rates and/or market values associated with these transactions.

2. Material accounting policies (continued)

(j) Derivatives (continued)

- Credit default swaps

The Fund may enter into credit default swaps to manage its exposure to certain sectors of the market or to reduce credit risk. The Fund may enter into credit default swap agreements to provide a measure of protection against the default of an issuer (as buyer of protection) and/or gain credit exposure to an issuer to which it is not otherwise exposed (as seller of protection). Credit default swaps are agreements in which one party pays fixed periodic payments to counterparty in consideration for a guarantee from the counterparty to make a specific payment should a negative credit event take place (e.g. default, bankruptcy or debt restructuring). The Fund may either buy or sell (write) credit default swaps. As a buyer, the Fund will either receive from the seller an amount equal to the notional amount of the swap and deliver the referenced security or underlying securities comprising of an index or receive a net settlement of cash equal to the notional amount of the swap less the recovery value of the security or underlying securities comprising of an index.

As a seller (writer), the Fund will either pay the buyer an amount equal to the notional amount of the swap and take delivery of the referenced security or underlying securities comprising of an index or pay a net settlement of cash equal to the notional amount of the swap less the recovery value of the security or underlying securities comprising of an index. In the event of default by the counterparty, the Fund may recover amounts paid under the agreement either partially or in total by offsetting any payables and/or receivables with collateral held or pledged. These periodic payments received or made by the Fund are included in net realised gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

- Interest rate swaps

Interest rate swaps relate to contracts taken out by the Fund with major brokers in which the Fund either receives or pays a floating rate of interest in return for paying or receiving, respectively, a fixed rate of interest. The payment flows are usually netted against each other, with the difference being paid by one party to the other. Changes in the value of the interest rate swap agreements and amounts received or paid in connection with them are recognised as net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

- Total return swaps

Total return swaps are contracts in which the Fund pays or receives a series of cash flows based upon the total return of a specified asset in return for paying or receiving, respectively, a fixed or floating rate of interest based upon that same specified asset.

- Warrants

The Fund invests in warrants through listed exchanges and OTC markets. The listed warrants are traded on recognised exchanges and valued at the last traded price. OTC traded warrants are valued by reference to quoted prices. Change in realised and unrealised gains and losses are recorded in the statement of comprehensive income.

(k) Realised and unrealised gains and losses

All realised and unrealised gains and losses on securities and derivatives are recognised as net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. The cost of securities is accounted for on a specific identification basis. Unrealised gains and losses comprise changes in the fair value of financial instruments for the year and from the reversal of the prior year's unrealised gains and losses for financial instruments which were realised in the reporting year. Realised gains and losses represent the difference between an instrument's initial carrying amount and disposal amount, or cash payments or receipts made in respect of derivative contracts (excluding payments or receipts on collateral margin accounts for such instruments).

(l) Transaction costs

Transaction costs are incremental costs, which are separately identifiable and directly attributable to the acquisition, issue or disposal of a financial asset or financial liability. Transaction costs incurred by the Fund during the year are recognised in the statement of comprehensive income as part of net gain/(loss) on financial assets and liabilities at fair value through profit or loss.

(m) Functional and presentation currency

Items included in the Fund's financial statements are measured using the currency of the primary economic environment in which it operates (the "functional currency"). This is United States Dollars ("US\$") for all sub-funds except, Man Pan-European Equity Growth, Man Systematic Europe RI Climate, and Man Euro Corporate Bond for which the functional currency is Euro ("€"), Man Japan CoreAlpha Equity for which the functional currency is Japanese Yen ("JPY") and Man GLG Strategic Bond which the functional currency is Pound Sterling ("£"). The Fund has adopted the functional currency of each sub-fund as the presentation currency for these financial statements. There has been no change in each sub-fund's functional currency since its inception. The Fund's functional and presentational currency is United States Dollars.

(n) Foreign currency

Transactions during the year denominated in foreign currencies have been translated at the rates of exchange ruling at the dates of transactions. Assets and liabilities denominated in foreign currencies are translated at the rates of exchange in effect at the date of the statement of financial position. For investment transactions and investments held as at year end denominated in foreign currency, resulting gains or losses are included in the net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. All other foreign currency gains and losses are also included in the net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

2. Material accounting policies (continued)

(n) Foreign currency (continued)

The combined fund balances are expressed in US\$, being the presentational currency of the Fund as a whole. For combined fund balances in the statement of financial position, the non-US\$ Portfolios are translated using the exchange rate at the date of the statement of financial position. For combined fund balances in the statement of comprehensive income, the non-US\$ Portfolios are translated at the average exchange rate prevailing during the year. The combined subscriptions and redemptions in the statement of changes in net assets are also translated at the average rate prevailing during the current year. The translation gain/(loss) resulting from the preparation of the combined fund balances in the financial statements amounting to (US\$269,815,178) (2023: (US\$105,497,124)) has been shown as other comprehensive income in the combined fund column in the statement of comprehensive income. The gain/loss does not have any effect on the individual Portfolios.

(o) Other expenses

Other expenses are recognised in the statement of comprehensive income on an accruals basis.

(p) Investor Money Regulations

Subscription and redemption monies are routed through a sub-fund cash collection account in the name of the sub-fund. Pending issue of the shares and / or payment of subscription proceeds to an account in the name of the sub-funds, and pending payment of redemption proceeds or distributions, the relevant investor will be an unsecured creditor of the sub-fund in respect of amounts paid by or due to it.

(q) Redeemable Participating Shares

Redeemable shares are classified as equity instruments when:

- The redeemable shares entitle the holder to a pro rata share of the Fund's net assets in the event of the Fund's liquidation;
- The redeemable shares are in the class of instruments that is subordinate to all other classes of instruments;
- All redeemable shares in the class of instruments that is subordinate to all other classes of instruments have identical features;
- The redeemable shares do not include any contractual obligation to deliver cash or another financial asset other than the holder's rights to a pro rata share of the Fund's net assets; and
- The total expected cash flows attributable to the redeemable shares over the life of the instrument are based substantially on the profit or loss, the change in the recognised net assets or the change in the fair value of the recognised and unrecognised net assets of the Fund over the life of the instrument.

In addition to the redeemable shares having all of the above features, the Fund must have no other financial instrument or contract that has:

- Total cash flows based substantially on the profit or loss, the change in the recognised net assets or the change in the fair value of the recognised and unrecognised net assets of the Fund; and
- The effect of substantially restricting or fixing the residual return to the redeemable shareholders.

The Fund continuously assesses the classification of the Redeemable Participating Shares. If the Redeemable Participating Shares cease to have all the features, or meet all the conditions set out, to be classified as equity, the Fund will reclassify them as financial liabilities and measure them at fair value at the date of reclassification, with any differences from the previous carrying amount recognised in equity. If the Redeemable Participating Shares subsequently have all the features and meet the conditions to be classified as equity, the Fund will reclassify them as equity instruments and measure them at the carrying amount of the liabilities at the date of the reclassification.

As at 31 December 2024 and 31 December 2023, the Fund classified its Redeemable Participating Shares as a liability.

Shareholder transactions include subscriptions received in advance and redemptions in the process of being paid.

(r) Cash and cash equivalents

Cash and cash equivalents in the statement of financial position may consist of cash at bank, demand deposits, short-term deposits in financial institutions and short-term highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value, with original maturities of three months or less. Short-term investments that are not held for the purpose of meeting short-term cash commitments and restricted margin accounts are not considered cash and cash equivalents.

(s) Bank Overdraft

Bank overdraft in the statement of financial position consists of negative cash balances on the bank accounts at the year end. Interest is charged on these bank overdraft balances.

(t) Collateral balances with brokers and collateral balances due to brokers

Collateral balances with brokers and collateral balances due to brokers include amounts transferred as collateral against open derivative contracts. Amounts receivable from short sales and collateral may be restricted in whole or in part until the related securities are purchased. To the extent that units are purchased on margin, the margin debt may be secured on the related units.

(u) Due from and due to brokers

Due from brokers include receivables for securities sold (in a regular way transaction) that have been contracted for but not yet delivered on the statement of financial position date. These are carried at amortised cost using the effective interest method less any allowance for impairment. Due to brokers are payables for securities purchased (in a regular way transaction) that have been contracted for but not yet delivered on the statement of financial position date. These are measured at amortised cost using the effective interest method.

2. Material accounting policies (continued)

(v) Distributions to shareholders

In accordance with the Fund's Prospectus, the Fund may fully distribute its distributable income to shareholders.

Distributable income includes capital gains arising from the disposal of investments.

Unrealised gains and losses are included in the net assets attributable to shareholders and are not distributable until realised. Capital losses are not distributed to shareholders but are retained to be offset against any future realised capital gains. Distributions to shareholders are recognised in statement of comprehensive income as finance costs.

(w) Withholding Tax

The Fund currently incurs withholding taxes imposed by certain countries on investment income. Such income is recorded gross of withholding taxes in the statement of comprehensive income. Withholding taxes are shown as a separate line item in the statement of comprehensive income. This line also includes reclaims of withholding tax received during the financial year.

IFRIC Interpretation 23 *Uncertainty over income tax treatment* addresses the accounting for income taxes when tax treatments involve uncertainty that affects the application of IAS 12 and does not apply to taxes or levies outside the scope of IAS 12, nor does it specifically include requirements relating to interest and penalties associated with uncertain tax treatments. The Interpretation specifically addresses the following:

- Whether an entity considers uncertain tax treatments separately;
- The assumptions an entity makes about the examination of tax treatments by taxation authorities;
- How an entity determines taxable profit/(tax loss), tax bases, unused tax losses, unused tax credits and tax rates; and
- How an entity considers changes in facts and circumstances.

An entity has to determine whether to consider each uncertain tax treatment separately or together with one or more other uncertain tax treatments. The approach that better predicts the resolution of the uncertainty should be followed. The interpretation, does not have a material impact on the Fund's reported results.

3. Cash and cash equivalents, bank overdraft, collateral balances with brokers, collateral balances due to brokers and due from/to brokers

At the year end, amounts disclosed as cash and cash equivalents, bank overdraft, collateral balances with brokers and collateral balances due to brokers were held at The Bank of New York Mellon (London Branch), BNP Paribas, Citibank N.A., Goldman Sachs International, HSBC Bank Plc, JP Morgan Securities Plc, Morgan Stanley & Co. International Plc, Nomura Holdings and Societe Generale. Collateral balances with brokers represent the margin account balances held with the broker and collateral balances due to broker represents an amount payable to broker as a result of margin or collateral amount payable at the year end. These include amounts transferred as collateral (which is subject to a security interest) against open derivatives, short positions or financial instruments purchased on margin, deposits held at call with banks and other short term highly liquid investments with original maturities of three months or less.

Included in cash and cash equivalents balances at 31 December 2024 are US T-bills with, a fair value of US\$199,394,778 (cost: US\$199,389,434) (31 December 2023: US\$Nil (cost: US\$Nil)) for Man Global Investment Grade Opportunities and US\$697,587 (cost: US\$693,641) (31 December 2023: US\$499,393 (cost: US\$496,989)) for Man Asia Credit Opportunities.

The portion of balance with/due to brokers represented by collateral as at 31 December 2024 and 31 December 2023 is outlined below:

	31 December 2024	31 December 2023

Man Global Climate Transition Impact Bond	US\$385,975	n/a

4. Financial assets and liabilities at fair value through profit or loss

Fair value of financial instruments

The Fund classifies fair value measurements using a fair value hierarchy that reflects the significance of the inputs used in determining the measurements in line with IFRS 13, *Fair Value Measurement*.

The fair value hierarchy has the following levels:

- Level 1 – Quoted market price in an active market for an identical instrument.
- Level 2 – Valuation techniques based on observable inputs. This category includes instruments valued using: quoted market prices in active markets for similar instruments; quoted prices for similar instruments in markets that are considered less than active; or other valuation techniques where all significant inputs are directly or indirectly observable from market data.
- Level 3 – Valuation techniques using significant unobservable inputs. This category includes all instruments where the valuation technique includes inputs not based on observable data and the unobservable inputs could have a significant impact on the instrument's valuation. This category includes instruments that are valued based on quoted prices for similar instruments where significant unobservable adjustments or assumptions are required to reflect differences between the instruments.

Valuation techniques

[Listed or publicly traded investment in equity and debt securities, government bonds, managed funds and derivatives](#)

When fair values of listed securities and debt securities at the reporting date, as well as publicly traded derivatives, are based on quoted market prices or binding dealer price quotations, without any deduction for transaction costs, the instruments are included within Level 1 of the hierarchy.

[Unlisted debt securities and treasury bills](#)

The Fund invests in debt securities, corporate and government bonds and treasury securities. In the absence of a quoted price in an active market, they are valued using observable inputs such as recently executed transaction prices in securities of the issuer or comparable issuers and yield curves. Adjustments are made to the valuations when necessary to recognise differences in the instruments terms. To the extent that the significant inputs are observable, the Fund categorises these investments as Level 2.

[Unlisted asset-backed securities](#)

The fair values of investments in asset-backed securities, for which there is currently no active market, are calculated using a valuation model which is accepted in the industry. The most frequently applied valuation techniques include forward pricing and swap models, using present value calculations. The models incorporate various inputs including both credit and debit valuation adjustments for counterparty and own credit risk, foreign exchange spot and forward rates and interest rate curves. For these financial instruments, significant inputs into models are market observable and are included within Level 2.

[Over-the-counter derivatives](#)

The Fund uses widely recognised valuation models for determining fair values of over-the-counter derivatives. The most frequently applied valuation techniques include forward pricing and swap models, using present value calculations. The models incorporate various inputs including both credit and debit valuation adjustments for counterparty and own credit risk, foreign exchange spot and forward rates and interest rate curves. For these financial instruments, significant inputs used are market observable and are included within Level 2.

For all other financial instruments, fair value is determined using valuation techniques. Valuation techniques include net present value techniques, comparison to similar instruments for which market observable prices exist, options pricing models and other relevant valuation models.

4. Financial assets and liabilities at fair value through profit or loss (continued)

Fair value of financial instruments (continued)

The following tables summarise the financial instruments at fair value through profit or loss as at 31 December 2024 and 31 December 2023 and the financial instruments measured at fair value in the statement of financial position grouped into the fair value hierarchy:

Man GLG Global Climate Impact Bond commenced its operations on 23 January 2024. Hence, there were no investments as at 31 December 2023.

Short term balances are excluded from the tables as their carrying value at the year end approximates to their fair value.

Investments are reviewed at each financial reporting point to ensure that they are correctly classified between Level 1, 2 and 3 in accordance with the fair value hierarchy outlined above. Where an investment's characteristics changed during the year and investments no longer meet the criteria of a given level, they are transferred into a more appropriate level at the end of the relevant financial reporting year.

For the year ended 31 December 2024 and 31 December 2023, there were no transfers between Level 1 and Level 2.

A reconciliation of the movements in Level 3 assets/liabilities for the year ended 31 December 2024 and the year ended 31 December 2023 is set out below:

All net realised and unrealised gains/(losses) in the tables above are reflected in the accompanying statement of comprehensive income. The net amount of US\$123,511 (31 December 2023: (US\$2,220,812)) for Man Global Convertibles, US\$Nil (31 December 2023: US\$165,287) for Man Systematic Emerging Markets Equity, €6,129 (31 December 2023: €Nil) for Man Systematic Europe RI Climate, (US\$514,800) (31 December 2023: US\$Nil) for Man Global Investment Grade Opportunities and (US\$113,100) (31 December 2023: US\$Nil) for Man Dynamic Income relates to those Level 3 financial instruments held by the Fund at 31 December 2024 and 31 December 2023 and is reflected in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

The fair value of investments classified within Level 3 is based on unobservable inputs that may be subject to significant variability. Because of the inherent uncertainty of valuation with respect to such investments, the Fund's estimates of fair value may differ significantly from fair values that would have been used had observable inputs been available for the valuation of such investments, and the differences could be material.

The tables below disclose the valuation techniques used in the valuation of Level 3 investments and quantifies the effect of significant unobservable inputs used to value investments that fall in this category. The ranges of these fair value are not representative of the appropriate inputs to use when calculating the fair value of any one Level 3 asset or liability. Accordingly, the ranges of fair value presented below do not represent uncertainty in, or possible ranges of fair value measurements of the Fund's Level 3 assets/liabilities.

4. Financial assets and liabilities at fair value through profit or loss (continued)

Fair value of financial instruments (continued)

The fair value impact of the discount range disclosed above is the Investment Manager's assessment of the range of possible illiquidity discounts.

Forward currency contracts

As part of its portfolio management techniques, the Fund may use forward currency contracts to economically hedge any non-functional currency exposure (although formal hedge accounting is not used). Forward currency contracts may also be used for trading purposes. Forward contracts entered into by the Fund represent a firm commitment to buy or sell an underlying asset, or currency at a specified value and point in time based upon an agreed or contracted quantity.

Forward currency contracts may expose the Fund to the risks associated with the absence of an exchange market on which to close out an open position. The investment managers closely monitor the Fund's exposure under forward currency contracts as part of the overall management of the Fund's market risk.

Derivative financial instruments

The Fund may trade derivative financial instruments, including futures, forward currency contracts, ASCOTs, credit default swaps, equity swaps, interest rate swaps and total return swaps whose values are based upon an underlying asset, index, currency or interest rate.

The Fund is subject to both market and credit risk in trading derivative financial instruments. Market risk is the potential for changes in value due to changes in market interest rates, foreign exchange rates, indices and changes in the value of the underlying financial instruments. Credit risk is the possibility that a loss may occur if a counterparty fails to perform according to the terms of the contract. Substantially all derivative contracts are transacted on a margin basis. Such transactions may expose the Fund to significant off-balance sheet risk in the event margin deposits and collateral investments are not sufficient to cover losses incurred.

The Investment Managers manage the risk associated with these transactions by maintaining margin deposits and collateral investments with its brokers in compliance with individual exchange regulations and internal guidelines. The Investment Managers also take an active role in managing and controlling the Fund's market and counterparty risks and monitoring trading activities and margin levels daily, and, as necessary, deposits additional collateral or reduces positions.

Credit default swaps are contracts in which the Fund pays or receives an interest flow in return for the counterparty accepting or selling all or part of the risk of default or failure to pay of a reference entity on which the swap is written. Where the Fund has bought protection, the maximum potential loss is the value of the interest flows the Fund is contracted to pay until maturity of the contract. Where the Fund has sold protection, the maximum potential loss is the nominal value of the protection sold. As at 31 December 2024, the maximum potential payout under credit default swaps where the Portfolio has sold protection is US\$828,400 (31 December 2023: US\$10,894,058) for Man Global Investment Grade Opportunities and US\$Nil (31 December 2023: US\$4,168,121) for Man Dynamic Income.

The fair value of these contracts as at 31 December 2024 was of US\$51,778 (31 December 2023: US\$263,613) for Man Global Investment Grade Opportunities and US\$Nil (31 December 2023: US\$103,144) for Man Dynamic Income.

The Fund may purchase or write put and call options through OTC markets. Options purchased by the Fund provide the Fund with the opportunity to purchase (call options) or sell (put options) the underlying asset at an agreed-upon value either on or before the expiration of the option. Options written by the Fund provide the purchaser of the option the opportunity to purchase from or sell to the Fund the underlying asset at an agreed-upon value either on or before the expiration of the option. Premiums received from writing options are marked-to-market in accordance with note 2 and the resulting gains or losses are recorded in the statement of comprehensive income. The Fund may also invest in swaptions which are a combination of features of an option and an interest rate swap. The maximum loss to a buyer of an option is the loss of the premium. The writer of a call option has to bear the risk of an unfavourable change in the value underlying the option and, unless an offsetting long position is owned, the theoretical loss is unlimited.

Derivative financial instruments are generally based on notional amounts which are not recorded in the financial statements. These notional amounts represent the theoretical principal value on which the cash flows of the derivative transactions are based. Unrealised gains or losses, rather than notional amounts, or the exchange-traded derivatives traded by the Fund are included in the statement of financial position. The net unrealised gains or losses, rather than contract or notional amounts, represent the Fund's approximate future cash flows from trading activities.

4. Financial assets and liabilities at fair value through profit or loss (continued)

Derivative financial instruments (continued)

At 31 December 2024 and 31 December 2023, the Fund's exposure through its investments in derivative financial instruments to underlying positions in notional amounts are summarised as follows:

Man Global Climate Transition Impact Bond commenced its operations on 23 January 2024, hence comparatives for the year ended 31 December 2023 are not presented.

* Excess of collateral held by a counterparty is not shown for financial reporting purposes.

** Excess of collateral pledged by a counterparty is not shown for financial reporting purposes.

6. Financial risk management

Overall risk management

The Fund's investment activities expose it to the various types of risk which are associated with the financial instruments and markets in which it invests. The most important types of financial risks to which the Fund is exposed are market risk, credit risk and liquidity risk. Market risk includes equity price risk, interest rate risk and foreign currency risk. The Fund manages these risks on an aggregate basis along with the risks associated with its investing activities as part of its overall risk management policies.

The nature and extent of the financial instruments outstanding at the dates of the statement of financial position and the risk management policies employed by the Fund are discussed below.

The Manager employs a risk management process in respect of the Fund by which it attempts to accurately measure, monitor and manage the various risks associated with the use of financial instruments by the Fund, including controls on their use and processes for assessing compliance with these controls. The Manager may delegate certain risk management functions to the Investment Manager.

The following summary is not intended to be a comprehensive summary of all of the risks and investors should refer to the Prospectus for a more detailed discussion of the risks inherent in investing in the Fund.

Market risk

Market risk is the risk that fair value or future cash flows of financial instruments will fluctuate due to changes in market variables such as interest rates, foreign exchange rates and security prices.

Market risk can include equity risk, interest rate risk, credit spread risk, volatility and foreign currency risk. The exposure to these factors is measured and monitored using either the Value at Risk ("VaR") or the commitment approach.

Man Pan-European Equity Growth, Man Global Emerging Markets Local Currency Rates, Man Global RI Sustainable Future and Man Global Emerging Markets Bond portfolios utilise the relative VaR approach to risk management (absolute VaR/ relative VaR).

All the remaining portfolios take a commitment approach to risk management.

The table below identifies the VaR calculated on the Portfolio during 2024. A Monte Carlo VaR model is calculated daily, with a 99% confidence interval, over a 20 day holding period, using a historical observation period of not less than 1 year. This signifies that the Portfolio would not be expected to lose more than the stated amount 99% of the time. The results are based on historically observed correlations and volatilities, which may not be an accurate predictor of the future.

6. Financial risk management (continued)

Market risk (continued)

As of 31 December 2024 and 2023, the following table represents the Fund VaR based on 2x benchmark VaR:

Fund Name	Benchmark		Relative VAR during 2024	Relative VAR during 2023
Man Global Emerging Markets Local Currency Rates	J.P. Morgan GBI-EM Global Diversified Composite Unhedged USD	Minimum	0.79	0.81
		Maximum	1.01	0.99
		Median	0.86	0.88
		Year-End	0.97	0.86
Man Global Emerging Markets Bond	J.P. Morgan EMBI Global Composite	Minimum	0.32	0.67
		Maximum	0.96	1.03
		Median	0.84	0.83
		Year-End	0.93	0.75
Man Pan-European Equity Growth	MSCI Europe (EUR, NDTR)	Minimum	1.46	1.29
		Maximum	1.93	1.70
		Median	1.66	1.44
		Year-End	1.55	1.58
Man RI Global Sustainable Future	MSCI World (USD, NDTR)	Minimum	1.03	1.12
		Maximum	1.82	1.38
		Median	1.44	1.23
		Year-End	1.41	1.18

Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

The Fund has direct and indirect exposure to interest rate risk on cash and cash equivalents, collateral balances with brokers and collateral balances due to brokers and certain derivative contracts. That exposure may not necessarily be significant due to the generally short term nature of those holdings. But a more significant exposure exists in that the value of all financial instruments held by the Fund may be affected either positively or negatively by changes in interest rates.

The Fund is directly exposed to interest rate risk through its investment in debt securities, which is deliberately designed to generate returns through trading strategies focused on exploiting price differentials in rates. The sensitivity of these exposures is modelled through the overall VAR analysis provided in the market risk section. Short term government treasury bills are included in the tables on the pages herein after as not being exposed to interest rate risk.

6. Financial risk management (continued)

Interest rate risk (continued)

The following tables detail the Fund's exposure to interest rate risk by the earlier of contractual maturities or re-pricing:

Man Global Climate Transition Impact Bond commenced its operations on 23 January 2024, hence no table has been presented as at 31 December 2023.

Liabilities not exposed to interest risk comprise due to brokers, certain financial liabilities through profit or loss, shareholder transactions, performance fees payable, management fees payable, interest payable, liquidation fees payable and accrued expenses and other liabilities. These amounts normally require contractual settlement within one quarter and, in all cases, within one year.

The following tables detail the effect on net assets should interest rates have increased/decreased by 50 basis points (bps) with all other variables remaining constant, assuming that a 50bps increase/decrease in the base interest rate would result in a correlating 50bps increase/decrease in the value of net assets. In reality, an increase/decrease of 50bps would not result in a direct correlating increase/decrease in the fair value of net assets, as the movement in the value of the net assets would depend on the individual asset class and/or market sentiment towards any sensitivity in the interest rate. The volatility measures presented in the Market Risk section capture, among all other variables, these actual interest rate sensitivities.

The Fund is indirectly exposed to interest rate risk through its investment strategy, which is deliberately designed to generate returns through trading strategies focused on exploiting price differentials in rates. The sensitivity of these exposures is modelled through the overall VaR analysis provided in the market risk section.

6. Financial risk management (continued)

Currency risk

Currency risk exists where assets and liabilities are denominated in currencies other than the functional currency, and also on non-functional currency redeemable participating shares. The Fund may use forward currency contracts for the purpose of currency speculation, as well as for hedging its foreign currency Share Class exposure.

Man Global Climate Transition Impact Bond commenced its operations on 23 January 2024, hence no table has been presented as at 31 December 2023.

Other price risk

Other market price risks arise mainly from uncertainty about future prices of financial instruments held. They represent the potential loss the Fund might suffer through holding market positions in the face of price movements caused by factors specific to the individual investment or factors affecting all instruments traded in the market.

Credit/counterparty risk

The Investment Managers perform due diligence on all counterparties before they become a service provider or counterparty to the Fund, and credit quality checks are part of this process. The credit quality of the Fund's banks, brokers, and Depository is regularly monitored and factored into allocation decisions.

The Fund is exposed to credit/counterparty risk on parties with whom it trades and bears the risk of settlement default. Credit risk is the risk that a counterparty to a financial instrument will fail to discharge an obligation or commitment that it has entered into with the Fund. For example, it represents the financial risk associated with a security issuer (either Government or Corporate) failing to discharge an obligation or commitment, or filing for bankruptcy. The Fund seeks to reduce concentrations of credit risk by undertaking transactions with several customers and counterparties on recognised and reputable exchanges. The Fund only buys and sells investments through brokers which have been approved by the Investment Managers as an acceptable counterparty.

Financial assets which potentially expose the Fund to counterparty credit risk consist principally of investments in cash balances and deposits with and receivables from brokers and other receivables. The extent of the Fund's exposure to counterparty credit risk in respect of these financial assets approximates their carrying value as recorded in the Fund's statement of financial position. In addition, where the Fund borrows cash to finance leveraged investments, additional collateral is lodged with the counterparty to provide them with security for potential adverse movements in the collateral. Whilst most finance providers afford some segregated protection for this collateral, this facility may not always be available to the Fund, and consequently, can expose the Fund to the credit worthiness of the counterparty.

Credit risk also arises on transactions with brokers related to transactions awaiting settlement. Risks relating to unsettled transactions are considered small due to the short settlement period involved and the high credit quality of the brokers used. Broker balances are primarily due from large reputable institutions and are, thus, considered at minimal risk for default. As delivery versus payment is the standard procedure for trade settlements, there is no significant credit risk arising from transactions settlements. Credit risk is the risk that an issuer or counterparty will be unable to meet a commitment that it has entered into with the Fund.

6. Financial risk management (continued)

Credit/counterparty risk (continued)

The Fund's maximum exposure to credit risk (not taking into account the value of any collateral or other security held) in the event that the counterparties fail to perform their obligations as of 31 December 2024 in relation to each class of recognised financial assets, including derivatives, is the carrying amount of those assets in the statement of financial position. Credit risk is mitigated through the diversity of counterparties and regular monitoring of concentration risk.

The exposures are to The Bank of New York Mellon (London Branch), BNP Paribas, Citibank N.A., Goldman Sachs International, JP Morgan Securities Plc, HSBC Bank Plc, Morgan Stanley & Co. International Plc, Nomura Holdings and Societe Generale (the "Brokers").

As at 31 December 2024, the majority of the Fund's assets were held with Brokers. Each of these counterparties is considered by the Fund to be a highly rated and reputable institution and, thus, the individual and aggregate credit risk exposure is considered to not be significant.

The following table details the Fund's primary exposure to its counterparties:

In addition, at 31 December 2024 and 31 December 2023, the Fund had credit risk exposure on credit instruments over which it has sold protection to third parties through credit default swaps.

The tables below and overleaf show the breakdown by Credit Spread of all credit securities held in the portfolio. This does not include any non-credit hedges held against these (for example equity securities) or deposits held with credit institutions. The "Credit Spread" is the measure which reflects the difference in yield of a credit security relative to an assumed credit risk-free security. For some security classes, the credit spread is the quotation method used by the market. For others, the credit spread is implied from the market price.

Credit/counterparty risk (continued)

As at 31 December 2024, the value of Man Global Convertibles and Man Global Emerging Markets Bond assets that are considered to be past due or impaired were US\$403,980 and US\$39,450, respectively (2023: US\$294,127 and US\$38,063).

The table below shows the analysis of age of financial assets which are considered to be past due:

<i>Man Global Convertibles</i>	31 December 2024	31 December 2023
3y+	US\$346,185	US\$236,332

Liquidity risk

Liquidity risk is the risk that the Fund will encounter difficulty in meeting its obligations associated with financial liabilities or equity that are settled by delivering cash or another financial asset. Redeemable Participating Shareholder redemption requests are the main liquidity risk for the Fund.

The Fund's Redeemable Participating Shares are redeemable as outlined in Note 10. The exposure to liquidity risk through Redeemable Participating Shareholder redemption requests is managed by specifically setting the redemption notice period to accommodate the expected liquidity of the underlying investments as agreed by the Investment Managers. The Fund is therefore potentially exposed to daily redemptions by its shareholders.

The Fund's financial instruments include Level 1 financial instruments which are considered readily realisable as they are all listed on major recognised exchanges.

The Fund's financial instruments also include investments in Level 2 and 3 financial Instruments, which are not quoted in an active public market and which generally may be illiquid. As a result, the Fund may not be able to liquidate quickly some of its investments in these instruments at an amount close to their fair value in order to meet its liquidity requirements.

The main liability of the Fund is associated with the need to satisfy Redeemable Participating Shareholder's request for redemptions. The Fund seeks to mitigate this risk by investing primarily in securities that are listed or traded on recognised markets, thus assets comprise mainly realisable securities, which can be readily sold, in tandem with setting the redemption notice period to accommodate the liquidity of the underlying investments.

The Manager implemented ESMA liquidity requirements as at September 2020 and liquidity stress testing is now monitored by the Manager on an on-going basis.

The following table below summarises the maturity profile of the Fund's financial liabilities:

Cyber security risk

Cyber security breaches may occur allowing an unauthorised party to gain access to the assets of the Fund, Shareholder data, or proprietary information, or may cause the Platform, the Investment Manager, the Distributor, the Administrator or the Depositary to suffer data corruption or lose operational functionality. The Fund may be affected by intentional cybersecurity breaches which include unauthorised access to systems, networks, or devices (such as through "hacking" activity); infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. In addition, unintentional incidents can occur, such as the inadvertent release of confidential information (possibly resulting in the violation of applicable privacy laws).

A cybersecurity breach could result in the loss or theft of Shareholder data or funds, the inability to access electronic systems, loss or theft of proprietary information or corporate data, physical damage to a computer or network system, or costs associated with system repairs. Such incidents could cause the Fund, the Investment Manager, the Distributor, the Administrator, the Depositary, or other service providers to incur regulatory penalties, reputational damage, additional compliance costs, or financial loss. Consequently, Shareholders may lose some or all of their invested capital. In addition, such incidents could affect issuers in which a Fund invests, and thereby cause a Fund's investments to lose value, as a result of which investors, including the relevant Fund and its Shareholders, could potentially lose all or a portion of their investment with that issuer.

As at 31 December 2024, there were no such instances reported.

6. Financial risk management (continued)

Option writing

As a writer of options, the Fund receives a premium at the outset and then bears the risk of unfavourable changes in the price of the financial instrument underlying the option. As a result of writing option contracts, the Fund is obligated to purchase or sell, at the holder's option, the underlying financial instrument at a fixed price which may differ from the prevailing market price at that date. Writing options may incur losses which greatly exceed the premium income received.

Securities sold short

Securities sold short are those in which a security is sold that the Fund does not own in anticipation of a decline in the market value of the security. The Fund's risk is that the value of the security will increase rather than decrease. Consequently, the settlement amount of the liability for securities sold short may exceed the amount recorded in the statement of financial position, as the Fund is obligated to purchase the security in the market at prevailing prices to settle its obligations.

Sanctions Analysis

The Investment Managers' Financial Crime Compliance ("FCC") team has analysed applicable sanctions regimes and consulted external counsel to assess whether the Fund is permitted to receive dividend payments from Russian issuers and concluded that the dividend payments themselves are not prohibited by regulators and there are no restrictions on receiving payments in rubles. However, an assessment was also made of any issues likely to arise with the mechanics of payment of the dividends if, for example, they were paid from a bank that is sanctioned by the UK or U.S. governments. Both the UK and U.S. require banks to freeze, or block in the case of U.S. financial institutions, funds transferred from a designated bank, even when the remitter is not designated. These concerns were mirrored by the custodian/ sub-custodian of the Fund, with the custodians placing prohibitions on repatriating any of the proceeds to base currency and spending the cash balance in any way, regardless of whether the dividends are paid into the funds' bank accounts or segregated bank accounts.

Man Asia Credit Opportunities and Man Euro Corporate Bond commenced its operations on 12 April 2023 and 26 October 2023, respectively.

8. Fees and expenses

Management and performance fees

The Fund has appointed Man Asset Management (Ireland) Limited (the “Manager”) as manager of the Fund. The Manager has delegated its administration and share registration functions to BNY Mellon Fund Services (Ireland) Designated Activity Company (the “Administrator”) and its investment management functions to GLG Partners LP for the Man GLG Portfolios, GLG LLC for the GLG LLC Portfolios and Numeric Investors LLC for the Man Numeric Portfolios (the “Investment Managers”). The Manager has delegated its distribution functions to Man Investments AG (the “Distributor”).

Man GLG Portfolios

The Manager receives management fees on an annual basis, based on the average NAV of each of the Portfolios, by class of shares as per the tables below and overleaf:

	0.11%	0.20%	0.25%	0.30%	0.43%	0.49%	0.50%	0.60%	Up to 0.60%	0.68%	0.75%	Up to 0.75%	0.77%	0.85%	0.89%	Up to 2.14%

Man Systematic Europe RI Climate		I				D		
Man Systematic China A Equity				I			D	
Man Systematic US High Yield	I							

8. Fees and expenses (continued)

Management and performance fees (continued)

The Manager receives a performance fee for DL and IL Share Classes of Man Global Convertibles calculated as an amount equal to 20% of the aggregate appreciation in value on each investor's relevant Shares over the amount of the investors' benchmark return for those Shares (which is based on a 3 month LIBOR/EURIBOR rate of the functional currency of the relevant Share Class of each Portfolio). Such performance fees are only payable in respect of Shares for which the Net Asset Value per Share is over and above its high watermark at the end of the performance year. The Manager also receives a performance fee for the Class IM Shares of the Man Global Convertibles equal to 20% of the aggregate appreciation in value on each investor's Shares in the aforementioned class over the amount of the investor's benchmark for those Shares (which is based on the FTSE Global Focus Convertible (Hedged) Index) provided that any such appreciation is limited by the amount by which such benchmark has appreciated over the same performance year (see the Fund's Prospectus for more detail). The Manager also receives a performance fee for the Class IMU of Man Systematic Emerging Markets Equity of up to 20% of the aggregate appreciation in value on each investor's Shares in the aforementioned class over the amount of the investor's benchmark for those Shares (which is based on the MSCI Europe Index) provided that any such appreciation is limited by the amount by which such benchmark has appreciated over the same performance year (see the Fund's Prospectus for more detail).

The Manager pays the fees of the Investment Managers and the Distributor. The Manager may also receive distribution fees, up-front sales charges and contingent deferred sales charges.

The Manager is also entitled to reimbursement of all out-of-pocket expenses incurred for the benefit of the Fund including expenses incurred by the Investment Managers, the Administrator and/or by the Distributor and charged to it. The Manager pays the fees of the Investment Managers out of its management and performance fees and the Investment Managers pay the Investment Advisers (if any) out of its fees.

Administration fees

The Fund is subject to an administration fee in respect of each Man GLG Portfolios, GLG LLC Portfolios and Man Numeric Portfolios in relation to administration services provided by the Administrator and the Investment Managers. The administration fee is an amount which may not exceed 0.30% per annum of the NAV of the relevant Portfolio. The amount paid to each of the Administrator and Investment Managers is determined between the parties from time to time. The Investment Managers receives only the portion of the administration fee relating to the administrative support services it provides pursuant to the Administrative Services Agreement. Part of the administration fee is paid by the Fund to the Manager (for on-payment to the Administrator) monthly in arrears and the remainder is paid by the Fund to the Investment Managers. The Fund also reimburses the Manager out of the assets of the Fund for reasonable out-of-pocket expenses incurred by the Administrator and the Investment Managers. The Manager is responsible for reimbursing the Administrator and the Investment Managers for these expenses.

Depository fees

The Fund pays the Depository a depository fee which will not exceed 0.04% per annum of the NAV of the Man GLG Portfolios together with value added tax, if any, applicable to such fees. In the case of Man Systematic Europe RI Climate depository fees will not exceed 0.04% per annum of the NAV together with value added tax, for Man Systematic Emerging Markets Equity depository fees paid will not exceed US\$60,000 with value added tax if applicable. The Fund also reimburses the Depository out of the assets of the relevant Portfolio for reasonable out-of-pocket expenses and transaction fees incurred by the Depository and for fees (which will not exceed normal commercial rates) and reasonable out-of-pocket expenses of any sub-Depository appointed by the Depository and will be liable for transaction charges. The fee and expenses of the Depository are paid monthly in arrears.

Directors' fees

The Fund pays the fees of the Directors. Up to 30 June 2024, each Director's fee was not expected to exceed €15,000 per annum. Effective 1 July 2024, each Director's annual fee increased and is not expected to exceed €35,000 per annum. Effective from this date each Director's fee increased on a pro-rata basis. The Directors' fees for the year ended 31 December 2024 were €75,000 (31 December 2023: €45,000). In addition, the Directors receive reimbursement for travel and other out-of-pocket expenses relating to attendance at meetings and other matters, including any expenses relating to the performance of due diligence for the benefit of the Fund.

Distribution fees

There were no distribution fees charged to the Fund for the year ended 31 December 2024 and 31 December 2023.

Details of management, performance, administration and depository fees incurred by the Fund during the year are shown in the statement of comprehensive income.

Amounts unpaid by the Fund at the year end relating to management, performance, administration and depository fees are shown below:

	2024 Combined Fund US\$	2023 Combined Fund US\$
Management fees	4,832,380	2,467,218
Performance fees	1,577,920	273,764
Administration fees	8,830,121	4,738,481
Depository fees	651,419	373,622

9. Related party transactions

Neither the Directors, nor their families, nor the secretary (Matsack Trust Limited), nor the Investment Managers had any interests in the Shares of the Fund during the year ended 31 December 2024, with the exception of 29,998 Subscriber Shares held by Man Asset Management (Ireland) Limited.

During the year Samantha McConnell, Ronan Daly and Bronwyn Wright earned Directors' fees of €25,000 each. John Morton has elected to waive his Directors' fee as he is the CEO and a director of Man Asset Management (Ireland) Limited, the Manager of the Fund.

Each of the Directors is or may become involved in other financial investment and professional activities which may cause conflicts of interest with the management of the Fund. These activities include management or administration of other companies (including those with investment objectives similar to those of the Fund or structures that may be related to Man Group plc sponsored investment funds), serving as directors, advisers and/or agents of other companies, including companies and legal structures in which the Fund may invest and/or which may invest into the Fund.

GLG Partners LP, GLG LLC and Numeric Investors LLC - the Investment Managers of the Portfolios, Man Asset Management (Ireland) Limited - the Manager of the Fund and Man Investments AG - the Distributor in relation to the Portfolios of the Fund are indirect wholly-owned subsidiaries of Man Group plc and all subsidiaries of Man Group plc are related parties.

The following transactions took place between the Fund and its related parties:

Related party	Types of fees	Total fees	Fees payable
31 December 2024	/income	/(income)	/(receivable)
		US\$	US\$
Man Asset Management (Ireland) Limited	Management fees	46,045,019	4,832,380
Man Asset Management (Ireland) Limited	Performance fees	1,578,172	1,577,920
Man Asset Management (Ireland) Limited	Administration fees*	21,114,182	8,830,121
Man Asset Management (Ireland) Limited	Expense reimbursement	(11,367,594)	(3,053,730)
Directors	Directors' fees	80,726	-

Man Asset Management (Ireland) Limited	Administration fees*	12,644,564	4,738,481
Man Asset Management (Ireland) Limited	Expense reimbursement	(8,303,452)	(2,912,610)
Directors	Directors' fees	48,664	-

* The amount paid to each Administrator and Investment Manager is determined between the parties from time to time, but, for the avoidance of doubt, the Investment Manager receives only the portion of the administration fee relating to the administrative support services it provides pursuant to the Administrative Services Agreement. Part of the administration fee will be paid by the Fund to the Manager (for on-payment to the Administrator) monthly in arrears and the remainder will be paid by the Fund to the Investment Manager.

Administration fees and expense reimbursement are included in accrued expenses and other liabilities and other assets, respectively in the statement of financial position.

The above amounts are payable on demand and do not bear interest. Furthermore, the above transactions were made on terms equivalent to those that prevail in arm's length transactions.

10. Share Capital

The authorised share capital of the Fund is €38,092.14 divided into 30,000 Subscriber Shares of €1.269 each ("Subscriber Shares") and 500,000,000,000 Shares of no par value initially designated as unclassified Shares. The Directors are empowered to issue up to 500,000,000,000 Shares of no par value designated as Shares of any series or class on such terms as they think fit.

Subscriber Shares of the Fund

The Subscriber Shares are each held by employees or former employees of Investment Managers and Man Asset Management (Ireland) Limited.

The Subscriber Shares were fully issued when the Fund was launched. They entitle the holders to attend and vote at general meetings of the Fund but do not entitle the holders to participate in the profits or assets of the Fund except for a return of capital on a winding-up. The Subscriber Shares' capital is beneficially held by or on behalf of the Manager.

Redeemable Participating Shares

The Fund's Redeemable Participating Shares are redeemable at the shareholder's option on each Dealing Day, with applications for any such Shares must be received by the Administrator prior to the relevant Dealing Day deadline as set out in relevant Supplement. The Fund is therefore potentially exposed to daily redemptions by its shareholders. The exposure to liquidity risk through shareholder redemption requests is managed by specifically setting the redemption notice period to accommodate the expected liquidity of the underlying investment as agreed by the Investment Managers.

The Fund manages its obligation to repurchase the Shares when required to do so and its overall liquidity risk by:

- Allowing for redemptions only during each Business Day.
- Requiring a 1 Business Day notice period before redemptions.

The Fund's policy is to satisfy redemption requests by any one of the following means or as may otherwise be provided in the Fund's Prospectus:

- Withdrawal of cash deposits.
- Disposal of assets.

All issued Shares are fully paid. The Fund's capital is represented by these shares with no par value and with each carrying one vote. They are entitled to dividends and to payment of a proportionate share based on the Fund's NAV per Share on the redemption date.

Investors may be subject to an upfront sales charge of up to 5% of their proposed subscription, payable to the Manager in respect of any subscription for any Class of Shares.

13. Segregation of liabilities between portfolios

At an Extraordinary General Meeting held on 22 May 2007, the Fund availed of the provisions of the Investment Funds, Companies and Miscellaneous Provisions Act, 2005 to segregate liabilities between each Portfolio. The Fund will not be liable as a whole to third parties for the liability of each Portfolio.

14. Securities owned and securities sold, not yet purchased

Possession of securities owned is maintained by major multinational broker-dealers as at 31 December 2024 and 31 December 2023. Securities sold, not yet purchased represent obligations of the Fund to purchase the securities at prevailing market prices. The future satisfaction of such obligations may be for an amount greater than the amount recorded.

15. Taxation

The Fund qualifies as an investment undertaking as defined in Section 739 B of the Taxes (Consolidation) Acts 1997. It is not chargeable to Irish tax on its income or capital gains. Tax may arise on the happening of a chargeable event.

A chargeable event includes any distribution payments to Shareholders or any encashment, redemption or transfer of Shares. No tax will arise on the Fund in respect of chargeable events regarding:

- i. a Shareholder who is not Irish resident and not ordinarily resident in Ireland at the time of the chargeable event, provided the necessary signed statutory declarations are held by the Fund; or
- ii. certain exempted Irish resident investors who have provided the Fund with the necessary signed statutory declarations; or
- iii. Shares held in a recognised clearing system as designated by the order of the Irish Revenue Commissioners.

Following legislative changes in the Finance Act 2006, the holding of Shares at the end of a relevant year will, in respect of Irish Resident investors, also constitute a chargeable event. To the extent that any tax issues arise on such a chargeable event, such tax will be allowed as a credit against any tax payable on the subsequent encashment, redemption, cancellation or transfer of the relevant Shares.

Relevant Year is defined as a period of 8 years beginning with the acquisition of a share by a shareholder and each subsequent period of 8 years beginning immediately after the preceding relevant year.

16. Soft commissions

In line with the introduction of revised rules in respect of the use of dealing commission as part of the implementation of the Directive 2014/65/EU on Markets in Financial Instruments and amending Directive 2004/39/EC ("MiFID II"), effective from 3 January 2018, the Investment Manager no longer pays for its investment research via dealing commission. The Investment Manager has established a research budget and the Portfolios have accrued a fee to pay for the research services independent of trade execution. The Investment Manager will share the research costs with the Portfolios based on an allocated usage basis. All transactions are placed and executed on the basis that best execution is achieved.

The Fund incurred transaction costs including equity swaps commissions which are included in the net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

17. Auditor's remuneration

For the year ended 31 December 2024, the Fund incurred audit fees as disclosed in the statement of comprehensive income; these amounts represent a provision. The actual audit fees are US\$171,000 (2023: US\$180,000).

During the year there were fees billed for tax advisory services, other assurance services or other non-audit services provided by the auditors of the Fund of US\$388,342 (2023: US\$486,112).

18. Efficient portfolio management

The Fund may employ investment techniques and instruments for efficient portfolio management of the assets of any Portfolio including hedging against market movements, currency exchange or interest rate risks under the conditions and within the limits stipulated by the Central Bank under the UCITS Regulations and described below.

Techniques and instruments which are used for the purpose of efficient portfolio management, including FDIs which are not used for direct investment purposes, shall be understood as a reference to techniques and instruments which fulfil the following criteria:

- i. they are economically appropriate in that they are realised in a cost effective way;
- ii. they are entered into for one or more of the following specific aims:
 - a) reduction of risk;
 - b) reduction of cost;
 - c) generation of additional capital or income for a Portfolio with an appropriate level of risk taking into account the risk profile of the Portfolio as described in the Prospectus, the risk diversification rules set out in UCITS Notice 9 and the general provisions of the UCITS Regulations
- iii. their risks are adequately captured by the risk management procedures implemented by the Fund, and
- iv. they cannot result in a change to a Portfolio's declared investment objective or add substantial supplementary risks in comparison to the general risk policy as described in its sales documents.

While the use of such techniques and instruments will be in line with the best interests of the Fund, individual techniques may result in increased counterparty risk and potential conflicts of interest. Details of the proposed efficient portfolio management techniques and policies adopted by the Fund in relation to their use by the Portfolios and details of the relevant risks are set out in the Prospectus.

19. Transaction costs

For the year ended 31 December 2024 and 31 December 2023, the Fund incurred transaction costs, which are included in the statement of comprehensive income as part of net gain/(loss) on financial assets and liabilities at fair value through profit or loss, as follows:

	31 December 2024	31 December 2023
Man Global Convertibles	US\$725	US\$746

* Man GLG RI European Equity Leaders, Man Numeric Global RI Climate, Man GLG RI Sustainable European Income and Man GLG RI Sustainable Water & Circular Economy ceased their operations on 16 February 2023, 29 December 2023, 20 January 2023, and 30 June 2023 and, respectively.

Man GLG Strategic Bond and Man GLG Sustainable Strategic Income ceased their operations on 23 December 2024 and 17 May 2024 respectively.

20. Securities Financing Transactions Regulation

The Securities Financing Transactions Regulation, as published by the European Securities and Markets Authority, aims to improve the transparency of the security financing markets. Disclosures regarding exposures to Securities Financing Transactions ("SFTs") will be required on all reports and accounts published.

As at 31 December 2024, certain Portfolios engaged in securities financing transactions, refer to the reporting requirement in respect of the Securities Financing Transactions Regulation section for details.

21. Significant events during the year

Prospectus

A new Supplement for the GLG Partners LP Portfolios was issued on 24 April 2024 to the Prospectus dated 1 December 2022. The amendments to the Prospectus reflected additional share classes "IU", "DY" and "IX", and their fee structures.

An addendum to the Man Numeric Supplement dated 25 August 2023 was issued on 26 April 2024. The amendments to the Supplement reflected the management fee changes with respect to Man Systematic US High Yield and Man Systematic China A Equity.

A new Supplement for the GLG Partners LP Portfolios was issued on 7 May 2024 to the Prospectus dated 1 December 2022. The amendment to the Prospectus reflected the inclusion of investment in mortgage-backed securities and asset-backed securities for Man Global Investment Grade Opportunities.

A further addendum to the Man Numeric Supplement dated 25 August 2023 was issued dated 16 May 2024. The amendments reflected the additional management fee changes with respect to Man Systematic US High Yield and Man Systematic China A Equity.

A new Supplement for the GLG Partners LP Portfolios was issued on 23 July 2024 to the Prospectus dated 1 December 2022. The amendments to the Prospectus reflected the change in name of Man GLG RI Global Sustainable Growth to Man RI Global Sustainable Future. It also reflected the change from Article 8 to Article 9 for SFDR Reporting purposes.

An updated Prospectus was issued dated 11 November 2024 along with updated Supplements to the GLG Partners LP Portfolios, GLG LLC Portfolios and Numeric Investors LLC Portfolios also dated 11 November 2024. The updates reflected the Portfolios name changes as disclosed previously in the financial statements along with other general prospectus updates.

A new Supplement for the GLG Partners LP Portfolios was issued on 13 December 2024 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected the launch of a new sub-fund, Man Emerging Markets Corporate Credit Opportunities which commenced operations on 6 January 2024.

21. Significant events during the year (continued)

Fund closures

Man GLG Strategic Bond and Man GLG Sustainable Strategic Income ceased their operations on 23 December 2024 and 17 May 2024 respectively.

Fund launches

Man Global Climate Transition Impact Bond commenced its operations on 23 January 2024.

Share classes

Below is the list of share classes which were launched during the year ended 31 December 2024:

Sub-Fund	Share Class	Launch Date
Man Japan CoreAlpha Equity	IXX EUR	04 June 2024

Man Global Climate Transition Impact Bond	IF H EUR	23 January 2024

The Directors, Investment Managers and the Manager acknowledge the current crisis in Ukraine and all applicable Russian related sanctions. The Investment Manager has reviewed positions held across the strategy for any Russian and Ukrainian exposure. Appropriate action was taken by the relevant Investment Manager to reduce or remove certain direct exposures to Russia where necessary and the situation is under ongoing review.

The ongoing political instability in the region is an additional risk factor which is being monitored and could impact the valuation of the Fund's assets after the year end.

Furthermore, there were no other significant events during the year ended 31 December 2024.

22. Subsequent events since the year end

Dividends proposed for the year ended 31 December 2024 were paid on 10 January 2025.

A new sub-fund, Man Emerging Markets Corporate Credit Opportunities commenced its operations on 6 January 2024.

A new Supplement for the GLG Partners LP Portfolios was issued on 3 March 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected the removal of China from the Business Day definition for Man Asia (ex Japan) Equity and Man China Equity.

A new Supplement for the GLG Partners LP Portfolios was issued on 11 March 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected a change with respect to Man Global Climate Transition Impact Bond to reflect that the coal exclusion which is applied in respect of the Portfolio does not apply in respect of investments in green, transition, or sustainable bonds.

A new Supplement for the GLG LLC Portfolios was issued on 18 March 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected the approval of a new sub-fund, Man Global Resources Equity, which at the date of approval of these financial statements has not yet launched.

Man RI Global Sustainable Future ceased its operations on 24 March 2025.

22. Subsequent events since the year end (continued)

Following the end of the year, the US government introduced a 10% minimum tariff on most imported goods, along with higher reciprocal tariffs on a broad range of countries. This led to significant uncertainty regarding the economic outlook, as market participants scrambled to assess the potential impacts on both growth and inflation. Consequently, equity markets experienced a severe correction, although they partially recovered some of the losses thereafter. The AIFM will continue to monitor the situation closely.

There have been no other subsequent events since the year end that impact the Fund and require disclosure in the financial statements.

23. Stock lending

The Fund may enter into stock lending programmes organised by generally recognised International Central Securities Depositories Systems provided that the programme is subject to a guarantee from the system operator. As at 31 December 2024 and 31 December 2023, the Fund has a stock lending programme in place with Bank of New York Mellon (London Branch).

Net income earned by the sub-funds from securities lending activity during the year and fees paid to the securities lending agent were as outlined below:

	Income earned	Fees paid
Man Global Convertibles	US\$8,223	-
Man Japan CoreAlpha Equity	¥112,499,741	-
Man Pan-European Equity Growth	€26,585	-

24. Dividends

On 31 December 2024 and 31 December 2023, the Directors proposed the payment of dividends as per the table below:

The Directors do not propose the payment of dividend for any of the other share classes in the other Portfolios.

25. Contingent liabilities and commitments

There were no contingent liabilities or commitments other than those already disclosed in these financial statements as at 31 December 2024 (31 December 2023: none).

26. Approval of financial statements

The Directors approved these financial statements on 28 April 2025.

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF MAN FUNDS PLC

Report on the audit of the financial statements

Opinion on the financial statements of Man Group Plc (the 'company')

In our opinion the financial statements:

- give a true and fair view of the assets, liabilities and financial position of the company as at 31 December 2024 and of the profit for the financial year then ended; and
- have been properly prepared in accordance with the relevant financial reporting framework and, in particular, with the requirements of the Companies Act 2014.

The financial statements we have audited comprise:

- the Statement of financial position;
- the Statement of changes in net assets;
- the Statement of comprehensive income;
- the Statement of cash flows; and
- the related notes 1 to 26, including material accounting policy information as set out in note 2.

The relevant financial reporting framework that has been applied in their preparation is the Companies Act 2014 and IFRS Accounting Standards as issued by the International Accounting Standards Board (IASB) and as adopted by the European Union ("the relevant financial reporting framework").

The applicable regulations that have been applied in their preparation is the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 (as amended), and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations, 2019 ("the applicable Regulations").

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (Ireland) (ISAs (Ireland)) and applicable law. Our responsibilities under those standards are described below in the "Auditor's responsibilities for the audit of the financial statements" section of our report.

We are independent of the company in accordance with the ethical requirements that are relevant to our audit of the financial statements in Ireland, including the Ethical Standard issued by the Irish Auditing and Accounting Supervisory Authority (IAASA), as applied to public interest entities, and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Summary of our audit approach

Key audit matters	The key audit matters that we identified in the current year were: <ul style="list-style-type: none">• Valuation of financial assets and liabilities at fair value through profit or loss• Existence of financial assets and liabilities at fair value through profit or loss
Materiality	The materiality that we used in the current year was 1% of Average Net Assets determined in respect of each sub-fund.
Scoping	Our audit is a risk-based approach taking into account the structure of the entity, types of investments, the involvement of the third parties service providers, the accounting processes and controls in place and the industry in which the entity operates.

Continued on next page/

Conclusions relating to going concern

In auditing the financial statements, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Our evaluation of the directors' assessment of the company's ability to continue to adopt the going concern basis of accounting included:

- Obtaining an understanding of the Funds system of internal control regarding going concern and the process undertaken by directors' in assessing the going concern basis of preparation
- Holding discussions with management on the directors' going concern assessment, the future plans for the entity and the feasibility of those plans.
- Challenging the reasonableness of the key assumptions applied by the directors in their assessment.
- Reviewing all board meeting minutes during the period up to the date of approval of the financial statements, for evidence of any discussions and/or decisions that could impact the entity's ability to continue as a going concern.
- Reviewing the capital activity and Net Asset Value movements subsequent to the financial year end.
- Assessing the adequacy of the relevant going concern disclosures made in the financial statements.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the Fund's ability to continue as a going concern for a period of at least twelve months from when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report.

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current financial year and include the most significant assessed risks of material misstatement (whether or not due to fraud) we identified, including those which had the greatest effect on: the overall audit strategy, the allocation of resources in the audit; and directing the efforts of the engagement team.

These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Valuation of financial assets and liabilities at fair value through profit or loss

Key audit matter description

For the financial year ended 31 December 2024, the financial assets and liabilities at fair value through profit and loss of the Fund (comprised of Equities \$3,427m, Interest bearing securities \$4,722m and Derivatives \$30m) to the amount of \$8,178m make up 87% of total net assets of \$9,404m.

The valuation of financial assets and liabilities at fair value through profit or loss is considered a key audit matter as this represent the most significant balance on the Statement of Financial Position and due to the potential for management judgement and estimation in their valuation. This is also the main driver of the Fund's performance and has been identified a significant risk of material misstatement.

As financial assets and liabilities at fair value through profit or loss are a key driver of

Continued on next page/

performance and due to their significance to the net asset value, there is a risk that they may not be valued correctly in accordance with IFRS. Refer also to Note 2 (Material accounting policies) and Note 4 (Financial assets and liabilities at fair value through profit or loss) in the financial statements.

How the scope of our audit responded to the key audit matter

We have performed the following procedures to address the key audit matter:

- We considered the valuation basis of financial assets and liabilities through profit or loss reflected the valuation policy as stipulated in the prospectus and the requirements of IFRS.
- We reviewed the SOC 1 Report of the administrator and assessed the scope, sufficiency and results of the controls reports and placed reliance on these reports with regard to controls over the valuation of investments.
- For low complexity investments, we independently revalued your listed and other low-complexity investments using the One Deloitte Price module ("ODP" is a dynamic price range encompassing millions of valuation datapoints from all leading independent pricing sources, the two largest ratings agencies, tens of thousands of trades, and a securities database designed to evolve with the markets) and other independent market data.
- For the higher complexity OTC derivatives, we performed re-valuation on a sample basis.
- For Level 3 investments: in auditing hard-to-value positions, our engagement team performed several procedures for funds which fall into scope for testing. They include but are not limited to:
 - We attended the IPC meetings and reviewed the pricing committee minutes.
 - We confirmed the fair value levelling disclosures in the financial statements are materially appropriate.
 - We agreed prices to independent pricing sources as available.
 - We recalculated the market value as a multiple of cost, reviewed current year and post year end purchase and sales reports.

Existence of financial assets and liabilities at fair value through profit or loss

Key audit matter description

The Fund's financial assets and liabilities at fair value through profit and loss at the year-end principally comprised of Equities \$3,427m, Interest bearing securities \$4,722m and Derivatives \$30m.

The existence of financial assets and liabilities at fair value through profit or loss is considered a key audit matter as the financial assets and liabilities at fair value through profit or loss represent a significant balance on the Statement of financial position. This is also a main driver of the Fund's performance.

The existence of and good title to the Fund's financial assets and liabilities at fair value through profit or loss is crucial to ensuring the financial statements are free from material misstatement. There is a risk that the financial assets and liabilities at fair value through profit or loss may not exist at year end or might not be owned by the Fund. Refer also to Note 2 (Material accounting policies) and Note 4 (Financial assets and liabilities at fair value through profit or loss) in the financial statements.

How the scope of our audit responded to the key audit matter

We have performed the following procedures to address the key audit matter:

- We obtained direct confirmation of the investments of each Fund with the Depositary. Material reconciling items between the Depositary confirmations and the Fund investment portfolios, such as late trades or pending settlements, were investigated to ensure that trades are recorded in the correct reporting period.
- We tested the cut-off of trades to ensure that they have been recorded in the correct period.
- IWe reviewed the SOC 1 Report of the administrator and assessed the scope, sufficiency and results of the controls reports and placed reliance on these reports with regard to controls over the existence of investments.

Our audit procedures relating to these matters were designed in the context of our audit of the financial statements as a whole, and not to express an opinion on individual accounts or disclosures. Our opinion on the financial statements is not modified with respect to any of the risks described above, and we do not express an opinion on these individual matters.

Our application of materiality

We define materiality as the magnitude of misstatement in the financial statements that makes it probable that the economic decisions of a reasonably knowledgeable person would be changed or influenced. We use materiality both in planning the scope of our audit work and in evaluating the results of our work.

Based on our professional judgement, we determined materiality for the financial statements as a whole as follows:

Basis for determining materiality	1% of Average Net Assets
Rationale for the benchmark applied	We have considered the average net assets to be the critical component for determining materiality because the main objective of each Sub-Fund is to provide shareholders with a total return and the Net Asset Value is the primary indicator of the size and performance of the Sub-Fund and is a key area of interest for the shareholders, who are the primary users of the financial statements. The use of the Average Net Asset Value is considered industry practice benchmark for Investment Funds.

We set performance materiality at a level lower than materiality to reduce the probability that, in aggregate, uncorrected and undetected misstatements exceed the materiality for the financial statements as a whole.

Performance materiality was set at 50% of materiality for the 2024 audit. In determining performance materiality, we considered the following factors:

- our understanding of the entity and the industry in which it operates;
- the quality of the control environment and whether we were able to rely on controls;
- assessment of risks of material misstatement, including fraud risks; and
- the nature, volume and size of misstatements (if any) identified in the current and previous audit.

We agreed with the Board of Directors that we would report to them all audit differences in excess of 5% as well as differences below that threshold that, in our view, warranted reporting on qualitative grounds. We also report to the Board of Directors on disclosure matters that we identified when assessing the overall presentation of the financial statements.

An overview of the scope of our audit

Our audit is a risk based approach taking into account the structure of the Fund, the types of investments, the involvement of the third parties service providers, the accounting processes and controls in place and the industry in which the entity operates. The entity is incorporated as an open-ended investment company with variable capital and is organised under the laws of Ireland as a public limited company pursuant to the Companies Act 2014. The entity is authorised by the Central Bank of Ireland ("the Central Bank") as a UCITS (Undertakings for Collective Investment in Transferable Securities) under the applicable Regulations.

The entity is organised as an umbrella fund with segregated liability between each Sub-fund. We assess the risks of each Subfund separately. We have conducted our audit based on the books and records maintained by the administrator Bank of New York Mellon Administration Services (Ireland) Limited at Riverside II Sir John Rogerson's Quay, Grand Canal Dock, Dublin 2.

Other information

The other information comprises the information included in the Reports and Financial Statements, other than the financial statements and our auditor's report thereon. The directors are responsible for the other information contained within the Reports and Financial Statements.

Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

Responsibilities of directors

As explained more fully in the Directors' Responsibilities, the directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view and otherwise comply with the Companies Act 2014, and for such internal control as the directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the company or to cease operations, or have no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the financial statements is located on IAASA's website at: <https://iaasa.ie/publications/description-of-the-auditors-responsibilities-for-the-audit-of-the-financial-statements>. This description forms part of our auditor's report.

Extent to which the audit was considered capable of detecting irregularities, including fraud

Irregularities, including fraud, are instances of non-compliance with laws and regulations. We design procedures in line with our responsibilities, outlined above, to detect material misstatements in respect of irregularities, including fraud. The extent to which our procedures are capable of detecting irregularities, including fraud is detailed below.

Identifying and assessing potential risks related to irregularities

In identifying and assessing risks of material misstatement in respect of irregularities, including fraud and non-compliance with laws and regulations, we considered the following:

- the nature of the industry and sector, control environment and business performance including the design of the Fund's remuneration policies;
- the Fund's documentation of their policies and procedures relating to fraud and compliance with laws and regulations;
- results of our enquiries of management and the board of directors about their own identification and assessment of the risks of irregularities;
- any matters we identified having obtained and reviewed the Fund's documentation of their policies and procedures relating to:
 - o identifying, evaluating and complying with laws and regulations and whether they were aware of any instances of non-compliance;
 - o detecting and responding to the risks of fraud and whether they have knowledge of any actual, suspected or alleged fraud;
 - o the internal controls established to mitigate risks of fraud or non-compliance with laws and regulations;
- the matters discussed among the audit engagement team and relevant internal specialists, regarding how and where fraud might occur in the financial statements and any potential indicators of fraud.

As a result of these procedures, we considered the opportunities and incentives that may exist within the organisation for fraud and identified the greatest potential for fraud in Revenue Recognition with respect to the net movement in unrealised gains/(losses) on financial assets and liabilities at fair value through profit or loss. In common with all audits under ISAs (Ireland), we are also required to perform specific procedures to respond to the risk of management override.

We also obtained an understanding of the legal and regulatory framework that the Fund operates in, focusing on provisions of those laws and regulations that had a direct effect on the determination of material amounts and disclosures in the financial statements. The key laws and regulations we considered in this context included the Companies Act 2014, the relevant financial reporting framework and the applicable Regulations.

In addition, we considered provisions of other laws and regulations that do not have a direct effect on the financial statements but compliance with which may be fundamental to the Fund's ability to operate or to avoid a material penalty. These included matters regulated by the Central Bank of Ireland, as well as Sustainable Finance Disclosures Regulation as regulated by the EU.

Audit response to risks identified

As a result of performing the above, we identified 'Valuation of financial assets and liabilities at fair value through profit or loss' as a key audit matter related to the potential risk of fraud. The key audit matters section of our report explains the matter in more detail and also describes the specific procedures we performed in response to that key audit matter.

Our procedures to respond to risks identified included the following:

- reviewing the financial statement disclosures and testing to supporting documentation to assess compliance with provisions of relevant laws and regulations described as having a direct effect on the financial statements;
- enquiring of management and the board of directors concerning actual and potential litigation and claims;
- performing analytical procedures to identify any unusual or unexpected relationships that may indicate risks of material misstatement due to fraud;
- reading minutes of meetings of those charged with governance and reviewing correspondence with the Central Bank of Ireland; and
- In addressing the risk of fraud in Revenue Recognition with respect to the net movement in unrealised gains and losses on financial assets and liabilities at fair value through profit or loss, independently valuing all securities using our own market feeds and completing an unrealised gain/loss reconciliation by comparing the opening unrealised gain/loss of each Sub-Fund to the closing unrealised gain/loss and comparing the movement to the balance per the Trial balance and financial statements.
- in addressing the risk of fraud through management override of controls, testing the appropriateness of journal entries and other adjustments; assessing whether the judgements made in making accounting estimates are indicative of a potential bias; and evaluating the business rationale of any significant transactions that are unusual or outside the normal course of business.

We also communicated relevant identified laws and regulations and potential fraud risks to all engagement team members including internal specialists and remained alert to any indications of fraud or non-compliance with laws and regulations throughout the audit.

Report on other legal and regulatory requirements

Opinion on other matters prescribed by the Companies Act 2014

Based solely on the work undertaken in the course of the audit, we report that:

- We have obtained all the information and explanations which we consider necessary for the purposes of our audit.
- In our opinion the accounting records of the company were sufficient to permit the financial statements to be readily and properly audited.
- The financial statements are in agreement with the accounting records.
- In our opinion the information given in the directors' report is consistent with the financial statements.
- In our opinion, those parts of the directors' report specified for our review, which does not include sustainability reporting when required by Part 28 of the Companies Act 2014, have been prepared in accordance with the Companies Act 2014.

Corporate Governance Statement required by the Companies Act 2014

We report, in relation to information given in the Corporate Governance Statement on pages 47 to 49 that:

- In our opinion, based on the work undertaken during the course of the audit, the information given in the Corporate Governance Statement pursuant to subsection 2(c) of section 1373 of the Companies Act 2014 is consistent with the company's statutory financial statements in respect of the financial year concerned and such information has been prepared in accordance with the Companies Act 2014. Based on our knowledge

Continued on next page/

and understanding of the company and its environment obtained in the course of the audit, we have not identified any material misstatements in this information.

- In our opinion, based on the work undertaken during the course of the audit, the information required pursuant to section 1373(2)(a),(b),(e) and (f) of the Companies Act 2014 is contained in the Corporate Governance Statement.

Matters on which we are required to report by exception

Based on the knowledge and understanding of the company and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

We have nothing to report in respect of the provisions in the Companies Act 2014 which require us to report to you if, in our opinion, the disclosures of directors' remuneration and transactions specified by law are not made.

Other matters which we are required to address

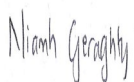

Following the recommendation of management, we were appointed by the Directors on 30 March 2023 to audit the financial statements for the financial year 31 December 2023. The period of total uninterrupted engagement including previous renewals and reappointments of the firm is 2 years, covering the year ending 31 December 2024.

The non-audit services prohibited by IAASA's Ethical Standard were not provided and we remained independent of the company in conducting the audit.

Our audit opinion is consistent with the additional report to the Board of Directors we are required to provide in accordance with ISA (Ireland) 260.

Use of our report

This report is made solely to the company's members, as a body, in accordance with Section 391 of the Companies Act 2014. Our audit work has been undertaken so that we might state to the company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the company and the company's members as a body, for our audit work, for this report, or for the opinions we have formed.

Niamh Geraghty
For and on behalf of Deloitte Ireland LLP
Chartered Accountants and Statutory Audit Firm
Deloitte & Touche House, 29 Earlsfort Terrace, Dublin 2

29 April 2025

Note: An audit does not provide assurance on the maintenance and integrity of the website, including controls used to achieve this, and in particular on whether any changes may have occurred to the Financial Statements since first published. These matters are the responsibility of the directors but no control procedures can provide absolute assurance in this area.

(a) Exchange traded derivative instruments.

(b) OTC financial derivatives instruments.

* Transferable securities dealt on another regulated market.

#Transferable securities other than those listed on an official stock exchange or dealt on another regulated market.

All other investments held at the period end are transferable securities listed on an official stock exchange.

Analysis of Total Assets

	% of Total Assets
Transferable securities listed on official stock exchange	69.43
OTC financial derivative instruments described in classification (b) above	0.28
Transferable Securities as described in # above	2.43
Transferable securities dealt on another regulated market described in * above	11.19
Other current assets	16.67
	100.00

Analysis of Total Assets rather than Net Assets is required under UCITS Notice 8.2 appendix B.

Positions valued at zero have been priced in accordance with the valuation policy.

CNP Assurances 2% 27/07/2050	(400,000)	(390,018)

The Statement of Significant Purchases and Sales reflects the aggregate purchases of a security exceeding one percent of the total value of purchases and aggregate disposals greater than one percent of total value of the sales for the year. At minimum the largest 20 purchases and 20 sales must be given or all purchases and sales if less than 20.

Common Reporting Standard - Data Protection Information Notice

The Fund hereby provides the following data protection information notice to all Shareholders in the Fund either as of 31 December 2015 or at any point of time since this date.

For the avoidance of doubt, this notice applies equally to any Shareholders that have ceased to hold Shares in the Fund since 1 January 2016. Furthermore, it should be noted that this notice is applicable to Controlling Persons of certain Shareholders. The Fund hereby confirm that they intend to take such steps as may be required to satisfy any obligations imposed by (i) the OECD's Standards for Automatic Exchange of Financial Account Information in Tax Matters ("the Standard"), which therein contains Common Reporting Standards ("CRS"), as applied in Ireland by mean of the relevant international legal framework and Irish tax legislation and (ii) EU Council Directive 2014/107/EU, amending Directive 2011/16/EU as regards mandatory automatic exchange information in the field of taxation ("DAC2"), as applied in Ireland by the means of the relevant tax legislation, so as to ensure compliance or deemed compliance (as the case may be) with the Standard/CRS and the DAC2 from 1 January 2016. In this regard, the Investment Manager on behalf of the Fund is obliged under Section 891F and Section 891G of the Irish Taxes Consolidation Act, 1997 (as amended) and regulations made pursuant to those sections to collect certain information about each Shareholder's tax arrangements (and also collect information in relation to relevant Controlling Persons of Specific Shareholders).

In certain circumstances, the Investment Manager on behalf of the Fund may be legally obliged to share this information and other financial information with respect to a Shareholder's interests in the Fund with the Irish Revenue Commissioners (and, in particular situations, also share information in relation to relevant Controlling Persons of specific Shareholders). In turn, and to the extent the account has been identified as a Reportable Account, the Irish Revenue Commissioners will exchange this information with the country of residence of the Reportable Person(s) in respect of the Reportable Account.

In particular, information that may be reported in respect of a Shareholder (and relevant Controlling Persons, if applicable) includes name, address, date of birth, place of birth, account number, account balance or value at year end (or, if the account was closed during such period, the balance or value at the date of the closure of the account), any payments (including redemption and dividend/interest payments) made with respect to the account during the calendar year, tax residency(ies) and tax identification number(s).

Report of Directors' Remuneration (Unaudited)

The Directors of the Fund who are also employees of Man Group plc and companies within its group structure ("Man Group") do not receive any remuneration in respect of their services as directors of the Fund. The other directors receive fixed remuneration in respect of their services which is set at a level determined by the Board of Directors as a whole and which is not performance related. This is detailed in note 8 of these financial statements. None of the Directors are currently in receipt of variable remuneration in respect of their services as directors of the Fund and none of the Directors are currently in receipt of a pension from the Fund. The Fund has appointed Man Asset Management (Ireland) Limited as its UCITS management company. As such, the provisions of Article 14b of Directive 2009/65/EC in relation to remuneration are not applicable to the Fund. However, they do apply to Man Asset Management (Ireland) Limited, which has adopted a remuneration policy to ensure compliance.

The Investment Managers may, on behalf of each sub-fund and subject to the conditions and within the limits laid down by the Financial Conduct Authority and the Prospectus, employ techniques and instruments relating to transferable securities, including investments in OTC Financial Derivative Instruments ("FDI") provided that such techniques and instruments are used for efficient portfolio management purposes or to provide protection against exchange risk or for direct investment purposes, where applicable.

The Fund engaged in securities lending activity during the year for the purposes of efficient portfolio management and invested in equity swaps and total return swaps.

Securities Lending

All securities lending transactions entered into by the sub-funds are subject to a written legal agreement between the sub-funds and Bank of New York Mellon (London Branch) (the "Lending Agent"), and separately between the Lending Agent and the approved borrowing counterparty. Collateral received in exchange for securities lent is delivered to an account in the name of the Depositary on behalf of the sub-funds. Collateral received is segregated from the assets belonging to the sub-funds' Depositary or the Lending Agent.

The total income earned from securities lending transactions is split between the relevant sub-fund and the securities lending agent. The sub-fund receives at least 80% while the securities lending agent receives up to 20% of such income with all operational costs borne out of the securities lending agent's share. Income received during the year by each sub-funds from securities lending transactions is disclosed in other income in the unaudited statement of comprehensive income.

As at 31 December 2024, no sub-fund is engaged in securities lending.

Net income earned by the sub-funds from securities lending activity during the year and fees paid to the securities lending agent were as outlined below:

	Income earned	Fees paid
Man Global Convertibles	US\$8,223	-
Man Japan CoreAlpha Equity	¥112,499,741	-
Man Pan-European Equity Growth	€26,585	-

Income earned by the Fund from the reinvestment of cash collateral in repos, net of any interest payable to the relevant counterparty, outlined below for the year ended 31 December 2024 and is presented within other income in the audited statement of comprehensive income:

	Income earned
Man Global Convertibles	US\$848
Man Pan-European Equity Growth	€9,493

All of the non-cash collateral received by the Fund was held by the Lending Agent, on a tri party settlement basis as at 31 December 2024.

100% of cash collateral is maintained in a segregated account with the depositary. 100% of non-cash collateral is maintained in pooled accounts.

Securities Lending (continued)

Portfolio Swaps

OTC derivative transactions are entered into by the Fund under an International Swaps and Derivatives Association, Inc. Master Agreement ("ISDA Master Agreement") or similar agreement. An ISDA Master Agreement is a bilateral agreement between the Fund and a counterparty that governs OTC derivative transactions (including total return swaps and portfolio swaps) entered into by the parties. All OTC derivative transactions entered under an ISDA Master agreement are netted together for collateral purposes therefore any collateral disclosures provided below/elsewhere in the report are in respect of all OTC derivative transactions entered into by the Fund under the ISDA Master agreement, not just portfolio swaps.

The collateral figures provided on the next page relate to collateral held to support specific SFTRs, other cash held at brokers to support SFTRs, and other derivative transactions held at brokers where SFTRs are transacted.

The following table details the value of portfolio swaps as a proportion of the Fund's NAV, as at 31 December 2024:

	Portfolio swaps % of Net Assets
Man Global Convertibles	0.35%
Man Systematic Emerging Markets Equity	0.21%
Man Asia (ex Japan) Equity	2.97%
Man China Equity	(0.54%)
Man Global Investment Grade Opportunities	0.22%
Man Dynamic Income	0.14%
Man Euro Corporate Bond	0.19%

All returns and costs from securities borrowing from OTC transactions were accrued by the Fund and were not subject to any returns sharing arrangements with the Fund's Investment Managers or any other third parties.

The following table details the value of portfolio swaps, analysed by counterparty as at 31 December 2024:

Counterparty	Counterparty's country of establishment	Portfolio Swap Market value
<u>Man Global Convertibles</u>		US\$
BNP Paribas	United Kingdom	241,319
Citibank N.A.	United Kingdom	98,228
<u>Man Systematic Emerging Markets Equity</u>		US\$
Goldman Sachs International	United Kingdom	(13,856)
Morgan Stanley & Co. International plc	United Kingdom	1,606,467
<u>Man Asia (ex Japan) Equity</u>		US\$
Societe Generale	United Kingdom	4,993,217
<u>Man Global Investment Grade Opportunities</u>		US\$

All cash posted as collateral has an open maturity tenor as it is not subject to a contractual maturity date.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Global Convertibles (the “Portfolio”)

Legal entity identifier: 549300DLK758C1ER2L98

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 71.59% of sustainable investments¹

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ As a percentage of Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²;
- the use of raw materials;
- the reduction of waste production; and
- the circular economy.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs;
- tackling inequality; and
- labour relations.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion list was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 71.59% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 6.42% of Taxonomy-aligned investments during the reference period. Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs. If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio's minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio's NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024.

Promoted characteristic	Sustainability indicator ³
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs
The use of raw materials	Responsible consumption and production (SDG 12)
The reduction of waste production	Sustainable cities and communities (SDG 11)
	Responsible consumption and production (SDG 12)
The circular economy	Industry, innovation and infrastructure (SDG 9)
	Sustainable cities and communities (SDG 11)
	Responsible consumption and production (SDG 12)
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs
Tackling inequality	Gender equality (SDG 5)
	Reduced inequalities (SDG 10)
Labour relations	Decent work and economic growth (SDG 8)

	Sustainability indicator ³	Alignment (as an average for reference period ending 31 December 2024) ⁴
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs	42.39%

³ Please note the sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

⁴ The first two indicators are as at 31 December 2024.

	Sustainability indicator ³	Alignment (as an average for reference period ending 31 December 2024) ⁴
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs	37.55%
3.	Gender equality (SDG 5)	69.78%
4.	Decent work and economic growth (SDG 8)	42.02%
5.	Industry, innovation and infrastructure (SDG 9)	21.03%
6.	Reduced inequalities (SDG 10)	30.24%
7.	Sustainable cities and communities (SDG 11)	26.57%
8.	Responsible consumption and production (SDG 12)	23.16%

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods⁵ in accordance with the process set out above.

	Sustainability indicator ³	Alignment (as an average for reference period ending 31 December 2024) ⁶	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs	42.39%	NA	NA
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs	37.55%	NA	NA
3.	Gender equality (SDG 5)	69.78%	55.28%	48.25
4.	Decent work and economic growth (SDG 8)	42.02%	28.67%	24.63%

⁵ As at 31 December of the relevant reporting period.

⁶ The first two indicators are as at 31 December 2024.

	Sustainability indicator ³	Alignment (as an average for reference period ending 31 December 2024) ⁶	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
5.	Industry, innovation and infrastructure (SDG 9)	21.03%	17.25%	12.33%
6.	Reduced inequalities (SDG 10)	30.24%	25.36%	24.56%
7.	Sustainable cities and communities (SDG 11)	26.57%	23.85%	12.80%
8.	Responsible consumption and production (SDG 12)	23.16%	20.71%	16.87%

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio⁷, being:

- Overall positive Environmental SDG Alignment
- Overall positive Social SDG Alignment
- Gender equality (SDG 5);
- Decent work and economic growth (SDG 8);
- Industry, innovation and infrastructure (SDG 9);
- Reduced inequalities (SDG 10);
- Sustainable cities and communities (SDG 11); and
- Responsible consumption and production (SDG 12).

⁷ Please note the sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Output - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Output - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Output - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Output - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio’s investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio’s investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column “% Assets” refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

Top 15 Holdings (31 March 2024)			
Issuer	Sector	Country	% Capital

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024⁸. However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.⁹

Asset allocation
describes the
share of
investments in
specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: https://www.man.com/products/man-global-convertibles#_product-documents.¹⁰

In which economic sectors were the investments made?

⁸ Please note that the Portfolio employs leverage and may at times be more than 100% invested. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total more than 100%.

⁹ **Taxonomy-aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹⁰ Please note that since 2022 figures were adjusted, only 2023 figures are directly comparable.

Please see below a breakdown of the Portfolio’s exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio’s capital/NAV.¹¹

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)		% Capital
Information Technology		17.51%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below. While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹², companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

¹² Delegated Regulation (EU) 2023/2486 of 27 June 2023

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹³?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

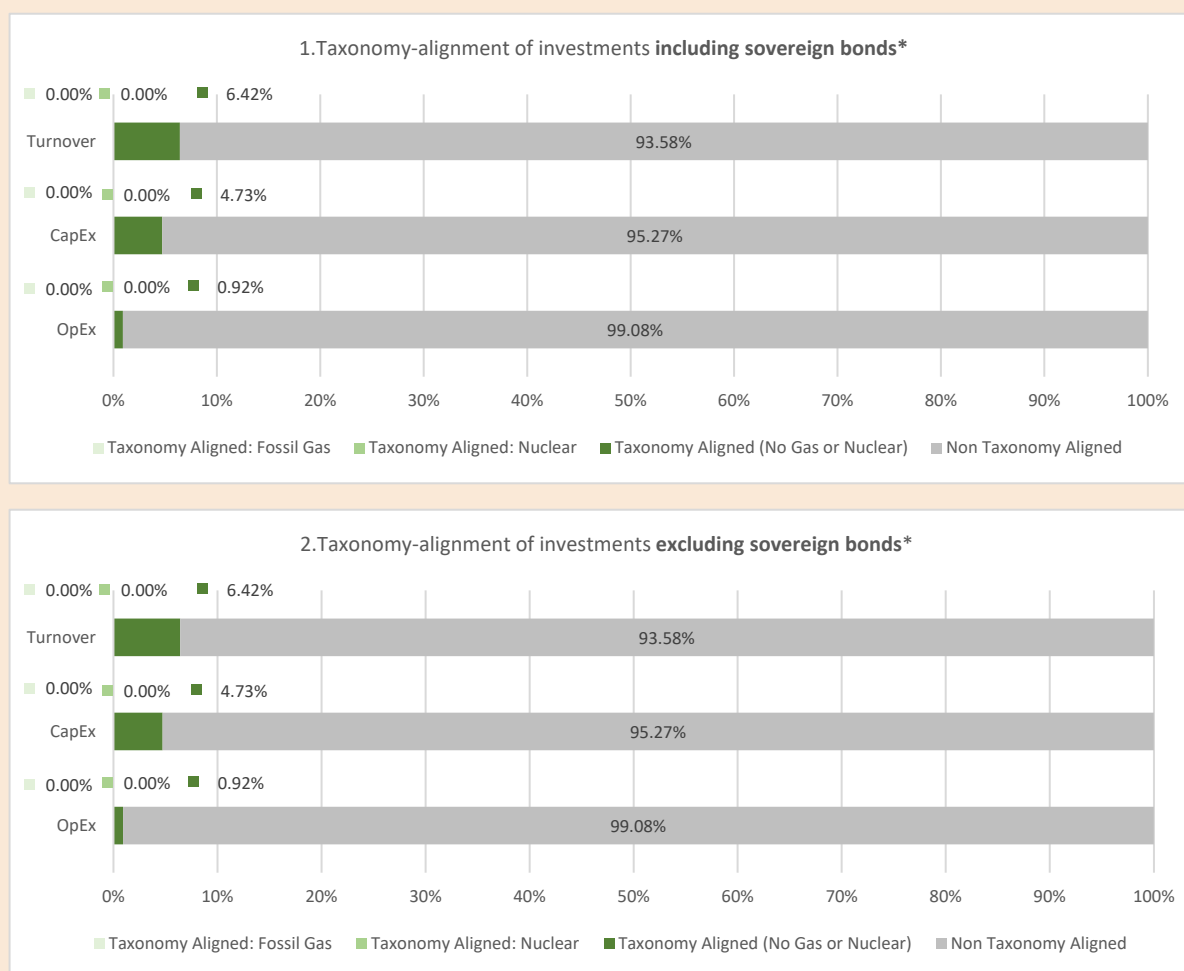

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

¹³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹⁴ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.01%	4.94%
CapEx	0.01%	3.78%
OpEx	0.00%	0.89%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

6.42% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 6.09% as at 31 December 2023 and 3.28% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 29.63% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 35.10% of its total investments in sustainable investments with a social objective.

Daily notional Value

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager’s due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group’s proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Japan CoreAlpha Equity (the "Portfolio")

Legal entity identifier: 549300ZVTTLI6REZB645

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 73.36% of sustainable investments¹

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ As a percentage of Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²
- the use of energy;
- the reduction of greenhouse gas ("GHG") emissions; and
- company products which aim to promote reduced environmental impact.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- investment in human capital.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion list was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 50% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 73.36% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 8.15% of Taxonomy-aligned investments during the reference period. Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 50% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 50% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "SDG Framework") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs., and produces an alignment score which may show positive alignment to one or more SDGs for a given investment. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs. If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both..

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs)..contributing to attaining the relevant SDG(s) with which the investment is deemed aligned through its positive score.

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio's minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio's NAV. SDGs are calculated as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as included in the table of results.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The use of energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)

³ Details of how the PAIs performed are available upon request.

⁴ Please note the sustainability indicators 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs' and 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs' were added in November 2024.

	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)
Company products which aim to promote reduced environmental impact	Sustainable cities and communities (SDG 11)
	Responsible consumption and production (SDG 12)
Promoted characteristic	Sustainability indicator
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Investing in human capital	Gender equality (SDG 5)
	Decent work and economic growth (SDG 8)
	Reduced inequalities (SDG 10)

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	56.28%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	26.96
3.	Gender equality (SDG 5)	23.21%
4.	Affordable and clean energy (SDG 7)	42.08%
5.	Decent work and economic growth (SDG 8)	50.30%
6.	Reduced inequalities (SDG 10)	59.31%
7.	Sustainable cities and communities (SDG 11)	47.02%
8.	Responsible consumption and production (SDG 12)	49.04%
9.	Climate action (SDG 13)	39.25%

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)
10.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)	90.12 CO ₂ e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods⁵ in accordance with the process set out above.

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	56.28%	NA	NA
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	26.96	NA	NA
3.	Gender equality (SDG 5)	23.21%	17.80%	31.21%
4.	Affordable and clean energy (SDG 7)	42.08%	39.70%	33.99%
5.	Decent work and economic growth (SDG 8)	50.30%	50.67%	51.00%
6.	Reduced inequalities (SDG 10)	59.31%	57.44%	59.92%

⁵ As at 31 December of the relevant reporting period.

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
7.	Sustainable cities and communities (SDG 11)	47.02%	59.48%	33.45%
8.	Responsible consumption and production (SDG 12)	49.04%	49.19%	38.50%
9.	Climate action (SDG 13)	39.25%	41.97%	23.78%
10.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)	90.12 CO2e / M\$	98.51 tonnes CO2e / M\$	139.12 tonnes CO2e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the sustainability indicators mentioned above, being:

- Overall positive Environmental SDG Alignment
- Overall positive Social SDG Alignment
- Gender equality (SDG 5);
- Affordable and clean energy (SDG 7);
- Decent work and economic growth (SDG 8);
- Reduced inequalities (SDG 10)
- Sustainable cities and communities (SDG 11);
- Responsible consumption and production (SDG 12); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant sustainability indicators as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available

sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment

against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio’s investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio’s investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column “% Assets” refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

Top 15 Holdings (31 March 2024)

Asset allocation
describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024⁶. However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.⁷

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: https://www.man.com/products/man-japan-corealpha-equity#_product-

⁶ Please note that the Portfolio employs leverage and may at times be more than 100% invested. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total more than 100%.

⁷ Taxonomy aligned percentages: Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

[documents](#).⁸

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio’s exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio’s capital/NAV.⁹

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Financials	23.20%
Consumer Discretionary	19.31%
Industrials	16.92%
Real Estate	9.24%
Materials	7.64%
Communication Services	6.89%
Consumer Staples	4.98%
Energy	3.07%
Information Technology	3.00%
Health Care	2.72%
Unclassified	1.48%

Q1 Sub- Sector Breakdown (31 March 2024)	% Capital
Oil & Gas Exploration & Production	0.67%
Oil & Gas Refining & Marketing	2.40%

Q2 Sector Breakdown (30 June 2024)	% Capital
Financials	27.28%
Consumer Discretionary	19.56%
Industrials	15.03%
Communication Services	10.76%
Real Estate	7.21%
Consumer Staples	5.58%
Materials	5.12%
Health Care	2.99%

⁸ Please note that since 2022 figures were adjusted, only 2023 figures are directly comparable.

⁹ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 – 31 December 2024

Information Technology	2.93%
Unclassified	1.79%
Energy	1.00%

Q2 Sub- Sector Breakdown (30 June 2024)	% Capital
Oil & Gas Exploration & Production	0.69%
Oil & Gas Refining & Marketing	0.32%

Q3 Sector Breakdown (30 September 2024)	% Capital
Consumer Discretionary	21.84%
Financials	20.63%

Unclassified	1.17%
Energy	0.50%

Q4 Sub- Sector Breakdown (31 December 2024)	% Capital
Oil & Gas Exploration & Production	0.50%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹⁰, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹¹?

☐ Yes:

¹⁰ Delegated Regulation (EU) 2023/2486 of 27 June 2023

¹¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make Taxonomy-aligned investments during the reference period.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹² made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	4.56%
CapEx	0.00%	0.37%
OpEx	0.00%	0.02%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

8.15% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 6.42% as at 31 December 2023 and 0.83% of the Portfolio's investments as at 31 December 2022 when calculated as a percentage of net long exposure. As noted above, the Investment Manager relies on partial data.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 44.18% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. . Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 21.08% of its total investments in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

¹² Daily notional Value

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager’s due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group’s proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Systematic Emerging Markets Equity (the "Portfolio")

Legal entity identifier: 549300QUIMF00BWN492

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53.09% of sustainable investments¹

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ As a percentage of Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²
- the use of renewable energy; and
- the reduction of greenhouse gas ("GHG") emissions.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 53.09% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 11.13% of Taxonomy-aligned investments during the reference period. Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "SDG Framework") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs, and produces an alignment score which may show positive alignment to one or more SDGs for a given investment. An 'alignment score' to each relevant SDG(s) is then produced for a

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs. If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both..

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs)..contributing to attaining the relevant SDG(s) with which the investment is deemed aligned through its positive score.

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are calculated as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as included in the table of results.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)
	Paris Agreement portfolio temperature alignment (the time horizon used is 2012 to 2030)
Promoted characteristic	Sustainability indicator
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as

³ Details of how the PAIs performed are available upon request.

⁴ Please note the sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

	set out below) in respect of the socially aligned SDGs
--	---

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	45.92%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	19.74%
3.	Affordable and clean energy (SDG 7)	35.98%
4.	Climate action (SDG 13)	26.07%
5.	GHG Intensity of investee companies	141.48 tonnes CO ₂ e / M\$
6.	Paris Agreement portfolio temperature alignment	1.89 degrees Celsius

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods⁵ in accordance with the process set out above.

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)
7.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	45.92	NA
8.	Overall positive Social SDG Alignment based on the alignment score under the	19.74%	NA

⁵ As at 31 December of the relevant reporting period.

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)
	SDG Framework (as set out below) in respect of the socially aligned SDGs		
9.	Affordable and clean energy (SDG 7)	35.98%	27.17%
10.	Climate action (SDG 13)	26.07%	23.03%
11.	GHG Intensity of investee companies	141.48 tonnes CO ₂ e / M\$	161.09 tonnes CO ₂ e / M\$
12.	Paris Agreement portfolio temperature alignment	1.89 degrees Celsius	1.88 degrees Celsius

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the sustainability indicators mentioned above, being:

- Overall positive Environmental SDG Alignment
- Overall positive Social SDG Alignment
- Affordable and clean energy (SDG 7);
- Climate action (SDG 13);
- GHG Intensity of investee companies; and
- Paris Agreement portfolio temperature alignment.

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant sustainability indicators as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Not applicable, the Manager and the Investment Manager do not consider the PAI of investment decisions on sustainability factors in respect of the Portfolio because the Investment Manager only operates quantitative investment strategies, which are currently not compatible with position-by-position diligence on such adverse impacts.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column “% Assets” refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

Top 15 Holdings (30 March 2024)

What was the proportion of sustainability-related investments?

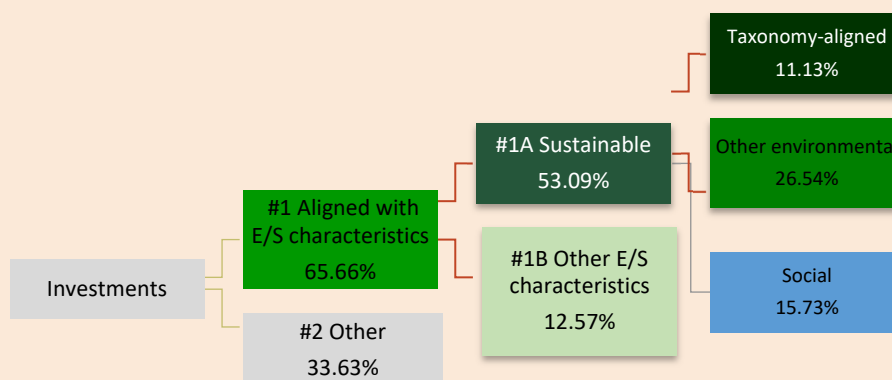

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024⁶. However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.⁷

⁶ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure less than its NAV. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

⁷ Taxonomy aligned percentages: Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

Asset allocation
describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: https://www.man.com/products/man-systematic-emerging-markets-equity#_product-documents.⁸

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 – 31 December 2024

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.⁹

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including

⁸ Please note that since 2022 figures were adjusted, only 2023 figures are directly comparable.

⁹ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹⁰, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

¹⁰ Delegated Regulation (EU) 2023/2486 of 27 June 2023

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹¹?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio’s NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹² made in transitional and enabling activities were as follows:

¹² Daily notional Value

	Transition Aligned	Enabling Aligned
Turnover	0.00%	11.11%
CapEx	0.00%	10.77%
OpEx	0.00%	0.00%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

11.13% of the Portfolio’s investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 21.12% as at 31 December 2023. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 26.54% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Since the Portfolio didn’t have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio’s objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 15.73% of its total investments in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.

- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager’s due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Global Emerging Markets Bond (the "Portfolio")

Legal entity identifier: 549300BQ6KFML0LD8E87

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53.45% of sustainable investments¹

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ As a percentage of Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- the use of renewable energy;
- the use of water; and
- the reduction of greenhouse gas (“GHG”) emissions and air pollution.

The social characteristics promoted by the Portfolio are:

- fostering social cohesion;
- fostering social integration;
- investing in human capital; and
- investing in economically or socially disadvantaged communities.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio’s NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 53.45% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

The Portfolio did neither make any commitment to invest in Taxonomy-aligned investments nor did it had any taxonomy-aligned investments as at 31 December 2024.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below detailed below. The indicators are environmental and social risk rating scores on countries and percentage of investments in emerging market countries. The sustainability indicators have helped in maintaining the Portfolio’s commitment to invest a minimum of 20% of the Portfolio’s NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio’s NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investees companies in the investment universe.

The Investment Manager uses alignment with the sustainability indicators as its proxy for measuring contributions to an environmental or social objective.

The Investment Manager has implemented a proprietary process (the “**Sovereign Framework**”) to assess sovereign issuers against a number of environmental and social metrics , as applicable (and, by extension, contribution to environmental or social objectives). The approach first evaluates the ‘do no significant harm’ (“DNSH”) criteria of each country. The Sovereign Framework then evaluates environmental and social data from two data providers. The factors include categories

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

such as energy intensity, use of renewables, water/land stress and protection (environmental) and access to water, land, food and health care, education, and life expectancy (social). The scores focus on how countries manage their existing resources (ie management scores), rather than the absolute level of their resources. Developed Markets and Emerging Markets countries were assessed relative to their peers. The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives.

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. Country scoring is a weighted average of the Sustainalytics sovereign scores and are measured as an average as at each month end during the reference period ending 31 December 2024 Other metrics are shown in different units as included in the table of results.

	Promoted characteristic	Sustainability indicator
Environmental		
1.	The use of renewable energy	Country Renewable Energy Consumption Score
2.	The use of water	Country Water Stress Score
3.	The reduction of GHG emissions and air pollution	Country Air Pollution Score
		Country Carbon Intensity Score
Social		
4.	Fostering social cohesion	Country Unemployment Score
		Country Food Security Score
5.	Fostering social integration	Country Gender Development Index Score
6.	Investing in human capital	Country Secondary Education Score
7.	Investing in economically or socially disadvantaged communities	Percentage of investments in emerging market countries

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods² in accordance with the process set out above.

	Sustainability indicator	Alignment (as an average of country scoring for the reference period ending 31 December 2024)	Alignment (as an average of country scoring for the reference period ending 31 December 2023)	Alignment (as an average of country scoring for the reference period ending 31 December 2022)
1.	Country Renewable Energy Consumption Score	52.74	40.23	39.26
2.	Country Water Stress Score	51.75	44.64	42.76
3.	Country Air Pollution Score	39.31	54.82	52.76
4.	Country Carbon Intensity Score	43.84	48.83	46.86
5.	Country Unemployment Score	56.03	58.19	55.38
6.	Country Food Security Score	58.88	57.77	54.92
7.	Country Gender Development Index Score	56.17	57.72	55.16
8.	Country Secondary Education Score	58.27	56.17	54.44
9.	Percentage of investments in emerging market countries	79.43%	75.81%	80.43%

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

² As at 31 December of the relevant reporting period. Please note that the Portfolio launched on 26 October 2023.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the sustainability indicators mentioned above, being:

- Country Renewable Energy Consumption Score;
- Country Water Stress Score;
- Country Air Pollution Score;
- Country Carbon Intensity Score;
- Country Unemployment Score;
- Country Food Security Score;
- Country Gender Development Index Score;
- Country Secondary Education Score; and
- Percentage of investments in emerging market countries.

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant sustainability indicators as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water

9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and

the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO ₂) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO ₂ /\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO ₂ /\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and	Investee companies that have been involved in violations of the UNGC principles or OECD	Binary

	OECD Guidelines for Multinational Enterprises	Guidelines for Multinational Enterprises	
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio’s investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column “% Assets” refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 31 December 2024.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio’s capital at 31 December 2024³. However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.

Asset allocation
describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

³ Although the Portfolio’s prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio’s NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio’s overall investment exposure may be limited at the Investment Manager’s discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure less than its NAV. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio’s webpage: https://www.man.com/products/man-global-emerging-markets-bond#_product-documents.⁴

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio’s exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio’s capital/NAV.⁵

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Government	76.85%
Energy	3.74%
Materials	1.79%

Q1 Sub-Sector Breakdown (31 March 2024)	% Capital
Integrated Oil & Gas	3.69%

Q2 Sector Breakdown (30 June 2024)	% Capital
Government	78.89%
Energy	3.65%
Materials	1.79%

Q2 Sub-Sector Breakdown (30 June 2024)	% Capital
Integrated Oil & Gas	3.54%

Q3 Sector Breakdown (30 September 2024)	% Capital
Government	77.51%
Energy	4.60%
Materials	1.95%

Q3 Sub-Sector Breakdown (30 September 2024)	% Capital
Integrated Oil & Gas	4.55%

Q4 Sector Breakdown (31 December 2024)	% Capital
--	-----------

⁴ Please note that since 2022 figures were adjusted, only 2023 figures are directly comparable.

⁵ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

Government	85.20%
Energy	2.69%
Materials	2.04%

Q4 Sub-Sector Breakdown (31 December 2024)	% Capital
Integrated Oil & Gas	2.61%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio did not make Taxonomy-aligned investments during the reference period.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy⁶?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio’s NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The Portfolio did not make any investments in transitional or enabling activities during the reference period.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

None of the Portfolio’s investments were in Taxonomy-aligned investments as at 31 December 2024, compared to 0% as at 31 December 2023 and 1.18% of the Portfolio’s investments as at 31 December 2022 calculated as a percentage of net long exposure. As noted above, the Investment Manager relies on partial data.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 31.79% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Since the Portfolio didn’t have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio’s objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 21.66% of its total investments in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager’s due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group’s proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Pan-European Equity Growth (the "Portfolio")

Legal entity identifier: 549300CYSOR0YAE33X30

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 79.32% of sustainable investments¹

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ As a percentage of Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²
- the reduction of greenhouse gas ("GHG") emissions; and
- the circular economy.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- responsible labour relations; and
- investment in human capital.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 37.91% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make Taxonomy-aligned investments during the reference period. Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "SDG Framework") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs, and produces an alignment score which may show positive alignment to one or more

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

SDGs for a given investment An ‘alignment score’ to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs . If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both..

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs)..contributing to attaining the relevant SDG(s) with which the investment is deemed aligned through its positive score.

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are calculated as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as included in the table of results.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The reduction of GHG emissions	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)
The circular economy	Industry, innovation and infrastructure (SDG 9)
	Responsible consumption and production (SDG 12)
Promoted characteristic	Sustainability indicator
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as

³ Details of how the PAIs performed are available upon request.

⁴ Please note the sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

	set out below) in respect of the socially aligned SDGs
Responsible labour relations	Decent work and economic growth (SDG 8)
Investing in human health and capital	Gender equality (SDG 5)
	Decent work and economic growth (SDG 8)

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	67.03%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	22.63%
3.	Gender equality (SDG 5)	80.83%
4.	Decent work and economic growth (SDG 8)	44.00%
5.	Industry, innovation and infrastructure (SDG 9)	17.71%
6.	Responsible consumption and production (SDG 12)	44.95%
7.	Climate action (SDG 13)	61.28%
8.	GHG intensity of investee companies (weight average carbon intensity-WACI) (PAI 3) ⁵	129.15 tonnes CO2e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods⁶ in accordance with the process set out above.

⁵ Details of how the PAIs performed are available upon request.

⁶ As at 31 December of the relevant reporting period.

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
9.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	67.03%	NA	NA
10.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	22.63%	NA	NA
11.	Gender equality (SDG 5)	80.83	66.21%	52.05%
12.	Decent work and economic growth (SDG 8)	44.00%	38.35%	31.90%
13.	Industry, innovation and infrastructure (SDG 9)	17.71%	18.87%	19.61%
14.	Responsible consumption and production (SDG 12)	44.95%	29.17%	20.26%
15.	Climate action (SDG 13)	61.28%	58.89%	62.76%
16.	GHG intensity of investee companies (weight average carbon intensity-WACI) (PAI 3) ⁷	129.15 tonnes CO2e / M\$	142.35 tonnes CO2e / M\$	138.57 tonnes CO2e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the sustainability indicators mentioned above, being:

⁷ Details of how the PAIs performed are available upon request.

- Overall positive Environmental SDG Alignment
- Overall positive Social SDG Alignment
- Gender equality (SDG 5);
- Decent work and economic growth (SDG 8);
- Industry, innovation and infrastructure (SDG 9);
- Responsible consumption and production (SDG 12); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant sustainability indicators as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the

Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio’s investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio’s investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column “% Assets” refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period ending 31 December 2024.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio’s capital at 31 December 2024⁸. However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.⁹

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio’s webpage: <https://www.man.com/products/man-pan-european-equity-growth>

⁸ Although the Portfolio’s prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio’s NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio’s overall investment exposure may be limited at the Investment Manager’s discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure less than its NAV. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

⁹ Taxonomy aligned percentages: Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories “Taxonomy-aligned”, “Other environmental” and “Social” is not equal to “#1A Sustainable”.

[# product-documents](#).¹⁰

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio’s exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio’s capital/NAV.¹¹

No breakdown for sub-sectors breakdown is provided as there is no exposure to sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels.

Q1 Sector Breakdown (31 March 2024)	% Capital
Consumer Discretionary	25.49%
Industrials	18.41%
Information Technology	16.37%
Health Care	16.17%
Consumer Staples	11.59%
Financials	7.11%
Materials	4.02%

Q2 Sector Breakdown (30 June 2024)	% Capital
Consumer Discretionary	22.63%
Information Technology	19.61%
Industrials	19.00%
Health Care	16.41%
Consumer Staples	10.12%
Financials	5.49%
Materials	5.43%

Q3 Sector Breakdown (30 September 2024)	% Capital
Industrials	22.03%
Consumer Discretionary	21.16%
Information Technology	19.00%
Health Care	16.33%
Financials	7.12%
Consumer Staples	7.05%
Materials	5.91%

Q4 Sector Breakdown (31 December 2024))	% Capital
---	-----------

¹⁰ Please note that since 2022 figures were adjusted, only 2023 figures are directly comparable.

¹¹ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 – 31 December 2024

Industrials	25.67%
Consumer Discretionary	19.51%
Information Technology	18.55%
Health Care	15.56%
Financials	7.59%
Consumer Staples	6.12%
Materials	5.60%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹², companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹² Delegated Regulation (EU) 2023/2486 of 27 June 2023

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹³?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The Portfolio did not make Taxonomy-aligned investments during the reference period.

¹³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹⁴ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	3.91%

¹⁴ Daily notional Value

CapEx	0.54%	4.17%
OpEx	0.24%	1.55%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

5.58% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 1.45% as at 31 December 2023 and 1.16% of the Portfolio's investments as at 31 December 2022 when calculated as a percentage of net long exposure. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 51.19% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 22.63% of its total investments in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager’s due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group’s proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX V

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man RI Global Sustainable Future (the “Portfolio”)¹

¹ On 23 July 2024 the fund changed its name from Man GLG RI Global Sustainable Growth to Man RI Global Sustainable Future and converted from Article 8 to Article 9.

² As a percentage of Net Asset Value (NAV).

³ As a percentage of Net Asset Value (NAV).

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Portfolio is to support the financing of companies that the Investment Manager believes contribute positively to social and environmental factors, in particular, companies that contribute to the UN Sustainable Development Goals (the "SDGs")⁴ while providing a long term capital appreciation to investors.

This was achieved by investing substantially all of its assets in companies that contribute to the SDGs, predominantly focussing on companies that contribute to the following SDGs:

- Gender equality (SDG5);
- Industry, innovation and infrastructure (SDG9);
- Responsible consumption and production (SDG12); and
- Climate action (SDG13).

During the reference period this sustainable investment objective was met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Sustainability criteria:
 - The Portfolio made 98.17% of sustainable investments (expressed as a percentage of the Portfolio's NAV) during the reference period meeting its minimum commitment of 90% as set in the pre-contractual disclosures. The Portfolio made of 68.56% towards an environmental objective (pre-contractual disclosures were setting a minimum of 0 to 40% of NAV) and 29.61 % towards a social objective.
 - The DNSH test was applied to all investments to be considered sustainable
- Commitment for the Portfolio to have a lower WACI than the Benchmark⁵: The Portfolio had a focus on the greenhouse gas intensity of investee companies so as to ensure that the Weighted Average Carbon Intensity ("WACI") was at least 50% lower than the MSCI World Total Return Net Dividend (the "Benchmark"). The Portfolio's WACI (Scope 1+ 2) was 19.16 tonnes CO₂e / M\$ as at 31 December 2024 compared to 96.74 tonnes CO₂e / M\$ for the Benchmark.
- Man Group exclusion policy was applied to all corporate issuers with a stricter threshold to fossil fuel issuers as detailed in the pre-contractual disclosures.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 9.46% of Taxonomy-aligned investments during the reference period⁶. Further

⁴ There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

⁵ For the purpose of this report, please note that the MSCI World Total Return Net Dividend is not a reference benchmark within the meaning of SFDR.

⁶ expressed as percentage's of net long exposure as required under Article 17 of the SFDR Delegated regulation.

details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

Sustainability

indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

The attainment of the sustainable investment objective of the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 90% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 90% of the Portfolio's NAV in investments which attain the sustainable investment objective of the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "SDG Framework") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs, and produces an alignment score which may show positive alignment to one or more SDGs for a given investment. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs². If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as "contributing to" the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs). contributing to attaining the relevant SDG(s) with which the investment is deemed aligned through its positive score.

The tables below set the sustainability indicators used to measure the sustainable investment objectives and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the Portfolio's NAV. SDGs are shown as a percentage of alignment, measured as the average of alignment as at each month end during the reference period commencing 23 July 2024 (date of portfolio re-categorisation to Article 9) and ending 31 December 2024. Other metrics are shown in different units as included in the table of results.⁷

¹⁰ As at 31 December of the relevant reporting period.

¹¹ Details of how the PAIs performed is available upon request.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available

sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above

indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

providing an explanation as to why the adverse harm is not a material risk;

- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period ending 31 December 2024 (the Fund changed its pre-contractual disclosures to comply with Article 9 requirements on 23 July 2024)

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024¹². However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.¹³

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports available on www.man.com.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹⁴

No breakdown for sub-sectors breakdown is provided as there is no exposure to sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is line with the restrictions applied to the portfolio. The Portfolio did not invest in Issuers that generated greater than 5% revenue from exploration or production of fossil fuels and issuers that generated greater than 50% revenue from the distribution or services of fossil fuels (investment restrictions applied upon fund converting to article 9 categorisation).

Q1 Sector Breakdown (31 March 2024)	% Capital
Information Technology	35.01%
Health Care	27.86%
Financials	12.80%
Consumer Staples	8.61%
Consumer Discretionary	6.75%
Industrials	5.18%
Materials	2.31%

¹² Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum proportion of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and exceptional market conditions). Therefore, from time to time, the Portfolio would have had total investment exposure less than its NAV. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

¹³ **Taxonomy-aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹⁴ For the purposes of this section, please note that the Portfolio may at times be under-invested or over-invested. The tables in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total are less or more than 100%.

Q2 Sector Breakdown (30 June 2024)	% Capital
Information Technology	36.64%
Health Care	26.76%
Financials	11.12%
Consumer Discretionary	8.61%

Consumer Staples	5.63%
Materials	2.26%

Q3 Sector Breakdown (30 September 2024)	% Capital
Information Technology	36.42%
Health Care	27.69%
Financials	12.54%
Industrials	10.20%
Consumer Discretionary	9.05%
Materials	2.64%

Q4 Sector Breakdown (31 December 2024)	% Capital
Information Technology	33.67%
Health Care	29.96%
Financials	12.84%
Industrials	11.55%
Consumer Discretionary	5.37%
Materials	4.79%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹⁵, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate

¹⁵ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁶?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

¹⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

This graph represents 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹⁷ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	8.01%
CapEx	0.07%	6.82%
OpEx	0.00%	1.05%

¹⁷ Daily notional Value

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

9.46% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024. 2.60% compared to 2.60% as at 31 December 2023 and 1.93% as at 31 December 2024. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Portfolio made 59.27% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Portfolio made 29.61% of its total investments in sustainable investments with a social objective.

The Portfolio's investments aligned with SDG 5 were found to promote social objectives. In addition to the fund's emphasis on SDG 5, the social objectives of the Sustainable Investments are those which constitute the "Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs" which include a blended score across SDGs considered socially aligned from 1-13: 1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production and (13) climate action.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The "#2 Not Sustainable" investments made by the Portfolio included investments previously classified as sustainable investments which were no longer sustainable but which had not yet been divested. These investments are subject to minimum environmental or social safeguards.¹⁸

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the sustainable investment objective of the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;

¹⁸ Cash, hedging, remaining short positions and index positions are not included in the allocation chart and are not considered to be sustainable investments.

- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group's proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference sustainable benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining its sustainable investment objective.

How did the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Systematic Europe RI Climate (the "Portfolio")

Legal entity identifier: 254900NJZDDLTB6R7472

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 73.72% of sustainable investments¹

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ As a percentage of Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²
- the use of renewable energy; and
- the reduction of greenhouse gas ("GHG") emissions.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 73.72% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 1.67% of Taxonomy-aligned investments during the reference period. Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 50% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 50% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "SDG Framework") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs, and produces an alignment score which may show positive alignment to one or more

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

SDGs for a given investment An ‘alignment score’ to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs . If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both..

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs)..contributing to attaining the relevant SDG(s) with which the investment is deemed aligned through its positive score.

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are calculated as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as included in the table of results.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)
	Paris Agreement portfolio temperature alignment (the time horizon used is 2012 to 2030)
Promoted characteristic	Sustainability indicator
Social	

³ Details of how the PAIs performed are available upon request.

⁴ Please note the sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
------------------------------	---

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	72.28%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	11.49%
3.	Affordable and clean energy (SDG 7)	59.47%
4.	Climate action (SDG 13)	66.90%
5.	GHG Intensity of investee companies	43.75 tonnes CO ₂ e / M\$
6.	Paris Agreement portfolio temperature alignment	1.69 degrees Celsius

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods⁵ in accordance with the process set out above.

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
7.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below)	72.28%	NA	NA

⁵ As at 31 December of the relevant reporting period.

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
	in respect of the environmentally aligned SDGs			
8.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	11.49%	NA	NA
9.	Affordable and clean energy (SDG 7)	59.47%	50.46%	42.45%
10.	Climate action (SDG 13)	66.90%	53.34%	51.03%
11.	GHG Intensity of investee companies	43.75 tonnes CO2e / M\$	45.58 tonnes CO2e / M\$	57.03 tonnes CO2e / M\$
12.	Paris Agreement portfolio temperature alignment	1.69 degrees Celsius	1.81 degrees Celsius	1.7 degrees Celsius

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the sustainability indicators mentioned above, being:

- Overall positive Environmental SDG Alignment
- Overall positive Social SDG Alignment
- Affordable and clean energy (SDG 7);
- Climate action (SDG 13);
- GHG Intensity of investee companies; and
- Paris Agreement portfolio temperature alignment.

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant sustainability indicators as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

How did this financial product consider principal adverse impacts on sustainability factors?

Not applicable, the Manager and the Investment Manager do not consider the PAI of investment decisions on sustainability factors in respect of the Portfolio because the Investment Manager only operates quantitative investment strategies, which are currently not compatible with position-by-position diligence on such adverse impacts.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column “% Assets” refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 31 December 2024.

What was the proportion of sustainability-related investments?

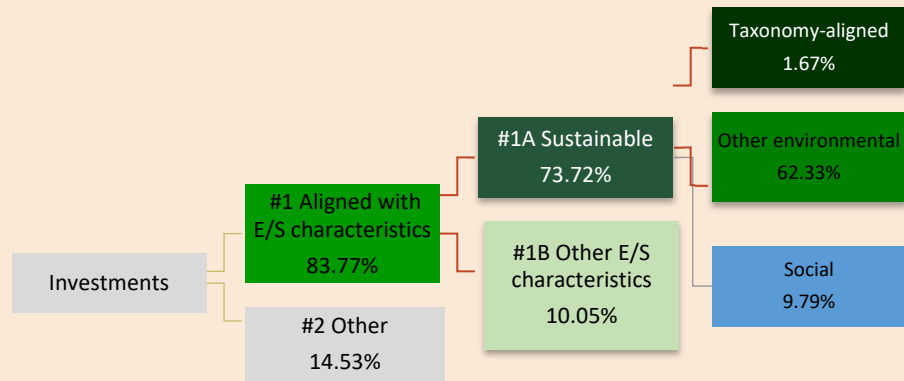

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024⁶. However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.⁷

⁶ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure less than its NAV. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

⁷ Taxonomy aligned percentages: Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: https://www.man.com/products/man-systematic-europe-ri-climate#_product-documents.⁸

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.⁹

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including

⁸ Please note that since 2022 figures were adjusted, only 2023 figures are directly comparable.

⁹ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 – 31 December 2024

transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹⁰, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

¹⁰ Delegated Regulation (EU) 2023/2486 of 27 June 2023

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹¹?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☐ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹² made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.01%	1.38%
CapEx	0.07%	1.67%
OpEx	0.02%	1.76%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

1.67% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 2.35% as at 31 December 2023 and 1.19% of the Portfolio's investments as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 62.33% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 9.79% of its total investments in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

¹² Daily notional Value

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager’s due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Asia (ex Japan) Equity (the "Portfolio")

Legal entity identifier: 2549006XM3I7U65BJ879

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ ☐ ☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 70.09% of sustainable investments¹

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

¹ As a percentage of Net Asset Value (NAV)

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²;
- the use of renewable energy; and
- the reduction of greenhouse gas ("GHG") emissions.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- investing in economically or socially disadvantaged communities.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 33% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 70.09% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 13.07% of Taxonomy-aligned investments during the reference period. Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 33% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 33% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S'

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

(social) SDGs . If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024.

Promoted characteristic	Sustainability indicator ³
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁴
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs
Investing in economically or socially disadvantaged communities	No poverty (SDG 1)
	Decent work and economic growth (SDG 8)
	Reduced inequalities (SDG 10)

	Sustainability indicator ³	Alignment (as an average for reference period ending 31 December 2024) ⁵
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs	50.67%

³ Please note the sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

⁴ Details of how the PAIs have performed are available upon request.

⁵ The first two indicators are as at 31 December 2024.

	Sustainability indicator³	Alignment (as an average for reference period ending 31 December 2024)⁵
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs	27.35%
3.	No poverty (SDG 1)	18.45%
4.	Affordable and clean energy (SDG 7)	34.14%
5.	Decent work and economic growth (SDG 8)	59.67%
6.	Reduced inequalities (SDG 10)	40.19%
7.	Climate action (SDG 13)	24.68%
8.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁶	91.60 tonnes CO ₂ e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods⁷ in accordance with the process set out above.

	Sustainability indicator³	Alignment (as an average for reference period ending 31 December 2024)⁸	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs	50.67%	NA	NA
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs	27.35%	NA	NA

⁶ Details of how the PAIs have performed are available upon request.

⁷ As at 31 December of the relevant reporting period.

⁸ The first two indicators are as at 31 December 2024.

	Sustainability indicator ³	Alignment (as an average for reference period ending 31 December 2024) ⁸	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
3.	No poverty (SDG 1)	18.45%	14.07%	15.17%
4.	Affordable and clean energy (SDG 7)	34.14%	25.01%	10.35%
5.	Decent work and economic growth (SDG 8)	59.67%	51.42%	44.15%
6.	Reduced inequalities (SDG 10)	40.19%	28.98%	20.07%
7.	Climate action (SDG 13)	24.68%	18.95%	15.54%
8.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁹	91.60 tonnes CO2e / M\$	84.28 tonnes CO2e / M\$	89.86 tonnes CO2e/M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio¹⁰, being:

- Overall positive Environmental SDG Alignment
- Overall positive Social SDG Alignment
- No poverty (SDG 1);
- Affordable and clean energy (SDG 7);

⁹ Details of how the PAIs have performed are available upon request.

¹⁰ Please note the sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

- Decent work and economic growth (SDG 8);
- Reduced inequalities (SDG 10); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer's industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer's GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary
-----	---	--	--------

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio’s investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio’s investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column “% Assets” refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period ending 31 December 2024.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024¹¹. However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.¹²

¹¹ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum proportion of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and exceptional market conditions). Therefore, from time to time, the Portfolio would have had total investment exposure less than its NAV. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

¹² **Taxonomy-aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

Asset allocation describes the share of investments in

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: https://www.man.com/products/man-asia-ex-japan-equity#_product-documents.

13

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹⁴

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 –

¹³ Please note that since 2022 figures were adjusted, only 2023 figures are directly comparable.

¹⁴ For the purposes of this section, please note that the Portfolio may at times be under-invested or over-invested. The tables in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total are less than 100% or more than 100%.

transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Information Technology	28.95%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹⁵, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

¹⁵ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁶?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio’s NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

As at 31 December 2024, the share of investments¹⁷ made in transitional and enabling activities were as follows:

¹⁷ Daily notional Value

	Transition Aligned	Enabling Aligned
Turnover	0.00%	11.08%
CapEx	0.00%	11.57%
OpEx	0.00%	0.00%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

13.07% of the Portfolio’s investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 15.38% as at 31 December 2023 and 1.79% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 32.43% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Since the Portfolio didn’t have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio’s objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 24.78% of its total investments in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager’s due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group’s proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Global Investment Grade Opportunities (the "Portfolio")

Legal entity identifier: 254900VH6IB43U8VZH96

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes

☐ It made **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 34.79% of sustainable investments¹

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ As a percentage of Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²;
- the mitigation of climate change.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- community relations and social opportunities.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 34.79% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 7.07% of Taxonomy-aligned investments during the reference period. Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental)

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs. If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The mitigation of climate change	Affordable and clean energy (SDG 7)
	Industry, innovation and infrastructure (SDG 9)
	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Community relations and social opportunities	Gender equality (SDG 5)
	Decent work and economic growth (SDG 8)

³ Details of how the PAIs have performed are available upon request.

⁴ Please note the sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

	Sustainability indicator	Alignment (as an average % of NAV for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	19.18%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	21.31%
3.	No poverty (SDG 1)	5.41%
4.	Gender equality (SDG 5)	48.09%
5.	Affordable and clean energy (SDG 7)	9.60%
6.	Decent work and economic growth (SDG 8)	20.24%
7.	Reduced inequalities (SDG 10)	12.25%
8.	Sustainable cities and communities (SDG 11)	10.64%
9.	Responsible consumption and production (SDG 12)	8.50%
10.	Climate action (SDG 13)	27.51%

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods¹² in accordance with the process set out above.

	Sustainability indicator	Alignment (as an average % of NAV for reference period ending 31 December 2024)	Alignment (as an average % of NAV for reference period ending 31 December 2023)	Alignment (as an average % of NAV for reference period ending 31 December 2022)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the	19.18%	NA	NA

	Sustainability indicator	Alignment (as an average % of NAV for reference period ending 31 December 2024)	Alignment (as an average % of NAV for reference period ending 31 December 2023)	Alignment (as an average % of NAV for reference period ending 31 December 2022)
	environmentally aligned SDGs			
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	21.31%	NA	NA
3.	No poverty (SDG 1)	5.41%	9.69%	8.25%
4.	Gender equality (SDG 5)	48.09%	54.37%	44.46%
5.	Affordable and clean energy (SDG 7)	9.60%	10.87%	6.33%
6.	Decent work and economic growth (SDG 8)	20.24%	24.72%	21.40%
7.	Reduced inequalities (SDG 10)	12.25%	15.40%	7.01%
8.	Sustainable cities and communities (SDG 11)	10.64%	11.78%	17.17%
9.	Responsible consumption and production (SDG 12)	8.50%	10.23%	12.39%
10.	Climate action (SDG 13)	27.51%	29.61%	28.49%

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during

the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio⁵, being:

- Overall positive Environmental SDG Alignment
- Overall positive Social SDG Alignment
- No poverty (SDG 1);
- Gender equality (SDG 5);
- Affordable and clean energy (SDG 7);
- Decent work and economic growth (SDG 8);
- Reduced inequalities (SDG 10);
- Sustainable cities and communities (SDG 11);
- Responsible consumption and production (SDG 12); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production

⁵ Please note the sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer's industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer's industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer's GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and

the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and	Investee companies that have been involved in violations of	Binary

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	OECD Guidelines for Multinational Enterprises	the UNGC principles or OECD Guidelines for Multinational Enterprises	
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Output - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period ending 31 December 2024.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in

The asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows

the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).^{6,7,8}

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: <https://www.man.com/products/man-global-investment-grade-opportunities#product-documents>.⁹

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹⁰

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 31 December 2024

Q1 Sector Breakdown (31 March 2024)	% Capital
Financials	74.03%
Real Estate	16.19%
Consumer Discretionary	7.93%
Energy	3.85%
Industrials	2.84%
Government	2.50%
Communication Services	1.38%
Utilities	1.12%

⁶ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

⁷ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

⁸ Net long exposure figures are provided as additional information.

⁹ Please note that since 2022 figures were adjusted, only 2023 figures are directly comparable.

¹⁰ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹¹, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹²?

☐ Yes:

¹¹ Delegated Regulation (EU) 2023/2486 of 27 June 2023

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

The first graph (including sovereign bonds) represents 100 % of the netted long exposure. The second graph (excluding sovereign bonds) represents 75.74% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio’s NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹³ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	0.00%
CapEx	0.02%	0.02%
OpEx	0.00%	0.00%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

7.07% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 4.08% as at 31 December 2023 and 7.96% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 9.73% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 13.36% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure. Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), those percentages are in line with the Portfolio's objective and investment policy

What was the share of socially sustainable investments?

The Portfolio made 15.91% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 17.21% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which seek to achieve the broader objectives of the Portfolio, which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for

¹³ Daily notional Value

the purposes of efficient portfolio management, liquidity management and hedging and these are not subject to minimum environmental or social safeguards. A large portion of the Portfolio’s NAV may have been held in cash and cash equivalents, which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager’s due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group’s proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man China Equity (the "Portfolio")

Legal entity identifier: 254900TTX1UISTA91X07

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46.17% of sustainable investments¹

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ As a percentage of Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²;
- the use of renewable energy; and
- the reduction of greenhouse gas ("**GHG**") emissions.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- investing in economically or socially disadvantaged communities.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 46.17% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 0.03% of Taxonomy-aligned investments during the reference period. Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("**SDGs**"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG

² 1 There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs . If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024 and compared to previous periods the table includes preceding reference period ending 31 December 2023. Other metrics are shown in different units as included in the table of results.

Promoted characteristic	Sustainability indicator ³
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁴
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs
Investing in economically or socially disadvantaged communities	No poverty (SDG 1)
	Decent work and economic growth (SDG 8)
	Reduced inequalities (SDG 10)

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024) ⁵
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs	23.70%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs	30.25%

³ Please note the sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

⁴ Details of how the PAIs have performed are available upon request.

⁵ The first two indicators are as at 31 December 2024.

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024) ⁵
3.	No poverty (SDG 1)	13.63%
4.	Affordable and clean energy (SDG 7)	16.10%
5.	Decent work and economic growth (SDG 8)	44.07%
6.	Reduced inequalities (SDG 10)	18.45%
7.	Climate action (SDG 13)	17.18%
8.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁶	80.49 tonnes CO ₂ e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods⁷ in accordance with the process set out above.

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024) ⁸	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs	23.70%	NA	NA
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs	30.25%	NA	NA
3.	No poverty (SDG 1)	13.63%	3.91%	7.09%
4.	Affordable and clean energy (SDG 7)	16.10%	14.51%	13.32%

⁶ Details of how the PAIs have performed are available upon request.

⁷ As at 31 December of the relevant reporting period.

⁸ The first two indicators are as at 31 December 2024.

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024) ⁸	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
5.	Decent work and economic growth (SDG 8)	44.07%	27.50%	30.10%
6.	Reduced inequalities (SDG 10)	18.45%	14.54%	11.59%
7.	Climate action (SDG 13)	17.18%	19.17%	19.58%
8.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁹	80.49 tonnes CO ₂ e / M\$	127.14 tonnes CO ₂ e / M\$	90.78 tonnes CO ₂ e/M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio¹⁰, being:

- Overall positive Environmental SDG Alignment
- Overall positive Social SDG Alignment
- No poverty (SDG 1);
- Affordable and clean energy (SDG 7);
- Decent work and economic growth (SDG 8);
- Reduced inequalities (SDG 10); and
- Climate action (SDG 13).

⁹ Details of how the PAIs have performed are available upon request.

¹⁰ Please note the sustainability indicators 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs' and 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs' were added in November 2024.

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”)¹¹:

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed

¹¹ The mandatory indicators specified in Table 1 of Annex 1 of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”) being: (1) GHG emissions; (2) carbon footprint; (3) GHG intensity of investee companies; (4) exposure to companies active in the fossil fuel sector; (5) share of non-renewable energy consumption and production; (6) energy consumption intensity per high impact climate sector; (7) activities negatively affecting biodiversity-sensitive areas; (8) emissions to water; (9) hazardous waste and radioactive waste ratio; (10) violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises; (11) lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises; (12) unadjusted gender pay gap; (13) board gender diversity; (14) exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons); (15) GHG intensity; and (16) investee countries subject to social violations.

by the Investment Manager to do significant harm, then it was excluded from being treated as a "sustainable investment".

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

All

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer's industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer's GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: (i) certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO ₂) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO ₂ /\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO ₂ /\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary

13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
deciding not to invest;
- limiting the position size of the investment; or
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 31 December 2024.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024¹². However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.¹³

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

¹² Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum proportion of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and exceptional market conditions). Therefore, from time to time, the Portfolio would have had total investment exposure less than its NAV. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

¹³ **Taxonomy aligned-percentages:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: https://www.man.com/products/man-china-equity#_product-documents.¹⁴

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹⁵

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)		% Capital
Consumer Discretionary		32.36%
Industrials		12.45%
Communication Services		12.11%
Information Technology		9.18%
Real Estate		8.72%
Health Care		6.39%
Energy		6.07%
Financials		4.40%
Materials		3.66%
Utilities		2.49%
Consumer Staples		1.79%
Q1 Sub-Sector Breakdown (31 March 2024)		% Capital
Integrated Oil & Gas		3.43%
Oil & Gas Drilling		2.63%
Q2 Sector Breakdown (30 June 2024)		% Capital
Consumer Discretionary		29.64%
Financials		11.67%

¹⁴ Please note that since 2022 figures were adjusted, only 2023 figures are directly comparable.

¹⁵ For the purposes of this section, please note that the Portfolio may at times be under-invested or over-invested. The tables in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total are less than 100%.

Communication Services	9.56%
Information Technology	9.47%
Real Estate	8.23%
Utilities	7.48%
Health Care	7.41%
Industrials	7.14%
Energy	4.80%

Q4 Sector Breakdown (31 December 2024)	% Capital
Consumer Discretionary	33.85%
Financials	13.43%
Communication Services	9.24%
Real Estate	8.31%
Information Technology	7.60%
Industrials	6.23%
Utilities	4.60%
Consumer Staples	4.19%
Health Care	3.78%
Materials	3.49%
Energy	2.35%

Q4 sub-sector breakdown (31 December 2024)	6.95%
Gas Utilities	4.60%
Integrated Oil & Gas	2.35%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁶?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy

¹⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

These graphs represents 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹⁷ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	0.02%
CapEx	0.00%	0.00%

¹⁷ Daily notional Value

OpEx	0.00%	0.00%
------	-------	-------

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

0.03% of the Portfolio’s investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 9.04% as at 31 December 2023 and 5.43% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 15.89% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Since the Portfolio didn’t have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio’s objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 30.25% of its total investments in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group's proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX V

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man GLG Sustainable Strategic Income (the “Portfolio”)¹

Legal entity identifier: 254900G7WC8068OI9686

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ Yes

☒ It made **sustainable investments with an environmental objective: 87.44²**

☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It made **sustainable investments with a social objective: 1.88%³**

☐ No

☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ The Portfolio closed on 17 May 2024. For the purpose of this report figures are shown as at 30 April 2024.

² As a percentage of Net Asset Value (NAV).

³ As a percentage of Net Asset Value (NAV).

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Portfolio is to further certain of the UN Sustainable Development Goals (the "**SDGs**") with a particular focus on climate change mitigation and climate change adaptation. The SDGs focused on by the Portfolio are:

- Affordable and clean energy (SDG 7);
- Decent work and economic growth (SDG 8); ⁴
- Industry, innovation and infrastructure (SDG 9)⁵; and
- Climate action (SDG 13).

During the reference period this sustainable investment objective was met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were mostly met during the reference period:

- Man Group exclusion list was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 90% of the Portfolio's NAV in sustainable investments fell slightly under the minimum requirements by 0.68%. As at 30 April 2024 the Portfolio had 89.32% of its NAV in sustainable investments. This was due to the Fund imminent closure and the fact that it was under-invested (looking at the equivalent figure as a percentage of net long exposure 92.64% of the funds investments were deemed sustainable). The Fund has also a minimum requirement to make 60% of sustainable investment with an environmental objective (the remainder being allowed towards a social objective). As at 30 April 2024, the Fund had 87.44% of its NAV invested in Sustainable investments with an environmental objective. To determine whether an investment was a sustainable investment, the Investment Manager used:
 - For corporate issuers: the "**SDG Framework**", a proprietary to measure the extent of an issuer's alignment to the UN Sustainable Development Goals ("**SDGs**")⁶ (and, by extension, contribution to environmental or social objectives). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs, and produces an alignment score which may show positive alignment to one or more SDGs for a given investment.

⁴ Note that although SDG 8 can be seen as promoting both environmental and social characteristics, for the purpose of this reporting we have considered SDG 8 as environmentally-aligned.

⁵ Note that although SDG 9 can be seen as promoting both environmental and social characteristics, for the purpose of this reporting we have considered SDG 9 as environmentally-aligned.

⁶ There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

- For sovereign issuers: the **"Sovereign Framework"**, a proprietary process to assess sovereign issuers against a number of environmental and social metrics, as applicable (and, by extension, contribution to environmental or social objectives). The approach first evaluates the 'do no significant harm' ("DNSH") criteria of each country. The Sovereign Framework then evaluates environmental and social data from two data providers. The factors include categories such as energy intensity, use of renewables, water/land stress and protection (environmental) and access to water, land, food and health care, education, and life expectancy (social). The scores focus on how countries manage their existing resources (ie management scores), rather than the absolute level of their resources. Developed Markets and Emerging Markets countries were assessed relative to their peers.
- The portfolio also had a commitments to invest 50% in Green bonds. For that purpose, the Investment Manager considered a bond 'Green' when it had been issued by an issuer/sovereign, with a third party verifying that such Green bond was aligned with the EU Green Bond Standard Regulation⁷ or Green Bond Principles⁸. As at 30 April 2024, the Portfolio's percentage in Green bonds was 76.93%.

The Fund had taxonomy commitment of 35% of its NAV. As at 30 April 2024, the Fund 86.20% of its investments taxonomy-aligned.

How did the sustainability indicators perform?

The attainment of the sustainable investment objective of the Portfolio was measured using the sustainability indicators specified below.

The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs").⁹ The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 90% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 90% of the Portfolio's NAV in investments which attain the sustainable investment objective of the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "SDG Framework") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs, and produces an alignment score which may show positive alignment to one or more SDGs for a given investment. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E'

⁷ Regulation (EU) 2023/2631 on European green bonds and optional disclosures for bonds marketed as environmentally sustainable and for sustainability-linked bonds

⁸ These are the International Capital Market Association's voluntary process guidelines for issuing green bonds

⁹ There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

(environmental) and ‘S’ (social) SDGs². If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs). contributing to attaining the relevant SDG(s) with which the investment is deemed aligned through its positive score.

The tables below set the sustainability indicators used to measure the sustainable investment objectives and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the Portfolio’s NAV. SDGs are shown as a percentage of alignment, measured as the average of alignment as at each month end during the reference period ending when the portfolio was fully invested^{10/}. Other metrics are shown in different units as included in the table of results.¹¹

	Sustainable investment objective	Sustainability indicator
1.	To further certain of the SDGs with a focus on climate change mitigation and climate change adaptation	Affordable and clean energy (SDG 7)
		Decent work and economic growth (SDG 8)
		Industry, innovation and infrastructure (SDG 9)
		Climate action (SDG 13)
		GHG intensity of investee companies (weighted average carbon intensity) (PAI 3) <i>(taking green bonds into account)</i>
		% of the Portfolio in green bonds

	Sustainability indicator	Alignment (as an average for reference period ending 30 April 2024)
1.	Affordable and clean energy (SDG 7)	41.96%
2.	Decent work and economic growth (SDG 8)	47.21%

¹⁰ For that purpose calculations were made up to previous month end of the Fund closure (30 April 2024).

¹¹ Details of how the PAIs performed are available upon request.

	Sustainability indicator	Alignment (as an average for reference period ending 30 April 2024)
3.	Industry, innovation and infrastructure (SDG 9)	29.36%
4.	Climate action (SDG 13)	53.13%
5.	GHG intensity of investee companies (weighted average carbon intensity) (PAI 3) <i>(taking green bonds into account)</i>	8.96 tonnes CO ₂ e / M\$
6.	% of the Portfolio in green bonds	76.93%

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods¹² in accordance with the process set out above.

	Sustainability indicator	Alignment (as an average for reference period ending 30 April 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
7.	Affordable and clean energy (SDG 7)	41.96%	43.44%	35.70%
8.	Decent work and economic growth (SDG 8)	47.21%	34.72%	NA
9.	Industry, innovation and infrastructure (SDG 9)	29.36%	24.52%	NA
10.	Climate action (SDG 13)	53.13%	50.90%	46.68%
11.	GHG intensity of investee companies (weighted average carbon intensity) (PAI 3) <i>(taking green bonds into account)</i>	8.96 tonnes CO ₂ e / M\$	22.58 tonnes CO ₂ e / M\$	175.45 tonnes CO ₂ e / M\$
12.	% of the Portfolio in green bonds	76.93%	68.92%	NA

¹² As at 31 December of the relevant reporting period.

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

How did the sustainable investments not cause significant harm to any sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number	Binary

		divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	
--	--	---	--

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to make the investment;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

Top 15 Holdings (30 March 2024)

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation
describes the share
of investments in
specific assets.

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024¹³. However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.¹⁴

Based on the fact that data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹⁵

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)

% Capital

¹³ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum proportion of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and exceptional market conditions). Therefore, from time to time, the Portfolio would have had total investment exposure less than its NAV. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

¹⁴ **Taxonomy-aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹⁵ For the purposes of this section, please note that the Portfolio may at times be under-invested or over-invested. The tables in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total are less or more than 100%.

Financials	33.44%
Utilities	23.40%
Government	17.07%
Consumer Staples	6.16%
Communication Services	5.21%
Industrials	4.51%

Information Technology	3.69%

Q2 Sector Breakdown (30 April 2024)	% Capital
Financials	54.77%
Government	16.24%
Utilities	7.35%
Consumer Staples	5.02%
Consumer Discretionary	3.88%
Industrials	3.30%
Communication Services	2.15%
Information Technology	2.07%
Unclassified	1.65%

Q2 Sub- Sector Breakdown (30 June 2024)	% Capital
Electric Utilities	7.35%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio committed to invest a minimum of 50% of the Portfolio's NAV in environmentally sustainable activities aligned with the EU Taxonomy. Details of the extent to which sustainable investments with an environmental objective were aligned with the EU Taxonomy during the reference period are set out below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹⁶, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

¹⁶ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁷?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

¹⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The first graph (including sovereign bonds) represents 100% of the netted long exposure. The second graph (excluding sovereign bonds) represents 83.16% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹⁸ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	0.24%

¹⁸ Daily notional Value

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

CapEx	0.00%	0.49%
OpEx	0.00%	0.41%

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

86.20% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 19.95% as at 31 December 2023. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Portfolio made 4.32% of its total investments (expressed as a percentage of NAV) in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. On the basis that the prospectus was stating a minimum percentage of 25% if its investments to be made in sustainable investment with an environmental objective not aligned with the EU taxonomy, the low percentage reported is in line with the fund objective.

What was the share of socially sustainable investments?

The Portfolio made 1.88% of its total investments in sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The "#2 Not Sustainable" investments made by the Portfolio included investments previously classified as sustainable investments which were no longer sustainable but which had not yet been divested. These investments are subject to minimum environmental or social safeguards.¹⁹

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the sustainable investment objective of the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;

¹⁹ Cash, hedging, remaining short positions and index positions are not included in the allocation chart and are not considered to be sustainable investments.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining its sustainable investment objective.

How did the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Asia Credit Opportunities (the "Portfolio")

Legal entity identifier: 254900Z8TOOXD9Y5UP43

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 39.85% of sustainable investments¹

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ As a percentage of Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²;
- the use of energy;
- the use of renewable energy; and
- the reduction of greenhouse gas ("GHG") emissions.
- the circular economy.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs;
- labour relations; and
- Investment in human capital

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion list was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 39.81% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 8.59% of Taxonomy-aligned investments during the reference period. Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

environmental or social objective. The Investment Manager has implemented a proprietary process (the “**SDG Framework**”) to measure the extent of an issuer’s alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer’s alignment to the SDGs. An ‘alignment score’ to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs. If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024 and compared to previous periods the table includes preceding reference period ending 31 December 2023. Other metrics are shown in different units as included in the table of results.

Promoted characteristic	Sustainability indicator ³
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁴
The Circular Economy	Industry, innovation and infrastructure (SDG 9)
	Responsible consumption and production (SDG 12)
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs
Labour relations	Reduced inequalities (SDG 10)
Investment in human capital	Decent work and economic growth (SDG 8)
	Reduced inequalities (SDG 10)

	Sustainability indicator ³	Alignment (as an average for reference period ending 31 December 2024) ⁵
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs	43.63%

³ Please note the sustainability indicators 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs' and 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs' were added in November 2024.

⁴ Details of how the PAIs have performed are available upon request.

⁵ The first two indicators are as at 31 December 2024.

	Sustainability indicator ³	Alignment (as an average for reference period ending 31 December 2024) ⁵
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs	21.84%
3.	Affordable and clean energy (SDG 7)	18.07%
4.	Decent work and economic growth (SDG 8)	34.96%
5.	Industry, innovation and infrastructure (SDG 9)	25.13%
6.	Reduced inequalities (SDG 10)	32.53%
7.	Responsible consumption and production (SDG 12)	13.08%
8.	Climate action (SDG 13)	20.94%
9.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁶	288.07 tonnes CO ₂ e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods⁷ in accordance with the process set out above.

	Sustainability indicator ³	Alignment (as an average for reference period ending 31 December 2024) ⁸	Alignment (as an average for reference period ending 31 December 2023)
10.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs	43.63%	NA
11.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs	21.84%	NA

⁶ Details of how the PAIs have performed are available upon request.

⁷ As at 31 December of the relevant reporting period. Please note the Portfolio launched on 12 April 2023 and therefore has not published periodic reports in 2022.

⁸ The first two indicators are as at 31 December 2024.

	Sustainability indicator ³	Alignment (as an average for reference period ending 31 December 2024) ⁸	Alignment (as an average for reference period ending 31 December 2023)
12.	Affordable and clean energy (SDG 7)	18.07%	18.85%
13.	Decent work and economic growth (SDG 8)	34.96%	23.23%
14.	Industry, innovation and infrastructure (SDG 9)	25.13%	17.03%
15.	Reduced inequalities (SDG 10)	32.53%	21.11%
16.	Responsible consumption and production (SDG 12)	13.08%	15.50%
17.	Climate action (SDG 13)	20.94%	19.51%
18.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁹	288.07 tonnes CO2e / M\$	284.18 tonnes CO2e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio¹⁰, being:

- overall positive Environmental SDG Alignment
- overall positive Social SDG Alignment
- affordable and clean energy (SDG 7);
- decent work and economic growth (SDG 8);
- industry, innovation and infrastructure (SDG 9);

⁹ Details of how the PAIs have performed are available upon request.

¹⁰ Please note the sustainability indicators 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs' and 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs' were added in November 2024.

- reduced inequalities (SDG 10);
- responsible consumption and production (SDG 12); and
- climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”)¹¹:

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

¹¹ The mandatory indicators specified in Table 1 of Annex 1 of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”) being: (1) GHG emissions; (2) carbon footprint; (3) GHG intensity of investee companies; (4) exposure to companies active in the fossil fuel sector; (5) share of non-renewable energy consumption and production; (6) energy consumption intensity per high impact climate sector; (7) activities negatively affecting biodiversity-sensitive areas; (8) emissions to water; (9) hazardous waste and radioactive waste ratio; (10) violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises; (11) lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises; (12) unadjusted gender pay gap; (13) board gender diversity; (14) exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons); (15) GHG intensity; and (16) investee countries subject to social violations.

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: (i) certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary

13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- limiting the position size of the investment; or
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 31 December 2024.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024¹². However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.¹³

Asset allocation
describes the
share of
investments in

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy

¹² Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum proportion of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and exceptional market conditions). Therefore, from time to time, the Portfolio would have had total investment exposure less than its NAV. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

¹³ **Taxonomy aligned-percentages:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: https://www.man.com/products/man-asia-credit-opportunities#_product-documents

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹⁴

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Financials	38.56%
Consumer Discretionary	13.24%
Communication Services	7.56%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹⁵, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

¹⁵ Delegated Regulation (EU) 2023/2486 of 27 June 2023

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁶?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

The first graph (including sovereign bonds) represents 100% of the netted long exposure. The second graph (excluding sovereign bonds) represents 95.91% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

As at 31 December 2024, the share of investments¹⁷ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	0.01%
CapEx	0.00%	0.00%
OpEx	0.00%	0.00%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

8.59% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 11.25% as at 31 December 2023.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 18.75% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 12.73% of its total investments in sustainable investments with a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The "#Other" investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

¹⁷ Daily notional Value

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group's proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Euro Corporate Bond (the "Portfolio")

Legal entity identifier: 254900PRX11W9SR4BM68

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 37.91% of sustainable investments¹

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

¹ As a percentage of Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²;
- the mitigation of climate change.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- community relations and social opportunities

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 37.91% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 9.62% of Taxonomy-aligned investments during the reference period. Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs. If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024 and compared to previous periods the table includes preceding reference period ending 31 December 2023. Other metrics are shown in different units as included in the table of results.

Promoted characteristic	Sustainability indicator ³
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs
The mitigation of climate change	Affordable and clean energy (SDG 7)
	Industry, innovation and infrastructure (SDG 9)
	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs

³ The following indicators were included in November 2024: Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs, Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs, Affordable and clean energy (SDG 7), and Industry, innovation and infrastructure (SDG 9).

Promoted characteristic	Sustainability indicator ³
Environmental	
Investing in economically or socially disadvantaged communities	Gender equality (SDG 5)
	Decent work and economic growth (SDG 8)

	Sustainability indicator ⁴	Alignment (as an average for reference period ending 31 December 2024) ⁵
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs	19.51%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs	26.96%
3.	Gender Equality (SDG 5)	48.96%
4.	Affordable and clean energy (SDG 7)	6.20%
5.	Decent work and economic growth (SDG 8)	21.44%
6.	Industry, innovation and infrastructure (SDG 9)	14.87%
7.	Climate action (SDG 13)	26.02%
8.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁶	18.44 tonnes CO ₂ e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods⁷ in accordance with the process set out above.

⁴ Please note the sustainability indicators Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs, Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs, Affordable and clean energy (SDG 7), and Industry, innovation and infrastructure (SDG 9) were added in November 2024.

⁵ The first two indicators are as at 31 December 2024.

⁶ Details of how the PAIs have performed are available upon request.

⁷ As at 31 December of the relevant reporting period. Please note that the Portfolio launched on 26 October 2023.

	Sustainability indicator ⁸	Alignment (as an average for reference period ending 31 December 2024) ⁹	Alignment (as an average for reference period ending 31 December 2023)
9.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs	19.51%	NA
10.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs	26.96%	NA
11.	Gender Equality (SDG 5)	48.96%	46.70%
12.	Affordable and clean energy (SDG 7)	6.20%	NA
13.	Decent work and economic growth (SDG 8)	21.44%	16.29%
14.	Industry, innovation and infrastructure (SDG 9)	14.87%	NA
15.	Climate action (SDG 13)	26.02%	25.86
16.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ¹⁰	18.43 tonnes CO ₂ e / M\$	21.41 tonnes CO ₂ e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during

⁸ Please note the sustainability indicators Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs, Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs, Affordable and clean energy (SDG 7), and Industry, innovation and infrastructure (SDG 9) were added in November 2024.

⁹ The first two indicators are as at 31 December 2024.

¹⁰ Details of how the PAIs have performed are available upon request.

the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio⁴, being:

- Overall positive Environmental SDG Alignment
- Overall positive Social SDG Alignment
- Gender Equality (SDG 5);
- Affordable and clean energy (SDG 7);
- Decent work and economic growth (SDG 8);
- Industry, innovation and infrastructure (SDG 9); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”):

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer's industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a "sustainable investment".

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer's industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer's GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: (i) certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO ₂) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO ₂ /\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO ₂ /\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and	Investee companies that have been involved in violations of the UNGC principles or OECD	Binary

	OECD Guidelines for Multinational Enterprises	Guidelines for Multinational Enterprises	
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerial Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- limiting the position size of the investment; or
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 31 December 2024.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024¹¹. However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.¹²

Asset allocation describes the share of investments in

Please note that as the taxonomy alignment reported is incidental (since the fund didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

¹¹ Please note that the Portfolio employs leverage and may at times be more than 100% invested. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total more than 100%.

¹² **Taxonomy aligned-percentages:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: https://www.man.com/products/man-euro-corporate-bond#_product-documents.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹³

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Financials	79.53%
Real Estate	19.58%
Consumer Discretionary	6.23%
Energy	5.71%
Government	4.03%
Industrials	2.73%

Oil & Gas Exploration & Production	3.46%
Oil & Gas Refining & Marketing	1.49%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹⁴, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

¹⁴ Delegated Regulation (EU) 2023/2486 of 27 June 2023

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁵?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

The first graph (including sovereign bonds) represents 100% of the netted long exposure. The second graph (excluding sovereign bonds) represents 93.85% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹⁶ made in transitional and enabling activities were as follows:

¹⁶ Daily notional Value

	Transition Aligned	Enabling Aligned
Turnover	0.00%	0.00%
CapEx	0.02%	0.02%
OpEx	0.00%	0.00%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

9.62% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 compared to 8.57% as at 31 December 2023.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 8.96% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 18.41% of its total investments in sustainable investments with a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The "#Other" investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference

benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX V

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds plc – Man Global Climate Transition Impact Bond (the “Portfolio”)¹

Legal entity identifier: 2549007WNF4Q2VJ5T402

1 Please note that the Portfolio launched on 23 January 2024. Accordingly, this report covers the period from 23 January 2024 to 31 December 2024 only.

2 As a percentage of Net Asset Value (NAV).

3 As a percentage of Net Asset Value (NAV).

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Portfolio is to support the financing of Climate Solutions with a view to contributing to the decarbonisation of the global economy and the mitigation of and/or adaptation to the adverse impact of climate change, while providing a long-term total return to investors.

During the reference period this sustainable investment objective was met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Sustainability criteria:
 - The Portfolio made 93.13% of sustainable investments during the reference period meeting its minimum commitment of 90% as set in the pre-contractual disclosures. Note that the minimum required of 80% towards an environmental objective was also met, as the Fund made 91.36% of its investments towards such objective
 - The DNSH test was applied to all investments to be considered sustainable
 - The Portfolio invested on an ongoing basis in the financing of climate solutions.
- Commitment to green bonds: The Portfolio invested 83.72% of its investments in green bonds in line with its minimum commitment set to 60% of the portfolio's NAV.
- Man Group exclusion list was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.

The Portfolio had 60% taxonomy alignment minimum commitment (expressed as percentage's of net long exposure⁴). As at 31 December 2024, the Fund had 92.48% of its investments taxonomy-aligned.

How did the sustainability indicators perform?

The attainment of the sustainable investment objective of the Portfolio was measured using the sustainability indicators specified below. The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 90% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 90% of the Portfolio's NAV in investments which attain the sustainable investment objective of the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe.

Corporate issuers: The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs").⁵ The Investment Manager uses alignment with the SDGs as its proxy for measuring

⁴ As required under Article 17 of the SFDR Delegated regulation.

⁵ There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the “SDG Framework”) to measure the extent of an issuer’s alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer’s alignment to the SDGs., and produces an alignment score which may show positive alignment to one or more SDGs for a given investment. An ‘alignment score’ to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs. If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

Sovereign issuers: the Investment Manager has implemented a proprietary process (the “**Sovereign Framework**”) to assess sovereign issuers against a number of environmental and social metrics, as applicable (and, by extension, contribution to environmental or social objectives). The approach first evaluates the ‘do no significant harm’ (“**DNSH**”) criteria of each country. The Sovereign Framework then evaluates environmental and social data from two data providers. The factors include categories such as energy intensity, use of renewables, water/land stress and protection (environmental) and access to water, land, food and health care, education, and life expectancy (social). The scores focus on how countries manage their existing resources (ie management scores), rather than the absolute level of their resources. Developed Markets and Emerging Markets countries were assessed relative to their peers.

As a result, the SDG Framework and the Sovereign Framework provided the Investment Manager with a list of issuers which have been formally identified as contributing to one or more environmental or social objectives (as applicable). Where the Portfolio invested in any of these issuers, those issuers were treated as “contributing to” the objective of the sustainable investments the Portfolio intended to make..

Separately, in respect of the SDGs used as sustainability indicators (as detailed below), the Investment Manager has monitored the Portfolio against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments. The DNSH Test (defined below) was applied to these aligned investments to ensure that such minimum commitment were met by the Portfolio. Each issuer is assessed continuously as new data becomes available and any improvement or worsening in an issuers score have been reflected once a month by whether an issuer became aligned or stopped being aligned for the next month. If a security was no longer deemed a sustainable investment due to a decrease in its score or the failing of DNSH criteria or good governance tests, it was disposed of in accordance with internal processes and controls of the Investment Manager.

Green Bonds: The Portfolio also had a minimum commitment to invest 60% of the Portfolio NAV in green bonds, with such green bonds being deemed to meet the Climate Solutions criteria of the Portfolio. The Investment Manager considers a bond ‘green’ if it has been issued as a green bond by an issuer/sovereign aligned with EU Green Bond Standards or Green Bond Principles. Additionally, the Investment Manager considers the green bond framework of the issuer to ensure that the green bonds in question are in line with best market practice (i.e. short lookback period, regular audits and reporting, sustainability of projects). In addition, these green bonds were considered de facto as sustainable investments. For that purpose the percentage in green bonds was monitored as a sustainability indicator.

Sustainable bonds: Although the Investment Manager didn't have any commitment with regards to Sustainable bonds, it had the possibility to invest up to 20% of the NAV in Sustainable bonds during the reference period.

The tables below set the sustainability indicators used to measure the sustainable investment objectives and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the Portfolio's NAV. SDGs are shown as a percentage of alignment, measured as the average of alignment as at each month end from launch date on 23 January 2024 until 31 December 2024. Other metrics are shown in different units as included in the table of results.⁶

Sustainable investment objective	Sustainability indicator ⁷
Supporting the financing of Climate Solutions with a view to contributing to the decarbonisation of the global economy and the mitigation of and/or the adaptation to the adverse impact of climate change	<p>SDGs:</p> <ul style="list-style-type: none"> • Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs • Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs • Affordable and clean energy (SDG 7) • Climate action (SDG 13) <p>PAI:</p> <ul style="list-style-type: none"> • GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) <p>Green bonds:</p> <ul style="list-style-type: none"> • % of the Portfolio in green bonds <p>Sustainable bonds:</p> <ul style="list-style-type: none"> • % of the Portfolio in Sustainable bonds Sustainable <p>Sovereign Investments based on the Sovereign Framework (defined below)</p>

⁶ Details of how the PAIs performed are available upon request.

⁷ Please note that the sustainability indicator 'Emissions saving intensity' was removed on 11 November 2024. At the same date, the following indicators were added:

- 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs'
- 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs'
- '% of the Portfolio in Sustainable bonds Sustainable'
- And 'Sovereign Investments based on the Sovereign Framework'

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	91.36%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	1.77%
3.	Affordable and clean energy (SDG 7)	49.69%
4.	Climate action (SDG 13)	52.83%
5.	GHG intensity of investee companies (weighted average carbon-intensity-WACI) (PAI 3) ⁸	22.01 tonnes CO ₂ e/M\$
6.	% of the Portfolio in green bonds	83.73%
7.	% of the Portfolio in sustainable bonds	1.63%
8.	% Sustainable Sovereign Investments based on the Sovereign Framework	N/A

None of the indicators were subject to an assurance provided by an auditor or a review by a third party

...and compared to previous periods?

Not applicable for the purposes of this periodic report, the Portfolio launched on 23 January 2024 and therefore has not published periodic reports for previous reference periods.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

One of the requirements for an investment to be considered "sustainable" is that the investment must do no significant harm ("DNSH") to environmental or social objectives (the "DNSH Test"). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

⁸ Details of how the PAIs performed is available upon request.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to make the investment;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period starting 23 January 2024 and ending 31

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation
describes the share
of investments in
specific assets.

The asset allocation of the Portfolio has been calculated as a percentage of the Portfolio's capital at 31 December 2024⁹. However, please note that the Taxonomy alignment figure is calculated as a percentage of net long exposure.¹⁰

Based on the fact that data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹¹

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Utilities	46.09%
Financials	17.34%
Industrials	7.85%
Government	6.17%
Real Estate	5.71%
Materials	4.04%
Communication Services	2.99%
Consumer Discretionary	1.91%
Information Technology	1.05%
Health Care	0.98%
Consumer Staples	0.83%

Q1 Sub- Sector Breakdown (31 March 2024)	% Capital
Electric Utilities	27.20%
Multi-Utilities	8.17%

⁹ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum proportion of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and exceptional market conditions). Therefore, from time to time, the Portfolio would have had total investment exposure less than its NAV. The figures in this section represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

¹⁰ **Taxonomy-aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹¹ For the purposes of this section, please note that the Portfolio may at times be under-invested or over-invested. The tables in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total are less or more than 100%.

Independent Power Producers & Energy Traders 4.00%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Communication Services	2.49%
Health Care	0.92%
Consumer Staples	0.77%
Consumer Discretionary	0.77%

Q4 Sub- Sector Breakdown (31 December 2024)	% Capital
Electric Utilities	23.76%
Multi-Utilities	6.96%
Independent Power Producers & Energy Traders	6.79%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio committed to invest a minimum of 60% of the Portfolio's NAV in environmentally sustainable activities aligned with the EU Taxonomy. Details of the extent to which sustainable investments with an environmental objective were aligned with the EU Taxonomy during the reference period are set out below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹², companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

¹² Delegated Regulation (EU) 2023/2486 of 27 June 2023

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹³?

☐ Yes:

☐ In fossil gas ☒ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

¹³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The first graph (including sovereign bonds) represents 100% of the netted long exposure. The second graph (excluding sovereign bonds) represents 95.86% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹⁴ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	1.34%
CapEx	0.00%	2.22%
OpEx	0.00%	2.60%

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

Not applicable - the Portfolio has not published periodic reports for previous reference periods.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

¹⁴ Daily notional Value

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The Portfolio made 5.24% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. On the basis that the prospectus was stating a minimum percentage of 20% if its investments to be made in sustainable investment with an environmental objective not aligned with the EU taxonomy, the low percentage reported is in line with the fund objective.

What was the share of socially sustainable investments?

The Portfolio made 1.77% of its total investments in sustainable investments with a social objective. The fund investments aligned with SDG 5 were found to promote social objectives. In addition to the fund's emphasis on SDG 5, the social objectives of the Sustainable Investments are those which constitute the "Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs" which include a blended score across SDGs considered socially aligned from 1-13: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production and (13) climate action.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The "#2 Not Sustainable" investments made by the Portfolio included investments previously classified as sustainable investments which were no longer sustainable but which had not yet been divested. These investments are subject to minimum environmental or social safeguards.¹⁵

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the sustainable investment objective of the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group's proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;

¹⁵ Cash, hedging, remaining short positions and index positions are not included in the allocation chart and are not considered to be sustainable investments.

- engagement activities were carried out dependent on the materiality of the issue at stake.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purposes of attaining the sustainable investment objective of the Portfolio.

How did the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

EU Sustainable Finance Disclosure Regulation and Framework Regulation

With respect to the remainder of the Portfolios of Man Funds plc for which a periodic report has not been appended to the financial statements, these Portfolios do not have as their objective sustainable investment and do not promote environmental or social characteristics for the purposes of the Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (EU Sustainable Finance Disclosure Regulation or the “SFDR”). The Portfolios are, therefore, not subject to the additional disclosure requirements for financial products referred to in Article 8 or Article 9 SFDR. For the same reason, the Portfolios are not subject to the requirements of Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment (the “Framework Regulation”). The Portfolios’ investments do not take into account the EU criteria for environmentally sustainable economic activities.

1. Representative

The Representative in Switzerland is Man Investments AG, Huobstrasse 3, 8808 Pfäffikon.

2. Paying Agent

The Paying Agent in Switzerland is CACEIS Bank, Montrouge, Nyon Branch/ Switzerland, Bleicherweg 7, CH-8027, Zürich.

3. Place, where the relevant documents can be obtained

Examples of the Prospectus, the KIIDs, the Articles, the Annual and Semi-Annual Report as well as further information can be obtained from the Representative in Switzerland free of charge.
