Asian Stars Fund

Fund Performance

In 2022, the Fund (Class I US Dollar Accumulation Shares) returned -26.6% compared to -19.7% for the benchmark, the MSCI All Country Asia ex Japan Net Total Return Index (in US dollar terms), a frustrating year for us.

As a growth and quality manager with a strong focus on sustainability, it was always going to be difficult to have good absolute and relative performance in a year as extreme as 2022 turned out to be. Having said that, we have still been surprised by the magnitude of the share price drops we have seen in some of our holdings on the back of either falling out of favour in the environment, being considered risky geopolitically, as happened with a number of our Chinese and Taiwan investments, experiencing slower growth or having negative margin surprises.

The damage to relative performance was very much in Q1, with the rest of the year a relatively poor value/anti-growth year. The market was surprised by the Fed rate hike cycle as well as, of course, the Russian invasion of Ukraine and the follow-on implications for inflation and geopolitics, as well as a further hit on the technology cycle on the back of the semiconductor war.

In terms of sector performance, we saw a -273bps negative selection effect (stock-picking), country-wise we saw -476bps contribution. This underperformance came more or less entirely from our weakest five or six stock picks. On the plus side, this implies a large part of the portfolio has been performing well, relatively. We believe this is down to our underlying quality and sustainability mindset.

Market Review

The one area that saw positive returns was 'dirty' oil and coal. Even fixed income in safe haven countries did not give any protection as a capital preserver. Anything with even the smallest element of duration risk was extremely discounted. The main headlines globally were the Fed rate hike cycle, the aim being to bring out-of-control inflation back in line. We can add very high levels of geopolitical risk on the back of the Russian invasion of Ukraine, the addition of risk to the already tense situation between the US and China around trade and technology and, of course, China and Taiwan. It peaked in late September / early November when Nancy Pelosi, the US Speaker of the House, visited Taiwan, China's President Xi secured his third term and the US mid-term elections took place. All of these events were spiced up with a technology down-cycle, China's zero-Covid policy and a heated election in Brazil where Luiz Inácio Lula da Silva returned to power.

Fund Activity

On the back of Russia/Ukraine, we significantly increased our exposure to the so-called 'green metals' – commodities needed for the transition into a renewable energy infrastructure. We already had strong copper exposure for a long time, but we saw this as an inflection point to add exposure to lithium and rare earth metals. The market sell-off gave us what, in the future, we will likely look back at as an attractive entry point. Towards the end of the year we reduced our relative overweight in India and added to China, thereby reducing the underweight we had been running in China for quite some time.

Outlook

We maintain a constructive outlook for the Fund and believe we are holding a portfolio of strong, high-quality companies that are very attractive relative to their fundamentals. We also believe many of our portfolio holdings have been hit unjustifiably hard by panic around the stickiness of inflation, geopolitics and an aggressive extrapolation of the current down-cycle in the IT sector. Therefore, we see a strong valuation case for our portfolio over the next 6–18 months and feel the sequence of events that will lead to a return of absolute and relative performance in the portfolio will be a combination of inflation fear rolling over, reduced geopolitical tension (we believe both China and the US will become more pragmatic around their policies towards each other) and a cyclical up-turn for the IT sector.

Polar Capital LLP

January 2023

Automation & Artificial Intelligence Fund

Fund Performance

The Fund (Class I USD Accumulation Shares) returned -33.5% in 2022, underperforming its global equity benchmark, the MSCI AC World Index TR Net, which returned -18.4% (all returns in US dollar terms unless stated otherwise).

The Fund suffered the bulk of its underperformance during the first half of the year when the market derated sharply as a result of rising inflation and interest rates. Value stocks significantly outperformed growth: the MSCI World Growth Index returned -29% significantly underperforming the -5.8% return of the MSCI World Value Index. The derating was broad in nature; while the technology sector's underperformance was noticeable, with the Russell 2000 Technology Growth Index falling -38.8%, the derating was as sharp in high-growth companies across many sectors.

Portfolio performance improved in the second half of the year. The Fund consolidated in companies with strong balance sheets and free cashflow generation characteristics. Meanwhile, the scale of the market derating eased as the pace of increases in investor expectations of terminal rates for central banks also eased.

Within our AI theme, our AI Applications sector performed modestly better than the Fund overall, while our AI Enablers underperformed.

AI Applications contains a diverse set of companies where an accelerated rate of technology adoption supported earnings growth outlooks, offset by some of our longer-duration stocks that came under pressure in the derating, albeit held in smaller position sizes because of their long-duration nature. UnitedHealth and Baker Hughes are two examples of such stocks where their industry-leading digital adoption supported earnings outlooks.

AI Enablers, which largely comprises companies with exposure to the semiconductor industry, was our worst-performing sector. The semiconductor industry was initially hit by a slump in PC demand after a huge pull-forward of demand during the pandemic, as well as smartphone demand falling due to pandemic-related lockdowns in China. Investors then worried about data centre spending falling and this revenue being less resilient than before, although cuts so far have been much more modest than in other more cyclical areas. Examples of such companies affected include NVIDIA, Advanced Micro Devices (AMD) and eMemory Technology.

Within our Automation theme, Factory Automation modestly outperformed the overall Fund, while Digital Transformation modestly underperformed. Our Digital Transformation sub-theme includes some of our higher-growth and higher-multiple stocks. These names were particularly hard hit in the market derating. This was due to the longer-duration nature of the earnings upside we expected such companies to generate from their digital transformation efforts. Our Factory Automation sub-theme benefited from increasing demand from both ongoing factory upgrades and the localisation of certain parts of the supply chain. The strong investment from the electric vehicle (EV) battery sector and semiconductor sector also provided a decent tailwind.

The Fund's top three individual relative performance contributors in 2022 were Tesla (not held), UnitedHealth and Emerson Electric. The bottom three individual relative detractors were NVIDIA, AMD and eMemory Technology.

Market Review

2022 was a challenging year for equity markets. Inflation numbers continued to come in higher than expected. This necessitated a robust policy response from central banks. They engaged in a steep, synchronised rate-hike cycle to prevent a wage-price spiral: more than 80% of central banks increased rates, higher than the previous peak of c.70% in 1995. Russia's invasion of Ukraine exacerbated energy and food price inflation, and China's reluctance to abandon its zero-Covid policy continued to disrupt supply chains. Economic growth slowed, and GDP forecasts were repeatedly downgraded during the year, which was reflected in company results and outlooks.

Given high inflation, a tight labour market and the desire to retain its credibility, the US Federal Reserve (Fed) embarked on its steepest tightening cycle since the early 1980s, cumulatively delivering 425bps of rate hikes by the end of the year to help counteract four-decade-high consumer price inflation (CPI) readings in H2 2022. At the start of the year, futures were pricing the Fed fund rate around 1% in June 2023, but this reached 5% by the end of the year. The cumulative impact of tightening began to be felt most acutely in the US property market. Thirty-year mortgage rates climbed from 3% coming into the year to 7% in October, while the National Association of Home Builders Market Index fell from 83 to 38, near Covid-era lows. Longer-term inflation expectations did, at least, remain well-anchored, with the University of Michigan survey of 5–10-year forward consumer inflation expectations remaining in the 2.9–3.1% range and market-implied 5–10-year forward break-even rates staying below 2.5%.

2022 was, thankfully, a period in which Covid-19 case numbers were no longer the key driver of markets. However, the lingering impact of the virus remained a driver of supply-side inflation, as China maintained its strict zero-Covid policy throughout. Unfortunately, geopolitical risks were still elevated as the war in Ukraine progressed, Russia shut off gas supplies to Europe and China dialled up hawkish rhetoric around Taiwan, as President Xi attempted to successfully consolidate power at the Communist Party Congress. The Chinese yuan fell to levels against the dollar not seen since 2008.

Nevertheless, political developments were supportive of some parts of the market, most notably in energy, clean energy and defence. President Biden signed the Inflation Reduction Act into law, a slimmed-down version of the Build Back Better bill. The Act included combating climate change via tax credits aimed at reducing carbon emissions, helping households offset energy costs and promoting investment in clean energy production. The war in Ukraine has prompted a more aggressive move to accelerate clean power adoption to strengthen energy security. Since the Russian invasion, 19 EU countries have set new records for the use of renewable power, bringing total wind and solar power generation to 24% of EU electricity, while Russian natural gas flows are down more than 80% from pre-war levels.

Investors found themselves navigating a highly uncertain, macro-led market with a wide range of possible macroeconomic and market outcomes. Most major equity markets performed poorly: in dollar terms, the MSCI All Country World returned -18.4% and the S&P 500 returned -18.1%, its fourth-worst annual performance since World War Two, closing down by more than 1% on 24% of all trading sessions, the most since 2008. European, Japanese and Asian markets were similarly weak, with the DJ Euro Stoxx 600 (-15.2%), the TOPIX (-14.3%) and the MSCI Asia ex-Japan (-19.5%) all falling heavily (returns quoted in dollar terms).

Equity markets were not alone in delivering poor returns. For the first time ever, the S&P 500 and the US 10-year Treasury both lost more than 10% in total return terms in a calendar year. The US 10-year Treasury yield increased from 1.51% to 3.88% during 2022, delivering its worst annual return since 1788. By the end of the year, only \$25bn worth of bonds in the Bloomberg Global Aggregate Bond Index carried a negative yield, down from \$18.4trn just two years ago.

The significant change in the interest-rate environment weighed heavily on growth and longer-duration asset valuations. S&P 500 value stocks (-5.3%) recorded their biggest outperformance against growth stocks (-29.4%) since 2000, helped by the S&P Energy sector, which returned 65.4%. The Dow Jones Industrial Average returned -6.9% against the NASDAQ Composite's -32.5%. Capital market activity declined significantly during the year, with just \$98bn of total US equity issuance, down 82% from 2021's record of \$539bn.

Fund Activity

In a year dominated by sharp changes to the macroeconomic outlook, we made numerous changes through the course of the period. During the early part of the year, as the market sharply derated in the face of rising inflation, we pivoted the portfolio more defensively. We preferred companies with robust balance sheets and good free cashflow generation, selling down some of our longer-duration exposure, and companies most at risk of a cyclical downturn.

As the scale of derating eased in the second half of the year, we took advantage of much more attractive valuations. We cautiously increased our exposure to high-quality, cashflow-positive growth stocks, noting that the likelihood of recessions continued to rise, but that some such stocks were attractively priced, even allowing for a further downgrade in consensus earnings numbers. As the year closed, we slightly increased our exposure towards early-cycle companies that appeared aggressively oversold. These should be the first beneficiaries of any economic uptick.

New positions established during the year included Disco, Baker Hughes, Wal-Mart Stores, Meituan Dianping, Deere, MSCI, Richemont, ASM International, Adyen, Kone, Veeva Systems, Nabtesco, GMO Payment Gateway, Teradyne, Alibaba, CrowdStrike, Samsung Electronics, Rotork, Aspen Technology, Monolithic Power Systems, Cognex and Farfetch.

There were a small number of stocks where we opened and closed a position within the year. Ocado and Ritchie Bros Auctioneers, both suffered from company-specific developments that fundamentally changed their investment cases; UiPath was an early-year, longer-duration buy that came under pressure as the market derated sharply; Synopsys was a successful outperformer through the course of the year, before we pivoted to other, less expensive semiconductor-related exposure.

We closed positions in Littelfuse, Daifuku, MediaTek, Brembo, Shin-Etsu Chemical, ASML, Tokyo Electron, Givaudan, Seagate Technology, TDK, Siemens Healthineers, Samsung Electro-Mechanics, Duerr, DoorDash, Snap, Airbnb, Unity Software, Guardant Health, UiPath, Netflix, Naver, Toyota Industries, ANSYS, Upstart, Covestro, Meta Platforms, Dolby Laboratories, Sysmex, Corbion, Masimo and PayPal.

Automation & Artificial Intelligence Fund continued

Market Outlook

Macroeconomic conditions continue to dominate the debate as we enter 2023, although the primary debate has transitioned from inflation to the looming recessions that are expected in many economies, whether central banks can engineer soft landings for consumers, and the resulting impact on corporate earnings.

The outlook for inflation has improved. Recent data suggests many countries and sectors are past the peak of inflation, with many companies noting an easing in supply-chain challenges and goods inflation. Energy prices should also continue to support disinflationary trends. The risk from inflation has not yet completely passed, however, with wage growth pressures not yet diminishing or in line with many central banks' long-term inflation targets. The Chinese economic reopening also brings uncertainty over how much this may reintroduce global inflationary pressure in both materials and energy costs. We also remain cognisant that the build-out of incremental supply-chain capacity beyond China might prove a longer-term inflationary driver. This is due to a potential lack of economies of scale as companies diversify away from concentrated and highly efficient manufacturing hubs.

Recessions also appear on the horizon for many economies: Bloomberg data (as of December 2022) indicates a 65% chance of a US recession in 2023, and a 90% chance for both Germany and the UK. The most widely forecast recession in history could still be averted in the US, if the Fed is able to tighten sufficiently to bring the jobs/workers gap down to a level compatible with its 2% inflation target but short of causing a major spike in unemployment and a broader slowdown. China's economic reopening could also provide an offset to slowing global growth, albeit potentially triggering the aforementioned inflationary pressures that would complicate the outlook for central banks' terminal rates.

Amid an uncertain macroeconomic backdrop, we are seeing a moderation of corporate spending as companies prioritise margins and free cashflow generation. Widely reported jobs cuts have been made at large technology companies that previously hired so prodigiously, although the broader labour market remains resilient for now, with the US unemployment rate at 3.6%, as of December. Cloud spending growth expectations have fallen as companies rationalise workloads and search for efficiencies, with knock-on impacts for data centre spending and capex. That said, AI-related spending and expectations continue to remain healthy, as companies prioritise investment in a rapidly developing space that can be both a revenue generator and cost saver. Beyond the technology sector, investment budgets are falling less quickly.

This is especially the case with multi-year digital transformation and technology implementation projects, that allow companies to deal better with supply-chain crises and increase productivity in the face of wage pressures and a tight labour market. Profit-generating investments, such as AI and automation technologies, as well as cybersecurity, given the growing risks from cyber crime, remain the top investment priorities for many companies, according to Chief Information Officer surveys.

We expect macroeconomic developments to continue to lead markets in the near term, given the wide range of outcomes that are currently possible. Looking longer term, however, we remain as excited as ever about the opportunities on offer for the Fund.

The potential of AI in the wider world exploded into the public conscience with the launch of ChatGPT, the OpenAI-developed chatbot that is able to deliver responses in a cogent, conversational manner. ChatGPT is the latest product of the rapid developments made in transformer-based large language models that, combined with other generative AI models such as DALL-E 2, have the potential to revolutionise many tasks, and indeed many industries.

With valuations having reset to more attractive levels and earnings expectations having fallen, we remain optimistic that as markets navigate and find greater certainty in the macroeconomic outlook, these new areas of growth and innovation can provide fertile ground for long-term investment.

Technology Team

Polar Capital LLP

January 2023

Biotechnology Fund

Fund Performance

The Fund (Class I US Dollar Distribution Shares) returned -7.2% in 2022, outperforming its benchmark, the NASDAQ Biotechnology Net Total Return Index, which returned -10.4%. The biotechnology sector outperformed the broader market, with the S&P 500 Total Return Index returning -18.1% over the period (all figures in US dollar terms).

It was another tough year for investors as mounting economic headwinds put most risk assets under pressure. The Fund's correct defensive positioning, away from early-stage technology platform and clinical development stocks, drove its relative outperformance. These stocks continued to find themselves under pressure as the US Federal Reserve targeted elevated inflation with aggressive interest rate increases, as well as perhaps some contagion from the continued poor performance of thematic growth assets generally, most notably in consumer technology. A measure of how much early-stage biotechnology companies continued to struggle was visible in the 25.9% fall in the small-cap-biased SPDR S&P Biotech ETF XBI Index over the year (in dollar terms), alongside an essentially closed IPO market for new biotechnology issues, although the secondary market remained reasonably healthy.

Stock selection in the Fund was generally positive, most notably including six M&A activities involving Fund holdings. However, we experienced frustrating relative underperformance in the fourth quarter after major benchmark constituents in what we term the diversified earnings category surged higher. The market had sought the comfort of the more defensive profile of these large-cap commercial stage (bio)pharmaceutical companies.

Within the biotechnology sector, clinical development and regulatory news flow continued to be mixed. Nevertheless, there were notable positive clinical trial results. These represent potentially important building blocks for the industry when/should these medicines receive regulatory approval for commercialisation over the coming year. While earlier-stage, unprofitable companies struggled as investors increasingly agonised over cash burn and attempted to calculate cash runways in the context of a much more discerning funding environment, generally the sector's commercial-stage companies fared much better. Their defensive growth characteristics and M&A activity – both real and anticipated – attracted investor interest.

Global Blood Therapeutics, Turning Point Therapeutics and Vertex Pharmaceuticals were among the top individual absolute contributors to performance; NanoString Technologies, Valneva and Evotec were among the main individual absolute detractors.

In terms of relative performance versus the benchmark, Global Blood Therapeutics, Illumina and Biohaven Pharmaceutical Holding were the largest individual positive contributors; NanoString Technologies, Valneva and Amgen were the largest negative contributors. Six holdings – Biohaven Pharmaceutical Holding, Turning Point Therapeutics, Global Blood Therapeutics, Diurnal Group, Myovant Sciences and Horizon Therapeutics – were acquired during the period. This brought the number of portfolio investments acquired since the Fund's launch in 2013 to 39.

Market Review

It was a difficult start to the new calendar year for growth stocks in early January. The 10-year US Treasury yield surged as investor fears mounted that the Federal Reserve, perhaps increasingly behind the curve in managing inflation, would need to raise interest rates faster and harder than the market had been expecting. While the price action for growth stocks during the month, including biotechnology, seemed terrible, it felt to us that prices were being forced by commodities, quantitative and derivative-trading strategies, perhaps at the margin forcing panic-selling from retail investors, but with only relatively modest underlying volume substance to the moves. Nevertheless, the price action left biotechnology investors, particularly those relatively new to the sector or focused on very early-stage companies, reeling and possibly more despondent than they were at the end of 2021.

The difficult start to the year for equities continued in February. Concerns over the macroeconomic outlook were overtaken by the growing geopolitical crisis in Ukraine after Russia's invasion, causing a surge in energy prices. Sentiment towards the biotechnology sector deteriorated a little further during February following a string of disappointing clinical updates, including one for portfolio company Synairgen, whose COVID-19 therapeutic failed to differentiate from the standard of care for patients hospitalised with COVID-19 pneumonia. However, on balance, the sector's leading commercial-stage companies announced constructive financial results for Q4 2021 and offered guidance for the coming year in line with expectations. This was reassuring given high-profile disappointments elsewhere, most notably in the technology and consumer discretionary areas.

While both the biotechnology sector and the broader market started March weakly, continuing the trend in place since the start of the year, the last two weeks of the month were characterised by a robust rally. Although this seemed to lift investor sentiment, most continued to be wary, concerned the move higher could be just a temporary bear market rally, driven more by quantitative strategies responding to short-term oversold technical trends and excessively bearish positioning, rather than reflecting a recovery in the long-term bull market for risk assets.

Biotechnology Fund continued

Market Review continued

Indeed, the brief rally of the last two weeks of March was given short shrift in April. Equities seemed to capitulate in the face of increasingly hawkish messaging from members of the Federal Reserve that indicated a preparedness to raise interest rates faster and more aggressively than the market had started to feel comfortable with. Within the biotechnology sector, clinical development and regulatory news flow remained mixed. Any hint of companies failing to deliver pristine clinical trial results, reporting unexpected results delays or announcing extended timelines for regulatory interaction was typically met with punishing selling. The effect was most pronounced among earlier-stage, loss-making companies. Investors increasingly worried about cash burn and attempted to calculate cash runways at a time when the capital markets needed for funding were almost completely closed.

The Q1 earnings season started in generally solid fashion for the sector's commercial-stage companies, although even these more defensive quality-growth names started to roll over in April. This was presumably on profit-taking following their relative outperformance year-to-date against a rapidly deteriorating macro backdrop. These stocks were also vulnerable due to crowded positioning among specialist investors, giving short-sellers an easy target, with seemingly no real buying interest anywhere to be seen.

The broader equity market and biotechnology sector capitulation of April seemed to have washed out in May. Early-month follow-through was met by modest but sustained buying interest over the balance of the month. With no significant shifts in market perceptions or expectations for the various macroeconomic issues weighing on investors, an uneasy peace emerged in May. This allowed investors to draw breath and consider their circumstances in an investment environment that had changed dramatically since the start of the year. Investor sentiment towards the biotechnology sector was lifted modestly by a handful of M&A announcements – most materially, Fund holding Biohaven Pharmaceutical Holding was acquired by Pfizer for \$11.6bn. However, the overall mood remained grim, with share prices still struggling to react positively to constructive news flow and outsized share price falls in response to anything even vaguely controversial or disappointing.

The broader equity markets resumed their downward slide in June on deteriorating macroeconomic conditions. However, the biotechnology sector held up better, with washed-out investor sentiment improving at the margin by a string of more constructive clinical development updates across several smaller companies but, perhaps more importantly, by additional M&A activity, realised and rumoured. During the month, portfolio company Turning Point Therapeutics announced its acquisition by Bristol Myers Squibb for \$4.1bn. Additionally, the financial press reported that Merck & Co. was evaluating a bid for Seagen, one of the sector's largest, more established commercial-stage companies. The Merck-Seagen speculation served to increase investor interest across a range of revenue-generating biotechnology companies.

In July, the broader equity market firmed up on expectations that peak inflation may have been reached and hopes that, having caught up with inflation, the Fed might moderate the pace of interest-rate rises in H2 2022 to avoid recession. Risk appetite returned at the margins, helping the biotechnology sector to build on the previous month's relatively strong performance. Companies at the smaller-cap and earlier-stage end of the spectrum performed particularly well, although this move seemed to us to be driven by short-sellers covering their sales by buying back stock against a lack of supply. Indeed, the performance burst came from just a few trading sessions at the beginning of the month on thin trading volumes. Performance appeared to fade again towards month-end.

During the month, drug pricing reform came back onto the agenda in Washington following the Biden administration's efforts to pull together the Inflation Reduction Act (IRA). Investors started refreshing calculations on the potential impact of proposals that included direct government negotiation for certain types of big-budget older drugs and inflation-benchmarked restrictions on price increases. With the proposals rehashing ideas from previous years, the market seemed to view them as well quantified and modest in their potential negative impact on the relevant companies (mostly large pharmaceutical company names and large commercial-stage biotechnology companies). In our opinion, their potential negative impact pales versus challenges to growth and profitability from an intensifying period of patent expirations over the coming decade whose impact is already reflected in future earnings estimates.

While the start of August for biotechnology continued the same dynamic, with the short-covering and algorithmic trading-affected equity market enhanced by some relatively high-profile positive clinical development and M&A news flow, the sector again ran out of momentum and reversed from the middle of the month, as investors contemplated a renewed hawkish tone from Fed Chair Jerome Powell at the Jackson Hole meeting toward the end of the month. While positive clinical development and news flow from some of the sector's higher-profile companies – Alnylam Pharmaceuticals announced a positive outcome for its cardiovascular medicine Onpattro; Karuna Therapeutics announced positive clinical trial data for its new schizophrenia medicine; and sickle-cell disease specialist and Fund holding Global Blood Therapeutics announced its acquisition by Pfizer for \$5.4bn – were welcomed as underpinning fundamental value creation, the short-term fortunes still seemed heavily dictated by the worrying macroeconomic picture. Both the global energy crisis and the broader inflation picture, and indeed central banks' response to it, continued to prove stubbornly unhelpful for risk assets.

In September, for the third month in a row, the sector started strongly but did not take long to reverse course in line with a broader equity market that continued to struggle in the face of central bank tightening and a deteriorating macroeconomic outlook.

The month again saw broadly positive fundamental news flow for the biotechnology sector. Regeneron Pharmaceuticals reported robust clinical data on a new formulation of its key ophthalmology medicine Eylea that arguably rejuvenates that franchise over the short and medium term. At the end of the month, Biogen surprised the market with what looked to be a relatively clean outcome for the much anticipated clinical data from its second Alzheimer's disease medicine partnered with Eisai – we remain sceptical about the clinical benefit shown by this class of medicine so far; in our view, the benefits are marginal. With continued elevated daily volatility and excessive share price moves indicating awkward (crowded or consensus) positioning around binary news flow events, such as clinical data and regulatory decisions, the dedicated biotechnology investment community, especially long/short funds, continued to have a frustrating and difficult time of things.

October was a confused month for biotechnology. While smaller-cap, more speculative names rallied toward the end of the month in anticipation of a Fed pivot – messaging indicating the US central bank's intention to back away from its the aggressive path of interest-rate increases – at the early November meeting of the Fed's Open Market Committee, the larger-cap commercial stage names with 'boring' defensive characteristics also climbed later in the month on the back of quarterly results in line with investor expectations; the latter were perhaps the beneficiaries of the mild investor panic gripping the consumer technology space. Although the Fund benefited from its fifth acquisition in the calendar year to date after Myovant Sciences was acquired by Sumitomo for \$2.9bn, it was the performance of the larger-cap commercial names, in particular Gilead Sciences, Amgen and Moderna – all major benchmark constituents and all up 20–30% over the month – that drove significant relative underperformance for the Fund versus the benchmark. The earnings season for biopharmaceutical companies was perhaps the strongest of all the healthcare verticals, reminding investors of the non-discretionary nature of pharmaceutical drug consumption, as well as the fact that the industry is well-insulated from the inflationary and supply-chain issues seen elsewhere.

An uneasy calm seemed to develop through November. Equity investors looked, albeit without much anticipation, to their favourite macroeconomic indicators on inflation and jobs, as well as commentary from Fed members, for signs that cautious positioning in defensive sectors should be re-evaluated. An emerging and colourful cryptocurrency scandal seemed to take the pressure and focus off the simmering concerns facing riskier equity asset classes. At the margin, though, we detected continued trading to realise liquidity, which felt seasonal in nature rather than anything more. The larger-cap commercial stage biotechnology names held up remarkably robustly during the month.

Combined with the anaemic performance of smaller-cap, more speculative names, this suggested that, moving into year-end, the market was comfortable with more defensive positioning, given high inflation, the Fed being seemingly determined to raise rates further, a tight US jobs market and doubts over the resilience of US earnings in the face of slowing growth, perhaps even a recession.

The calendar year ended in muted fashion in December. Bruised and despondent investors seemed largely content to sit on their hands while taking liquidity at the margins when and where it was to be found. The major biotechnology news of the month was Amgen confirming its intention to acquire Horizon Therapeutics for \$28bn. As a sizeable portfolio investment, the latter contributed to the Fund's relative outperformance versus the benchmark to close the year out.

Fund Activity

The Fund was positioned defensively over the year, with a continued bias towards larger, diversified earnings and revenue growth-stage companies. While the Fund fell in absolute terms, its relative performance was constructive. Correct top-down positioning was complemented by good stock-picking overall, in particular the avoidance of all but a handful of company-specific clinical development and regulatory setbacks and disappointments during the period.

The acquisitions of six Fund investments were announced during the period: Biohaven Pharmaceutical Holding, Turning Point Therapeutics, Global Blood Therapeutics, Diurnal Group, Myovant Sciences and Horizon Therapeutics.

Material positive developments elsewhere included arGEN-X announcing successful outcomes to clinical studies investigating, separately, a new formulation and a new indication for the company's main asset, Vyvgart. Elsewhere, Bavarian Nordic experienced increased demand for its smallpox vaccine Jynneos. The vaccine also provides protection against the monkeypox virus – several countries suffered monkeypox outbreaks in 2022. In addition, French-Austrian vaccines company Valneva received EU regulatory approval for its COVID-19 vaccine.

The Fund continued to benefit from avoiding the high-profile mRNA-technology names Moderna and BioNTech. Their valuations – which we think remain excessive – continued to fade as the world seemed to move on from the coronavirus pandemic. Interest in and appetite for repeated vaccine boosters subsided as more benign variants emerged and amid still early and unconvincing updates on additional applications of the technology.

Investment Manager's Reports *continued*

For the financial year ended 31 December 2022

Biotechnology Fund *continued*

Fund Activity *continued*

The most material negative development for the Fund came from NanoString Technologies. Its share price performed poorly on operational execution missteps for its core product in the exciting new research application referred to as spatial biology. Owning Valneva also hurt. Although, as noted above, it received EU regulatory approval for its COVID-19 vaccine, the EU stepped away from fulfilling its large purchase commitment of the company's vaccine due to the waning threat from the virus. Elsewhere, not owning large benchmark constituents Amgen and Gilead Sciences hit the Fund's relative showing. Their share prices surged in October and November, along with those of other major pharmaceuticals companies. Synairgen was also a detractor. As reported earlier, its COVID-19 therapeutic did not differentiate from the standard of care for patients hospitalised with COVID-19 pneumonia. Lastly, Summit Therapeutics weighed on performance after its strategic reset failed to inspire the confidence and interest of the market.

Generally, the share prices of the Fund's early-stage unprofitable clinical development-stage companies performed poorly with the deteriorating macroeconomic backdrop. Portfolio turnover for the period was relatively low by historical standards, reflecting the portfolio having been, in our view, correctly positioned entering the period, and remaining appropriately set for current conditions to continue in the near term.

Market Outlook

We have a constructive outlook on the biotechnology sector for 2023. We believe a reasonable base-case expectation for investors should be a similar pattern of relative performance to that seen in 2022. It feels to us that the macroeconomic headwinds that have undermined risk assets over the past two years are easing. The inflation picture is perhaps moderating, and the market is now more comfortable, or least better aligned, with the Federal Reserve's interest rate strategy.

Notwithstanding the early short-term global economic growth risk from the disruptive effects of China's COVID-19 surge following its government's abandonment of its zero-Covid strategy, US and European consumers continuing to cut discretionary spending as energy and food inflation hit domestic budgets, and possible manufacturing indicator weakness as excess inventories built up across global supply chains are drawn down, it feels as if deteriorating investor risk appetite might be bottoming out. However, the question remains where to deploy equity capital, given elevated interest rates, a tight US employment market and doubts over corporate America's earnings resilience in the face of slowing growth and perhaps even a recession.

In such a stagflationary environment, we expect the defensive growth qualities of the larger commercial-stage biopharmaceutical companies to remain attractive. The challenge for investors at the start of 2023, however, is that the share prices of diversified earnings-companies have already moved aggressively; they no longer trade at the significant valuation discounts to the broader market that they have in recent times.

Without multiple strong new product cycles to drive material earnings revisions, it is unclear how much higher the share prices of these larger companies can go. They face a looming wave of patent expirations in the second half of this decade that will cause more than \$100bn worth of combined industry product sales to be lost to generics. This development will naturally start to compress multiples.

With the deeply unprofitable early-stage technology platform and clinical development-stage space still congested in competition terms, as well as suffocated by a far more discerning capital markets environment, we believe appropriate positioning continues to be a bias towards revenue growth-stage companies. We believe selective ownership of a handful of clinically and financially de-risked later-stage clinical development-stage companies is also appropriate, at least for the time-being.

We believe well-capitalised commercial revenue-growth or late-clinical-development-stage companies remain best positioned to create value for investors. This view is based on several factors: industry R&D productivity remains strong as novel tool kits are deployed with greater competence against increasingly better-understood complex biology; multiple pipeline within a product-type growth opportunities positioned for bootstrap growth and profitability; a still-constructive, though not always predictable, regulatory agency in the form of the US Food and Drug Administration (FDA); clarity on the medicine-pricing environment after the recently passed Inflation Reduction Act in the US; and significant M&A optionality, as larger companies feel the pressure building to replace product revenues expected to be lost to patent expirations.

The Fund remains agnostic to therapeutic areas and technology modality. However, as we look into 2023, there will be some important milestone regulatory events for medicines based on some of the newer technology approaches, such as gene therapy, which could prove important in shaping the direction, debates and perceptions around the biotechnology industry over the next few years.

Following an active risk-managed approach, we continue to invest in those companies that have, in our view, the best people using the best technologies to develop the best new medicines.

Polar Capital LLP

January 2023

China Stars Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned -19.4% in 2022, outperforming the MSCI China All Shares Net Total Return Index, which returned -23.6% (all figures in US dollar terms).

To describe 2022 as an eventful year would be a massive understatement. War broke out in Ukraine, escalating geopolitical risk and disrupting the global energy market; inflation surged; central bankers hiked rates aggressively and exited QE; the cost of capital, an almost forgotten financial concept, finally made a comeback; China stuck stubbornly with its zero-Covid policy for too long; Chinese growth slowed and consumer confidence collapsed; frustrated students and citizens bravely protested; Chinese policymakers finally listened and made a swift u-turn.

Against this challenging backdrop, the portfolio fared poorly in absolute terms despite its outperformance against the broader market. The top contributors to relative performance were 51job, China Lodging Group and China State Construction Development Holdings; the biggest detractors were China Meidong Auto Holdings, Bilibili and Zhejiang Heda Technology.

51job, a leader in online recruitment and HR services, completed its management-led privatisation during the second quarter and delisted from the NASDAQ. The company had been a core investment in the portfolio since the Fund's launch. We are disappointed we cannot be a part of its next stage of growth, but we wish CEO Rick Yan and the company all the best.

China Lodging Group, now named H World Group, is the country's best-run hotel operator in our view, with a strong portfolio of brands in the premium segment. Despite the zero-Covid policy, investors have been looking through to the post-Covid recovery. We expect a strong 2023 and 2024 rebound, with significantly enhanced profitability, given about 20–30% of China's hotel supply has exited the market over the past three years. H World Group is a large position.

China State Construction Development Holdings, an exterior engineering solution provider, performed well during the year. It continues to deliver stellar growth and improved its profitability through a successful restructuring. It is currently a mid-size holding.

China Meidong Auto Holdings, a best-in-class luxury car dealership run by an excellent owner/operator, dropped significantly as investors became concerned about its short-term growth. With the help of hindsight, Meidong's valuation was too high entering 2022; we should have trimmed the position significantly more given the highly cyclical nature of the business. That said, investors should now look forward to its cyclical recovery in 2023. Meidong is a mid-size holding.

Bilibili, a video-based online community popular with China's Generation Z, performed poorly as its pre-profit nature made it vulnerable in the current market environment. We exited the position as we saw better opportunities elsewhere.

Zhejiang Heda Technology, a smart water solution provider, suffered from delayed project deployment. There were signs in the fourth quarter that these delayed projects are finally coming to fruition, which should boost the company's growth in 2023 and improve its cashflow conversion. Heda is a small position.

Market Review

Chinese stock markets fell materially in 2022, together with all other major global asset classes. The MSCI China All Shares Index's 12-month forward earnings multiple contracted from 13x at the beginning of 2022 to 11.5x as the year ended, an 11.5% depression compared to the net total return of -23.6% by the index. This derating was primarily driven by the global sell-off in risk assets and China's zero-Covid policy.

Fund Activity

During 2022, there were a few noteworthy new positions and exits.

We re-established a position in China Lodging Group as it is a major beneficiary of the economy's reopening. We bought Tingyi Cayman Islands Holding, a food and beverage company with strong free cashflows and a compelling valuation. We also added Jiangsu Hengli Hydraulic, a rising domestic champion in hydraulic components and systems, Ctrip.com International, a leading online travel booking site that should benefit materially from the resumption of outbound tourism, and Hongfa Technology, a global leader in electric relays with high growth potential in supplying the electric vehicle market.

We exited positions in Yunnan Baiyao Group, Haier Smart Home, Guangdong Kinlong Hardware Products and Hainan Meilan International Airport, as we found better opportunities elsewhere for the capital. We also exited 51job after it completed its management-led privatisation.

China Stars Fund continued

Market Outlook

After the 20th Party Congress in October, President Xi secured his third term and a new generation of top leaders took their places. The attention of the new leadership now turns to managing and boosting the economy and mending international relations.

The greatest overhang on growth and markets had been the country's increasingly costly and unpopular zero-Covid policy. After the Party Congress, we were encouraged to see a swift and decisive change in late November. The path to an early 2023 exit from COVID-19 is now clear. We believe this will boost consumer and business confidence. We also expect more stimulus and monetary policy to stay accommodative.

In our view, Chinese equities are currently valued attractively in both absolute and relative terms. The economy's reopening and further easing policies should lead to a robust growth recovery. This may be amplified by strong operating leverage, as many companies have drastically optimised their cost base.

Three themes stand out: reopening beneficiaries, Big Tech mean reversion and industrial upgrading. The exit from COVID-19 will unleash a tremendous amount of pent-up consumption power, especially in leisure, travel, and food and beverages. We believe the major internet companies are well placed to re-rate significantly higher. The regulation cycle has ended, and they may enter a strong positive earnings cycle. Meanwhile, the powerful trends in the adoption of factory automation and rising penetration of electric vehicles will continue, and we still see attractively valued stocks capable of delivering high growth.

While the rest of the world is zigging, China is zagging in terms of the policy cycle. With trough valuations and a positive earnings revision cycle, we are confident our portfolio companies will continue to deliver strong earnings growth, while they are also trading at material discounts to their intrinsic values. We believe the portfolio is well-positioned to deliver good performance in 2023.

Thank you for keeping your eyes on the horizon.

January 2023

Emerging Markets Stars Fund

Fund Performance

In 2022, the Fund (Class I US Dollar Accumulation Shares) returned -28.1% compared to -20.1% for the benchmark, the MSCI Emerging Markets Net Total Return Index (in US dollar terms), a frustrating year for us.

As a growth and quality manager with a strong focus on sustainability, it was always going to be difficult to have good absolute and relative performance in a year as extreme as 2022 turned out to be. Having said that, we have still been surprised by the magnitude of the share price drops we have seen in some of our holdings on the back of either falling out of favour in the environment, being considered risky geopolitically, as happened with a number of our Chinese and Taiwan investments, experiencing slower growth or having negative margin surprises.

The Fund remains in the top-10 percentile since its inception in June 2018, though 2022 was hard on our longer-term track record. We have some hard work ahead to make sure we are back in the top 5% where we have been historically.

The damage to relative performance was very much in Q1, with the rest of the year a relatively poor value/anti-growth year. The market was surprised by the Fed rate hike cycle as well as, of course, the Russian invasion of Ukraine and the follow-on implications for inflation and geopolitics, as well as a further hit on the technology cycle on the back of the semiconductor war.

In terms of sector performance, we saw a -400bps negative selection effect (stock-picking), while country-wise we saw a -579bps contribution. This underperformance came more or less entirely from our weakest five or six stock picks. On the plus side, this implies a large part of the portfolio has been performing well, relatively. We believe this is down to our underlying quality and sustainability mindset.

The positive sector perspective was concentrated in the IT and communication services sectors (e-commerce), with weak performance in Korea and Taiwan. China was also hit hard, but we managed to navigate this relatively well, ending up with a positive contribution to relative performance from our China exposure. The other key positive relative contribution came from India and our overweight was a positive driver. Finally, having relatively little exposure to Russia in the early part of the year – and managing to exit fully before its invasion of Ukraine on 24 February, the country's assets being frozen and it being kicked out of the emerging markets benchmark – gave us a positive relative performance contribution.

Market Review

The one area that saw positive returns was 'dirty' oil and coal. Even fixed income in safe haven countries did not give any protection as a capital preserver. Anything with even the smallest element of duration risk was extremely discounted. The main headlines globally were about the Fed rate hike cycle, the aim being to bring out-of-control inflation back in line. We can add very high levels of geopolitical risk on the back of the Russian invasion of Ukraine, the addition of risk to the already tense situation between the US and China around trade and technology and, of course, China and Taiwan. It peaked in late September / early November when Nancy Pelosi, the US Speaker of the House, visited Taiwan, China's President Xi secured his third term and the US mid-term elections took place. All of these events were spiced up with a technology down-cycle, China's zero-Covid policy and a heated election in Brazil where Luiz Inácio Lula da Silva returned to power.

Fund Activity

On the back of Russia/Ukraine, we significantly increased our exposure to the so-called 'green metals' – commodities needed for the transition into a renewable energy infrastructure. We already had strong copper exposure for a long time but we saw this as an inflection point to add exposure to lithium and rare earth metals. The market sell-off gave us what, in the future, we will likely look back at as an attractive entry point. Towards the end of the year we reduced our relative overweight in India and added to China, thereby reducing the underweight we had been running in China for quite some time.

Outlook

We maintain a constructive outlook for the Fund and believe we are holding a portfolio of strong, high-quality companies that are very attractive relative to their fundamentals. We also believe many of our portfolio holdings have been hit unjustifiably hard by panic around the stickiness of inflation, geopolitics and an aggressive extrapolation of the current down-cycle in the IT sector. Therefore, we see a strong valuation case for our portfolio over the next 6–18 months and feel the sequence of events that will lead to a return of absolute and relative performance in the portfolio will be a combination of inflation fear rolling over, reduced geopolitical tension (we believe both China and the US will become more pragmatic around their policies towards each other) and a cyclical up-turn for the IT sector.

Emerging Markets and Asia Team

Polar Capital LLP

January 2023

European (ex UK) Income Fund

Fund Performance

The Fund (Class I Sterling Accumulation Shares) returned 7.3%, outperforming its benchmark, the MSCI Daily Net Total Return Europe ex UK Index, which returned -12.6%, in sterling terms.

The top individual relative contributors to performance were TotalEnergies, BIC, Cia de Distribucion Integral Logista, Munich Re and NOS. The top individual relative detractors were Novo Nordisk (not owned), Deutsche Post, Tele2, Assa Abloy and Brenntag.

Market Review

2022 can be summarised as the year inflation proved not to be transitory. The US Federal Reserve's pivot to monetary tightening in late 2021 was followed by a steady hawkish path that was consistently underestimated by the market. This produced dramatic moves in financial asset prices, given investors were used to a low-interest-rates-forever mindset and abundant liquidity. Traditional 60/40 strategies performed very poorly, as both bonds and stocks fell together to reflect the new inflation reality. The ability of bonds to act as a diversifier, particularly against the most expensive parts of the equity market, was compromised by the severe negative real yields of many of these assets.

In February, the world was rocked by the tragic invasion of Ukraine by Russia, which was itself swiftly hit by unprecedented economic and financial sanctions by the West. Most European-listed companies have negligible direct exposure to Russia. As a result, the effect on stock markets was more systemic (the energy cost impact on inflation and economies) rather than idiosyncratic for single stocks. It has taken a terrible war to make Europe reassess its complacency around defence and energy security. Germany quickly moved to announce it would materially hike defence spending to the 2%-of-GDP NATO target.

The European Central Bank (ECB) became more hawkish in May, and in December even the Bank of Japan eventually started to move away from the extremes of unconventional monetary policy via a small tweak to its yield-curve control policy. The move towards tighter monetary policy was not without issues, with the ECB launching an anti-fragmentation tool in the summer and the Bank of England stepping in to support the gilt market in the autumn. The ECB's balance sheet continues to shrink due to falling TLTRO balances (cheap loans to the banking sector). Our impression is that ECB hawks will simply end up with more QE if they overplay their hand at this point. A more gradual tightening approach is clearly warranted in the macro context of the Eurozone.

Earnings in 2022 were generally more positive than feared. Sales often surprised on the upside, given markets were used to a low-inflation regime and many companies were able to quickly raise prices in a more inflationary backdrop. The unwind of many of the oddities of the pandemic and pandemic policy responses has increased the unpredictability of events. There were signs of more profit warnings in the second half of the year.

While the pain in equity markets in 2022 was mainly about deratings from historically high valuations, we expect 2023 to be more about earnings. We think companies able to protect margins will stand out more ahead.

The year ended on a slightly more upbeat footing, with December seeing positive developments in three of the main areas of macro concern in 2022: European gas prices fell materially due to mild weather; the Eurozone inflation print was lower, and below consensus; and China continued to move away from its zero-Covid policy. We remain constructive on the European market, because we see relatively limited further downside to sentiment or valuations, while there is positive asymmetry to most of the current challenges over the medium term. The region held up well in 2022 given all the challenges thrown at it, suggesting a turn in the relative outlook after such a dire performance since the global financial crisis.

Fund Activity

In January, we started a position in the Swiss testing business SGS. The shares had pulled back into our valuation range as part of the selloff in quality stocks. SGS has a leading position in the TIC (testing, inspection and certification) industry, an area with an attractive long-term growth profile. Meanwhile, sector growth prospects are complemented by a management team focused on future margin improvement and an ability to pass price rises on to end customers. The starting dividend yield of 3.1% looked compelling to us in the context of consensus estimates of a 7% compound annual growth rate in earnings per share.

Within non-life insurance, we switched our position in AXA to Zurich Insurance Group. Both businesses are non-life-focused and performing well operationally. We see Zurich as a higher-quality business due to its higher return on equity, low earnings volatility and strong balance sheet. AXA has been taking steps to improve its business mix over the past decade but remains a riskier proposition, in our view, given the ongoing turnaround of its acquired XL business. Zurich has been experiencing positive pricing tailwinds. We expect this to drive mid-single-digit dividend growth from an attractive 5% dividend yield starting point.

We sold Red Electrica, the Spanish electricity grid, in January. The shares rallied from a low valuation early in 2022. We have become increasingly concerned about political risk within the utilities sector. The energy crisis is prompting political interference to protect consumer bills. The European utility sector structure is, frankly, a mess. The regulated grid businesses have regulated asset bases that are remunerated based on allowed returns. These have steadily fallen as local government bond yields have fallen to a level that makes the regulated grid operators unattractive in the context of political and long-term technological risk. Elsewhere in the utility value chain, we believe the retail supplier businesses are worthless in a no longer truly liberalised energy market of pricing caps. This has been demonstrated by the debacle of supplier bankruptcies in the UK.

In March, we bought back into German chemical distributor Brenntag. The share price had fallen, and we became more confident in the management team's ability to execute its strategy to boost growth and restructure. Despite pandemic headwinds, the company has demonstrated its resilient business model and strong pricing power. In addition, robust free cash flow generation has allowed the group to continuously increase dividends since its listing.

In May, we sold our position in consumer goods giant Unilever. We switched Unilever for luxury conglomerate LVMH, in doing so adding more exposure to higher-end consumers. The broad sell-off in quality stocks brought this name into our valuation range. The group has a strong, diversified portfolio of attractive brands and a robust, decentralised business structure.

In April, we sold our position in global brewer Anheuser-Busch InBev. The company's star had faded somewhat from the golden era when it was able to generate and grow cash flows quickly after large-scale acquisitions. We thought management's presentations at recent conferences were less convincing than those of their peers. We still like the beverages sub-sector within consumer staples and continue to look for ideas there.

In July, we started a position in Schneider Electric, the French energy management and industrial automation company. Schneider is the world's largest low-voltage electrical equipment company, the world leader in medium voltage, and the largest player in critical power and cooling systems used in datacentres. It also has a significant presence in industrial automation employed to control factories. At the point of purchase, Schneider was trading on a 2023 earnings multiple of 16x and on an enterprise value (EV)/earnings (EBITDA) level of 13.1x, attractive in absolute terms and a discount to US peers like Eaton and Rockwell Automation, which are trading at 22x P/E and 15.8x on EV/EBITDA, on average.

The Fund had a resilient 2022 as the effects of the pandemic shutdowns and wild stimulus were unwound. We were able to add quality cyclicals to our portfolio in the first half of the year, with fewer opportunities to do so in the second half. This was primarily because inflation was broadening out and expectations of central bank responses gradually escalated. This made us more discerning on both likely earnings outlooks and valuations for incremental ideas.

In December, we decided to sell our position in global consumer staples name Nestlé. The company had an operationally strong year, with its key category exposures proving their defensive characteristics. On a three-year view, we think Nestlé's valuation limits its defensiveness.

ESG

Our approach to ESG has been to try to integrate ESG characteristics in a way that identifies how they will directly lead into financial variables (eg cost-of-capital risk to potentially stranded assets or medium-term top-line evolution). The scale of the challenges for policymakers in both energy security and energy transition became clearer as the year progressed. While there will clearly be handsome rewards for energy innovation, we see political repression of utility incumbents as likely to be an increasing and structural phenomenon.

During the year, the Fund was confirmed as qualifying for Article 8 status under the Sustainable Finance Disclosure Regulation (SFDR). We are pleased with the work we have done to build our own dividend sustainability score, combining a sustainability score with a financial and business model score. We strongly believe that better corporate disclosure will allow us to move to using third-party ESG scores as a sense check for our own scoring.

Our discussions with companies around upcoming principle adverse impact (PAI) disclosures point to many companies needing to catch up. This is understandable given how quickly a variety of ESG initiatives have evolved recently. We remain constructive on the PAIs as an improved basis on which investors can build their own ESG scoring methodologies but also monitor the progress of ESG initiatives over time. We continue to be surprised by the scale of sell-offs related to ESG controversies, not necessarily of stocks we own. We believe this highlights the increased importance of ESG integration to try to identify potential risks, but also to be better able to assess potential opportunities in these big sell-offs.

Market Outlook

The investment outlook has been fundamentally altered by policy responses to both the pandemic and the war in Ukraine. In an environment of elevated inflation, the key challenge for all investors is to deliver positive real returns in a highly uncertain world with many assets at expensive starting valuations. The stability of sales growth and margins will be more appreciated than very high but unprofitable growth. Valuation discipline will be more important in the post-quantitative easing policy era.

Given the current backdrop, stocks with defensive business models and resilient dividend yields appear increasingly appealing versus overvalued growth stocks, vulnerable deep-value sectors and other asset classes offering little yield.

European Income Team

Polar Capital LLP

January 2023

Financial Opportunities Fund

Fund Performance

Despite the uncertain macro environment, the financials sector materially outperformed the broad market: the MSCI All Country World Financials Net Total Return Index returned -9.8% versus the MSCI All Country World Net Total Return Index's return of -18.4% (all figures in US dollar terms). Gains in the insurance sector (4.3%) partially offset weakness in banks (-9.4%), diversified financials (-17.5%) and fintech (-32.6%).

The Fund's NAV (Class I US Dollar Distribution Shares) fell 13% over the year. Its relative performance was hurt by its focus on the banking sector and fintech, and an underweight position in non-life insurance.

Market Review

Following a positive start to the year, Russia's invasion of Ukraine in late February precipitated a sell-off in markets, as investors assessed the broader implications for the region and the global economy. Global stock markets largely remained under pressure throughout the remainder of the year. Investors were concerned about a moderating growth outlook combined with hawkish central bank commentary in response to high inflation. These macro concerns were compounded by the extension of Covid-related shutdowns in Chinese cities, as the Chinese government maintained its zero-Covid policy until late in the year.

In the UK, a mini-budget from the short-lived Liz Truss government in September that included £45bn of debt-funded tax cuts led to significant pressure on the pound (sterling fell 4.3% against the dollar over the month) and added to market risk aversion. While the government swiftly cancelled its plan to abolish the top rate of income tax in response to fierce criticism, the damage to its credibility is likely to endure at a time when the UK is particularly vulnerable to changes in capital inflows – the UK's Q1 2022 current account deficit hit a record 8.3%.

Global markets staged a recovery in the fourth quarter. Expectations rose that central banks would shift from a path of aggressive tightening and economies would potentially avoid a hard landing. Global financials were relatively strong over the final quarter: the MSCI All Country World Financials Net Total Return Index rose 14.3% versus a 9.8% rise in the broad MSCI All Country World Net Total Return Index. Financial stocks were supported by the rotation into cyclical sectors, while sentiment was also boosted by a resilient third-quarter results season. Expectations for a pivot in monetary policy were bolstered by evidence of moderating inflation towards the end of the year. This was visible in core goods, as the effects of pandemic-related supply-chain dislocations faded, and housing, where rental prices for newly leased apartments pointed to further falls and shelter inflation represents 57% of core services' consumer price inflation.

Fund Activity

The significant derating in fintech stocks created attractive opportunities for investment, and we gradually increased our fintech allocation to c.13% of the Fund. We added to our core payment holdings Visa and Mastercard. We also invested in Wise, a UK-listed fintech company focused on cross-border transfers and international banking. It increased its FY23 earnings guidance, benefiting from strong volumes and a revenue uplift from interest income generated on £7bn of customer balances. Furthermore, we started a position in Flywire, a US payments and software provider focused on niche areas within education, healthcare, travel and business-to-business that are ripe for disruption and present a significant long-term growth opportunity.

We gradually trimmed our Asian exposure on the back of a more difficult macro environment and delays in the relaxation of Covid-related measures in China. This included selling our position in Bank of the Philippine Islands. However, the abandonment of China's zero-Covid policy following widespread protests toward the end of the period raised the prospect of improved economic activity, and led to a sharp recovery in China and, more broadly, the region. While the Fund had no direct exposure to China, we increased its overweight position in Hong Kong through additions to our holdings in life insurance (AIA Group), banks (BOC Hong Kong), exchanges (HK Exchanges & Clearing) and UK-Asian stocks (HSBC, Standard Chartered and Prudential).

Market Outlook

After a turbulent year that included an energy crisis, high inflation, political uncertainty (the UK being a standout performer in a competitive race), monetary policy shifts and COVID-19 restrictions in Asia, we are cautiously optimistic as we enter 2023. The shift away from a period of ultra-low inflation and interest rates is a major positive for the sector, with implications for long-term profitability and therefore absolute and relative valuations. We expect asset quality to remain resilient in the context of a shallow recession and excess capital to support attractive yields.

The Fund is also focused on finding the most compelling structural growth opportunities in a sector that is seeing a rapid transformation. Following a significant de-rating in 2022, we view numerous opportunities for investment in fintech, where we expect to increase our exposure further.

Financials Team

Polar Capital LLP

January 2023

Global Absolute Return Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned 0.2% in 2022, taking its return since inception to 31.1%, or 7.0% annualised.

Market Review

We believe the following macroeconomic crosswinds had a significant influence on global markets in 2022:

- Global inflation levels and associated economic reports.
- Central bank interest-rate hikes and global quantitative tightening (QT).
- Russia's invasion of Ukraine and its related global geopolitical consequences.
- Recessionary expectations and corporate impacts.
- The Chinese Communist Party's 20th National Congress and the Chinese government's zero-Covid policy.

The primary driver of market movements in 2022 was the significant increase in global inflation. The lagging effects of the historically loose monetary and fiscal policies used to cushion the blow of Covid-related shutdowns resulted in monetary policy being far too loose for a rapidly overheating economy. Consequently, Western central banks spent much of 2022 attempting to tighten policy.

In December 2021, the US Federal Reserve's 'dot plot' pointed to only three 25bp interest-rate hikes in 2022. According to Deutsche Bank, investors concurred, with futures pricing in 74bp of hikes in 2022. Over the course of the year, expectations of the number and magnitude of rate hikes were continually adjusted upwards as post-pandemic-driven consumer demand met supply chain shortages, much of which was a consequence of the disruption to Chinese supply chains amid the country's zero-Covid policies.

Disruption was elevated to new heights after Russia invaded Ukraine in February, pressuring food and energy prices considerably. This strong demand, coupled with higher energy costs and supply chain challenges, and compounded by wage growth due to tight labour markets, ensured inflation continued to surprise on the upside throughout much of the year. In turn, this led to the need for central bankers to redouble their efforts on controlling inflation to avoid price rises becoming self-perpetuating, as in the late 1970s and 1980s. This reassessment resulted in far more aggressive rate hikes than anticipated at the start of the year.

The dynamics to the left led to a dramatic repricing of financial assets over the course of 2022. With borrowed money suddenly only available at a cost and sovereign debt yielding interest at levels unseen in years, investors began to question their involvement in riskier credits and unprofitable companies. This resulted in substantial declines in equities and bonds. Indeed, according to Deutsche Bank, the S&P 500 suffered its worst annual performance since 2008. Meanwhile, global bonds fell into a bear market for the first time in 70 years. Commodities were one of the few winners of the year, as was the dollar as investors sought a haven and as US interest rates rose more quickly than in other major economies.

Equities declined markedly in H1 2022. The MSCI World fell in five of the first six months, only experiencing respite in March, and returned -20.3% over the six-month period. This performance was replicated in all major markets, with the S&P 500, Eurostoxx 50 and Nikkei falling 20.0%, 17.4% and 7.4%, respectively. Unsurprisingly, high-beta technology stocks were the worst performers, with the NASDAQ 100 declining 29.2%. The most growth-focused part of the technology universe posted truly shocking returns: the ARK Innovation ETF, which invests almost exclusively in such companies, fell a remarkable 57.8% over H1 2022. (All in local currency returns).

These movements were mirrored in credit markets. The rise in interest rates caused a repricing of credit risk, which manifested in the widening of credit spreads. Indeed, the spreads of the CDX North American HY Index and iTraxx European XOver Index increased from 293 bps to 579 bps and 242 bps to 580 bps, respectively, over 1H 2022. Even investment-grade bonds were not immune. The asset class underperformed high-yield debt in the first quarter – its greater duration was a headwind in the face of rising rates. As a result, the only assets to experience positive returns in H1 2022 were generally those tied to the materials and energy sectors. All other major asset classes suffered declines.

Despite falling rapidly over H1 2022, financial markets experienced an extremely volatile H2 that ended with major equity and credit indices being essentially unchanged, on aggregate, over the latter six months. This volatility was largely driven by inflation and other macroeconomic data reports, Fed rate hikes, changes to terminal rate expectations, and recessionary expectations for Western companies.

Global Absolute Return Fund continued

Market Review continued

The second half of the year began with financial markets climbing in July, driven by an easing of financial conditions. This reversed in August after central banks reiterated their resolve to tame elevated inflation at a time when leading economic indicators increasingly pointed to a weakening outlook. In the US, Fed Chair Jerome Powell made it clear during his annual speech at Jackson Hole that there would be no near-term pivot in monetary policy. Similar action was taken in Europe, as surging food and energy prices, largely caused by Russia's invasion of Ukraine, continued to cause upside surprises in inflationary numbers. In Europe, August was one of the worst months on record for bond markets, while in the UK the pound experienced its weakest month since 2016.

Poor equity and credit performance continued into September, as energy-driven inflationary pressures continued to mount in Europe. In the UK, the pound and gilts had an extremely volatile month. This was largely due to the mini-budget set by Chancellor Kwasi Kwarteng, in which he announced the biggest programme of tax cuts in half a century, funded by borrowing. This led to a technical debacle for liability-driven investment (LDI) products, widely used by pension funds. This forced many pension funds to sell gilts to meet collateral calls, creating a vicious downward spiral in the gilt market that ultimately prompted a £65bn intervention from the Bank of England and played a factor in Liz Truss swiftly giving way to Rishi Sunak as prime minister.

After hitting their lowest point for the calendar year in September, equities moved broadly higher and credit markets narrowed in October. China and Hong Kong were the notable exceptions following economic reports of an ongoing growth slowdown and the 20th Party Congress. The latter featured the confirmation of President Xi and close allies, saw national security stressed over pro-market agendas, and continued commitment to restrictive zero-Covid policies. Western equities continued their move higher in November, driven by inflation readings that undershot expectations for the first time in three months, as well as a speech by Fed Chair Powell hinting at slowing rate hikes in December. Against this backdrop, interest rates fell, credit spreads narrowed and the dollar experienced one of its largest monthly declines on record. Chinese and Hong Kong stocks rebounded from their October lows after demonstrations by Chinese citizens against the zero-Covid policy led investors to increasingly believe in an economic reopening. October and November's risk-on rally in global equity and bond markets reverted to risk-off declines following the Fed meeting on 14 December. December also brought a shift from optimism to concern surrounding China's relaxation of its zero-Covid policy, with soaring Covid-19 cases threatening operational disruptions. Gold extended its sharp November rise amid continued global inflation and heavy buying by the Chinese state.

Fund Activity

The Fund was not immune to the impact of rising interest rates and widening credit spreads on convertible valuations throughout 2022. However, we used a variety of techniques to protect capital and deliver a positive return over the year, despite significant declines in global equity and fixed-income markets.

- All in dollar terms.
- Class I US Dollar Accumulation Shares.

We believe that this result, achieved amid historically challenging financial conditions, evidences the Fund's ability to generate positive returns regardless of macroeconomic crosswinds. Moreover, during our 10 years managing absolute return strategies at Polar Capital (four for the Polar Capital Global Absolute Return Fund and six for the Polar Capital ALVA Fund, between 2010–16), we have never suffered a loss-making year. We attribute our success this year to the following, illustrating the flexibility of return-generating strategies that have powered our 100% positive return record.

- Primary focus on credit quality:** our investment process places primacy upon capital protection. Fundamental credit analysis is at the core of our approach, as reflected by our average credit rating of BB+ and our exclusion of any company rated below B-, either internally or externally. This process helps explain why the team has not had any insolvencies or bankruptcies in any of its investments in any of the funds we have managed in our 12 years at Polar Capital.
- Risk control:** The team stresses the portfolio's exposures daily and constantly assess the Fund's main risk exposures, whether they are equity, credit or interest-rate-related. The Fund employed some interest-rate and credit-spread hedges to mitigate the adverse effects of quantitative tightening on global fixed-income markets. Additionally, over the period, the Fund maintained a modest equity sensitivity, averaging 2.5%. We were able to increase and decrease the equity sensitivity to take advantage of volatility by participating in equity rallies and minimising equity correlation in periods of decline.

- **Put profile trades:** The Fund took advantage of falling equity prices through our put profile investment category. An example of this is Remy Cointreau, where the Fund profited from a downward directional equity move.
- **Equity hedged trades:** The Fund was able to take advantage of high market volatility through names in the equity hedged category, which was the highest contributor to overall Fund performance. In fact, the Fund's position in Middleby, one of our largest contributors over the period, was able to capitalise on the high realised volatility in the equity. We anticipate this investment category will be a key contributor in the coming months, given continued high equity market volatility.
- **Asymmetry of convertible profiles:** The team seeks to invest in convertible bonds that offer greater participation in the upside than downside for a given move in the underlying equity. Over the longer term, this ensures returns are compounded from a higher base. While some names in this category, such as Veritone, were among the Fund's largest detractors, others such as Vertex Energy were among the Fund's biggest contributors.
- **Income and defensive profiles:** Given their more bond-like nature, investments in this category are typically more sensitive to credit spreads and interest rates than equity movement. This served as a headwind in 2022 (Sofi Technologies and Guardant Health). However, with many good-quality credits now trading at attractive yields, we view this category as having considerable potential in 2023.
- **Team experience:** The team is one of the most experienced convertible teams globally, having managed absolute and relative return strategies for many years at Polar and elsewhere.

Overall, the Fund was able to adjust to unfavourable market conditions and deliver a positive return in a year in which many absolute return funds failed to do so. We believe this demonstrates the Fund has the requisite investment strategies to defend capital regardless of market conditions. Moreover, we remain optimistic about the opportunities we now see in 2023.

Market Outlook

2022 was characterised by historic declines in fixed-income and equity markets. As convertibles are a hybrid equity and fixed-income asset class, this made for headwinds from both markets. However, with interest rates having risen materially, credit spreads at much wider levels and equities off their peaks, convertibles currently offer one of the most interesting mixes of yield and equity appreciation potential in many years.

The change in the macroeconomic policy backdrop has significant implications for investors. The reduction in exceptional liquidity provision has ended the 'buy the dip' era that characterised the post-global financial crisis equity market, the longest bull market on record. Similarly, the end of super-normal liquidity has increased the risk-free rate and tightened financial conditions – factors which imply higher corporate bond default rates ahead. These factors suggest traditional investment approaches may continue to struggle in the years to come, given 'easy beta' and 'free carry' are no longer available.

Convertibles have historically been well-placed to address such challenges. Their low duration protects against interest rates and widening credit spreads, while their bond floors provide defensiveness without sacrificing equity upside. Moreover, convertibles offer companies a stable, consistent source of funds when primary market liquidity in other markets declines – a factor we believe will support convertible issuance and opportunities in the year to come.

Consequently, despite the challenges of 2022, we believe the asset class offers both fixed-income and equity investors better risk-adjusted return potential than their native asset classes. As such, we believe convertibles provide an attractive solution to the asset class choice conundrum.

Global Convertible Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned -16.3% in 2022, taking its return since inception to 34.8%. In comparison, the Refinitiv Global Focus Convertible Bond Index returned -19.1% and 20.8% over the same periods, respectively (all in US dollar terms).

Market Review

We believe the following macroeconomic crosswinds had a significant influence on global markets in 2022:

- Global inflation levels and associated economic reports
- Central bank interest-rate hikes and global quantitative tightening (QT)
- Russia's invasion of Ukraine and its related global geopolitical consequences
- Recessionary expectations and corporate impacts
- The Chinese Communist Party's 20th National Congress and the Chinese government's zero-Covid policy

The primary driver of market movements in 2022 was the significant increase in global inflation. The lagging effects of the historically loose monetary and fiscal policies used to cushion the blow of Covid-related shutdowns resulted in monetary policy being far too loose for a rapidly overheating economy. Consequently, Western central banks spent much of 2022 attempting to tighten policy.

In December 2021, the US Federal Reserve's 'dot plot' pointed to only three 25bp interest-rate hikes in 2022. According to Deutsche Bank, investors concurred, with futures pricing in 74bp of hikes in 2022. Over the course of the year, expectations of the number and magnitude of rate hikes were continually adjusted upwards as post-pandemic-driven consumer demand met supply chain shortages, much of which was a consequence of the disruption to Chinese supply chains amid the country's zero-Covid policies.

Disruption was elevated to new heights after Russia invaded Ukraine in February, pressuring food and energy prices considerably. This strong demand, coupled with higher energy costs and supply chain challenges, and compounded by wage growth due to tight labour markets, ensured inflation continued to surprise on the upside throughout much of the year. In turn, this led to the need for central bankers to redouble their efforts on controlling inflation to avoid price rises becoming self-perpetuating, as in the late 1970s and 1980s. This reassessment resulted in far more aggressive rate hikes than anticipated at the start of the year.

The above dynamics led to a dramatic repricing of financial assets over the course of 2022. With borrowed money suddenly only available at a cost and sovereign debt yielding interest at levels unseen in years, investors began to question their involvement in riskier credits and unprofitable companies. This resulted in substantial declines in equities and bonds. Indeed, according to Deutsche Bank, the S&P 500 suffered its worst annual performance since 2008.

Meanwhile, global bonds fell into a bear market for the first time in 70 years. Commodities were one of the few winners of the year, as was the dollar as investors sought a haven and as US interest rates rose more quickly than in other major economies.

Equities declined markedly in H1 2022. The MSCI World fell in five of the first six months, only experiencing respite in March, and returned -20.3% over the six-month period. This performance was replicated in all major markets, with the S&P 500, Eurostoxx 50 and Nikkei falling 20.0%, 17.4% and 7.4%, respectively. Unsurprisingly, high-beta technology stocks were the worst performers, with the NASDAQ 100 declining 29.2%. The most growth-focused part of the technology universe posted truly shocking returns: the ARK Innovation ETF, which invests almost exclusively in such companies, fell a remarkable 57.8% over H1 2022. (All in local currency returns).

These movements were mirrored in credit markets. The rise in interest rates caused a repricing of credit risk, which manifested in the widening of credit spreads. Indeed, the spreads of the CDX North American HY Index and ITraxx European XOver Index increased from 293 bps to 579 bps and 242 bps to 580 bps, respectively, over 1H 2022. Even investment-grade bonds were not immune. The asset class underperformed high-yield debt in the first quarter – its greater duration was a headwind in the face of rising rates. As a result, the only assets to experience positive returns in 1H 2022 were generally those tied to the materials and energy sectors. All other major asset classes suffered declines.

Despite falling rapidly over H1 2022, financial markets experienced an extremely volatile H2 that ended with major equity and credit indices being essentially unchanged, on aggregate, over the latter six months. This volatility was largely driven by inflation and other macroeconomic data reports, Fed rate hikes, changes to terminal rate expectations, and recessionary expectations for Western companies.

The second half of the year began with financial markets climbing in July, driven by an easing of financial conditions. This reversed in August after central banks reiterated their resolve to tame elevated inflation at a time when leading economic indicators increasingly pointed to a weakening outlook. In the US, Fed Chair Jerome Powell made it clear during his annual speech at Jackson Hole that there would be no near-term pivot in monetary policy. Similar action was taken in Europe, as surging food and energy prices, largely caused by Russia's invasion of Ukraine, continued to cause upside surprises in inflationary numbers. In Europe, August was one of the worst months on record for bond markets, while in the UK the pound experienced its weakest month since 2016.

Poor equity and credit performance continued into September, as energy-driven inflationary pressures continued to mount in Europe. In the UK, the pound and gilts had an extremely volatile month. This was largely due to the mini-budget set by Chancellor Kwasi Kwarteng, in which he announced the biggest programme of tax cuts in half a century, funded by borrowing. This led to a technical debacle for liability-driven investment (LDI) products, widely used by pension funds.

This forced many pension funds to sell gilts to meet collateral calls, creating a vicious downward spiral in the gilt market that ultimately prompted a £65bn intervention from the Bank of England and played a factor in Liz Truss swiftly giving way to Rishi Sunak as prime minister.

After hitting their lowest point for the calendar year in September, equities moved broadly higher and credit markets narrowed in October. China and Hong Kong were the notable exceptions following economic reports of an ongoing growth slowdown and the 20th Party Congress. The latter featured the confirmation of President Xi and close allies, saw national security stressed over pro-market agendas, and continued commitment to restrictive zero-Covid policies. Western equities continued their move higher in November, driven by inflation readings that undershot expectations for the first time in three months, as well as a speech by Fed Chair Powell hinting at slowing rate hikes in December. Against this backdrop, interest rates fell, credit spreads narrowed and the dollar experienced one of its largest monthly declines on record. Chinese and Hong Kong stocks rebounded from their October lows after demonstrations by Chinese citizens against the zero-Covid policy led investors to increasingly believe in an economic reopening. October and November's risk-on rally in global equity and bond markets reverted to risk-off declines following the Fed meeting on 14 December. December also brought a shift from optimism to concern surrounding China's relaxation of its zero-Covid policy, with soaring Covid-19 cases threatening operational disruptions. Gold extended its sharp November rise amid continued global inflation and heavy buying by the Chinese state.

Fund Activity

The Fund was not immune to the broader market backdrop of falling share prices, rising interest rates and wider credit spreads. However, the portfolio was able to mitigate some of these headwinds and outperform the convertible bonds asset class.

Source: Bloomberg as at 30 December 2022. 1: All in dollar terms, 2: Class I US Dollar Accumulation Shares

There were several reasons for the Fund's outperformance in 2022. First, given our bottom-up credit analysis approach, we were selective in our investment choices. This was particularly advantageous last year when credit spreads widened markedly. The Fund's corporate bond holdings held their value more effectively than the index, adding to our outperformance. We believe capital preservation is paramount. This approach is prudent for avoiding credit events as we enter tougher economic times.

Furthermore, several Russian companies have issued convertible bonds in recent years (with a total nominal value of approximately \$2.4bn). These convertible bonds fell precipitously when Russia invaded Ukraine, resulting in a material headwind to the broader asset class. While the Fund's index had exposure to some of these convertible bonds, the Fund did not and still does not.

Additionally, again due to our bottom-up investment approach, the Fund avoided taking significant positions in weaker-duration and beta-trade tech names included in the Fund's index, such as Delivery Hero, Okta and MicroStrategy. These names declined meaningfully over the year and provided relative outperformance for the Fund.

In times of broad market decline, as was the case last year, alpha generation is crucial for returns. Meanwhile, the beta trade that had been effective in the generally rising markets since the global financial crisis is no longer effective. The Fund successfully generated alpha in technology throughout the year, outperforming on the way down, as evidenced by the aforementioned active index underweights, while participating in the various rallies throughout the year, as exemplified by an active overweight position in Array Technologies. We believe that our alpha generation in the highly volatile technology sector will continue into 2023 and see various idiosyncratic opportunities to generate both absolute and relative returns.

Moreover, the Fund successfully identified and held multiple out-of-the-money, strong credit bonds of companies we believed were likely takeover targets. These were asymmetric trades that provided the backstop of good credit with the upside of gap-to-par puts. Included in these trades were Global Blood Therapeutics, Avalara and Electricite de France, all of which were acquired and provided significant absolute return and index outperformance for the Fund. We believe there will be similar opportunities in 2023.

Nonetheless the positive contribution of the above-mentioned names was partially offset by the fund's biggest detractors over the period: Basic Fit, MP Materials, Hellofresh, Guardant Health, IAG, Bill.com Holdings and Silicon Laboratories.

Finally, the Fund employed some interest-rate and credit-spread hedges, which allowed for the effective mitigation of unfavourable moves in each, again contributing to positive performance.

Global Convertible Fund continued

Market Outlook

2022 was characterised by historic declines in fixed income and equity markets. As convertibles are a hybrid equity and fixed income asset class, this made for headwinds from both markets. However, with interest rates having risen materially, credit spreads at much wider levels and equities off their peaks, convertibles currently offer one of the most interesting mixes of yield and equity appreciation potential in many years.

The change in the macroeconomic policy backdrop has significant implications for investors. The reduction in exceptional liquidity provision has ended the 'buy the dip' era that characterised the post-global financial crisis equity market, the longest bull market on record. Similarly, the end of super-normal liquidity has increased the risk-free rate and tightened financial conditions – factors which imply higher corporate bond default rates ahead. These factors suggest traditional investment approaches may continue to struggle in the years to come, given 'easy beta' and 'free carry' are no longer available.

Convertibles have historically been well-placed to address such challenges. Their low duration protects against interest rates and widening credit spreads, while their bond floors provide defensiveness without sacrificing equity upside. Moreover, convertibles offer companies a stable, consistent source of funds when primary market liquidity in other markets declines – a factor we believe will support convertible issuance and opportunities in the year to come.

Consequently, despite the challenges of 2022, we believe the asset class offers both fixed-income and equity investors superior risk-adjusted return potential than their native asset classes. As such, we believe convertibles provide an attractive solution to the asset class choice conundrum.

Polar Capital LLP

January 2023

Global Insurance Fund

Fund Performance

The Fund (Class R Sterling Accumulation Shares) returned 23.7% versus 18.4% for its benchmark, the MSCI World Insurance Index (net total returns in GBP terms). Returns from the other comparators were -8.4% for the MSCI World Index, 0.3% for the FTSE All-Share Index and -8.4% for the S&P 500 Index (all total returns in GBP terms).

We were pleased with the Fund's absolute and relative performance last year. The Fund benefited from the defensive characteristics of the non-life insurance sector. But it was also helped by increasing recognition of the materially increased earnings power of our companies. This is due to the combined impact of four years of improving (re)insurance prices and now higher prospective investment returns following the rise in short-term bond yields.

Given the significant movements in financial markets, it is more complicated than usual to attribute the Fund return across the usual drivers: book value growth, price-to-book multiple changes and currency effects.

Despite our companies having defensive investment portfolios (and low investment leverage versus other financials), they were affected by market falls in the first three quarters of the year, although marked-to-market investment losses were somewhat mitigated by a positive fourth quarter after bond yields eased from their highs. For context, the US two-year Treasury yield rose from 0.7% at the end of 2021 to 4.4% at the end of 2022. Overall, we estimate an after-tax loss of around 6% on invested assets in 2022, which, given leverage of 2.5x to shareholders' equity, reduces book values by 14%, all else being equal. We expect this decline to be offset in part by underwriting profits equivalent to 11%, resulting in book values being down 3% over the year.

The Fund returned 24% in 2022, or 17% at constant exchange rates, due to the rise in the dollar versus sterling during the period. Therefore, we estimate the 17% constant exchange return comprised a 3% book value decline offset by 19% from rising price-to-book valuations and a 1% contribution from M&A. The latter followed Berkshire Hathaway's \$11.6bn all-cash acquisition of Alleghany Corporation, a long-term top-10 Fund holding. Although price-to-book multiples have increased this year, we believe this is fully justified by the significant rise in the earnings power of our companies. This is discussed in more detail below.

In the end, what drives the Fund's long-term performance is our companies' ability to compound book value-per-share and dividends at an attractive rate over time. Over the 24 years of the Fund, we estimate this metric has compounded at approximately 10% per annum, which is almost identical to the Fund's performance over the same period. Constructing a 30–35 stock diversified portfolio focused on speciality underwriters that can deliver double-digit book value-per-share growth over time remains core to our investment process.

Market Review

Given recent experience, perhaps it is not surprising that each passing year feels like it has again broken climate-related records, alongside a barrage of ever more unusual weather events. 2022 insured catastrophe losses are estimated at c\$130bn. Hurricane Ian, which made landfall in September, initially in southwest Florida and, two days later, in South Carolina, was the largest event, representing just under half of these losses. Last year was the fifth year of elevated catastrophes in the past six. Managing and insuring risk is becoming ever more complex, due to rising climate change volatility, a proliferation of cyber threats, increasing jury verdicts and social inflation. In a world of relentlessly increasing risk, the value that the insurance industry provides has never been greater.

Risk continues to be re-evaluated and repriced globally, which is providing excellent growth opportunities for our companies. The strong underwriting environment that began in 2018 continues. These robust market conditions are well illustrated by the quarterly Global Insurance Market Index, published by insurance broker Marsh, which is skewed to the medium/large commercial market. In 2019, rate rises progressively increased from 3% in Q1 to 11% by year-end. Pricing accelerated throughout 2020: 14% in Q1 2020 rising to 22% by Q4 2020, the greatest increase since the survey began. In 2021, rates again rose by mid/high-teens percentages, resulting in a third year of rate-on-rate increases. Momentum continued into 2022, with rate rises averaging high single-digit percentages despite some tough comparatives. Over the last three years, in each of the last six quarters to Q3 2022 (our last data point), compounded rate rises have been a significant 45–50%.

Reinsurance pricing increases, particularly for catastrophe risk, have lagged price rises in the primary market, despite the abundance of catastrophe losses that have occurred in recent years. Poor profitability can only persist for so long, and, in 2022, we saw the start of a long-overdue turn in the reinsurance market. We were already witnessing meaningful rate rises pre-Hurricane Ian, given a growing demand/supply imbalance that many commentators measure in the tens of billions of dollars (industry analysts Dowling & Partners estimate \$50bn-\$80bn). Rising general inflation means reinsurance buyers typically want 10–15% more cover at their next renewal just to cover their existing books of business. This increased demand is happening at the same time as a growing number of companies have reduced their risk appetites, with some exiting the market entirely. In mid-September, before Hurricane Ian hit, our base case was for catastrophe reinsurance pricing to rise 15–25% in 2023. Hurricane Ian proved the last straw and pushed a stressed reinsurance market into a dislocated one.

Global Insurance Fund continued

Market Review continued

About 50–60% of property catastrophe business is placed at the 1 January renewal, with a bias to European and global accounts. Early reports suggest the market underwent a hard reset on 1 January 2023. Risk-adjusted rate increases were a headline-grabbing 20–70%, on average, led by North America at 50%, which had another year of elevated losses in 2022, most notably Hurricane Ian. European rates rose 30–40%, with other regions up 20%+. Howden's Global Property-Catastrophe Risk-Adjusted Rate-on-Line Index rose by an average of 37% on 1 January (versus a 9% rise a year ago), the biggest year-on-year increase since 1992.

Potentially even more significant to prospective profitability was a material change in terms and conditions that led to a wholesale restructuring of reinsurance contracts. Primary insurer retentions have moved significantly higher, putting reinsurers further away from the risk, and policy wordings have been tightened. Reinsurance coverage is returning to focus on core perils such as hurricanes and earthquakes, and less so on wildfires, hailstorms, strikes and civil commotion risks. This momentum will likely continue throughout 2023 (and possibly into 2024), with Japanese risks largely renewing on 1 April, US domestic accounts at the mid-year ahead of the Atlantic hurricane season and Australian accounts on 1 July. We believe this renewal represents the start of a multi-year reinsurance market correction, not the peak.

As a result of the growing optimism over reinsurance rate rises for 2023 and beyond, one might expect new capital to be taking some interest in the abundant opportunities ahead. We saw in past hard markets, notably after the World Trade Centre loss in 2001 and Hurricane Katrina in 2005, a wave of start-ups. This is simply not happening this time around. Those start-ups were typically sponsored by private equity, which is currently showing no appetite for funding balance sheet-underwriting businesses; their attention is focused on capital-light insurance brokers. Capital providers see little reason to roll the dice with Mother Nature. The abundance of losses in recent years, combined with the broad declines in financial markets in 2022, means there are other places to put money to work where they perceive risk-reward profiles to be more favourable.

We entered 2022 expecting book values to grow by low double-digit percentages over the year, as we achieved in the preceding two years. As discussed above, marked-to-market losses led to a short-term book value decline in 2022, but this was more than compensated for by a material step up in the earnings power of our companies. For our portfolio, every 1% increase in investment yield is worth an additional 2% of book value growth. Non-life insurer balance sheets are dominated by cash and short-duration bonds of two to three years, given the need for liquidity to pay claims and the fact companies do not want to double up their underwriting risk with 'exciting' things in their investment portfolios. We had to revise up our 12-month book value growth estimate three times over 2022, from 10%+ at the outset to 16%+ in our last revision in November. This estimate includes an investment return assumption of 4.25%. Many of our companies are reporting new money yields above 5%, so our assumption could well prove too conservative should US short-term bond yields stay at or increase from current levels.

As well as an element of conservatism on the investment yield, we have also assumed no change in underwriting margins. We do expect premium rate increases to continue to exceed loss-cost inflation for the foreseeable future, which would result in higher margins. However, we allow some extra prudence here, given that we expect our overall portfolio to write a little more catastrophe risk in 2023 than in recent years. This is due to the significant rise in pricing discussed above and the dry powder many of our companies continue to have to lean into this opportunity.

Fund Activity

The Fund continues to have a low turnover, and we did not change our overall positioning materially during the period. We sold our holding in Alleghany following its acquisition by Berkshire Hathaway. The proceeds were broadly reinvested including into two small new positions.

Trupanion, a North American pet insurer, has been on the Fund's radar for several years because long-term Fund holding RenaissanceRe Holdings was an early investor in the company. We have attended numerous Trupanion investor events, held after the Berkshire Hathaway AGM in Omaha, and met with management twice in London. We initiated a position following a significant de-rating of the stock; many investors (wrongly, in our view) perceived the stock as more of a growth technology company. Trupanion is well-placed to benefit from a prolonged market tailwind as the very low penetration of pet insurance in the US starts to catch up with other more developed markets. International expansion in countries such as Japan, in partnership with Aflac, another Fund holding, adds further optionality.

In May, we bought a holding in Hagerty. The North American-centric insurer of collector cars has evolved into a global automotive enthusiast brand and is the world's largest membership organisation for car lovers. Whilst Hagerty only went public in 2021, we have observed the company for many years owing to its close relationship with its underwriting partner and investor Markel, a long-term Fund position.

Market Outlook

The reinsurance market dislocation will most likely underpin the ongoing rises in primary insurance pricing, given reinsurance costs are borne by the insurers. After four to five years of premium rate hardening, we have seen an inevitable slowdown in the pace of insurance price increases in recent quarters. However, looking forward, we expect some insurance pricing will re-accelerate, especially for property risk. This will further add to the already abundant underwriting opportunities for our companies.

Rising inflation is a tailwind for insurance demand, as a lot of insurance is priced off asset values, company payrolls and revenues. Therefore, as inflation moves through the system, premium revenues adjust higher. When combined with ongoing premium rate increases, this should result in robust revenue growth for our companies over the next few years. This contrasts with the recessionary fears affecting many other industries. Given these tailwinds, the already excellent underwriting environment is set to improve further. It is a good time to be an underwriter.

Turning to the other side of the balance sheet, the investment portfolios of our companies are highly liquid, with lots of cash and typically two- to three-year-dated bonds, so the rise in short-term bond yields in 2022 is already starting to flow into earnings. More material increases in investment income should come as we move through 2023 and 2024.

The book value growth of our holdings over the 24-year life of the Fund has compounded at c.10% per annum. Recent book value growth, in 2020 and 2021, has been in line with this historical average, which the market valued at the time at a price-to-book of around 135%, similar to the average valuation multiple of the US industry since the Fund's launch. Paying 135% of book value for 11% growth is a cash-on-cash return of 8%. Today, the market is valuing our mid/high-teens expected book-value growth at a US industry multiple of 200%. For simplicity, if we assumed 18% book-value growth ahead, this would be a 9% cash-on-cash return. Therefore, we believe investors are getting more for their money today than they have in recent years. This is even more noteworthy, given non-life insurance is a defensive sector in an increasingly uncertain world.

The Fund's historic 10% book-value growth, if matched by Fund performance, doubles investors' money in around seven years. At a US conference in November, our portfolio manager, Nick Martin, met with Bill Berkley, who founded WR Berkley in 1967. From nothing, he has built a \$20bn company with returns that have far exceeded the S&P 500. At the same time, he has generated billions of dollars of wealth for his family and his investors. Bill said that the next two to three years are likely to be some of the best he has seen, based on his 55 years of experience. It is rare to have well-established underwriting profitability, which may well improve further, at the same time the industry is seeing a significant rise in investment returns. Bill noted he is "exceptionally excited about the opportunities for the next few years", which is quite something for an insurance executive renowned for his conservatism.

Looking ahead, we are set to enjoy some of the strongest earnings power in the Fund's history. We look forward to continuing to update investors on the progress of our companies in the coming months and years ahead.

January 2023

Global Technology Fund

Fund Performance

2022 proved to be a highly challenging year for the technology sector: the Dow Jones Global Technology Index returned -34.8%, giving back most of its gains from 2020 and 2021. This represented the sector's weakest absolute performance since 2008, and its worst relative performance versus the MSCI All Countries World Index since 2002.

The Fund (Class I USD Distribution Shares) returned -39.3% during the year. Its relative underperformance was driven by a combination of style headwinds – the Russell 2000 Technology Growth Index fell 38.8% while the Russell 2000 Technology Value Index fell 23.7% – as tighter financial conditions weighed on growth assets, Apple's outperformance and a few stock disappointments due to macroeconomic headwinds or company-specific issues that weighed on results and/or outlooks. Given market weakness, our cash holdings and NASDAQ put options positively contributed 158bps and 77bps, respectively, to relative performance.

At the stock level, our relative underweight position in Apple, although it fell 26.4%, still did better than the rest of the market and was a significant detractor to relative performance (-78bps). This was despite it being one of our largest absolute positions (averaging 6.25% of NAV versus c.17.1% in the benchmark). Apple was also partly responsible for the underperformance of Snap and Unity Software (two top-10 detractors) following a privacy-related change to IDFA (Identifier for Advertisers), which resulted in a significant loss of 'signal' at social media and mobile game companies reliant on advertising revenue. Higher risk-free rates, and some macroeconomic weakness, weighed on cloud software and long-duration stocks like Atlassian, Elastic and CrowdStrike, which suffered further, and significant, valuation compression. Weakness in the PC market also took its toll on a number of semiconductor stocks, including Advanced Micro Devices (AMD) and Marvell Technology.

Performance versus the benchmark was also hurt by the relative outperformance of incumbents, such as IBM (+11%) and Oracle (-4.6%), where we had zero exposure. While these assets have benefited from safe-haven status and the rotation towards value stocks, we continue to eschew them as legacy vendors on the wrong side of technological change and IT budget migrations. Meanwhile, longer-duration, more speculative areas, such as GS Expensive Software (-57.8%) and GS Non-profitable Tech (-63.3%), showed pronounced weakness as higher rates and recession concerns took their toll.

The Fund was ranked third quartile versus its Lipper peers over the year (66th out of 102 funds). This showing largely reflected our investment style, in particular, the underperformance of growth relative to value (especially the compression of multiples in software), our underweight position in Apple and the relative outperformance of semiconductors – the latter can disproportionately benefit the narrower-focused thematic funds (which tend to have high semiconductor exposure) that sit within our peer group.

Market Review

2022 was a challenging year for equity markets. Inflation numbers continued to come in higher than expected. This necessitated a robust policy response from central banks. They engaged in a steep, synchronised rate-hike cycle to prevent a wage-price spiral: more than 80% of central banks increased rates, higher than the previous peak of c.70% in 1995. Russia's invasion of Ukraine exacerbated energy and food price inflation, and China's reluctance to abandon its COVID-zero policy continued to disrupt supply chains. Economic growth slowed, and GDP forecasts were repeatedly downgraded during the year, which was reflected in company results and outlooks.

Given high inflation, a tight labour market and the desire to retain its credibility, the US Federal Reserve (Fed) embarked on its steepest tightening cycle since the early 1980s, cumulatively delivering 425bps of rate hikes by the end of the year to help counteract four-decade-high consumer price inflation (CPI) readings in H2 2022. At the start of the year, futures were pricing the Fed funds rate around 1% in June 2023, but this reached 5% by the end of the year. The cumulative impact of tightening began to be felt most acutely in the US property market. Thirty-year mortgage rates climbed from 3% coming into the year through 7% in October, while the National Association of Home Builders Market Index fell from 83 to 38, near Covid-era lows. Longer-term inflation expectations did, at least, remain well-anchored, with the University of Michigan survey of 5–10-year forward consumer inflation expectations remaining in the 2.9–3.1% range and market-implied 5–10-year forward break-even rates staying below 2.5%.

2022 was, thankfully, a period in which Covid-19 case numbers were no longer the key driver of markets. However, the lingering impact of the virus remained a driver of supply-side inflation, as China maintained its strict zero-Covid policy throughout. Unfortunately, geopolitical risks were still elevated as the war in Ukraine progressed, Russia shut off gas supplies to Europe and China dialled up hawkish rhetoric around Taiwan, as President Xi attempted to successfully consolidate power at the Communist Party Congress. The Chinese yuan fell to levels against the dollar not seen since 2008.

Nevertheless, political developments were supportive of some parts of the market, most notably in energy, clean energy, and defence. President Biden signed the Inflation Reduction Act into law, a slimmed-down version of the Build Back Better bill. The Act included combating climate change via tax credits aimed at reducing carbon emissions, helping households offset energy costs and promoting investment in clean energy production. The war in Ukraine has prompted a more aggressive move to accelerate clean power adoption to strengthen energy security. Since the Russian invasion, 19 EU countries have set new records for the use of renewable power, bringing total wind and solar power generation to 24% of EU electricity, while Russian natural gas flows are down more than 80% from pre-war levels.

Investors found themselves navigating a highly uncertain, macro-led market with a wide range of possible macroeconomic and market outcomes. Most major equity markets performed poorly: in dollar terms, the MSCI All Country World returned -18.4% and the S&P 500 returned -18.1%, its fourth-worst annual performance since World War Two, closing down by more than 1% on 24% of all trading sessions, the most since 2008. European, Japanese and Asian markets were similarly weak, with the DJ Euro Stoxx 600 (-15.2%), the TOPIX (-14.3%) and the MSCI Asia ex-Japan (-19.5%) all falling heavily (returns quoted in dollar terms).

Equity markets were not alone in delivering poor returns. For the first time ever, the S&P 500 and the US 10-year Treasury both lost more than 10% in total return terms in a calendar year. The US 10-year Treasury yield increased from 1.51% to 3.88% during 2022, delivering its worst annual return since 1788. By the end of the year, only \$25bn worth of bonds in the Bloomberg Global Aggregate Bond Index carried a negative yield, down from \$18.4trn just two years ago.

The significant change in the interest-rate environment weighed heavily on growth and longer-duration asset valuations. S&P 500 value stocks (-5.3%) recorded their biggest outperformance against growth stocks (-29.4%) since 2000, helped by the S&P Energy sector, which returned 65.4%. The Dow Jones Industrial Average returned -7% against the NASDAQ Composite's -32.5%. Capital market activity declined significantly during the year, with just \$98bn of total US equity issuance, down 82% from 2021's record of \$539bn.

Technology Review

The technology sector lagged the broader market as macroeconomic headwinds weighed on company results and outlooks, investors rotated into more defensive and pro-inflation sectors, and higher rates hurt growth and longer-duration asset valuations. The Dow Jones World Technology Index fell 34.8%.

Unlike 2021, mega-cap technology companies did not fare any better: the 'MFAANG' group fell 43%, underperforming the wider technology market for the first time since 2016. A slightly broader Big Tech group (Apple, Microsoft, Google, Amazon, Tesla, Meta Platforms and NVIDIA) shed c\$4.9trn of market cap between them, while the NASDAQ 100 returned -32.4%, its worst annual return since 2008 when it declined 42%. Despite this weakness, the technology sector made up 26% of the S&P 500's market cap at the end of 2022 and still accounted for 21% of its profits. The only areas of relative defensiveness were GARP (GS TMT GARP Index -15.2%-) and quality (GS TMT Quality Index -22.4%).

Weakness was pronounced across every major subsector, with the weakest performance in the internet subsector. It recorded its largest underperformance relative to the S&P 500 in the past 20 years. The NASDAQ Internet Index fell 47.6%, as consumer-focused internet companies were affected by slowing growth following post-pandemic normalisation and concerns about a recession. Advertising budgets have been pressured by the economic backdrop. Furthermore, social media companies have suffered market share losses to TikTok and experienced an ongoing headwind from Apple's IDFA privacy changes which curtailed the efficacy of ad targeting and measurement.

A meaningful slowdown in internet company revenue growth was widely anticipated, but investors were further disappointed by the lack of appropriate cost discipline at some of the largest internet companies, despite a stream of news flow about hiring freezes. The regulatory backdrop remained challenging, with the passing of the EU Digital Markets Act, aimed at ensuring large online platforms do not abuse their market power, and the Digital Services Act, which sets standards for accountability and online user protection, alongside the US Federal Trade Commission's more combative stance under Lisa Khan's leadership.

The semiconductor sector fell -34.9% (SOX Index). Weakness in handset and PC markets led to material near-term estimate reductions across the semiconductor sector, as demand softened, and inventories corrected. This weakness and slowing hyperscale cloud growth also raised concerns about data centre spending on semiconductors, although this did not show up in numbers or data centre capex indications and commentary. Auto and industrial markets remained relatively resilient, and companies with high exposure here generally held up well. Makers of semiconductor production equipment (SPE) struggled with supply constraints. Logic and foundry Wafer Fabrication Equipment spending outlooks remain robust, but memory capex was lowered to adjust supply, given softer end demand. Towards the end of the period, both semiconductor and SPE companies were proactive in cutting numbers, and many stocks acted well on poor results and weaker guidance.

Markets also had to contend with new rules set by the Biden administration that further restrict the sale of semiconductors and semiconductor manufacturing equipment to the Chinese market. The most detrimental rule is the new control on 'US persons', who are now restricted from specific activities that support the development or production of restricted integrated circuits (ICs) in China without a licence. The aim is said to be to limit China's access to advanced computing for its military modernisation, advanced intelligence collection/analysis and surveillance. However, the control will likely have wider ramifications, given that the precise end use of such items cannot be determined by the US person. Several SPE companies removed China from their guidance, but semiconductor sovereignty policies, including meaningful subsidies, elsewhere, such as the US CHIPS and Science Act, will likely provide longer-term opportunities, as will the continued balkanisation of supply chains as companies prioritise supply resilience.

Global Technology Fund continued

Technology Review continued

Corporate IT spending growth expectations tempered during the year. Chief Information Officer (CIO) spending surveys initially suggested steady mid-single-digit growth in enterprise IT budgets in 2022, followed by similar growth in 2023. However, these expectations were downgraded to low single digits by the end of the period, as financial conditions tightened and the economy slowed. Spending priorities did, however, remain consistent, with cloud, security, digital transformation, and artificial intelligence (AI) remaining the focus for most enterprises.

Against this backdrop, somewhat unsurprisingly hyperscale public cloud growth slowed. The aggregate cloud revenue growth eased from 36% in the June quarter to 32% in September, while guidance indicates a high-20s percentage growth rate for Q4 2022. This was a disappointment despite the public cloud's vast scale at >\$160bn annualised revenue run rate. Customers have optimised their spending, and a tighter IT budget environment has slowed the shift of existing workloads to the cloud, given the upfront costs involved in refactoring and re-architecting applications.

The software sector also had a challenging year: the Bloomberg Americas Software Index fell -33.5%. Diminished risk appetite and a higher rate environment led to a material valuation reset for the sector, with the overall sector EV/NTM sales multiple compressing by 63% during the year, according to Jefferies. The sector reached 5.2x EV/NTM sales, down from a peak of 18.8x in November 2021. The worst performance came from higher growth and unprofitable software companies: the GS Expensive Software basket returned -56.9%.

Legacy software companies held up better on a relative basis, given generally strong pricing power and undemanding valuation multiples, with the GS GARP software basket returning 24.7%. During the period, many software companies highlighted greater deal scrutiny, longer sales cycles and deal compression, and, in later months, found it more difficult to expand sales as customers retrenched. The impact was generally more pronounced in European and small/mid-sized business customers, further compounding currency headwinds, given software companies' relatively high non-US revenue mix.

Fund Activity

We started the year cautiously optimistic, having begun to tilt our exposure towards reopening plays and away from work-from-home (WFH) winners, which we had already greatly reduced in 2021. However, the market turned decidedly negative after Russia began its assault on Ukraine and inflation started to accelerate. As interest rates and inflation expectations went up, investors eschewed growth for value and inflation hedges, creating a substantial headwind for our investment style that would last for the rest of 2022.

During this period, we sold our remaining consumer and WFH-related stocks, including Netflix, PayPal, Uber Technologies, Everbridge, HelloFresh and DocuSign, and we reduced Meta Platforms to a much smaller position. We redeployed the proceeds into secular growth stories in semiconductors and software. We also added exposure to sectors where demand was strengthened by geopolitical events, such as cybersecurity (adding Palo Alto Networks) and clean tech (reinitiating positions in SolarEdge Technologies, Enphase Energy and First Solar in the second half of the year).

As the selloff deepened, we began to selectively initiate starter positions in a number of high-quality assets where valuations had pulled back to attractive levels. These included reopening plays, such as cross-border travel beneficiary Visa, a unique play on chip-level security with eMemory Technology, emerging market champion MercadoLibre, and we also added to our positions in companies primarily exposed to AI/data centre and autos' end markets, where spending trends remained the strongest. These were funded by reducing position sizes in consumer, internet and digital entertainment, for example Snap, Amazon, Airbnb, Adobe Systems and Alphabet, exiting Match, Naver and Unity, and selected high-growth software and cyclical stock such as Seagate Technology, Applied Materials and Tokyo Electron.

As the year progressed and valuations compressed, we effectively tried to upgrade the portfolio's growth profile. We re-initiated positions in high-growth/high-quality software stocks that had pulled back the most, such as Snowflake and CloudFlare, where valuations had previously been too rich, in our opinion, despite being cognisant that estimates will likely be revised lower as companies report Q4 2022 numbers and give preliminary guidance for 2023.

We also added to China recovery/reopening-related names. This included establishing a new position in Trip.com and increasing existing positions in Meituan Dianping, Alibaba, Tencent, Visa and Mastercard, as well as semiconductor/semiconductor equipment and factory automation names that should benefit from China's recovery. Having exited/reduced most of our consumer-centric and/or FinTech stocks at the beginning of the year, we re-initiated small positions in select consumer names, such as Block, Pinterest and Bill.com, as they pulled back and the toughest Covid comparators appeared to be behind us.

Semiconductor and semiconductor equipment combined remains our top overweight at 5.1% (although this includes most of our alternative energy/solar exposure, which accounts for 2.5–3%). Our data processing (payments) overweight has gone up to 4.4% (+0.6%), as we added to Visa and Mastercard and started small positions in Block and Bill.com. We increased our internet and direct marketing retail (e-commerce) overweight by 1.7% to 3.5%.

Our biggest sector underweight remains hardware, storage and peripherals at -11.1% (-9.7%), largely due to our Apple underweight. We are less underweight software compared to the beginning of 2022 (-2.6% versus -4%), although the underlying constituents have changed more materially as we rotated towards high-growth stocks.

The number of positions reduced from 70 in December 2021 to 67 at the end of 2022. Our top 10 holdings accounted for 37% of the Fund at the year-end, down from 41%, most of which was accounted for by the reduction in Alphabet (from 8.3% to 4.2%), while our weightings in Apple and Microsoft edged up due to outperformance, although we remain significantly underweight both compared to our benchmark. At year-end, we did not hold any single-stock call options. Previously, we have used these regularly to reduce underweight positions during particular periods.

The Fund's active share has gone up from 55.2% to 61.8%, its highest in some time. This is mainly due to our lower weighting in mega-caps (we hold 4% less Alphabet today than we did a year ago while Meta Platforms is no longer in our top 10). Many names are no longer in the top 10: Meta Platforms 0.9% (2.6% on 31 December 2021); Amazon 1.2% (2.4%); Taiwan Semiconductor Manufacturing Company (TSMC) 1.8% (2.4%); Marvell Technology 1.3% (2.1%) and Seagate Technology 0% (2%). They have been replaced by ServiceNow 2.9% (2%); KLA Tencor 2.5% (1.1%); ASML 2.2% (1.7%); Lattice Semiconductor 2.1% (1.3%) and HubSpot 2% (1.2%).

From a geographic perspective, our weightings in the US (73.8% versus 77.8% a year ago) and Europe (5% versus 7.7% a year ago) have fallen. They served as a source of funds, primarily for Asia ex-Japan (partly covering Chinese internet names and gaining exposure to China recovery/reopening), which now account for 12% of the portfolio (previously 9.3%). Other regions that saw modest increases in allocation included Japan, now 4.4% (3.4%), Middle East and Africa 3.2% (1.7%) and Latin America 1.6% (0%). Cash remains around the same 4% level at which we started 2022. It went up during the year but was then partially redeployed.

As we turned more cautious, we sold all our single-stock call options early in 2022. Deep out-of-the-money (OTM) NASDAQ put options – with minimal premium invested (<5bp) – were the only derivatives held at the end of the year (and at the time of writing in January 2023). The Fund uses options for efficient portfolio management to reduce the beta (downside volatility) of the portfolio or the relative risk of being underweight individual stock positions, especially growth stocks with large benchmark weights. As valuations of core technology stocks come down, and our confidence in the macroeconomic outlook improves, it is quite likely we will have periods where we hold no put options – with lower valuations, stock betas and downside risk should hopefully be lower too.

Market Outlook

2022 was highly challenging for technology investors. Inflation hit multi-decade highs, prompting central banks to deliver their most aggressive tightening cycle in a generation. Entering the year, the technology sector had outperformed the broader market in each of the previous eight years, with the sector's market cap rising from less than 20% of the broader market (based on the top 1,500 US stocks) to a peak of 38% in 2021. It has now come back to around 30%, according to Bernstein.

Market conditions entering 2023 lend support to an unusually wide range of potential outcomes, both good and bad. It seems likely the macroeconomic backdrop will continue to lead the market in the near term, although the main debate has moved to the timing and magnitude of a recession and its impact on revenue and earnings estimates, rather than the level of inflation and central banks' response to it, as was dominant in 2022.

Indeed, the outlook for inflation has improved, as recent data suggests many countries are likely already past the peak. Goods and energy prices should continue to exert disinflationary pressure while longer-term inflation expectations remain well-anchored, as indicated in consumer surveys and market-derived measures, such as range-bound 5-year/5-year forward breakevens.

Global Technology Fund continued

Market Outlook continued

However, the risk from inflation has by no means passed completely; monetary policy may still surprise to the upside or remain restrictive for longer than markets are currently anticipating. Services inflation and wage growth are still at levels inconsistent with central bank inflation targets, leading to uncertainty over the level at which rates peak and how long they will need to stay there. Indeed, Fed Chair Jerome Powell warned that the nature of the current cycle (strong corporate/consumer balance sheets and a tight labour market coincident with slower growth) might require a higher terminal Fed funds rate which may need to stay there for longer than normal. Minutes from the Fed's December meeting also indicated it is concerned about an 'unwarranted easing in financial conditions' while inflation remains 'unacceptably high'. It seems very unlikely there will be a Fed put under markets until inflation looks comprehensively curtailed.

The impact of tightening actions already undertaken is perhaps of greater concern. The median probability of a US recession in the next 12 months is 65%, according to the Wall Street Journal forecaster survey (October), as the lagged impact of tightening catches up with real consumer spending and ultimately offsets the spending of excess savings and a strong labour market. Recession signals abound. More than 85% of a range of US yield curves, from three months to 30 years, are inverted and Conference Board Leading Economic Indicators have dropped to levels indicating proximity to a recession.

The most widely forecast recession in history could still be averted, however, if the Fed is able to tighten sufficiently to bring the jobs/workers gap down to a level compatible with the 2% inflation target without causing a major spike in unemployment and a broader slowdown. A global slowdown also appears highly probable, with the IMF warning that a third of the global economy will be in recession this year – Europe may already be in recession. That said, the growth impetus from the reopening of the Chinese economy will be a meaningful offset to a global slowdown.

Weaker growth expectations and macro caution are showing up in lower IT spending expectations, compounded by concerns many companies overinvested during the Covid-period scramble to upgrade and expand their digital capabilities. Morgan Stanley's Q3 2022 CIO survey found 50% of CIOs still expect IT budgets to grow as a percentage of revenues in 2023, but this could still represent a slowdown in budget growth and a tough demand environment. Investors remain concerned about the severity of the reset required for 2023 revenue expectations, which has been made more challenging by greater levels of macro uncertainty, leading to a later-than-typical budget-setting process. We would like to see a conservative bar (expectations) but acknowledge there will likely still be a high degree of dispersion in forecasts, given the wide range of possible outcomes.

Cloud spending is a near-term concern, as the major cloud providers have seen a meaningful deceleration in growth rates. Moreover, any slowdown in cloud capacity expansion could affect the demand outlook for data centre-exposed semiconductor companies, which has so far held up well. The outlook for the rest of the semiconductor market is mixed, as inventory builds and demand slowdowns in PC and smartphone markets are worked through, although automotive and industrial demand remains firm, so far. We continue to watch closely for signs of a bottom, given the strong secular demand for semiconductor content across the economy.

Despite near-term concerns and the need for an estimate reset, there are many things to remain excited about in the sector over the longer term. Market narratives can change quickly should macroeconomic headwinds and/or exogenous risks subside. First, positioning is cleaner because investors have gravitated away from the technology sector as financial conditions have tightened. Second, this tightening has also helped to wash out some of the Covid-era pockets of speculative excess (cryptocurrency, SPACs, private holdings in daily-traded investment vehicles, etc). Third, valuations have returned to much more attractive levels, both absolute and relative to historical averages, even excluding the Covid period: growth internet valuations have reached multi-year lows on an EV/NTM EBITDA basis (10.2x) in the context of a 2010–19 average of 19.8x; software growth-adjusted EV/sales multiples sit at 10-year lows (0.28x versus 0.43x from 2014–19), and c.80% of Morgan Stanley's software coverage is trading below average 2022 P/E takeover multiples.

The semiconductor sector (SOX) has derated by more than 40% from its recent highs against an average cycle decline of 26% during the past seven years. Meanwhile, many technology companies have the potential to bring cost discipline to bear and deliver margin expansion, even in a more challenging macro environment. The scale of these potential improvements may be underestimated – a recent Goldman Sachs note suggested an illustrative private equity playbook can give an 800bps boost to software company free cash flow margins, for example. It is very possible that we could also move into the second half of 2023 with the Fed signalling the start of a rate-cutting cycle, which would support multiples as well as easier H2 2023 and H1 2024 comparisons, allowing for growth re-acceleration.

Near-term deceleration in cloud growth and greater scrutiny around corporate digital transformation budgets have not contained the speed and scale of innovation still prevalent in the sector. The rise of Large Language Models (advanced deep-learning algorithms capable of understanding written language) and the functionality they enable, such as ChatGPT, as well as AI advances in image recognition, are early indications of the potential for AI-driven reimagining of many activities and, in time, potentially whole industries.

Even amid tighter budgets, CIO spending priorities continue to focus on AI, cloud, cybersecurity, and digital transformation, given the productivity benefits and innovation these areas continue to offer. In view of these trends and the more attractive valuations today, we see a high degree of upside risk (largely driven by the growth prospects of underlying stocks) offset by elevated macro uncertainty and the need for further downward estimate revisions. The range of outcomes remains unusually wide in the short run, but the opportunities for the Fund over the longer term are as plentiful as ever.

Polar Capital LLP

January 2023

Healthcare Blue Chip Fund

Fund Performance

The Fund returned -5.8% (Class I US Dollar Accumulation Shares), outperforming the MSCI AC World Daily Net Total Return Health Care Index, which returned -6.1% (in US dollar terms).

Except for the US and Canada, geographic attribution was positive across all regions, with Asia Pacific ex-Japan, Japan and Europe being the biggest positive contributors.

In terms of market cap, large-cap stocks (market cap >\$10bn at the time of investment) were the primary driver of performance, with positive stock selection offsetting a modestly negative allocation effect. Mid-cap stocks (\$5bn-10bn market cap at the time of investment) were also positive contributors, with stock selection again being the key driver of performance.

On a subsector basis, selection was strong in healthcare equipment and managed healthcare, with allocation being the main driver in healthcare technology. Life sciences tools and services was the biggest drag on performance, driven by stock selection, followed by healthcare services (weak stock picking) and biotechnology (also stock selection). Cash and others were a modest positive for the year.

The three biggest positive stock contributions came from DexCom, Acadia Healthcare and Daiichi Sankyo.

DexCom, a US medical device company focused on diabetes, performed strongly in 2022. This was primarily due to growing excitement over the company's next-generation continuous glucose monitoring device, the G7. It was approved in the US in late 2022 but, more importantly, the product's addressable market continues to expand. We believe the G7 will have broad utility not just amongst type I diabetics, but also amongst more prevalent type II diabetics.

Acadia Healthcare is a US-based company that provides behavioural health services. Sadly, there is a growing demand for Acadia Healthcare's products and services. However, the solid share price performance is more reflective of the company's consistent execution and a steady stream of earnings upgrades.

Japanese pharmaceutical company Daiichi Sankyo had a very productive 2022, not just in the clinic but also commercially. The company reported several impressive clinical updates in oncology. It also delivered strong operational results, such that there has been considerable upward pressure on near and medium-term revenue forecasts.

The three biggest negative relative contributors were Avantor, Merck & Co and Bio-Rad Laboratories.

Avantor and Bio-Rad Laboratories both operate life sciences tools and services, a subsector that struggled in 2022 following a strong, COVID-19-driven 2021. Unfortunately, both materially underperformed their peers, but for very different reasons.

Avantor's disappointing performance started following its Q2 2022 financial results, where the company referenced COVID-19 revenues rolling off, foreign-exchange headwinds and lower-than-expected contributions from recent acquisitions MasterFlex and Ritter GmbH as the reasons for its weak operational performance. With downward pressure on earnings, the stock derated heavily during the year.

Bio-Rad Laboratories, by contrast, was operationally sound in 2022, with the share price performance primarily reflecting two things. First, concerning and confusing messaging around M&A; second, a significant fall in value in the company's strategic stake in German life sciences tools and services company Sartorius.

The Fund did not own Merck & Co, a stock that performed extremely well. This performance was driven not just by strong commercial execution in oncology and vaccines, but also by value-added business development, as the management team looks to sustainable growth and a higher terminal value.

Market Review

Global equity markets experienced a tough start to 2022, driven by inflationary pressures, rising rates and the prospect of economic recessions. US inflation jumped to over 8%, and the US Federal Reserve announced its first 75bps rate hike in decades in a bid to cool inflation, having already raised its base rate by 25bp and 50bps earlier in the year. As a result of the macro dynamics, there was a rotation as portfolios reduced their exposure to high-growth areas like technology or areas that carry high terminal values, such as small and mid-cap biotechnology and medical devices. Key beneficiaries of the rotation were more value-oriented sectors like financials, basic resources and energy.

Turning to healthcare, the sector steadily outperformed the broader market during the reporting period. It was helped by the switch to defensive sectors, especially those that sit higher up the market-cap scale. Looking closely at the subsectors, healthcare distributors, managed care and pharmaceuticals/large-cap biotech all performed well. Distributors' steady, defensive earnings profiles made them a key pick for investors seeking shelter in a stable, non-cyclical industry. The positive rerating seen in the managed care sector reflected both strong underlying business dynamics and a favourable macro backdrop, given the industry benefits from rising interest rates. Finally, the pharmaceuticals subsector performed well, thanks to its defensive nature coupled with its ability to absorb inflationary pressure better than other subsectors.

By contrast, the healthcare supplies and equipment subsectors experienced a challenging 2022. Healthcare supplies, dominated by economically sensitive areas such as dental and ophthalmology, struggled due to concerns over consumer spending power. Equipment also had a difficult year. Margins were affected by inflationary pressures and revenues were hurt by a slower-than-anticipated recovery in patient volumes. Lastly, life sciences tools and services stocks were richly valued entering 2022, having been major COVID-19 beneficiaries. The subsector experienced a material derating, as investors fled expensive assets and started to assess the implications of both a slowing biotechnology funding environment and the tailing off of COVID-19-related revenues.

Politics is always an important investment consideration in the healthcare sector, and, on 16 August 2022, the Inflation Reduction Act (IRA) was signed into US law. The Act contained many healthcare provisions designed to ensure and improve access to care and reduce the out-of-pocket costs US seniors face with their pharmaceuticals. The provisions on access to care – extending health insurance subsidies to reduce monthly premium expenses for the next three years – are a clear positive for the healthcare industry as more citizens will stay inside the system. On the drug pricing front, the Act was more balanced, with the opportunity for greater drug volumes perhaps tempered by provisions that could modestly reduce the net present value of drugs.

In summary, however, the IRA is a boon for the industry, with major political risk in the US now in the rearview mirror. Looking back over the past three decades, greater clarity over the US political landscape has been a catalyst for outperformance by the healthcare sector. We do not see this being any different.

Fund Activity

In terms of subsectors, compared to December 2021, the Fund continues to be overweight biotechnology, healthcare facilities and healthcare supplies.

We remain constructive on biotechnology despite anecdotal evidence of a less generous funding environment and higher interest rates reducing the terminal value of early-stage companies. Having derated materially, the subsector's pace of innovation and its ability to address high unmet medical needs remains intact. We believe these attributes should ultimately drive value creation for shareholders.

Healthcare facilities should also experience more favourable conditions in 2023 as COVID-19 becomes endemic and labour costs start to ease.

Given the macroeconomic uncertainties, the Fund reduced its material underexposure in pharmaceuticals, from -16.5% in December 2021 to -9.6% in December 2022. Pharmaceutical companies continue to innovate and could yield interesting growth opportunities while remaining a historically defensive industry.

In terms of the most significant changes compared to 2022, the Fund has relative underweights in healthcare equipment, distributors and managed care, all of which were relative overweight positions 12 months ago. The near-term operating environment remains challenging for the healthcare equipment sub-sector, although there is hope that patient volumes are starting to pick up and supply-chain challenges are easing. Meanwhile, after strong performances in 2022, earnings multiples for distributors and managed care have re-rated, leaving less room for upside.

Market Outlook

2022 was extremely challenging for equity markets for reasons that included rampant inflation, rapidly rising interest rates and widespread quantitative tightening. It might be of little consolation that the healthcare sector comfortably outperformed the broader market, but continued outperformance from here is a distinct possibility. Industry fundamentals are strong, the demand for products and services is incredibly robust, innovation continues unabated, valuations are attractive and the macroeconomic backdrop is extremely supportive. With the relative performance of the sector versus the broader market starting to turn positive in the US, the recent healthcare reform update could be just the catalyst the market is looking for ahead of a potential period of sustained outperformance.

January 2023

Healthcare Discovery Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Share Class) returned -23.8% in 2022, outperforming the MSCI World Small Cap Health Net Total Return Index, which returned -29.1% (in US dollar terms).

While the Fund outperformed on a relative basis in 2022, its absolute performance, down 23.8%, weighs heavy on us. Though we are disappointed with our absolute result, we take consolation from the fact that we delivered a third consecutive year of relative outperformance since the Fund's launch in 2020.

For the year in review, we generally did well across our investible universe, with our micro- and mid-cap stocks being the standouts. Our small-cap names came in somewhat behind, along with cash, although still made a positive contribution. We would have added to our outperformance by moving up the investible universe market-cap spectrum; not allocating more in mega-caps was our chief market-cap detractor.

Looking at subsector performance, we fared best in biotechnology. Here allocation, selection and currency effects were all positive, especially selection, which was helped by Pfizer's bid for Biohaven Pharmaceutical Holding, a top-10 position and an overweight for the Fund. Healthcare supplies came in a solid second, although our relative performance was slightly hurt by not having even greater exposure; our position in Lantheus Holdings more than made up for it on the selection side of the ledger. Our healthcare equipment exposure detracted from returns. Stock selection – specifically owning Tandem Diabetes Care and Omnicell – was a headwind. Here we bear responsibility for not having crystallised previous outperformance. While we were keen to maintain these positions for development opportunities yet to be realised, the market volatility was such that complete exits in these stocks would have served us best.

From a regional perspective, our North American stock selection was most helpful while our exposure to Europe hurt. The latter was more due to selection than allocation, although currency movements helped to soften the blow. Overall, currency effects were positive for the portfolio. M&A was active across the wider market as well as within healthcare. Portfolio bids received over the year also included Meridian Biosciences, a healthcare supplies company.

Market Review

2022 will likely be remembered by investors for being dominated by macroeconomic conditions, with a side-helping of geopolitics. The year came down to a battle between rising interest rates to cool aggregate demand versus the expanding balance sheets of commercial banks, households, governments and companies.

To date, a compression in earnings multiples has led a forecast earnings recession in 2023 – despite the wall of investor worry for each quarter, earnings mostly held up for 2022. Even so, it was hard going. Market factor rotation remained high and unnerving, as investors sought to parse varying risks and opportunities from each incremental data point. Those areas with more defensive attributes, such as healthcare, were increasingly deemed attractive as the year progressed, albeit the energy sector was the clear overall winner.

Within the healthcare sector, biopharmaceuticals and managed care fared best. The healthcare facilities and medical equipment subsectors struggled to recover, with the former hit by staffing and rising wage costs, the latter by fewer procedures being carried out as well as, in some instances, providers scrutinising in costs for medical equipment.

The pharmaceuticals and biotechnology areas also had the benefit of the parting of some clouds, in the short term at least, as drug pricing legislation was endorsed by the US Congress as part of the broader Inflation Reduction Act. In addition, the second half of the year brought better clinical data, specifically in areas of unmet need such as the central nervous system, including schizophrenia and hopeful progress on Alzheimer's. The regulatory pathway was convoluted for some drugs, especially those that went to an advisory committee panel, although approval outcomes tended to trend better as the year progressed.

While smaller-company investors witnessed some reprieve from the market's June lows, including what was hopefully the low for healthcare, particularly for biopharma investors, the ebb and flow of economic data and related market effects resulted in a large number of healthcare stocks trading water into the year-end, with more Grinch than Santa on offer.

Fund Activity

Market rotation was a feature of 2022. Investors climbed up and down the wall of worry over inflation and the consequences for interest-rate policy. This had implications for sectors and across the market-cap spectrum as we approached and exited each earnings season.

As smaller-company investors are aware, late-cycle is not the preferred market backdrop for those investing down the market-cap scale. As such, we mostly maintained a defensive tilt while at the same time trying to pick our trading spots when things went to extremes, on both ends of the trade spectrum. In retrospect, selling what worked in one month and recycling the proceeds into what had underperformed the next was one of the better-performing strategies across the market last year. Admittedly, that is a much easier task for large and liquid stocks versus those further down the market-cap scale.

Fund Activity continued

In general, we mostly stuck to our knitting, focusing where the fundamentals were strong and valuations supportive, though often in the face of unnerving market conditions. We did well to mostly avoid exposure to the problem of higher direct staffing costs in acute care settings, although we should have seen the knock-on effect for healthcare equipment and technology and the resulting softening of procedures and budget constraints.

There were successful equity raises for companies that delivered sound clinical data, regulatory approvals or other positive milestone events. For instance, we participated in equity raises by both Revance Therapeutics and Zealand Pharma, adding to our existing positions. Both companies, while very early in their respective product opportunities, subsequently performed strongly.

While we did completely exit select positions – for instance, Establishment Labs (healthcare supplies) and Repligen (life sciences tools and services) – to crystallise profits and recycle them elsewhere, we kept portfolio changes to a minimum. We preferred to manage positioning around the edges in the constant to and fro of market moves and against the backdrop of a post-pandemic recovery in the global healthcare delivery system.

Market Outlook

Peak fear may be priced in over the near term, suggesting Christmas may come late for investors, especially those down the market-cap scale. This could result in a positive 'January effect' following a heavy tax-loss-selling year-end.

Looking further ahead, the path for 2023 likely lies more with inflation and the subsequent steepening of the yield curve, with the former now rolling over and inflation expectations remaining firmly anchored. Meanwhile, the market awaits signs of cooling on the employment front.

Although extraordinary tightening by central banks overshadowed 2022, this cycle is likely to be a conventional profit recession, not a credit one. Unlike after the global financial crisis, balance sheets will not need to be rebuilt after the recession, so the recovery should be relatively quick. In the interim, inflation is a much more important driver for equity markets than the fall in earnings, because of the changes to the equity/bond relationship over the past four years. The last major period when inflation declined precipitously – the 'Volcker shock' – saw the Russell 2000 sharply outperform the S&P 500.

Bringing it back to healthcare, those areas with defensive attributes that outperformed during 2022 may come under pressure as we enter 2023, although this may prove to be short-lived as equity market conditions, at least until mid-year, are likely to remain tricky, especially as we approach the upcoming reporting season.

More broadly, the challenge for earnings is that new orders are starting to fall while inventories have continued to build, driven by the excessive demand bubble that was created over the pandemic. This should continue to normalise, pressuring earnings for many industries. For healthcare, the situation is largely the opposite. Much of the sector saw growth pressured during the pandemic, but utilisation levels are finally starting to increase as healthcare providers continue to adapt in a difficult environment.

Finally, the discount for smaller companies relative to their larger brethren has approached extremes not seen since the aftermath of the late 1990s' technology bubble. Adding in record M&A activity, especially within the healthcare sector, this suggests investors should at least begin to revisit their smaller-cap exposure, while for those already invested down the market-cap scale, these factors offer welcome comfort.

In sum, 2023 is likely to bring a variety of curveballs for equity investors. However, we will remain focused on the long game and on those quality smaller healthcare companies, especially those with experienced leadership, being overlooked amid the cacophony of market noise.

Polar Capital LLP

January 2023

Healthcare Opportunities Fund

Fund Performance

The Fund returned -9.7% (Class I US Dollar Distribution Shares), modestly underperforming its benchmark, the MSCI AC World Daily Net Total Return Health Care Index, which returned -6.1% (all figures in US dollar terms).

The sector significantly outperformed broader equity markets in 2022 – the MSCI ACWI Index returned -19.8% in US dollar terms – driven by the outperformance of large and mega-cap healthcare stocks.

The Fund's underperformance of the MSCI AC World Daily Net Total Return Health Care Index was due to being, on average, approximately 60% underweight large and mega-caps versus the index, thus having a significant overweight in small and mid-cap stocks. The Russell 2000 Healthcare Total Return Index, which is a US small and mid-cap healthcare index, returned -29.0% (in US dollar terms) in 2022. The dispersion between this index and the MSCI ACWI Healthcare Index is now over 50% for the past two years, which is unprecedented.

From a market-cap perspective, asset allocation was negative due to being underweight large- and mega-caps and overweight small and mid-caps, with the significant overweight in mid-cap stocks being the most painful. Stock selection was strong, but not enough to offset the negative asset allocation. Stock selection was positive for mid-caps and negative for large-caps. From a geographic perspective, asset allocation was a small positive while stock selection was negative, driven by the US and Europe. Again, the latter was caused by the small and mid-caps held in the Fund, which are predominantly based in the US and Europe. Performance was positive in Japan.

On a subsector basis, asset allocation was negative and stock selection was slightly negative. On asset allocation, the positives were our overweight positioning in biotechnology and healthcare distributors and our underweight position in life sciences tools and services. Our overweight in healthcare supplies and underweight in managed care and pharmaceuticals were negatives. Stock selection was positive in healthcare equipment, biotechnology, healthcare technology, supplies and facilities, but negative in pharmaceuticals, life sciences tools and services, and distributors.

The most positive individual relative contributors were Zealand Pharma, Penumbra and Medley. Zealand Pharma announced positive clinical data and excitement built around its obesity pipeline. Penumbra moved higher as investors anticipated outperformance from three new product launches in 2023. Medley outperformed financial expectations with higher margins than expected.

The most negative individual relative contributors were Uniphar, Merck & Co and Quotient. Uniphar was driven lower by general weakness in small-cap stocks rather than negative fundamentals. Not owning Merck & Co was a drag on relative performance, with the company surpassing expectations in 2022. Quotient struggled due to market conditions, delays driven by COVID-19 and financing overhangs.

Market Review

The bear market that began in Q4 2021 continued throughout 2022, the key drivers for investors being concerns over inflation, tightening monetary policy, the war in Ukraine and China's zero-Covid policy. Inflation was much more of a problem than anticipated, first in goods and then in services. Wage inflation was ultimately seen as the most significant issue that central banks needed to address to prevent inflation becoming a long-term challenge. The realisation that central banks would have to raise interest rates to higher levels and maintain them for much longer to prevent a repeat of the 1970s halted several bear market rallies at different points during the year. The start of quantitative tightening was an additional drain on liquidity and another drag on equities.

Energy and low-beta, defensive stocks outperformed, while high-beta, small and mid-cap stocks suffered the most. The drivers of energy stocks were obvious, but margins in general became a major issue due to the cost pressures from inflation on companies. The large move higher in interest rates was expected to eventually push the economy into a recession, thus supporting the outperformance of more defensive stocks throughout the year.

The first half saw the most damage to equity markets, particularly small and mid-cap stocks, which were the first to sell off significantly, back in Q4 2021. With rates moving higher and liquidity tightening, the decline in small- and mid-cap stocks continued, with the weakness reaching an extreme in June. Stocks had a better period over the summer months, but the rally petered out multiple times, with the characteristics of the market at year-end mirroring those of the first half of 2022.

China maintained its zero-Covid policy until the end of the year when there was a complete shift in approach with the country opening up. This caused a huge spike in COVID-19 cases, as would be expected, and China is currently attempting to manage this situation amid hopes the virus will move toward a more endemic status, like most of the rest of the world. The reopening of the Chinese economy led to a significant rally in its stock markets at the end of the year.

Inflation has peaked, but whether it remains elevated or quickly subsides is critical. This will determine the outlook for monetary policy. Investors are most focused on the outlook for economic growth, as the delayed effects of the interest rate increases have yet to be seen in certain economic indicators, particularly statistics relating to labour markets, which remain very tight. This is the main area of concern ahead, as the current state of the labour market suggests that rates will need to move even higher and stay higher for longer, which is an ongoing negative for equities and a driver of the belief that a recession is inevitable in 2023. Given tight labour markets, the reminder of the challenge faced by central banks caused the weakness in markets at the year-end.

Market Review continued

Healthcare outperformed in the year although, as noted earlier, this was mainly due to large and mega-cap stocks, which are typically defensive, low-beta stocks. Small and mid-caps were hit hard, although they improved from mid-year onwards after a pick-up in M&A highlighted the valuation opportunity. Fundamentally, utilisation – the use of healthcare services – started to slowly improve over the year and should continue to rise through 2023, driving growth for the sector.

Fund Activity

Portfolio turnover was much lower than historical levels. This was due to the bear market, with moves lower typically more significant than would be expected in a bull market, thus a more patient approach was taken in regard to buying opportunities.

In the first quarter, we established new positions in Legend Biotech, Astellas Pharma, Swedish Orphan Biovitrum and Bayer, all stocks in the pharmaceutical or biotechnology industries. These new holdings were funded in part by the sale of Genmab. Bayer proved to be a short-term holding after expectations built too aggressively around one of its key pharmaceutical pipeline products. We increased positions in arGEN-X and Max Healthcare Institute, which represent the portfolio's only direct exposure to emerging markets through investments in India, with Max Healthcare Institute being the largest.

In the second quarter, new purchases included Daiichi Sankyo and Tenet Healthcare. The former was based on our optimism over its pipeline for products to treat cancer; the latter was based on a sum-of-the-parts thesis on valuation. We increased positions in Xenon Pharmaceuticals and in Zealand Pharma through a financing. Sales included Biohaven Pharmaceutical and Encompass Health. Pfizer announced its intention to acquire Biohaven Pharmaceutical for a significant premium, hence the sale of the position after this news.

In the third quarter, we brought Penumbra, DexCom and Becton Dickinson into the portfolio. All three are medical device companies and were added following a significant derating of the subsector in the first half of the year, with hopes of an improvement in overall utilisation being the rationale behind our increased exposure. We upped positions in Swedish Orphan Biovitrum, AstraZeneca, Max Healthcare Institute and Revance Therapeutics, increasing our holdings in the latter two through participation in a secondary offering and a financing, respectively. We sold positions in CVS Health, UCB, Envista Holdings and TransMedics Group and trimmed Horizon Therapeutics to fund these changes.

In the final quarter of the year, we built a new position in Intuitive Surgical, driven by optimism over its potential financial performance in 2023 and product launches in the mid-term. We increased our positions in Revance Therapeutics, Zealand Pharma, Alkermes and Xenon Pharmaceuticals. We exited Horizon Therapeutics, AngioDynamics, AtriCure and Surgery Partners. Lastly, we initiated a position in Indian company, Global Health through participation in the company's IPO and added further stock through the secondary market. The Indian hospital operator came to the market at an attractive valuation and generated a strong return into year-end.

Market Outlook

The key challenge for markets is the pressure on earnings, that will likely develop in 2023. The pandemic drove a bubble of spending that brought forward demand for many industries. Through the pressure of interest rate increases and inflation, this is now in reverse. New orders have fallen away dramatically and inventories are at elevated levels. New orders and inventories normally move in sync, as would be expected, but the correlation has broken down and this must normalise. This explains the earnings pressure likely ahead.

Looking at healthcare specifically, if anything demand dropped during the pandemic. This was for several reasons, but mostly due to healthcare providers managing the challenges of COVID-19. This led to a slowdown in demand and a significant build-up of backlogs across different areas. Evidence suggests utilisation is starting to move higher. This should be a positive for growth and highlight the strength of the industry's robust earnings profile, particularly relative to other industries in 2023. This could drive outperformance for the sector in the short to medium term at least.

Consolidation picked up in the sector versus 2021, with large companies taking advantage of the collapse in valuations in small and mid-cap stocks. This should continue to be a theme for the sector in 2023, particularly in pharmaceutical, biotechnology and medical devices. This would provide support for small and mid-cap healthcare stocks in the year ahead, despite the potential pressure on broader equities. Small and mid-cap stocks have lagged since the start of the bear market, with those that participated in the bubble that peaked in Q1 2021 being the weakest. Many of these types of stock will likely struggle for an extended period, as is typical when an equity market bubble bursts. However, the weakness in small and mid-cap stocks that were not in the bubble has created new opportunities at attractive valuations.

Healthcare Team

Polar Capital LLP

January 2023

Income Opportunities Fund

Fund Performance

The Fund (Class B2 I Sterling Accumulation Shares) returned 4.6% over the year. In comparison, our benchmark index, the STOXX Europe 600 Financials Net Return Index, returned 0.7%, while wider equity markets, as represented by the MSCI All Country World Total Return Index, returned -8.2% (all in sterling terms).

Market Review

2022 was a brutal year for investors. Equity and bond markets both fell sharply on concerns about the outlook for inflation, interest rates and growth. For perspective, the S&P 500 has only suffered one larger first-half fall since the Second World War (1962). However, even though equity markets enjoyed a positive final quarter, coupled with the fall in bond markets, it was the worst year for financial markets for over 100 years on some metrics.

Equity markets fell at the beginning of the year after highly-rated growth stocks were hit hard by the pivot by central banks, notably the Federal Reserve, and central bankers' realisation that they would need to raise interest rates more quickly than anticipated. Financials is inescapably a value sector, albeit there are many companies within it that trade at high valuations. Consequently, the sector benefited as there was a degree of rotation into value stocks, especially companies seen as beneficiaries of rising interest rates, such as banks.

Russia's shocking invasion of Ukraine in late February led to a further fall in equity markets and a sharp rise in commodity markets, as the ramifications of the invasion and the response by the US, European and other governments weighed on sentiment. However, equity markets inexplicably rallied sharply in March, to a level above where they had been prior to the war's outbreak. Equity markets then continued their sell-off, hitting lows for the year in October, before seeing some recovery over the remainder of the year.

Reflecting the change in outlook for inflation and interest rates, bond markets were also very weak over the year, as noted above. High-yield and investment-grade corporate bond spreads widened sharply. The US 2–10-year government bond yield curve inverted amid concerns around the impact of higher interest rates on growth as central bank rhetoric raised rate expectations.

Against this background, financials outperformed wider equity markets over the 12 months. The sector's strong outperformance in January through to the middle of February was driven by rising interest rates. However, the sector gave back a significant percentage of this outperformance following Russia's invasion and during the following months, as worries about the outlook for growth in the sector more than offset the benefit of further interest rate rises. Relative performance bottomed in August, and the sector outperformed for the balance of the year.

Banks, and to a lesser extent, insurance companies, drove the initial strong performance of the sector up until the outbreak of war. However, with concerns about the deterioration in the growth outlook, bank shares started to underperform. In contrast, insurance companies held up well due to their more defensive characteristics and strong tailwinds, namely a continued rise in insurance premium rates and M&A activity. This lifted insurance share prices, resulting in the subsector significantly outperforming the financials sector and wider equity markets over the year.

Diversified financials, which cover a broad spectrum of companies from stock exchanges, asset managers, investment banks and information service companies, performed poorly. This was due to a mixture of high valuation multiples coming under pressure and being sensitive to the level of equity markets or both. In particular, alternative asset managers, as well as fintech companies, both of which have performed extremely well over the last couple of years, suffered some of the sharpest share price falls.

Fund Activity

The Fund was relatively defensively positioned at the beginning of the period. Its cash level was close to its highest-ever level, excluding when the Fund launched. Furthermore, we had reduced the Fund's exposure to fixed income securities materially, as yields had fallen too far, in our view, and made the risk/reward of owning bonds much less attractive. We had also reduced the Fund's exposure to bank stocks.

Following the sharp sell-off in financial markets, we further reduced our exposure to bank stocks and other consumer financial stocks, the latter after the bounce in equity markets in March. Consequently, our exposure to bank stocks fell to 11.7% at the end of the year versus 19.4% at the start of 2022. We increased the Fund's exposure to more defensive areas of the sector, increasing our weighting in insurance stocks to 20.2%.

We sold holdings in several companies, including JPMorgan, East West Bancorp, Skandinaviska Enskilda Banken and Flow Traders, the latter because it fell short on ESG metrics following negative news reports. We bought a holding in Intercontinental Exchange for its defensive characteristics, but we later sold it after the company announced that it would be purchasing Black Knight, a company focused on the US mortgage market. We also sold our non-voting Schroders' shares following the announcement that the UK asset manager would be franchising them.

We established positions in Greencoat Renewables and First Republic Bank, both of which we have held previously. We added Greencoat because it is benefiting from the rise in energy prices and should prove more defensive. We bought First Republic following a sharp derating in its valuation to a more attractive level, albeit we later sold the stock following disappointing results. We also added to our holdings in Sampo and Beazley, the latter being a beneficiary of rising insurance premiums, especially for cyber risks where it has a market-leading presence. Lastly, we started a position in Hannover Rueck, a reinsurance company.

With the increase in bond yields and credit spreads widening, we significantly increased our exposure to the subordinated bonds of banks and insurance companies. In recent years, we have been cautious about AT1 securities, the most subordinated part of a bank's debt stack, but the pick-up in yields changed our outlook. We purchased new holdings in several European banks including Barclays, AIB Group and Caixabank. We also added to our holdings in the RT1 (Restricted Tier 1) securities of various insurers including Aviva, Pension Insurance and Rothesay Life. Lastly, we sold our Singapore Government bonds.

Market Outlook

The Fund undoubtedly benefited in 2022 from having sterling as its base currency. This partly cushioned the portfolio from the sharp falls in financial markets. Less positively, a significant percentage of the Fund's portfolio is invested in the subordinated bonds of financial companies. Reflecting the weakness across bond markets, these performed poorly: the iBOXX Contingent Convertible AT1 Index fell 10.5% over the year (in dollar terms).

The Fund's performance in the face of these headwinds largely reflected its defensive positioning. This was evident in our high cash weighting and our decision to keep the duration of the bond portfolio relatively short by using bond futures. We have reduced our bond futures hedges now that yields on subordinated financial bonds have increased to attractive levels, and we have also increased our exposure to subordinated financial bonds. However, our positioning in the equity portion of the portfolio remains defensive.

Nevertheless, we remain constructive on the outlook. This is despite shorter-term uncertainties that suggest caution, given the profoundly cyclical nature of the financials sector. As we have said many times, banks are more robust today, with much greater levels of capital and liquidity than before the global financial crisis. Perhaps even more importantly, the risk appetites of banks coming into this downturn imply much lower loan losses; in plain English, banks have made far fewer dumb loans than in previous cycles. The unknown for bank investors over the next year is the degree and duration of the downturn, and therefore the cost to bank profitability.

Will bank shares, along with wider equity markets, suffer further weakness in anticipation of a severe downturn, before recovering as investors realise this is not a repeat of the global financial crisis or the early 1990s downturn? Or will investors start to see through the shorter-term weakness and sense the value in buying banking shares due to their longer-term value, bidding up share prices to reflect their longer-term value and earnings potential?

Investors have stepped back from the banking sector because of the risk of a recession hitting short-term earnings. They have also somewhat ignored the longer-term improvement in banks' earnings from higher interest rates. For non-life insurance companies, however, investors seem willing to look beyond the short-term impact on their earnings. We have been constructive on the non-life insurance sector and continue to be so, albeit we are conscious that its strong performance in 2022 was in part due to its defensive characteristics. Nevertheless, there has been a material improvement in the underlying earnings of non-life insurance companies. This has come from better underwriting returns, due to higher insurance premiums relative to claims costs, but also from higher investment income. Understandably, investors have willingly paid higher multiples for these earnings streams. Similarly, reinsurance companies have performed well despite 2022 being another poor year for returns. They were helped by forecasts of a sharp rise in reinsurance premium rates, something we have seen in early 2023.

Against this background, the portfolio remains positioned in more defensive areas of the sector, notably non-life insurance and fixed-income securities, having increased our exposure to the latter. We continue to see favourable tailwinds for the financials sector while balance sheet strength should limit downside risks. Conversely, the Fund is likely to lag a further recovery in equity markets and the sector if the recent falls in oil and gas prices continue and the inflation and interest rate outlook moderates even more.

Polar Capital LLP

January 2023

Japan Value Fund

Fund Performance

The Fund (Class S Japanese Yen Distribution Shares) returned 11%, outperforming its benchmark, the TOPIX Total Return Index, which returned -2.5% (in yen terms).

Stock selection was the primary driver of the Fund's outperformance over the year. In addition, the Fund was supported by a style tailwind. Its value bias returned to favour against the backdrop of spiralling inflation and aggressive rate-hiking by central banks.

From a top-down perspective, the portfolio was exposed to several themes over the year that we expected to contribute to relative performance. These themes included digital transformation, policy change by the Bank of Japan (BoJ), and the post-pandemic reopening. The first two themes proved accretive, but somewhat surprisingly, our post-pandemic plays are yet to materially contribute to performance in many cases. We believe the disappointing performance by these names is explained by investors having focused on large-cap reopening plays with greater sensitivity to the much earlier reopening of Western economies. The full reopening of Japan did not occur until October. Therefore, many small and mid-caps with more domestic exposure are yet to participate in the reopening rally.

The largest individual contributors to performance were Lifedrink and Sumitomo Mitsui Financial Group (SMFG).

Lifedrink, a bottled water manufacturer, rallied after it became clear investors had underestimated the growth outlook for the business. The company is extremely cost-efficient and a cost leader within the industry. As a result of undercutting larger rivals, it has been able to expand its market share rapidly. Investors were buoyed by strong operating forecasts and further encouraged by news that rivals were raising prices for competitor products. Lifedrink already has a significant cost base advantage in comparison to its peers, and investors expect significant market share gains as the price gap between its products grows.

SMFG, the second largest Japanese banking group, modestly outperformed throughout the year after financial shares re-rated against the backdrop of aggressive monetary tightening by most central banks. In December, the BoJ surprised investors by adjusting the trading band for 10-year bonds, a move many investors perceived as the start of the Japanese tightening cycle. This resulted in strong outperformance by SMFG and other financial names, as expectations rose for further policy shifts in April once a new governor is appointed.

The largest individual detractors of performance were Minebea and Nohmi Bosai.

We purchased Minebea, a leading electronic components manufacturer, in April after a research meeting with the company. We concluded that the business was well-positioned to expand its already significant market share in the miniature ball bearing business, which we believe is substantially undervalued. Unfortunately, the ongoing weakness in semi-related industries, in addition to Covid lockdowns in China, led to inventory adjustments in the second half that caused the shares to underperform. However, we continue to see upside potential in the long term.

Nohmi Bosai, Japan's largest manufacturer of fire-safety equipment, underperformed throughout the year. Its underperformance was caused by falling profits due to the company's inability to pass on cost pressures to customers in the short term. The business remains on attractive ex-cash valuations. Furthermore, we continue to expect a reorganisation within the Secom Group. The company is a listed subsidiary of Secom, which also owns Nittan, the number three player in the fire-safety industry. This suggests potential for significant synergies under a restructuring.

Market Review

It was a year to remember for investors for the wrong reasons. On the back of two years dominated by the coronavirus pandemic, many had been anticipating a less volatile year in 2022. That was not to be the case. Russia's sudden and unprovoked invasion of Ukraine in the first quarter set the tone for the year.

The conflict has had many consequences, first and foremost being the devastating impact on Ukrainian citizens, but also the economic impact, which has been felt globally. The resulting volatility in energy and commodity prices caused further pressure on already high levels of inflation. Central banks globally had to move quickly to control spiralling inflation.

This theme largely directed sentiment throughout the year. All financial asset classes were affected, as investors continually underestimated the scale of the expected monetary tightening. As a result, value stocks significantly outperformed their growth counterparts throughout the year. In part, this was due to the impacts of higher interest rates, and in part, it was due to the extremely high valuation levels that growth stocks have been trading on in recent times.

Elsewhere, although the coronavirus pandemic had less of an effect on asset classes this year, the divergence in quarantine and social restrictions across nations led to a vast divergence in returns by geography. In China, the relaxation of the government's zero-Covid policy only happened in December. This led to strength in Asian equity prices during the fourth quarter.

Market Review continued

Japan's market followed the trajectory of global markets, despite not having the same extent of pressure from soaring inflation seen in other countries. Inflation did pass the BoJ's target of 2%. However, for much of the year, the central bank decided to take no action, citing the lack of correlation between inflation and wages. This stance changed in December when the central bank surprised investors by widening the permissible range of its yield-curve control policy from 25bps to 50bps. Despite attempts from Governor Haruhiko Kuroda to explain the change as linked to improving market functionality rather than tightening policy, investors viewed the move as a de facto rate hike.

The policy change had a significant impact on market direction, with banks and insurance stocks rallying into the year-end while real estate names suffered a double-digit decline. Exporters also came under selling pressure, as the BoJ move further accelerated the unwind of excessive yen weakness seen earlier in 2022.

On coronavirus, the government finally decided to end the remaining pandemic-related travel restrictions from October in the hope of reviving inbound tourism. The reluctance to end social restrictions quickly had a material impact on market leadership, with large companies typically outperforming smaller ones, given their greater exposure to overseas economies where restrictions were removed much earlier.

The year brought the tragic assassination of Shinzo Abe, Japan's former and longest-serving prime minister. He had been a leader on the global stage and a driving force in Japan's political landscape over the past decade. He will long be remembered for Abenomics and the great strides taken in evolving Japanese corporate governance. The enhancements he made in corporate governance continue to benefit investors in Japan. We believe this is likely to continue long into the future. The end results of such improvements will have many benefits, including increased shareholder returns, better capital allocation and a realignment of shareholder and management interests. The evidence that this continues to build is scattered across the market. The most high-profile case currently is Toshiba, a former failing conglomerate with large differences between shareholder and management opinions that recently put itself up for sale. There is still work to be done, but the transformation of one of Japan's worst offenders (management agency, fraud, poor capital management, voting scandals) is a sign of the great improvements currently under way.

Fund Activity

Portfolio strategy remained consistent during 2022, with new purchases focused on areas where we believe there is a mismatch between the quality of the underlying business and the share price performance. In addition to the long-term strategy of capitalising on Japanese corporate governance reforms, there were several short-term themes that emerged. Many of the new additions related to digital transformation, BoJ policy change and the post-pandemic reopening. One other notable development, in the fourth quarter, was the opportunity provided by initial public offerings (IPOs) coming to market at reasonable valuation levels following the dramatic change in the investment environment. The Fund participated in three IPOs during the fourth quarter (Socionext, Daiei Kankyo and Skymark Airlines), having only participated in three in the previous six years of the strategy.

Significant new positions over the second half of the year (please refer to the Polar Capital Fund Interim Report 2022 for a discussion of significant first-half purchases) included:

Tokai: we took a position in this supplier of linen products to hospitals and hotels following a research meeting with its management. The company had suffered a severe valuation de-rating, with the share price almost falling 50% from 2020 highs, despite earnings remaining largely flat over the course of the pandemic. At the time of purchase, the shares were trading on a 20% discount to book value, around 10x earnings, and with 50% of its market cap in net cash. These valuation levels, the company's sensitivity to a domestic post-covid reopening, and a management team that appears receptive to improving capital efficiency led us to initiate a holding.

Socionext: we elected to participate in the IPO of Socionext, a system-on-chip (SoC) designer formed in 2015 by the merger of the LSI SoC divisions of Panasonic and Fujitsu. The company's client base was initially heavily biased toward consumer electronics customers in Japan, but it has shifted focus under its new management team to design opportunities in higher growth fields (autonomous vehicles, data centres and smart devices) in overseas markets. Given the difficult stock market environment in 2022, particularly for semiconductor-related stocks, the company came to market at a very reasonable valuation (a low P/E ratio, a high dividend yield and a large net-cash position), hence our decision to participate in the deal.

Investment Manager's Reports *continued*

For the financial year ended 31 December 2022

Japan Value Fund *continued*

Tsumura: we elected to return to Tsumura, the dominant producer of kampo (traditional Chinese) medicine in Japan, having previously owned the shares in 2020. The share price has lagged the market rally over the past two years, leaving a very attractive valuation based purely on the value of Tsumura's Japanese business. However, the management team has been putting in place the building blocks for a full-scale entry into the much larger Chinese market in recent years. We expect this to become a more visible driver of revenues and profits over the next three to five years. With no sign of the Chinese business potential being reflected in the market capitalisation, we believe the medium-term risk/reward profile for the shares is exceptionally good.

Daiei Kankyo: we decided to participate in the IPO of this comprehensive waste management service provider, given its discounted valuation versus its listed peers. The company is expected to continue to expand, driven by both organic growth and further acquisitions in a fragmented industry. We believe the company may trade at a premium valuation in time, given its attractive growth outlook and strong ESG credentials.

Skymark Airlines: it returned to the Japanese equity market in December after years of large-scale restructuring following bankruptcy in 2015. The newly-listed entity is solely focused on the domestic aviation market, offering consumers a lower-cost option on popular routes dominated by full-service providers Japan Airlines and All Nippon Airways. We believe the relatively low competition in the domestic aviation market should mean Skymark can achieve attractive returns, given its superior cost competitiveness versus its larger incumbent competitors, who tend to view the Japanese market as a cash cow business.

The purchases were funded by sales of TDK, Mabuchi Motor, DTS, WingArc1st, SoftBank Group, Hogy Medical, Socionext, Lifedrink, Alps Alpine and Kissei Pharmaceutical.

Outlook and Strategy

2022 proved a difficult year for global equities. Major central banks abruptly shifted policy from an ultra-easy monetary stance to an inflation-fighting mode, leading to a sharp de-rating of equity valuations amid fears of a looming recession.

We believe the direction of global equities in 2023 will be determined more by earnings levels than valuation multiples, with the de-rating of equity valuations proving more of a 2022 story. At the time of writing, consensus expectations for global earnings are largely flat year-on-year, but the direction of earnings revisions in recent months is clearly downward. In combination with greater valuation discipline, we are optimistic that a market more focused on earnings will offer a rich environment for alpha generation by fundamental bottom-up stock-pickers.

Looking forward, it seems likely interest rates will peak in the coming months as inflationary pressures ease, although a return to a world of quantitative easing and negative interest rates appears highly unlikely. The lagged effect of monetary tightening and the loss of consumer purchasing power from the recent inflationary surge means the outlook for global growth is muted. After all, the benefits from Covid-related fiscal stimulus measures and economic reopening have largely run their course in major Western economies. The recent reversal of China's zero-Covid policy may prove to be a rare positive growth driver in 2023, although, over the very short term, it is likely to lead to further supply chain issues due to the rising number of Covid cases.

The outlook for the Japanese economy and its stock market differs somewhat from the global picture. As Japan lagged major Western developed economies in its response to the pandemic, many of the tailwinds to growth in 2022 will continue into the first half of 2023. Economic reopening, fiscal stimulus and the return of inbound tourism should all be supportive of another year of above-trend growth in Japan. The recent shift in policy by the BoJ and the upcoming change in the bank's leadership creates some uncertainty with regard to Japan's monetary policy stance, although we assume any policy changes will be small, incremental moves, given low-trend growth and the limited risk of a wage-price spiral emerging.

We believe the portfolio remains well-positioned to benefit from both the Japanese economic reopening trade and improved capital allocation in Japan. In terms of reopening, we believe the portfolio has substantial exposure to economic normalisation, with many of our domestic-exposed normalisation names not having yet recovered to pre-Covid levels. This could be an important market theme in 2023. On the capital allocation front, given the optionality from what we believe is the superior balance sheet strength of the portfolio, we were encouraged by numerous share buyback announcements in 2022 and notable increases in dividend guidance to March 2023. We continue to expect the ongoing corporate governance improvements to force companies to allocate capital more efficiently. The portfolio stands to benefit from this factor, given 45% of its market cap is covered by cash and investments, compared to the benchmark's marginal net debt position.

Polar Capital LLP

January 2023

North American Fund

Fund Performance

2022 was a disappointing year for equity investors. The Fund (Class I US Dollar Distribution Shares) returned -18.1%. Its performance benchmark, the MSCI North America Net Total Return Index, returned -19.5% (both in US dollar terms), the first decline since 2018 and the worst return since 2008. Returns for North American equities in real terms were even worse considering the high level of inflation.

Significant positive contributions to performance over the year came from The Travelers (insurance), Cenovus Energy (energy), T-Mobile (mobile telecoms), United Rentals (industrial equipment rentals) and LPL Financial Holdings (a provider of outsourced services to investment advisers).

In all cases, these businesses experienced improving fundamentals against a general market backdrop of slowing growth. Improving pricing and profitability backdrops drove strong performance for both the energy producers and insurers held in the Fund. T-Mobile benefited from market share gains, given its superior value proposition of a better-quality network at a lower price than competitors. It is rapidly expanding its free cash flow margins as it integrates Sprint following its acquisition. Despite a slowing economy, United Rentals enjoyed accelerating demand for its products. This was due to growth in areas of the economy where spending was previously somewhat depressed, such as infrastructure, commodities and manufacturing (the latter driven by some reshoring projects). LPL Financial's profitability has benefited materially from interest rates rising from historic lows, as it can again generate a yield on the vast customer cash balances it holds.

Another crucial factor that helped the strong performance of the above stocks is they also started from relatively depressed valuations – improving fundamentals were not priced in. We still like the long-term fundamentals and valuations for all these businesses. However, we have taken profits in some of the above names where the valuations had become less attractive and risk/reward profiles are less appealing than before. We reinvested proceeds into parts of the portfolio where the investment opportunity has improved.

Notable negative contributors to performance included Signature Bank, IAC (a media and internet asset conglomerate), MKS Instruments (a manufacturer of precision electronics), Meta Platforms (formerly Facebook) and Alphabet.

Signature Bank, a US commercial bank, was weak primarily for reasons related to its ownership of one of the dominant digital payment platforms. Although this platform has been a meaningful driver of deposit growth in recent years, the long-term viability of this part of the business is in question. However, it is only a small part of the bank.

It does not own any crypto assets or extend credit to firms in that market. Meanwhile, the loss of those deposits is likely to have a relatively small impact on profits. On a longer-term view, given the significant opportunity for profitable growth, a differentiated entrepreneurial business model and low valuation, we find the risk/reward profile attractive.

IAC has seen disappointing performance in some of its underlying assets. We still have high regard for the management team. However, given a less favourable disposition towards the long-term prospects of its assets, we felt the risk/reward profile was no longer compelling enough and decided there were better opportunities elsewhere in the portfolio, so we sold the position.

MKS Instruments, a manufacturer of highly specialised electronic components, has suffered from a significant slowdown in spending in the semiconductor equipment industry, an important end market for the company. This occurred shortly after the company made a large acquisition that increased financial leverage at what turned out to be the peak of the cycle. Although we have reduced our assessment of its long-term cash generation potential and are warier of its weakened balance sheet, we continue to like the long-term fundamental opportunity and find the valuation of the stock, on a cyclically-adjusted basis, very appealing.

Meta Platforms has suffered from well-publicised issues regarding increased competition, lower user engagement among some cohorts of the population and decreased efficacy of its advertising. This has happened at the same time as the company has highlighted its intention to invest a substantial part of its cashflows into building its metaverse capabilities, where the payoff is uncertain. Despite a valuation derating that somewhat reflected deteriorating fundamentals, we sold the position, based on our reduced confidence that it can achieve our long-term double-digit value creation hurdle.

Alphabet, a Fund holding for more than a decade, was weak. This was due to the softening outlook for digital advertising and, more recently, worries about potential new competition. We have concerns regarding the latter and have reduced the position size. However, we continue to be optimistic about the company's competitive position, growth potential, strong cash generation, balance sheet and valuation.

The Fund's relative lack of exposure to traditionally defensive sectors, such as consumer staples, utilities and pharmaceuticals, was a relative performance headwind, given the more stable performance of these sectors in such a weak market. We have struggled to find many investment opportunities in these areas that fit our long-term value creation and value criteria. We are struggling even more following their strong relative performance.

Investment Manager's Reports *continued*

For the financial year ended 31 December 2022

North American Fund *continued*

Market Review

If one excludes the rapid collapse and recovery in equity prices during and following the height of the COVID-19 pandemic, we believe 2022 marked the end of a very long bull market that started in 2009 in the aftermath of the global financial crisis. The strength of the bull market was underpinned by a prolonged period of ultra-low interest rates. This manifested itself in unusual and extreme phenomena, such as up to 30% of the stock of global bonds outstanding offering negative nominal yields towards the end of the last decade. Such extremes of monetary conditions may never be repeated in our lifetimes.

2022 saw a clear change in the investing landscape, with significant and rising inflation pressures and a rapid tightening of monetary policy. US inflation reached the highest levels for 40 years, marking the end of a long period of disinflation. Last year also witnessed the fastest increase in the Fed funds rate (425bps in nine months) since Paul Volcker was chairman of the Fed in the early 1980s, marking the end of a long period of declining interest rates.

Some of the more transient forces that have driven inflation over the last two years have now started to go into reverse and are acting as disinflationary forces. Inflation has peaked and will probably ease further as 2023 progresses. However, it seems unlikely to us that the world will revert to a sustained period of very low inflation and interest-rate levels akin to what we experienced for much of the last decade. Once inflation has become embedded into the system and the behaviour of companies, politicians, consumers and employees changes, it is difficult to get rid of. Moreover, there are some other forces that in recent times have been disinflationary which could now be inflationary. These include an over-supply of many commodities over the past decade turning into an under-supply following a decade of underinvestment, and the previously steady trend of globalisation being impeded as supply chains are reconsidered in the face of rising geopolitical instability.

It is sometimes instructive to compare an economic or market environment to periods in the past. Although there are many differences in terms of macroeconomic fundamentals compared to the early part of this century, we see many similarities in terms of market dynamics. Then, like now, we were experiencing the end of a roaring bull market, particularly in the highest growth stocks, which had been driven by a relatively small number of large-cap stocks and an investor mentality fuelled by overly lax monetary policy to buy (and hold) high (or stable) growth stocks at any price.

What followed then was a growing appreciation for sustainable cash generation and balance sheet strength, a realisation that the price you pay matters and a broadening of stock market performance beyond a handful of companies. We suspect, like then, market returns won't match the prior decade, but opportunities for active, value-disciplined investors to generate attractive returns will be bountiful in an investing environment that is not driven by cheap money and ever-expanding valuations.

Fund Activity

New stocks added to the portfolio hailed from a variety of industries. They included natural resource-exposed companies Cenovus Energy, Ovintiv and Teck Resources; the freight railroad operators Union Pacific and Norfolk Southern, First Republic Bank, RenaissanceRe Holdings (a reinsurer) and Amdocs (a provider of billing software and services to the telecoms industry).

The Fund saw a greater number of sales of existing positions than purchases of new ones, with the result that the number of stocks in the portfolio fell during the year. In particular, we exited a number of smaller positions in the Fund. At the year-end, there were 41 holdings. We expect the typical number of holdings to be between 35–50 in the future.

The Fund's composition is very different from the benchmark. The active share at the end of 2022 was 86%, meaning the overlap with the index was only 14%. The portfolio continues to exhibit a small- and mid-cap bias versus the benchmark. For example, at year-end, 54% of the Fund (excluding the cash position) was invested in businesses with market caps of <\$50bn. This compares to only 29% of the benchmark.

Given the value discipline that is a key part of our approach, it is unsurprising that the Fund also has a value bias versus the benchmark. For instance, the Fund's (historical) free cashflow yield is 6.3% versus the index at 5.6%. It has rarely had a higher free cashflow yield than this since 2016. The forecast portfolio-weighted price/earnings ratio at year-end was a reasonable 14.9x versus the benchmark at 17.9x. Other measures such as price-to-book, price-to-gross profits and price-to-sales are also meaningfully cheaper for the Fund versus the benchmark.

Simple near-term/historic quality metrics for the portfolio are appealing and reassuring, too. For example, as has consistently been the case since its inception, the portfolio converts net income into free cash flow at a much higher rate than the benchmark (114% versus 92%), has high free cash flow margins (18% versus 12% for the benchmark) and a strong balance sheet across a number of metrics (for example, net debt/EBITDA minus capex) of 1.3x versus 2.3x for the benchmark).

For a more detailed write-up of the rationale of some of our key buys and sells, please see our investment updates on our website.

Market Outlook

2022 was a challenging year for investors in American equities. Inflation reached multi-decade highs and became embedded across an array of goods and services. Inflation has peaked, but it seems unlikely that we will return to the prior period of anomalously low or negative interest rates.

2023 will likely be a tougher year for corporate profits, given potential headwinds affecting some areas of the economy. Those headwinds will impact some of the portfolio's companies, too. We take some comfort that this is not a contrarian view and is priced into many equities. We also take comfort from the fact that the long-term outlook for the portfolio's companies remains very bright, given appealing growth prospects for the businesses held combined with robust cash generation that can be deployed well by good management teams.

Not only do we believe the portfolio has strong long-term prospects that are appealing and better than the average American business, but given our value-disciplined investment approach, we also believe the holdings in the portfolio are attractively valued, more so than the average American business. Given their qualities and long-term prospects, we doubt they would be more attractively valued if domiciled or listed in any other developed market. At a trailing free cashflow yield of over 6%, we believe the portfolio offers a sound valuation starting point to deliver attractive long-term returns if it compounds business value at the double-digit rate we expect.

North American Team

Polar Capital LLP

January 2023

Smart Energy Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned -20.3% over 2022, underperforming the MSCI AC World Net Total Return Index, which returned -18.4% over the same period (in US dollar terms).

The clean power generation cluster delivered a positive contribution, while the other three clusters – energy transmission and distribution, energy conversion and storage, and energy efficiency – were all negative. The energy efficiency cluster provided the largest negative contribution.

At an individual stock level, Enphase Energy, First Solar, Aixtron and SolarEdge Technologies were the strongest positive contributors. The largest negative contributors were Marvell Technology, Plug Power, Silergy and XPeng.

Market Review

Global stock markets had a difficult year. Central banks struggled to contain elevated inflation, revising upwards their expectations for peak interest rates. Towards the end of 2022, softer overall economic data caused bond yields to fall, boosting the likelihood of slower-paced rate hikes. Meanwhile, China loosened its Covid-19 restrictions. This added to the more positive sentiment as the year closed, even though the move created further supply-chain disruptions by causing a spike in new infections.

The clean energy sector, including electrification, remained in the investment spotlight due to its key role in achieving energy independence. The EU, through its REPowerEU plan, is speeding up its plans to boost its share of energy from renewable sources this decade, while simultaneously accelerating plans for green hydrogen infrastructure. At the same time, the US Congress passed the Inflation Reduction Act (IRA). As part of a larger package, the Act assigned \$370bn in tax and rebate incentives in clean energy and climate change programmes. It was subsequently signed into law by President Biden. The IRA includes a wide range of funding programmes across renewables, electric vehicles (EVs), hydrogen and storage supply chains, with the additional objective of supporting domestic industries. The Act is expected to be fully implemented in 2023.

Fund Activity

Over the year, the Fund increased its exposure to the clean power generation cluster. Companies from this sector are likely to be the most direct beneficiaries of the IRA and the REPowerEU plan. The Fund also raised its exposure to the solar energy supply chain, with holdings including inverter companies Enphase Energy and SolarEdge Technologies, module producers First Solar and Moxon Solar Technologies, solar installers SunPower and Sunrun, as well as solar tracking systems company Array Technologies. Given their good performance over the year, which increasingly priced in short-term expectations, the Fund partially trimmed some of these positions at the end of the year.

The Fund reduced its exposure to the power conversion subcluster by trimming ON Semiconductor, Power Integrations, Rohm and Monolithic Power Systems. The Fund exited Navitas Semiconductor and established a new position in the compound semiconductor deposition tool manufacturer Aixtron.

Within the energy storage subcluster, the Fund sold its position in the small cells battery manufacturer Varta. The Fund established new positions in the Asian battery cells manufacturers Contemporary Amperex Technology Limited (CATL) and LG Energy Solution. It also cut exposure to the lithium mining companies, given the increased likelihood of a less supply-constrained market as 2023 unfolds. It only held minor positions in Livent and Albemarle at the end of the year.

The Fund slightly reduced investments in the energy efficiency cluster, mostly through the transportation subcluster. Here it sold China EV companies NIO, XPeng and Niu Technologies, due to concerns about softening demand in China. The Fund initiated a new position in the China EV and battery manufacturer Byd.

In the Big Data subcluster, the Fund sold Xilinx at the beginning of the year, as the company was acquired by AMD. It also sold Lumentum Holdings. The Fund upped its exposure to Vertiv Holdings, a supplier of electric power equipment and thermal management to data centres. Similarly, it slightly increased its positions in Lattice Semiconductor and Marvell Technology.

The Fund significantly cut its exposure to the building efficiency sub-cluster, given rapidly softening demand. It exited positions in Johnson Controls International, Regal Rexnord, Nibe Industrier and Resideo Technologies.

In the industrial processes subcluster, the Fund sold out of positions in Regal Rexnord, Skyworks Solutions and Mabuchi Motor. It initiated new positions in rare-earth miners MP Materials and Lynas, as well as in Keyence and Cognex, both of which provide machine vision systems for inspection systems.

Finally, in the hydrogen infrastructure equipment sub-cluster, the Fund started a new position in the industrial gases company Air Products & Chemicals. The Fund reduced its weighting in Plug Power. This came after the company's new guidance reflected the challenges facing first-mover companies in the green hydrogen sector; their ability to reduce capital costs through economies of scale will take a few years to materialise. Lastly, the Fund sold Norwegian electrolyser manufacturer Nel.

Market Outlook

Interest rate rises are having an increasing impact on the global economy. Inflationary pressures caused by supply-chain bottlenecks, tight labour markets and higher energy costs are receding. Concerns that China's U-turn on its Covid prevention policies may create additional inflationary pressures should soon abate. The positive medium-term impact of this policy shift in normalising economic conditions, including the restoration of functioning supply chains, is likely to far outweigh any negative short-term inflationary effects. Overall, we expect financial conditions to ease as 2023 progresses. Falling inflation rates will allow central banks to adopt more accommodative policies.

We remain constructive on the underlying themes within Fund's investment strategy. Given the need to accelerate the energy transition towards clean energy solutions and electrification, governments worldwide continue to explore how to reduce dependency on imported energy sources, as well as foster local manufacturing and power generation.

Following a very strong 2022 marked by record-high installation numbers, the deployments of new solar installations should increase in 2023, as falling raw material input costs will further improve the economics of solar power.

2023 should also see record investments in energy storage. It offers a strong complement to distributed generation, especially in solar panels. We also expect the power semiconductor space to continue to benefit from robust demand, as the underlying electrification trend in the global energy transition is a powerful one. This could bode well for related stocks in 2023 since current valuations are highly attractive on a mid- to long-term perspective.

As in the past, the Fund seeks to invest in diversifying investments across the clean energy value chain, focusing on segments with strong structural growth drivers, such as clean power production, smart grid and storage solutions, green hydrogen infrastructure, power electronics, EVs, building efficiencies and the energy efficiency of big data.

Sustainable Thematic Equity Team

Polar Capital (Switzerland) AG

January 2023

Smart Mobility Fund

Fund Performance

The Fund returned -25.0% (Class I US Dollar Accumulation Shares) in 2022, underperforming the broader MSCI AC World Net Total Return Index, which returned -18.4% during the same period (in US dollar terms).

All four investment clusters contributed negatively. The largest negative performance contribution came from the EV manufacturing cluster, followed by the EV technologies and mobility infrastructure clusters. The autonomous driving cluster was only slightly negative.

At an individual stock level, u-blox, Air Products & Chemicals, Visteon and SolarEdge Technologies were the strongest positive contributors. The largest negative contributors were Uber Technologies, NIO, Plug Power, XPeng and ITM Power.

Market Review

Global stock markets had a difficult year. Central banks struggled to contain elevated inflation, revising upwards their expectations for peak interest rates. Towards the end of 2022, softer overall economic data caused bond yields to fall, boosting the likelihood of slower-paced rate hikes. Meanwhile, China loosened its Covid-19 restrictions. This added to the more positive sentiment as the year drew to a close, even though the move created further supply-chain disruptions by causing a spike in new infections.

The clean energy sector, including electrification of the transportation sector, remained in the investment spotlight. Its key role in achieving energy independence was reflected in the introduction of the Inflation Reduction Act in the US and the REPowerEU plan in Europe.

The growth in the overall automotive market in 2022 was entirely driven by electrification, with electric vehicle (EV) sales recording y/y growth of nearly 60%. This gave EVs a 12% share of the global automotive market, driven by China and followed by Europe.

The year marked a major milestone on the journey toward autonomous driving following the appearance of 'level 3' series cars on public roads for the first time. This came after authorities granted system approval in December 2021. Subsequently, in Germany in May 2022, Mercedes-Benz became the first car OEM (original equipment manufacturer) to make 'level 3' functionality officially available, on its high-end models. 'Level 3' autonomy conditionally allows a driver to focus on other activities such as checking emails, reading, online shopping and web browsing.

Fund Activity

The Fund increased the share of the autonomous driving cluster. It initiated a position in Trimble Navigation and increased existing stakes in u-blox and NXP Semiconductors.

It significantly reduced exposure to Chinese EV manufacturers, selling XPeng and NIO on worries over softening EV demand in China. It also exited positions in the electric two-wheeler company Niu Technologies and the Japanese EV supplier Denso.

The Fund also reduced its weight in the EV technologies cluster by trimming exposure to both the batteries and electric powertrain sub-clusters. Within the batteries subcluster, the Fund cut positions in lithium miners, given the increased likelihood of a less supply-constrained market as 2023 unfolds: it sold out of Sociedad Química y Minera de Chile completely and significantly reduced its positions in Livent and Albemarle. The Fund established positions in Asian battery module manufacturers Contemporary Amperex Technology Limited (CATL) and LG Energy Solution. It cut exposure to the electric powertrain subcluster by trimming positions in ON Semiconductor and Rohm and selling Power Integrations and Monolithic Power Systems. The Fund started new positions in rare earth miners MP Materials and Lynas.

The Fund steadily increased the weight of the mobility infrastructure cluster during the year. In the green hydrogen and sustainable fuels subcluster, it started a position in industrial gases company Air Products & Chemicals and sold Norwegian electrolyzer company Nel. Furthermore, in the smart grid and charging sub-cluster, the Fund established a position in SolarEdge Technologies, a provider of electric inverters, storage solutions and electric powertrain units.

Market Outlook

Interest rate rises are having an increasing impact on the global economy. Inflationary pressures caused by supply-chain bottlenecks, tight labour markets and higher energy costs are receding. Concerns that China's U-turn on its Covid prevention policies may create additional inflationary pressures should soon abate. The positive medium-term impact of this policy shift in normalising economic conditions, including the restoration of functioning supply chains, is likely to far outweigh any negative short-term inflationary effects. Overall, we expect financial conditions to ease as 2023 progresses. Falling inflation rates will allow central banks to adopt more accommodative policies.

We expect another year of growth for EVs in 2023, with y/y growth rates of 40% likely. All regions should contribute to this growth, most notably China and the EU. We also expect the US market to reach an inflection point, supported by the Inflation Reduction Act, which includes new tax credits of up to \$7,500 over 10 years for locally-made EVs.

Market Outlook continued

We also expect the continuous strive for better safety, efficiency and comfort through automation to raise the market penetration of increasingly advanced 'level 2+' driver assistance systems. Furthermore, the major fully automated robotaxi projects in the US and China will continue to expand their offerings – in late 2022, a leading US big tech company announced the 2023 launch of its robotaxi service in Los Angeles, its third metropolitan market.

Overall, we remain very constructive on the Fund, given the strong fundamentals of the smart mobility sector. The entire transport sector is engaged in an unprecedented transformation towards electrification. We will continue to invest across the smart mobility value chain, seeking exposure to market segments like EV manufacturers and suppliers, power semiconductors, batteries, hydrogen and EV charging infrastructure, sensor and data processing technologies for automated driving, shared mobility solutions and new developments in driverless mobility.

Sustainable Thematic Equity Fund

Polar Capital (Switzerland) AG

January 2023

UK Value Opportunities Fund

Fund Performance

The Fund (Class I Sterling Accumulation Shares) had an extremely tough year, returning -18.1% in 2022 compared to 0.7% for the FTSE All-Share Total Return Index (in sterling terms).

The Fund suffered from being materially underweight the FTSE 100, with 70% exposure to the small and mid-cap indices. The FTSE 100 Index (+4.7%) significantly outperformed the FTSE 250 (-18.4%), FTSE Small Cap (-17.3%) and AIM indices (-30.7%). Indeed, the FTSE 250 Index's underperformance versus the FTSE 100 Index was the widest margin since the mid-cap index's launch in 1992. The AIM Index, where the Fund has 18% exposure, was notably weak, finishing down 30.7%.

The FTSE 100 Equally-weighted Index (-12.9%) did not perform much better than the FTSE 250 Index, highlighting that the FTSE 100 Index's positive return was predominantly driven by a small group of the largest-cap shares. These comprised oil stocks Royal Dutch Shell and BP, miners Glencore and Rio Tinto, defensive names AstraZeneca, GlaxoSmithKline, Unilever, Diageo and British American Tobacco, and, lastly, BAE Systems and HSBC. These 10 shares returned an average of 24.2% in 2022, a stark contrast to the wider market.

Globally, small and mid-cap indices underperformed their large-cap counterparts, but the UK was a particularly extreme case. In part, this was driven by the sectoral composition of the UK's large-cap index, which is overweight resources and defensive shares. It was also a reflection of the risk-off trend in UK small and mid-cap stocks, which experienced record outflows in the face of the rising prospect of a recession.

Domestic shares significantly underperformed international shares, with a median return of -26% for domestic shares and -15% for international shares. This provided a considerable headwind: about two-thirds of the Fund's revenues are derived from domestic earnings versus just a quarter of the FTSE All-Share. The underperformance of domestic shares was caused by the strength of the US dollar. Sterling, in particular, suffered a horrendous first nine months, a consequence of political turmoil culminating in the catastrophic mini-budget in September and one of the highest inflation numbers in the G7. Since the appointments of Jeremy Hunt and Rishi Sunak as Chancellor and Prime Minister, respectively, in October, the pound has strengthened, although it remains c10% below the level at which it started the year.

The Fund was relatively underweight sectors that performed extremely well, namely resources, energy, mining and defensive areas such as tobacco, pharmaceuticals, and household and personal products. The Fund was also overweight several cyclical sectors that materially underperformed, including retailing, consumer durables and apparel, and capital goods.

Of particular note was our housing and infrastructure exposure, which performed badly in the face of rising interest rates. Rising recessionary risks due to high inflation and the associated increase in interest rates led to a rotation into defensive shares from cyclical shares.

The inflationary environment, stoked by Russia's invasion of Ukraine, accounted for the considerable outperformance of the resources and energy sectors.

Our worst-performing shares reflected the thematic headwinds we faced. They were predominately small-cap, domestic-earners with cyclical end markets. These included Luceco, Watkin Jones, Marshalls, Greencore Group, MJ Gleeson Group, Rank Group and Kier Group. There is an additional common theme of housing/infrastructure in many of these shares and they were affected by higher mortgage rates.

We had three stock-specific issues outside these themes: IG Design Group, Alliance Pharma and Hilton Food Group. IG Design Group suffered a margin squeeze from its customers, which was exacerbated by difficult supply chain conditions. While the core Hilton Food Group business performed well, its newer fish business failed to pass on fish price increases in the middle of the year. Alliance Pharma suffered from delays in meeting orders for its scar treatment Kelo-cote in its Chinese business.

Our best-performing shares predominately reflected the sectors that outperformed in 2022. As a bottom-up stock-picking fund, this is a rare occurrence. The largest contributors to performance included oil and gas holdings Serica Energy, Harbour Energy and Royal Dutch Shell, mining stocks Anglo American, Rio Tinto, defence names QinetiQ Group and BAE Systems, and financials Standard Chartered, Beazley, NatWest Group and Investec.

Market Review

We assess the period based on our three investment criteria: valuation, durability of profits and financial safety checks.

While value outperformed in 2023, the trend was not clear. Value's outperformance was driven by the cheapest decile in the FTSE 100, predominately comprising oil, mining, tobacco and banks. While the Fund held several of these shares, including Anglo American, Barclays, Standard Chartered, 3i Group and now Royal Dutch Shell, the Fund is materially underweight the index in these positions.

The outlook for future profits deteriorated throughout the year. Despite a fall in bond yields and a rise in sterling in the final few months, the reality is real disposable incomes did not trough in 2022, but will likely trough at some stage in 2023. Companies are already starting to report weakening demand, especially in the housing sector. Domestic earnings will continue to come under pressure in the coming months. However, we would flag that earnings troughs are not a good guide to share price troughs. Indeed, earnings typically troughed many months after share prices in previous downturns; trough earnings and trough multiples are rarely simultaneous. We would love to find high-quality businesses with solid end markets, improving profits and bulletproof balance sheets trading at trough valuations but, sadly, they rarely exist. The exceptional valuations that are on offer in the UK market are because of the uncertain backdrop.

The premise of our financial safety check is that businesses that generate decent positive retained cash and have robust balance sheets are best placed to weather storms and seize opportunities. As financing rates rose sharply over the year, we were surprised that our focus on financial strength did not help more. We believe the step change in interest rates means financial strength is going to matter more in the months and years ahead. Half of our portfolio holdings (excluding banks and insurance companies) enjoy net cash balance sheets. Those that have a net debt position pass our safety check with more clearance than they ever have in the past. Things can change quickly in this market, but we think our companies' balance sheets are highly robust.

Fund Activity

The major share price falls seen in 2022 meant many shares hit attractive entry price points. These shares typically had higher returns on invested capital than existing holdings and were higher quality than value managers would normally be able to access. These included Gamma Communications, Howden Joinery Group, JD Sports Fashion, Marshalls and Next. All of these companies generate returns on invested capital above 20% and enjoy double-digit margins.

In addition, we bought Redrow at 20% below the company's book value. We also initiated a position in Royal Dutch Shell after it shifted from failing to passing our safety check and ESG criteria. Elsewhere, we established a position in Harbour Energy early in the year after the gas price soared following Russia's invasion of Ukraine.

We exited Reckitt Benckiser, Investec, AstraZeneca and Watches of Switzerland after they hit our target prices and therefore no longer met our 'cheap valuation' test, our first criterion.

The majority of shares we exited this year were because they did not meet our second criterion: attractive returns on invested capital. In some cases – including Mitchells & Butlers, Johnson Service Group and IG Design Group – we were concerned about the ability of companies to pass on inflationary costs. In other cases – including TT Electronics, Forterra and Alliance Pharma – we were worried about a weakening demand outlook. In a few cases, there were cheaper shares on offer in the same sector, such as Tesco and Taylor Wimpey.

As economic conditions have worsened, the outlook for returns on invested capital has naturally deteriorated. But share price falls elsewhere have enabled us to invest in higher-quality shares. Therefore, the Fund's overall return on invested capital and quality characteristics have been enhanced, as have our conviction levels in individual positions.

The stock changes detailed above are bottom-up investment decisions and have not dramatically altered the Fund's overall exposure, which remains biased toward cheap value and predominantly small and mid-cap domestic-earning companies.

Market Outlook

While the current backdrop is incredibly tough and highly macro-driven, the Fund's fundamentals have almost never looked better. The portfolio is on 8.6x aggregate earnings, valued at a c.14% discount to the FTSE All-Share, and over half the Fund's cheap value creators trade on 10-year trough P/E ratios. The Fund contains a record number of businesses generating over 20% returns on invested capital, a function of higher-quality businesses falling into our remit over the course of the year. Furthermore, excluding banks and insurance stocks, half the Fund's holdings have net cash balance sheets. Meanwhile, those holdings with debt are even more lowly geared than usual.

So what changes the backdrop? We cannot point to an obvious trigger. Moreover, in the event a trigger occurs, we will not know for several months afterward what that key was. While we are unsure of the timing, we know that small and mid-cap stocks typically rally ahead of large caps at turning points in the market. Indeed, during the global financial crisis, the FTSE 250 rallied over three months before the overall market and posted c.15% outperformance versus the FTSE 100 over that period. We also note that the FTSE 250's performance has historically closely tracked the rise in peak interest rate expectations; the higher the peak expectation, the lower the FTSE 250. Were peak rates to continue to fall, this would be materially positive for small- and mid-cap stocks.

UK Value Opportunities Fund continued

Market Outlook continued

We are frustrated by the lack of benefits that were forthcoming from cheaper valuations in 2022. As mentioned above, the outperformance of value stocks was confined to the cheapest decile of the FTSE 100, dominated by oil, mining, tobacco and banks. We suspect that the failure of value stocks further down the market cap scale to outperform related to the rising risks of recession as the year unfolded. Small- and mid-cap value stocks suffered from the flight from cyclical towards defensives.

Towards the end of the year, we saw better performance in small and mid-cap value but a true turning point will require investors to look through the impending downgrades and extend their time horizons. While we do not know when this will be, earnings do not typically trough at the same time as earnings multiples. Indeed, earnings typically trough many months after share prices have begun to rise. Were earnings to trough in the second quarter of 2023, we would expect to see rising share prices ahead of that.

The Fund continues to be overweight domestic earnings. The rebound in sterling is supportive for our investments, and we hope that we have moved past peak bearish sentiment toward the UK. The much-discussed Fed pivot and associated dollar weakness would be a huge help. We know the Fund outperforms on days when inflation data comes in lower than expectations.

In our view, the Fund remains cheap with considerable re-rating potential. The returns on invested capital of the Fund's holdings are at an elevated level, while our companies' balance sheets are even stronger than usual. Despite the frustrating lack of certainty in the near term, the Fund's strong fundamentals give us great confidence for the year ahead.

UK Value Team

Polar Capital LLP

January 2023

Report of the Directors

For the financial year ended 31 December 2022

The Directors of Polar Capital Funds plc (the 'Company') have pleasure in submitting their Annual Report and Audited Financial Statements for the financial year ended 31 December 2022 to the Shareholders.

Directors Responsibilities Statement

The Directors are responsible for preparing the Directors' report and the financial statements in accordance with the Companies Act 2014 (including amendments made by the Companies (Accounting) Act 2017, hereinafter 'Companies Act 2014') and the applicable regulations.

Irish company law requires the Directors to prepare financial statements for each financial year. Under the law, the Directors have elected to prepare the financial statements in accordance with International Financial Reporting Standards as adopted by the European Union ('IFRS').

Under company law, the Directors must not approve the financial statements unless they are satisfied that they give a true and fair view of the assets, liabilities and financial position of the Company as at the financial year end date and of the profit or loss of the Company for the financial year and otherwise comply with the Companies Act 2014.

In preparing those financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and estimates that are reasonable and prudent;
- state whether the financial statements have been prepared in accordance with the applicable accounting standards, identify those standards, and note the effect and the reasons for any material departure from those standards; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Company will continue in business.

The Directors are responsible for ensuring that the Company keeps or causes to be kept adequate accounting records which: correctly explain and record the transactions of the Company; enable at any time the assets, liabilities, financial position and profit or loss of the Company to be determined with reasonable accuracy; enable the financial statements and Directors' report to comply with the Companies Act 2014 and with the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 (as amended) (the 'UCITS Regulations') and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the 'Central Bank UCITS Regulations') and the Listing Rules of Euronext Dublin; and enable the financial statements to be audited. They are also responsible for safeguarding the assets of the Company and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

In this regard, MJ Hudson Fund Management (Ireland) Limited (the 'Manager') has been appointed as the Company's UCITS management company, with overall responsibility for the administration of the Company and the management of its investments. The Manager has in turn appointed Polar Capital LLP and Polar Capital (Switzerland) AG (the 'Investment Manager') as investment managers of the Company's sub-funds and Northern Trust International Fund Administration Services (Ireland) Limited (the 'Administrator') as administrator appointed for the purpose, among others, of maintaining adequate accounting records. Northern Trust Fiduciary Services (Ireland) Limited (the 'Depositary') has been appointed for the purpose of safeguarding the assets of the Company.

Basis of Presentation

The format and certain wording in the Financial Statements has been adapted from those contained in the Companies Act 2014 and IFRS so that, in the opinion of the Directors, they more appropriately reflect the nature of the Company's business as an investment fund.

Directors' Statement on Adequate Accounting Records

The Directors believe that they have complied with the requirements of sections 281 to 285 of the Companies Act 2014 with regard to adequate accounting records by employing personnel with appropriate expertise and by providing adequate resources to the finance function. The accounting records of the Company are maintained by the Administrator at Georges Court, 54-62 Townsend Street, Dublin 2, Ireland.

Business Review and Future Developments

The Company is an open-ended investment company with variable capital and segregated liability between its sub-funds (the 'Funds'), organised under the laws of Ireland. The Company was incorporated on 28 September 2001.

During the financial year ended 31 December 2022:

- Polar Capital (Switzerland) AG was appointed as investment managers by the Company on 30 November 2022.
- James Cayzer-Colvin resigned as Director of the Company on 11 October 2022.
- Robert Bovet resigned as Director and Chairman of the Company on 31 December 2021.

The Company will continue to act as an investment vehicle as set out in its Prospectus.

A detailed review of the Company's activities for the financial year ended 31 December 2022 is included in the Investment Manager's Reports.

Risk Management Objectives and Policies

The principal risks and uncertainties faced by the Company are the investment risks associated with the portfolio of investments held for the account of each Fund and the operational risks associated with their management and administration. A more detailed analysis of some of the risks facing the Company is included in Note 10 of the Notes to the Financial Statements.

Directors' Interests in Shares of the Company

Other than as disclosed in Note 8 to the Financial Statements, there were no contracts or agreements of any significance in relation to the business of the Company in which the Directors had any interest, as defined in the Companies Act 2014, at any time during the financial year.

Transactions with Connected Persons

Regulation 43(1) of the Central Bank UCITS Regulations requires that any transaction carried out with the Company by a management company or depositary to the Company, their respective delegates, and associated or group companies ('connected persons') must be carried out as if negotiated at arm's length. Transactions must be in the best interests of the shareholders.

The Directors are satisfied that the Manager has arrangements (evidenced by written procedures) in place, to ensure that this obligation is applied to all transactions with connected persons, and are satisfied that transactions with connected persons entered into during the year complied with this obligation.

Distributions

Distributions declared for the financial year are as set out in Note 13.

Corporate Governance Statement

The Company is subject to corporate governance practices imposed by:

- (i) The Memorandum and Articles of Association of the Company;
- (ii) The Companies Act 2014;
- (iii) The UCITS Regulations;
- (iv) The Euronext Dublin Code of Listing Requirements and Procedures.

Copies of the above are all available for inspection at the Company's registered office at Georges Court, 54–62 Townsend Street, Dublin 2.

The Company has adopted the Corporate Governance Code for Collective Investment Schemes and Management Companies (the 'Code') issued by Irish Funds. The Company is organized in such a way to meet all provisions of the code with one exception. All of the Directors are independent of the Investment Managers although the Code includes a recommendation that an investment manager have a representative on a fund board. The Directors have considered this requirement and in their opinion, the absence of a representative of the Investment Managers on the board of the Company does not impair the ability of the board to function fully independent, objectively and effectively in the best interests of investors.

The Directors are responsible for establishing and maintaining adequate internal control and risk management systems in relation to the financial reporting process of the Company. Such systems are designed to manage, rather than eliminate, the risk of error or fraud in achieving the Company's financial reporting objectives and can only provide reasonable and not absolute assurance against material misstatement or loss.

The Company has procedures in place to ensure all relevant accounting records are properly maintained and are readily available, including production of annual and half-yearly financial statements. The annual and half-yearly financial statements of the Company are required to be approved by the Directors of the Company and filed with the Central Bank of Ireland and Euronext Dublin.

The accounting information provided in the annual financial statements is required to be audited by an independent auditor who reports annually to the Shareholders of the Company on the audit process and their findings. The auditor's report on the financial statements, including any qualifications, is reproduced in full in the annual report of the Company.

The Board meets at least four times a financial year review the operations of the Company, to address matters of strategic importance and to receive reports from the Manager, the Administrator, the Depositary and the Investment Managers. However, a Director may call a meeting of Directors at any time.

Questions arising at any meeting of the Directors are generally decided by consensus, but majority voting can be used if necessary to reach a decision. If there are an equal number of votes for or against a resolution the Chairperson of the meeting can effectively decide the matter by exercising a second or casting vote.

The minimum required number of Directors is two, which is also the minimum number of Directors required for a meeting to take place. Currently there are four non-executive Directors, all of whom are independent of the Investment Managers. The reduction in the size of the board during the year reflects the appointment and responsibilities in has assumed. The Directors are listed on page 556.

The convening and conduct of Shareholders' meetings are governed by company law and the Memorandum and Articles of Association. Shareholders together holding 5 per cent or more in aggregate of the shares of the Company in issue may at any time request that the Directors convene a meeting of Shareholders to consider any matters that may be proposed by the Shareholders requesting the meeting.

A meeting of Shareholders held in accordance with the provisions of the Memorandum and Articles of Association may by a 75% majority of those voting approve a change to the Memorandum and Articles of Association or a proposal to wind up the Company. A simple majority vote is required for most other proposals, including proposals to determine that the Directors shall retire, or to terminate any of its Funds, and any material change in the investment objective and policies or the investment restrictions set out in the Prospectus issued by the Company.

Twenty one days' notice at least of every meeting shall be given to Shareholders in the manner provided in the Memorandum and Articles of Association. At any meeting any matter put to a vote shall be decided on a show of hands unless a poll is (before or on the declaration of the result of the show of hands) demanded by the Chairperson or by one or more Shareholders present in person or by proxy and holding or representing one-twentieth of the number of shares for the time being in issue. Unless a poll is so demanded, a declaration by the Chairperson that a resolution has been carried or carried unanimously or by a particular majority or lost shall be conclusive evidence of the fact without proof of the number or proportion of the votes recorded in favour of or against such resolution.

If a poll is duly demanded, it shall be taken in such manner as the Chairperson may direct and the result of a poll shall be deemed to be the resolution of the meeting at which the poll was demanded.

Diversity Statement

The Board of Directors strives to ensure that its membership reflects diversity in the broadest sense (capturing a combination of skills, experience, age, gender, educational and professional backgrounds).

The Company believes that there is a strong business case for boardroom diversity, which helps to promote good governance and challenge 'group think' mentality. A diverse board should also help to ensure that the board continues to remain objective in its decision making and to exercise good judgement on behalf of the Shareholders. When appointing members to the board, the Company will consider whether the candidates have the knowledge, qualifications and skills necessary to safeguard proper and prudent management of the institution.

The Company has no employees. It is the opinion of the Board that the current Directors represent an appropriate mix of skills, knowledge and experience commensurate with governing a UCITS investment company of this scale and with its current management structure while meeting regulatory requirements as to the composition of the board and the experience and qualifications of its members.

Results

The results of operations for the financial year are set out in the Statement of Comprehensive Income.

Significant Events During the Financial Year

Events which were significant during the financial year are set out above and detailed in Note 17.

Subsequent Events

Significant events since the financial year end date are detailed in Note 18.

Directors Compliance Statement made in accordance with Section 225 of the Companies Act 2014

The Directors acknowledge that they are responsible for securing compliance by the Company with its Relevant Obligations as defined with the Companies Act 2014 (hereinafter called the 'Relevant Obligations').

The Directors confirm that they have drawn up and adopted a Compliance Policy Statement setting out the Company's policies that, in the Directors' opinion, are appropriate to the Company in respect of its compliance with its Relevant Obligations.

The Directors further confirm the Company has put into place appropriate arrangements or structures that are, in the Directors' opinion, designed to secure material compliance with its Relevant Obligations including reliance on the advice of persons employed by the Company and external legal and tax advisers as considered appropriate from time to time and that they have reviewed the effectiveness of these arrangements or structures during the financial year to which this Report relates.

Report of the Directors continued

For the financial year ended 31 December 2022

Audit Committee

During the financial year ended 31 December 2022 the Company did not have an audit committee in place. The Board has decided not to establish an audit committee as this was deemed most appropriate to the Company's structure as a UCITS fund and the nature, scale and complexity of the Company's operations at this time.

Statement on Relevant Audit Information

So far as the Directors are aware, there is no relevant audit information of which the Company's auditors are unaware. The Directors have taken all the steps that should have been taken as Directors in order to make themselves aware of any relevant audit information and to establish that the Company's auditors are aware of that information.

Independent Auditor

Deloitte LLP, Chartered Accountants and Statutory Audit Firm, was appointed as the auditors of the Company on 22 October 2014. In accordance with Section 383 (2) of the Companies Act 2014, the auditors have indicated their willingness to continue in office.

On behalf of the Board

David Hammond

Director

Report of the Depositary to the Shareholders

For the financial year ended 31 December 2022

We, Northern Trust Fiduciary Services (Ireland) Limited, appointed Depositary to Polar Capital Funds plc ('the Company') provide this report solely in favour of the shareholders of the Company for the year ended 31 December 2022 ('the Annual Accounting Period'). This report is provided in accordance with the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 (SI No 352 of 2011), as amended, which implemented Directive 2009/65/EU into Irish Law ('the Regulations'). We do not, in the provision of this report, accept nor assume responsibility for any other purpose or person to whom this report is shown.

In accordance with our Depositary obligation as provided for under the Regulations, we have enquired into the conduct of the Fund for the Accounting Period and we hereby report thereon to the shareholders of the Company as follows;

We are of the opinion that the Company has been managed during the Annual Accounting Period, in all material respects:

- (i) in accordance with the limitations imposed on the investment and borrowing powers of the Fund by the constitutional documents and by the Regulations; and
- (ii) otherwise in accordance with the provisions of the constitutional documents and the Regulations.

For and on behalf of

Northern Trust Fiduciary Services (Ireland) Limited

 **Independent Auditor’s Report**
to the members of Polar Capital Funds plc

Report on the audit of the Financial Statements

Opinion on the Financial Statements of Polar Capital Funds plc (“the company”)

In our opinion the Financial Statements:

- give a true and fair view of the assets, liabilities and financial position of the company as at 31 December 2022 and of the loss for the financial year then ended; and
- have been properly prepared in accordance with the relevant financial reporting framework and, in particular, with the requirements of the Companies Act 2014.

The Financial Statements we have audited comprise:

- the Statement of Financial Position;
- the Statement of Comprehensive Income;
- the Statement of Changes in Net Assets to Holders of Redeemable Participating Shares;
- the Statement of Cash Flows; and
- the related notes 1 to 19, including a summary of significant accounting policies as set out in note 2.

The relevant financial reporting framework that has been applied in their preparation is the Companies Act 2014 and International Financial Reporting Standards as adopted by the European Union (“IFRS”) (“the relevant financial reporting framework”).

The applicable regulations that have been applied in their preparation is the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations, 2019 (“the applicable Regulations”).

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (Ireland) (ISAs (Ireland)) and applicable law. Our responsibilities under those standards are described below in the “Auditor’s responsibilities for the audit of the financial statements” section of our report.

We are independent of the company in accordance with the ethical requirements that are relevant to our audit of the Financial Statements in Ireland, including the Ethical Standard issued by the Irish Auditing and Accounting Supervisory Authority (IAASA), as applied to public interest entities, and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Summary of our audit approach

Key audit matters	<p>The key audit matters that we identified in the current year were:</p> <ul style="list-style-type: none"> • Valuation of Financial Assets and Liabilities at Fair Value Through Profit or Loss; • Existence of Financial Assets and Liabilities at Fair Value Through Profit or Loss ;and • Accuracy of Performance Fees <p>Within this report, any new key audit matters are identified with  and any key audit matters which are the same as the prior year identified with </p>
Materiality	The materiality that we used in the current year was 1% of Average Net Assets determined in respect of each sub-fund.
Scoping	Our audit is a risk-based approach taking into account the structure of the Company, types of investments, the involvement of the third-party service providers, the accounting processes and controls in place and the industry in which the Company operates.
Significant changes in our approach	There have been no significant changes in our approach from our prior year audit.

Conclusions relating to going concern

In auditing the Financial Statements, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the Financial Statements is appropriate.

Our evaluation of the directors' assessment of the entity's ability to continue to adopt the going concern basis of accounting included:

- Obtaining an understanding of the relevant controls in place regarding going concern as part of our audit risk assessment procedures.
- Holding discussions with management on the directors' going concern assessment, the future plans for the entity and the feasibility of those plans.
- Challenging the reasonableness of the key assumptions applied by the directors in their assessment.
- Reviewing all board meeting minutes during the period up to the date of approval of the Financial Statements, for evidence of any discussions and/or decisions that could impact the entity's ability to continue as a going concern.
- Reviewing the capital activity and NAV movements, subsequent to the financial year end.
- Assessing the adequacy of the relevant going concern disclosures made in the Financial Statements.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the ability to continue as a going concern for a period of at least twelve months from when the Financial Statements are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report.

Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the Financial Statements of the current financial year and include the most significant assessed risks of material misstatement (whether or not due to fraud) we identified, including those which had the greatest effect on: the overall audit strategy, the allocation of resources in the audit; and directing the efforts of the engagement team.

These matters were addressed in the context of our audit of the Financial Statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Valuation of Financial Assets and Liabilities at Fair Value Through Profit or Loss

Key audit matter description

For the financial year ended, the investments of the entity of \$15.27B make up 97.6% of total net assets of \$15.63B.

The valuation of investments is considered a key audit matter as it is the most significant number on the Statement of Financial Position, is a key driver of performance and due to the potential for management judgement and estimation in the valuation.

As investments are a key driver of performance and due to their significance to the net asset value, there is a risk that these investments might not be correctly valued, in accordance with IFRS.

Refer also to note 2 and 10 in the Financial Statements.

How the scope of our audit responded to the key audit matter

We have performed the following audit procedures to address the key audit matter:

- We obtained an understanding and evaluated the key controls that have been implemented over the valuation process for financial assets and liabilities at fair value through profit or loss.
- We obtained the Northern Trust Fund Administration Services (Ireland) Limited (the "Administrator") SOC 1 Report and identified the key controls in place over the valuation process and reviewed those key controls for any exceptions.
- We considered the valuation basis used in light of the valuation policy as stipulated in the entity's Prospectus documents and the requirements of IFRS.
- We independently valued 100% of securities using our own market feeds.
- We reviewed the adequacy of the fair value levelling disclosures in the Financial Statements.

Independent Auditor’s Report continued
to the members of Polar Capital Funds plc

Existence of Financial Assets and Liabilities at Fair Value Through Profit or Loss

Key audit matter description

The investment portfolio at the year-end principally comprised Equities, Bonds, Investments in Investment Funds, Swaps, Options and other Financial Derivatives to the value of \$15.27B.

There is a risk that investments recorded might not exist or might not be owned by the entity. Investments are considered to be a key driver for the entity’s performance.

Therefore, due to the significance of investments to the entity’s Financial Statements, we have determined this as a key audit matter.

Refer also to note 2 and 10 in the Financial Statements.

How the scope of our audit responded to the key audit matter

We have performed the following audit procedures to address the key audit matter:

- We obtained an understanding and evaluated the key controls that have been implemented over the reconciliation process for existence from the Administrator to the depositary and counterparties.
- We obtained the Administrator’s SOC 1 Report and identified the key controls in place over the reconciliation process and reviewed those key controls for any exceptions.
- We obtained independent confirmations from the depositary and counterparties at the financial year-end and agreed the amounts held to the investment portfolio.
- We tested a sample of reconciling trades to ensure that they have been recorded in the correct period including a review of a sample of unsettled trades.

Accuracy of Performance Fees

Key audit matter description

The performance fee crystallises on an annual basis. The accuracy of performance fees are considered a key audit matter because the performance fee is a related party transaction and a significant expense in the Statement of Comprehensive Income.

There is a risk that performance fee is not calculated correctly in accordance with the prospectus and input used in the calculation is incorrect.

Refer also to note 3 in the financial statements.

How the scope of our audit responded to the key audit matter

We have performed the following audit procedures to address the key audit matter:

- We obtained an understanding and assessed the design of the key controls over the calculation and approval of the performance fees.
- We reviewed the prospectus of the Company to understand the calculation methodology.
- We reviewed the inputs used in the performance fee calculation to ensure compliance with the prospectus.
- We recalculated performance fees in accordance with the prospectus and compared to recorded performance fee to ensure accuracy.

Our audit procedures relating to these matters were designed in the context of our audit of the Financial Statements as a whole, and not to express an opinion on individual accounts or disclosures. Our opinion on the Financial Statements is not modified with respect to any of the risks described above, and we do not express an opinion on these individual matters.

Our application of materiality

We define materiality as the magnitude of misstatement in the Financial Statements that makes it probable that the economic decisions of a reasonably knowledgeable person would be changed or influenced. We use materiality both in planning the scope of our audit work and in evaluating the results of our work.

Based on our professional judgement, we determined materiality for the Financial Statements as a whole as follows:

Basis for determining materiality	1% of Average Net Assets of each Sub-Fund.
Rationale for the benchmark applied	As the company is set up as an umbrella fund with segregated liabilities between sub funds, we determined materiality on a sub fund basis to be 1% of average net assets. We have considered the average net assets to be the critical component for determining materiality because the main objective of the sub funds is to provide investors with a total return. We have considered quantitative and qualitative factors such as understanding the Company and its environment, history of misstatements, complexity of the Company and reliability of control environment.

We set performance materiality at a level lower than materiality to reduce the probability that, in aggregate, uncorrected and undetected misstatements exceed the materiality for the Financial Statements as a whole. Performance materiality was set at 50% of materiality for the 2022 audit. In determining performance materiality, we considered the following factors:

- our understanding of the entity and its environment (including its current operations and risk profile);
- the quality of the control environment;
- The degree of centralization and common controls/processes
- Management override of controls risk;
- the nature and extent of misstatements identified in previous audits; and
- our expectations in relation to misstatements in the current period.

We agreed with the Board of Directors that we would report to the Board of Directors all audit differences in excess of 5% of materiality, as well as differences below that threshold that, in our view, warranted reporting on qualitative grounds. We also report to the Board of Directors on disclosure matters that we identified when assessing the overall presentation of the Financial Statements.

An overview of the scope of our audit

Our audit is a risk based approach taking into account the structure of the Company, types of investments, the involvement of the third party service providers, the accounting processes and controls in place and the industry in which the Company operates. The Company is incorporated as an open-ended investment Company with variable capital and is organised under the laws of Ireland as a public limited company pursuant to the Irish Companies Act, 2014. The Company is authorised by the Central Bank of Ireland (the "Central Bank") as a UCITS (Undertaking for Collective Investment in Transferable Securities) pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2019 (as amended).

The Company is organised as an umbrella fund with segregated liability between sub funds. The redeemable participating shares of the sub funds are listed on the Irish Stock Exchange (the "ISE"). At 31 December 2022, the Company had twenty active sub funds. We assess the risks of each Sub-Fund separately. We have conducted our audit based on the books and records maintained by the administrator Northern Trust Fund Administration Services (Ireland) Limited, Georges Court, 54-62 Townsend Street, Dublin 2, Ireland.

Other information

The other information comprises the information included in the Annual Report and Audited Financial Statements, other than the financial statements and our auditor's report thereon. The directors are responsible for the other information contained within the Annual Report and Audited Financial Statements.

Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the Financial Statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the Financial Statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

Responsibilities of directors

As explained more fully in the Directors' Responsibilities Statement, the directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view and otherwise comply with the Companies Act 2014, and for such internal control as the directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the company or to cease operations, or have no realistic alternative but to do so.

Auditor's responsibilities for the audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the Financial Statements is located on IAASA's website at: <https://iaasa.ie/publications/description-of-the-auditors-responsibilities-for-the-audit-of-the-financial-statements/>. This description forms part of our auditor's report.

Extent to which the audit was considered capable of detecting irregularities, including fraud

Irregularities, including fraud, are instances of non-compliance with laws and regulations. We design procedures in line with our responsibilities, outlined above, to detect material misstatements in respect of irregularities, including fraud. The extent to which our procedures are capable of detecting irregularities, including fraud is detailed below.

Identifying and assessing potential risks related to irregularities

In identifying and assessing risks of material misstatement in respect of irregularities, including fraud and non-compliance with laws and regulations, we considered the following:

- the nature of the industry and sector, control environment and business performance;
- results of our enquiries of management about their own identification and assessment of the risks of irregularities;
- any matters we identified having obtained and reviewed the entity's documentation of their policies and procedures relating to:
 - identifying, evaluating and complying with laws and regulations and whether they were aware of any instances of non-compliance;
 - detecting and responding to the risks of fraud and whether they have knowledge of any actual, suspected or alleged fraud;
 - the internal controls established to mitigate risks of fraud or non-compliance with laws and regulations;
- the matters discussed among the audit engagement team and relevant internal specialists, including IT and valuations regarding how and where fraud might occur in the Financial Statements and any potential indicators of fraud.

As a result of these procedures, we considered the opportunities and incentives that may exist within the organisation for fraud and identified the greatest potential for fraud in the following areas: Valuation of Investments, Performance Fees, Share Class Allocation and Revenue Recognition – Unrealised Gains & Losses. In common with all audits under ISAs (Ireland), we are also required to perform specific procedures to respond to the risk of management override.

We also obtained an understanding of the legal and regulatory framework that the entity operates in, focusing on provisions of those laws and regulations that had a direct effect on the determination of material amounts and disclosures in the Financial Statements. The key laws and regulations we considered in this context included the UCITS Regulations, Listing Rules and the Applicable Regulations.

In addition, we considered provisions of other laws and regulations that do not have a direct effect on the Financial Statements but compliance with which may be fundamental to the entity's ability to operate or to avoid a material penalty. These included matters regulated by the Central Bank of Ireland.

Audit response to risks identified

As a result of performing the above, we identified 'Valuation of Financial Assets and Liabilities at Fair Value Through Profit or Loss', 'Existence of Financial Assets and Liabilities at Fair Value Through Profit or Loss' and 'Accuracy of Performance Fees' as key audit matters related to the potential risk of fraud. The key audit matters section of our report explains the matter in more detail and also describes the specific procedures we performed in response to that key audit matter.

In addition to the above, our procedures to respond to risks identified included the following:

- reviewing the financial statement disclosures and testing to supporting documentation to assess compliance with provisions of relevant laws and regulations described as having a direct effect on the Financial Statements;
- enquiring of management and the Board of Directors concerning actual and potential litigation and claims;
- performing analytical procedures to identify any unusual or unexpected relationships that may indicate risks of material misstatement due to fraud;
- reading minutes of meetings of those charged with governance and reviewing correspondence with the Central Bank of Ireland; and
- In addressing the risk of fraud in Revenue Recognition, independently valuing all securities using our own market feeds and completing an unrealised gain/loss reconciliation.
- In addressing the risk of fraud in Performance Fees, examining the calculation of the performance fees to evaluate whether it is consistent with the Prospectus and re-performing the calculation of the Performance Fees on that basis.
- In addressing the risk of fraud in incorrect Share Class Allocations, assessing and testing the implementation of key controls in place regarding the allocating profit/loss to the individual share classes at the fund accounting level; performing a walkthrough of the process at Northern Trust for calculating the NAV per share at the fund accounting level and follow the process to the transfer agent where the shares got converted to different currencies for dealing purposes; using D.NAV to review the movement between share classes and to understand any deviations, taking into account fee rates, hedging, distributions and currency movements; and testing swing pricing for the sub funds and check whether that swing pricing should be applied on the dealing date net redemptions based on the thresholds set out in the fund documents.
- in addressing the risk of fraud through management override of controls, testing the appropriateness of journal entries and other adjustments; assessing whether the judgements made in making accounting estimates are indicative of a potential bias; and evaluating the business rationale of any significant transactions that are unusual or outside the normal course of business.

We also communicated relevant identified laws and regulations and potential fraud risks to all engagement team members including internal specialists, and remained alert to any indications of fraud or non-compliance with laws and regulations throughout the audit.

Independent Auditor's Report continued

to the members of Polar Capital Funds plc

Report on other legal and regulatory requirements

Opinion on other matters prescribed by the Companies Act 2014

Based solely on the work undertaken in the course of the audit, we report that:

- We have obtained all the information and explanations which we consider necessary for the purposes of our audit.
- In our opinion the accounting records of the company were sufficient to permit the Financial Statements to be readily and properly audited.
- The Financial Statements are in agreement with the accounting records.
- In our opinion the information given in the directors' report is consistent with the financial statements and the directors' report has been prepared in accordance with the Companies Act 2014.

Matters on which we are required to report by exception

Based on the knowledge and understanding of the company and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

We have nothing to report in respect of the provisions in the Companies Act 2014 which require us to report to you if, in our opinion, the disclosures of directors' remuneration and transactions specified by law are not made.

Other matters which we are required to address

We were appointed by the Board of Directors in 2014 to audit the annual accounts for the year ending 31 December 2014. The period of total uninterrupted engagement including previous renewals and reappointments of the firm is 9 years, covering the year ending 31 December 2022.

The non-audit services prohibited by IAASA's Ethical Standard were not provided and we remained independent of the company in conducting the audit.

Our audit opinion is consistent with the additional report to the audit committee we are required to provide in accordance with ISA (Ireland) 260.

Use of our report

This report is made solely to the company's shareholders, as a body, in accordance with Section 391 of the Companies Act 2014. Our audit work has been undertaken so that we might state to the company's shareholders those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the company and the company's shareholders as a body, for our audit work, for this report, or for the opinions we have formed.

Christian MacManus

For and on behalf of Deloitte Ireland LLP Chartered Accountants and Statutory Audit Firm
Deloitte & Touche House, Earlsfort Terrace, Dublin 2

29 April 2023

Note: An audit does not provide assurance on the maintenance and integrity of the website, including controls used to achieve this, and in particular on whether any changes may have occurred to the Financial Statements since first published. These matters are the responsibility of the directors but no control procedures can provide absolute assurance in this area.

Legislation in Ireland governing the preparation and dissemination of financial statements differs from legislation in other jurisdictions.

* Asian Opportunities Fund terminated on 1 March 2021.

For each Fund, share classes are available to both Institutional and Retail investors to which different fee rates may apply. For further information regarding the investment management fee and performance fee relating to each Fund please refer to the Prospectus and the relevant Fund Supplement.

The following table summarises the investment objective and policies for each active Fund, details of which are set out in the relevant Fund Supplement. Investors should note that there can be no guarantee that any Fund will achieve its investment objective.

Fund Name	Investment Objective
Asia Stars Fund	The investment objective of Asia Stars Fund is to achieve medium to long term growth and to primarily invest in a diversified portfolio of equity securities and equity related securities of, or relating to companies which are domiciled, or exercise the predominant part of their economic activity, in Asian developed and emerging markets. The Fund will generally not invest more than 30% of its Net Asset Value in securities issued by companies in Japan or outside Asia (such as Australia or New Zealand). The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Automation & Artificial Intelligence Fund	The investment objective for Automations & Artificial Intelligence Fund is to achieve long term capital appreciation by primarily investing in a diversified portfolio of global equity securities which may be listed or traded on a Regulated Market. The Fund is not expected to invest more than 20% of its Net Asset Value in emerging markets. The securities in which the Fund will primarily invest will include equity and equity related securities including, but not limited to, ordinary and preference shares and financial derivative instruments.
Biotechnology Fund	The investment objective of the Biotechnology Fund is to preserve capital and achieve long-term capital appreciation. The Fund will seek to achieve its investment objective by investing in a globally diversified portfolio of biotechnology, diagnostics and life sciences tools companies and will invest in transferable securities including shares, equity warrants and other types of equity related securities such as preferred shares, which will be listed and/or traded on a Regulated Market, and issued by biotechnology, diagnostics and life sciences tools companies. The Fund may also invest in Global depository receipts and American and European depository receipts to gain exposure to biotechnology companies. The Fund may invest in unlisted securities subject to a limit of 10% of its Net Asset Value in unlisted securities. The Fund will seek to outperform the NASDAQ Biotechnology Index. The Fund will seek to outperform the NASDAQ Biotechnology Index. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
China Stars Fund	The investment objective of China Stars Fund is to achieve long-term capital growth by primarily investing in a diversified portfolio of equity securities and equity related securities of, or relating to companies, which are domiciled, or exercise the predominant part of their economic activity, in The Peoples' Republic of China, Hong Kong and Taiwan (together 'Greater China'). The Fund is not expected to invest more than 40% of its Net Asset Value in securities issued by companies outside of Greater China. The securities in which the Fund will invest will include transferable securities, to include shares, equities, equity warrants, preferred shares, shares in collective investment schemes with investment policies that are consistent with the Fund's investment objective and securities convertible into shares, which may be listed on a Regulated Market or unlisted (subject to a limit of 10% of the Net Asset Value of the Fund in unlisted securities) and issued by companies. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Emerging Markets Stars Fund	The investment objective of the Emerging Market Stars Fund is to achieve long term capital growth. The Fund will seek to achieve its investment objective by primarily investing in a diversified portfolio of equity securities and equity related securities of, or relating to companies, which are domiciled, or exercise the predominant part of their economic activity, in emerging markets. The Fund is not expected to invest more than 30% of its Net Asset Value in securities issued by companies outside of the emerging markets. The securities in which the Fund will invest will include transferable securities, such as shares, equities, equity warrants, preferred shares, and shares in collective investment schemes. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
European (ex UK) Income Fund	The investment objective of European (ex UK) Income Fund is to deliver strong long term risk adjusted returns to achieve both income and capital growth by investing in securities of issuers that are incorporated, have their headquarters, or exercise a significant part greater than 20% of their economic activities in European markets/countries excluding the United Kingdom. It is anticipated to target an overall yield of 10% higher than that of the Index (MSCI Daily Net Total Return Europe ex UK EUR); however, this cannot be guaranteed. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Financial Opportunities Fund	The investment objective of the Financial Opportunities Fund is to achieve long term capital growth, and in order to achieve its objective the Fund will invest in the securities of financial sector companies and companies related to the financial sector worldwide. These companies primarily include commercial and investment banks, life and non-life insurance and reinsurance companies, asset management and brokerage companies.

Notes to the Financial Statements continued

For the financial year ended 31 December 2022

1. Organisation and nature of business continued

Fund Name	Investment Objective
Global Absolute Return Fund	The investment objective of the Global Absolute Return Fund is to deliver capital growth over rolling 12-month periods, in all market conditions. There is no guarantee the Fund will achieve this objective over any given period. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Global Convertible Fund	The investment objective of the Global Convertible Fund is to generate both income and long term capital growth by investing in a diversified portfolio of convertible bonds (the underlying of which will be equity securities) and financial derivative instruments. Such securities will be listed and/or traded on a Recognised Exchange. The Fund will have a global geographical focus, and may invest more than 20% of its Net Asset Value in emerging markets. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Global Insurance Fund	The investment objective of the Global Insurance Fund is to provide an attractive total return irrespective of broader economic and financial market conditions. In order to achieve its investment objective the Fund will invest primarily in securities of insurance related companies worldwide. These companies include insurance and reinsurance companies, life assurance companies, insurance brokerage companies and other insurance related businesses including, but not limited to, insurance claims administration companies, insurance support service companies and companies that own insurance related assets. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Global Technology Fund	The investment objective of the Global Technology Fund is long term capital appreciation by way of investing in a globally diversified portfolio of technology companies. Although the Fund may receive income in the form of dividends, interest and from other sources, income is not a primary consideration. The Fund will invest at least two thirds of its net asset value in technology-related companies worldwide. The Fund will take a geographically diversified approach and operate within broad asset allocation ranges, but there are no specified limits on investing in any geographical region or single country. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Healthcare Blue Chip Fund	The investment objective of the Healthcare Blue Chip Fund is to achieve long term capital appreciation. The Fund will seek to achieve its investment objective by investing in a globally diversified portfolio of healthcare companies. The Fund will invest in transferable securities including, shares, equity warrants and other types of equity related securities such as preferred shares, which will be listed and/or traded on a Regulated Market, and issued by healthcare companies, to include, but not limited to, pharmaceutical, biotechnology, medical device and healthcare services companies. The Healthcare Blue Chip Fund may also invest in Global depository receipts and American and European depository receipts to gain exposure to healthcare companies. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Healthcare Discovery Fund	The investment objective of the Healthcare Discovery Fund is to achieve long term capital appreciation by way of investing in a globally diversified portfolio of healthcare companies which may be listed on traded on a Regulated Market. The securities in which the Fund will primarily invest will include equity and equity related securities including, but not limited to, ordinary and preference shares and financial derivative instruments. The Fund will typically invest in small capitalisation issues depending on market liquidity and as it judges the available opportunities. The Fund will take a geographically diversified approach. There are no specified limits on investing in any geographical region or in any sub-sector of healthcare.
Healthcare Opportunities Fund	The investment objective of the Healthcare Opportunities Fund is to preserve capital and achieve long term capital appreciation by investing in a globally diversified portfolio of healthcare companies. The Fund will seek to outperform the MSCI Global Healthcare Index whilst striving to limit the volatility of the Fund's returns. The Fund will take a geographically diversified approach and operate within broad asset allocation ranges, but there are no specified limits on investing in any geographical region or in any sub-sector of healthcare. Non-healthcare related securities will not exceed one third of the Fund's total assets. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Income Opportunities Fund	The investment objective of the Income Opportunities Fund is to provide an attractive level of income together with capital growth. In order to achieve its objective the Fund will invest primarily in the equity, debt and other securities of listed financial companies. The debt securities in which the Fund will invest will be fixed and floating rate and include, but are not limited to, preference shares, convertible bonds, debentures and bonds with the restriction that unrated debt securities will not be greater than 25% of the Net Asset Value of the Fund. The other securities in which the Fund may invest will be securities with equity characteristics, including but not limited to preferred stocks, as well as depository receipts (including global depository receipts traded) for such securities.

Fund Name	Investment Objective
Japan Value Fund	The investment objective of the Japan Value Fund is to achieve long term capital appreciation. The Fund will seek to achieve its investment objective by investing primarily in equity securities of issuers that exercise a significant part of their economic activities in Japan or are organised under the laws of Japan. The Fund intends to primarily invest its assets in securities listed on the Tokyo and regional Japanese exchanges that are Regulated Markets. Investment will primarily be concentrated in securities listed on the Tokyo Stock Exchange, however, the Fund may also, to a limited extent, invest in securities listed on regional Japanese exchanges. In addition, the Fund may also, to a limited extent, invest in securities listed and/or traded globally on Regulated Markets which securities provide exposure to the Japanese market.
North American Fund	The investment objective of the North American Fund is to achieve long term capital appreciation. The Fund invests in a diversified portfolio of securities of North American companies. The Investment Manager will invest in large, medium and small capitalisation companies depending on market liquidity and as it judges the available opportunities. The Fund promotes environmental and social characteristics under Article 9 of the SFDR.
Smart Energy Fund	The investment objective of the Smart Energy Fund is to provide long-term capital growth. The Fund invests in a global portfolio of selected publicly listed companies with exposure to the themes of smart energy, with at least 51% of its gross assets invested on a continuous basis in Equity Participations. Investments will be made in transferable securities including, but not limited to, shares, equity warrants and other types of securities such as preferred shares, which will be listed on a Regulated Market, and issued by companies, and Global, American and European depository receipts. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Smart Mobility Fund	The investment objective of the Smart Mobility Fund is to provide long-term capital growth. The Fund invests in a global portfolio of selected publicly listed companies with exposure to the themes of smart mobility, with at least 51% of its gross assets invested on a continuous basis in Equity Participations. Investments will be made in transferable securities including, but not limited to, shares, equity warrants and other types of securities such as preferred shares, which will be listed on a Regulated Market, and issued by companies, and Global, American and European depository receipts. The Fund promotes environmental and social characteristics under Article 9 of the SFDR.
UK Value Opportunities Fund	The investment objective of UK Value Opportunities Fund is to achieve long term capital appreciation. The Fund will seek to achieve its investment objective by primarily investing in a diversified portfolio of equity securities listed in the UK. The securities in which the Fund will invest will primarily include equity securities including, but not limited to ordinary and preference shares and equity warrants. The Fund will aim to outperform the FTSE All-Share Total Return Index by investing in undervalued companies or shares, whilst striving to reduce the volatility of the Fund's return by investing in a diversified portfolio. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.

2. Principal Accounting Policies

The principal accounting policies applied in the preparation of these Financial Statements are set out below.

A. Basis of Preparation

These Financial Statements have been prepared in accordance with International Financial Reporting Standards as adopted by the European Union ('IFRS'), with Irish Statute comprising the Companies Act 2014 and with the Central Bank UCITS Regulations.

The financial statements have been prepared on a fair value basis for financial assets and financial liabilities at fair value through profit or loss and derivative financial instruments in accordance with the relevant accounting standards. All other assets and liabilities are short term in nature and their carrying value approximates fair value. Redeemable participating shares are stated at redemption amount (redeemable participating shares).

The format and certain wording of the financial statements have been adapted from those contained in the Companies Act 2014 so that, in the opinion of the Directors, they more appropriately reflect the nature of the Company's business as an investment fund.

Notes to the Financial Statements continued

For the financial year ended 31 December 2022

2. Principal Accounting Policies continued

A. Basis of Preparation continued

The preparation of financial statements requires management to make judgements, estimates and assumptions that affect the application of policies and the reported amounts of assets, liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgements about carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates. Where applicable, information about assumptions and estimation uncertainties that have an impact on the financial statements are disclosed in note 2 (D) and note 10 and relate to the determination of fair value of financial instruments with significant unobservable inputs. As at 31 December 2022 and 31 December 2021, the Sub-Funds do not hold any financial instruments with significant unobservable inputs.

These financial statements are prepared on a going concern basis with the exception of UK Absolute Equity Fund (terminated 15 May 2020), Asian Opportunities Fund (terminated 1 March 2021) and Emerging Markets Income Fund (terminated 8 June 2021).

The financial information for these Funds has been prepared on a non-going concern basis of accounting where all assets are stated at their estimated recoverable amounts. As the assets of the Funds were already carried at amounts which approximate their recoverable amounts the re-measurement has not resulted in any adjustments to their value.

International Financial Reporting Standards

The Company has adopted all applicable International Financial Reporting Standards as endorsed by the European Union.

The Company classifies its redeemable shares as financial liabilities in accordance with IAS 32. The financial statements of the Company also include qualitative disclosure which indicates how the net asset value attributable to redeemable shareholders is calculated.

The combination of the above disclosures is considered, in this instance, to be sufficient to address the requirements of the amendments.

IFRIC interpretation 23 Uncertainty or Income Tax Treatment

On 7 June 2017, the international Accounting Standards Board issued IFRIC Interpretation 23 – uncertainty over Income Tax Treatments (the 'Interpretation'). The Interpretation clarifies application of recognition and measurement requirements in IAS 12 Income Taxes when there is uncertainty over the income tax treatments. The Interpretation specifically addresses the following:

- Whether an entity considers uncertain tax treatments separately
- The assumptions an entity makes about the examination of tax treatments by taxation authorities
- How an entity determines taxable profit (tax loss), tax bases, unused tax losses, unused tax credits and tax rates
- How an entity considers changes in facts and circumstances

The Company determines whether to consider each uncertain tax treatment separately or together with one or more other uncertain tax treatments and uses the approach that better predicts the resolution of the uncertainty.

The Company applies significant judgement in identifying uncertainties over income tax treatments. Since the Company operates in a complex multinational environment, it assessed whether the Interpretation had an impact on its financial statements.

The accounting policies have been applied consistently by the Company.

B. Swing pricing/dilution levy

A Fund may suffer dilution of the net asset value per share due to investors buying or selling shares in a Fund at a price that does not reflect dealing and other costs that arise when security trades are undertaken by the Investment Manager to accommodate cash inflows or outflows.

In order to counter this impact, a swing pricing mechanism has been adopted to protect the long-term interests of shareholders of the Funds. If, on any valuation date, the aggregate net capital activity of a Fund exceeds a pre-determined threshold, as established and reviewed by the Board of Directors of the Company, the net asset value per share will be adjusted upwards or downwards to reflect costs associated with the net capital inflows/(outflows) respectively.

The swing factor is impacted by three factors:

1. Adjustment for the spread between the bid and offer price of the underlying securities (currently a Fund will only swing to bid on material net redemptions).
2. An adjustment for broker fees and other market charges.
3. An adjustment for governmental taxes and duties payable on securities transactions

As a result of capital activity at the financial year end on the Income Opportunities Fund and UK Value Opportunities Fund, these Funds' net asset value per share at the financial year end were adjusted to reflect factors two and three above. The level of activity was not sufficiently material to justify applying factor one, or to require adjustment for any other Funds.

For financial reporting purposes, the net assets of each Fund at 31 December 2022 as disclosed in the Statement of Financial Position and Statement of Changes in Net Assets attributable to Holders of Redeemable Participating Shares does not reflect any swing pricing or duties and charges adjustment. The net asset value per share at 31 December 2022 used for dealing purposes, which is shown in Note 9 and Note 12, includes any swing price adjustments.

The following tables set out a reconciliation of the financial reporting net asset value per share and the dealing Net Asset Value per share for the two Funds affected:

Income Opportunities Fund	Dealing NAV per share	Swing Pricing Adjustment	Financial Statements NAV per share
Class A1 Sterling Distribution	£1.47	£0.00	£1.47
Class A2 Sterling Accumulation	£2.83	£0.00	£2.83
Class B1 Sterling Distribution	£1.57	£0.00	£1.57
Class B2 Sterling Accumulation	£2.98	£0.00	£2.98
Class I Euro Accumulation	€3.36	€0.00	€3.36
Class I Euro Distribution	€1.77	€0.00	€1.77
Class I Euro Hedged Accumulation	€16.77	€0.02	€16.75
Class I Euro Hedged Distribution	€12.35	€0.02	€12.33
Class I US Dollar Accumulation	\$3.58	\$0.00	\$3.58
Class I US Dollar Distribution	\$1.89	\$0.00	\$1.89
Class R Euro Accumulation	€3.18	€0.00	€3.18
Class R Euro Distribution	€1.66	€0.00	€1.66
Class R Euro Hedged Accumulation	€16.22	€0.02	€16.20
Class R Euro Hedged Distribution	€11.99	€0.01	€11.98
Class R US Dollar Accumulation	\$3.40	\$0.00	\$3.40
Class R US Dollar Distribution	\$1.77	\$0.00	\$1.77
Class R US Dollar Hedged Accumulation	\$14.56	\$0.02	\$14.54
Class R US Dollar Hedged Distribution	\$11.35	\$0.01	\$11.34

Notes to the Financial Statements continued

Class S Sterling Distribution	£11.18	£0.04	£11.14
Class Z Sterling Accumulation	£10.97	£0.05	£10.92

C. Foreign exchange translation

(i) Functional and presentation currency

Items included in the Company's financial statements are measured using the currency of the primary economic environment in which it operates (the "functional currency"). The functional currency of each Fund is the currency that reflects the fact that the participating shares of the Fund have been subscribed in this currency and the Fund's investments are in currencies that are denominated in or economically linked to this currency.

(ii) Transactions and balances

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in the Statement of Comprehensive Income. The presentation currency is the functional currency for each individual Fund and for the Company Total figures the presentation currency is US Dollars, denoted by the symbol USD.

The foreign currency translation adjustment of US\$551,924,156 (31 December 2021: US\$80,709,370) included in the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares and the foreign currency translation adjustment of US\$142,186,149 (31 December 2021: US\$315,382,092) included in the Statement of Cash Flows is due to the movement in exchange rates between 1 January 2022 and 31 December 2022 and the rate difference arising on the translation of the Statement of Comprehensive Income and the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares at average rates. The translation is in relation to the notional value for the Company only and has no impact on any individual Fund.

Proceeds from subscriptions and amounts paid on redemption of redeemable participating shares are translated at daily rates, which approximate the rates prevailing at the dates of the transactions.

D. Investments at fair value

(i) Classification of financial assets

On initial recognition, the Company classifies financial assets as measured at amortised cost or fair value through profit or loss (FVTPL). A financial asset is measured at amortised cost if it meets both of the following conditions and is not designated as at fair value through profit or loss:

- it is held within a business model whose objective is to hold assets to collect contractual cash flows; and
- its contractual terms give rise on specified dates to cash flows that are Solely Payments of Principal and Interest ('SPPI').

The Company's financial assets include equity investments, debt securities, investments in unlisted open-ended investment funds and derivatives. These financial assets are managed and their performance is evaluated, on a fair value basis, with frequent sales taking place, other than short term receivables held for collection and which meet the criteria for measurement at amortised cost.

The Company's financial assets and liabilities are measured as follows:

Financial Assets	Measurement
Equities	FVTPL
Debt securities	FVTPL
Investment funds	FVTPL
Financial derivative instruments	FVTPL
Cash and cash equivalents	Amortised cost
Other assets	Amortised cost
Financial Liabilities	
Financial derivative instruments	FVPTL
Other liabilities	Amortised cost
Net assets attributable to unitholders	Amortised cost

(ii) Recognition and derecognition of financial liabilities

Purchases and sales of investments are recognised on trade date, which is the date on which the Company commits to purchase or sell the asset. Investments are derecognised when the rights to receive cash flows from the investments have expired or the Company has transferred substantially all risks and rewards of ownership.

A financial liability is derecognised when the obligation specified in the contract is discharged, cancelled or expired.

(iii) Measurement

Financial instruments are measured initially at fair value (transaction price). Transaction costs on financial assets and financial liabilities at fair value through profit or loss are expensed immediately. Subsequent to initial recognition, all instruments classified at fair value through profit or loss are measured at fair value with changes in their fair value recognised in the Statement of Comprehensive Income. Other financial assets are carried at amortised cost using the effective interest rate method, less impairment losses, if any.

Financial liabilities, other than those at fair value through profit or loss, are measured at amortised cost using the effective interest rate method. Financial liabilities arising from the redeemable participating shares issued by the Funds are carried at the redemption amount representing the investors' right to a residual interest in the Funds' assets.

Gains and losses on investments

Gains and losses arising from changes in the fair value of the 'financial assets at fair value through profit or loss' category are included in the Statement of Comprehensive Income in the period in which they arise.

Investment transactions are accounted for on a trade date basis. Profits and losses on the disposal of investments are calculated by reference to the net proceeds received on disposal and the cost attributable to those investments based on the first in first out basis and are included in the Statement of Comprehensive Income.

(iv) Fair value measurement principles

The fair value of financial instruments traded in active markets (such as publicly traded derivatives and trading securities) is based on quoted market prices at the Statement of Financial Position date. The value of financial assets and liabilities which is quoted, listed or normally dealt in on a regulated market shall be the last traded price on such regulated market as at the valuation point or the mid-price, where no trades occurred on such day where relevant.

If a quoted market price is not available on a recognised stock exchange or from a broker/dealer for non-exchange-traded financial instruments, the value of any investment which is not quoted, listed or normally dealt in on a regulated market shall be the probable realisable value estimated with care and in good faith by a competent person, firm or association making a market in such investment (approved for the purpose by the Depositary) and/or any other competent person, in the opinion of the Directors (and approved for the purpose by the Depositary).

2. Principal Accounting Policies continued

D. Investments at fair value continued

Investment funds

Open-ended Investment funds are included in the accounts at the last reported NAV at close of business on the last dealing day of the reporting period. The changes in the daily net asset value of these Units are recognised in the Statement of Comprehensive Income.

Contracts for difference and swaps

Contracts for difference and equity swaps are agreements between the Company and third parties which allow the Company to acquire an exposure to the price movement of specific securities without actually purchasing the securities. The changes in contract values are recorded as unrealised gains or losses and the Company recognises a realised gain or loss when the contract is closed. Realised and unrealised gains and losses on contracts for difference and equity swaps are recognised in the Statement of Comprehensive Income.

Futures

A futures contract is an agreement between two parties to buy or sell a security, index or currency at a specific price or rate at a future date. Upon entering into a futures contract, the Company is required to deposit with a broker an amount of cash or cash equivalents equal to a certain percentage of the contract amount. This is known as 'initial cash margin'. Subsequent payments ('variation margin') are made or received by the Company each day, depending upon the daily fluctuation in the value of the contract. The daily changes in contract value are recorded as unrealised gains or losses and the Company recognises a realised gain or loss when the contract is closed. Realised and unrealised gains and losses on futures contracts are recognised in the Statement of Comprehensive Income.

Forward foreign currency contracts

A forward foreign currency contract ('FFCC') involves an obligation to purchase or sell a specific currency at a future date at a price set at the time the contract is made. FFCCs will be valued by reference to the forward price at which a new FFCC of the same size and maturity could be undertaken at the valuation date. The realised and unrealised gain or loss on open FFCC is calculated as the difference between the contract rate and this FFCC price and the Company recognises a realised gain or loss when the contract is closed. Realised and unrealised gains and losses on FFCCs are recognised in the Statement of Comprehensive Income. Where a FFCC is purchased to hedge the currency risk of a specific class which is issued in a currency other than the measurement currency of the Company, all gains or losses on that contract are allocated to that class.

Options

As part of the Company's investment strategy, it enters into options which are recognised in the Statement of Financial Position at fair value. The premium on purchased put options exercised is subtracted from the proceeds of the sale of the underlying security or foreign currency in determining the realised gain or loss. The premium on purchased call options exercised is added to the cost of the securities or foreign currency purchased. Premiums paid on the purchase of options which expire unexercised are treated as realised losses. Unrealised gains or losses on options are included in assets or liabilities on the Statement of Financial Position and movements are dealt with through the Statement of Comprehensive Income.

The above however differs for both Global Absolute Return Fund and the Global Technology Fund. The reclassification of option premiums is a bespoke and manual process. Option premiums on all written options are manually reclassified from capital to income.

Warrants

Warrants are sometimes used to gain exposure to emerging market equities where custody, liquidity, or other issues make ownership of local shares sub-optimal. The valuation of warrants depends on the level of trading. If the warrants are actively traded in the market then the market price is used. If the warrants are not actively traded in the market then the intrinsic value of the warrant based on the underlying equity price and the warrant strike price is used.

Credit Default Swaps

The Funds may enter into credit default swap contracts where one party, the protection buyer, makes an upfront or usually quarterly payment depending on the contractual arrangement to the counterparty, the protection seller, in exchange for the right to receive a contingent payment. The maximum amount of payment may equal the notional amount, at par, of the underlying index or security as a result of a related credit event.

Payments are made upon a credit default event of the disclosed primary referenced obligation or all other equally ranked obligations of the reference entity. An upfront payment received by the Funds, as the protection seller, is recorded as a liability. An upfront payment made by the Funds, as a protection buyer, is recorded as an asset. Periodic payments received or paid by the Funds are disclosed as realised gains/(losses) and disclosed in the Net gain on financial assets and financial liabilities at fair value through profit or loss in the Statement of Comprehensive Income.

Credit default swap contracts are marked to market at each valuation point by a third party vendor and the change, if any, is recorded as a movement in unrealised gains/(losses). Payments received or made as a result of a credit event or termination of the contract are recognised, net of a proportional amount of the upfront payment, as realised gains/(losses). In addition to bearing the risk that the credit event will occur, the Funds may be unable to close out their positions at the same time or at the same price as if they had purchased comparable publicly traded securities. The counterparty may also default on its obligation to perform. Risks of loss may exceed amounts recognised on the Statement of Financial Position. Realised gains/(losses) and changes in unrealised gains/(losses) on credit default swaps are disclosed in Net gain on financial assets and financial liabilities at fair value through profit or loss in the Statement of Comprehensive Income. Unrealised gains/(losses) are disclosed in the Statement of Financial Position.

E. Other measurement principles

Cash and bank overdrafts

Cash, other liquid assets and bank overdrafts are valued at their face value with interest accrued, where applicable. Cash at bank and bank overdraft balances are comprised of cash balances held with The Northern Trust Company (TNTC) and includes investors' money held in collection accounts.

Margin cash and margin receivable

Cash provided by the Funds to a counterparty in relation to futures and option contracts is identified in the Statement of Financial Position as Margin Cash. Margin Cash is not included as a component of cash and cash equivalents in the Statement of Financial Position and is not available to the Funds on demand.

Margin receivable or payable is held with or due to Credit Suisse Securities (Europe) Limited ('Credit Suisse') and UBS AG.

Receivables

Receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. Receivables are recognised initially at amortised cost plus transaction costs that are directly attributable to their acquisition.

Payables

Payables are recognised initially at fair value and subsequently stated at amortised cost. The difference between proceeds and amount payable is recognised over the period of the payable using the effective interest method.

Offsetting financial instruments

Financial assets and liabilities are offset and the net amount reported in the Statement of Financial Position when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis, or realise the asset and settle the liability simultaneously.

The Company has ISDA Master Agreements (the "Agreements") with UBS AG. Under certain conditions, as set out under each agreement, amounts payable by one party to the other in respect of derivative contracts covered by the Agreement may be offset against any other amounts payable by the payee to the payer.

Redeemable participating shares

Redeemable participating shares are redeemable at the shareholder's option and are classified as financial liabilities. Distributions on these redeemable participating shares are recognised in the Statement of Comprehensive Income as finance costs.

Redeemable participating shares can be put back to the Company at any time for cash equal to a proportionate share of the Company's net asset value. The redeemable participating shares are carried at the present value of the redemption amount that is payable at the Statement of Financial Position date if the shareholders exercised their rights to put the shares back to the Company.

Transaction costs

Transaction costs are incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or financial liability. An incremental cost is one that would not have been incurred if the entity had not acquired, issued or disposed of the financial instrument.

Transaction costs on the purchase and sale of bonds, forward foreign currency contracts, CFDs, investment funds and warrants are included in the purchase and sale price of the investment. They cannot be practically or reliably gathered as they are embedded in the cost of the investment and cannot be separately verified or disclosed.

Transaction costs on purchases and sales of equities, futures and options are included in net gains/(losses) on financial assets at fair value through profit or loss in the Statement of Comprehensive Income for each Fund. These costs are separately identifiable and are disclosed in Note 15.

Notes to the Financial Statements continued

For the financial year ended 31 December 2022

2. Principal Accounting Policies continued

Income Equalisation

Income equalisation is a process by which accrued income included in the price of shares purchased and redeemed during the accounting financial year is reported to Shareholders. The subscription price of Shares is deemed to include an equalisation payment calculated by reference to the accrued income of the relevant Fund and the first distribution in respect of any Share will include a payment of income usually equal to or greater than the amount of such equalisation payment. The redemption price of each Share will also include an equalisation payment in respect of the accrued income of the relevant Fund up to the date of redemption. Income equalisation is classified as investment income in the Statement of Comprehensive Income.

F. Distribution policy

The share classes of certain Funds have been approved by the United Kingdom HM Revenue and Customs as Reporting Funds in accordance with the UK Offshore Funds (Tax) Regulations 2009. The Directors intend to continue the distribution policy as outlined below unless otherwise specified in the relevant fund supplement. Dividends, if declared, will only be paid out of the Company's net investment income return (i.e. income from dividends, interest or otherwise, less the Company's accrued expenses to be certified for the accounting period), realised and unrealised profits on the disposal/revaluation of investments and other assets less realised and unrealised losses of the Company, although the amount available for distribution in respect of certain Funds may be effectively increased by the charging of expenses to capital. Funds which can avail of this facility are identified in the relevant Fund supplement.

Dividends will normally be paid in May of each financial year for all of the Funds except for the Distributing Share Classes of the European (ex UK) Income Fund, Global Convertible Fund and Financial Opportunities Fund for which dividends will be paid in July and January and for the Distributing Share Classes of the Global Insurance Fund and Income Opportunities Fund for which dividends are to be declared at the beginning of each calendar quarter in respect of the preceding quarter, and paid by the end of the month in which they are declared. Any dividend paid on a redeemable participating share that is not claimed will not earn interest and, if not claimed within six years of its declaration, shall be forfeited for the benefit of the Company.

G. Operating expenses

The Company is responsible for all normal operating expenses including investment management fees, depositary fees, performance fees, administration fees, audit fees, stamp duties and accruals and other duties and charges incurred on the acquisition and realisation of investments. These are accounted for on an accruals basis. The Investment Manager, Polar Capital LLP ('the Investment Manager'), meets all other operating expenses incurred by it in connection with its services.

H. Interest and dividend income

Interest income and expense is recognised in the Statement of Comprehensive Income for all the relevant instruments using the effective interest method. The effective interest method is a method of calculating the amortised cost of the financial asset or the financial liability and of allocating the interest income or expense over the relevant period.

Dividends are recognised to the Statement of Comprehensive Income on the dates on which the relevant securities are listed as 'ex-dividend'. Dividend income is recorded gross of irrecoverable dividend withholding tax which is disclosed separately in the Statement of Comprehensive Income. Bank interest income is recognised on an accruals basis.

The Manager is entitled to receive an annual management fee from the Company. This fee will not exceed 0.02% of the Net Asset Value of the Company. All fees paid to the Manager is disclosed separately in the Statement of Comprehensive Income. US\$23,418 (31 December 2021: US\$178,646) was due to the Manager at 31 December 2022

3. Fees and Expenses

The Manager is entitled to receive an annual management fee from the Company. This fee will not exceed 0.02% of the Net Asset Value of the Company. All fees paid to the Manager is disclosed separately in the Statement of Comprehensive Income. US\$23,418 (31 December 2021: US\$178,646) was due to the Manager at 31 December 2022.

The Investment Managers are entitled to receive an investment management fee and a performance fee in respect of each Fund together with any extraordinary out of pocket expenses. The investment management fee is accrued daily and is payable monthly in arrears. Please see note 1 for a breakdown of investment management and performance fee rates for each Fund. Investment management fees are calculated before deduction for any accrued performance fees. An initial payment of the investment management fee based on the most recently published Net Asset Value will be made on the last day of each month, with an adjustment being made where necessary, on the last day of the next month.

Performance fee calculation methods differ from Fund to Fund. In the method of calculation used for the majority of the Funds, the performance fee is calculated separately for each class of shares in a Fund and is equal to a percentage of the amount by which the increase in the Net Asset Value per share (prior to the provision for a performance fee) during the relevant performance period exceeds the increase in the Indexed Net Asset Value per share (the specific established index that the respective Fund is aiming to track) over the same period. However, the precise method of calculation may differ in each case. Full details are set out in each Fund Supplement. The performance fee is accrued daily and payable annually on 31 December, where there is a performance fee payable.

All fees paid to the Investment Managers, including any performance fees, are disclosed separately in the Statement of Comprehensive Income. US\$24,510,483 (31 December 2021: US\$35,487,391) was due to the Investment Managers at 31 December 2022, which includes both investment management and performance fees.

The Administrator is entitled to receive a fee of 0.09% of the first US\$1.5 billion of the Company's Net Asset Value, 0.07% of the next US\$3.5 billion of the Company's Net Asset Value, 0.04% of the next US\$5 billion of the Company's Net Asset Value and 0.02% of the Company's Net Asset Value thereafter, subject to a monthly minimum fee of US\$3,500 in respect of each Fund, which shall be accrued daily and paid monthly in arrears. The performance fee is calculated at a Company level and then prorated between the sub-funds on a daily basis by the Fund Accounting team as part of the daily NAV process.

The Administrator shall also be entitled to be repaid out of the assets of the Company or relevant Fund all of its reasonable out-of-pocket expenses incurred on behalf of the Company (which shall include legal fees, couriers' fees and telecommunication costs and expenses).

The Depository is entitled to an annual fee from the Company accrued daily and paid monthly in arrears of 0.015% of the Company's Net Asset Value, subject to a monthly minimum fee of US\$1,200 in respect of each Fund, which shall be accrued daily and paid monthly in arrears. The Depository shall also be entitled to be repaid out of the assets of each Fund all reasonable out-of-pocket expenses incurred by it on behalf of the relevant Fund (such as telephone, postage, printing, legal and fax expenses) including stamp duties and registration fees and the fees and expenses of sub-custodians, at normal commercial rates.

BNP Paribas Securities Services also acts as the Swiss Representative and Swiss Paying Agent and for the financial year ended 31 December 2022 was entitled to receive the following fees for this service:

- (i) an annual fee of CHF 29,000;
- (ii) additional hours for extraordinary expenditures which are not covered by the agreement and which are billed at CHF 250 per hour;
- (iii) reimbursement for all external costs, such as the publication of rates or other publication costs, charges levied by the Swiss Financial Market Supervisory Authority ('FINMA') and any amounts charged by external lawyers on behalf of the Company.

The European Facilities Agent, Zeidler Legal Process Outsourcing Limited, receives an annual fee from the Company which varies according to the number and category of country in which the Funds are registered for marketing purposes. The European Facilities Agent received a fee of EUR 12,750 during the year. The EU Facilities Agent is also entitled to receive reimbursement of any reasonable out of pocket expenses incurred by it in the performance of their duties.

The Directors fees are disclosed in the Statement of Comprehensive Income.

Auditor's Remuneration

The remuneration for all work carried out by the statutory auditors in respect of the financial year is as follows:

	2022 EUR	2021 EUR
Statutory audit fee	146,300	187,211
Other assurance services	–	7,000
Tax advisory services	–	–
Other non audit services	–	–
	146,300	194,211

The audit fee stated above is different to the Statement of Comprehensive Income due to the impact of opening and closing accruals and the movement in fx rates in the year. The fees are exclusive of VAT.

Amounts payable at the year-end to the Administrator, Depository, Directors, Auditors and other general expenses are included in sundry creditors on the Statement of Financial Position.

Notes to the Financial Statements continued

For the financial year ended 31 December 2022

4. Bank Overdraft

The Company has an overdraft facility with The Northern Trust Company for liquidity purposes. The assets of the relevant Fund are held as collateral for the overdraft when it is utilised. As at the financial year end the following Funds had bank overdrafts:

	31 December 2022	31 December 2021
Asian Opportunities Fund	US\$ 1	US\$ Nil

5. Soft Commissions and investment research

The Investment Managers have committed to the Company that it will bear the cost of all general written research consumed by its investment teams. For certain strategies where the consumption of specialised research is regarded as critical to the investment process, the Company will pay for such costs up to a level pre-agreed with the Directors. These costs are included on the Statement of Comprehensive Income. The Funds that paid for the cost of specialised research are listed below:

Asian Opportunities Fund	Global Technology Fund
Asian Stars Fund	Healthcare Blue Chip Fund
Automation & Artificial Intelligence Fund	Healthcare Discovery Fund
Biotechnology Fund	Healthcare Opportunities Fund
China Stars Fund	Income Opportunities Fund
Emerging Markets Stars Fund	Japan Value Fund
Financial Opportunities Fund	Smart Energy Fund
Global Absolute Return Fund	Smart Mobility Fund
Global Convertible Fund	UK Absolute Equity Fund
Global Insurance Fund	UK Value Opportunities Fund

The Investment Managers received no soft commissions during the year.

7. Taxation

Under current Irish law and practice the Company qualifies as an investment undertaking as defined in Section 739B of the Taxes Consolidation Act, 1997, as amended (the "TCA"). On that basis, it is not chargeable to Irish tax on its income or gains.

However, Irish tax may arise if a "chargeable event" occurs. A chargeable event includes any distribution payments to shareholders or any encashment, redemption, cancellation, transfer or deemed disposal of shares for Irish tax purposes, arising as a result of holding shares in the Company for a period of eight years or more, or the appropriation or cancellation of shares of a shareholder by the Company for the purposes of meeting the amount of tax payable on a gain arising on a transfer.

No Irish tax will arise on the Company in respect of chargeable events in respect of:

(iv) transactions by a shareholder who is neither Irish resident nor ordinarily resident in Ireland for tax purposes, at the time of the chargeable event, provided that a relevant declaration is in place (in accordance with Schedule 2b of the TCA) and the Company is not in possession of any information which would reasonably suggest that the information contained therein is no longer materially correct; or

(v) transactions by a shareholder who is an exempt Irish investor (as defined in Section 739D TCA).

Dividends, interest and capital gains (if any) received on investments made by the Company may be subject to withholding taxes imposed by the country from which the investment income/gains are received and such taxes may not be recoverable by the Company or its shareholders.

During the financial year ended 31 December 2022, the following Funds were subject to Indian and Brazilian capital gain taxes on sale of investments: Automation & Artificial Intelligence Fund, Asian Stars Fund, Emerging Markets Stars Fund, Healthcare Discovery Fund and Healthcare Opportunities Fund. Such charges are included in Net realised and unrealised gain/(loss) on investments in Statement of Comprehensive Income.

8. Related Party Transactions

A number of the Directors held interests directly or indirectly in the Funds during the financial year. At the end of the year, their interests were as follows:

Director	Fund	Share Class	Number of Holdings	
			31 December 2022	31 December 2021
Charles Scott	Global Insurance Fund	Class R US Dollar Accumulation	69,977	69,977
	Income Opportunities Fund	Class B2 Sterling Accumulation	184,233	184,233
David Astor	Financial Opportunities Fund	Class I Sterling Distribution	4,685	4,685
	Income Opportunities Fund	Class B1 Sterling Distribution	9,531	9,531
	Japan Value Fund	Class S Hedged	1,125	1,125
Robert Bovet*	Biotechnology Fund	Class I US Dollar Distribution	8,000	8,000
Karen Nolan	Emerging Markets Stars Fund	Class I Euro Accumulation	3,817	3,817
	Automation & Artificial Intelligence Fund	Class I Euro Accumulation	2,729	2,729

* Robert Bovet resigned as a Director and Chairman of the Company on 31 December 2022. Robert Bovet's holdings are disclosed above as he was a Director during the financial year.

No other Director had any interest in the redeemable participating shares of the Company during the financial year.

Notes to the Financial Statements continued

For the financial year ended 31 December 2022

8. Related Party Transactions continued

The remuneration of the Directors of the Company may not, in the aggregate, exceed €1,000,000. Directors fees earned during the financial year ended 31 December 2022 and 31 December 2021 are disclosed in the Statement of Comprehensive Income.

The Manager of the Company is Bridge Fund Management Limited. Under the terms of the management agreement, the Manager is responsible for the general management and administration of the Funds' affairs and for ensuring compliance with the UCITS Regulations, including investment and reinvestment of each Fund's assets, having regard to the investment objective and policies of each Fund. However, the Manager has delegated its investment management functions to the Investment Managers and certain of its administration and transfer agency functions in respect of each Fund to the Administrator. The Manager receives fees in respect of its services as management company of the Funds.

James Cayzer-Colvin was a Director of both the Company and the holding company of Polar Capital LLP up to his resignation as a Director of the Company on 11 October 2022.

Polar Capital LLP and Polar Capital (Switzerland) AG are the Investment Managers of Polar Capital Funds plc and Polar Capital Partners Limited is a controlling partner of Polar Capital LLP and the ultimate parent of Polar Capital (Switzerland) AG. As at 31 December 2022 and 31 December 2021, Polar Capital Partners Limited held shares in the Funds listed below:

9. Shareholders' Funds

On incorporation, the authorised share capital of the Company was US\$40,000 divided into 40,000 Subscriber Shares with a par value of US\$1 each and 500,000,000,000 redeemable participating shares of no par value. There are 7 Subscriber Shares currently in issue which are held by the Investment Manager and nominees of the Investment Manager. These subscriber shares do not participate in any of the Company's Funds and are not included as part of the net asset value of the Company. The Directors consider this treatment is appropriate, given the nature of the Company as an investment Fund.

10. Financial Risk Management

The Funds hold financial instruments, which at any one time may comprise securities, cash and derivatives, held in accordance with the investment objective and policies of each Fund.

A review of the portfolio activity for the financial year is available in the Investment Manager's Reports and a detailed analysis of the investments is shown in the Portfolio Statements. Investments listed on the Portfolio Statements are stated at fair value as described in Note 2.

Risks

The following summary is not intended to be a comprehensive summary of all the risks inherent in investing in the Company and investors should refer to the prospectus for a more detailed discussion of these risks.

Strategy in using Financial Instruments

The Funds are exposed to a variety of financial risks in pursuing their stated investment objectives and policies. These risks are defined for financial reporting purposes by IFRS as credit risk, liquidity risk and market risk (which in turn includes currency risk, interest rate risk and price risk). The Funds take exposure to certain of these risks to generate investment returns on their portfolios, although these risks can also potentially result in a reduction in the Funds' assets. The Investment Manager will use its best endeavors to minimise the potentially adverse effects of these risks on the Funds' performance where it can do so while still managing the investments of the Funds in ways that are consistent with each Fund's investment objectives and policies.

The risks, and the measures adopted by the Company for managing these risks, are detailed over the coming pages.

Market price risk

Market price risk is the risk that the fair value of a financial instrument or its future cash flows will fluctuate because of changes in market prices.

The assets of the Funds consist principally of equities, equity related securities, fixed income securities, contracts for difference ("CFDs") and currency derivatives used for hedging purposes. Credit default swaps, interest rate futures and options are also used by certain Funds from time to time.

The values of these instruments are determined by market forces and there is accordingly a risk that market prices can change in a way that is adverse to a Fund's performance.

The Directors have adopted a number of investment restrictions which are set out in the individual Fund supplements to the Company's prospectus and which limit the exposure of the Funds to adverse changes in the price of any individual financial asset. In accordance with Company policy, the Investment Manager monitors the Funds' positions on a daily basis and reports regularly to the Board of Directors. The Board reviews the information on each Fund's overall market exposure provided by the Investment Manager at its periodic meetings.

In addition, the Investment Managers manages the exposure of the portfolios to the risk of adverse changes in the general level of market prices to the extent consistent, in the judgement of the Investment Manager, with each Fund's respective investment objective.

Use of Derivatives and Efficient Portfolio Management

Depending on the Funds involved, the Company may invest in derivatives for both investment and efficient portfolio management purposes, subject to the conditions and within the limits from time to time stipulated by the Central Bank under the UCITS Regulations. A number of the Funds use currency forwards to hedge share class exposures.

Apart from the Global Absolute Return Fund and Global Convertible Fund, and before it was fully redeemed on 15 May 2020, the UK Absolute Equity Fund, the Investment Manager has generally only used derivatives instruments in the Funds for the purpose of efficient portfolio management and efficient access to markets during the financial year. This includes contracts for difference, option contracts, forward foreign currency contracts and futures contracts. Risks arising from the use of derivatives at the financial year end are consistent with those set out in the Prospectus.

Open derivative contracts at the financial year end are disclosed in the Portfolio Statements, including the relevant counterparty, the underlying securities, currencies or indices, and the market value or unrealised gain/loss on the contract at the financial year end.

At 31 December 2022, market price risks applying to each Fund are affected by two main components: changes in market prices and currency exchange rates.

The following tables show the sensitivity of each Fund (for a representative share class) to changes in market prices based on a 10% price stress test on the portfolio as at 31 December 2022 and 31 December 2021.

Notes to the Financial Statements continued

For the financial year ended 31 December 2022

10. Financial Risk Management continued

Sensitivity analysis is calculated after an adjustment for swing pricing.

Market price risk analysis is based on the dealing NAV per share. Some limitations of sensitivity analysis are:

- (i) the models are based on historical data and cannot take account of the fact that future market price movements, correlations between markets and levels of market liquidity in conditions of market stress may bear no relation to historical patterns;
- (ii) the market price risk information is a relative estimate of risk rather than a precise and accurate number
- (iii) the market price information represents a hypothetical outcome and is not intended to be predictive; and
- (iv) future market conditions could vary significantly from those experienced in the past.

Exposure to derivatives

In respect of Global Absolute Return Fund, the Investment Manager uses a Value at Risk ('VaR') based approach to limit the exposure of the Fund to derivatives. In accordance with the UCITS Regulations, derivatives exposure is limited to the extent necessary to keep the Fund's VaR within the limit set out below. VaR is measured using a 99% confidence level.

Global Absolute Return Fund

The VaR limit for the Global Absolute Return Fund is 20% based on a 20-day holding period. The minimum VaR during the financial year was 1.79%.

The maximum VaR during the financial year was 10.62%. The average VaR during the financial year was 3.50%.

Gross leverage, calculated as the sum of the absolute notional values of the derivatives used in the Fund, is not anticipated to exceed 250% of Net Asset Value of the Fund at any given time.

All of the other Funds active during the financial year use the commitment approach to measure derivatives exposure.

Currency risk

Currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates. Each Fund is exposed to currency risk as the assets and liabilities of each Fund may be denominated in a currency other than the base currency of that Fund.

The fluctuations in the rate of exchange between the currency in which the asset or liability is denominated and the functional currency could result in an appreciation or depreciation in the fair value of that asset when measured in the Fund's base currency. The Investment Managers may attempt to mitigate these risks through the use of financial derivative instruments.

Currency transactions undertaken for the Funds will also include hedges against the base or functional currency of the Sub-Funds in respect of the values of share classes in the Funds which are denominated in currencies other than the base currency. These hedges are specific to individual share classes and will not impact all investors.

The Investment Managers monitor each Fund's currency exposure, where relevant to the investment strategy for the Fund, on a daily basis and reports regularly to the Board of Directors.

At 31 December 2022 each Fund's currency exposure was as follows:

Asian Stars Fund	Non-USD currency Assets US\$	Non-USD currency Liabilities US\$	Non-USD Cash Balance US\$	Forward Foreign Currency Contracts US\$	Net Non-USD Currency Assets US\$

Notes to the Financial Statements continued

For the financial year ended 31 December 2022

10. Financial Risk Management continued

Interest rate risk

Most of the Funds' financial assets and liabilities are non-interest bearing and any excess cash and cash equivalents are invested at short term market interest rates. As a result, the Funds are not subject to significant amounts of risk due to fluctuations in the prevailing level of market interest rates.

The three Funds which invest in interest bearing securities are Global Absolute Return Fund, Global Convertible Fund and Income Opportunities Fund and as such their net asset values are exposed to changes in interest rates, the risk being that if interest rates rise, they will cause the value of the interest-bearing securities component of the Funds' portfolio to decline. These portfolios consist of a variety of positions with varying maturity dates; in general, the longer the period to maturity of the securities, the greater the risk that the net asset value will decline as a result of an increase in interest rates. The Investment Manager of these funds regularly monitors the portfolio and particularly the spread of maturity dates and portfolio balances to achieve the investment objective in line with change in interest rates.

As part of its monitoring process the Investment Manager, when looking at individual bonds and the portfolios as a whole, will consider their sensitivity to changes in interest rates. This will include taking into account their position in the capital structure, whether they have fixed maturities or are perpetual, and whether they have call dates. If they have call dates, the terms if not called will be considered, whether fixed or floating, and what margin over the relevant risk free rate the bond will yield if not called. The Investment Managers will also compare the yield on corporate bonds relative to government bonds and the impact that this may have in increasing or reducing the sensitivity of the portfolio to moves in interest rates.

Global Absolute Return Fund

31 December 2022	Less than 1 month (US\$)	1 month – 1 year (US\$)	Greater than 1 year (US\$)	Non-Interest bearing (US\$)	Total (US\$)
Financial assets at fair value through profit or loss	–	6,079,946	83,397,890	21,444,129	110,921,965

Total	11,103,274	1,018,325	4,297,311	41,633,789	58,052,699

As at 31 December 2022, should interest rates have fallen by 0.25%, with all other variables remaining constant, the increase in net assets attributable to the holders of redeemable shares would amount to approximately 0.29% (31 December 2021: 0.07%). An equal change in interest rates in the opposite direction would have decreased net assets attributable to the holders of redeemable shares by 0.28% (31 December 2021: 0.05%).

Credit risk

Credit risk is the risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation.

The majority of the Funds' financial assets are equity securities. As a result, they are not subject to significant amounts of credit risk.

The credit rating of the fixed income securities held in the three Funds that do invest in debt securities were as follows at 31 December 2022 and 31 December 2021.

Global Absolute Return Fund	31 December 2022		31 December 2021

Credit risk on settlement

Transactions in securities are generally settled or paid for on delivery or cleared through the appropriate clearing system for the market on which the securities are traded. The risk of default is not considered to be material, as delivery of securities sold is only made once the Depository has received confirmation of payment. Payment is also only made on a purchase once confirmation of delivery of the securities has been received by the Depository. The trade will fail if either party fails to deliver the required confirmations.

Credit risk on cash and receivables

The Company has an exposure for cash at bank, margin cash and margin receivable as an unsecured creditor to either counterparty risk or the Depository which would involve a significant risk of loss in the event of a default by either. Credit risk for sundry debtors is considered immaterial.

At 31 December 2022 and 31 December 2021, none of the Funds' financial assets were past due or impaired.

The Investment Manager monitors each Fund's credit exposure, where relevant to the Fund's investment strategy, on a daily basis and reports regularly to the Board of Directors, which reviews the information provided by the Investment Manager on significant exposures at its periodic meetings.

Credit risk statement

The Depository is responsible for the safe-keeping of assets. The Depository has appointed The Northern Trust Company ("TNTC") as its global sub-custodian. Both the Depository and TNTC are wholly owned subsidiaries of Northern Trust Corporation ("NTC"). As at 31 December 2022, NTC had a long-term credit rating from Standard & Poor's of A+ (31 December 2021: A+).

TNTC, in the discharge of its delegated depository duties, holds in custody (i) all financial instruments that may be registered in a financial instruments account opened on the books of TNTC and (ii) all financial instruments that can be physically delivered to TNTC. TNTC ensures all financial instruments (held in a financial instruments account on the books of TNTC) are held in segregated accounts in the name of the relevant Fund, clearly identifiable as belonging to the relevant Fund, and distinct and separately from the proprietary assets of TNTC, Depository and NTC.

In addition, TNTC, as banker, holds cash of the Funds on deposit. Such cash is held on the balance sheet of TNTC. In the event of the insolvency of TNTC, in accordance with standard banking practice, the Funds will rank as an unsecured creditor of TNTC in respect of any cash deposits.

The Insolvency of the Depository and or one of its agents or affiliates may cause the Fund's rights with respect to their assets to be delayed or may result in the Funds not receiving the full value of their assets.

Notes to the Financial Statements continued

For the financial year ended 31 December 2022

10. Financial Risk Management continued

Credit risk statement continued

As noted in Note 2 (E), Cash at bank and bank overdraft balances are comprised of cash balances held at TNTC. As at 31 December 2022 cash was held with counterparties and brokers as follows:

China Stars: US\$ Nil (31 December 2021: US\$6,461)

Global Absolute Return Fund: US\$1,754,196 (31 December 2021: US\$711,785)

Global Convertible Fund: US\$6,226,037 (31 December 2021: US\$ Nil)

Global Technology Fund: GBP Nil (31 December 2021: GBP14,322,512)

Healthcare Opportunities Fund: US\$ Nil (31 December 2021: US\$100)

Income Opportunities Fund GBP741,899 (31 December 2021: GBP97,949)

UK Value Opportunities Fund: GBP Nil (31 December 2021: GBP(2))

The Funds' counterparties and brokers had the following long-term credit ratings from Standard & Poor's as at 31 December 2022:

Credit Suisse Securities (Europe) Limited: A- (31 December 2021: A+)

UBS AG: A+ (31 December 2021: A+).

Liquidity risk

Liquidity risk is the risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities as they fall due.

The Funds are exposed to daily cash redemptions of redeemable participating shares. The Funds invest the majority of their assets in securities and other instruments that are traded on an active market and which are considered to be liquid as under normal market conditions, they can be readily disposed of in the event that cash needs to be raised to meet redemptions or to pay expenses.

In accordance with Company policy, the Investment Manager monitors the Funds' liquidity on a daily basis and report regularly to the Board of Directors, which reviews the information provided by the Investment Manager on significant exposures at its periodic meetings.

The Funds' listed securities are considered to be readily realisable as they are principally listed on major European, Asian and US stock exchanges. At 31 December 2022 and 31 December 2021, the Funds all held liquid assets and liabilities that could be realised in less than one month. The residual contractual maturities of financial liabilities held by the Funds are all within 3 months.

Offsetting Financial Instruments

The Company has not offset any financial assets and financial liabilities in the Statement of Financial Position. Financial assets and financial liabilities which are subject to enforceable master netting arrangements are detailed in the tables below.

The Global Convertible Fund is party to an ISDA Master Agreement with UBS AG, which was signed on 30 August 2013. The existing Agreement was amended by adding Global Absolute Return Fund on 31 December 2018.

Fair value hierarchy

Financial assets and financial liabilities at fair value through profit and loss are valued at fair value at the Statement of Financial Position date. Subsequent to initial recognition, all financial assets and financial liabilities at fair value through profit or loss are measured at fair value. Gains and losses arising from changes in the fair value of the 'financial assets or financial liabilities at fair value through profit or loss' category are presented in the Statement of Comprehensive Income within 'Net gain/loss on financial assets and financial liabilities at fair value through profit or loss' in the period in which they arise. Fair value is the price that would be received to sell the asset or paid to transfer the liability in an orderly transaction between market participants at the measurement date.

In determining fair value, securities which are quoted, listed or traded on a recognised exchange will be valued at the last traded price (or, if no last traded price is available, at the mid-market price).

A financial instrument is regarded as quoted in an active market if quoted prices are readily and regularly available from an exchange, dealer, broker, industry group, pricing service, or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis.

The fair value of financial assets and liabilities that are not traded in an active market is determined by using valuation techniques.

For instruments for which there is no active market, the Company may use internally developed models, which are usually based on valuation methods and techniques generally recognised as standard within the industry.

Valuation models are used primarily to value unlisted equities, for which markets were or have been inactive during the financial year. Some of the inputs to these models may not be market observable and are therefore estimated based on assumptions.

The table below sets out fair value measurements using the fair value hierarchy:

Financial assets and liabilities at fair value through profit or loss as at 31 December 2022

Categorisation within the hierarchy has been determined on the basis of the lowest level input that is significant to the fair value measurement of the relevant asset as follows:

Level 1 – valued using quoted prices in active markets for identical assets.

Level 2 – valued by reference to valuation techniques using observable inputs other than quoted prices included within level 1.

Level 3 – valued by reference to valuation techniques using inputs that are not based on observable market data.

There are no assets held in level 3 at 31 December 2022 (31 December 2021: Nil). In addition, there were no transfers between level 1 and level 2 of the fair value hierarchy during the financial year from 1 January 2022 to 31 December 2022 and 1 January 2021 to 31 December 2021.

The valuation techniques used by the Company are explained in the accounting policies described in note 2.

11. Cross/Segregated Liability

The Company is an umbrella fund investment company with segregated liability between the Funds of the Company. Under Irish law, being the law applicable to the Company, this should result in any liabilities attributable to any Fund being borne solely by that Fund in the event of any insolvency.

There were no distributions for Japan Value Fund in 31 December 2022. The income from December was distributed in March 2023.

14. FCA Side Letter Policy

The Financial Conduct Authority (FCA) in the United Kingdom, which regulates Polar Capital LLP, expects all investment managers authorised and regulated by the FCA to write to investors in the funds managed by them with details of any Side Letter that may have been entered into by it. The FCA considers a Side Letter to be an arrangement which can reasonably be expected to provide an investor with materially more favourable rights than other investors, such as enhanced redemption rights or the provision of portfolio information which are not generally available. Polar Capital LLP has confirmed to the Company that it is not aware or party to an arrangement whereby an investor has any preferential redemption terms. However in exceptional circumstances, for example where an investor seeds a new Fund, the Polar Capital LLP has provided investors on the Fund's behalf with portfolio information and capacity commitments.

15. Transaction Costs

During the financial year ended 31 December 2022 and 31 December 2021, the Funds incurred transaction costs in the purchase and sale of investments as follows:

	Currency	31 December 2022	31 December 2021
Asian Opportunities Fund	US\$	–	20,951
Asian Stars Fund	US\$	235,118	340,560

* Average net assets held during the financial year end were used for this calculation. Financial Highlights are based on financial statements NAV per share. The above shares classes represent the overall performance of each Fund. Other share classes may have a different performance depending on the specific characteristics of the share class.

ASC 740-10 "Accounting for Uncertainty in Income Taxes – an interpretation of ASC 740" clarifies the accounting for uncertainty in income taxes recognised in the Fund's financial statements in conformity with ASC 740 "Accounting for Income Taxes".

ASC 740-10 prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken on a tax return.

In conformity with ASC 740-10, the Directors have analysed the Funds' tax positions to be taken for the financial year ended 31 December 2022 and 31 December 2021 have concluded that no provision for income tax is required in the financial statements.

For the financial year ended 31 December 2022 and 31 December 2021, the average volume of the Company's derivative activities based on their notional amounts and number of contracts, categorised by primary underlying risk, are as follows:

17. Significant Events during the Financial year

Following Russia's invasion of Ukraine on 24 February 2022, various states have imposed sanctions and restrictions on the Russian state, Russian companies and individuals linked to Russia. The invasion has had a significant impact on markets with increased volatility, supply chain disruption and the potential to create severe disruption to oil, gas, and grain markets in particular.

The Funds have no direct exposure to Russia or Ukraine but the events have potential to impact global markets negatively. The Investment Managers are actively monitoring and continue to manage the Funds' assets within the investment and risk parameters that have been established and the Directors continue to monitor developments as feels like yesterday's news.

The following new share classes were launched during the year:

	Share Class	Launch Date
Global Absolute Return Fund	Class I Hedged GBP Distribution	28 June 2022
	Class I Hedged JPY Accumulation	28 June 2022
	Class I Hedged JPY Distribution	28 June 2022
	Class S Hedged GBP Distribution	28 June 2022

 Information for Investors (unaudited)

Information for Investors in the Federal Republic of Germany (unaudited)

The Prospectus, the Key Information Documents, the Memorandum and Articles of Association of the Company and the annual and semi-annual reports of the Company and a complete listing of the purchases and sales during the period, each in paper form, as well as the Net Asset Value per Share, issue and redemption prices and any switching prices are available and may be obtained free of charge from the office of EU Facilities Agent.

Information for Investors in Switzerland (unaudited)

The Company has appointed BNP Paribas Securities Services, Paris, Succursale de Zurich, Selnaustrasse 16, 8002 Zurich, Switzerland as representative and paying agent for Switzerland. For redeemable participating shares distributed in Switzerland, the performance place is at BNP Paribas Securities Services' address. Investors can obtain free of charge, the prospectus, the simplified prospectus (both also available for potential investors), and the last annual and interim reports from the representative at the above address and the official publications for the Company are published in www.fundinfo.com.

Following a directive of the Swiss Funds Association dated 27 July 2004, the Company is required to supply performance data in conformity with the said directive. This data can be found under each of the Fund reports.

Please note that all references to a specific index are for comparative purposes only.

Past performance is no indication of current or future performance. The value of an investment can fall as well as rise as a result of market fluctuations and investors may not get back the amount originally invested. The performance data does not take account of the commissions and costs incurred on the issue and redemption of redeemable participating shares.

Investors should contact the Swiss representative at the above address should they require additional information, e.g. on performance including the composition of the relevant indices where applicable.

Smart Mobility Fund	1.00	1.00	0.25	0.25
UK Value Opportunities Fund	0.72	0.72	0.67	0.89

The Total Expense Ratio is calculated after an adjustment for swing pricing.

PEA Compliance (unaudited)

The European (ex UK) Income Fund is Plan d'Épargne en Actions ("PEA") eligible. For the purpose of eligibility requirement of Article L-221-31 of the French Monetary and Financial Code, the Fund must at all times during the financial year ended 31 December 2022 be invested in more than 75% of PEA eligible assets. PEA eligible assets are defined as equity or equity equivalent securities, which have their registered office in a country which is a member of the EU or the European Economic Area.

	% PEA Eligible Assets 31 December 2022	% PEA Eligible Assets 31 December 2021
European Income (ex UK) Fund	80.16%	81.03%

Appendix I – UCITS V Remuneration Disclosure (unaudited)

The below disclosure is made in respect of the remuneration policies of Bridge Fund Management Limited (the “Manager”) in accordance with the European Union Directive 2014/91/EU as implemented in Ireland by European Union (Undertakings for Collective Investment in Transferable Securities) (Amendment) Regulations 2016. This requires UCITS management companies to establish and apply remuneration policies and practices that promote sound and effective risk management, and do not encourage risk taking which is inconsistent with the risk profile of the UCITS.

The Manager has designated the following persons as Identified Staff:

- Executive and Non-Executive members of the management body of the Manager e.g. CEO, Directors, Executive and Non-Executive Directors;
- Senior management;
- Risk takers – staff who can exert material influence on the Manager or on the UCITS or AIFs it manages;
- Those in control functions: Operations, HR, Compliance, Finance where applicable;
- Staff whose total remuneration takes them into the bracket of senior management and risk takers, whose professional activities have a material impact on the Manager’s risk position or those of the UCITS and/or AIFs it manages; and
- Categories of staff of the entities to which portfolio management or risk management activities have been delegated whose professional activities have a material impact on the Manager’s risk position or those of the UCITS and/or AIFs it manages.

The Manager is required under UCITS regulations to make quantitative disclosures of remuneration. Disclosures are provided in relation to Identified Staff who are employed directly by the Manager and Identified Staff who have the ability to materially impact the risk profile of the UCITS including individuals who, although not directly employed by the Manager, are assigned by their employer to carry out services directly by the Manager.

All remuneration paid to Identified Staff can be divided into:

- Fixed remuneration (payments or benefits without consideration of any performance criteria); and
- Variable remuneration (additional payments or benefits depending on performance or in certain cases, other contractual criteria)

Remuneration details for the Manager are disclosed below:

Description	Number of beneficiaries	Total remuneration paid	Fixed remuneration paid	Variable remuneration paid
Total Staff Remuneration	45	€3,339,320	€2,927,820	€411,500
Senior Management (including executives), risk takers and other identified staff	8	€1,208,015	€946,015	€262,000

Details of the Remuneration Policy, including, but not limited to, a description of how remuneration and benefits are calculated and the identity of persons responsible for awarding the remuneration and benefits is available at the following website:
<https://bridgefundmanagement.mjudson.com/>

Appendix II – Securities Financing Transactions Regulation (unaudited)

Article 13 of the Securities Financing Transactions Regulation (“SFTR”) requires information to be provided as to the use of securities financing transactions (“SFT”) and Total Return Swaps (“TRS”).

An SFT is defined in Article 3 (11) of the SFTR as: a repurchase transaction, securities or commodities lending and securities or commodities borrowing; a buy-sell back transaction or sell-buy back transaction; or a margin lending transaction.

As at 31 December 2022, the Company held Total Return Swaps (including CFDs) but no SFTs. The amount of securities and commodities on loan as a proportion of total lendable assets (excluding cash and cash equivalents) was 0.00% as at 31 December 2022.

Global Data

Type of Asset	Absolute Amount	Proportion of AUM (%)
Contracts for difference		
Global Absolute Return Fund	\$83,420,046	26.86%
Global Convertible Fund	\$42,985,539	2.69%

Concentration Data

	Collateral Issuers	Volume of the collateral securities and commodities
1	UBS AG	(\$36,398,464)

The gross volume of outstanding trades with each counterparty across all SFTs is as follows:

	Counterparty	Gross volume of outstanding trades*
Contracts for difference		
Global Absolute Return Fund	UBS AG	\$83,420,046
Global Convertible Fund	UBS AG	\$42,985,539

* Gross volume of outstanding transactions expressed as market value of open derivative contracts at the reporting date.

Aggregate transaction data

Contracts for difference	Type/Quality of collateral	Currency	Maturity tenor (collateral)	Maturity tenor (SFTs/ Total Return Swaps)	Country of counterparty establishment (not collateral)	Settlement and clearing
Global Absolute Return Fund						
UBS AG	Cash	Multiple	>1 year	>1 year	Switzerland	Bilateral
Global Convertible Return Fund						
UBS AG	Cash	Multiple	>1 year	>1 year	Switzerland	Bilateral

The share of collateral that is reused is 0.00%.

Safekeeping

Counterparty	Collateral assets safe-kept
UBS AG	Cash Collateral

The proportion of collateral held in segregated accounts, in pooled accounts or any other accounts is 100.00%.

Return/(Costs)

Contracts for difference	Absolute Returns		Overall returns %
	Return	Cost	
Global Absolute Return Fund	\$20,594,651	(\$1,133,139)	100
Global Convertible Fund	\$15,968,207	(\$5,380,535)	100

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) (unaudited) continued

Asian Stars Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Asian Stars Fund (the “Fund”)

Legal entity identifier: 549300KAEBRJQSPZT179

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 38% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies primarily situated in emerging markets that have the ability to remain competitive and deliver attractive profitability over the long term due to robust fundamental characteristics, but only where these robust fundamental characteristics were combined with good or improving environmental, social and governance (“ESG”) profiles based on the Investment Manager’s proprietary analysis.

The Fund had a bias towards companies with improving sustainability profiles, based on the Investment Manager’s proprietary analysis.

The Fund excluded companies that have an unacceptable or controversial ESG profile following the application of quantitative and qualitative analysis by the Investment Manager and through the use of the Fund's exclusions list.

The Investment Manager determined a security had met the characteristics of the Fund if it scored equal to or greater than 5 on its proprietary 'Sustainability Delta' scoring framework.

All investments attained the characteristics of the Fund on an individual basis over the review period.

● ***How did the sustainability indicators perform?***

The Investment Manager evaluated the Fund's performance on the characteristics through scores in five specific areas of sustainability, including how a company contributed to future sustainable economic development (its 'Impact on Progress'), how a company managed its key risks and opportunities from an ESG perspective (its 'Material ESG Issues' – broken down into three separate areas: 'Environmental', 'Social' and 'Governance') and how a company ensured it acted as a responsible corporate citizen (its 'Business Ethics').

Each company was assigned two quantitative scores from 1-10 based on these five areas, one on a 'Current Level' basis and another on a 'Future Direction' basis.

The company's scores in these areas are then taken together to provide the Investment Manager with a company's 'Sustainability Delta', which shows both the 'Current Level' and 'Future Direction' of a company from a sustainability perspective.

There are two ways in which portfolio-level indicator scores change from period to period. These are via i) upgrades/downgrades to the Investment Manager's internal stock scores on existing holdings, and ii) portfolio changes from buying lower scoring, selling higher scoring stocks or vice versa.

In the case of i), stock score upgrades are typically incremental, only apply to one element of the Investment Manager's complex scorecard for a stock, do not carry a large weight, and will require many upgrades to have a large impact on the overall indicator score.

In the case of ii), as the Fund has relatively low turnover, and it is unlikely that the spread on all new stocks bought versus all stocks sold during a given period will be very wide (in either direction), this driver too is moderate. Over this reporting period, the Fund bought 14 new stocks and exited 17 positions.

There is one significant feature which impacted a number of the upgrade/downgrade scores for a range of the Fund's portfolio companies over the period on a one-off basis. Over the year meaningful enhancements were made to the rigour of the scoring process in order to increase robustness, consistency and

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

comparability across the investment universe as well as to more effectively incorporate better proprietary datasets into E&S scores and incorporate a new checklist system into the way governance and business ethics are assessed for all companies.

The Investment Manager therefore expects to continue to see small changes in the sustainability indicators at the portfolio level going forward, even whilst at the underlying stock level there may be a number of investments which experience multi-point upgrades due to operational and strategic improvement.

The Investment Manager prefers to invest in securities which display an improving trend with the score for Future Direction improving from Current Level (“Positive Delta”), though this is not a requirement for an investment to meet the Fund’s characteristics and the Fund may invest in securities where scores are stable across the forecast period (“Stable Delta”).

In cases where scores display a deteriorating trend, with the Future Direction score declining from the Current Level score (“Negative Delta”), the Investment Manager makes a commitment to engage with the company to resolve a path forward.

The current breakdown of the Fund is shown in the table below¹:

	2022	
	Current Level	Future Direction
Impact on progress	7.54	7.81
Environmental	5.92	6.63
Social	6.62	6.90
Governance	7.25	7.30
Business ethics	6.90	7.03

	% Fund ²
Positive Delta: Level < Direction	67.5%
Stable Delta: Level = Direction	32.5%
Negative Delta: level > Direction	0.0%

¹ The table shows the average score of the Fund, excluding cash, across the five sustainability indicators of the Fund over the reference period. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted scores as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

² The tables shows the percentage of the Fund’s assets as at 31 December 2022, excluding cash, on a portfolio weighted basis that either have positive, stable or negative Delta. The Delta of the sustainability scores is defined as the difference between the Current Level and the Future Direction.

● ...and compared to previous periods?

A summary of the headline scores for comparison is shown below³:

	2021		2022	
	Current Level	Future Direction	Current Level	Future Direction
Impact on progress	7.39	7.70	7.54	7.81
Environmental	6.28	6.72	5.92	6.63
Social	6.82	7.17	6.62	6.90
Governance	7.16	7.43	7.25	7.30
Business ethics	6.75	6.99	6.90	7.03

The table below displays a summary of all changes that have been made in the way described over the reporting period.

	Current Level 2021	Upgrade	Portfolio Change	Current Level 2022	Future Direction 2021	Upgrade	Portfolio Change	Future Direction 2022
Impact on progress	7.39	0.27	-0.12	7.54	7.70	0.19	-0.08	7.81
Environmental	6.28	-0.45	0.09	5.92	6.72	-0.17	0.08	6.63
Social	6.82	-0.17	-0.02	6.62	7.17	-0.28	0.01	6.90
Governance	7.16	0.00	0.09	7.25	7.43	-0.23	0.11	7.30
Business ethics	6.75	0.08	0.07	6.90	6.99	-0.08	0.12	7.03

As is consistent with the Fund's process and the expectations of the Investment Manager, the sustainability indicator scores shown at a headline, aggregated level remain relatively stable from the previous period to the reference period. Nine out of these ten individual indicators (5 metrics across level and direction) have seen movement of less than +/- 0.20 from the reference period, with one recording a contraction of -0.36 (Environmental, as discussed below) for its Current Level.

Impact on Progress

The Fund's Impact on Progress score increased the most of any over the reference period, up by 0.15 for Current Level and 0.11 for Future Direction as compared with 2021, to 7.54 and 7.81, as shown in the summary table above.

In both cases this improvement came entirely from upgrades within existing holdings, as the effect from portfolio changes was very slightly negative in each case.

The largest contributors to improving scores came from Apollo Hospitals, following a visit to India as well as engagement with management which gave a fuller appreciation of Apollo's leadership in and exposure to the Investment Manager's health and wellness sub-area. This made it deserving of the highest score: an upgrade from 8 to 10 on Current

³ Please note the figures shown for 2021 in this table differ slightly to those shown in the Asian Stars Fund SFDR Disclosure Annex of the Company's 2021 Annual Report. This difference is due to an update in the calculation methodology of the sustainability indicators. Sustainability indicator scores are now based on the portfolio weighted average of investee companies scores rather than a simple average. Please refer to page 398 of the 2021 Annual Report for full details of the portfolio scores against the five areas on a simple average basis.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

Level and Future Direction. Apollo is trying to accelerate work to increase the accessibility and affordability of the Indian healthcare ecosystem by expanding its overall network, developing new technologies and rolling out telemedicine nationally – with the potential to improve health outcomes and allow patients to recover faster or prevent illness and remain healthier.

Samsung Electronics was also upgraded from 7 to 9 (for both Current Level and Future Direction) during the review period as under the upgrades to the Investment Manager’s methodology, the Investment Manager linked scoring for Impact on Progress more directly with the capital expenditure, revenue and operational expenditure of business areas deemed eligible for inclusion under this indicator.

As a global leader in the memory semiconductor industry, Samsung Electronics plays a central role in not only supplying current memory technology but also in developing future technologies. These future technologies contribute to climate change mitigation by providing low-power, high efficiency data storage which will reduce the carbon emissions associated with these devices. The semiconductor business only makes up ~30% of revenue but the company spends ~90% of its capex investments and almost all its R&D spend on these future technologies which is why the Investment Manager scores the company in the Exceptional range.

These positive moves outweighed small downgrades to scores for other companies.

Environmental

The Environmental Current Level indicator was something of an anomaly, deteriorating by 0.36 from 6.28 to 5.92, the most of any indicator over the review period, whilst the Future Direction indicator was relatively more stable, declining only -0.09 from 6.72 to 6.63. These changes were again driven almost entirely by existing holdings, which the Investment Manager concluded to be, for the most part, a function of their assessment against the revised methodology which enables the Investment Manager to make better, stricter interpretations of the ways the portfolio companies are performing on their material environmental factors in both absolute and industry relative terms.

By some distance the largest negative effects here came from Alibaba and Tencent, due to a combination of poor disclosure, very poor greenhouse gas (“GHG”) emissions intensity versus peers (9th and 29th percentile vs. peers, respectively) and behind trend initiatives on energy mix. These factors, together with the fact that this year the Investment Manager’s scores are portfolio weighted rather than a simple average, mean that the low Current Level scores for Alibaba (3.5) and Tencent (3) dominate the downgrades here. The positive is that both companies have made significant future commitments, with stated net carbon zero targets, and this is why there is a much less marked effect on the Future Direction scores.

It should be noted that these downgrades masked some positive changes to other stocks, such as Koh Young, which saw a significant upgrade to both Current Level and Future Direction due to an improvement in the availability of data. The company had previously been scored neutrally due to a lack of sufficient comparable data, but better disclosure enabled analysis of Koh Young’s superior relative performance. Additionally, Oz minerals performed very strongly on water withdrawal data during 2021 which caused us to revise

up the trajectory on that variable. At the same time the company brought down their GHG emission intensity strongly as they continued to lead the way in renewable adoption, as these environment scores reflect 5 year rolling averages and the company had increased renewable % from 45% in 2020 to 70% in 2021 we were able to upgrade our expectation for Future Direction too.

Social

The Social indicator saw a small deterioration as compared with the reference period, falling -0.20 from 6.82 to 6.62 on Current Level and -0.27 on from 7.17 to 6.90 on Future Direction. Once again this was owing to downgrades of existing holdings within the portfolio.

Notable downgrades including our Indian financial holdings, ICICI Bank and HDFC Ltd. The former has poor disclosure on human capital management and staff turnover levels relative to peers as well as slightly lower than average data privacy measures. Meanwhile, HDFC Ltd.'s score was reduced owing to an increase in customer complaints during the prior year and no evidence of employee training on practices to reinforce consumer financial protection.

Additionally, Chroma, a manufacturer and marketer of electronic and automation measuring instruments, had its Current Level score reduced as the company had a significant spike in its total recordable incident rate data which hugely derated the performance in 5 year rolling data to 21% percentile. The Investment Manager is more confident in this improving on a Future Direction basis.

Unfortunately, both Oz Minerals and Tokyo Electron also incurred downgrades due to deeper analysis of their health and safety data, which impacted both Current Level and Future Direction scores.

More positively, these were somewhat evened-out at the portfolio level by upgrades to the scores for TSMC, a semiconductor manufacture and design company, due to strong performance on human capital with continuing increase in years of service and low turnover. The Investment Manager also updated its score for controversial sourcing as it firmed up the analysis around that variable.

Ememory, producer of Logic-based non-volatile memory (Logic NVM) technology used in semiconductor production, similarly showed an improvement in this area with low employee turnover and a continued increase in average years of service for employees, indicating overall top performance on Human capital management which caused the Investment Manager to revise the score up.

Governance

This indicator improved modestly on Current Level up 0.09 from 7.16 to 7.25 and declined slightly for Future Direction by -0.13 from 7.43 to 7.30.

What is most interesting to note is that there was a surprisingly large spread in the governance scores between newly purchased companies and those the Investment Manager exited over the period. On Current Level and Future Direction, the outgoing companies' simple average scores were 6.97 and 7.05 and the new purchases scored 7.81 and 7.85, respectively – close to a one-point increase in each case. This is highly

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

encouraging as it supports the fact that the process is particularly able to identify and capture higher *quality* companies, which is very often a hallmark of strong governance. The Investment Manager is especially pleased that the new checklist system for additional scrutiny on the key determinants and frequent red flags for governance has resulted in the ability to rank and convey the quality of the companies that the Investment Manager has always held more thoroughly and tangibly.

The reason why a portfolio change effect is not more strongly shown in the summary table is due to the portfolio weighted average scoring. Additionally, the benefit of the new governance checklist scoring is also felt across all portfolio holdings, resulting in an almost equal impact to existing investments as well as new purchases on a Current Level basis.

On Future Direction the contribution from portfolio changes was a net positive benefit whilst there were small downgrades to existing stocks from the more detailed analytical framework.

Business Ethics

Business Ethics is very similar to Governance in that here the Investment Manager also introduced a more systematic scorecard approach to promote consistency across scores as well as to ensure the core elements of this indicator were being captured in the analysis of all stocks.

The overall outcome at the portfolio level is very small fluctuations to scores, looked at in terms of both upgrades and downgrades and portfolio changes. The Current Level increased by 0.15 from 6.75 to 6.90 while the Future Direction increased by 0.04 from 6.99 to 7.03. All changes were due to the new scorecard which requires in depth consideration of metrics related to corporate behaviour and tax.

There was one exception to this, SK Hynix, where the company was thought to be involved in a 'severe controversy' related to anti-competitive behaviour and in relation to which China's anti-monopoly bureau has also launched an investigation which the Investment Manager believes is ongoing and which reportedly has an ultimate potential penalty of up to US\$8bn. However, the Investment Manager engaged with peer company Samsung Electronics regarding this issue and carried out additional due diligence which led it to conclude that the matter was in fact all media speculation and there had never been an active investigation. The Investment Manager moderated SK Hynix's controversy score to 'moderate' to reflect past convictions for collusion in 2002-2010 and the higher-than-average risk level. The Investment Manager has since fully exited the investment in this company for unrelated reasons.

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Investment Manager used an ‘Impact on Progress’ assessment within the Fund’s proprietary Economic Value Added (EVA) Framework to identify and assess investment opportunities that, in the Investment Manager’s view, contribute to sustainable environmental and social objectives.

The ‘Impact on Progress’ assessment is centred around three key pillars (Resource Management, Social Development and Economic Progress) informed by the United Nations Sustainable Development Goals (“UN SDGs”). Each pillar links to corresponding sustainable objectives. Companies were eligible to be considered as a Sustainable Investment if the company’s products or services were deemed to contribute to one or more of the Sustainable Investment objectives. For the reference period, the sustainable objectives that the Fund contributed towards are highlighted in the table below.

Sustainable Investment Objective	% of Sustainable investments in the Fund, categorised by Sustainable Investment Objective ⁴
Circular economy	1%
Climate Change	33%
Health & Wellbeing	3%
Biosphere Protection	1%
Financial Inclusion	0%
Total Sustainable investments	38%

The following are examples of Sustainable Investments and how they are contributing to the sustainable objective:

Samsung SDI

Samsung SDI contributes to the mitigation of climate change by developing and manufacturing batteries for electric vehicles and energy storage systems, products from which the company derived 44% of its 2021 revenue.

Transportation consumed around 19% of total primary energy globally in 2021, and the Investment Manager views adoption of electric vehicles as a significant contributor to increasing energy efficiency in the sector.

A recent study from Yale Climate Connection under Yale School of the Environment, Yale University, shows that around 80% of the energy in gasoline powered Internal Combustion Engine (ICE) vehicles is lost to various inefficiencies and the number is only 11% for electric vehicles. Roughly speaking an electric vehicle is, therefore, 4.5x as energy efficient as an ICE vehicle.

⁴ Please note that the Fund formalized its commitment to a minimum proportion of Sustainable Investments on 30 November 2022. These figures show the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments pursuant to the relevant sustainable investment objective as at 31 December 2022.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm (“DNSH”), assessed each company primarily using third party data, to assess whether it had an adverse impact on the environment and society.

Companies with controversies that have very severe adverse impacts on the environment and society will be excluded from consideration as Sustainable Investments by the Investment Manager.

The Investment Manager used the research of third party providers to provide deeper insights into a company’s compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over the assessment of third party conclusions on a case-by-case basis.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts (“PAI”) indicators provided in Table 1 (and where applicable, Tables 2 and 3) of the Annex 1 Level 2 Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable, Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Where, in the Investment Manager’s view, a company did not cause significant harm with respect to a specific PAI but the Investment Manager felt there was room for material improvement, it took the required steps to reduce or mitigate the PAI, such as engaging with the company, using the right to vote, seeking to improve disclosure of data by the company, or reducing exposure to the issuer where deemed appropriate or necessary.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing the alignment of portfolio companies with these global norms, and where necessary, conducting further due diligence to determine compliance with these norms.

The following are examples of DNSH assessments during the reference period:

ITM Semiconductors (Tobacco - exited). ITM Semiconductor is a specialised technology company focusing on battery energy and safety management. Unfortunately, the company decided to use its technology to enter the e-cigarettes business – which the Investment Manager does not feel comfortable with from a Material ESG Issues viewpoint, as well as an ethical perspective. The Investment Manager attempted to strongly engage with the company (as mentioned in last year’s annual report), arguing that the upside from being able to be a very strong, clean ESG technology company, within the battery technology space, would far outweigh the revenue/profit from e-cigarettes, as this line of business would in the end result in a significant “ESG discount”.

The Investment Manager was not able to convince the company, and it took the decision to pursue e-cigarettes as a new main business line. As this became clear, the Investment Manager acted in line with its philosophy and process, and fully exited the Fund’s position.

Embraer (Armaments – Not Owned). The Investment Manager engaged with this company which has a 90% subsidiary that has developed eVTOL (vertical take off and landing) technology in which the Investment Manager was interested.

However, the core aerospace business has significant legacy challenges related to historic aircraft production which render the risk level too high for the Investment Manager to participate in. Namely, a plane built in 2000 by Embraer for the Brazilian air force featured the enablement of cluster munitions. None of these models have been sold this year or indeed recently, and Embraer themselves do not manufacture any weapons directly, only the aircraft, while the vast majority of their defence fleet serves functions such as carrying troops or cargo, re-fuelling other aircraft and extinguishing fires. This represents a declining portion of the company’s revenue, but the company

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

could not give assurances that the models causing concern have been taken out of production and will never again be produced.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

When assessing a company’s impact on the environment, the Investment Manager considered GHG emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity, energy consumption and carbon reduction initiatives. Furthermore, revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. Where material revenues were flagged, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero.

Similarly, where water usage was deemed material to an investee company by the Investment Manager, the Investment Manager sought to encourage the adoption of appropriate water management and water reduction policies.

The Investment Manager considered the board gender diversity of investee companies, and, where it deemed appropriate, used its tools of active ownership to encourage better diversity practices.

The Investment Manager considered the standards of the United Nations Global Compact, the Organisation for Economic Co-Operation and Development’s Guidelines for Multinational Enterprises, whistleblower protection, and anti-corruption and anti-bribery policies. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

The following are examples of consideration of principal adverse impacts on sustainability factors:

Example 1 – PAI 12 Number of women on Board of Directors

The Investment Manager captures the number of companies in the portfolio that do not have any women on their boards. As at 31 December 2022, seven of the Fund's 44 investee companies had zero female board numbers. This represents 15.9% of the Fund by number of holdings and a lesser 11.6% of the Fund by weight, as on average the Investment Manager holds smaller positions in these companies. It should be noted that 6 of these 7 companies are in the technology sector, principally in high-value, leading edge companies related to the semiconductor industry. The remaining name is in a much earlier stage economy: Vietnam.

Part of the Investment Manager's process involves engagement with all companies regarding board structure, efficiency, controls and oversight which involves analysis of diversity representation and as part of this work it has questioned companies in this space over a period of years regarding the absence of women on their boards. There is a strong consensus in the response: despite a keen willingness, there is a shortage of women with sufficient seniority, specific technical skills and managerial experience in these particular areas due to very low levels of women having studied to become semiconductor engineers or software programmers 15-20 years ago – where they exist they are highly sought after, but are few and far between.

In middle-management and all tiers further down through technology organisations there are increasing numbers of women, which the Investment Manager views as encouraging and is hopeful that strong pipelines of future female leaders are being built, that investee companies are keen to bring into their leadership teams or to board-level, in the not too distant future.

The Investment Manager has good relationships with the management of these companies and believes that they are well equipped to manage their top-level talent and structure their management well, in a diversified manner such that strategic thought receives balanced input, challenge and the benefit of a range of backgrounds. The Investment Manager, and the investee companies, are highly aware of the paramount importance of a strong culture on the overall success of a business.

When the Investment Manager scores a company in its proprietary Material ESG scoring framework, it has the ability to make a specific adjustment with regard to board diversity – either to reflect very positive performance, or to deduct points for what it assesses to be a poor setup relative to industry peers.

The Investment Manager strongly supports gender and racial/ethnic diversity on boards of the Fund's investee companies. It captures as much data as it can and engages to promote this, but there are nuances across the portfolio which the Investment Manager does not believe should be seen as negative, as companies try to invest in the right talent to support their business, now and for the future – which conversely provides a bright outlook for improvement.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

Example 2 – PAI 4 – Exposure to Fossil Fuels

The Fund excludes any company which has over 5% of its revenue derived from oil exploration and production. The Fund does not exclude investments into gas (natural gas/liquid natural gas or “LNG”). The Investment Manager views gas as a transition fuel or interim energy source, far cleaner than coal and required before society can move to a structure powered entirely by renewable energy.

Currently the Fund’s only exposure to fossil fuels is via Reliance Industries in India. Given the large, transformative transition this company is undertaking from a high emissions petrochemicals business to a leader in new energy such as solar, battery storage and hydrogen, the Investment Manager undertakes additional engagement by means of a long-term collective investor engagement programme under Climate Action 100+ to ensure the company is held to account and there is continued oversight. The Investment Manager is a co-lead investor of this engagement and spent significant time during the review period visiting management at their operations in India.

In addition, a letter was sent by one of the Climate Action 100+ engagement group participants to the Chair of Reliance Industries’ Corporate Social Responsibility and Governance Committee highlighting a range of suggestions for potential improvement of the company’s climate governance and strategy.

In terms of ongoing progress, compared to the previous year, the Investment Manager notes that Reliance Industries provided additional detail regarding its decarbonization strategy as the company identified the set of actions and investments it intends to undertake to achieve its GHG reduction targets. Capital expenditure in the New Energy Business is on track to reach 10GW of solar module manufacturing capacity by 2024, and 20GW by 2026. Battery capacity for large scale energy storage is projected to reach 5GWh by 2024 and 50GWh by 2027. Moreover, Reliance Industries expanded its plans with the announcement of the fifth Gigafactory for Power Electronics and reiterated its commitment to further investment in India’s energy transition.

At the consolidated level, the company’s Financial Year 2022 emissions performance showed improvement year-on-year with some reduction across most GHG metrics. The company has targeted Taskforce for Climate-related Financial Disclosure (TCFD) reporting by 2024 and has an ambition to implement Science Based Target Initiative (SBTI) reporting too.

Reliance Industries has also been improving some aspects on governance, notably Board oversight and compensation structures, which will take a further 2 years. Part of the improvement in governance includes the establishment of the Reliance New Energy Council, an internal advisory council where the intention is to gain knowledge and perspective from the experience of the council members and for them to help assist Reliance’s transition.

Example 3 – UNGC Controversies

In November 2022, third party ESG rating providers released new controversies research which led to downgrades on UNGC compliance for a number of companies with Chinese operations. The downgrades related to alleged involvement in Xinjiang province and the alleged infringements of human rights and civil liberties of the Uyghur population.

As part of these actions, Tencent, an investee company, was not downgraded but flagged on the 'watchlist' due to allegations of use of surveillance and using social media records to spy on Uyghur communications through WeChat and other social platforms. The UN Human Rights Office of the High Commissioner (OHCHR) and Australian Strategic Policy Institute (ASPI) have made mention on Tencent in reports related to human rights and surveillance practices in China.

As the Investment Manager considers UNGC compliance as a PAI indicator this is something it takes seriously. The Investment Manager has been engaging with the company and carrying out further due diligence relating to this issue, while taking into account the context that Tencent is operating under Chinese law, as defined by the Chinese Communist Party (CCP). The management have made clear to the Investment Manager that they have at all times complied with Chinese law and Chinese law makes clear that the CCP must at all times be given access to all information and data they request. This has been the case for many years and is well understood by the market and by Chinese society.

The Investment Manager does not believe that Tencent is enabling or complicit in any human rights abuse. Conversely, Tencent has changed the face of Chinese society in its democratisation of access to communication and information for the widest groups in society via its WeChat app and access to finance via WeChat Pay. These innovations leapfrogged desktop computing and credit cards for the Chinese population in a way that catapulted development and opportunities for all – granting more rights, not compromising them.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

Indicator ⁵		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁶
GHG Emissions (TCO2e)	Scope 1	1,455	94.7%	14,266	99.6%	-90%
	Scope 2	1,085	94.7%	2,674	99.6%	-59%

⁵ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: MSCI AC Asia ex Japan Total Return Index. Allocated emissions of investee companies is calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €128.3m as of 31 December 2022. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁶ The figures shown demonstrate the difference in the performance of the Fund and the Benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What was the proportion of sustainability-related investments?

● What was the asset allocation?

100% of the companies the Fund invested in were assessed under the Investment Manager's EVA Framework, which is used to assess and deliver the environmental or social characteristics promoted by the Fund.

All investments, excluding cash, attained the characteristics of the Fund on an individual basis over the reference period.

During the reference period, the Fund invested 96.5% of its assets in equity and equity warrants. Therefore, on average 96.5%⁷ of the investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund.

While the Fund does not have sustainable investing as its objective, the Fund invested 38%⁸ of its assets in Sustainable Investments with an environmental or social objective.

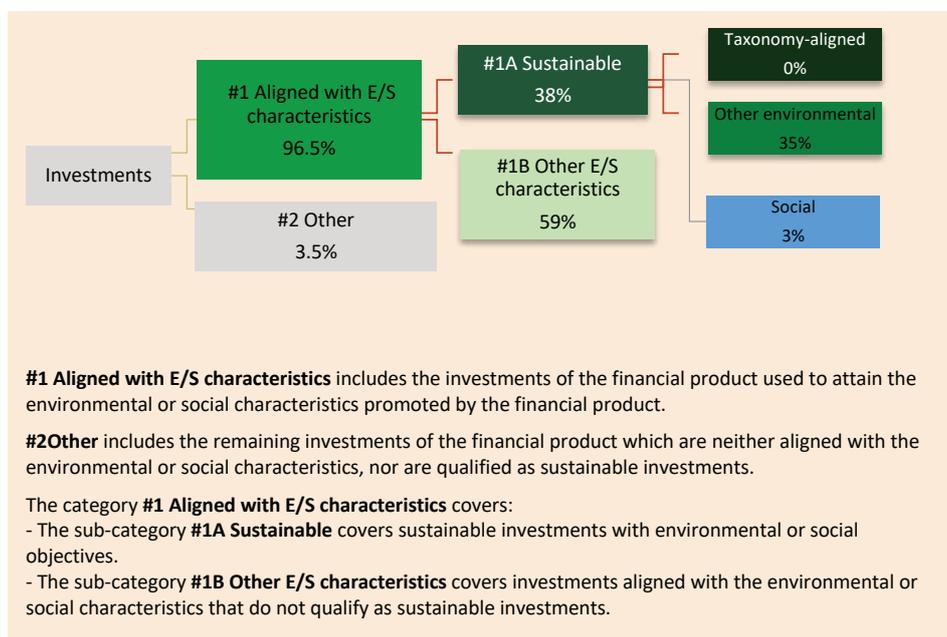

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. '#1 Aligned with E/S characteristics', '#1A sustainable' etc.)

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

⁷ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, aligned with the Fund's characteristics. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

⁸ Please note that the Fund formalised its commitment to a minimum proportion of Sustainable Investments on 30 November 2022. This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments as at 31 December 2022.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

During the reference period the only material exposure to fossil fuels within the Fund was via Reliance Industries in India. Given the large, transformative transition this company is undertaking from a high emissions petrochemicals business to a leader in renewable energy such as solar, battery storage and hydrogen, the Investment Manager undertakes additional engagement by means of a long-term collective investor engagement programme under Climate Action 100+ to ensure the company is held to account and there is continued oversight. The Investment Manager co-leads this engagement with other investors and spent significant time during 2022 visiting management at their operations in India.

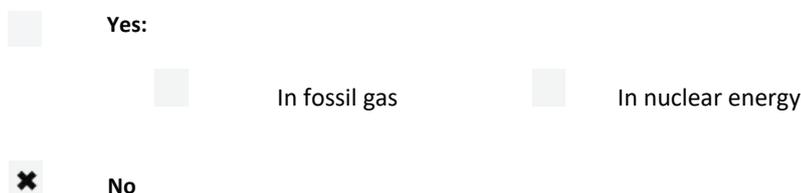

⁹ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2022.

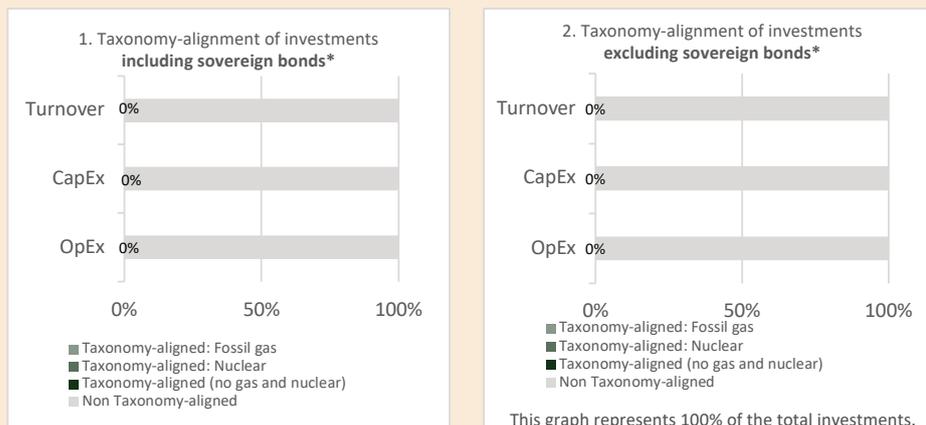

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund’s net assets.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹⁰?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

¹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee

● **What was the share of investments made in transitional and enabling activities?**

The proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation is 0% of the Fund’s net assets.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund’s net assets.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

During December 2022, the percentage of Sustainable Investments with an environmental objective not aligned with the EU taxonomy was 35%.¹¹

In order to satisfy itself that an investment is environmentally sustainable pursuant to the Taxonomy Regulation, the Investment Manager must (a) determine whether or not the investments underlying the Fund are in environmentally sustainable activities (b) identify the extent to which the investments of the Fund are in economic activities that qualify as environmentally sustainable and are aligned with the Taxonomy Regulation; (c) identify the proportion, as a percentage of the Fund’s portfolio, of investments in environmentally sustainable activities which are aligned with the Taxonomy Regulation; and (d) identify the proportion, as a percentage of the Fund’s portfolio, of enabling and transitional activities (as described in the Taxonomy Regulation).

At the present time, the Investment Manager cannot satisfy itself that the Fund’s investments meet the criteria outlined above. Accordingly, the proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation is 0% of the Fund’s net assets.

¹¹ Please note that the Fund formalized its commitment to a minimum proportion of Sustainable Investments on 30 November 2022. This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments with an environmental objective as at 31 December 2022.

What was the share of socially sustainable investments?

During the reference period the percentage of socially Sustainable Investments within the Fund was 3%.¹²

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 3.5% of the Fund’s investments were identified as #2 Other in the above diagram and were held in cash for liquidity purposes in line with the Fund’s Investment Policy. There are no minimum environmental or social safeguards applicable to these investments.¹³

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Using company specific knowledge and often engagement with company representatives, the Investment Manager assesses every prospective investee company, prior to purchase, using the Investment Manager’s Proprietary quantitative Economic Value Added (EVA) Wheel Model. The Investment Manager used the EVA Wheel to evaluate how investee companies contributed to future sustainable economic development (its Impact on Progress), how a company managed its key risks and opportunities from an ESG perspective (its Material ESG Issues) and how a company ensures it acted as a responsible corporate citizen (its Business Ethics). Each company was assigned a quantitative score based on these three areas. The Investment Manager carried out this evaluation using a variety of sources, including information and data published by the companies themselves and third party data and research providers. Every prospective investment was also assessed against the Fund’s exclusion criteria.

The following are engagement examples carried out during the reference period:

Apollo Hospitals: The Investment Manager engaged with Apollo regarding its use of solar power, as the company continues to think more seriously about sustainability. Apollo already generates 40% of energy from renewable sources, with a target to reach 70% in the medium-term. Solar panels are installed on the roof of a number of its hospitals, including its Vanagaram hospital in Chennai. It has installed 100 panels with a capacity of 250 watts per panel, giving a capacity of 25 KWh. Annually, all Apollo’s hospitals across the state of Tamil Nadu have an aggregate power requirement of 60 million KWh to which

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

¹² Please note that the Fund formalized its commitment to a minimum proportion of Sustainable Investments on 30 November 2022. This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments with a social objective as at 31 December 2022.

¹³ This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, not aligned with the Fund’s characteristics. The average is calculated as a simple average of the percentage of the Fund’s assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

wind power is also contributing, helping to substantially reduce the company's carbon footprint, even as it continues to grow.

Chroma: The Investment Manager had a good discussion with Chroma related to ESG where it has recognised a need to broadly improve performance on a range of factors and, encouragingly, it has added recognition of this in to the KPIs for senior managers. It is particularly on Social and Governance areas that it has identified more of a need to improve as the company does not use a large amount of water, gas or energy in its operations. In the first instance, targets have been set to increase female director-level employees from a single-digit percentage to 20%. Additionally, the company has appointed a consult to help with these initiatives as well as launching an ESG Foundation. Chroma recognises that improvements will take time, but the Investment Manager supports these initiatives.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How does the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the reference benchmark?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Biotechnology Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Biotechnology Fund (the “Fund”)

Legal entity identifier: 5493006Y2HTKJGMQ4Y29

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 97.3% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies within the healthcare investment universe that contributed to:

- (i) improve clinical outcomes for patients through innovation,
- (ii) improve the affordability and accessibility of healthcare services; and
- (iii) improve the efficiency of the delivery of healthcare services.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

By investing in these companies, the Investment Manager believes that the Fund contributes to Goal 3 of the United Nations Sustainable Development Goals (SDGs) which is to “ensure healthy lives and promote well-being for all at all ages”. The UN SDGs are part of the United Nation’s 2030 Agenda for Sustainable Development, adopted by all UN member states in 2015, and comprise 17 goals which aim to tackle the world’s approach to the environmental and social matters. The full list of the 17 UN SDGs can be found at <https://sdgs.un.org/goals>.

● **How did the sustainability indicators perform?**

The Investment Manager monitors the Fund’s attainment of its characteristics by evaluating the portfolio’s weighted exposure to each of the three characteristics:

- (i) improve clinical outcomes for patients through innovation,
- (ii) improve the affordability and accessibility of healthcare services; and
- (iii) improve the efficiency of the delivery of healthcare services.

The Investment Manager’s calculation of the Fund’s portfolio weighted exposure will take account of both revenue and operational expenditure exposure to the characteristics for commercial stage companies (i.e. companies which have taken their product or service to market, commercialised their product or service or which receive revenues from already commercialised products or services) and of actual or proposed operational expenditure exposure to the characteristics for pre-commercial stage companies (i.e. companies which are still in the development stage conducting pre-clinical testing and clinical trials of their product). The Investment Manager will also account for instances in which an investee company’s revenue and/or operational expenditure is exposed to more than one of the social characteristics described above.

Over the reference period a weighted average of 92.1% of the Fund’s assets were invested in investee companies with current revenues or R&D expenditures derived from products, services or activities aligned with the three promoted characteristics

(which is calculated by taking an average of the quarters ended March, June, September and December 2022)¹.

Over the reference period, an average of 97.3% of the Fund's investments were classified as Sustainable Investments. An investee company is classified as a Sustainable Investment under Article 2(17) SFDR if its revenue, Operating Expenditure (OpEx) or Capital Expenditure (CapEx) exceeds the required threshold of alignment with the sustainable objective, provided it also passed the Do No Significant Harm test referred to in the section below and followed good governance practices.

	31-Mar-22	30-Jun-22	30-Sep-22	31-Dec-22	Average ²
Pillar 1 <i>improve clinical outcomes for patients through innovation</i>	88.3%	90.7%	88.3%	87.7%	88.8%
Pillar 2 <i>improve the affordability and accessibility of healthcare services</i>	0.4%	0.4%	0.3%	1.0%	0.5%
Pillar 3 <i>improve the efficiency of the delivery of healthcare services</i>	3.7%	3.1%	2.0%	2.4%	2.8%
Overall Alignment	92.4%	94.1%	90.6%	91.2%	92.1%
Sustainable Investments exceeding the threshold revenue alignment³	n/a	n/a	n/a	97.3%	97.3%

As of the date of this report, 0% of the Fund's investments failed the exclusion criteria.

● ...and compared to previous periods?

The Fund was approved by the Central Bank of Ireland as an Article 8 SFDR fund on 4 January 2022 and the Fund did not promote environmental or social characteristics, or measure its performance against the sustainability indicators, prior to this date.

The Fund's sustainability indicators are not subject to assurance by an auditor or review by a third party.

¹ This shows the percentage revenue or operational expenditure exposure of the Fund's assets, including cash, on a portfolio weighted basis, to the Fund's characteristics. The average is calculated as a simple average of the Fund's percentage exposure as at 31 March, 30 June, 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue to calculate an investee company's alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company's alignment with the characteristics.

² The Fund's average exposure to each of its characteristics is calculated by taking a simple average of the quarterly exposures. The average exposure to each characteristic on a quarterly basis is calculated by taking a portfolio weighted average of the exposure.

³ Please note that the Fund formalized its commitment to a minimum proportion of Sustainable Investments on 30 November 2022. The figures show the percentage of Sustainable Investments as at the relevant date.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund committed to a minimum proportion of 50% of its investments as Sustainable Investments on 30 November 2022. The Investment Manager considered a company eligible as a Sustainable Investment if the company was deemed to contribute to the themes highlighted below.

The objectives of the Sustainable Investments aligned with the themes:

- (i) improve clinical outcomes for patients through innovation;
- (ii) improve the affordability and accessibility of healthcare services; and
- (iii) improve the efficiency of the delivery of healthcare services.

During the reference period, companies held by the Fund were aligned to the three sustainability themes in a variety of ways. Examples of how the Investment Manager established an investee company's contribution to a sustainable investment objective are provided below.

Investee companies were deemed to contribute to *improving clinical outcomes* where they derived a sufficient portion of their revenues from, or committed a sufficient proportion of their operational expenditure to, activities such as drug discovery, the research and sale of new drugs, the sale of over the counter products and the sale of diagnostic tools and services.

Investee companies were deemed to contribute to *improving the affordability and accessibility of healthcare* where they derived a sufficient portion of their revenues from, or committed a sufficient proportion of their operational expenditure to, activities such as the manufacture of generic medicines and the provision of health insurance services.

Investee companies that derived a sufficient portion of revenues from activities such as hospitals and other healthcare facilities were aligned with the *improving the efficiency of delivery of healthcare services* pillar.

Although on average the revenue purity from biotechnology companies held during the reference period was high, some sources of revenue were not considered to be aligned with the above Sustainable Investment themes, such as medical aesthetics and non-healthcare business segments, such as electronics manufacturing. While these revenue sources were not considered sustainable, a company that generated some revenues from activities not aligned to the sustainable themes outlined above was still eligible to be considered sustainable overall if the company also had business segments that are positively aligned to the sustainability themes.

Examples of investments in the Fund and the alignment to the three sustainable investing themes outlined above are detailed below.

Some companies held by the Fund showed strong alignment to a single pillar. An example of this is a research-stage biopharmaceutical company focused on the development of a new medicine to treat a common form of childhood brain cancer. As a pre-revenue generating company, it spends approximately 60% of its operating expenses on medical R&D, which, alongside encouraging early clinical trial results for

its medicine, means the investment met the Investment Manager's criteria of being aligned with the sustainability theme of *improving clinical outcomes through innovation*. Other companies held demonstrated alignment to more than one sustainable theme through their respective businesses. A commercial stage biopharmaceutical company focused on the development of, and generated its revenues from, the commercialisation of, medicines for a range of rare diseases. Over the years the company has been successful in developing several new medicines that materially improve outcomes for patients. The company has also proactively implemented an innovative pricing model for its medicines that introduces risk/cost sharing with payers. For this reason, the Investment Manager views the investment as being aligned to both *improving clinical outcomes through innovation* as well as *improving the affordability and accessibility of healthcare*.

Some companies held in the portfolio were aligned with multiple Sustainable Investment themes through their combined efforts in research and development as well as through generating revenues aligned with the sustainable themes. One such case is a commercial stage biopharmaceutical company focused on the development and commercialisation of vaccines to prevent a range of viral diseases. The company has a strong history of developing and commercialising several new medicines for the traveller's market and has a pipeline of programmes against endemic viruses that pose a growing threat, partly through climate change. With vaccines being one of the most powerful tools available to prevent, rather than treat, disease, the Investment Manager assessed the investment as mostly aligned to the *improving the efficiency of healthcare delivery* pillar. However, the company's efforts in research and novel innovation were also recognised through the Investment Manager's assessment, and a smaller alignment weighting with the *improving clinical outcomes through innovation* pillar was given.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm ("DNSH"), assessed each company primarily using third party data, to assess whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as Sustainable Investments by the Investment Manager.

The Investment Manager used the research of third party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over whether an investee company had significantly harmed an environmental or social objective.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts (“PAI”) indicators provided in Table 1 (and where applicable, Tables 2 and 3) of Annex 1 Level 2 of the Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Where, in the Investment Manager’s view, a company did not cause significant harm with respect to a specific PAI but the Investment Manager felt there was room for material improvement, it took the required steps to reduce or mitigate the PAI, such as engaging with the company, using the right to vote, seeking to improve disclosure of data by the company, or reducing exposure to the issuer where deemed appropriate or necessary.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with these global norms, and where necessary, conducted further due diligence to determine compliance with these norms.

All Sustainable Investments have been assessed using third party providers for adherence to the UNGC principles and OECD guidelines. Any positions not aligned were not deemed Sustainable Investments for the reference period.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

When assessing a company's impact on the environment, the Investment Manager considered greenhouse gas ("GHG") emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives. Where material, the Investment Manager assessed the company's carbon reduction policies or targets related to achieving net zero. Exposure to companies active in the fossil fuel sector were considered by the Investment Manager through the exclusion policy in place.

When considering PAIs, the Biotechnology industry is subject to a high level of regulatory oversight, whether a company is developing drugs or diagnostic products, or providing biotechnology products and services, to ensure that products pass rigorous safety standards, and do not cause harm to patients or communities.

Furthermore, companies in the Healthcare sector have substantially lower energy and carbon intensities than market averages, so carbon emissions are on average much lower than most other industries. To illustrate this, the Scope 1 and 2 carbon emissions footprint of the Fund in TCO_{2e}/EVIC AUM measured roughly around 6% of the MSCI ACWI Index as a whole as at 31 December 2022⁴.

Despite low industry emissions, GHG emissions of investee companies were evaluated using either company reported data, or where this was not disclosed, through third party estimates based on business segment. Scope 1 and Scope 2 emissions were considered. Where those emissions are considered likely to be material, the Investment Manager will engage with the company to solicit the data. This emissions data is used to collectively consider Principal Adverse Impacts – GHG Emissions, Carbon Footprint and GHG Intensity.

This emissions data was then referenced against the Fund's benchmark and the Healthcare sub-sector in which the investee company operates to identify those in sectors having a high impact on the climate. When these emissions were flagged as being above a certain threshold, the Investment Manager assessed whether the company had a carbon strategy in place, and the sophistication of that strategy, for example, whether the company measures and reports its carbon emissions, whether the company has a mitigation or reduction strategy in place, whether that strategy or target is independently verified by a reputable third party such as the Science Based Targets Initiative (SBTi), and whether the company's historic emission trend is on track with the reduction target.

For those companies that failed these tests, and where the company's emissions were deemed material, the position was flagged for potential engagement with the investee company.

At a US-based life sciences tools and diagnostics portfolio company developing and commercialising instruments and consumables in the field of "spatial biology", proxy voting adviser ISS advised against several recommendations related to executive

⁴ Source: MSCI Climate Change Metric: GHG emissions footprint. Where 100% coverage of a metric is not available, the Fund and index figures are estimated as if 100% coverage had been achieved and calculated on the basis of existing data coverage figures.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

remuneration, including Chief Executive Officer pay during shareholder proxy voting. The company reached out to the Investment Manager to discuss the ISS recommendations and was engaged via a video conference call. The company's management team made representations as to why they believed shareholders should vote in favour of the resolutions. To the Investment Manager, the representations seemed reasonable in the context of a small company attempting to attract and retain talent in a highly competitive field, where remuneration was aligned with performance.

At a commercial stage biopharmaceutical company focused on the development and commercialisation of vaccines to prevent a range of viral diseases, ISS expressed dissatisfaction with the level of transparency around the structure of Chief Executive Officer remuneration during proxy voting. While having no issue with the overall level of remuneration, the Investment Manager did agree with ISS that greater transparency and explanation of components of the salary package was required and elected to vote against the company's recommendations, in line with ISS, on that item.

The Investment Manager considered the standards of the United Nations Global Compact (UNGC), and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises (OECD). If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company.

Every investee company was assessed for severe controversies and allegations of UNGC norms violations using data and information provided by third party data providers or independently sourced by the Investment Manager. When deemed material, the issue was investigated further with an in-depth review of the specific circumstances. During the reference period, no companies were assessed to have failed the UNGC standards.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ⁵		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁶
GHG Emissions (TCO ₂ e)	Scope 1	1,679	88.0%	1,766	89.8%	-5%
	Scope 2	2,696	88.0%	2,789	89.8%	-3%
	Scope 1 & 2	4,375	88.0%	4,556	89.8%	-4%
Carbon Footprint (TCO ₂ e/ €m Invested)	Scope 1 & 2	3.05	87.3%	3.38	89.8%	-10%
GHG Intensity (TCO ₂ e / Revenue)	Scope 1 & 2	23.93	93.9%	22.79	95.9%	5%
Female Board Representation (%)		33.1%	93.9%	29.3%	95.5%	13%

What were the top investments of this financial product?

⁵ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: NASDAQ Biotechnology Index Net Total Return. Allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €1,485.3m as of 31 December 2022. The Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁶ The figures shown demonstrate the difference in performance of the Fund and the Benchmark on each metric based on 100% data coverage (whether achieved or estimated).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The Fund primarily seeks to invest in companies within the healthcare investment universe. The Investment Manager assessed 100% of the companies in the Fund for revenue alignment towards the Fund’s promoted social characteristics.

During the reference period, a weighted average of 92.1% of the revenue or operational expenditure of the companies invested in were exposed to products, services or activities aligned with one or more of the three promoted characteristics⁷.

While the Fund does not have sustainable investing as its objective, the Fund invested in 97.3% of its investments in Sustainable Investments with a social objective. Given that the Fund committed to a minimum proportion of 50% of its investments as Sustainable Investments on 30 November 2022, this is the figure as of 31 December 2022.

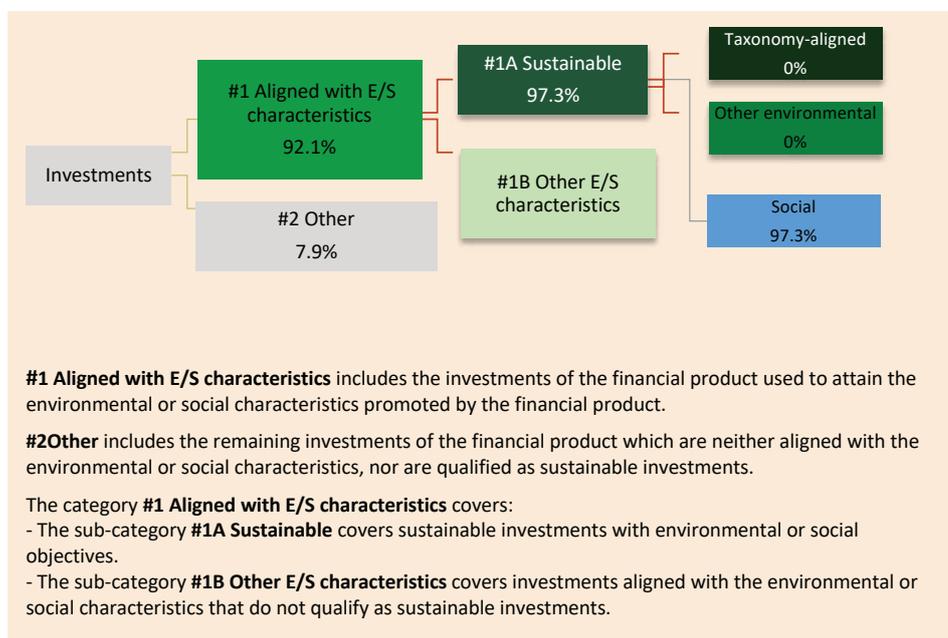

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’, ‘#1A sustainable’ etc.)

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

⁷ This figure shows the percentage revenue or operational expenditure exposure of the Fund’s assets, including cash, on a portfolio weighted basis, to the Fund’s characteristics. The average is calculated as a simple average of the Fund’s percentage exposure as at 31 March, 30 June, 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company’s alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company’s alignment with the characteristics.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

● **In which economic sectors were the investments made?**

Economic Sectors	% Assets ⁸
Medical-Biomedical/Gene	69.24
Medical-Drugs	19.09
Medical Products	4.06
Therapeutics	1.86
Medical Labs & Testing Services	1.79
Diagnostic Kits	0.61
Drug Delivery Systems	0.58

0% of the Fund’s investee companies had exposure to fossil fuel related activities.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁹?**

- Yes:**
- In fossil gas In nuclear energy
- No**

⁸ This shows the percentage of the Fund’s assets within each economic sector as at 31 December 2022.

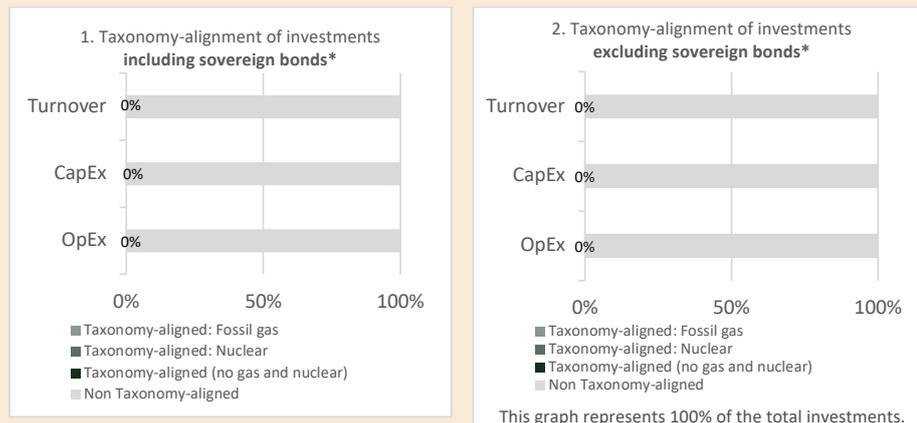

⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **What was the share of socially sustainable investments?**

The Fund's Sustainable Investments are aligned to the Fund's three characteristics and are considered by the Investment Manager to be socially Sustainable Investments.

While the Fund does not have Sustainable Investments as its objective, the Fund invested 97.3% of its investments in Sustainable Investments with a social objective. Given that the Fund committed to a minimum proportion of 50% of its investments as Sustainable Investments on 30 November 2022, this is the figure as of 31 December 2022.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund’s investments identified as #2 Other in the above diagram were made up of portions of investment revenues not aligned with the promoted characteristics of the fund and cash. During the reference period, an average of 7.9% of investments were not aligned with the promoted characteristics of the Fund.¹⁰

The Fund held cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these holdings.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Manager’s methodology for assessing whether an investment contributes to a sustainable investment objective is harmonised with the assessment of its social characteristics.

Detailed examples of how companies held during the reference period were assessed and aligned with the Fund’s characteristics and the sustainable investment objectives contributed to by the Fund are given above in the section “*What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*”.

Using their sector expertise, company specific knowledge and often, engagement with company representatives, the Investment Manager assesses every prospective investee company for its revenue alignment or, where the company is at pre-revenue stage, operational expenditure alignment, with the characteristics and sustainable investment objectives described above. Every prospective investment was also assessed against the Fund’s exclusion criteria.

Every investee company was assessed on the same basis and its alignment was monitored on an ongoing basis.

As well as pre-trade exclusion checks, a quarterly oversight review ensured compliance with the Fund’s exclusion parameters.

At AGMs or shareholder meetings, the Investment Manager reviewed the resolutions and documented voting intentions and any resultant engagements with investee companies.

¹⁰ This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, not aligned with the Fund’s characteristics. The average is calculated as a simple average of the percentage of the Fund’s assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December 2022.

Biotechnology Fund continued

Stewardship activities, including voting, interactions with companies, and follow up engagements emanating from this assessment were documented in a central database. Monitoring of any ESG issues and controversies was undertaken during the reference period and is ongoing.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

China Stars Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - China Stars Fund (the "Fund")

Legal entity identifier: 549300CJYC75WWHYR44

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund primarily invested in issuers situated in or with material exposure to Greater China that can remain competitive and deliver attractive profitability over the long term due to robust fundamental characteristics, but only where these robust fundamental characteristics were combined with positive environmental, social and governance ("ESG") profiles based on the Investment Manager's proprietary analysis.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

China Stars Fund continued

The Fund excluded companies that had an unacceptable or controversial ESG profile following the application of quantitative and qualitative analysis by the Investment Manager and through the use of exclusions list.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● **How did the sustainability indicators perform?**

The Fund achieved its sustainability characteristics across all indicators during the reporting period.

As at the date of this report, 0% of the Fund's investments failed the Fund's exclusion criteria.

The Investment Manager evaluated the Fund's performance on the characteristics through scores in five specific areas of sustainability, including how a company contributed to future sustainable economic development (its 'Impact on Progress'), how a company managed its key risks and opportunities from an ESG perspective (its 'Material ESG Issues' – broken down into three separate areas: 'Environmental', 'Social' and 'Governance') and how a company ensured it acted as a responsible corporate citizen (its 'Business Ethics'). Each company was assigned two quantitative scores from 1-10 based on these five areas, one on a 'Current Level' basis and another on a 'Future Direction' basis.

The company's scores in these five areas are then taken together to provide the Investment Manager with a company's 'Sustainability Delta', which shows the holistic profile of a company from a sustainability perspective.

A summary of the headline scores for 2022 is shown below¹:

	Current Level	Future Direction
Impact on Progress	6.8	6.6
Environmental	5.8	5.9
Social	6.6	6.3
Governance	6.9	6.3
Business ethics	7.2	6.6

¹ The table shows the average score of the Fund, excluding cash, across the five sustainability indicators of the Fund over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted scores as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

● **...and compared to previous periods?**

A comparison of the headline scores for 2022 and 2021 is shown below²:

	2021 Current Level	2022 Current Level
Impact on Progress	6.6	6.8
Environmental	6.4	5.8
Social	6.4	6.6
Governance	6.4	6.9
Business ethics	6.9	7.2

Impact on Progress

The Fund's positive bias in Impact on Progress increased further in 2022, as the Investment Manager increased the size of investments in existing companies with high exposure to industrial automation and robotics, electric vehicle production, and digital technology industries. These companies are well aligned with the long-term transition towards a more sustainable and fairer economy and society.

The score was further boosted by addition of new investments in companies such as Hongfa Technology, which is a key enabler and beneficiary of the growth in electric vehicles and renewable energy storage.

Environmental

The Fund's Environmental score dropped slightly over the reference period but maintained a solid positive bias. These changes were driven purely by adjustments in the scores of existing investee companies, which the Investment Manager concludes to be, for the most part, a function of the renewed application of its improved, proprietary database which enable it to make better, stricter interpretations of the ways our portfolio companies are performing on their material environmental factors in both absolute and industry relative terms.

By some distance the largest negative effects here came from Alibaba and Tencent, due to a combination of poor disclosure, very poor greenhouse gas ("GHG") emissions intensity versus peers and behind trend initiatives on energy mix and data centre management. The positive is that both companies have made significant commitments to improvement in this area, with stated net carbon zero targets.

²Please note that the Fund's sustainability indicators were updated during the reference period to incorporate both 'Current Level' and 'Future Direction' scores for each sustainability indicator. The Fund did not consider 'Future Direction' as a sustainability indicator in 2021 and, as a result, there are no 'Future Direction' scores for 2021. The figures show the average scores of the Fund, excluding cash, across the five sustainability indicators of the Fund over the relevant reference periods. The average is calculated as a simple average of the Fund's quarterly portfolio weighted scores as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

China Stars Fund continued

Social

The portfolio's social score improved modestly as a result of a combination of larger investments in higher social score companies and some of the underlying companies improving on their social characteristics.

One notable upgrade is TSMC, a leading designer and manufacturer of semiconductors, due to strong performance on human capital with continuing increases in years of service and low turnover. The Investment Manager also updated its score for controversial sourcing as it firmed up the analysis around that variable.

Ememory, a supplier of semiconductor intellectual property cores, similarly showed improvement in this area with low employee turnover and a continued increase in average years of service for employees, indicating overall top performance on human capital management which caused the Investment Manager to revise its score up.

The main contributors to the positive bias in Social are the Fund's investments in enabling digital and industrial technology companies that assist traditional industries to transition to a more efficient, productive, and safer environment for their employees and other stakeholders.

Governance

The Fund's Governance score saw a material improvement, mainly due to Fund turnover in which the Investment Manager switched from lower rated companies to higher rated ones, as it took advantage of the downcycle to trade up in management quality.

The Fund is made up of well-aligned owner-operated investee companies with high integrity and strong track records. These companies not only score highly on alignment and long-term incentives but also have a good history and established structures to ensure minority shareholders are treated fairly.

Business Ethics

For similar reasons to the improved Governance score, the Fund's Business Ethics score also improved. Good businesses understand that behaving as a good corporate citizen is not only a moral obligation but also serves the long-term orientated profit motive.

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund did not consider principal adverse impacts on sustainability factors during the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

China Stars Fund continued

What were the top investments of this financial product?

	Largest investments	Sector	% Assets	Country
The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31 December 2022	Tencent	Internet	10.44	Cayman Islands
	Alibaba Group	Internet	7.31	Cayman Islands
	Meituan Dianping	Internet	4.79	Cayman Islands
	JD.com Inc	Internet	4.62	Cayman Islands
	China Construction Bank	Banks	3.87	People's Republic of China

	Foshan Haitian Flavouring & Food	Food	2.27	People's Republic of China
	Glodon	Software	2.18	People's Republic of China

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

100% of the companies the Fund invested in were assessed under the Investment Manager's EVA Framework, which is used to assess and deliver the environmental or social characteristics promoted by the Fund.

All investments, excluding cash, attained the characteristics of the Fund on an individual basis over the reference period.

During the reference period the Fund averaged 95.8% in equity and equity warrants. Therefore, on average 95.8%³ of the investments of the Fund attained the environmental or social characteristics promoted by the Fund.

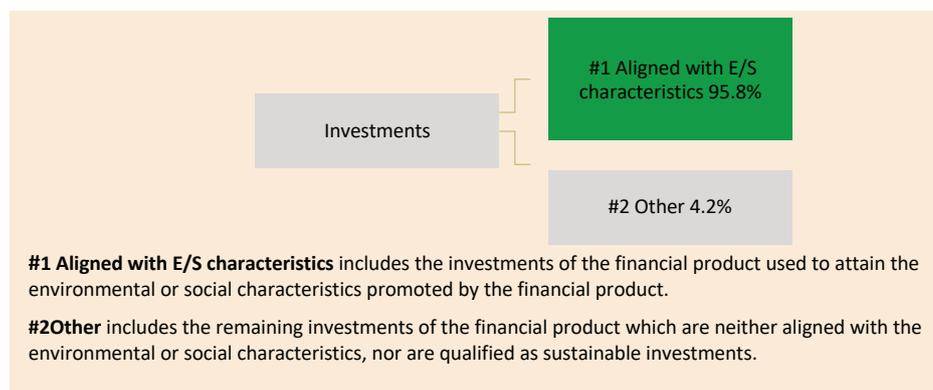

³ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, aligned with the Fund's characteristics. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)

● **In which economic sectors were the investments made?**

China Stars Fund continued

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

Materials	1.18
Metal Fabricate/Hardware	1.10
Health Care	0.86
Tech Hardware & Semiconductors	0.65
Renewable Energy	0.31

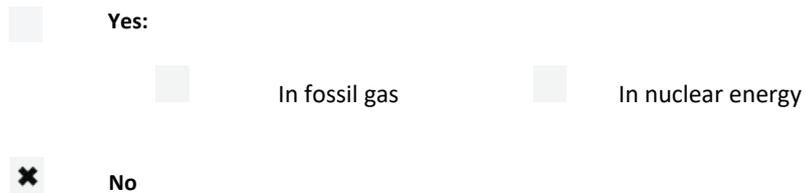

0% of the Fund’s investee companies had exposure to fossil fuel related activities.

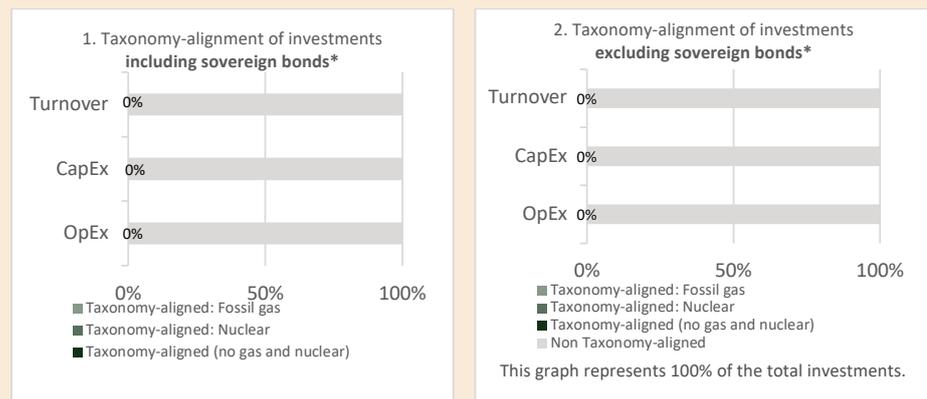

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁵?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Over the reference period, an average of 4.2%⁶ was held in cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The assessment of sustainability factors is not a one-time event and does not stop at the point of purchase. Ongoing engagement and monitoring are a constant and valuable part of the Investment Manager’s work, as it is very focused on how companies see the future and how they allocate capital accordingly to mitigate risk and benefit from revenue opportunities as part of a sustainable future. These are the types of companies that will score highly on the Investment Manager’s proprietary framework.

In this way, the Investment Manager views engagement as entirely integrated with its ongoing, fundamental dialogue with the Fund’s investments. The Investment Manager holds hundreds of meetings each year alongside site visits, meetings with competitors,

⁶ This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, not aligned with the Fund’s characteristics. The average is calculated as a simple average of the percentage of the Fund’s assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

China Stars Fund continued

suppliers, customers, industry experts and lower-tier employees as part of its ongoing engagement and due diligence. Engagement can take the form of meetings, calls, emails or voting as a shareholder.

The Investment Manager aims to be regular and proactive in its efforts rather than only engaging post an ESG 'event'. However, there are a few situations each year where the Investment Manager feels it can add value as minority shareholders through more active forms of engagements.

In circumstances where a company is involved in a negative and material ESG incident which compromises the integrity of the whole business, or, less dramatically, where the Investment Manager loses confidence in its investment thesis owing to an issue related to ESG practices and therefore its belief in a company's ability to generate long-term sustainable EVA, or its comfort with it as a corporate citizen, its policy is to immediately divest.

An example of a highly active engagement during the reporting period is given below.

Meidong Auto is a best-in-class luxury car dealership run by a great owner/operator. Through the Investment Manager's proprietary research on its business practice and strategy, it is confident that Meidong has a strong culture to retain and attract the best talent in the industry, a business strategy aligned not only with operational excellence but also the auto industry's transition towards digitization and electrification. As a result, the Investment Manager did not feel that this was being reflected in third party ESG ratings.

As a result, the Investment Manager started to engage with Meidong senior management to improve its scores with third party ESG rating providers, with the view that having improved scores would have material impact on its cost of capital in the future as the company looks to continue to expand its footprint.

The Investment Manager helped to convince the management about the importance and urgency of improving third party ESG ratings and identified areas for improved communication and disclosure to address concerns.

Through highly engaged dialogue with third party ESG rating providers on disclosure and communication, the company proved its ESG credentials and potentially improved its cost of accessing capital in future which the Investment Manager welcomes.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How does the reference benchmark differ from a broad market index?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) *continued*

Emerging Market Stars Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Emerging Market Stars Fund (the “Fund”)

Legal entity identifier: 5493001FUNLE56KXSU19

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 40% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies primarily situated in emerging markets that have the ability to remain competitive and deliver attractive profitability over the long term due to robust fundamental characteristics, but only where these robust fundamental characteristics were combined with good or improving environmental, social and governance (“ESG”) profiles based on the Investment Manager’s proprietary analysis.

The Fund had a bias towards companies with improving sustainability profiles, based on the Investment Manager’s proprietary analysis.

The Fund excluded companies that have an unacceptable or controversial ESG profile following the application of quantitative and qualitative analysis by the Investment Manager and through the use of the Fund's exclusions list.

The Investment Manager determined a security had met the characteristics of the Fund if it scored equal to or greater than 5 on its proprietary 'Sustainability Delta' scoring framework.

All investments attained the characteristics of the Fund on an individual basis over the review period.

● ***How did the sustainability indicators perform?***

The Investment Manager evaluated the Fund's performance on the characteristics through scores in five specific areas of sustainability including how a company contributed to future sustainable economic development (its 'Impact on Progress'), how a company managed its key risks and opportunities from an ESG perspective (its 'Material ESG Issues' – broken down into three separate areas: 'Environmental', 'Social' and 'Governance') and how a company ensured it acted as a responsible corporate citizen (its 'Business Ethics').

Each company was assigned two quantitative scores from 1-10 based on these five areas, one on a 'Current Level' basis and another on a 'Future Direction' basis.

The company's scores in these five areas are then taken together to provide the Investment Manager with a company's 'Sustainability Delta', which shows both the 'Current Level' and 'Future Direction' of a company from a sustainability perspective.

There are two ways in which portfolio-level indicator scores change from period to period. These are via i) upgrades/downgrades to the Investment Manager's internal stock scores on existing holdings, and ii) portfolio changes from buying lower scoring, selling higher scoring stocks or vice versa.

In the case of i), stock score upgrades are typically incremental, only apply to one element of the Investment Manager's complex scorecard for a stock, do not carry a large weight, and will require many upgrades to have a large impact on the overall indicator score.

In the case of ii), as the Fund has relatively low turnover, and it is unlikely that the spread on all new stocks bought versus all stocks sold during a given period will be very wide (in either direction), this driver too is moderate. Over this reporting period the Fund bought 15 new stocks and exited 19 positions.

There is one significant feature which impacted a number of the upgrade/downgrade scores for a range of the Fund's portfolio companies over the period on a one-off basis. Over the year meaningful enhancements were made to

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

the rigour of the scoring process in order to increase robustness, consistency and comparability across the investment universe as well as to more effectively incorporate better proprietary datasets into E&S scores and incorporate a new checklist system into the way governance and business ethics are assessed for all companies.

The Investment Manager therefore expects to continue to see small changes in the sustainability indicators at the portfolio level going forward, even whilst at the underlying stock level there may be a number of investments which experience multi-point upgrades due to operational and strategic improvement.

The Investment Manager prefers to invest in securities which display an improving trend with the score for Future Direction improving from Current Level (“Positive Delta”), though this is not a requirement for an investment to meet the Fund’s characteristics and the Fund may invest in securities where scores are stable across the forecast period (“Stable Delta”).

In cases where score display a deteriorating trend, with the Future Direction score declining from the Current Level score (“Negative Delta”), the Investment Manager makes a commitment to engage with the company to resolve a path forward.

The current breakdown of the Fund is shown in table below¹:

	2022	
	Current Level	Future Direction
Impact on progress	7.58	7.93
Environmental	5.94	6.72
Social	6.61	6.97
Governance	7.16	7.26
Business ethics	6.78	7.03

	% Fund ²
Positive Delta: Level < Direction	78.5%
Stable Delta: Level = Direction	21.5%
Negative Delta: level > Direction	0.0%

¹ The table shows the average score of the Fund, excluding cash, across the five sustainability indicators of the Fund over the reference period. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted scores as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

² The table shows the percentage of the Fund’s assets as at 31 December 2022, excluding cash, on a portfolio weighted basis that either have positive, stable or negative Delta. The Delta of the sustainability scores is defined as the difference between the Current Level and the Future Direction.

● *...and compared to previous periods?*

A summary of the headline scores for comparison is shown below³:

	2021		2022	
	Current Level	Future Direction	Current Level	Future Direction
Impact on progress	7.42	7.80	7.58	7.93
Environmental	6.34	6.85	5.94	6.72
Social	6.73	7.15	6.61	6.97
Governance	7.08	7.40	7.16	7.26
Business ethics	6.68	6.98	6.78	7.03

The table below displays a summary of all changes that have been made in the way described over the reporting period.

	Current Level 2021	Upgrade	Portfolio Change	Current Level 2022	Future Direction 2021	Upgrade	Portfolio Change	Future Direction 2022
Impact on progress	7.42	0.28	-0.12	7.58	7.80	0.23	-0.09	7.93
Environmental	6.34	-0.41	0.01	5.94	6.85	-0.18	0.05	6.72
Social	6.73	-0.11	-0.01	6.61	7.15	-0.20	0.01	6.97
Governance	7.08	0.03	0.05	7.16	7.40	-0.20	0.07	7.26
Business ethics	6.68	0.03	0.07	6.78	6.98	-0.10	0.14	7.03

As is consistent with the Fund's process and the expectations of the Investment Manager, the sustainability indicator scores shown at a headline, aggregated level remain relatively stable from the previous period to the reference period. Nine out of these ten individual indicators (5 metrics across level and direction) have seen movement of less than +/- 0.20 from the reference period, with one recording a contraction of -0.4 (Environmental, as discussed below) for its Current Level.

Impact on Progress

The Fund's Impact on Progress score increased the most of any over the reference period, up by 0.16 for Current Level and +0.14 for Future Direction as compared with 2021, to 7.58 and 7.93, as shown in the summary table above.

In both cases this improvement came entirely from upgrades within existing holdings, as the effect from portfolio changes was very slightly negative in each case.

The largest contributors to improving scores came from Apollo Hospitals, following a visit to India as well as engagement with management which gave a fuller appreciation of Apollo's leadership in and exposure to the Investment Manager's health and wellness sub-area. This made it deserving of the highest score: an upgrade from 8 to 10 on Current

³ Please note the figures shown for 2021 in this table differ slightly to those shown in the Emerging Markets Stars Fund SFDR Disclosure Annex of the Company's 2021 Annual Report. This difference is due to an update in the calculation methodology of the sustainability indicators. Sustainability indicator scores are now based on the portfolio weighted average of investee companies scores rather than a simple average. Please refer to page 408 of the 2021 Annual Report for full details of the portfolio scores against the five areas on a simple average basis.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

Level and Future Direction. Apollo is trying to accelerate work to increase the accessibility and affordability of the Indian healthcare ecosystem by expanding its overall network, developing new technologies and rolling out telemedicine nationally – with the potential to improve health outcomes and allow patients to recover faster or prevent illness and remain healthier.

Samsung Electronics was also upgraded from 7 to 9 (for both Current Level and Future Direction) during the review period as under the upgrades to the Investment Manager's methodology, the Investment Manager linked scoring for Impact on Progress more directly with the capital expenditure, revenue and operational expenditure of business areas deemed eligible for inclusion under this indicator.

As a global leader in the memory semiconductor industry, Samsung Electronics plays a central role in not only supplying current memory technology but also in developing future technologies. These future technologies contribute to climate change mitigation by providing low-power, high efficiency data storage which will reduce the carbon emissions associated with these devices. The semiconductor business only makes up ~30% of revenue but the company spends ~90% of its capex investments and almost all its R&D spend on these future technologies which is why the Investment Manager scores the company in the Exceptional range.

These positive moves outweighed small downgrades to scores for other companies.

Environmental

The Environmental Current Level indicator was something of an anomaly, deteriorating by -0.40 from 6.34 to 5.94, the most of any indicator over the review period, whilst the Future Direction indicator was relatively stable, declining only -0.13 from 6.85 to 6.72. These changes were again driven purely by existing holdings, which the Investment Manager concluded to be, for the most part, a function of their assessment against the revised methodology which enables the Investment Manager to make better, stricter interpretations of the ways the portfolio companies are performing on their material environmental factors in both absolute and industry relative terms.

By some distance the largest negative effects here came from Alibaba and Tencent, due to a combination of poor disclosure, very poor greenhouse gas ("GHG") emissions intensity versus peers (9th and 29th percentile vs. peers, respectively) and behind trend initiatives on energy mix. These factors, together with the fact that this year the Investment Manager's scores are portfolio weighted rather than a simple average mean that the low Current Level scores for Alibaba (3.5) and Tencent (3) dominate the downgrades here. The positive is that both companies have made significant future commitments, with stated net carbon zero targets, and this is why there is a much less marked effect on the Future Direction scores.

It should be noted that these downgrades masked some positive changes to other stocks, such as Koh Young, which saw a significant upgrade to both Current Level and Future Direction due to an improvement in the availability of data. The company had previously been scored neutrally due to a lack of sufficient comparable data, but better disclosure enabled analysis and identification of Koh Young's superior relative performance on environmental matters.

Social

The Social indicator saw a small deterioration as compared with the reference period, falling -0.12 from 6.73 to 6.61 on Current Level and -0.18 from 7.15 to 6.97 on Future Direction. Once again this was owing to downgrades of existing holdings within the portfolio.

Notable companies that were downgraded over the review period include the Investment Manager's Indian financial holdings, ICICI Bank and HDFC Ltd. The former has poor disclosure on human capital management and staff turnover levels relative to peers as well as slightly lower than average data privacy measures. Meanwhile, HDFC Ltd.'s score was reduced owing to an increase in customer complaints during the prior year and no evidence of employee training on practices to reinforce consumer financial protection.

Additionally, Chroma, a manufacturer and marketer of electronic and automation measuring instruments, had its Current Level score reduced as the company had a significant spike in its total recordable incident rate data which hugely derated the performance in 5 year rolling data to 21% percentile. The Investment Manager is more confident in this improving on a Future Direction basis.

More positively, these were somewhat evened-out at the portfolio level by upgrades to the scores for TSMC, a semiconductor manufacture and design company, due to strong performance on human capital with continuing increase in years of service and low turnover. The Investment Manager also updated its score for controversial sourcing as it firmed up the analysis around that variable.

Ememory, producer of Logic-based non-volatile memory (Logic NVM) technology used in semiconductor production, similarly showed an improvement in this area with low employee turnover and a continued increase in average years of service for employees, indicating overall top performance on Human capital management which caused the Investment Manager to revise the score up.

Governance

This indicator improved modestly on Current Level up 0.08 from 7.08 to 7.16 and declined slightly for Future Direction by -0.14 from 7.40 to 7.26.

What is most interesting to note is that there was a surprisingly large spread in the governance scores between newly purchased companies and those the Investment Manager exited over the period. On Current Level and Future Direction, the outgoing companies' simple average scores were 6.42 and 6.63 and the new purchases scored 7.44 and 7.68, respectively – more than a one-point increase in each case. This is highly encouraging as it supports the fact that the process is particularly able to identify and capture higher *quality* companies, which is very often a hallmark of strong governance. The Investment Manager is especially pleased that the new, checklist system for additional scrutiny on the key determinants and frequent red flags for governance, has resulted in the ability to more thoroughly and tangibly rank and convey the quality of the companies that the Investment Manager has always held.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

The reason why a portfolio change effect is not more strongly shown in the summary table is due to the portfolio weighted average scoring. Additionally, the benefit of the new governance checklist scoring is also felt across all portfolio holdings, resulting in an almost equal impact to existing investments as well as new purchases on a Current Level basis.

On Future Direction, the contribution from portfolio changes was a net positive benefit whilst there were small downgrades to existing stocks from the more detailed analytical framework.

Business Ethics

Business Ethics is very similar to Governance in that here the Investment Manager also introduced a more systematic scorecard approach to promote consistency across scores as well as to ensure the core elements of this indicator were being captured in the analysis of all stocks.

The overall outcome at the portfolio level is very small fluctuations to scores, looked at in terms of both upgrades and downgrades and portfolio changes. The Current Level increased by 0.1 from 6.68 to 6.78 while the Future Direction increased by 0.05 from 6.98 to 7.03. All changes were due to the new scorecard which requires in depth consideration of metrics related to corporate behaviour and tax.

There was one exception to this, SK Hynix, where the company was thought to be involved in a ‘severe controversy’ related to anti-competitive behaviour and in relation to which China’s anti-monopoly bureau has also launched an investigation which the Investment Manager believes is ongoing and which reportedly has an ultimate potential penalty of up to US\$8bn. However, the Investment Manager engaged with peer company Samsung Electronics, which faced an investigation of the same issue, and carried out additional due diligence which led the Investment Manager to conclude that the matter was in fact all media speculation and there had never been an active investigation. The Investment Manager moderated SK Hynix’s Business Ethics score to reflect past convictions for collusion in 2002-2010 and the higher-than-average risk level. The Investment Manager has since fully exited the investment in this company for unrelated reasons.

For the avoidance of doubt, neither the Fund’s sustainability indicators nor the Fund’s performance on those indicators are subject to assurance by an auditor or review by a third party.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Investment Manager used an ‘Impact on Progress’ assessment within the Fund’s proprietary Economic Value Added (EVA) Framework to identify and assess investment opportunities that, in the Investment Manager’s view, contribute to sustainable environmental and social objectives.

The ‘Impact on Progress’ assessment is centred around three key pillars (Resource Management, Social Development and Economic Progress) informed by the United Nations Sustainable Development Goals (“UN SDGs”). Each pillar links to corresponding sustainable objectives. Companies were eligible to be considered as

a Sustainable Investment if the company's products or services were deemed to contribute to one or more of the Sustainable Investment objectives. For the reference period, the sustainable objectives that the Fund contributed towards are highlighted in the table below.

Sustainable Investment Objective	% of Sustainable investments in the Fund, categorised by Sustainable Investment Objective ⁴
Circular economy	1%
Climate Change	33%
Health & Wellbeing	5%
Financial Inclusion	2%
Total Sustainable investments	40%

The following are examples of Sustainable Investments and how they are contributing to the sustainable objective:

Samsung SDI

Samsung SDI contributes to the mitigation of climate change by developing and manufacturing batteries for electric vehicles and energy storage systems, products from which the company derived 44% of its 2021 revenue.

Transportation consumed around 19% of total primary energy globally in 2021, and the Investment Manager views adoption of electric vehicles as a significant contributor to increasing energy efficiency in the sector.

A recent study from Yale Climate Connection under Yale School of the Environment, Yale University, shows that around 80% of the energy in gasoline powered Internal Combustion Engine (ICE) vehicles is lost to various inefficiencies and the number is only 11% for electric vehicles. Roughly speaking an electric vehicle is, therefore, 4.5x as energy efficient as an ICE vehicle.

Alinma Bank

In 2018, the percentage of total adults with a bank account in Saudi Arabia was 71%, far below the developed market average of >90%. Financial inclusion for adult women in Saudi Arabia is far lower at 58.2% and financial literacy is astonishingly low – it is scored at 9.6 out of 21 according to a 2019 OECD survey and below even many lower income emerging market peers.

During the review period, an IMF consultation paper on Saudi Arabia called for improvement to financial inclusion – particularly for SMEs and women, and an earlier 2020 project by the G20 Partnership for Financial Inclusion (GPFI) identified the digital financial inclusion of women, youths and SMEs as its key priorities.

⁴ Please note that the Fund formalized its commitment to a minimum proportion of Sustainable Investments on 30 November 2022. These figures show the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments pursuant to the relevant sustainable investment objective as at 31 December 2022.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

Alinma Bank's retail strategy very explicitly targets exactly these areas, prioritising growth in serving the under-banked digital youth and women's segments. Alinma Bank has 3 high level segment goals, one of which is 'Be the most digitally advanced, fastest, and most convenient retail bank in KSA'. Below this, specifically within their retail banking business, Alinma sets three core targets, one of which is: 'Grow the digitally-savvy youth customer franchise'.

99% of transactions are now digital and it is broadly accepted that the problems of financial inclusion are going to be solved via technology and Alinma Bank are investing to address this, offer new products, improve infrastructure and move towards a more cashless society (from 36% in 2019).

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm ("DNSH"), assessed each company primarily using third party data, to assess whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as Sustainable Investments by the Investment Manager.

The Investment Manager used the research of third party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over the assessment of third party conclusions on a case-by-case basis.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of the Annex 1 Level 2 Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable, Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Where, in the Investment Manager's view, a company did not cause significant harm with respect to a specific PAI but the Investment Manager felt there was room for material improvement, it took the required steps to reduce or mitigate the PAI, such as engaging with the company, using the right to vote, seeking to improve disclosure of data by the company, or reducing exposure to the issuer where deemed appropriate or necessary.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing the alignment of portfolio companies with these global norms, and where necessary, conducting further due diligence to determine compliance with these norms.

The following are examples of DNSH assessments during the reference period:

ITM Semiconductors (Tobacco - exited). ITM Semiconductor is a specialised technology company focusing on battery energy and safety management. Unfortunately, the company decided to use its technology to enter the e-cigarettes business – which the Investment Manager does not feel comfortable with from a Material ESG Issues viewpoint, as well as an ethical perspective. The Investment Manager attempted to strongly engage with the company (as mentioned in last year's annual report), arguing that the upside from being able to be a very strong, clean ESG technology company, within the battery technology space, would far outweigh the revenue/profit from e-cigarettes, as this line of business would in the end result in a significant "ESG discount".

The Investment Manager was not able to convince the company, and it took the decision to pursue e-cigarettes as a new main business line. As this became clear, the Investment Manager acted in line with its philosophy and process, and fully exited the Fund's position.

Embraer (Armaments – Not Owned). The Investment Manager engaged with this company which has a 90% subsidiary that has developed eVTOL (vertical take off and landing) technology in which the Investment Manager was interested.

However, the core aerospace business has significant legacy challenges related to historic aircraft production which render the risk level too high for the Investment Manager to participate in. Namely, a plane built in 2000 by Embraer for the Brazilian air force featured the enablement of cluster munitions. None of these models have been sold this year or indeed recently, and Embraer themselves do not manufacture any weapons directly, only the aircraft, while the vast majority of their defence fleet serves functions such as carrying troops or cargo, re-fuelling other aircraft and extinguishing fires. This represents a declining portion of the company's revenue, but the company

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

could not give assurances that the models causing concern have been taken out of production and will never again be produced.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

When assessing a company’s impact on the environment, the Investment Manager considered GHG emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity, energy consumption and carbon reduction initiatives. Furthermore, revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. Where material revenues were flagged, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero.

Similarly, where water usage was deemed material to an investee company by the Investment Manager, the Investment Manager sought to encourage the adoption of appropriate water management and water reduction policies.

The Investment Manager considered the board gender diversity of investee companies, and, where it deemed appropriate, used its tools of active ownership to encourage better diversity practices.

The Investment Manager considered the standards of the United Nations Global Compact, the Organisation for Economic Co-Operation and Development’s Guidelines for Multinational Enterprises, whistleblower protection, and anti-corruption and anti-bribery policies. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

The following are examples of consideration of principal adverse impacts on sustainability factors:

Example 1 – PAI 12 - Number of women on Board of Directors

The Investment Manager captures the number of companies in the portfolio that do not have any women on their boards. As at 31 December 2022, eight of the Fund's 47 investee companies had zero female board numbers. This represents 17% of the Fund by number of holdings and a lesser 12.5% of the Fund by weight, as on average the Investment Manager holds smaller positions in these companies. It should be noted that 6 of these 8 companies are in the technology sector, principally in high-value, leading edge companies related to the semiconductor industry. The remaining two companies are in much earlier stage economies: Vietnam and Saudi Arabia.

Part of the Investment Manager's process involves engagement with all companies regarding board structure, efficiency, controls and oversight which involves analysis of diversity representation and as part of this work it has questioned companies in this space over a period of years regarding the absence of women on their boards. There is a strong consensus in the response: despite a keen willingness, there is a shortage of women with sufficient seniority, specific technical skills and managerial experience in these particular areas due to very low levels of women having studied to become semiconductor engineers or software programmers 15-20 years ago – where they exist they are highly sought after, but are few and far between.

In middle-management and all tiers further down through technology organisations there are increasing numbers of women, which the Investment Manager views as encouraging and is hopeful that strong pipelines of future female leaders are being built, that investee companies are keen to bring into their leaderships teams or to board-level, in the not too distant future.

The Investment Manager has good relationships with the management of these companies and believes that they are well equipped to manage their top level talent and structure their management well, in a diversified manner such that strategic thought receives balanced input, challenge and the benefit of a range of backgrounds. The Investment Manager, and the investee companies, are highly aware of the paramount importance of a strong culture on the overall success of a business.

When the Investment Manager scores a company in its proprietary Material ESG scoring framework, it has the ability to make a specific adjustment with regard to board diversity – either to reflect very positive performance, or to deduct points for what it assesses to be a poor setup relative to industry peers.

The Investment Manager strongly supports gender and racial/ethnic diversity on boards of the Fund's investee companies, captures as much data as it can and engages to promote this, but there are nuances across the portfolio which the Investment Manager does not believe should be seen as negative, as companies try to invest in the right talent to support their business, now and for the future – which conversely provides a bright outlook for improvement.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

Example 2 – PAI 4 – Exposure to Fossil Fuels

The Fund excludes any company which has over 5% of its revenue derived from oil exploration and production. The Fund does not exclude investments into gas (natural gas/liquid natural gas or “LNG”). The Investment Manager views gas as a transition fuel or interim energy source, far cleaner than coal and required before society can move to a structure powered entirely by renewable energy.

Currently the Fund’s only exposure to fossil fuels is via Reliance Industries in India. Given the large, transformative transition this company is undertaking from a high emissions petrochemicals business to a leader in new energy such as solar, battery storage and hydrogen, the Investment Manager undertakes additional engagement by means of a long-term collective investor engagement programme under Climate Action 100+ to ensure the company is held to account and there is continued oversight. The Investment Manager is a co-lead investor of this engagement and spent significant time during the review period visiting management at their operations in India.

In addition, a letter was sent by one of the Climate Action 100+ engagement group participants to the Chair of Reliance Industries' Corporate Social Responsibility and Governance Committee highlighting a range of suggestions for potential improvement of the company’s climate governance and strategy.

In terms of ongoing progress, compared to the previous year, the Investment Manager notes that Reliance Industries provided additional detail regarding its decarbonization strategy as the company identified the set of actions and investments it intends to undertake to achieve its GHG reduction targets. Capital expenditure in the New Energy Business is on track to reach 10GW of solar module manufacturing capacity by 2024, and 20GW by 2026. Battery capacity for large scale energy storage is projected to reach 5GWh by 2024 and 50GWh by 2027. Moreover, Reliance Industries expanded its plans with the announcement of the fifth Gigafactory for Power Electronics and reiterated its commitment to further investment in India’s energy transition.

At the consolidated level, the company’s Financial Year 2022 emissions performance showed improvement year-on-year with some reduction across most GHG metrics. The company has targeted Taskforce for Climate-related Financial Disclosure (TCFD) reporting by 2024 and has an ambition to implement Science Based Targets Initiative (SBTi) reporting too.

Reliance Industries has also been improving some aspects on governance, notably Board oversight and compensation structures, which will take a further 2 years. Part of the improvement in governance includes the establishment of the Reliance New Energy Council, an internal advisory council where the intention is to gain knowledge and perspective from the experience of the council members and for them to help assist Reliance’s transition.

Example 3 – UNGC Controversies

In November 2022, third party ESG rating providers released new controversies research which led to downgrades on UNGC compliance for a number of companies with Chinese operations. The downgrades related to alleged involvement in Xinjiang province and the alleged infringements of human rights and civil liberties of the Uyghur population.

As part of these actions, Tencent, an investee company, was not downgraded but flagged on the 'watchlist' due to allegations of use of surveillance and using social media records to spy on Uyghur communications through WeChat and other social platforms. The UN Human Rights Office of the High Commissioner (OHCHR) and Australian Strategic Policy Institute (ASPI) have made mention on Tencent in reports related to human rights and surveillance practices in China.

As the Investment Manager considers UNGC compliance as a PAI indicator this is something it takes seriously. The Investment Manager has been engaging with the company and carrying out further due diligence relating to this issue, while taking into account the context that Tencent is operating under Chinese law, as defined by the Chinese Communist Party (CCP). The management have made clear to the Investment Manager that they have at all times complied with Chinese law and Chinese law makes clear that the CCP must at all times be given access to all information and data they request. This has been the case for many years and is well understood by the market and by Chinese society.

The Investment Manager does not believe that Tencent is enabling or complicit in any human rights abuse. Conversely, Tencent has changed the face of Chinese society in its democratisation of access to communication and information for the widest groups in society via its WeChat app and access to finance via WeChat Pay. These innovations leapfrogged desktop computing and credit cards for the Chinese population in a way that catapulted development and opportunities for all – granting more rights, not compromising them.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

⁵ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: MSCI Emerging Market Net Total Return Index. Allocated emissions of investee companies is calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €1,000m as of 31 December 2022. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability. Figures may differ due to rounding and currency conversion effects.

⁶ The figures shown demonstrate the difference in performance of the Fund and the Benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What was the proportion of sustainability-related investments?

● What was the asset allocation?

100% of the companies the Fund invested in were assessed under the Investment Manager’s EVA Framework, which is used to assess and deliver the environmental or social characteristics promoted by the Fund.

All investments, excluding cash, attained the characteristics of the Fund on an individual basis over the reference period.

During the reference period, the Fund averaged 96.9% investment in equity and equity warrants. Therefore, on average 96.9%⁷ of the investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund.

While the Fund does not have sustainable investing as its objective, the Fund invested in 40%⁸ of its investments in Sustainable Investments with an environmental or social objective.

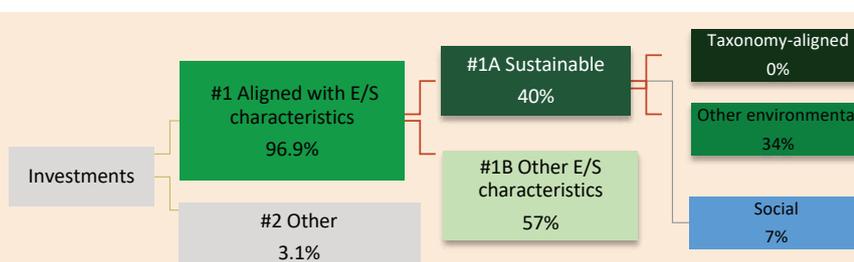

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’, ‘#1A sustainable’ etc.)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

⁷ This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, aligned with the Fund’s characteristics. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

⁸ Please note that the Fund formalised its commitment to a minimum proportion of Sustainable Investments on 30 November 2022. This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments as at 31 December 2022.

During the reference period the only material exposure to fossil fuels within the Fund was via Reliance Industries in India. Given the large, transformative transition this company is undertaking from a high emissions petrochemicals business to a leader in renewable energy such as solar, battery storage and hydrogen, the Investment Manager undertakes additional engagement by means of a long-term collective investor engagement programme under Climate Action 100+ to ensure the company is held to account and there is continued oversight. The Investment Manager co-leads this engagement with other investors and spent significant time during 2022 visiting management at their operations in India.

⁹ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2022.

Taxonomy-aligned activities are expressed as a share of:

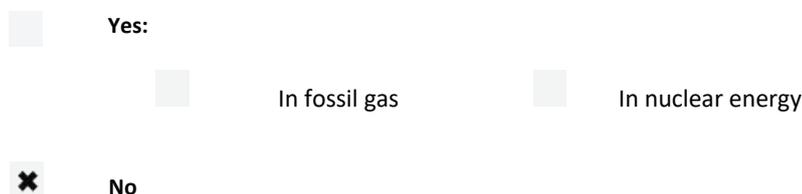

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee .

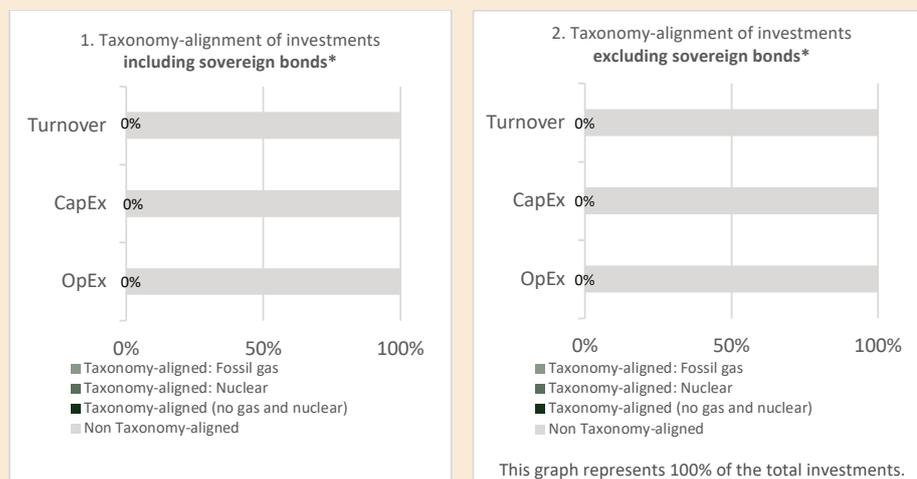

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund’s net assets.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹⁰?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

**For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures*

¹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

● **What was the share of investments made in transitional and enabling activities?**

The proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

During December 2022, the percentage of Sustainable Investments with an environmental objective not aligned with the EU Taxonomy was 34%.¹¹

In order to satisfy itself that an investment is environmentally sustainable pursuant to the Taxonomy Regulation, the Investment Manager must (a) be satisfied that the investments underlying the Fund are in environmentally sustainable activities (b) identify the extent to which the investments of the Fund are in economic activities that qualify as environmentally sustainable and are aligned with the Taxonomy Regulation; (c) identify the proportion, as a percentage of the Fund's portfolio, of investments in environmentally sustainable activities which are aligned with the Taxonomy Regulation; and (d) identify the proportion, as a percentage of the Fund's portfolio, of enabling and transitional activities (as described in the Taxonomy Regulation).

At the present time, the Investment Manager cannot satisfy itself that the Fund's investments meet the criteria outlined above. Accordingly, the proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

What was the share of socially sustainable investments?

During the reference period the percentage of socially Sustainable Investments within the Fund was 7%.¹²

¹¹ Please note that the formalized its commitment to a minimum proportion of Sustainable Investments on 30 November 2022. This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments with an environmental objective as at 31 December 2022.

¹² Please note that the formalized its commitment to a minimum proportion of Sustainable Investments on 30 November 2022. This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments with a social objective as at 30 December 2022.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 3.1% of the Fund’s investments were identified as #2 Other in the above diagram and were held in cash for liquidity purposes in line with the Fund’s Investment Policy. There are no minimum environmental or social safeguards applicable to these investments.¹³

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Using company specific knowledge and often engagement with company representatives, the Investment Manager assesses every prospective investee company, prior to purchase, using the Investment Manager’s Proprietary quantitative Economic Value Added (EVA) Wheel Model. The Investment Manager used the EVA Wheel to evaluate how investee companies contributed to future sustainable economic development (its Impact on Progress), how a company managed its key risks and opportunities from an ESG perspective (its Material ESG Issues) and how a company ensures it acted as a responsible corporate citizen (its Business Ethics). Each company was assigned a quantitative score based on these three areas. The Investment Manager carried out this evaluation using a variety of sources, including information and data published by the companies themselves and third party data and research providers. Every prospective investment was also assessed against the Fund’s exclusion criteria.

The following are engagement examples carried out during the reference period:

Apollo Hospitals: The Investment Manager engaged with Apollo regarding its use of solar power, as the company continues to think more seriously about sustainability. Apollo already generates 40% of energy from renewable sources, with a target to reach 70% in the medium-term. Solar panels are installed on the roof of a number of its hospitals, including its Vanagaram hospital in Chennai. It has installed 100 panels with a capacity of 250 watts per panel, giving a capacity of 25 KWh. Annually, all Apollo’s hospitals across the state of Tamil Nadu have an aggregate power requirement of 60 million KWh to which wind power is also contributing, helping to substantially reduce the company’s carbon footprint, even as it continues to grow.

Ivanhoe Mines: The Investment Manager undertook a significant onsite due diligence across a range of factors at Ivanhoe Mines in the Democratic Republic of Congo earlier this year. Given the company’s location as well as the nature of its business in the extractives sector it was important for the Investment Manager to see and engage with all levels of the company in-country at its facilities. The Investment Manager was granted wide ranging access to speak with employees regarding working standards, rights, pay,

¹³ This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, not aligned with the Fund’s characteristics. The average is calculated as a simple average of the percentage of the Fund’s assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December 2022.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

satisfaction, as well as taking tours to visit staff accommodation and purpose-built homes and facilities for resettled communities.

Management stressed that great care had been taken to provide equivalent housing with upgraded facilities such as close-by boreholes for fresh water supplies, so that young girls did not have to walk for hours a day and were instead able to go to school, meaning the time saved could enable life-changing education. Employee wages are benchmarked to local averages and in some cases employees are able to partake in equity schemes. Ivanhoe make strong efforts to ensure that there is no artisanal mining through their chain.

Chroma: The Investment Manager had a good discussion with Chroma related to ESG where it has recognised a need to broadly improve performance on a range of factors and, encouragingly, it has added recognition of this in to the KPIs for senior managers. It is particularly on Social and Governance areas that they have identified more of a need to improve as the company does not use a large amount of water, gas or energy in its operations. In the first instance, targets have been set to increase female director-level employees from a single-digit percentage to 20%. Additionally, the company has appointed a consultant to help with these initiatives as well as launching an ESG Foundation. Chroma recognises that improvements will take time, but the Investment Manager supports these initiatives.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How does the reference benchmark differ from a broad market index?**
No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.
- **How did this financial product perform compared with the reference benchmark?**
No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.
- **How did this financial product perform compared with the broad market index?**
No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

European ex-UK Income Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - European ex UK Income Fund (the "Fund")

Legal entity identifier: 549300Q9605P02TCDU17

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy. Using the Investment Manager's proprietary ESG analysis tool (the "European ex UK Income Fund framework"), the Fund took positions in companies with positive or credibly improving aggregate scores against four categories:

- i. **Governance and Culture** - This category concerns a company's policies relating to its corporate culture and behaviour, including policies in relation to employee welfare.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

European ex-UK Income Fund continued

- ii. **ESG Strategy and Technology** - This category concerns the positive environmental and social impacts of a company's products and services.
- iii. **Stakeholder Due Diligence** - This category concerns a company's practices and policies in relation to all its stakeholders.
- iv. **Environmental Risk Analysis** - This category concerns a company's interaction with, and material impacts on, the environment.

● **How did the sustainability indicators perform?**

Over the reference period, 0% of the Fund's investments failed the Fund's exclusion criteria.

The Fund used the European ex UK Income Fund Framework to measure the attainment of the Fund's ESG characteristics against the four categories described above.

The Investment Manager's European ex UK Income Fund Framework consists of a sustainability score measured across three categories: Governance and Culture, Strategy & Technology and Stakeholder Due Diligence (which are scored on a combined basis), and Environmental Risk Management.

Each of these three categories is scored out of 5, resulting in an aggregate score of 15. In September 2022 and December 2022, 100% of the investee companies in the Fund remained aligned with the promoted characteristics, each passing the exclusion criteria and meeting the minimum combined score of 5 out of 15. Across all investee companies, the lowest score remained 11 out of 15¹.

The table below shows the Fund's performance against the sustainability indicators for the reference period²:

	30-Sep-22	31-Dec-22	Average ³
Pillar 1 Score Governance and Culture	4.6	4.6	4.6
Pillar 2 Score Strategy and Technology and Stakeholder Due Diligence	4.5	4.5	4.5
Pillar 3 Score Environmental Risk Management	4.6	4.6	4.6
Overall Score	13.7	13.6	13.7

¹ The Fund was approved by the Central Bank of Ireland as an Article 8 Fund under the SFDR effective 26 August 2022. September 2022 is taken as the end of the first quarter for which the Fund was categorised as an Article 8 SFDR Fund. The portfolio alignment is calculated through investee companies' alignment with the Fund's exclusion criteria and the percentage of companies that have positive or credible improving scores against the European ex UK Income Fund Framework during the period for which the Fund was classified as an Article 8 Fund under the SFDR.

² This shows the portfolio weighted average score of the Fund, excluding cash, across each of the three categories of the European ex UK Income Fund Framework at the end of each quarter. The Overall Score is calculated as a sum of the Fund's score against each category of the European ex UK Income Fund Framework.

³ The Fund's average exposure to each of the characteristics promoted by the Fund is calculated by taking a simple average of the quarterly exposures. The average exposure to each characteristic on a quarterly basis is calculated by taking a portfolio weighted average of the exposure.

In December 2022, 5 out of the 30 investee companies' scores changed. Of these scores, 3 incrementally improved, whilst 2 scores incrementally decreased (facilitating further engagement with the companies with decreasing scores).

● ***...and compared to previous periods?***

The Fund was classified as Article 8 on 26 August 2022 and therefore the Fund did not promote environmental or social characteristics, or measure its performance against the sustainability indicators, prior to this date.

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

European ex-UK Income Fund continued

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager integrated the principal adverse impact indicators (PAIs) set out in Annex I, Table 1 of the SFDR into its European ex UK Income Fund framework for the Fund as a component of its sustainability score (which is out of 15).

As outlined above, the sustainability score is comprised of three sections which are each scored out of 5: Governance and Culture (scored out of 5), Strategy and Technology and Stakeholder Due Diligence (scored out of 5) and Environmental Risk Management (scored out of 5).

The chosen PAI indicators are mapped onto these sections in the following manner. The percentage of female directors and a company's gender pay gap are used to assess the Governance and Culture of a company. UNGC violations and the confirmation that a company is a UNGC signatory, as well as production of controversial weapons, are all factors considered under Stakeholder Due Diligence.

In regard to Environmental Risk Management, we incorporate assessment of the following principal adverse impacts: the company's greenhouse gas (“GHG”) emissions, the company's carbon footprint and greenhouse gas intensity, the company's fossil fuel exposure, the company's production and consumption of non-renewable energy, the company's energy consumption intensity, the company's level of emissions to water, the company's hazardous waste ratio and the company's impact on biodiversity.

Having measured all available data for investee companies, the Investment Manager first engages to encourage investee companies to consider and disclose all 14 of the principal adverse impact indicators.

The Investment Manager has therefore engaged with the likes of Deutsche Telekom, NOS, and Air Liquide (amongst other companies) to ensure that all information necessary to measure the PAIs is provided.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Indicator ⁴		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁵
GHG Emissions (TCO2e)	Scope 1	3,216	100.0%	8,832	99.8%	-64%
	Scope 2	1,836	100.0%	1,370	99.8%	34%
	Scope 1 & 2	5,053	100.0%	10,202	99.8%	-50%
Carbon Footprint (TCO2e/ €m Invested)	Scope 1 & 2	42.23	100.0%	91.29	99.8%	-54%
GHG Intensity (TCO2e / Revenue)	Scope 1 & 2	82.52	100.0%	126.20	100.0%	-35%
Female Board Representation (%)		41.5%	92.1%	38.9%	87.3%	7%

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31 December 2022

Largest investments	Sector	% Assets	Country
TotalEnergies	Oil & Gas	4.94	France

⁴ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: MSCI Daily Net Total Return Europe ex UK Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €120.1 m as of 31 December 2022. The Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. The figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁵ The figures shown demonstrate the difference in the performance of the Fund and Benchmark on each metric based on 100% data coverage (whether achieved or estimated).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

European ex-UK Income Fund continued

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● What was the asset allocation?

The Fund invested primarily in securities of issuers that are incorporated, have their headquarters, or exercise a significant part (greater than 20%) of their economic activities in European markets/ countries (excluding the United Kingdom).

The Investment Manager used the European ex UK Income Fund Framework to assess the environmental and social characteristics (“E/S”) of each investee company.

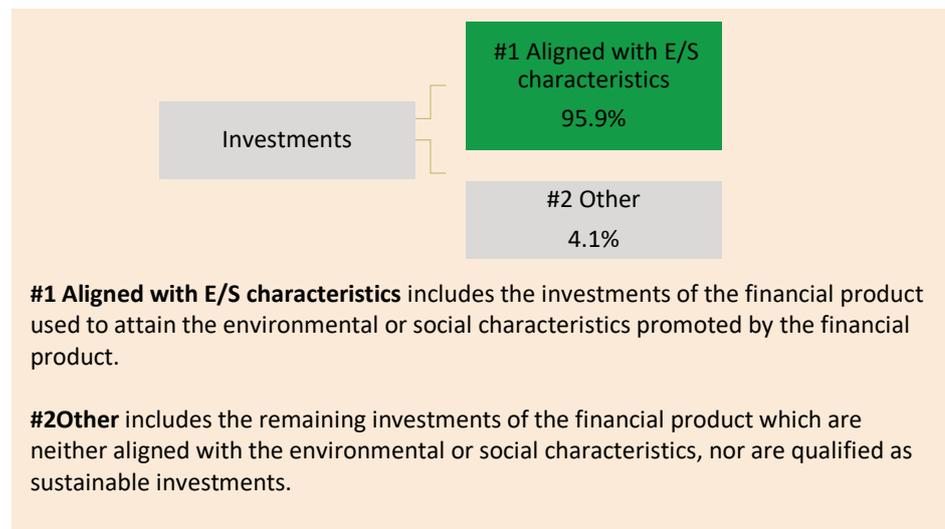

100% of the companies the Fund invests in were assessed under the Investment Manager’s European ex UK Income Fund Framework, which was used to assess and deliver the environmental and social characteristics promoted by the Fund.

During the reference period, an average of 95.9%⁶ of the investments of the Fund were used to meet the environmental and social characteristics promoted by the Fund by passing the exclusion criteria and meeting the minimum company score of 5 out of 15.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

⁶ This shows the portfolio weighted average of the assets of the Fund, including cash, which were aligned with the characteristics during the reference period. The average alignment is calculated as a simple average of the portfolio weighted alignment at 30 September 2022 and 31 December 2022. Portfolio alignment is determined by investee companies’ compliance with the Fund’s exclusion criteria and by investee companies having positive or credibly improving scores as assessed under the European ex UK Income Fund Framework.

● **In which economic sectors were the investments made?**

Economic Sectors	% Assets⁷
Insurance	16.50
Telecommunications	12.61
Medical-Drugs	8.94
Transportation	5.69
Oil & Gas	4.94
Pharmaceuticals	4.93
Chemicals	4.31
Miscellaneous Manufacturing	4.18

Beverages	2.60
Electronics	2.41
Basic Materials	2.40
Consumer Discretionary Products	1.77

The Fund has held two companies with exposure to fossil fuels during the reference period:

UPM-Kymmene Corporation (UPM)

UPM is a global forest company. UPM's business segments include UPM Biorefining, UPM Energy, UPM Raflatac, UPM Specialty Papers, UPM Paper ENA, UPM Plywood and Other operations. UPM is focussed on providing customers with responsibly sourced products and mitigating its environmental impact.

The UPM Energy business segment is an electricity producer. UPM Energy is the second largest provider of electricity in Finland and generates zero-carbon electricity in both independently owned and co-owned power plants through hydropower, nuclear and thermal power.

UPM has also invested in biofuels since 2015, thereby providing consumers with a low-emitting alternative to traditional fossil fuels. Customers for these products include oil refiners and blenders, distributors and retailers, and the petrochemical industry. UPM's Bioverna produces 80% less greenhouse gas emissions relative to fossil diesel and is produced from the residue of pulp production (the renewable crude tall oil wood extract).

⁷ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2022.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

European ex-UK Income Fund continued

Across the business, UPM has currently reached a 70% share in its own energy usage of renewable fuels and has an aim to reduce CO₂ emissions from its own fossil fuel combustion and purchased electricity by 2030 (across Scope 1 emissions and Scope 2 emissions). Additionally, UPM has outlined that it is aiming to stop using coal and peat on-site by 2030 and is aiming to reduce supply chain emissions by 30% by 2030, from its levels in 2018. UPM has put in place carbon emission reduction targets that are aligned with the Paris Agreement and are validated by the Science Based Targets Initiative (SBTi).

TotalEnergies SE (Total)

Total is a French multinational energy company, providing fuels, natural gas and electricity. In our view, this company is instrumental in leading the energy transition.

Total operates across four segments: Exploration and Production, Gas, Renewables & Power, Refining & Chemicals and Marketing & Services.

Exploration & Production encompasses the oil and gas exploration and production activities, while Gas, Renewables & Power comprises activities conducted downstream of the production process and concerns natural gas, liquefied natural gas (LNG) and liquefied petroleum gas (LPG), as well as power generation, gas and power trading, marketing and the development of renewable energy activities (excluding biotechnologies) and the power storage. Energy efficiency activities are represented through a dedicated Innovation & Energy Efficiency division within the Renewables and Power segment.

Total has set a target to reduce carbon emissions from its operated industrial facilities (Scope 1 emissions and Scope 2 emissions) by over 40% by 2030 and will disclose the progress made at its operated and non-operated facilities. Furthermore, Total has set itself the target that by 2030 its global Scope 3 emissions, linked to the use by its customers of its energy products, will be below 2015 levels, while over the same period it plans to produce and sell 30% more energy products from growth in sales of electricity and liquified natural gas.

Additionally, Total has outlined that by 2050 renewable electricity will account for 50% of production, with a quarter of production resulting from carbon-free molecules, such as biofuels and biogas, and hydrocarbons only accounting for the final 25% of total production.

Total was one of the founding companies of the Oil and Gas Climate Initiative, which aims to ensure that the 12 major global energy companies provide solutions for a low carbon future, and collectively work to achieve Scope 1 and Scope 2 emissions carbon neutrality by 2050. Moreover, the company has been integrating carbon pricing, and applying an internal carbon price to its operations to encourage a better approach to energy management and capital allocation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

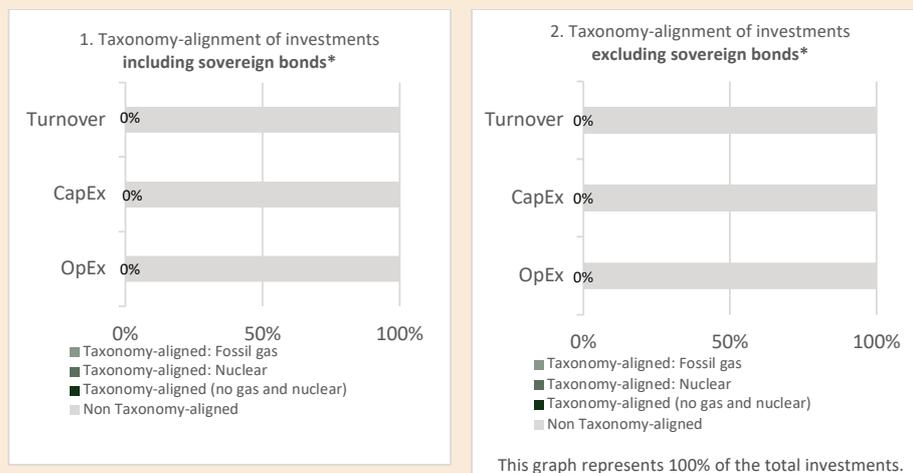

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁸?

Yes:

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy Regulation are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

European ex-UK Income Fund continued

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

- **What was the share of socially sustainable investments?**

The Fund does not invest in socially Sustainable Investments.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

During the reference period, an average of 4.1% of the Fund’s investments identified as #2 Other in the above diagram were held in cash in line with the Fund’s Investment Policy. There were no minimum environmental or social safeguards applicable to these investments.⁹

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Using company specific knowledge, and often engagement with company representatives, the Investment Manager assessed every prospective investee company, prior to purchase, using the European ex UK Income Fund Framework.

The Investment Manager used the European ex UK Income Fund Framework to evaluate the ESG performance of companies against the four categories highlighted above and carried out this evaluation using a variety of sources, including information and data published by the companies themselves and third-party data and research providers. Every prospective investment is also assessed against the Fund’s exclusion criteria.

Investee companies were also reviewed periodically against the European ex UK Income Fund Framework to ensure that their scores reflect their performance. During the review period, for example, the Investment Manager positively amended the sustainability score of Novartis. After Novartis’ ESG presentation to investors, as well as further insight being gained into the company’s Access Principles (for improving access to essential medicines and healthcare) and its new strategy for distribution of products in sub-Saharan Africa,

⁹ This figure shows the portfolio weighted average of the assets of the Fund, including cash, which were classified as other investments and therefore not aligned with the characteristics during the reference period. The average alignment is calculated as a simple average of the portfolio weighted alignment at 30 September 2022 and 31 December 2022.

the Investment Manager felt that relative to other pharmaceutical companies in the Fund, Novartis deserved to be rewarded with an incrementally higher score. This resulted in the Investment Manager changing the company's sustainability score from 11 to 12.

Siemens' sustainability score was reviewed during the reference period. Engagement with the company reassured the Investment Manager that the company adheres to stringent business conduct guidelines in order to ensure compliance with the UNGC, and moreover that the company has effective labour management tools in place. However, the Investment Manager is aware that with many multinationals, oversight of supply chains and subsidiaries can result in less stringent monitoring of employees: Siemens has over 300,000 employees and operates in 190 countries. Whilst the company indicated that no incidents of bribery in Brazil necessitated investigation, the Investment Manager wishes to continue to monitor the company. To ensure that the Investment Manager effectively oversees the company's management of its suppliers, and to encourage more frequent audits, particularly investigating the potential of forced labour, the Investment Manager has incrementally decreased the score from 15 to 14. Whilst Siemens has stringent mechanisms in place, the Investment Manager does feel that there is minor room for improvement, which a best-in-class score of 15 would not indicate.

As outlined earlier, the Investment Manager has engaged investee companies to ensure that the promoted characteristics of the Fund are met. In particular, the Investment Manager has focused on improving disclosure of the PAI metrics considered by the Fund across all of the investee companies. This enables the Investment Manager to set minimum standards that all companies should adhere to regardless of their sector, and therefore provides a basis for engagement. The Investment Manager does, in addition, engage with investee companies on any issues that the Investment Manager feels may pose a future material risk to the investment thesis.

During the fourth quarter of 2022, the Investment Manager engaged with 5 companies; Deutsche Telekom, Air Liquide, Siemens, Total and NOS, having engaged with Nestle and UPM in the third quarter of 2022.

With Total in particular, the Investment Manager was concerned about the company's impact on biodiversity and the level of damage that Total may cause in protected areas, such as Tilenga in Uganda, or Mozambique. Engagement with the company's sustainability specialists ensured that the Investment Manager understood the high level of remedial action occurring in these areas to mitigate any potential negative impact, illustrated the actual scale of potential negative impact and illustrated the strong risk assessment and due diligence process in place. A key outcome from this meeting was that Total would create regular information sessions with the wider investor community about potential projects of concern.

The Investment Manager's engagement across all these companies provided the Investment Manager with the information it was seeking and reassured it about its assessments of these company's improving sustainability credentials.

Global Absolute Return Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Global Absolute Return Fund (the "Fund")

Legal entity identifier: 549300FZYEQXKDUP14

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy.

The Fund sought to make its long investments in convertible bonds issued by companies which are positively aligned with the Investment Manager’s proprietary ESG analysis framework (the “Global Absolute Return Fund Framework”).

The Investment Manager considered the alignment of issuing companies with the United Nations Sustainable Development Goal (“UN SDG”) 8, which concerns the promotion of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Absolute Return Fund continued

sustained, inclusive and sustainable economic growth, full and productive employment for all, efficient use of resources and protection against environmental degradation, an essential characteristic of the Fund's investment selection process.

For the avoidance of doubt, the Fund invested in convertible bonds issued by companies which were not aligned with the Global Absolute Return Fund Framework where, in the Investment Manager's view, such an investment would nevertheless represent an attractive opportunity for the Fund. Short positions taken by the Fund may have been made without the intention of promoting environmental and social characteristics.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainability indicators perform?**

At the time of the Fund's investment, 0% of investee companies over the reference period failed the exclusion criteria.

During the reference period, the Fund averaged 66.5%¹ of its investments in convertible bonds issued by companies that were positively aligned with the Global Absolute Return Fund Framework. This equated to an average of 66.9%² of the long asset value of the Fund being positively aligned with the Fund Framework.

● **...and compared to previous periods?**

The Fund was classified as Article 8 under the SFDR on 26 August 2022 and therefore the Fund did not promote environmental or social characteristics, or measure its performance against the sustainability indicators, prior to this date.

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

¹ This figure shows the percentage of issuers of the convertible bonds held by the Fund, on an equal weighted basis, that scored positively against the Global Absolute Return Fund Framework. The average is calculated as a simple average of the Fund's percentages as at 30 September 2022 and 31 December 2022.

² This figure shows the percentage of the long market value of the Fund's assets on a portfolio weighted basis, that scored positively against the Global Absolute Return Fund Framework. The average is calculated as a simple average of the Fund's percentages as at 30 September 2022 and 31 December 2022. The Fund does take short positions in the equity of issuers of the convertible bonds held by the Fund to hedge the financial risk involved in holding the convertible bond.

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

This Fund did not consider the principle adverse impacts of its investment decisions on sustainability factors pursuant to Article 7 of the SFDR during the reference period.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Absolute Return Fund continued

	Neoen	Utilities	3.47	France
	Bloomin' Brands	Consumer Discretionary	3.36	United States

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

● What was the asset allocation?

The Fund seeks to make its long investments in convertible bonds issued by companies which are positively aligned with the Global Absolute Return Fund Framework.

100% of the issuing companies the Fund invested in were assessed under the Investment Manager's Global Absolute Return Fund Framework.

During the reference period the Fund averaged 66.9%³ of its long asset value to meet the environmental or social characteristics promoted by the Fund.

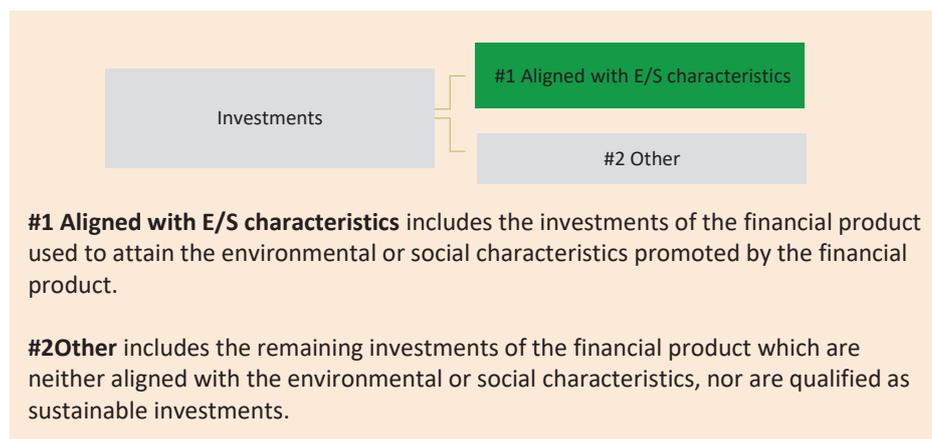

All long positions adhered to the exclusions criteria set out in the investment strategy. Short positions taken by the Fund have been made without the intention of promoting environmental and social characteristics.

³ This shows the percentage of the long market value of the Fund's assets, on a portfolio weighted basis, that scored positively against the Global Absolute Return Fund Framework. The average is calculated as a simple average of the Fund's percentages as at 30 September 2022 and 31 December 2022. The Fund does take short positions in the equity of issuers of the convertible bonds held by the Fund to hedge the financial risk involved in holding the convertible bond.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)

● **In which economic sectors were the investments made?**

Economic Sectors	% Assets ⁴
Software & Tech Services	18.56
Health Care	12.09

Real Estate	1.11
Tech Hardware & Semiconductors	1.05
Iron/Steel	0.86

⁴ This shows the percentage of the Fund’s long assets within each economic sector as at 31 December 2022.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Absolute Return Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Further to the information provided above, the SFDR requires Article 8 SFDR funds to identify their exposure to the value chain or supply chain of the fossil fuel sector.

While the Fund excluded from the long book companies that derive the majority of their revenues from thermal coal production and distribution, the Fund did have exposure to the fossil fuel value and supply chains over the reference period.

The Fund, when investing in the natural resources sector, places primacy on companies whose operations either are, or are likely to migrate to be, in compliance with the need to transition to a sustainable, circular economy.

Sasol and Vertex are prime examples of this focus. Sasol is the world’s largest producer of hydrogen, all of which is currently grey. However, the company has credible plans to become a fully green hydrogen producer within the decade – something which is clearly an environmental & social positive and a transition we wish to fund.

Similarly, after purchasing a conventional refinery from Shell, Vertex immediately began converting 2 of the 7 trains to produce renewable biodiesel, again a net reduction in carbon emissions from this plant and a positive in terms of a transition to a more sustainable energy framework.

Alternatively, investments like BP (already making significant progress to transition towards clean energy production), Iberdrola (a top 3 global solar power producer), NEP (one of the top 3 renewable independent power producers in the US), EDF (France’s nuclear power “champion”), and Gaztransport (technology enabling greater adoption of LNG) represent companies that are more advanced on their transition to renewable and “future proof” energy mixes.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁵?

Yes:

In fossil gas

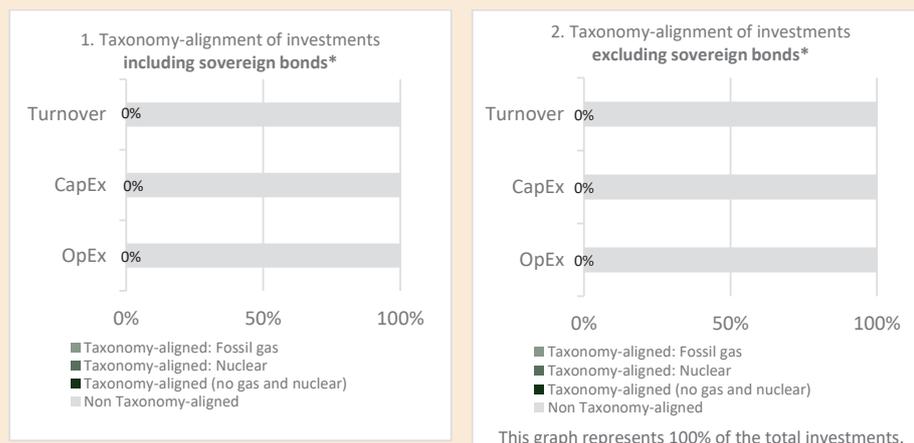

In nuclear energy

No

⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Absolute Return Fund continued

The investments identified as #2 Other in the above diagram included, but were not limited to, convertible bonds and short equity derivatives and were held to attain the Fund's investment objective: to generate both income and long-term capital growth, or for efficient portfolio management. Furthermore, positions were held in cash and derivative instruments in line with the Fund's Investment Policy.

Long positions not aligned with the environmental and social characteristics are subject to minimum environmental and social safeguards through the exclusion criteria set out in the Fund's SFDR prospectus disclosure. Short positions taken by the Fund have been made without the intention of promoting environmental or social characteristics and no minimum environmental or social safeguards are applicable to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In the first instance, the Investment Manager carried out a negative exclusionary screening process on the Fund's investment universe and excluded from the long book investments that were in breach of the Fund's exclusions policy.

The Investment Manager used the Global Convertible Fund Framework to conduct detailed reviews of each investment and proposed investment, updating each on a periodic basis.

These reviews considered the alignment of each company with the indicators within SDG 8 and assigned a score with justification and documentation made for each. Further to this, the Investment Manager assessed good governance practices by reviewing the issuing company's compliance with relevant tax legislation, its employee relations and remuneration policies, and the soundness of its management practices.

The Investment Manager used a variety of information sources to evaluate a company's performance in these areas including, but not limited to, company financial accounts and statements, third party research, and engagement and dialogue with management.

The following is an example of an assessment of an issuing company, in line with the Global Absolute Return Fund Framework:

Soitec:

Soitec is a designer of innovative semiconductor materials. Chips based on its SOI (silicon on insulator) are able to achieve much better thermal and energy efficiency than traditional bulk silicon techniques. This is a crucial aspect of the growth of the smartphone and mobile technology industry.

Soitec discloses its greenhouse gas (GHG) emissions and has an approved Science Based Targets initiative (SBTi) carbon emissions reduction target in place. Soitec has committed to reducing its absolute Scope 1 and 2 GHG emissions by 25.2% by 2026 from a 2020 base year. Furthermore, Soitec has committed to reducing its Scope 3 GHG emissions by 35.3% per million Euros value added by 2026 from the same 2020 base year.

Soitec has grown its number of employees from 880 in 2016 to 1750 in 2021 which demonstrates that it has engagement initiatives to assist with the retention of its workforce.

Soitec has more than doubled revenues over the past 3 years with revenues projected to double again by 2023. Net income and ROIC are both positive and growing.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

However, the company has credible plans to become a fully green hydrogen producer within the decade – something which is clearly an environmental & social positive and a transition we wish to fund.

Similarly, after purchasing a conventional refinery from Shell, Vertex immediately began converting 2 of the 7 trains to produce renewable biodiesel, again a net reduction in carbon emissions from this plant and a positive in terms of a transition to a more sustainable energy framework.

Alternatively, investments like BP (already making significant progress to transition towards clean energy production), Iberdrola (a top 3 global solar power producer), NEP (one of the top 3 renewable independent power producers in the US), EDF (France's nuclear power "champion"), and Gaztransport (technology enabling greater adoption of LNG) represent companies that are more advanced on their transition to renewable and "future proof" energy mixes.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁵?

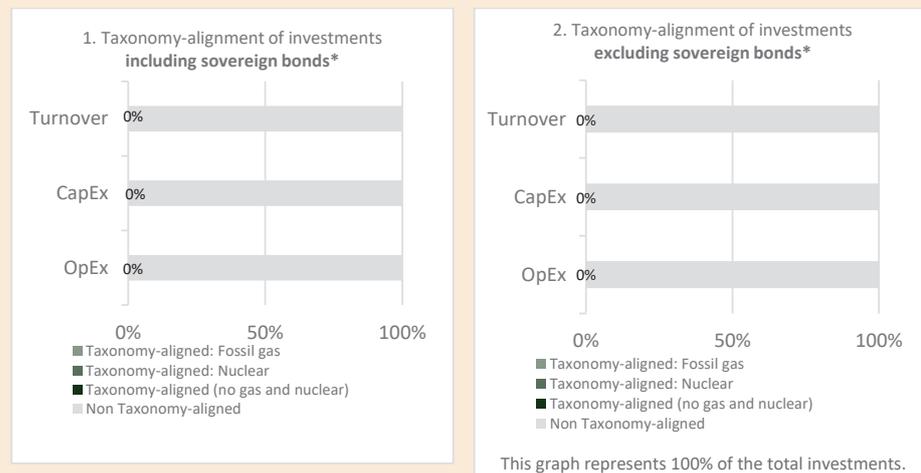

⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Convertible Fund continued

- Yes:
 - In fossil gas
 - In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The investments identified as #2 Other in the above diagram included, but were not limited to, convertible bonds and short equity derivatives and were held to attain the Fund’s investment objective: to generate both income and long-term capital growth, or for efficient portfolio management. Furthermore, positions were held in cash and derivative instruments in line with the Fund’s Investment Policy.

Long positions not aligned with the environmental and social characteristics are subject to minimum environmental and social safeguards through the exclusion criteria set out in the Fund’s SFDR prospectus disclosure. Short positions taken by the Fund have been made without the intention of promoting environmental or social characteristics and no minimum environmental or social safeguards are applicable to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In the first instance, the Investment Manager carried out a negative exclusionary screening process on the Fund’s investment universe and excluded investments from the long book that were in breach of the Fund’s exclusions policy.

The Investment Manager used the Global Convertible Fund Framework to conduct detailed reviews of each investment and proposed investment, updating each on a periodic basis.

These reviews considered the alignment of each company with the indicators within UN SDG 8 and assigned a score with justification and documentation made for each. Further to this, the Investment Manager assessed good governance practices by reviewing the issuing company’s compliance with relevant tax legislation, its employee relations and remuneration policies, and the soundness of its management practices.

The Investment Manager used a variety of information sources to evaluate a company’s performance in these areas including, but not limited to, company financial accounts and statements, third party research, and engagement and dialogue with management.

The following is an example assessment of an issuing company that is positively aligned with UN SDG 8 as assessed through the Global Convertible Fund Framework:

Soitec:

Soitec is a designer of innovative semiconductor materials. Chips based on its SOI (silicon on insulator) are able to achieve much better thermal and energy efficiency than traditional bulk silicon techniques. This is a crucial aspect of the growth of the smartphone and mobile technology industry.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Convertible Fund continued

Soitec discloses its greenhouse gas (GHG) emissions and has an approved Science Based Targets initiative (SBTi) carbon emissions reduction target in place. Soitec has committed to reducing its absolute Scope 1 and 2 GHG emissions by 25.2% by 2026 from a 2020 base year. Furthermore, Soitec has committed to reducing its Scope 3 GHG emissions by 35.3% per million Euros value added by 2026 from the same 2020 base year.

Soitec has grown its number of employees from 880 in 2016 to 1750 in 2021 which demonstrates that it has engagement initiatives to assist with the retention of its workforce.

Soitec has more than doubled revenues over the past 3 years with revenues projected to double again by 2023. Net income and ROIC are both positive and growing.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How does the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the reference benchmark?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Global Insurance Fund

Sustainable

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Global Insurance Fund (the “Fund”)

Legal entity identifier: 549300NR2E7UPARFOU07

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invests broadly in the global insurance industry but predominantly focuses on the non-life insurance subsector (also known as property and casualty insurance), which the Investment Manager believes positively impacts most, if not all, the UN SDGs.

Portfolio holdings have been consistently evaluated through the reference period in line with the Fund’s ESG methodology. The Investment Manager was active during the Financial Year 2021/2022 Proxy Voting season, which predominantly took place in April and May 2022, engaging with numerous management teams of companies in the Fund, which is discussed in more detail below, as part of the Fund’s ongoing assessment of

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

Principal Adverse Impacts (“PAI”). This included, where appropriate, taking action which is evidenced from the Fund’s shareholder voting log.

● **How did the sustainability indicators perform?**

The Fund used the Global Insurance UN SDG Matrix to measure the attainment of the Fund’s ESG characteristics.

The Global Insurance UN SDG Matrix sets out the weighting of the Fund in each area of insurance underwriting risk and then demonstrates whether, and to what extent, the Fund’s holdings within that underwriting risk area have contributed to each UN SDG over the reference period.

The Global Insurance UN SDG Matrix incorporates both the Investment Manager’s ESG scoring of investee companies and the information received by the Investment Manager as a result of engagements with those investee companies. Engagements may be driven by an evaluation of the annual change in ESG scores at both a company and Fund level.

At the end of the reference period, 28% of the Fund’s underwriting mix had a high impact on one or more of the UN SDGs, while 13% had a strong impact, 59% a positive impact and 0% had no impact or an adverse impact.

As at 31 December 2022, 100% of the Fund’s investments, excluding the Fund’s cash and any derivative holdings, had a positive impact on one or more of the UN SDGs, as demonstrated by the UN SDG Matrix.¹

The Fund is primarily invested in listed equities. However, the Fund does have investments in several unlisted retrocession funds which are not listed entities. These retrocession funds are collective investment schemes in which the collective investment proceeds are used to underwrite a range of reinsurance protections, primarily for reinsurers and typically with a term of one year.

¹ The figure shown is calculated with reference to the underwriting mix of each investee company and at least one aspect of that investee company’s underwriting mix having a positive, strong or high impact on one or more of the UN SDGs.

GOAL 8: Decent Work and Economic Growth	GOAL 17: Partnerships to achieve the Goal
GOAL 9: Industry, Innovation and Infrastructure	

The Investment Manager assesses a company's impact on the UN SDGs based on five categorisations namely; (i) high impact ( dark green), (ii) strong impact ( light green), (iii) positive impact ( light blue), (iv) no impact (white) or (v) adverse impact ( orange).

High impact actions are quantifiable actions taken by portfolio companies directly in support of specific UN SDGs, strong impacts reflect that company actions of the reference period have had indirect benefits from a UN SDG perspective and positive impacts reflect harder to quantify or more holistic impacts on the UN SDGs.

Adverse impacts are actions taken by portfolio companies, or occurrences at portfolio companies, that run counter to the intention and spirit of the UN SDGs.

● **...and compared to previous periods?**

UN SDG Impact	2021	2022 ²
High Impact	28%	28%
Strong Impact	11%	13%
Positive Impact	61%	59%
No Impact	0%	0%
Adverse Impact	0%	0%

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

² The figures shown are calculated with reference to the underwriting mix of each investee company. A company will be classified as having no impact where its underwriting mix is deemed to have no impact on any of the UN SDGs.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

GHG Emissions - During the financial year 2021/2022 proxy season, which predominantly took place in April and May 2022, Chubb and Travelers, both investee companies of the Fund, were subject to shareholder resolutions calling for the measurement or disclosure of financed greenhouse gas (“GHG”) emissions related to underwriting and investment activities and the cessation of underwriting of fossil fuel investments.

The Investment Manager participated in significant engagement with both companies around these points, which included meetings discussing comprehensive commentary issued by the companies that provided further context to their ESG approach and specifically with respect to GHG emissions. The companies highlighted the significant

difficulties of measuring the GHG emissions of the companies they insure within their underwriting portfolios and that there are challenges in respect of some investments where measurement is not currently expected to result in the publication of useful data.

It is not realistic to expect Fund holdings to no longer underwrite fossil fuels given the need for energy security and the negative impact this would have on the ability to fund the net zero carbon emissions transition and for many consumers there is currently no viable net zero alternative to fossil fuels. However, the Investment Manager's approach is to continue to encourage companies and investee companies through engagement to align with the approach of the United Nations Environment Programme Finance Initiative (UNEP FI) Principles for Sustainable Insurance.

The Investment Manager made several recommendations to management teams over the review period with respect to how they could improve the implementation of the UNEP FI Principles into the underwriting and investment process and it was pleasing later in the year to discover at subsequent company meetings that several of these recommendations had been adopted.

Fossil Fuels - During the Financial Year 2021/2022 Proxy Voting season the Investment Manager voted against Berkshire Hathaway management in one instance to persuade them to further engage with the reporting and transparency of their climate footprint and more clearly articulate their approach to the net zero carbon emissions transition so as to ensure each subsidiary company moves to comply with the objectives of the Paris Agreement Goals.

It is important to note that the majority of fossil fuel emissions at Berkshire Hathaway arise within Berkshire Hathaway Energy, which is a leading company operating in support of the net zero carbon emissions transition and the largest owner of regulated renewable energy assets in the United States. This is discussed in more detail below.

Biodiversity - The Investment Manager regularly engaged with Fund holdings around biodiversity, which is an area that management teams had not always thought about extensively prior to these discussions but is likely to be increasingly important in the future as actions to address the climate crisis and biodiversity crisis become more interlinked. The act of discussing biodiversity with management teams raises awareness of the actions that they can take to promote biodiversity in ways which are often aligned to the products and services the insurers provide, for instance in increasing the resilience of flood defences or supporting the objectives of the Task Force for Nature-related Financial Disclosures on scaling voluntary carbon markets.

Social and employee matters - The Investment Manager monitored PAI compliance with respect to social and employee matters through the UN SDG Matrix which aggregated the impact of both revenue specific and corporate entity analysis. This monitoring included the Investment Manager's quarterly ESG Scoring for investee companies, where controversies related to social and employee matters are assessed in Governance "red flags" and also evaluated as a separate line item that feeds into the Fund's directional ESG assessment of a company (i.e. whether the company's ESG performance is improving or deteriorating). The Investment Manager then assessed compliance with social and employee matters against UN SDG 16 "Peace and Justice".

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

Board Gender Diversity - The Investment Manager continued to engage with investee company management teams in support of the objectives of the 30% Club, a campaign group of global business chairpersons and CEOs, to increase gender diversity across the insurance industry. Finding qualified and appropriately experienced board members in the insurance industry can often be a challenge given the specific skills required so the Investment Manager is pragmatic in its approach to meeting this objective in the near term but expects to see positive directional momentum over time.

An investee company's performance on this PAI feeds into the UN SDG matrix through the Corporate ESG Assessment element of the Investment Manager's ESG scoring process where it is then reflected within the UN SDG matrix as a high impact in terms of UN SDG 5 General Equality and UN SDG 10 Inequality, provided there is no PAI negative impact assessed. There was a 1% improvement in Board Diversity scores across the Fund during the reference period illustrating gradual improvement, but scores are lower in comparison to other categories of Governance scoring highlighting that continual progress over time is important as directors come up for election. In addition, there was an increase in Board Experience scores demonstrating Fund companies' ability to continue to obtain the highest quality of talent at the same time as making diversity improvements.

Indicator ³		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁴
GHG Emissions (TCO ₂ e)	Scope 1	8,032	99.3%	1,352	100.0%	494%
	Scope 2	2,384	99.3%	2,423	100.0%	-2%
	Scope 1 & 2	10,415 ⁵	99.3%	3,776	100.0%	176%
Carbon Footprint (TCO ₂ e/ €m Invested)	Scope 1 & 2	3.76	98.0%	1.44	100.0%	161%
GHG Intensity (TCO ₂ e / Revenue)	Scope 1 & 2	8.43	99.3%	2.37	100.0%	255%
Female Board Representation (%)		29.7%	99.3%	34.5%	100.0%	-14%

³ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: MSCI Daily TR World Net Insurance Index. Allocated emissions of investee companies is calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €2,840.5 m as of 31 December 2022. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁴ The figures shown demonstrate the difference in performance of the Fund and the Benchmark on each metric based on 100% data coverage (whether achieved or estimated).

⁵ Note that a large proportion of the Fund's Scope 1 and Scope 1 & 2 emissions are contributed by the Fund's Berkshire Hathaway holding. This amounts to more than 75% of Scope 1 & 2 emissions, based on a snapshot as of 31 December 2022.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2022

Largest investments	Sector	% Assets	Country
Arch Capital	Property/Casualty	9.28	Bermuda
Chubb	Multi-line	7.04	Switzerland

Markel	Property/Casualty	5.55	United States
Fairfax Financial	Reinsurance	4.86	Canada
WR Berkley	Property/Casualty	4.52	United States
Essent	Reinsurance	4.16	Bermuda
Intact Financial	Property/Casualty	3.68	Canada
Aon	Insurance Brokers	3.57	Ireland
Travelers Cos	Property/Casualty	3.54	United States
Reinsurance of America	Reinsurance	3.46	United States
Everest Re	Reinsurance	3.17	Bermuda
Beazley	Property/Casualty	2.94	United Kingdom
Progressive Corp	Property/Casualty	2.89	United States

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Asset allocation describes the share of investments in specific assets.

● *What was the asset allocation?*

The Fund invests primarily in securities of insurance-related companies worldwide. The Investment Manager uses the Global Insurance ESG Framework and the Global Insurance UN SDG Matrix to assess the environmental and/or social characteristics (“E/S”) of each investee company.

100% of the companies the Fund invests in were assessed in this way.

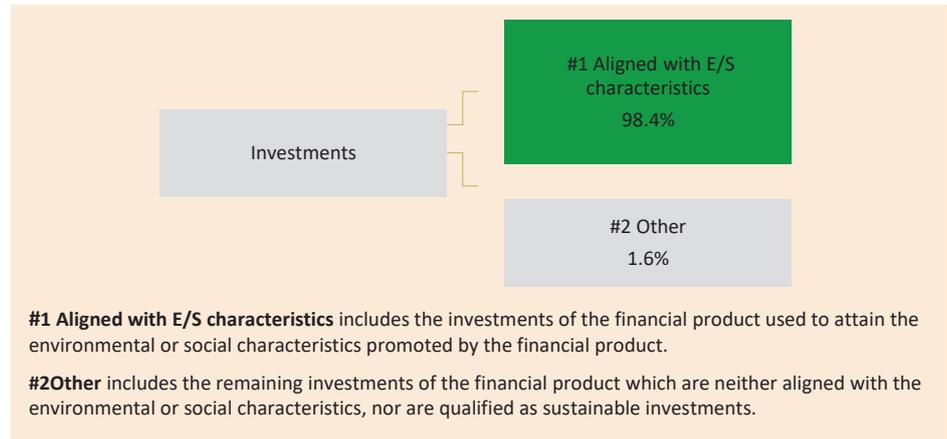

During the reference period, an average of 98.4% of the Fund’s investments were positively aligned with one or more UN SDGs using the Global Insurance UN SDG Matrix⁶.

⁶ This figure shows the portfolio weighted average of the Fund’s assets, including cash, that are aligned with the Fund’s characteristics. Alignment is calculated with reference to the underwriting mix of each investee company and at least one aspect of that investee company’s underwriting mix having a positive, strong or high impact on one or more of the UN SDGs. The average is calculated as a simple average of the portfolio weighted average of the alignment of the Fund’s assets as at the end of each calendar quarter (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● In which economic sectors were the investments made?

Economic Sectors	% Assets ⁷
Property/Casualty Insurance	46.38
Reinsurance	22.51
Insurance Brokers	12.34
Multi-line Insurance	10.61
Life/Health Insurance	6.83

The Fund’s direct exposure to fossil fuels is confined to its investment in Berkshire Hathaway, a mid-sized holding in the Fund. Berkshire Hathaway is a diversified conglomerate rather than a pure insurance company and one of its subsidiaries, Berkshire Hathaway Energy, has applicable revenues equating to c. 6% of total group revenues.

However, the Investment Manager believes that Berkshire Hathaway Energy is transitioning its business model towards renewable energy at a satisfactory pace and making key investments that will help to facilitate the transition more broadly, particularly in US energy transmission capability. 45% of 2021 power generation was from renewables up from 10% in 2005 which reflects capital investment of c.\$36bn to December 2021. A further \$7.5bn investment in wind and solar development is budgeted by the end of 2024. Existing plans are expected to achieve a 50% reduction in CO2 emissions by 2030 from 2005 levels.

⁷ Figure shows the percentage of the Fund’s assets within each economic sector as at 31 December 2022.

Taxonomy-aligned activities are expressed as a share of:

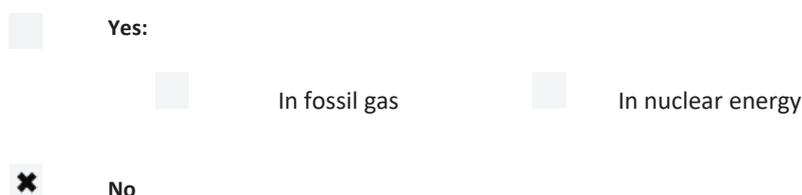

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

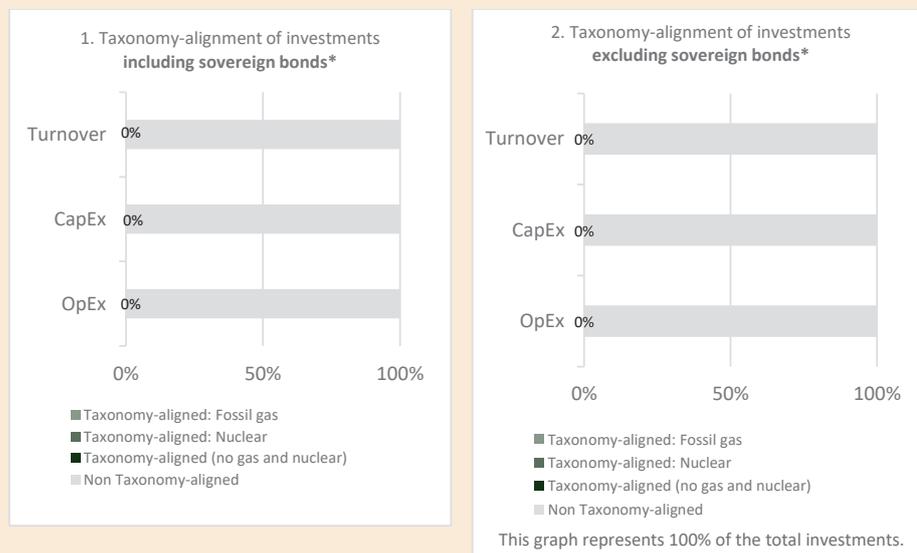

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁸?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 1.6% of the Fund’s investments were identified as #2 Other in the above diagram and were held in cash for liquidity purposes in line with the Fund’s Investment Policy. There are no minimum environmental or social safeguards applicable to these investments.⁹

Any equity holdings not positively aligned with the promoted E/S characteristics were held in order to meet the Fund’s investment objective: to achieve long term capital appreciation. As highlighted within the investment strategy, the Investment Manager carries out broader assessment of the ESG risks and opportunities relevant to all of the companies held by the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has consistently applied the methodology of the Global Insurance UN SDG Matrix to the Fund holdings and portfolio composition during the reference period.

⁹ This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, not aligned with the Fund’s characteristics. The average is calculated as a simple average of the percentage of the Fund’s assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

Although the Investment Manager assesses the ESG performance of investee companies against the Investment Manager's view of best in class performance on the relevant categories, there is an expectation that these best in class standards will rise over time and the standards will become more stringent accordingly. Investee companies that show little or no improvement over the reference period will therefore be scored lower.

The Fund continued to engage with holdings specifically around GHG emissions disclosures and incorporation of climate related factors into catastrophe risk modelling as appropriate based on business mix.

Where investee companies demonstrated deteriorating performance on environmental, social and governance metrics that the Investment Manager believed were relevant, the Investment Manager engaged with those investee companies to encourage improved ESG performance thereby ensuring continued alignment with the UN SDGs.

Only one investee company demonstrated deteriorating performance against the Fund's increasingly stringent ESG criteria during the year which was Berkshire Hathaway (a c.2.7% average holding over the period). The Investment Manager voted for a resolution that encouraged increased disclosure around climate reporting and the transparency of its climate footprint and to more clearly articulate its approach to the transition. This was against the company management's recommendation. Although this resolution did not pass there was subsequently some progress evidenced at the May 2022 AGM management discussion which the Investment Manager attended which showed that management had, to some extent, taken note of shareholders' concerns.

The Investment Manager has also been participating in a significant engagement with James River to improve its low ESG rating. The company management has begun to make material progress from an ESG perspective, which has subsequently led to a notable increase in the company's ESG score (although this is yet to be recognised by external ESG rating agencies). This has primarily arisen due to various resolutions around governance that were brought to a vote (and subsequently approved) at the 2022 shareholder AGM.

Turning to changes experienced by investee companies in relation to social factors during the review period, investee companies showed a c.1% positive trend in the Investment Manager's ESG scores with no areas of material concern noted.

From an environmental perspective, the Investment Manager continued to engage with investee companies around incorporation of the UNEP FI Principles for Sustainable Insurance into underwriting processes and investment portfolios. Responsible investment practices showed the most significant improvement of around 5% in the Investment Manager's ESG scores during the review period. This was due to improvements in approach at a number of investee companies, some of which were supported by Fund engagements, such as the one discussed above with Chubb.

Global Insurance Fund continued

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How does the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the reference benchmark?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Global Technology Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Global Technology Fund (the "Fund")

Legal entity identifier: 549300OF1H21ODJZM634

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies within the technology investment universe with products and services which contributed to;

- (i) Access to technology and communications infrastructure
- (ii) Increasing business productivity and efficiency
- (iii) Empowering individuals

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

For the avoidance of doubt, the Fund did invest in companies within the technology investment universe the products and services of which did not, in part or in whole, contribute to the promoted characteristics outlined above. Such companies included, by way of example, those operating in emerging areas of technology which lacked well-defined use cases or for which their contribution to the promoted characteristics was uncertain, but the Investment Manager was of the view that an investment offered attractive investment opportunities for the Fund and aligned with the broader ESG elements of the Fund's investment process.

● *How did the sustainability indicators perform?*

The Investment Manager measured the attainment of the Fund's promoted characteristics by analysing the proportion of its investee companies' current or estimated future revenues derived from products, services or activities aligned with each promoted characteristic.

Over the reference period, a weighted average of 87.9% of the current or estimated future revenues of the companies in which the Fund had invested were derived from products, services or activities aligned with the three promoted characteristics¹.

The breakdown of revenue alignment per promoted characteristic is highlighted in the table below:

Characteristics	Quarterly Revenue Alignment ²			Average ³
	Jun-22	Sep-22	Dec-22	
Access to technology and communications infrastructure	42.1%	40.4%	37.1%	39.9%
Increasing business productivity and efficiency	27.1%	26.0%	28.7%	27.3%
Empowering individuals	19.9%	21.4%	20.9%	20.7%
Total	89.1%	87.8%	86.7%	87.9%

There were no investments that failed the exclusion criteria for the whole reference period.

● *...and compared to previous periods?*

¹ The Fund's alignment with its promoted characteristics is calculated by taking the weighted average alignment of the Fund with its characteristics at the end of each calendar quarter (30 June 2022, 30 September 2022 and 31 December 2022) and calculating the simple average of the quarterly alignment figures. This excluded the first quarter of the calendar year as the Fund was not classified as Article 8 at this time.

² The table shows the portfolio weighted average current or estimated future revenue alignment of the Fund, including cash, with each of the characteristics at the end of each quarter. The total alignment of the Fund with the characteristics is calculated by summing the alignment figures for each of the characteristics.

³ This shows the simple average of the Fund's quarterly portfolio current or estimated future revenue alignment with each of the characteristics. The total alignment of the Fund with the characteristics is calculated by summing the alignment figures for each of the characteristics.

The Fund was approved by the Central Bank of Ireland as an Article 8 SFDR fund on 11 April 2022 and therefore the Fund did not promote environmental or social characteristics, or measure its performance against the sustainability indicators, prior to this date.

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Fund does not invest in sustainable investments as defined under Article 2 (17) of the SFDR.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The Fund does not invest in sustainable investments as defined under Article 2 (17) of the SFDR

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

The Fund does not invest in sustainable investments as defined under Article 2 (17) of the SFDR

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Fund does not invest in sustainable investments as defined under Article 2 (17) of the SFDR.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The greenhouse gas (“GHG”) emissions of investee companies were evaluated using either data provided by a third party data provider or, where this was unavailable, the investee company’s own disclosures in their Annual Report, 10K or 20F, Sustainability or ESG Reports. Scope 1 and Scope 2 emissions were considered. This emissions data is used to collectively consider Principal Adverse Impacts – GHG Emissions, Carbon Footprint and GHG Intensity.

This emissions data was then referenced against the Fund’s benchmark, the MSCI ACWI index and the sector in which the company operates to identify those operating within High Impact Climate Sectors as defined by the Institutional Investors Group on Climate Change. When these emissions were flagged as being above a certain threshold or the company is in a High Impact Climate Sector, the Investment Manager assessed whether the company has a mitigation or reduction strategy in place, whether that strategy or target is independently verified by a reputable third party such as the Science Based Targets initiative (SBTi), and whether the company’s emission trend is on track with the reduction target.

For those investee companies that failed these tests, the Investment Manager conducted an in-depth additional review on a case-by-case basis. This review verifies the accuracy of any data provided by third parties, checks whether the investee company was intending to set new reduction targets soon and checks whether the investee company had committed to SBTi accreditation in the future or otherwise had other mitigation strategies, such as a commitment to close down or dispose of high emission activities.

When the Investment Manager was dissatisfied with the overall mitigation strategy, engagement was undertaken with the relevant companies. Examples of investee companies with whom the Investment Manager engaged with include On Semiconductor, Samsung Electronics and Taiwan Semiconductor Manufacturing (TSMC). Questions to these investee companies included, but were not limited to, why their GHG emissions were high compared to relevant peers and why they were not committing to SBTi accredited reduction targets. These engagements are ongoing and the Investment Manager will evaluate the adequacy of the responses received.

The Investment Manager considered the exposure to companies active in the fossil fuel sector by evaluating each investee company’s revenue breakdown using third party data and the Investment Manager’s knowledge of each company. The Investment Manager confirms that 0% of the Fund’s investee companies had revenues attributed to the fossil fuel sector.

Using data provided either by third parties or the company’s own disclosures, the Board of Directors of every investee company was considered for gender diversity. When a

company's proportion of female directors fell below a certain threshold, the Investment Manager conducted an additional review of the circumstances to verify that the data was correct, and whether the investee company had a strategy or objective to improve board gender diversity.

Two examples of such investee companies that the Investment Manager considered needed to improve their gender diversity in time are BYD and Meituan. The latter has a publicly stated strategy of adding female board representatives by the end of 2024, when existing, contractual board tenure expires. The Investment Manager engaged with BYD to enquire about its strategy. This engagement is still ongoing and the Investment Manager will evaluate the adequacy of the responses received.

Every investee company is assessed for severe controversies and allegations of United Nations Global Compact (UNGC) norms violations using data and information provided by third parties or independently sourced by the Investment Manager. When deemed material, the issue is investigated further with an in-depth review of the specific circumstances. This review will make recommendations for further action which may include monitoring, voting, engagement and in extremis, divestment or exclusion.

Investee companies covered by such a review included Activision Blizzard, Alphabet, Amazon, Apple and Tencent. Engagement has taken place, or is scheduled to take place, with some of these companies and the Investment Manager will evaluate the adequacy of the responses received.

During the reference period, as an example, we engaged with Activision Blizzard. The company was highlighted due to lawsuits, regulator complaints and state and federal investigations into allegations of gender discrimination and sexual harassment over a period of months. The call with the company probed the allegations and lawsuits in detail, the changes the company had or is intending to make as a result of the issues, and any impact on the company's workforce from any reputational damage.

Further engagement with the company subsequently took place in September 2022 to discuss in specific detail the issues surrounding the lawsuits facing the company over previous months and to investigate any improvements in the company's ESG practices in their response to these issues. This was a satisfactory engagement in that we learnt of 60 new initiatives introduced by the company to improve its ESG practices.

Many of these initiatives are aimed at improving the diversity of the company's workforce, with specific targets including reaching a third of female or non-binary proportion of employees within 5 years. A Chief Diversity, Equality and Inclusion Officer has also been hired. The Investment Manager believes these steps represent a good foundation to support further improvement in the company's reputation and, moreover, the Investment Manager believes there has been a fundamental improvement in how the executive management and company generally treat ESG issues.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

As a result, the Investment Manager has taken the view that ESG concerns are no longer a material impediment to owning the stock given the attractive investment case. The Fund therefore held a position in the company at the year end, but the Investment Manager will continue to monitor developments and progress on these issues.

At the AGM of Alphabet (one of the companies highlighted for alleged norms violations) held in June 2022, the Investment Manager voted against management recommendations on several shareholder proposed resolutions linked to norms violations, for example concerning racial equality, lobbying payments, management of misinformation and use of algorithms.

The Investment Manager has excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ⁴		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁵
GHG Emissions (TCO ₂ e)	Scope 1	5,195	98.9%	6,782	99.0%	-23%
	Scope 2	13,172	98.9%	17,641	99.0%	-25%
	Scope 1 & 2	18,367	98.9%	24,423	99.0%	-25%
Carbon Footprint (TCO ₂ e/ €m Invested)	Scope 1 & 2	5.13	96.7%	7.14	99.0%	-28%
GHG Intensity (TCO ₂ e / Revenue)	Scope 1 & 2	28.99	98.9%	30.13	99.3%	-4%
Female Board Representation (%)		29.3%	98.9%	31.5%	99.1%	-7%

⁴ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: Dow Jones Global Technology Net Total Return Index. Allocated emissions of investee companies is calculated using the companies Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €3,818m as of 31 December 2022. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁵ The figures shown demonstrate the difference in performance of the Fund and Benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2022

Largest investments	Sector	%Assets	Country
Microsoft	Software	8.60	United States
Apple	Computers	6.69	United States
Alphabet	Internet	4.23	United States
Advanced Micro Devices	Semiconductors	3.77	United States
ServiceNow	Software	2.88	United States
KLA Corp	Semiconductors	2.50	United States
NVIDIA	Semiconductors	2.30	United States
ASML	Semiconductors	2.18	Netherlands
Lattice Semiconductor	Semiconductors	2.14	United States
HubSpot	Software	2.01	United States
Arista Networks	Tech Hardware & Semiconductors	2.00	United States
Visa	Diversified Financial Services	1.98	United States
Taiwan Semiconductor	Semiconductors	1.82	Taiwan
Nintendo	Tech Hardware & Semiconductors	1.66	Japan
E Ink	Tech Hardware & Semiconductors	1.62	Taiwan

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● *What was the asset allocation?*

Asset allocation describes the share of investments in specific assets.

The Fund primarily seeks to invest in companies within the technology investment universe. The Investment Manager assessed 100% of the companies in the Fund for revenue alignment towards the Fund's promoted environmental and/or social characteristics ("E/S") characteristics.

During the reference period, an average of 87.9% of current or estimated future revenues of the companies invested in by the Fund were aligned with the environmental or social characteristics promoted by the Fund.⁶

The Fund's investments identified as #2 Other in the below diagram were held in equity securities that did not contribute towards the Fund's promoted characteristics, cash and/or derivative instruments.

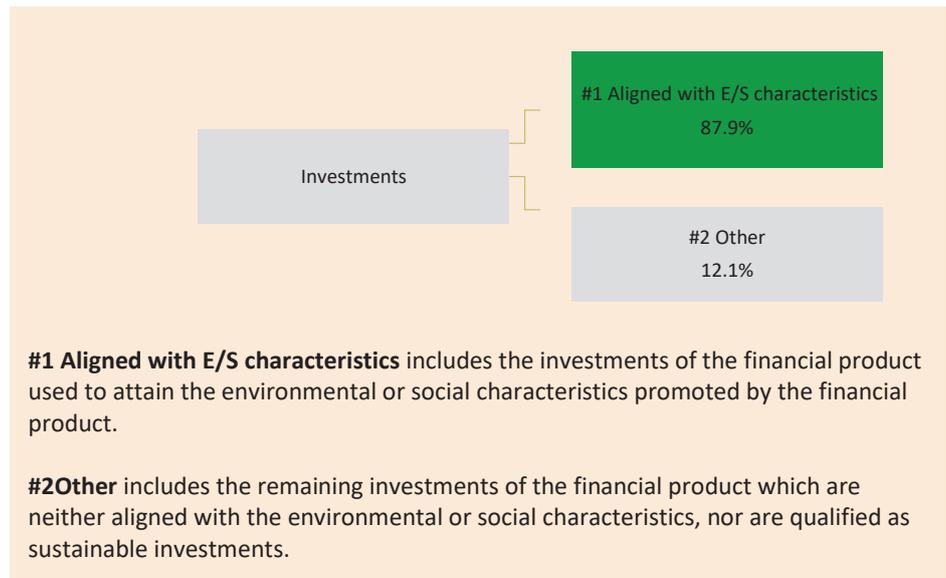

⁶ The Fund's alignment with its promoted characteristics is calculated by taking the weighted average alignment of the Fund with its characteristics at the end of each calendar quarter (30 June 2022, 30 September 2022 and 31 December 2022) and calculating the simple average of the quarterly alignment figures. This excluded the first quarter of the calendar year as the Fund was not classified as Article 8 at this time.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Media	1.23%
Technology	1.18%
Electronics	1.08%
Machinery-Diversified	1.06%
Energy-Alternate Sources	1.01%

⁷ This shows the percentage of the Fund’s assets within each economic sector as at 31 December 2022

0% of the Fund’s investee companies had exposure to fossil fuel related activities.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

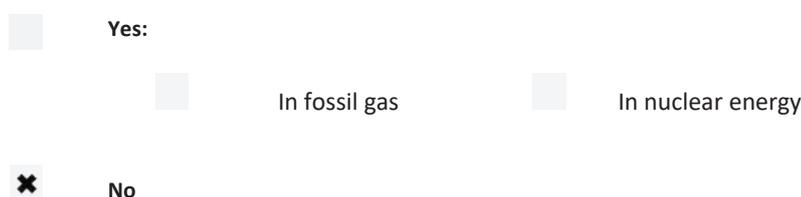

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

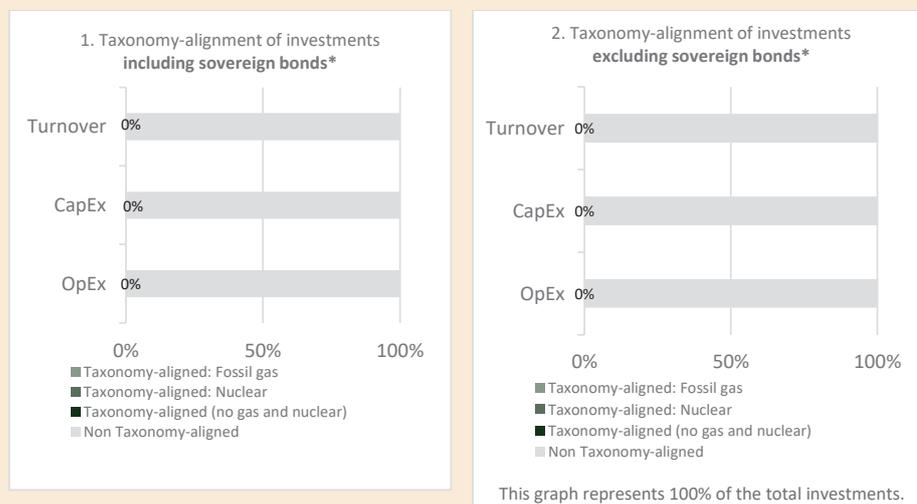

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁸?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

An average of 12.1% of the Fund’s investments were classified as #2 Other over the reference period⁹. These investments include the portion of equity investments whose current or estimated future revenue, in part or on the whole, did not align with the promoted characteristics and cash and derivative instruments.

All equity investments are subject to the Fund’s exclusion criteria. There are no minimum environmental or social safeguards applicable to cash or derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In accordance with the investment strategy for the Fund, the Investment Manager assessed every prospective investee company, prior to purchase, for the company’s current or estimated future revenue alignment with the three promoted characteristics described above. Every prospective investment is also assessed against the Fund’s exclusion criteria.

⁹ This figure shows the average percentage of the Fund’s assets, including cash, on a portfolio weighted basis, categorised as ‘Other’ investments. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted ‘Other’ investments as at each calendar quarter end (i.e. 30 June, 30 September and 31 December).

Every existing holding is assessed on the same basis and its alignment is monitored on an on-going basis.

These metrics for every investee company are then entered into a spreadsheet and a weighted average alignment for the entire Fund is calculated and recorded each and every month. This enables a quarterly and entire reference period average to be calculated. An internal review is undertaken monthly to ensure every investee company has been evaluated for its alignment and is included in the overall Fund calculation.

This internal review also ensures that a minimum threshold of at least 50% of the Fund's assets are always invested in companies aligned with the promoted characteristics. The internal review also ensures compliance with the Fund's exclusion parameters.

The following are examples of stocks held over the review period in part due to their very strong alignment with the Fund's promoted characteristics:

KLA Corporation

KLA Corporation's revenue is aligned with promoting access to technology and communications infrastructure given the company's semiconductor production equipment and services help customers produce the semiconductors that are the foundation of technological infrastructure. KLA's advanced process control solutions enable innovation in the electronics industry and help power eco-friendly technologies that are crucial to achieving a low-carbon economy.

Hubspot

HubSpot's mission is to be the leading customer relationship management (CRM) platform for scaling enterprises and is therefore aligned with promoting increasing business efficiency and productivity. It is a product focussing on small and medium sized businesses which allows them access to best-in-class business to business marketing automation and CRM tools and supports new business formation.

The platform includes marketing, sales, service, operations and website management products that start free and scale to meet customers' needs at any stage of growth. This is an important aspect of increasing small business productivity and efficiency, which otherwise may struggle to compete with large incumbers with greater sales and distribution resources.

Advanced Micro Devices (AMD)

AMD is the global leader in high-performance computing, which provides the brains behind the crucial technological and communications infrastructure that has transformed modern life and has the potential to be part of the solution to global challenges such as climate change. AMD is helping to develop a new generation of supercomputers which can cross the 'exascale' performance barrier for the first time by performing more than one quintillion (10^{18}) calculations per second, which will allow researchers to develop

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

models which can create breakthroughs in climate science, materials discovery and biomedical engineering.

COVID-19 vaccine development was accelerated using AMD's technology and the company's provision of free computing resources for universities and research institutions from April 2020 as part of their High Performance Compute (HPC) Fund.

For every investee company, a specific ESG assessment was conducted and documented to ensure compliance with all the Fund's pre-contractual commitments and any material controversies were flagged and reviewed. An overall assessment of the investee company's ESG practices and disclosure was provided. Stewardship activities emanating from this assessment were either documented or recommended. Monitoring of any ESG issues and controversies was undertaken during the reference period and is on-going.

At every AGM or shareholder meeting, the Investment Manager reviewed the resolutions and documented when voting against Management and why.

As an example, at the Smartsheet AGM, the Investment Manager voted against a management recommendation on a resolution on executive compensation. A review of this issue prompted further engagement with the company, firstly with Investor Relations and then secondly with the Chairman of the Board, on a wider range of ESG issues including employee remuneration and staff retention initiatives more generally.

The Investment Manager engaged with Activision Blizzard following allegations of gender discrimination over a period of months, with resulting lawsuits and threatened regulatory action. Further engagement with the company subsequently took place in September 2022 to discuss in specific detail the issues surrounding the lawsuits facing the company over previous months and to investigate any improvements in the company's ESG practices in their response to these issues. This was a satisfactory engagement in that the Investment Manager learnt of 60 new initiatives introduced by the company to improve its ESG practices.

Many of these initiatives are aimed at improving the diversity of the company's workforce, with specific targets including reaching a third of female or non-binary proportion of employees within 5 years. A Chief Diversity, Equality and Inclusion Officer has also been hired. The Investment Manager believes these steps represent a good foundation to support further improvement in the company's reputation and, moreover, believes there has been a fundamental improvement in how the executive management and company generally treat ESG issues. As a result, the Investment Manager has taken the view that ESG concerns are no longer a material impediment to owning the stock given the attractive investment case. The Fund therefore held a position in the company at the year end, but the Investment Manager will continue to monitor developments and progress on these issues.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Healthcare Blue Chip Fund (the “Fund”)
Legal entity identifier: 549300ERXLM8TOFA2G98

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 96.7% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies within the healthcare investment universe that contributed to:

- (i) improve clinical outcomes for patients through innovation,
- (ii) improve the affordability and accessibility of healthcare services; and
- (iii) improve the efficiency of the delivery of healthcare services.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

By investing in these companies, the Investment Manager believes that the Fund contributes to Goal 3 of the United Nations Sustainable Development Goals (SDGs) which is to “ensure healthy lives and promote well-being for all at all ages”. The UN SDGs are part of the United Nation’s 2030 Agenda for Sustainable Development, adopted by all UN member states in 2015, and comprise 17 goals which aim to tackle the world’s approach to the environmental and social matters. The full list of the 17 UN SDGs can be found at <https://sdgs.un.org/goals>.

● ***How did the sustainability indicators perform?***

The Investment Manager monitors the Fund’s attainment of its characteristics by evaluating the portfolio’s weighted exposure to each of the three characteristics:

- (i) improve clinical outcomes for patients through innovation,
- (ii) improve the affordability and accessibility of healthcare services; and
- (iii) improve the efficiency of the delivery of healthcare services.

The Investment Manager’s calculation of the Fund’s portfolio weighted exposure will take account of both revenue and operational expenditure exposure to the characteristics for commercial stage companies (i.e. companies which have taken their product or service to market, commercialised their product or service or which receive revenues from already commercialised products or services) and of actual or proposed operational expenditure exposure to the characteristics for pre-commercial stage companies (i.e. companies which are still in the development stage conducting pre-clinical testing and clinical trials of their product). The Investment Manager will also account for instances in which an investee company’s revenue and/or operational expenditure is exposed to more than one of the social characteristics described above.

As of the date of this report, 0% of the Fund’s investments failed the exclusion criteria.

Over the reference period a weighted average of 90.0% of the Fund assets were invested in investee companies with current revenues or R&D expenditures derived from products,

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

services or activities aligned with the three promoted characteristics (which is calculated by taking an average of the quarters ended September and December 2022)¹.

Over the reference period, an average of 96.7% of the Fund’s investments were classified as Sustainable Investments. An investee company is classified as a Sustainable Investment under Article 2(17) SFDR if its revenue, Operating Expenditure (OpEx) or Capital Expenditure (CapEx) exceeds the required threshold of alignment with the sustainable objective, provided that it also passed the Do No Significant Harm test referred to in the section below and followed good governance practices.

	31-Mar-22	30-Jun-22	30-Sep-22	31-Dec-22	Average ²
Pillar 1 <i>improve clinical outcomes for patients through innovation</i>	n/a	n/a	64.2%	72.3%	68.2%
Pillar 2 <i>improve the affordability and accessibility of healthcare services</i>	n/a	n/a	12.9%	8.1%	10.5%
Pillar 3 <i>improve the efficiency of the delivery of healthcare services</i>	n/a	n/a	10.7%	11.9%	11.3%
Overall Alignment	n/a	n/a	87.7%	92.3%	90.0%
Sustainable Investments exceeding the threshold revenue alignment³	n/a	n/a	n/a	96.7%	96.7%

● **...and compared to previous periods?**

The Fund was approved by the Central Bank of Ireland as an Article 8 SFDR fund on 26 August 2022 and therefore such measurements were not made prior to this date.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

¹ This figure shows the percentage revenue or operational expenditure exposure of the Fund’s assets, including cash, on a portfolio weighted basis, to the characteristics promoted by the Fund. The average is calculated as a simple average of the Fund’s percentage exposure as at 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company’s alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company’s alignment with the characteristics.

² The Fund’s average exposure to each characteristic is calculated by taking a simple average of the quarterly exposures. The average exposure to each characteristic on a quarterly basis is calculated by taking a portfolio weighted average of the exposure.

³ The target for a minimum percentage of Sustainable Investments was only formally adopted on 30 November 2022 and therefore the Sustainable Investment alignment figure is the alignment as of 31 December 2022.

The Fund committed to a minimum proportion of 50% of its investments as Sustainable Investments on 30 November 2022. The Investment Manager considered a company eligible as a Sustainable Investment if the company was deemed to contribute to the themes highlighted below.

The objectives of the Sustainable Investments aligned with the themes:

- (i) improve clinical outcomes for patients through innovation;
- (ii) improve the affordability and accessibility of healthcare services; and
- (iii) improve the efficiency of the delivery of healthcare services.

During the reference period, companies held in the Fund were aligned to the three sustainability themes in a variety of ways, some examples of which are provided below.

The majority of revenues derived from drug discovery and the research and sale of new drugs, along with diagnostic tools and services were positively aligned with the pillar of *improving clinical outcomes*, as were over the counter products. Activities aligned to *improving the affordability and accessibility of healthcare* included the manufacture of generics, and the provision of health insurance services. Revenues from hospitals and other healthcare facilities were aligned with the *improving the efficiency of delivery of healthcare services* theme.

Although on average the revenue purity of the healthcare companies held during the reference period was high, some sources of revenue were not considered to be aligned with the above Sustainable Investment themes, such as medical aesthetics and non-healthcare business segments, such as electronics manufacturing. While these revenue sources were not considered sustainable, a company that generated some revenues from activities not aligned to the sustainable themes outlined above was still eligible to be considered sustainable overall if the company also had business segments that were positively aligned to the sustainability themes. Also, certain larger cap investments in the Fund generated revenues from separate business areas, which aligned with separate Sustainable Investment themes.

A large cap pharmaceutical business generated roughly 81% of its revenues from innovative medicines in the cardiovascular, immunology, neuroscience and oncology areas. Novel drugs require extensive research (and thus innovation) and undergo an extremely thorough regulatory process before being approved to ensure safety and efficacy which ultimately leads to improving the patients' clinical outcomes, aligning with the theme of *improving clinical outcomes for patients through innovation*. The company also generated c. 19% of its revenue from a subsidiary which manufactures generics and biosimilars. These are non-branded medicines that are sold at a lower price than their branded-equivalent, allowing for greater access to medicines, thus aligning with the sustainability theme of *improving the affordability and accessibility of healthcare services*.

A biopharmaceutical company generated 95% of its revenues from biopharmaceutical and academic research customers. These revenues are split across its business segments of Bioprocess Solutions (for production of biopharmaceuticals) and Lab Products and Services (bioanalytics consumables and services). The company's products and solutions enable research, development and manufacturing of drugs and therapies, therefore aligning with the sustainable theme

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

of *improving clinical outcomes for patients through innovation*. The company also had a ~5% revenue exposure to the food and chemical industries which was not aligned with any of the Sustainable Investment themes.

The Fund's investment in a healthcare insurance business was an example of strong alignment to a single pillar. 97% of the company's revenue came from its healthcare insurance business which provides members access to the healthcare system at a limited cost, aligning with the Sustainable Investment theme of *improving the affordability and accessibility of healthcare services*. The remaining revenue is generated by healthcare services, pharmacy benefits, primary care organisation and home solutions, which align with *improving the efficiency of the delivery of healthcare services*.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Investment Manager, in compliance with the principle of Do No Significant Harm ("DNSH"), assessed each company primarily using third party data, to assess whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as Sustainable Investments by the Investment Manager. These included, by way of example, controversies related to energy and climate, biodiversity and land use, toxic emissions, human rights, child labour, employee health and safety, and product quality and safety.

The Investment Manager used the research of third-party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over the assessment of third-party conclusions on a case-by-case basis.

An example of the due diligence performed for DNSH is monitoring portfolio holdings for controversies and engaging with investee companies for further information to understand the nature and impact of controversy allegations. As part of this monitoring process, an investee company appeared in a national news article alleging price fixing on the part of the company. The Investment Manager arranged a meeting with the Chairman and CEO to discuss the issue. The company chairman confirmed unequivocally that the company had not entered into any discussions with peers or suppliers relating to pricing. The chairman explained that company-wide prices are set annually at a budgeting meeting and the prices that the company sets are competitive and set at a level that is attractive in the open market in which its healthcare services compete. Following the meeting the Investment Manager remained satisfied that the company currently met its DNSH requirements.

In another example, the Investment Manager took an opposing view to ESG research provided by a third-party research provider. This research provider's 2021 ESG Research report noted a high-profile controversy for an investee company over

reports of cardiovascular side effects for the COVID-19 vaccine the company had developed. As part of the Investment Manager's ongoing monitoring, this controversy was still flagged as "severe" by the third-party research provider in 2022.

The Investment Manager's analysis at the time suggested these side effects in total were not materially more of a concern than the side effects associated with the mRNA vaccines from competitors, with the overall benefits of strong durable protection against COVID-19 infection significantly outweighing the rare (but serious) side effects. In addition, the easier distribution of the vaccine, and data that indicated more durable efficacy than the other approved vaccines, provided added benefits.

The Investment Manager therefore disagreed with the third party research provider's assessment regarding the controversy and the investee company's actions. The Investment Manager continued to believe that the company was a good actor. The current CEO places a focus on stakeholder engagement and societal value creation, and the company regularly publishes comprehensive sustainability reports, providing great transparency around sustainability and material ESG issues.

— — *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of the Annex 1 Level 2 Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator, to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Where, in the Investment Manager's view, a company did not cause significant harm with respect to a specific PAI but the Investment Manager felt there was room for material improvement, it took the required steps to reduce or mitigate the PAI, such as engaging with the company, using the right to vote, seeking to improve disclosure of data by the company, or reducing exposure to the issuer where deemed appropriate or necessary.

— — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

these global norms, and where necessary, conducted further due diligence to determine compliance with these norms.

All Sustainable Investments have been assessed using third party providers for adherence to the UNGC principles and OECD guidelines. Any positions not aligned were not deemed Sustainable Investments for the reference period.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (GHG) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives. Where material, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero. Exposure to companies active in the fossil fuel sector were considered by the Investment Manager through the exclusion policy in place.

When considering PAIs, the Healthcare industry is subject to a high level of regulatory oversight, whether a company is developing drugs or diagnostic products, or providing healthcare products and services, to ensure that products pass rigorous safety standards, and do not cause harm to patients or communities.

Furthermore, companies in the Healthcare sector have substantially lower energy and carbon intensities than market averages, so carbon emissions were on average much lower than most other industries. Scope 1 and 2 carbon footprint of portfolio companies in TCO_{2e}/EVIC AUM measured only around 6% of the MSCI ACWI Index as a whole.

Despite low industry emissions, GHG emissions of investee companies were evaluated using either company reported data, or where this was not disclosed, through third-party estimates based on business segment. Scope 1 and Scope 2 emissions were considered. Where those emissions are considered likely to be material, the Investment Manager will engage with the company to solicit the data. This emissions data is used to collectively consider Principal Adverse Impacts – GHG Emissions, Carbon Footprint and GHG Intensity.

This emissions data was then referenced against the Fund's benchmark and the Healthcare sub-sector in which the investee company operates to identify those in sectors having a high impact on the climate. When these emissions were flagged as being above a certain threshold, the Investment Manager assessed whether the company had a carbon strategy in place, and the sophistication of that strategy. In doing so, the Investment Manager considered whether the company measures and reports its carbon emissions, whether the company has a mitigation or reduction strategy in place, whether that strategy or target is independently verified by a reputable third party such as the Science Based Targets initiative (SBTi), and whether the company's historic emission trend is on track with the reduction target.

For those companies that failed these tests, and where the company's emissions were deemed material, the position was flagged for potential engagement with the investee company.

An example of how CEO pay was assessed in the Fund was a case where a third party provider flagged potential excessive pay for the CEO. The Investment Manager arranged a meeting with the company to understand the circumstances behind the pay increase. CEO pay had been frozen for a number of years; the increase brought it to the level it would have been if it had increased in line with rest of the senior team who had received successive annual incremental raises. The pay rise awarded to the CEO was awarded as a one-off catch up payment. The absolute quantum of pay was deemed to be fair in comparison to peers and the Investment Manager noted that his performance has been exceptional, increasing the value of the company by a multiple of more than four times in two years and delivering sector leading margins and return on capital employed. In addition, the CEO was not part of the Employee Stock Ownership Plan (ESOP). A cash bonus incentive scheme had been established to allow participation on the basis of continued performance to a level similar to the ESOP, underpinned by a requirement for compound annual growth rate of above 20%. These matters were put to the vote at the company's AGM, and on the back of the information received through the engagement with the company, and assessment by the Investment Manager, the Fund supported the company on both resolutions.

In its assessments, the Investment Manager considered the standards of the United Nations Global Compact (UNGC) and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises (OECD). If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident to decide the appropriate action to take: whether to monitor, enter enhanced engagement, or divest from the company.

Every investee company was assessed for severe controversies and allegations of UNGC norms violations using data and information provided by third party data providers or independently sourced by the Investment Manager. When deemed material, the issue was investigated further with an in-depth review of the specific circumstances. During the reference period, no companies were assessed to have failed the UNGC standards.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ⁴		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁵
GHG Emissions (TCO2e)	Scope 1	392	100.0%	359	99.9%	9%
	Scope 2	657	100.0%	463	99.9%	42%
	Scope 1 & 2	1,049	100.0%	822	99.9%	28%
Carbon Footprint (TCO2e/ €m Invested)	Scope 1 & 2	5.75	97.4%	4.69	99.9%	22%
GHG Intensity (TCO2e / Revenue)	Scope 1 & 2	25.48	100.0%	19.90	100.0%	28%
Female Board Representation (%)		33.0%	100.0%	33.1%	100.0%	0%

⁴ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: MSCI AC World Daily Total Return Net Health Care Index. Allocated emissions of investee companies is calculated using the companies Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €193.8m as of 31 December 2022. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note these figures are provided for comparative and illustrative purposes only and should not be relied upon. The figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁵ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31 December 2022

Largest investments ⁶	Sector	% Assets	Country
Johnson & Johnson	Medical-Drugs	6.73	United States
UnitedHealth Group Inc	Medical-HMO	6.13	United States
Eli Lilly	Medical-Drugs	6.03	United States
AbbVie	Medical-Drugs	5.99	United States
Novartis	Medical-Drugs	4.88	Switzerland
AstraZeneca	Medical-Drugs	4.65	United
Sanofi	Medical-Drugs	3.46	France
Boston Scientific	Medical Instruments	3.27	United States
Alcon	Medical Instruments	3.26	Switzerland
HCA Healthcare	Medical-Drugs	2.81	United States
Daiichi Sankyo	Medical-Drugs	2.77	Japan
Lonza Group	Medical-Drugs	2.60	Switzerland
Swedish Orphan Biovitrum	Medical-Biomedical/Gene	2.47	Sweden
BioMerieux	Medical-Biomedical/Gene	2.46	France
Seagen	Medical-Biomedical/Gene	2.45	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The Fund primarily seeks to invest in companies within the healthcare investment universe. The Investment Manager assessed 100% of the companies in the Fund for revenue alignment towards the Fund's promoted social characteristics.

During the reference period, a weighted average of 90.0% of the revenue or operational expenditure of the companies invested in were exposed to products, services or activities aligned with one or more of the three promoted characteristics⁷.

While the Fund does not have sustainable investing as its objective, the Fund invested 96.7% of its investments in Sustainable Investments with a social objective. Given that the Fund committed to a minimum proportion of 50% of its investments

⁶ The top 15 largest holdings as at 31 December 2022.

⁷ This shows the percentage revenue or operational expenditure exposure of the Fund's assets, including cash, on a portfolio weighted basis, to the Fund's characteristics. The average is calculated as a simple average of the Fund's percentage exposure as at 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company's alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company's alignment with the characteristics.

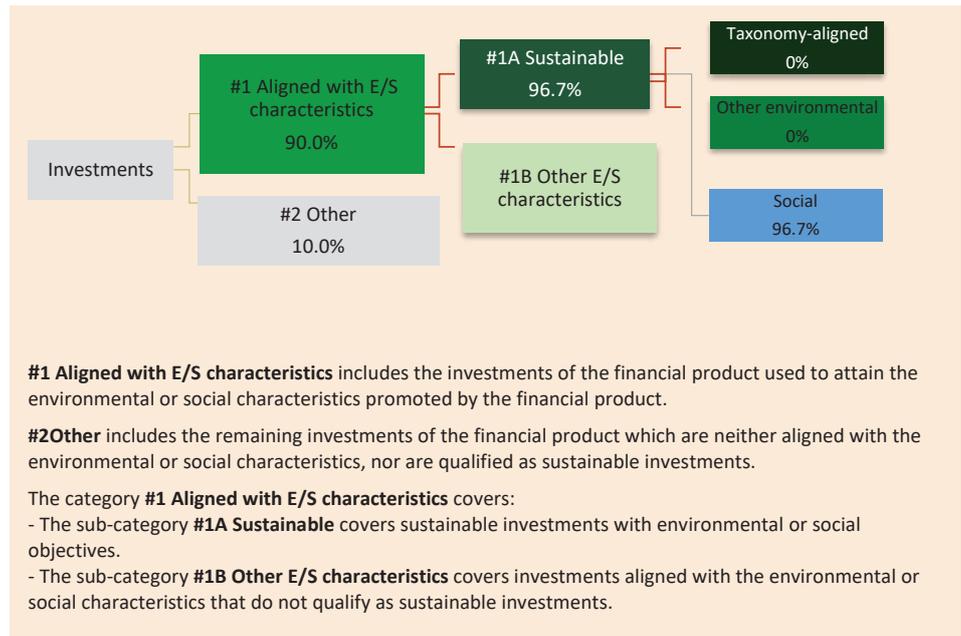

Asset allocation describes the share of investments in specific assets.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

as Sustainable Investments on 30 November 2022, this is the figure as of 31 December 2022.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’, ‘#1A sustainable’ etc.)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

In which economic sectors were the investments made?

Economic Sectors	% Assets ⁸
Medical-Drugs	46.95
Medical-Biomedical/Gene	17.06
Medical-HMO	8.58
Medical Instruments	6.53
Medical-Hospitals	5.28
Pharmacy Services	2.40
Diagnostic Equipment	2.22
Health Care	2.10
Electronic Measuring Instruments	2.03
Containers-Paper/Plastic	2.02
Pharmaceuticals	1.52

0% of the Fund’s investee companies had exposure to fossil fuel related activities.

⁸ This shows the percentage of the Fund’s assets within each economic sector as at 31 December 2022.

Taxonomy-aligned activities are expressed as a share of:

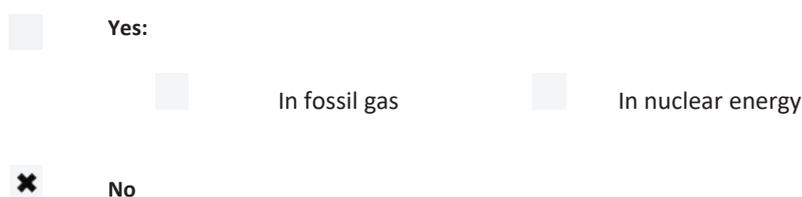

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

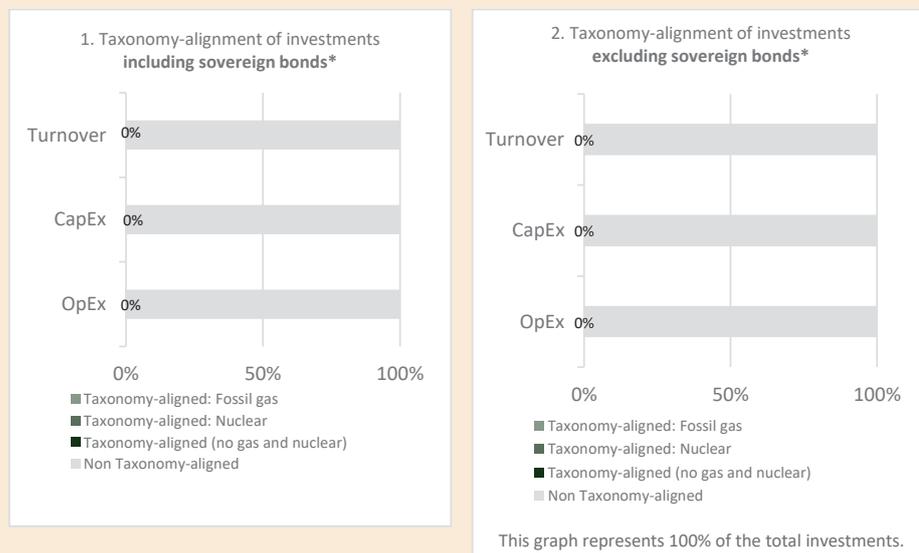

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund's Sustainable Investments are aligned to the Fund's three characteristics and are considered by the Investment Manager to be socially Sustainable Investments.

While the Fund does not have Sustainable Investments as its objective, the Fund invested 96.7% of its investments in Sustainable Investments with a social objective. Given that the Fund committed to a minimum proportion of 50% of its investments as Sustainable Investments on 30 November 2022, this is the figure as of 31 December 2022.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund's investments identified as #2 Other in the above diagram were made up of portions of investment revenues not aligned with the promoted characteristics of the Fund and cash. During the reference period, an average of 10.0% of the Fund's investments were not aligned with the promoted characteristics of the Fund.¹⁰

The Fund held cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these holdings.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

¹⁰ The figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, not aligned with the Fund's characteristics. The average is calculated as a simple average of the percentage of the Fund's assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Manager's methodology for assessing whether an investment contributes to a sustainable investment objective is harmonised with the assessment of its social characteristics.

Detailed examples of how companies held during the reference period were assessed and aligned with the Fund's characteristics and the sustainable investment objectives contributed to by the Fund are given above in the section "*What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*".

Using its sector expertise, company specific knowledge and often, engagement with company representatives, the Investment Manager assesses every prospective investee company for its revenue alignment or, where the company is at pre-revenue stage, operational expenditure alignment, with the characteristics and sustainable investment objectives described above. Every prospective investment was also assessed against the Fund's exclusion criteria.

Every investee company was assessed on the same basis and its alignment was monitored on an on going basis.

As well as pre-trade exclusion checks, a quarterly oversight review ensured compliance with the Fund's exclusion parameters.

At AGMs or shareholder meetings, the Investment Manager reviewed the resolutions and documented voting intentions and any resultant engagements with investee companies.

Stewardship activities, including voting, interactions with companies, and follow up engagements emanating from this assessment were documented in a central database. Monitoring of any ESG issues and controversies was undertaken during the reference period and is on-going.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How does the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Healthcare Opportunities Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Healthcare Opportunities Fund (the “Fund”)

Legal entity identifier: 54930002QS35HXNHZ756

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 99.1% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies within the healthcare investment universe that contributed to:

- (i) improve clinical outcomes for patients through innovation;
- (ii) improve the affordability and accessibility of healthcare services; and
- (iii) improve the efficiency of the delivery of healthcare services.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

By investing in these companies, the Investment Manager believes that the Fund contributes to Goal 3 of the United Nations Sustainable Development Goals (SDGs) which is to “ensure healthy lives and promote well-being for all at all ages”. The UN SDGs are part of the United Nation’s 2030 Agenda for Sustainable Development, adopted by all UN member states in 2015, and comprise 17 goals which aim to tackle the world’s approach to the environmental and social matters. The full list of the 17 UN SDGs can be found at <https://sdgs.un.org/goals>.

● **How did the sustainability indicators perform?**

The Investment Manager monitored the Fund’s attainment of its characteristics by evaluating the portfolio’s weighted exposure to each of the three characteristics:

- (i) improve clinical outcomes for patients through innovation;
- (ii) improve the affordability and accessibility of healthcare services; and
- (iii) improve the efficiency of the delivery of healthcare services.

The Investment Manager’s calculation of the Fund’s portfolio weighted exposure takes account of both revenue and operational expenditure exposure to the characteristics for commercial stage companies (i.e. companies which have taken their product or service to market, commercialised their product or service or which receive revenues from already commercialised products or services) and of actual or proposed operational expenditure exposure to the characteristics for pre-commercial stage companies (i.e. companies which are still in the development stage conducting pre-clinical testing and clinical trials of their product). The Investment Manager also accounts for instances in which an investee company’s revenue and/or operational expenditure is exposed to more than one of the social characteristics described above.

Over the reference period, a weighted average of 91.6% of the revenue or operational expenditure of the Fund’s assets was exposed to products, services or activities aligned with the three promoted characteristics (which is calculated by taking an average of the quarters ended March, June, September and December 2022)¹.

¹ The figure shows the percentage revenue or operational expenditure exposure of the Fund’s assets, including cash, on a portfolio weighted basis, to the characteristics promoted by the Fund. The average is calculated as a simple average of the Fund’s percentage exposure as at 31 March, 30 June, 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company’s alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company’s alignment with the characteristics.

Over the reference period, an average of 99.1% of the Fund's investments were classified as Sustainable Investments. An investee company is classified as a Sustainable Investment under Article 2(17) SFDR if its revenue, Operating Expenditure (OpEx) or Capital Expenditure (CapEx) exceeds the required threshold of alignment with the sustainable objective, provided it also passed the Do No Significant Harm test referred to in the section below and followed good governance practices.

	31-Mar-22	30-Jun-22	30-Sep-22	31-Dec-22	Average ²
Pillar 1 <i>improve clinical outcomes for patients through innovation</i>	59.0%	61.1%	68.9%	72.1%	65.3%
Pillar 2 <i>improve the affordability and accessibility of healthcare services</i>	9.2%	9.0%	7.2%	7.3%	8.2%
Pillar 3 <i>improve the efficiency of the delivery of healthcare services</i>	21.3%	19.6%	15.5%	16.2%	18.1%
Overall Alignment	89.5%	89.7%	91.6%	95.6%	91.6%
Sustainable Investments exceeding the threshold revenue alignment³	n/a	n/a	n/a	99.1%	99.1%

As of the date of this report, 0% of the Fund's investments failed the exclusion criteria.

● **...and compared to previous periods?**

The Fund was approved by the Central Bank of Ireland as an Article 8 SFDR fund on 4 January 2022 and the Fund did not promote environmental or social characteristics or measure its performance against the sustainability indicators prior to this date.

The Fund's sustainability indicators are not subject to assurance by an auditor or review by a third party.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund committed to a minimum proportion of 50% of its investments as Sustainable Investments on 30 November 2022. The Investment Manager

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

² The Fund's average exposure to each characteristic is calculated by taking a simple average of the quarterly exposures. The average exposure to each characteristic on a quarterly basis is calculated by taking a portfolio weighted average of the exposure.

³ Please note that the Fund formalized its commitment to a minimum proportion of Sustainable Investments on 30 November 2022. The figures show the percentage of Sustainable Investments as at the relevant date.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

considered a company eligible to be a Sustainable Investment if the company was deemed to contribute to the themes highlighted below.

The objectives of the Sustainable Investments aligned with the themes:

- (i) improve clinical outcomes for patients through innovation;
- (ii) improve the affordability and accessibility of healthcare services; and
- (iii) improve the efficiency of the delivery of healthcare services.

During the reference period, companies held by the Fund were aligned to the three sustainability themes in a variety of ways. Examples of how the Investment Manager established an investee company's contribution to a sustainable investment objective are provided below.

Investee companies were deemed to contribute to *improving clinical outcomes*, where they derived a sufficient portion of their revenues from or committed a sufficient proportion of their operational expenditure to, activities such as drug discovery, the research and sale of new drugs, the sale of over the counter products and the sale of diagnostic tools and services.

Investee companies were deemed to contribute to *improving the affordability and accessibility of healthcare* where they derived a sufficient portion of their revenues from, or committed a sufficient proportion of their operational expenditure to, activities such as the manufacture of generic medicines and the provision of health insurance services.

Investee companies that derived a sufficient portion of revenues from activities such as hospitals and other healthcare facilities were aligned with the *improving the efficiency of delivery of healthcare services* objective.

The Investment Manager noted that although on average the revenue purity of healthcare companies held during the reference period (i.e. the revenue associated with sustainable investment objectives) was high, some sources of revenue were not considered to be aligned with the above sustainable investment objectives, such as medical aesthetics and non-healthcare business segments, such as electronics manufacturing.

While these revenue sources were not considered sustainable, an investee company that generated revenues from activities not aligned to the sustainable themes outlined above was still eligible to be considered as a Sustainable Investment if the investee company also had business segments that were positively aligned to the sustainability themes.

Specific examples of investee companies and their alignment to the three sustainable investment objectives outlined above are detailed below.

An investee company is a large cap pharmaceutical and biotechnology company generates 100% of its revenues from innovative medicines in cardiovascular; renal & metabolic; respiratory and immunology; rare disease; oncology, and other therapeutic areas.

Novel drugs require extensive investment in research and development to prove that the innovative step confers a therapeutic benefit. An extremely thorough and tightly controlled regulatory process ensures that safe and efficacious medicines result, that improve patients' clinical outcomes. The company therefore aligns with *improving clinical outcomes through innovation*.

Another investee company is a health insurance company focused mainly on lower income populations that have their healthcare paid for by state and federal government in the United States, a program called Medicaid. Managed Medicaid insurers such as the investee company manage the patient population much more effectively, thus *improving affordability and access to healthcare services*.

Finally, an investee company provides infusion therapy services to over 240,000 patients in the US. From a network of 4,500 clinicians, the investee company has improved the standards of care for patients with acute and chronic conditions managed through infusion therapies. The investee company provides its services to patients in their homes or at local ambulatory centres, easing access for patients that cannot travel or travel far, and thereby freeing up space within tertiary hospitals. This more efficient model of care delivery aligns 100% of revenues to *improving the efficiency of healthcare delivery*.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm ("DNSH"), assessed each company primarily using third-party data, to assess whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as Sustainable Investments by the Investment Manager.

The Investment Manager used the research of third-party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over whether an investee company had significantly harmed an environmental or social objective.

An example of the due diligence performed by the Investment Manager for DNSH is the monitoring it undertakes on investee companies with respect to controversies and the subsequent engagement it undertakes with investee companies to gain further information on the nature and impact of controversy allegations.

Over the reference period, an investee company appeared in a national news article alleging price fixing on the part of the company. The Investment Manager arranged a meeting with the Chairman and CEO to discuss the issue in which the Chairman confirmed unequivocally that the investee company had not entered into any discussions with peers or suppliers relating to pricing.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

The Chairman explained that company-wide prices are set annually at a budgeting meeting and the prices that the investee company sets are competitive and set at a level that is attractive in the open market in which its healthcare services compete. Following the meeting the Investment Manager was satisfied that the investee company did not breach the DNSH requirements.

In another example, the Investment Manager took an opposing view to ESG research provided by a third-party research provider.

The research provider's 2021 ESG Research report noted a high-profile and severe controversy for an investee company over reports of cardiovascular side effects for the COVID-19 vaccine the company had developed and the provider had maintained this controversy flag into 2022.

The Investment Manager's analysis at the time suggested the side effects referred to were not materially more of a concern than the side effects associated with the mRNA vaccines from competitors, with the overall benefits of strong durable protection against COVID-19 infection significantly outweighing the rare (but serious) side effects. In addition, the easier distribution of the vaccine, and data that indicated more durable efficacy than the other approved vaccines provided, added benefits.

The Investment Manager therefore disagreed with the third-party research provider's assessment regarding the controversy and the investee company's actions and continued to believe that the investee company was a good actor. The current Chief Executive Officer of the investee company places a focus on stakeholder engagement and societal value creation, and the investee company regularly publishes comprehensive sustainability reports, providing great transparency around sustainability and material ESG issues.

— — *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of the Annex 1 Level 2 Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Where, in the Investment Manager's view, a company did not cause significant harm with respect to a specific PAI but the Investment Manager felt there was room for material improvement, it took the required steps to reduce or mitigate the PAI, such as engaging with the company, using the right to vote, seeking to improve

disclosure of data by the company, or reducing exposure to the issuer where deemed appropriate or necessary.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager used third-party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with these global norms, and where necessary, conducted further due diligence to determine compliance with these norms.

All Sustainable Investments have been assessed for adherence to the UNGC

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

principles and OECD guidelines and any positions not aligned were not deemed as Sustainable Investments for the reference period.

How did this financial product consider principal adverse impacts on sustainability factors?

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (GHG) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives. Where material, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero. Exposure to companies active in the fossil fuel sector were considered by the Investment Manager through the exclusion policy in place.

When considering PAIs, the Healthcare industry is subject to a high level of regulatory oversight, whether a company is developing drugs or diagnostic products, or providing healthcare products and services, to ensure that products pass rigorous safety standards, and do not cause harm to patients or communities.

Furthermore, companies in the Healthcare sector have substantially lower energy and carbon intensities than market averages, so carbon emissions are on average much lower

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

than most other industries. To illustrate this, the Scope 1 and 2 carbon emissions footprint of the Fund in TCO₂e/EVIC AUM measured roughly around 5% of the MSCI ACWI Index as a whole as at 31 December 2022⁴.

Despite low industry emissions, Scope 1 and Scope 2 GHG emissions of investee companies were evaluated using either company reported data, or where this was not disclosed, through third-party estimates based on business segment. This emissions data was also used to collectively consider Carbon Footprint and GHG Intensity of investee companies. Where those emissions were considered material, the Investment Manager engaged with the company to solicit the data.

This emissions data was then referenced against the Fund's benchmark and the Healthcare sub-sector in which the investee company operates to identify those in sectors having a high impact on the climate. Where these emissions were flagged as being above a certain threshold, the Investment Manager assessed whether the company had a carbon emissions reduction strategy in place, and the sophistication of that strategy. In doing so, the Investment Manager considered whether that strategy or target is independently verified by a reputable third party such as the Science Based Targets initiative (SBTi), whether the company measures and reports its carbon emissions and whether the company's historic emission trend is on track with the reduction target.

For those companies that failed these tests, and where the company's emissions were deemed material, the position was flagged for potential engagement with the investee company.

An example of one such engagement was with an investee company that, at time of engagement, did not have a carbon emissions policy or disclose its Scope 1 and 2 emissions. However, when the Investment Manager engaged with the investee company, it confirmed that it was in the process of baselining its Scope 1 and 2 carbon emissions in 2022 year and that it planned on disclosing its environmental footprint and policy for 2023.

The investee company's initial ESG report was then published, and it stated that it was "committed to ensuring we responsibly manage our operations and continually seek opportunities to reduce the environmental impact of our operations" and committing to lowering its transportation impact over time. The company will be monitored for adherence to its commitments.

The Investment Manager considered investee companies' exposure to the fossil fuel sector by evaluating their revenue breakdown using third party data. In line with the Fund's stated exclusions, 0% of the Fund's investee companies had revenues attributed to the fossil fuel sector over the reporting period.

The Investment Manager considered the board gender diversity and excessive CEO pay ratio of investee companies, and where it deemed appropriate, used its tools of active ownership to encourage better practices.

⁴ Source: MSCI Climate Change Metric: GHG emissions footprint. Where 100% coverage of a metric is not available, the Fund and index figures are estimated as if 100% coverage had been achieved and calculated on the basis of existing data coverage figures.

An example of how CEO pay was assessed in the Fund was a case where a third-party provider flagged an investee company for a potentially excessive pay for the CEO. The Investment Manager arranged a meeting with the investee company to understand the circumstances behind the pay increase. The CEO's pay had been frozen for a number of years and the increase brought it to the level it would have been if it had increased in line with the rest of the senior management team who had received successive annual incremental raises. The investee company confirmed that the pay rise awarded to the CEO was a one-off catch up payment.

The Investment Manager deemed the absolute quantum of pay to be fair in comparison to peers and noted that his performance has been exceptional, increasing the value of the investee company by a multiple of more than four times in two years and delivering sector leading margins and return on capital employed.

In addition, the CEO was not part of the Employee Stock Ownership Plan (ESOP). A cash bonus incentive scheme had been established to allow participation on the basis of continued performance to a level similar to the ESOP, underpinned by a requirement for compound annual growth rate of above 20%. These matters were put to the vote at the company's AGM, and on the back of the information received through the engagement with the investee company, and assessment by the Investment Manager, the Fund supported the company on both resolutions.

In its assessments, the Investment Manager considered the standards of the United Nations Global Compact (UNGC), and the Organisation for Economic Co-Operation and Development's (OECD) Guidelines for Multinational Enterprises. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident to decide the appropriate action to take: whether to monitor, enter enhanced engagement, or divest from the company.

Every investee company was assessed for severe controversies and allegations of UNGC norms violations using data and information provided by third party data providers or independently sourced by the Investment Manager. When deemed material, the issue was investigated further with an in-depth review of the specific circumstances. During the reference period, no companies were assessed to have failed the UNGC standards.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

Indicator ⁵		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁶
GHG Emissions (TCO2e)	Scope 1	2,384	96.4%	3,029	99.9%	-21%

⁵ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: MSCI AC World Daily Total Return Net Health Care Index. Allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €1576.6m as of 31 December 2022. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. The figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁶ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

⁷ The top 15 largest holdings as at 31 December 2022.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

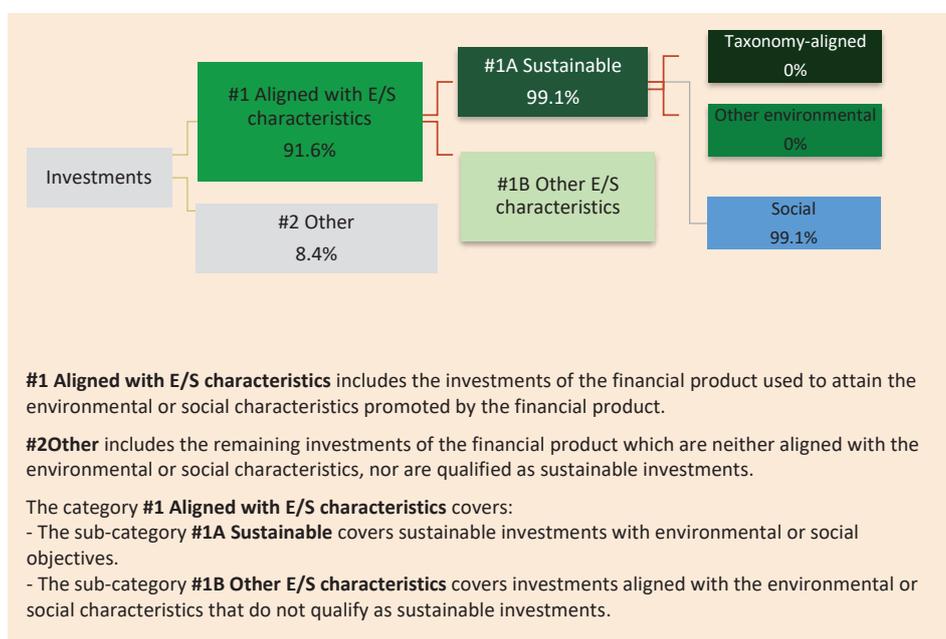

● What was the asset allocation?

The Fund primarily seeks to invest in companies within the healthcare investment universe. The Investment Manager assessed 100% of the companies in the Fund for revenue alignment towards the Fund’s promoted social characteristics.

During the reference period, a weighted average of 91.6% of the revenue or operational expenditure of the companies invested in were exposed to products, services or activities aligned with one or more of the three promoted characteristics⁸.

While the Fund does not have sustainable investing as its objective, the Fund invested in 99.1% of its investments in Sustainable Investments with a social objective. Given that the Fund committed to a minimum proportion of 50% of its investments as Sustainable Investments on 30 November 2022, this is the figure as of 31 December 2022.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’, ‘#1A sustainable’ etc.)

⁸ This shows the percentage revenue or operational expenditure exposure of the Fund’s assets, including cash, on a portfolio weighted basis, to the Fund’s characteristics. The average is calculated as a simple average of the Fund’s percentage exposure as at 31 March, 30 June, 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company’s alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company’s alignment with the characteristics.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

In which economic sectors were the investments made?

Economic Sectors	% Assets ⁹
Medical-Drugs	28.37
Medical-Biomedical/Gene	21.88
Medical Products	9.80
Medical-Hospitals	8.87
Medical-HMO	5.46
Medical-Wholesale Drug Distribution	5.23
Medical Instruments	4.09
Drug Delivery Systems	3.45
Pharmacy Services	3.05
Commercial Services	2.86
Disposable Medical Product	2.36
Medical-Outpatient/Home Med	1.99
Diagnostic Equipment	1.65
Health Care	1.10
Diagnostic Kits	0.25

0% of the Fund's investee companies had exposure to fossil fuel related activities.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹⁰?

Yes:

In fossil gas In nuclear energy

No

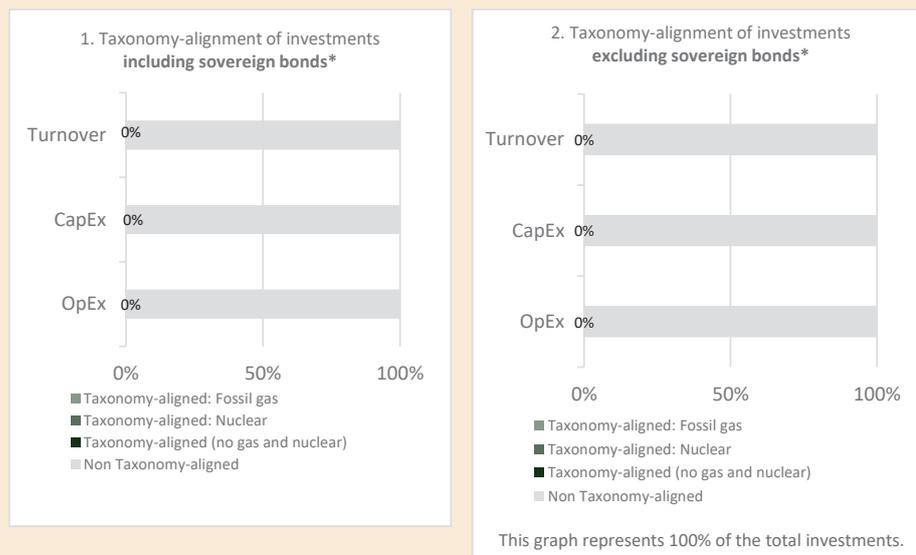

⁹ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2022.

¹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund’s Sustainable Investments are aligned to the Fund’s three characteristics and are considered by the Investment Manager to be socially Sustainable Investments.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

While the Fund does not have Sustainable Investments as its objective, the Fund invested 99.1% of its investments in Sustainable Investments with a social objective. Given that the Fund committed to a minimum proportion of 50% of its investments as Sustainable Investments on 30 November 2022, this is the figure as of 31 December 2022.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund’s investments identified as #2 Other in the above diagram were made up of portions of revenues or expenditure of companies the Fund had invested in that were not aligned with the promoted characteristics of the Fund and cash held for liquidity purposes. During the reference period, an average of 8.4% of investments were not aligned with the promoted characteristics of the fund.¹¹

All equity investments are subject to minimum environmental or social safeguards through the Fund’s exclusion criteria.

The Fund held cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these holdings.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Manager’s methodology for assessing whether an investment contributes to a sustainable investment objective is harmonised with the assessment of its social characteristics.

Detailed examples of how companies held during the reference period were assessed and aligned with the Fund’s characteristics and the sustainable investments objectives contributed to by the Fund are given above in the section *“What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?”*.

Using its sector expertise, company specific knowledge and often, engagement with company representatives, the Investment Manager assessed every prospective investee company for its revenue alignment or, where the company is at pre-revenue stage, operational expenditure alignment, with the characteristics and sustainable investments objectives described above. Every prospective investment was also assessed against the Fund’s exclusion criteria.

¹¹ This figure shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, not aligned with the characteristics promoted by the Fund. The average is calculated as a simple average of the percentage of the Fund’s assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

Every investee company was assessed on the same basis and its alignment was monitored on an ongoing basis.

As well as pre-trade exclusion checks, a quarterly oversight review ensured compliance with the Fund's exclusion parameters.

At AGMs or shareholder meetings, the Investment Manager reviewed the resolutions and documented voting intentions and any resultant engagements with investee companies.

Stewardship activities, including voting, interactions with companies, and follow up engagements emanating from this assessment were documented in a central database. Monitoring of any ESG issues and controversies was undertaken during the reference period and is ongoing.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How does the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the reference benchmark?**

- **How did this financial product perform compared with the broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) *continued*

North American Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – North American Fund (the “Fund”)

Legal entity identifier: 549300E1985KCB4EO849

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy.

Using the Investment Manager’s proprietary ESG analysis framework (the “North American Fund Framework”), the Fund sought to invest in companies with positive aggregate scores against the four ESG categories below:

- (i) Interaction with the Environment - This concerns a company’s management of the risks and opportunities related to the environment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- (ii) Treatment of Stakeholders - This concerns a company's practices and policies in relations to all stakeholders.
- (iii) Corporate Governance - This concerns a company's governance structures and frameworks.
- (iv) Positive Contribution to Society - This concerns the company's ability to contribute to broader society in a sustainable manner and the likelihood that this will improve over time.

● **How did the sustainability indicators perform?**

The Investment Manager used the North American Fund Framework to measure the attainment of the Fund's environmental or social characteristics against the four categories described above.

All companies in the Fund were assessed under the North American Fund Framework. For the fourth quarter, an average of 89%¹ of companies in the Fund scored 1 or higher on the North American Fund Framework. In addition, all companies passed the North American Fund Framework criteria of not scoring -3 on any single category and not scoring below -4 in aggregate across the 4 categories. There was no significant deterioration in the scores for any company over the period.

As a result, on average 83%² of the investments of the Fund, on a portfolio weighted basis as a percentage of total assets including cash, were used to meet the environmental or social characteristics promoted by the Fund.

A summary of the Fund's headline scores of the four categories over the reference period is shown below³:

Category	30/09/2022	31/12/2022	Average ⁴
Interaction with the Environment	1.1	1.1	1.1
Treatment of Stakeholders	0.9	1.0	0.9
Corporate Governance	1.0	1.0	1.0
Positive Contribution to Society	1.2	1.2	1.2
Fund North American Fund Framework Score	4.1	4.2	4.2

¹ This figure shows the percentage of investee companies of the Fund, on an equal weighted basis, that exceeded the threshold of scoring 1 or higher in aggregate across the four categories of the North American Fund Framework. The fourth quarter average is calculated as a simple average of the Fund's percentages as at 30 September 2022 and 31 December 2022.

² This figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that exceeds the threshold of scoring 1 or higher in aggregate across the four categories of the North American Fund Framework. The average is calculated as a simple average of the Fund's percentages as at 30 September 2022 and 31 December 2022.

³ These figures show the performance of investee companies of the Fund, on an equal weighted basis, against the North American Fund Framework.

⁴ The figures in this column show a simple average of the 30 September 2022 and 31 December 2022 Fund investee company scores in aggregate across the four categories of the North American Fund Framework.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

North American Fund continued

● **...and compared to previous periods?**

The Fund was approved by the Central Bank of Ireland as an Article 8 SFDR Fund on 26 August 2022 and therefore the Fund did not promote environmental or social characteristics, or measure its performance against the sustainability indicators, prior to this date.

The Fund’s sustainability indicators are not subject to assurance by an auditor or review by a third party.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

This Fund did not consider the principle adverse impacts of its investment decisions on sustainability factors pursuant to Article 7 of the SFDR during the reference period.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2022

Largest investments	Sector	% Assets	Country
Microsoft	Software	5.19	United States
Visa	Diversified Financial Services	5.05	United States
Alphabet	Internet	4.62	United States
United Rentals	Commercial Services	4.06	United States
Constellation	Software	3.74	Canada
US Foods	Food	3.28	United States
T-Mobile US	Telecommunications	3.07	United States
Ovintiv	Oil & Gas	2.89	United States
Arch Capital	Property/Casualty Insurance	2.85	Bermuda
Cenovus Energy	Oil & Gas	2.70	Canada
Canadian Natural Resources	Oil & Gas	2.68	Canada
Centene	Medical-HMO	2.61	United States
Intercontinental Exchange	Diversified Financial Services	2.55	United States
Affiliated Managers	Diversified Financial Services	2.55	United States
Anthem	Healthcare-Services	2.53	United States

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● *What was the asset allocation?*

The Fund invested primarily in a diversified portfolio of North American listed companies. The Investment Manager used the North American Fund Framework to assess the environmental and/or social characteristics (“E/S”) of each investee company.

100% of the companies the Fund invested in were assessed under the Investment Manager’s North American Fund Framework, which was used to assess and deliver the environmental or social characteristics promoted by the Fund.

Asset allocation describes the share of investments in specific assets.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

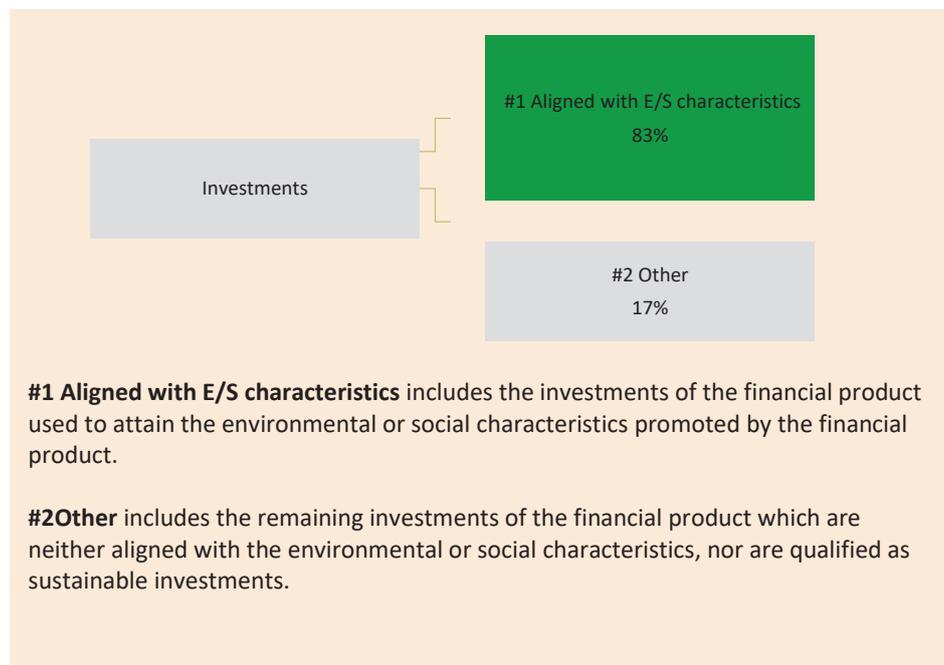

North American Fund continued

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

During the reference period, an average 89%⁵ of companies in the Fund exceeded the threshold of scoring 1 or higher on the North American Fund Framework. As a result, on average 83%⁶ of the investments of the Fund, on a portfolio weighted basis as a percentage of total assets including cash, were used to meet the environmental or social characteristics promoted by the Fund.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’, etc.)

⁵ This figure shows the percentage of investee companies of the Fund, on an equal weighted basis, that exceeded the threshold of scoring 1 or higher in aggregate across the four categories of the North American Fund Framework. The fourth quarter average is calculated as a simple average of the Fund’s percentages as at 30 September 2022 and 31 December 2022.

⁶ This figure shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, that exceeds the threshold of scoring 1 or higher in aggregate across the four categories of the North American Fund Framework. The average is calculated as a simple average of the Fund’s percentages as at 30 September 2022 and 31 December 2022.

Further to the information provided above, the Regulatory Technical Standards of the SFDR requires Article 8 SFDR funds to identify their exposure to the fossil fuel sector, including those companies that are involved in the value or supply chain of fossil fuels.

In light of the above, the Fund held positions in the following companies during the reference period which were exposed to fossil fuels:

Canadian Natural Resources Limited and Cenovus

Canadian Natural Resources Ltd and Cenovus are Canada-based companies engaged in oil and gas exploration and production. While the Investment Manager considers lower demand for hydrocarbons over the next several decades to be a threat to these businesses, the Investment Manager also expects long term supply to struggle to keep up with demand, given lack of investment in the industry and

⁷ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2022.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

North American Fund continued

the finite nature of the resource. With reserves that can sustain current production levels for decades, both companies are strategically advantaged.

The Investment Manager also considers that it is beneficial for society that the hydrocarbon production requirements come from businesses with sound environmental and social credentials. The Investment Manager believes Canadian Natural and Cenovus have relatively high standards with a good record of reducing emissions and a credible plan to continue to do so.

In 2021, Canadian Natural and Cenovus, along with Canada's other largest oil sands producers, established the Pathways Alliance. The goal of this alliance, working collectively with the Federal and Alberta governments, is to achieve net zero greenhouse gas ("GHG") emissions from oil sands operations by 2050, to help Canada meet its climate goals, including its Paris Agreement commitments and 2050 net zero carbon emissions aspirations. This is one of the most substantial and credible intra industry alliances across the world when it comes to climate change that the Investment Manager is aware of. Moreover, from a social perspective, the companies have a good record of safety and working with local aboriginal communities.

Union Pacific

Union Pacific connects approximately 23 states in the western two-thirds of the United States of America by rail. The company currently flags for fossil fuel revenue exposure as it derives revenues from oil, gas and coal transportation. However, this is a minority part of the business and the company should also benefit in the future from the transport required to build renewable energy infrastructure.

The Investment Manager takes account of the fact that Union Pacific uses hydrocarbons to power its fleet. Consumption of hydrocarbons emits more GHGs than production. On the positive side, where rail competes with other viable transportation alternatives such as trucking, rail is a more efficient transport solution when it comes to GHG emissions (75% lower emissions per ton of goods transported). The company has successfully reduced carbon intensity over the last decade and has a credible plan to continue to do so.

Norfolk Southern

Norfolk Southern provides rail transportation for the eastern part of the United States. The company derives revenues from oil, gas and coal transportation. However, this is a minority part of the business and the company should also benefit in the future from the transport required to build renewable energy infrastructure.

Similar to Union Pacific, the Investment Manager takes account of the fact that Norfolk Southern uses hydrocarbons to power its fleet and that consumption of hydrocarbons emits more GHGs than production. However, as stated above, where rail competes with other viable transportation alternatives such as trucking, rail is a more efficient transport solution when it comes to GHG emissions (75% lower

emissions per ton of goods transported). The company has successfully reduced carbon intensity over the last decade and has a credible plan to continue to do so.

Norfolk Southern also has a very small legacy subsidiary, Pocahontas Land, that owns natural resource properties which have coal reserves. This is immaterial to the company's financials and future prospects.

Teck Resources Limited

Teck Resources Limited is a Canada-based mining company that operates in copper, zinc and steelmaking coal. The company derives a large part of its cash flows from the production of metallurgical coal for use in steel making.

The Investment Manager considers this a long term risk over the next several decades as steel manufacturers eventually move to cleaner forms of production. However, of note, the business is ramping up its copper production. Copper is a key base metal required for the electrification of society and is a key element required for renewable energy infrastructure. The Investment Manager expects the company to derive the majority of its profits from copper in 2-3 years' time. This provides a large opportunity for value creation for the business and also upward valuation potential for the stock.

Also of note, the company has a strong record with environmental and social related issues and the Investment Manager expects this to continue. For instance, the company has been costing carbon pricing into the majority of operations since 2008. It has a goal to achieve net-zero GHG emissions by 2050 across all aspects of the business and activities and net zero on a Scope 2 GHG emissions basis by 2025.

From a social perspective, it has a strong safety record and a strong programme of supporting local communities.

The Fund sold out of its position in the company over the reference period.

Ovintiv Inc.

Ovintiv Inc. is an oil and natural gas exploration and production company. While the Investment Manager considers lower demand for hydrocarbons over the next several decades to be a threat to the business, the Investment Manager also expects long term supply to struggle to keep up with demand given lack of investment in the industry and finite nature of the resource.

The Investment Manager also considers that it is beneficial for society that hydrocarbon production requirements be produced by businesses with sound environmental and social credentials.

The Investment Manager believes Ovintiv has relatively high standards from an environmental and social perspective. For instance, the company has achieved a 24% reduction in Scope 1 & 2 GHG emissions intensity since 2019, and is therefore progressing towards the company's target of reducing Scope 1 & 2 GHG emissions intensity by 50% by 2030 from 2019 levels.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

North American Fund continued

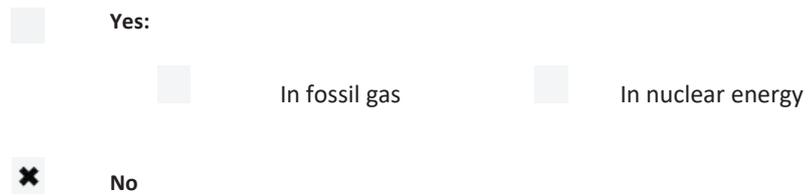

The company also delivered on its 33% methane intensity reduction target in 2021, four years ahead of schedule. Furthermore, Ovintiv aligned fully with the World Bank Zero Routine Flaring Initiative as of September 1, 2021, nine years ahead of the World Bank’s 2030 compliance target. From a social perspective, Ovintiv achieved its safest year ever in 2021, the eighth consecutive year of safety improvement.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁸?

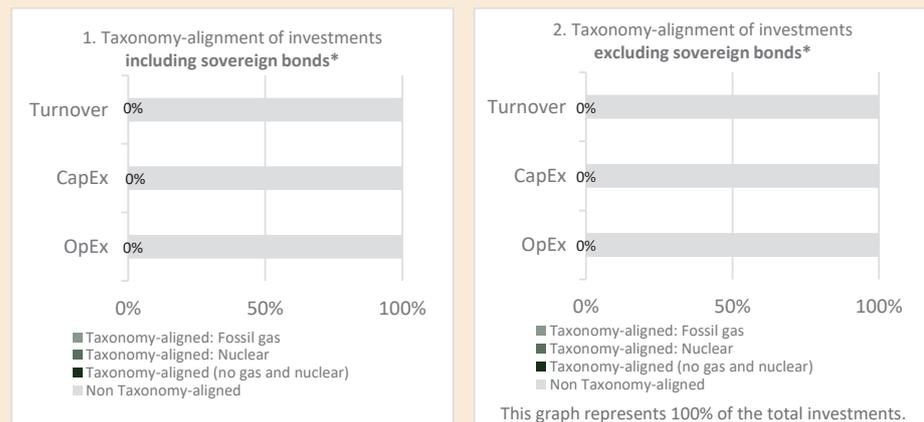

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds⁸, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 17% of the Fund’s investments were identified as #2 Other in the below diagram.

The Fund held positions in equity securities that did not contribute towards the Fund’s promoted characteristics, as well as cash held for liquidity purposes. All equity securities were assessed under the North American Fund Framework to ensure their compliance with minimum social safeguards. All investee companies analysed passed the exclusion criteria of scoring better than -3 on any single category (including environmental and social categories) and scoring above -4 in aggregate across the 4 categories, meaning all investable positions complied with the minimum requirements of the North American Fund Framework. There are no minimum environmental or social safeguards applicable to cash investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

All investee companies were assessed under the North American Fund Framework, which incorporates 4 ESG-related categories as part of a 15-point fundamental checklist. 2 of those 4 ESG categories specifically address environmental and social characteristics of investments. All investee companies analysed passed the exclusion criteria of scoring better than -3 on any single category (including environmental and social categories) and scoring above -4 in aggregate across the 4 categories.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

North American Fund continued

The following are examples of how investee companies were assessed by the Investment Manager against the environmental and social categories of the North American Framework:

First Republic – Under the environmental category, the company was judged to have relatively limited direct and indirect exposure to, or involvement with, environmental issues. The team noted that it has good policies on use of renewable energy and is already carbon neutral. The Investment Manager determined that there was limited risk to sustainable value creation and the company was given a score of 2.

Under the social category, the Investment Manager noted the high degree of focus on consumer satisfaction and that the company appears to have a strong culture and low staff turnover. The Investment Manager determined that there was limited risk to sustainable value creation and a good opportunity to create sustainable value from well-designed policies. The company was given a score of 3.

Amdocs – Under the environmental category, the Investment Manager noted that Amdocs is naturally a capital light software and services company and hence has limited interaction with the broader environment. The company has Science Based Targets initiative ('SBTi') targets in place on Scope 1 and Scope 2 GHG emissions, although the Investment Manager noted that these did not seem particularly ambitious. The company does have a comprehensive strategy overall to reduce the environmental impact of the company, and the team concluded that there are limited risks to value creation. The company was awarded a score of 2.

Under the social category, the Investment Manager noted a lot of involvement from the Company in communities and digital inclusion. The company also has good policies on the treatment of its suppliers. The Investment Manager noted that the labour intensity of some aspects of the company's operations could present some challenges, though these seem to be well managed. Overall, the Investment Manager believed there is limited risk to sustainable value creation and awarded the company a score of 1 on the social category.

The Investment Manager analysed and appraised information from multiple sources during the reference period, including reports from third party ESG specialists and documents from companies themselves, such as 10Ks and sustainability reports.

The Investment Manager also conducted meetings with the management of a number of prospective and current investee companies and material engagement issues raised with management teams in the fourth quarter included detailed carbon pricing discussions during meetings with energy company, Cenovus.

The Investment Manager engaged Cenovus management in light of the signing into law of the Inflation Reduction Act in the US. Discussion revolved around the Biden Administration's efforts to offer tax incentives to encourage investment in carbon sequestration and other clean up initiatives and the impact this would have on the company's long term carbon reduction goals.

Another example of the Investment Manager's engagement in the quarter was with Service Corp, a funeral and death care services firm. The discussion here covered the company's recent appointment of a Head of Sustainability and the publishing of an

inaugural sustainability report. The company is currently engaging with third party ESG ratings providers to facilitate better disclosure of its emissions from its large vehicle fleet and its network of crematoriums as well as its progress in reducing emissions.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) *continued*

UK Value Opportunities Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – UK Value Opportunities Fund (the “Fund”)

Legal entity identifier: 549300MWI6XYCECN5P80

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and/or social characteristics through the application of its investment strategy. Using the Investment Manager’s proprietary ESG analysis tool - the economic value-added sustainability scoring framework (“EVA SS Framework”) – the Fund seeks to take higher conviction positions in companies with positive scores against six categories: Carbon Emissions, Short Termism, Company Efficiency, exposure to relevant ESG Regulation, Consumer Demand and Thematic Trends.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● **How did the sustainability indicators perform?**

The Fund used the EVA SS Framework to measure the attainment of the Fund's ESG characteristics against the six categories described.

The Fund saw an improvement in the average overall EVA Sustainability Score from 7.5 to 7.8 from June 2022 to the end of the year (31 December)¹.

Four of the six categories saw improvements throughout the year with the Carbon Emissions score moving from 7.8 to 8.4, the Short Termism score moving from 9.3 to 9.5, the Company Efficiency score moving from 7.3 to 7.4 and the ESG Regulation score moving from 5.6 to 5.7.

The Thematic Trends score held level at 4.8 and only the Customer Trends score went backwards, marginally from 3.8 to 3.6. The decline in the Consumer Trends score was driven by the Fund exiting specific stocks such as Legal and General and TT Electronics with higher scores in this category than the Fund's average.

Focusing on the Carbon Emissions category, which attracts the largest weight in the EVA SS Framework, the percentage of investee companies signed up to a Net Zero carbon emissions commitment of some form, moved from 69% to 73% between June and December 2022. The percentage of investee companies with no commitment to introduce carbon emissions reduction targets dropped from 6% to 3% and those without targets but a commitment to set a target, dropped from 9% to 7% between June and December. Investee companies requiring focused engagement on the Carbon Emissions category reduced from 23% to 22% over the same period.

The Investment Manager focused on three other areas of engagement for investee companies during 2022 which were the independence of the remuneration committee and audit committee (falling within the Short Termism category), board gender diversity (also falling within the Short Termism category) and waste reduction (falling within the Company Efficiency category).

The percentage of investee companies without fully independent remuneration and audit committees fell from 3% to 2% during the review period, while the percentage of investee companies with less than 33% women on the board fell from 42% to 31% and investee companies without waste reduction targets fell from 38% to 37%.

¹ The Fund was approved by the Central Bank of Ireland as an Article 8 Fund under the SFDR effective 11 April 2022. June 2022 is taken as the end of the first quarter for which the Fund was categorised as an Article 8 SFDR Fund and the scores provided are for the portfolio weighted average scores of the Fund as at the given date.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

UK Value Opportunities Fund continued

	Quarterly EVA Sustainability Scores ²			2022 EVA Sustainability Score Average ³
	Jun-22	Sep-22	Dec-22	
Carbon Score	7.8	8.1	8.4	8.1
Short Termism Score	9.3	9.5	9.5	9.4
Company Efficiency Score	7.3	7.3	7.4	7.3
ESG Regulation Score	5.6	5.6	5.7	5.7
Customer Demand Score	3.8	3.8	3.6	3.8
Thematic Trends Score	4.8	4.8	4.8	4.8
Overall Score	7.5	7.7	7.8	7.6

The Fund held a position in Jadestone Energy, a UK oil and gas producer, over the reference period and prior to its reclassification as an Article 8 SFDR Fund. When the Fund was approved as an Article 8 SFDR Fund, Jadestone failed the EVA SS Framework exclusion criteria and the Fund notified the Central Bank of Ireland of this position, and of the Investment Manager's intention to exit it, during the reclassification process. Given the need to protect investor interests, the Fund began to sell the position down gradually, following its reclassification as an Article 8 SFDR Fund. However, Jadestone introduced a credible Net Zero carbon emissions plan in June 2022 and, as a result, no longer failed the EVA SS Framework exclusion criteria. The Fund has since retained its remaining position in Jadestone Energy. There were no other investments that failed the exclusion criteria for the reference period.

● **...and compared to previous periods?**

The Fund was approved by the Central Bank of Ireland as an Article 8 SFDR fund on 11 April 2022 and therefore the Fund did not promote environmental or social characteristics, or measure its performance against the sustainability indicators, prior to this date.

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

² This figure shows the portfolio weighted average score of the Fund, excluding cash, across each of the six categories of the EVA SS Framework at the end of each quarter. The Overall Score (EVA Sustainability Score) is the sum of the Fund's scores against each category which have been weighted in accordance with the EVA SS Framework.

³ These figures show the simple average of the Fund's quarterly EVA Sustainability Scores across each of the six categories. The Overall Score (EVA Sustainability Score) is the sum of the Fund's 2022 scores against each category which have been weighted in accordance with the EVA SS Framework.

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

UK Value Opportunities Fund continued

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors⁴?

When assessing a company's impact on the environment, the Investment Manager considered greenhouse gas ("GHG") emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives.

Revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. Where material revenues were flagged, the Investment Manager assessed the company's carbon reduction policies or targets related to achieving net zero.

Focusing on the Carbon Emissions category, which attracts the largest weight in the EVA SS Framework, the percentage of investee companies within the Fund that are signed up to a Net Zero carbon emissions commitment of some form, moved from 69% to 73% between June and December 2022.

The percentage of investee companies with no commitment to introduce carbon emissions reduction targets dropped from 6% to 3% and investee companies without targets but with a commitment to set a target, dropped from 9% to 7% between June and December. Investee companies requiring focused engagement on the Carbon Emissions category reduced from 23% to 22% over the same period.

The EVA Sustainability Score impacts: (i) stock selection; (ii) position sizing; and (iii) engagement and so the GHG emissions were considered over the reference period in the following ways:

- (i) With respect to stock selection, Lancashire Holdings was exited in the year as a consequence of its performance on the Carbon Emissions category of the EVA SS Framework. In short, the investee company is yet to recognise the impact of climate change on its cost base. Shell came off the exclusion list and into the Fund as a consequence of an increase in the percentage of gas within Shell's product mix and an improvement in interim carbon emissions reduction targets. Examples of shares that were on the watchlist but failed the Investment Manager's Carbon Emissions category requirement and were, therefore, excluded from the Fund, include BP and Glencore.
- (ii) With respect to position sizing, no shares were promoted or demoted on the basis of their performance in the Carbon Emissions category during the review period.
- (iii) With respect to engagement, the Investment Manager engaged 30 times with companies on their carbon targets and delivery. Seven of these were high priority engagements involving companies with no carbon targets. One

⁴ Please note engagement examples may have begun before the formal adoption of consideration of principal adverse impacts of sustainability factors.

company, Serica, now has carbon reduction targets in part because of the Investment Manager's engagement on the topic. Much of the Investment Manager's engagement on ESG matters in 2021 came into fruition in 2022. The Investment Manager made 48 engagements on carbon emissions in 2021, of which 19 were high priority involving companies with no carbon emissions reduction targets. 19 of these engagements have subsequently seen improvements with 12 in the high priority group.

Similarly, where water management was deemed material to an investee company by the Investment Manager, the Investment Manager encouraged the adoption of appropriate water management and water reduction policies.

The Investment Manager engaged with 15 investee companies in 2022 on their water management policies, encouraging the adoption of formal water reduction targets, and the percentage of investee companies with water reduction targets increased from 55% in December 2021 to 63% in December 2022.

The Investment Manager considered the board gender diversity of investee companies, and, where it deemed appropriate, used its tools of active ownership to encourage better diversity practices.

The Investment Manager engaged with 20 investee companies on female board diversity in 2022, of which 16 did not have at least 33% female board representation. Much of the Investment Manager's engagement in 2021 came into fruition in 2022, as the Investment Manager made 25 engagements on gender diversity in 2021, of which 23 were high priority involving companies less than 33% female representation on the board. 8 of these engagements have subsequently seen improvements with 7 in the high priority group, including Anglo American, Computacenter, Cranswick, Grafton, Gleeson, Morgan Sindall and Sigma Roc.

The percentage of investee companies with at least 33% of women on the board rose from 55% to 69% from December 2021 to December 2022.

The Investment Manager also took into account as part of its process the standards of the United Nations Global Compact, and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident to decide the appropriate action to take: whether to monitor, enter enhanced engagement, or divest from the company. No companies were involved in severe norms violations over the reference period so no action was taken.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

UK Value Opportunities Fund continued

Indicator ⁵		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁶
GHG Emissions (TCO2e)	Scope 1	77,097	95.4%	85,088	92.7%	-9%

Grafton	Consumer, Cyclical	1.93	United Kingdom
Marks & Spencer	Consumer, Non-cyclical	1.92	United Kingdom

⁵ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: FTSE All-Share Total Return Index. Allocated emissions of investee companies' is calculated using the companies Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €1139.1 m as of 31 December 2022. The Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁶ The figures shown demonstrate the difference in performance of the Fund and benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The Fund invested primarily in a diversified portfolio of UK listed companies. The Investment Manager used the EVA SS Framework to assess the environmental and/or social characteristics of each investee company.

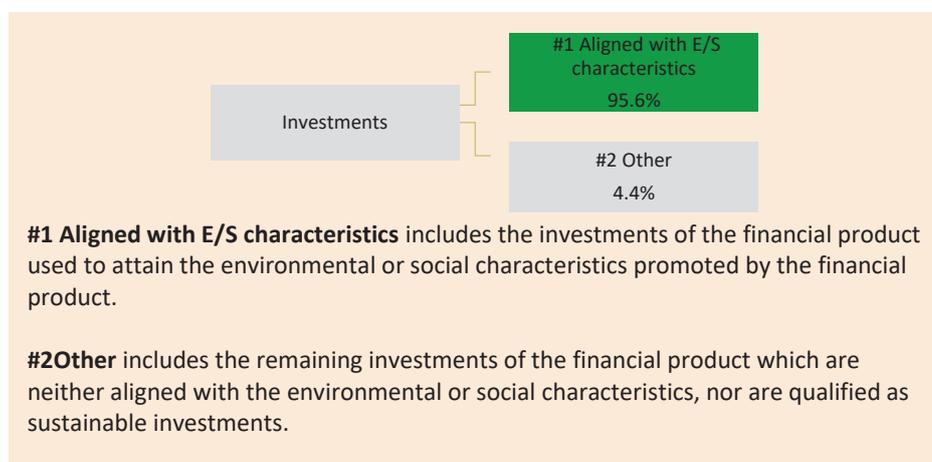

100% of the companies the Fund invested in were assessed under the Investment Manager's EVA SS Framework, which was used to assess and deliver the environmental or social characteristics promoted by the Fund.

During the reference period, an average of 95.6% of investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund.⁷

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. '#1 Aligned with E/S characteristics' etc.)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

⁷The figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, aligned with the Fund's characteristics as a result of passing the minimum criteria for investment set out in the EVA SS Framework. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

UK Value Opportunities Fund continued

● In which economic sectors were the investments made?

Economic Sectors	% Assets ⁸
Consumer, Non-cyclical	16.19
Consumer, Cyclical	13.28
Industrial	12.63
Financial	11.97
Basic Materials	9.11
Retail & Wholesale – Discretionary	4.44
Communications	3.56
Consumer Discretionary Products	3.50
Healthcare	2.71
Energy	2.48
Industrial Products	2.36
Oil & Gas	2.33
Telecommunications	2.20
Insurance	1.98
Banking	1.82
Technology	1.80
Materials	1.68
Financial Services	1.18

Tobacco and thermal coal producers were automatically excluded from the Fund. The Investment Manager did not automatically exclude oil producers where the company had made a credible commitment to align with the Paris Agreement and had initiated the transition away from oil production. During the reference period, the Fund held the following companies that had exposure to fossil fuel related activities:

Shell: In 2021, Shell did not pass the minimum exclusion score in the Carbon Emissions category as a result of deriving less than 50% of its revenue to natural gas and a lack of a credible Net Zero carbon emissions transition plan.

In 2022, the company shifted to passing the minimum carbon score by virtue of having over 50% of its revenue derived from natural gas, with a target of over 50% natural gas production in 2024. The company has made material improvements to its Net Zero plan, including the introduction of interim carbon emissions reduction targets: 50% absolute reduction in Scope 1& 2 carbon emissions by 2030.

Jadestone: Jadestone has targeted Net Zero Scope 1 and Scope 2 carbon emissions by 2040 and has introduced interim and long term carbon emissions reduction targets. While the percentage of its revenue derived from natural gas is not yet over 50%, there is a medium term ambition to be majority gas and the company plans to provide more details on this plan in 2023. If the Investment Manager decides this plan is not sufficiently near term, then the holding will be exited.

Serica: Serica is an investee company with the majority of its revenues derived from natural gas and with carbon reduction plans in place. The Investment Manager will

⁸ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2022.

continue to engage with the investee company on establishing its Net Zero carbon emissions plan in the coming months.

Harbour: Harbour is a majority gas producer and therefore does pass the Fund's exclusion criteria. The company has a target of net zero Scope 1 and 2 emissions by 2035. Furthermore, they have a long-term target plan to reach net zero on Scope 3. However, this does require planning approval and government support for their carbon capture scheme.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁹?

Yes:

In fossil gas In nuclear energy

No

⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

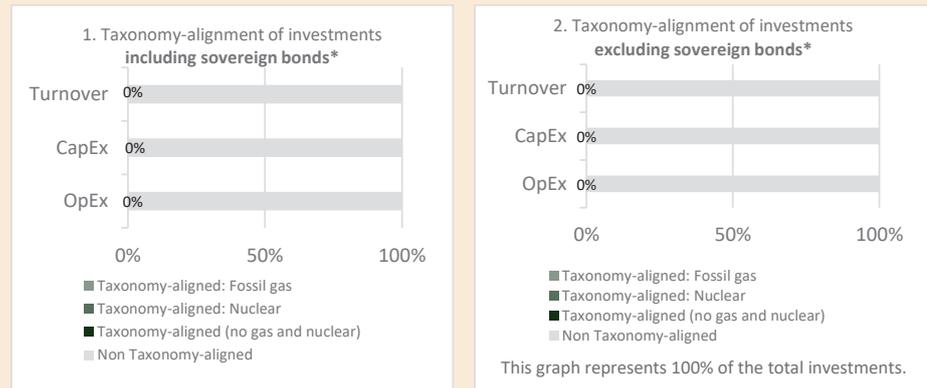

UK Value Opportunities Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund held an average of 4.4% of investments identified as #2 Other over the reference period¹⁰. The majority of these investments were held in cash or derivative instruments in line with the Fund's investment policy. There were no minimum environmental or social safeguards applicable to these holdings.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund approach is to take ESG issues into consideration through integration into the investment process. The proprietary EVA Sustainability Score integrates the risks and opportunities of ESG factors into the Investment Manager's EVA SS framework. Each company in the portfolio was assessed and scored on their approach to six ESG topics; Carbon Emissions, Short Termism, Efficiency, ESG Regulation, Customer Demand and Thematic Trends.

Within the EVA SS Framework, the cost of capital is an extremely powerful force and the Investment Manager believes that carbon emissions policies will increasingly affect the cost of capital. As such, the level of carbon emissions is the single most important ESG factor attracting the highest weighting in the Investment Manager's EVA Sustainability Score.

Further climate change risks and opportunities are captured within the other 5 factors. Waste, water and plastic reduction polices are assessed with the efficiency factor. The possibility of climate related taxes, bans or quotas are assessed with the ESG Regulation factor. Environmental considerations are included within the Investment Managers assessment of changes in Consumer Demand. The opportunities emerging from the transition economy are captured within the Thematic Trends category.

With respect to Carbon Emissions, companies are scored on their emissions policies. The scoring is consistent with the Investment Manager's ambition that investee companies will reach net zero emissions by 2050 or sooner.

Over the period, the EVA Sustainability Score impacted: (i) stock selection; (ii) position sizing; and (iii) engagement, with examples provided below:

- (i) **Stock Selection:** Lancashire was exited as a result of failed engagement on the Investment Manager's Carbon Emissions category. In short, the investee company is yet to recognise the impact of climate change on its cost base. Additionally, several shares have not been bought despite appearing on our watchlist, including: BP, Glencore and DCC, on the basis of their Carbon Emissions score; Plus 500 and Playtech were not purchased on the basis of their Short-Termism score; and Imperial Tobacco was not purchased on the basis of its Thematic Trends score.
- (ii) **Stock weightings:** No investee companies shifted division within the Fund over the review period on the basis of changes in EVA Sustainability Scores.

¹⁰ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, categorised as 'Other' investments. The average is calculated as a simple average of the Fund's quarterly portfolio weighted 'Other' investments as at each calendar quarter end (i.e. 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

UK Value Opportunities Fund continued

- (iii) **Engagement:** The Investment Manager has written bespoke individual letters to investee companies this year in support of its ESG agenda on each of the six factors: Carbon Emissions, Short Termism, Company Efficiency, ESG Regulation, Customer Demand and Thematic Trends, of which Carbon Emissions received a particular focus.

Company specific feedback is given within every topic, including areas for improvement and areas of success. The Investment Manager is currently focusing on decarbonisation, board independence, female representation, executive remuneration and waste reduction. In 2022, the Investment Manager made 30 engagements on carbon, 20 on female representation, 31 on waste and 11 on other topics. The Investment Manager had notable success during the review period on the introduction of carbon emissions reduction targets at Serica and the collapse of the non-voting share class, which limited minority shareholders' ability to exercise effective stewardship, at Schroders.

The Investment Manager's proprietary ESG tool monitors outstanding engagements with a high priority status. Meaningful change takes time to achieve and a number of key successes relate to engagements in the prior year. During the reference period, the Investment Manager had 19 cases of improved carbon targets following engagement, 8 cases of improved female representation following engagement and 9 cases of the improvements in waste management following engagement.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How does the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the reference benchmark?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Smart Energy Fund

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Smart Energy Fund (the "Fund")

Legal entity identifier: 5493000XYVRO8AIHN823

Sustainable investment objective

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input type="checkbox"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 99.6% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Fund has sustainable investment as its objective. Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Sustainability indicators

measure how the sustainable objectives of this financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Energy Fund continued

The Fund achieved its sustainable investment objective by investing in a portfolio of companies worldwide that supported, through their technology solutions and services, the decarbonisation and electrification of the global energy sector.

● How did the sustainability indicators perform?

The Investment Manager measured the Fund's alignment with its sustainable investment objective on a qualitative and quantitative basis by:

1. The alignment of the Fund's investments with the Fund's eligible investment universe, as described in the 'Investment Strategy' section of the Fund's SFDR prospectus and website disclosures, which only includes companies that derive a significant portion of their current or future revenue from activities that are in line with the Fund's sustainable investment objective.
2. The alignment of the Fund's investments with the Investment Manager's exclusions list for the Fund, as set out in the 'Investment Strategy' section of the Fund's SFDR prospectus and website disclosures.

During the reference period of this annual report, the Investment Manager's eligible investment universe comprised four main themes. A breakdown of the Fund weightings to the four themes over the reference period is given below.

Fund exposures to each of the four themes over the reference period¹:

Investment Area	31-Mar-22	30-Jun-22	30-Sep-22	31-Dec-22	Average 2022 ²
Clean Power Generation	12.8%	19.4%	23.4%	18.0%	16.0%
Energy Conversion & Storage	30.9%	29.9%	28.8%	24.0%	29.9%
Energy Efficiency	36.5%	36.9%	34.2%	42.7%	39.1%
Energy Transmission & Distribution	19.5%	13.3%	12.8%	15.3%	14.6%
Cash	0.3%	0.5%	0.8%	0.0%	0.4%
Total	100%	100%	100%	100%	100%

¹ The table shows the percentage of the Fund's investments, on a portfolio weighted basis, aligned with investment areas contributing to the Fund's sustainable investment objective as at the relevant date.

² The figures show the average alignment of the Fund with each investment area during the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at the end of each quarter (i.e. 31 March, 30 June, 30 September and 31 December).

Fund current or future revenue alignment to the four themes over the reference period³:

Investment Area	31-Mar-22	30-Jun-22	30-Sep-22	31-Dec-22	Average 2022 ⁴
Clean Power Generation	100.0%	100.0%	100.0%	100.0%	100.0%
Energy Conversion & Storage	80.1%	71.8%	69.8%	74.6%	74.5%
Energy Efficiency	84.8%	88.4%	83.0%	81.8%	83.4%
Energy Transmission & Distribution	81.8%	80.2%	85.7%	77.0%	80.2%
Cash	0.0%	0.0%	0.0%	0.0%	0.0%
Total	84.5%	84.2%	82.8%	82.6%	82.6%

During the reference period, the Fund did not invest in any companies that were not aligned with the Fund's sustainable investment objective by virtue of not meeting the prescribed current or future revenue exposure threshold, or in companies that participated in activities linked to the Fund's exclusions criteria.

All of the Fund's equity investments during the reference period contributed to the Fund's sustainable investment objective through their exposure to one or more of the sub-themes set out above.

During the reference period, the Fund averaged 99.6%⁵ in Sustainable Investments that met the sustainable investment objective, of which 100% contributed to environmental objectives.

The Fund did not use derivatives to attain its sustainable investment objective over the reference period.

● ...and compared to previous periods?

Investment Area	Portfolio Average Weight 2021	Revenue Exposure ⁶ 2021	Portfolio Average Weight 2022	Average revenue exposure 2022
Clean Power Generation	6.6%	100.0%	16.0%	100.0%
Energy Conversion & Storage	35.7%	76.0%	29.9%	74.5%
Energy Efficiency	45.1%	79.1%	39.1%	83.4%
Energy Transmission & Distribution	12.2%	76.2%	14.6%	80.2%
Cash	0.4%	0.0%	0.4%	0.0%
Total	100.0%	78.7%	100.0%	82.6%

³ The table shows the average alignment of the current or future revenues of the investee companies within each investment area (please see Figure 1 for details of the percentage of the Fund aligned with the relevant investment areas) as at the relevant date.

⁴ The average is calculated as a simple average of the quarterly portfolio weighted averages as at the end of each quarter (i.e. 31 March, 30 June, 30 September and 31 December).

⁵ The figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are Sustainable Investments. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

⁶ Please note that the Fund launched on 30 September 2021. The Fund's 2021 thematic alignment and revenue alignment figures are therefore provided as at 31 December 2021 and do not represent a quarterly average as do the Fund's 2022 thematic alignment and revenue alignment figures.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Energy Fund continued

● *How did the sustainable investments not cause significant harm to any sustainable investment objective?*

The Investment Manager, in compliance with the principle of Do No Significant Harm (“DNSH”), assessed each company, primarily using third party data, on whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as Sustainable Investments by the Investment Manager and were, therefore, excluded from the Fund.

The Investment Manager used the research of third party providers to provide deeper insights into a company’s compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over the assessment of whether a company was involved in a very severe controversy over the review period.

As an example, the Investment Manager excluded both Xinjiang Goldwind, a wind turbine manufacturer, and Jinko Solar, a solar panel manufacturer based in China, from the eligible universe during the third quarter of the review period. The Fund was not invested in either company.

Several investigative reports have alleged that the companies are in violation of human rights. The companies were alleged to have employed Uyghurs and other ethnic minorities in forced labour as part of the Chinese government’s labour transfer programs where they were held in ‘re-education camps’, subjected to abuse and kept under surveillance.

Further in August 2022, the United Nations High Commissioner for Human Rights (OHCHR) published its “Assessment of human rights concerns in the Xinjiang Uyghur Autonomous Region, People’s Republic of China” and the report concluded that there was evidence of forced labour practices. Therefore, after the Investment Manager reviewed the various reports and conducted its own assessment, the Investment Manager decided to exclude both companies from its investable universe as it viewed their responses to the reports as unconvincing in refuting the allegations.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts (“PAI”) indicators provided in Table 1 (and where applicable, Tables 2 and 3) of the Annex 1 Level 2 Regulatory Technical Standards.

Over the reference period, the Investment Manager carried out a screening process during the construction of its eligible investment universe to exclude any companies that significantly harm environmental or social objectives due to their

involvement in a range of controversial business activities. The Investment Manager used external ESG data providers as an initial input for the screen.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager, to the best of its ability, used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with these global norms, and where necessary, conduct further due diligence to determine compliance with these norms.

All sustainable investments have been assessed for adherence to the UNGC principles and OECD guidelines and any positions not aligned were not deemed as sustainable investments for the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

As part of its do no significant harm assessment (“DNSH”) with respect to sustainable investments, the Investment Manager considered the mandatory Principal Adverse Impacts (PAI) indicators provided in Table 1 (and where applicable, Tables 2 and 3) of Annex 1 of the Regulatory Technical Standards.

Where material, the Investment Manager considered the following principal adverse impacts of a company on the environment and society in the manner described below.

Unless subject to an exclusion, either as a result of the application of the exclusions policy or as a result of a principle adverse impact indicating that the company causes significant harm to a sustainable investment objective, the Investment Manager sought to improve material adverse impacts of investee companies through active ownership activities such as engagement, voting or if necessary, divestment from the company within a reasonable timeframe, taking into consideration the best interests of the Fund and its Shareholders.

Factors considered when assessing a company’s impact on the environment included greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity, energy consumption and/or production profile and carbon reduction initiatives. Revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager.

In accordance with the Fund’s exclusions criteria, companies involved in the exploration, production and distribution of oil, natural gas, coal, and the first generation of biofuels (derived from food crops) are excluded. Furthermore, utilities with fossil fuel or nuclear

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Energy Fund continued

power generation, as well as natural gas transmission and distribution utilities are also excluded.

Similarly, the Investment Manager considered biodiversity impact, water use and hazardous waste generated by a company, where deemed material.

The Investment Manager considered the board gender diversity and, where possible, gender pay gap of investee companies.

The Investment Manager considered the standards of the United Nations Global Compact (UNGC), and the Organisation for Economic Co-Operation and Development's (OECD) Guidelines for Multinational Enterprises. If a company is involved in severe controversies or norms violations, the Investment Manager assesses the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company. During the reference period, no investee companies were deemed to be in violation of the standards of the United Nations Global Compact, and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance in relation to selected PAI indicators compared to the Fund's benchmark.

Indicator ⁷		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁸
GHG Emissions (TCO ₂ e)	Scope 1	2,439	100.0%	1,918	93.9%	27%
	Scope 2	2,797	100.0%	2,371	93.9%	18%
	Scope 1 & 2	5,236	100.0%	4,289	93.9%	22%
Carbon Footprint (TCO ₂ e/ €m Invested)	Scope 1 & 2	44.56	98.4%	38.43	93.9%	16%
GHG Intensity (TCO ₂ e / Revenue)	Scope 1 & 2	187.42	100.0%	165.17	97.3%	13%
Female Board Representation (%)		29.9%	100.0%	29.2%	97.35%	2%

⁷ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: MSCI ACWI Net TR Index. Allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €119.5 m as of 31 December 2022. The Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. The figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁸ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2022

Largest investments	Sector	% Assets	Country
Lattice Semiconductor	Technology	4.82	United States
SolarEdge Technologies	Energy	4.54	United States
Infineon Technologies	Technology	3.72	Germany
Marvell Technology	Technology	3.65	United States
Vertiv Holdings	Industrial	3.52	United States
Delta Electronics	Industrial	3.43	Taiwan
Hydro One	Utilities	3.32	Canada
Qorvo	Technology	3.20	United States
Renesas Electronics	Technology	3.02	Japan
MP Materials	Basic Materials	3.00	United States
Cognex	Industrial	2.98	United States
Keyence	Industrial	2.83	Japan
Linde	Basic Materials	2.62	United Kingdom
Sunrun	Energy	2.57	United States
Analog Devices	Technology	2.56	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The Fund invests primarily in companies worldwide that support, through their technology solutions and services, the decarbonization and thereby electrification of the global energy sector.

All investments held by the Fund in equity participations were used to meet the Fund's sustainable investment objective.

During the reference period, the Fund averaged 99.6%⁹ in Sustainable Investments that met the Fund's sustainable investment objective, of which 100% contributed to environmental objectives.

Asset allocation describes the share of investments in specific assets.

⁹ This is the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are Sustainable Investments. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

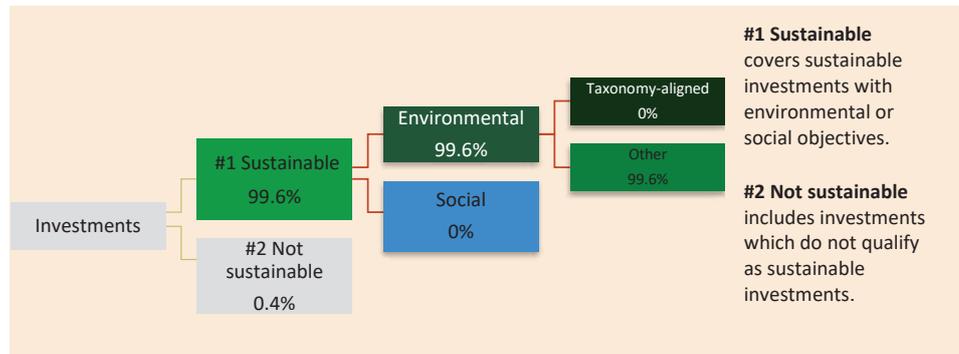

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Energy Fund continued

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Sustainable’, ‘Environmental’ etc.)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **In which economic sectors were the investments made?**

Economic Sector	% Assets ¹⁰
Semiconductors	15.73
Renewable Energy	14.22
Technology	12.72
Industrial	12.09
Industrial Products	8.86
Basic Materials	8.81
Utilities	6.19
Machinery-Diversified	5.82
Energy-Alternate Sources	4.54
Materials	3.45
Tech Hardware & Semiconductors	2.36
Electronics	1.92
Consumer Discretionary Products	1.64
Auto Manufacturers	1.64

In accordance with the Fund’s exclusion criteria, investments in fossil fuel exploration and production companies, as well as in utilities with thermal fossil power generation, are prohibited and, therefore, the Fund did not have any exposure to fossil fuels over the review period.

¹⁰ This shows the percentage of the Fund’s assets within each economic sector as at 31 December 2022

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

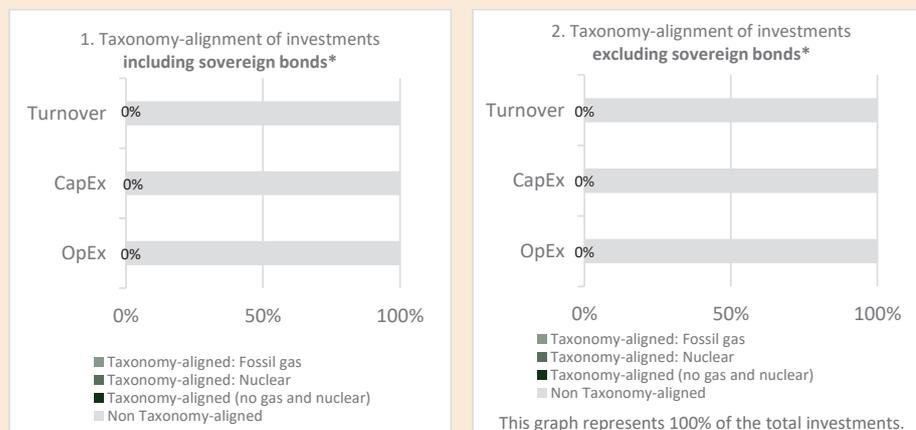

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

The proportion of investments of the Fund in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, was 0% over the reference period.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹¹?

- Yes:
 - In fossil gas
 - In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Energy Fund continued

● **What was the share of investments made in transitional and enabling activities?**

The proportion of investments of the Fund in transitional and enabling activities, and aligned with the requirements of the EU Taxonomy Regulation, was 0% over the reference period.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

During the previous reference period, the Fund was 0% aligned with the EU Taxonomy Regulation and during this reference period the Fund was 0% aligned with the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

During the reference period, the Fund averaged 99.6% in Sustainable Investments that met the Fund’s sustainable investment objective, of which 100% contributed to environmental objectives not aligned with the EU Taxonomy Regulation.

In order to satisfy itself that an investment is environmentally sustainable pursuant to the EU Taxonomy Regulation, the Investment Manager must (a) be satisfied that the investments underlying the Fund are in environmentally sustainable activities (b) identify the extent to which the investments of the Fund are in economic activities that qualify as environmentally sustainable and are aligned with the EU Taxonomy Regulation; (c) identify the proportion, as a percentage of the Fund’s portfolio, of investments in environmentally sustainable activities which are aligned with the EU Taxonomy Regulation; and (d) identify the proportion, as a percentage of the Fund’s portfolio, of enabling and transitional activities (as described in the EU Taxonomy Regulation).

At the present time, the Investment Manager cannot satisfy itself that the Fund’s investments meet the criteria outlined above. Accordingly, the proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the EU Taxonomy Regulation is 0% of the Fund’s net assets.

What was the share of socially sustainable investments?

The Fund will be invested in Sustainable Investments contributing to environmental objectives only. Therefore, the Fund’s share of socially sustainable investments was 0% over the reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund’s investments identified as #2 Not Sustainable averaged 0.4% over the review period and consisted of cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these investments.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the reference period, the Investment Manager maintained the Fund’s eligible investment universe across to four investment clusters: (i) Clean Power Generation; (ii) Energy Conversion and Storage; (iii) Energy Efficiency; and (iv) Energy Transmission and Distribution. The alignment of a company with the four investment clusters was determined by its current or future revenue exposure to these clusters.

The Fund only invested in companies within the eligible investment universe and, therefore, all the companies in the portfolio passed the necessary minimum thematic threshold and did not breach the SFDR’s principles of ‘do no significant harm’ and ‘good corporate governance’.

The eligible investment universe maintained by the Investment Manager serves as a reference portfolio to the Fund, both in terms of financial performance and in terms of contribution to the sustainable investment objective. The Investment Manager reviewed the companies that qualify for the eligible investment universe on a periodic basis during the reference period and companies that were not aligned with the Fund’s sustainable investment objective, by virtue of not meeting the prescribed current or future revenue exposure threshold, not passing the DNSH assessment (including with reference to PAI indicators) or not having good governance practices, were excluded from the eligible investment universe. Further companies that participated in activities linked to the Fund’s exclusion criteria were excluded from the eligible investment universe.

Similarly, additional new companies that met the previously mentioned criteria were added to the eligible investment universe.

The Investment Manager did engage with an investee company where it felt that there was room for material sustainability improvement over the reference period. The company produces rare earth products and is building a fully integrated supply chain for high strength permanent magnets enabling carbon-reducing technologies like electric vehicles, wind turbines and other energy savings industrial applications.

Despite positively contributing to decarbonization through its technologies in the Investment Manager’s view, it is essential for a company involved in the extraction of minerals to address the environmental and social impacts of its activities, such as the emissions associated with mining and processing, the risks arising from insufficient water and waste management, and the impacts from lack of worker safety protection and human rights.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Energy Fund continued

The company is a young company and listed in mid-2020, as a result of which its ESG disclosures are at an early stage and limited. During the second quarter of 2022, the Investment Manager had its first engagement with the company, to understand how the company managed its environmental risk, to urge the company to provide quantitative disclosures on GHG emissions, water usage, waste management and health and safety metrics specifically, and understand its plans to reduce GHG emissions as a first step. The company had also issued USD 600mn green convertible senior bonds in March 2021 and the Investment Manager sought to understand if it could share some of the ESG key performance indicators for those bonds.

Through this engagement, the Investment Manager understood that the company was taking the right initial steps, was aware of its key material risks and shared more detail of its sustainability practices, such as tailings management and water and energy use.

The Investment Manager encouraged the company to report on some of the initiatives and practices it has already in place as investors would appreciate the information on their ESG practices. The company was appreciative of the input and confirmed it would consider the areas to improve and was prepared to track and report on its ESG metrics.

Thereafter, the company released its first sustainability report and the Investment Manager was very encouraged to see that it had included some of its inputs and suggestions, recognizing that the company was still in the very early stage of its sustainability reporting journey.

Looking at the newly reported GHG emissions figures, the Investment Manager understood that third party data providers had overestimated these figures and, therefore, that performance in this area was not as bad as first thought.

The company also reported on health and safety metrics, such as lost time injury, recordable injury rate and mining violations and was showing favorable trends on these metrics. The Investment Manager will continue to monitor the company: more disclosures on other environmental reporting metrics, such as waste emissions, energy use and climate strategy will be the next steps.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Mobility Fund

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

To what extent was the sustainable investment objective of this financial product met?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Fund has sustainable investment as its objective. Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The Fund achieved its sustainable investment objective by investing in a portfolio of companies worldwide that support, through their technology solutions and services, the decarbonization and transformation of the global transport sector.

● *How did the sustainability indicators perform?*

The Investment Manager measured the Fund's alignment with its sustainable investment objective on a qualitative and quantitative basis by:

1. The alignment of the Fund's investments with the Fund's eligible investment universe, as described in the 'Investment Strategy' section of the Fund's prospectus and website SFDR disclosures, which only includes companies that derive a significant portion of their current or future revenue from activities that are in line with the Fund's objective.

2. The alignment of the Fund's investments with the Investment Manager's exclusions list for the Fund, as set out in the 'Investment Strategy' section of the Fund's prospectus and website SFDR disclosures.

During the reference period of this annual report, the Investment Manager's eligible investment universe comprised four main themes. A breakdown of the Fund weightings to the four themes over the reference period is given below.

Fund Exposures to each of the four themes over the reference period¹:

Investment Area	31-Mar-22	30-Jun-22	30-Sep-22	31-Dec-22	Average 2022 ²
Autonomous Driving	16.9%	21.9%	25.1%	29.3%	21.5%
EV Manufacturing	22.1%	26.1%	13.6%	11.3%	18.7%
EV Technologies	38.8%	34.4%	39.2%	28.3%	36.3%
Mobility Infrastructure	23.9%	17.0%	20.0%	31.1%	23.2%
Cash	-1.6%	0.6%	2.0%	0.1%	0.3%
Total	100%	100%	100%	100%	100%

Fund current or future revenue alignment to the four themes over the reference period³:

Investment Area	31-Mar-22	30-Jun-22	30-Sep-22	31-Dec-22	Average 2022 ⁴
Autonomous Driving	28.0%	30.0%	31.7%	31.0%	30.5%
EV Manufacturing	67.8%	76.3%	48.3%	34.0%	55.8%
EV Technologies	44.5%	39.1%	49.3%	42.2%	43.4%
Mobility Infrastructure	58.8%	48.4%	49.9%	45.7%	52.0%
Cash	0.0%	0.0%	0.0%	0.0%	0.0%
Total	51.0%	48.2%	43.9%	39.0%	45.6%

During the reference period, the Fund did not invest in any companies that were not aligned with the Fund's sustainable investment objective, by virtue of not meeting the

¹ The table shows the percentage of the Fund's investments, on a portfolio weighted basis, aligned with investment areas contributing to the Fund's sustainable investment objective as at the relevant date.

² The figures show the average alignment of the Fund with each investment area during the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at the end of each quarter (i.e. 31 March, 30 June, 30 September and 31 December).

³ The table shows the average alignment of the current or future revenues of the investee companies within each investment area (please see Figure 1 for details of the percentage of the Fund aligned with the relevant investment areas) as at the relevant date.

⁴ The average is calculated as a simple average of the quarterly portfolio weighted averages as at the end of each quarter (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Mobility Fund continued

prescribed current or future revenue exposure threshold, or companies that participated in activities linked to the Fund's exclusions criteria.

All of the Fund's equity investments during the reference period contributed to the sustainable investment objective through their exposure to one or more of the sub-themes set out above.

During the reference period, the Fund averaged 99.7%⁵ in Sustainable Investments that met the Fund's sustainable investment objective, of which 100% contributed to environmental objectives.

The Fund did not use derivatives to attain its sustainable investment objective over the reference period.

● ...and compared to previous periods?

Investment Area	Portfolio Average Weight 2021	Revenue Exposure 2021 ⁶	Portfolio Average Weight 2022	Average revenue exposure 2022
Autonomous Driving	14.1%	31.9%	21.5%	30.5%
EV Manufacturing	20.5%	52.4%	18.7%	55.8%
EV Technologies	40.7%	41.8%	36.3%	43.4%
Mobility Infrastructure	24.2%	57.1%	23.2%	52.0%
Cash	0.5%	0.0%	0.3%	0.0%
Total	100.0%	46.1%	100.0%	45.6%

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm ("DNSH"), assessed each company, primarily using third party data, on whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as Sustainable Investments by the Investment Manager and were, therefore, excluded from the Fund.

The Investment Manager used the research of third party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour,

⁵ The figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are Sustainable Investments. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

⁶ Please note that the Fund launched on 30 September 2021. The Fund's 2021 thematic alignment and revenue alignment figures are therefore provided as at 31 December 2021 and do not represent a quarterly average as do the Fund's 2022 thematic alignment and revenue alignment figures.

the Investment Manager retained discretion over the assessment of whether a company was involved in a very severe controversy over the review period.

As an example, the Investment Manager excluded the company Lithium Americas from the eligible universe in Q4 2022 due to potential UNGC violations regarding its impact on the local community (human rights and community) from its proposed Thacker Pass lithium mine in Nevada. There is an ongoing lawsuit filed by environmental groups against the proposed project due to concerns over animal habitats and environmental impact, and alleged significant deficiencies in the environmental review for the proposed mine. Also, there was opposition from indigenous communities over potential damage to historical sites. The Investment Manager decided to move the company out of the eligible universe after assessing the company's response as inadequate. The company is currently undergoing further environmental and stakeholders' studies and the Investment Manager will continue to monitor the situation.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of the Annex 1 Level 2 Regulatory Technical Standards.

Over the reference period, the Investment Manager carried out a screening process during the construction of its eligible investment universe to exclude any companies that significantly harm environmental or social objectives due to their involvement in a range of controversial business activities. The Investment Manager used external ESG data providers as an initial input for the screen.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager, to the best of its ability, used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator, to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with these global norms, and where necessary, conduct further due diligence to determine compliance with these norms.

All sustainable investments have been assessed for adherence to the UNGC principles and OECD guidelines and any positions not aligned were not deemed as sustainable investments for the reference period.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Mobility Fund continued

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

As part of its do no significant harm assessment (“DNSH”) with respect to sustainable investments, the Investment Manager considered the mandatory Principal Adverse Impacts (PAI) indicators provided in Table 1 (and where applicable, Tables 2 and 3) of Annex 1 of the Regulatory Technical Standards.

Where material, the Investment Manager considered the following principal adverse impacts of a company on the environment and society in the manner described below.

Unless subject to an exclusion, either as a result of the application of the exclusions policy or as a result of the principle adverse impact indicating that the company causes significant harm to a sustainable investment objective, the Investment Manager sought to improve material adverse impacts of investee companies through active ownership activities such as engagement, voting or if necessary, divestment from the company within a reasonable timeframe, taking into consideration the best interests of the Fund and its Shareholders.

Factors considered when assessing a company’s impact on the environment included greenhouse (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity, energy consumption and/or production profile and carbon reduction initiatives. Revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. In accordance with the Fund’s exclusion criteria, companies involved in the exploration, production and distribution of oil, natural gas, coal, and the first generation of biofuels (derived from food crops) are excluded. Furthermore, utilities with fossil fuel or nuclear power generation, as well as natural gas transmission and distribution utilities are also excluded.

Similarly, the Investment Manager considered biodiversity impact, water use and hazardous waste generated by a company, where deemed material.

The Investment Manager considered the board gender diversity and, where possible, gender pay gap of investee companies.

The Investment Manager considered the standards of the United Nations Global Compact (UNGC), and the Organisation for Economic Co-Operation and Development’s (OECD) Guidelines for Multinational Enterprises. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company. During the reference period, no investee companies were deemed to be in violation of the standards of the United Nations Global Compact, and the Organisation for Economic Co-Operation and Development’s Guidelines for Multinational Enterprises.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance in relation to selected PAI indicators compared to the Fund's benchmark.

Indicator ⁷		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁸
GHG Emissions (TCO ₂ e)	Scope 1	230	100.0%	153	89.8%	50%

GHG Intensity (TCO ₂ e / Revenue)	Scope 1 & 2	235.43	100.0%	173.63	95.6%	36%
Female Board Representation (%)		30.0%	100.0%	28.1%	95.5%	7%

⁷ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2022. Benchmark: MSCI ACWI Net TR Index. Allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €9.7 m as of 31 December 2022. The Fund and the benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note that figures are provided for comparative and illustrative purposes only and should not be relied upon. The figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁸ The figures shown demonstrate the difference in performance of the Fund and benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What were the top investments of this financial product?

	Largest investments	Sector	% Assets	Country
The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31 December 2022	Visteon	Consumer Discretionary Products	5.67	United States
	Aptiv	Auto Parts & Equipment	5.66	Jersey
	u-blox	Tech Hardware &	5.40	Switzerland
	NXP Semiconductors	Tech Hardware & Semiconductors	5.03	People's Republic of China
	Analog Devices	Technology	4.74	United States
	MP Materials	Basic Materials	4.45	United States
	Infineon Technologies	Technology	4.09	Germany
	Uber	Internet	4.05	United States
	Trimble	Industrial Products	3.90	United States
	Air Products and Chemicals	Materials	3.86	United States
	Delta Electronics	Industrial	3.68	Taiwan
	Renesas Electronics	Technology	3.63	Japan
	Schneider Electric	Industrial	3.50	France
	Alstom	Industrial	3.29	France
	SolarEdge	Energy-Alternate Sources	3.28	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The Fund invests primarily in companies worldwide that support, through their technology solutions and services, the decarbonization and thereby electrification of the global energy sector.

All investments held by the Fund in equity participations were used to meet the Fund's sustainable investment objective.

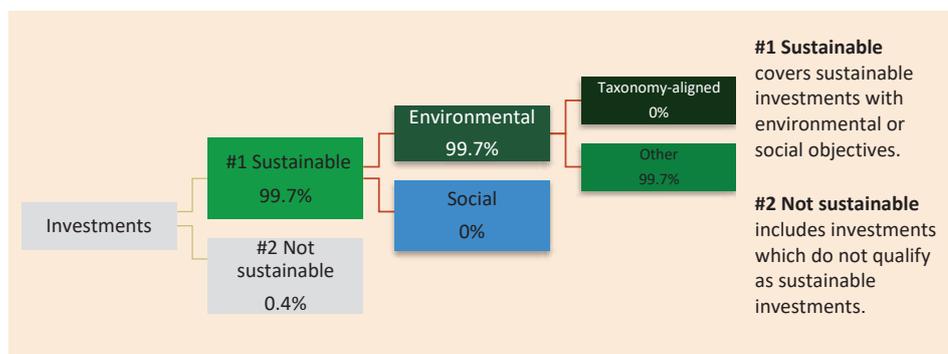

During the reference period, the Fund averaged 99.7%⁹ in Sustainable Investments that met the Fund's sustainable investment objective, of which 100% contributed to environmental objectives.

⁹ This is the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are Sustainable Investments. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. '#1 Sustainable', 'Environmental' etc.)

● **In which economic sectors were the investments made?**

Economic Sector	% Assets ¹⁰
Industrial	17.64
Technology	16.58
Tech Hardware & Semiconductors	12.83
Consumer Discretionary Products	11.53
Basic Materials	11.29
Auto Parts & Equipment	5.66
Internet	4.05
Materials	4.04
Industrial Products	3.90
Renewable Energy	3.44
Energy-Alternate Sources	3.28
Electronics	2.03
Software & Tech Services	1.90
Auto Manufacturers	1.66

In accordance with the Fund's exclusion criteria, investments in fossil fuel exploration and production companies, as well as in utilities with thermal fossil power generation, are prohibited and, therefore, the Fund did not have any exposure to fossil fuels over the review period.

¹⁰ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2022

Smart Mobility Fund continued

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of investments of the Fund in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, was 0% over the reference period.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹¹?

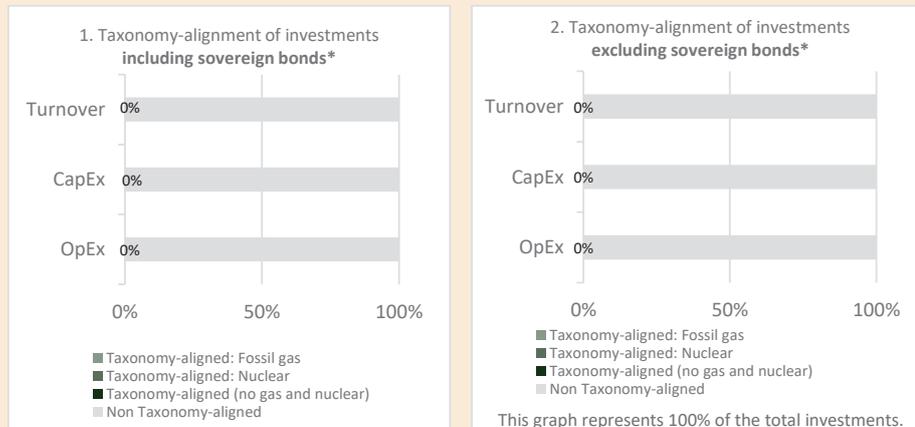

- Yes:
 - In fossil gas
 - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The proportion of investments of the Fund in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, was 0% over the reference period.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

During the previous reference period, the Fund was 0% aligned with the EU Taxonomy and during this reference period the Fund was 0% aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

During the reference period, the Fund averaged 99.7% in Sustainable Investments that met the sustainable investment objective, of which 100% contributed to environmental objectives not aligned with the EU Taxonomy Regulation.

In order to satisfy itself that an investment is environmentally sustainable pursuant to the EU Taxonomy Regulation, the Investment Manager must (a) be satisfied that the investments underlying the Fund are in environmentally sustainable activities (b) identify the extent to which the investments of the Fund are in economic activities that qualify as environmentally sustainable and are aligned with the EU Taxonomy Regulation; (c) identify the proportion, as a percentage of the Fund's portfolio, of investments in environmentally sustainable activities which are aligned with the EU Taxonomy Regulation; and (d) identify the proportion, as a percentage of the Fund's portfolio, of enabling and transitional activities (as described in the EU Taxonomy Regulation).

At the present time, the Investment Manager cannot satisfy itself that the Fund's investments meet the criteria outlined above. Accordingly, the proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the EU Taxonomy Regulation is 0% of the Fund's net assets.

● **What was the share of socially sustainable investments?**

The Fund will be invested in Sustainable Investments contributing to environmental objectives only. Therefore, the Fund's share of socially sustainable investments was 0% over the reference period.

● **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

The Fund's investments identified as #2 Not Sustainable averaged 0.3% over the review period and consisted of cash held for liquidity purposes. There are no minimum environmental or social safeguards applicable to these investments.

Smart Mobility Fund continued

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the reference period, the Investment Manager maintained the Fund's eligible investment universe across to four investment clusters: (i) Autonomous Driving; (ii) EV Manufacturing; (iii) EV Technologies; and (iv) Mobility Infrastructure. The alignment of a company with the four investment clusters was determined by its current or future revenue exposure to these clusters.

The Fund only invested in companies within the eligible investment universe and, therefore, all the companies in the portfolio passed the necessary minimum thematic threshold and did not breach the SFDR's principles of 'do no significant harm' and 'good corporate governance'.

The eligible investment universe maintained by the Investment Manager serves as a reference portfolio to the Fund, both in terms of financial performance and in terms of contribution to the sustainable investment objective. The Investment Manager reviewed the companies that qualify for the eligible investment universe on a periodic basis during the reference period and companies that were not aligned with the Fund's sustainable investment objective, by virtue of not meeting the prescribed current or future revenue exposure threshold, not passing the DNSH assessment (including with reference to PAI indicators) or not having good governance practices, were excluded from the eligible investment universe. Further companies that participated in activities linked to the Fund's exclusion criteria were excluded from the eligible investment universe.

Similarly, additional new companies that met the previously mentioned criteria were added to the eligible investment universe.

The Investment Manager did engage with an investee company where it felt that there was room for material sustainability improvement over the reference period. The company produces rare earth products and is building a fully integrated supply chain for high strength permanent magnets enabling carbon-reducing technologies like electric vehicles, wind turbines and other energy savings industrial applications.

Despite positively contributing to decarbonization through its technologies in the Investment Manager's view, it is essential for a company involved in the extraction of minerals to address the environmental and social impacts of its activities, such as the emissions associated with mining and processing, the risks arising from insufficient water and waste management, and the impacts from lack of worker safety protection and human rights.

The company is a young company and listed in mid-2020, as a result of which ESG disclosures are at an early stage and limited. During the second quarter of 2022, the Investment Manager had its first engagement with the company, to understand how the company managed its environmental risk, to urge the company to provide quantitative disclosures on GHG emissions, water usage, waste management and health and safety metrics specifically, and understand its plans to reduce GHG emissions as a first step. The company had also issued USD 600mn green convertible senior bonds in March 2021 and the Investment Manager sought to understand if it could share some of the ESG key performance indicators for those bonds.

Through this engagement, the Investment Manager understood that the company was taking the right initial steps, was aware of its key material risks and shared more detail of its sustainability practices, such as tailings management and water and energy use.

The Investment Manager encouraged the company to report on some of the initiatives and practices it has already in place as investors would appreciate the information on their ESG practices. The company was appreciative of the input and confirmed it would consider the areas to improve and was prepared to track and report on its ESG metrics.

Thereafter, the company released its first sustainability report and the Investment Manager was very encouraged to see that it had included some of its inputs and suggestions, recognizing that the company was still in the very early stage of its sustainability reporting journey.

Looking at the newly reported GHG emissions figures, the Investment Manager understood that third party data providers had overestimated these figures and, therefore, that performance in this area was not as bad as first thought.

The company also reported on health and safety metrics, such as lost time injury, recordable injury rate and mining violations and was showing favorable trends on these metrics. The Investment Manager will continue to monitor the company: more disclosures on other environmental reporting metrics, such as waste emissions, energy use and climate strategy will be the next steps.

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.
