- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for
- green economy.
 operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

a transition to a

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 9%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 11%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Product name : BNP PARIBAS FUNDS EURO EQUITY Legal Entity Identifier : 5493000XKEMVB00IEY27

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 35% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies.
 capital expenditure (CapEx)
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	• X No	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	
It will make a minimum of	x with a social objective It promotes E/S characteristics, but will	
sustainable investments with a social objective:%	not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 15% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 15%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green
- expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

 operational
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy,** the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

an environmental objective might be aligned with the Taxonomy or not.	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Sovereign issuers and agencies

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country

against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Corporate issuers

The investment strategy selects corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- The portfolio invests in securities issued by eligible states following the conditions of the Central Labelling Agency of the Belgian SRI label (CLA)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy by excluding companies involved in controversies due to poor

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- The portfolio shall invest in securities issued by eligible states following the conditions of the Central Labelling Agency of the Belgian SRI label (CLA)
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy 1?

- 1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective
- see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, cf Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Euro Government Green Bond

Legal entity identifyier: 213800VHP8SJICD1TU71

SUSTAINABLE INVESTMENT OBJECTIVE

Doe	s this financial product have a s	sustainable investment objective?
••	× Yes	• No
×	It will make a minimum of sustainable investments with an environmental objective: 80% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Funds Euro Government Green Bond fund is to allocate capital to new and existing projects with environmental benefits by investing in green bonds issued by governments, supranational, sovereign agencies, local entities and/or corporate to finance environmentally sound and sustainable projects that foster a net-zero emissions economy and protect the environment.

The eligible green projects categories include, but are not limited to:

- Renewable energy (including production, transmission, appliances and products);
- Energy efficiency (such as in new and refurbished buildings, energy storage, district heating, smart grids, appliances and products);
- Clean transportation (such as electric, hybrid, public, rail, non-motorized, multi-modal transportation, infrastructure for clean energy vehicles and reduction of harmful emissions);

- Solutions for climate change (including efforts to make infrastructure more resilient to impacts of climate change, as well as information support systems, such as climate observation and early warning systems);
- Green buildings that meet regional, national or internationally recognized standards or certifications for environmental performance.

The selected green bonds should comply with the principles formulated by the International Capital Market Association and receive a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

The sustainable investment objective of the financial product is environmental but mainly outside the scope of the environmental objectives defined by the EU Taxonomy.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective promoted by the financial product:

- The percentage of the financial product's portfolio invested in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The percentage of the financial product's portfolio compliant with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy;
- The percentage of the financial product's portfolio covered by the ESG analysis based on the proprietary ESG methodology;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the financial product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the Investment Manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in projects that do not meet the fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The Investment Manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process; RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT. SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the financial product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment:
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on composition of the financial product's portfolio (
i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct.
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

Νn

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The Product is actively managed. The Bloomberg Euro Aggregate Treasury Total Return Index Value Unhedged EUR benchmark is used for performance comparison only. The Product is not benchmark-constrained and its performance may deviate significantly from that of the benchmark.

The Product seeks to increase the value of its assets over the medium term and aims at facilitating or accelerating the transition into a sustainable world by focusing on challenges related to environment by investing at least 75% of its assets in green bonds to finance projects primarily designed to deliver solutions to climate change.

The Product invests at least 2/3 of its assets in green bonds denominated in EUR issued by or guaranteed by a Member State of the European Union, supranational agencies, sovereign agencies and local entities.

Exposure to high yield bonds in Euro, GBP and USD is limited to a maximum of 25% of the Product's assets.

A maximum of 10% of the Product's assets may be denominated in USD or GBP.

The investment team applies BNP PARIBAS ASSET MANAGEMENT Sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights at each step of the investment process of the Product.

The investment universe of this Product is based on the Green Bond Principles ("GBP")* as formulated by the International Capital Market Association (more information on these principles are available in the following website:

https://www.icmagroup.org/sustainable-finance/the-principles-guidelines-and-handbooks/green-bond-principles-gbp/).

The Product follows the Sustainable Thematic approach which means that it invests in companies or projects which products, services or operations positively contribute to the environmental and/or social challenges addressed by the theme. The Product seeks to allocate capital to specific themes of the transition towards a more sustainable economy and to benefit from future growth anticipated in these themes.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

- The financial product shall invest at least 75% of its assets in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The financial product shall comply with the ENP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the Investment Manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>:

- The financial product shall have at least 90% of its assets (excluding investments in ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology;
- The financial product shall invest at least 80% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation and as disclosed in the asset allocation section below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What is the sustainable investment objective of this financial product?" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance, include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 80%.

Asset allocation describes the share of investments in specific assets.

Good governance practices include

sound management

employee relations, remuneration of

structures.

staff ad tax

compliance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. Either these instruments are not used to attain the sustainable investment objective of the financial product, or they are aligned with the sustainable investment objective of the financial product

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not Applicable.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Yes:

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is C.8%.

The objective of the Investment Manager is not to prevent the financial product from investing in taxonomy-aligned activities within the framework of the investment strategy of the financial product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

Not applicable.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The Investment Manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary
 to enable the management company to assess for each financial product it manages the
 exposure of that financial product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies
 due to poor practices related to human and labour rights, environment, and corruption, as well
 as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...),
 as these companies are deemed to be in violation of international norms, or to cause
 unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More financial product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the financial product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and

that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EURO HIGH Legal Entity Identifier : 21380048HKTFQR2XST10 CONVICTION INCOME BOND

Environmental and/or social characteristics

Ooes this financial product have a sus	stainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics

promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations, remuneration of

structures,

staff and tax

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made

by investee

green economy.
- operational
expenditure (OpEx)
reflecting green
operational
activities of investee
companies.

companies, e.g. for a transition to a

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the

Sustainable

investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **BNP PARIBAS FUNDS EURO HIGH YIELD BOND** Legal Entity Identifier: 213800ZVIU1LRMH2HG90

Environmental and/or social characteristics

Ooes this financial product have a sus	etainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 70% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee
- green economy.
 operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

companies, e.g. for a transition to a

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP PARIBAS FUNDS EURO HIGH YIELD SHORT Legal Entity Identifier: 213800XCXV4261JS0U74
DURATION BOND

Environmental and/or social characteristics

Does this financial product have a sus	tainable investment objective? x No
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

What are the objectives of the sustainable investments that the financial product partially intends to make and how do es the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 70% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green

investments made

companies, e.g. for

by investee

companies.

a transition to a green economy. - operational expenditure (OpEx) reflecting green operational activities of investee

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy ?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or

social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EURO INFLATION-LINKED

Legal Entity Identifier: THMZ0I4L5W8K1WN4XT60

BOND

Environmental and/or social characteristics

Ooes this financial product have a sus	stainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 0% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	x It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Sovereign issuers and agencies

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital

against a combination of environmental, social and governance factors, which include but not limited to:

- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Corporate issuers

The investment strategy selects corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The portfolio invests in securities issued by eligible states following the conditions of the Central Labelling Agency of the Belgian SRI label (CLA)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Not applicable

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy by excluding companies involved in controversies due to poor

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The portfolio shall invest in securities issued by eligible states following the conditions of the Central Labelling Agency of the Belgian SRI label (CLA)

• What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of

staff and tax

compliance.

structures,

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee

companies.

- capital
expenditure (CapEx)
showing the green
investments made
by investee
companies, e.g. for
a transition to a
green economy.
- operational
expenditure (OpEx)
reflecting green
operational
activities of investee

companies.

The minimum proportion of sustainable investments of the financial product is 0%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU

Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of socially sustainable investments?

Not applicable

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor

practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

investment means an investment in an economic activity

Sustainable

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **BNP PARIBAS FUNDS EURO LOW VOL EOUITY** Legal Entity Identifier: 213800MQX37ATN2HWD96

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No X	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU	
Taxonomy	Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: $\underline{\text{https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63}$

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u> Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

• What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment, as defined in the Prospectus
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2(17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include

structures,

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting

- the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- **#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 11%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EURO MEDIUM TERM Legal Entity Identifier : 213800W47YB3LT62YH87 INCOME BOND

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
Yes	X No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a
- green economy.
 operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- green economy.
 operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee
companies follow

good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EURO SHORT TERM
CORPORATE BOND OPPORTUNITIES

Legal Entity Identifier: 549300JJAXA72XVPGM77

Environmental and/or social characteristics

Ooes this financial product have a sus	etainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas

- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 25% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 25%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made

by investee

green economy.
- operational
expenditure (OpEx)
reflecting green
operational
activities of investee
companies.

companies, e.g. for a transition to a

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 70% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee
- a transition to a green economy. - operational expenditure (OpEx) reflecting green operational activities of investee

companies.

companies, e.g. for

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS FUNDS EUROPE EQUITY Legal Entity Identifier : 213800QR2HMXARPGFK67

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does

an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

Sustainable

investment means

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
Yes	No No
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 45% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 45% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 45%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green
- expenditure (CapEx showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy,** the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 45% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 45% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include

structures,

compliance.

sound management

employee relations,

remuneration of staff and tax

Taxonomy-aligned activities are expressed as a share of:

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 45%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green
- expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Environmental and/or social characteristics

ns n an

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

Sustainable

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EUROPE REAL ESTATE SECURITIES

Legal Entity Identifier: 213800XADYKA8SH59M19

Ooes this financial product have a sus	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	 with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average portfolio ESG Score of the sub-fund compared to the average portfolio ESG Score of its investment universe, after eliminating at least 15% of securities with the lowest ESG Score
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, the protection and/or restoration of biodiversity and ecosystems. The extent to which the sustainable investments with an environmental objective are aligned with the EU Taxonomy will be disclosed in the annual report of the financial product.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global

Compact principles and OECD Guidelines for Multinational Enterprises

- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the average portfolio ESG Score higher than the average portfolio ESG Score of its investment universe, after eliminating at least 15% of securities with the lowest ESG Score
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy as disclosed below
- The average percentage of the sustainable investments of the sub-fund is improved by at least 15% compared to its investment universe.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance practices include

structures,

sound management

employee relations,

remuneration of

staff and tax

compliance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The Management Company is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Not applicable

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Product name : BNP PARIBAS FUNDS EUROPE SMALL CAP Legal Entity Identifier : 213800DFEHDBWJC7W373

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?			
Yes	No No		
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments		
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		
	x with a social objective		
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments		

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 65% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies.
 capital expenditure (CapEx) showing the green
- expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 65% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green
- expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities¹ that comply with the EU Taxonomy?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Product name: BNP Paribas Funds Global Absolute Return Bond Legal Entity Identifier: 213800DVKBMCKTL76304

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	
Taxonomy	x with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

Asset allocation describes the share

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made

by investee

a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

companies, e.g. for

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy 1?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS GLOBAL BOND Legal Entity Identifier : 213800BK6M5X4LRSZE11 OPPORTUNITIES

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
	Yes	No X
	It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments
	in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
		x with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made

by investee

companies.

a transition to a green economy. - operational expenditure (OpEx) reflecting green operational activities of investee

companies, e.g. for

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS FUNDS GLOBAL CONVERTIBLE Legal Entity Identifier : 2138001TD2MSZQT66F42

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 15% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations, remuneration of

structures,

staff and tax

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 70% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 15%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

 turnover reflecting the share of revenue from green activities of investee companies.
 capital expenditure (CapEx) showing the green

expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Product name: BNP PARIBAS FUNDS GLOBAL ENVIRONMENT

legal identifier: 213800LPWZUEV2JPJF87

SUSTAINABLE INVESTMENT OBJECTIVE

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Does this financial product have a sustainable investment objective?				
•	× Yes	• No		
*	It will make a minimum of sustainable investments with an environmental objective: 45%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments		
	in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy		
	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		
		with a social objective		
×	It will make a minimum of sustainable investments with a social objective: 1%	It promotes E/S characteristics, but will not make any sustainable investments		

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Global Environment is to help or accelerate the transition to a more sustainable economy by focusing on challenges related to the environment.

At all times, this financial product invests at least 75% of its assets in equities and/or equity equivalent securities issued by global companies that conduct a significant part of their business in Environmental markets. "Environmental markets" include, but are not limited to, Renewable & Alternative Energy, Energy Efficiency, Water Infrastructure & Technologies, Pollution Control, Waste Management & Technologies, Environmental Support Services, and Sustainable Food.

Sustainable investments underlying the financial product contribute to the environmental objectives set out in Article 9 of Regulation (EU) 2020/852: climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product:

- The percentage of the financial product's portfolio invested in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics;
- The percentage of the financial product's portfolio compliant with the BNP Paribas Asset Management Responsible Business Conduct Policy (RBC Policy);
- The percentage of the financial product's assets covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology (excluding ancillary liquid assets);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
- The percentage of the financial product's portfolio aggregate Revenue which is "EU Taxonomy Aligned" as defined by Regulation (EU) 2020/852.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

In order to ensure that the sustainable investments that the financial product intends to make do not cause significant harm to any environmental or social sustainable objective, the financial product assesses each investment against a set of indicators of adverse impacts by conducting proprietary Fundamental ESG analysis for all portfolio holdings. The ESG analysis aims to identify the quality of governance structures, the most material environmental and social harms for a company or issuer and assesses how well these harms are addressed and managed. The Investment Manager seeks robust policies, processes, management systems and incentives as well as adequate disclosure, as applicable. Additionally, the Investment Manager assesses any past controversies identified. A proprietary aggregate ESG score is then assigned for each company or issuer taking into account the indicators as set out below, based on a qualitative judgement. As part of the internal ESG proprietary methodology used, the three criteria E, S and G account respectively for a relative minimum weight of 20% each in the scoring model. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the financial product's investable universe. The Investment Manager considers it important to engage with companies and issuers and to analyse company and issuer disclosures and reports. The ESG process is proprietary to the Investment Manager, although the Investment Manager uses external ESG-research as an input.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Indicators for adverse impacts on sustainability factors have been taken into account in the Investment Manager's Fundamental ESG analysis as follows – the data considered, as prescribed by SFDR, by the Investment Manager to assess the relevant indicator is set out in the first paragraph under each indicator below:

Mandatory Indicators

GHG emissions, carbon footprint and GHG intensity of investee companies

Data considered: an investee company's absolute scope 1, 2 and 3 GHG emissions, and its enterprise value and revenue.

Companies are tiered between those providing full disclosure of Scopes 1, 2, 3 emissions across the majority of their operations; reporting across all four pillars prescribed by the Task Force on Climate related Financial Disclosures (TCFD); having set stretching short-medium term target (3+ years), as well as a Net zero/Paris Agreement aligned/Science-based long term target (10-30 years) and detailed actions plans versus those with no emission disclosure in place, no targets and no clear commitment to setting one.

Exposure to companies active in the fossil fuel sector

Data considered: an investee company's exposure to fossil fuel revenues.

The Investment Manager evaluates a company's transition to a low carbon economy by working towards ambitious science-based Paris-aligned decarbonisation targets and by strategically phasing out any fossil fuel exposure.

Share of non-renewable energy consumption and production, and energy consumption intensity per high impact climate sector

Data considered: an investee company's total energy consumption and production as well as the consumption and production from non-renewable energy sources, and an investee company's output metric as the basis of energy intensity.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks prescribed by the International Sustainability Standards Board (ISSB), the Global Reporting Initiative (GRI) and the CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Activities negatively affecting biodiversity-sensitive areas

Data considered an investee company's sites/operations located in or near to biodiversity-sensitive areas.

The Investment Manager uses external tools and research as well as its own proprietary analysis in assessing companies' management of nature-related harms. The Investment Manager seeks investment in companies or issuers that have addressed the harm with robust policies, processes, management systems and incentives that are scaled appropriately to the importance of the harm. Site-level geolocation data and regional exposure are not always easily available or disclosed by companies and issuers. The Investment Manager engages with companies to achieve geo-location data and to assess the potential harm at the specific locations of interest, for example highlighting habitats of IUCN Red List species (the International Union for Conservation of Nature), protected areas and key biodiversity areas in the vicinity.

Emissions to water, and hazardous waste and radioactive waste ratio

Data considered: an investee company's generated tonnes of emissions to water, and tonnes of hazardous waste and radioactive waste.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

Data considered: an investee company's involvement in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.

The Investment Manager screens the Sub-Fund's investments against adherence to global standards such as the UN Global Compact principles and OECD Guidelines for Multinational Enterprises. An external research provider is used to support this screening activity. A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

Data considered: instances where an investee company is lacking policies to monitor compliance with the UNGC Principles or OECD Guidelines.

The Investment Manager uses external tools and research to assertain the existence/non-existence of these policies and identify those companies that do not satisfy credible policy standards in all those areas that speak to UNGC principles or the OECD Guidelines.

Unadjusted gender pay gap

Data considered: an investee company's average gross hourly earnings of male paid employees and of female paid employees as a percentage of average gross hourly earnings of male paid employees.

Companies are assessed for their pay equity through review of the pay gap, were available, alongside a broader set of KPIs related to Equality, Diversity & Inclusion (ED&I). Companies are tiered between those demonstrating state of the art management processes and those with no ED&I disclosure.

Board gender diversity

Data considered: an investee company's number of women on the board of directors and percentage of board members that are female.

Companies are assessed for their board gender diversity alongside other key roles which influence company strategy alongside a broader set of metrics related to leadership diversity. Companies are tiered between those achieving 40%-60% women on the board and in executive management as well as demonstrating diversity in key roles and those with no women on the board or in executive management.

Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Data considered: an investee company's exposure to controversial weapons through business activity and ownership.

Companies are screened by business activity in an effort to ensure, using a combination of screen activity and the Investment Manager's qualitative judgement, that they are not involved in the activity of manufacturing or of manufacturing tailor-made components, using, repairing, putting up for sale, selling, distributing, importing or exporting, storing or transporting controversial or indiscriminate weapons such as anti-personnel mines, submunitions, inert ammunition and armour containing depleted uranium or any other industrial uranium, weapons containing white phosphorus, biological, chemical or nuclear weapons. The Investment Manager seeks to exclude all companies with any involvement in controversial weapons from investment and in addition uses qualitative judgement as part of the analysis. If the Investment Manager determines that one of these activities takes place within a subsidiary, the direct parent company is also considered to be involved in controversial weapons if it holds a majority equity interest in the subsidiary. Likewise, if one of the above-mentioned activities is determined to take place within a parent company, any majority-owned subsidiary of this parent company is also deemed to be involved.

Voluntary Indicators

Investments in companies without carbon emission reduction initiatives

Data considered: instances where an investee company is lacking of all of the following: near-term GHG reduction target, long-term GHG reduction target (10+ years), science-based GHG reduction target, Net Zero commitment.

The Investment Manager actively seeks to engage with companies to encourage the implementation of effective performance management systems, with the objective to establish GHG emissions baseline data (scope 1, 2 and 3), set science-based long-term carbon emission reduction targets with a viable action plan to deliver on these targets, and regularly report.

Water usage and recycling

Data considered: an investee company's operational water use (cubic meters of water consumed), and water management (percentage of water recycled and reused).

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws

Data considered: an investee company's number of convictions per severity category in the past three to five years (three years for minor controversies or incidents; five years for more significant controversies or incidents).

The materiality and severity of convictions and fines for violation of anti-corruption and anti-bribery laws are reviewed as part of the Fundamental ESG analysis.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The Investment Manager uses a Global Standards Screening which assesses companies' impact on stakeholders and the extent to which a company causes, contributes or is linked to violations of international norms and standards. The underlying research provides assessments covering the OECD Guidelines for Multinational Enterprises and the UN's Global Compact Principles, as well as International Labour Organization's (ILO) Conventions, and the UN Guiding Principles on Business and Human Rights (UNGPs). A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The Sub-Fund considers principal adverse impacts on sustainability factors by identifying, assessing, and managing negative effects of portfolio-related investment decisions on environmental, social and employee matters, respect for human rights, and anti-bribery & corruption matters.

The following illustrates how this exposure is intended to be managed, once identified and assessed, taking into account each of the mandatory and voluntary indicators listed above.

- 1. All companies and other issuers must meet financial and ESG criteria before entering the Sub-Fund's list of investable companies. When all the data is gathered, an ESG report is written and a proprietary aggregate ESG score assigned. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the investable universe. In cases where a company has a low ESG score, but is not deemed to cause significant harm and is not excluded, the company will have a capped position size in the portfolio, for risk management reasons. The Investment Manager does not seek to exclude a certain number or percentage of companies or issuers, but rather seeks an absolute level of ESG quality based on a qualitative judgement.
- 2. Bottom-up company-specific engagement: As part of the Investment Manager's ongoing, proprietary company and issuer-level ESG analysis, it identifies company and issuer-specific matters and risks and actively engages with companies and issuers about these matters. For the bottom-up, company specific engagements, the objective is typically to solve or improve the issue that has been identified as part of ESG analysis and when that objective has been achieved, move to the next objective or pause the engagement.

Top-down strategic engagement: Every year the Investment Manager assesses and outlines the engagement priorities for the next 12 months. These priorities are based on market developments and emerging sustainability issues that are considered relevant and material for companies and issuers. The Investment Manager then identifies the companies and issuers which it considers are most exposed to these topics and focuses its engagement on specific companies and issuers. For the strategic engagement areas, the Investment Manager sets up specific steps as objectives that it seeks to reach with the engagements. The strategic engagement areas have analysts assigned as leads for each of the areas of engagement.

3. Where the Investment Manager identifies unmanaged risk, and its usual management approach to engagement fails to produce positive outcomes, its Escalation Policy takes hold.

If the Investment Manager views the investee company or issuer is unresponsive to engagement or unwilling to consider alternative options posing less significant risks to shareholders, the Investment Manager will escalate the dialogue by:

- Seeking alternative or more senior contacts within the company or issuer
- Intervening or engaging together with other shareholders
- Intervening or engaging together with other institutions or organisations (multi-stakeholder)
- Highlighting the issue and/or joint engagements regarding the issue through institutional platforms and/or
- Filing or co-filing resolutions at General Meetings

If interventions are unsuccessful and the Investment Manager considers that the risk profile of the company has significantly deteriorated or company strategy/governance structures have altered because of an incident, to a degree where the return outlook and the company's strategy and quality no longer meet expectations, the company would be excluded from the investable universe and/or sold.

Information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This Product is actively managed. The benchmark MSCI World NR is used for performance comparison only. The Product is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Product seeks to increase the value of its assets over the medium term by investing in shares issued by global companies that operate in Environmental Markets.

Environmental Markets include, but are not limited to, Renewable & Alternative Energy, Energy Efficiency, Water Infrastructure & Technologies, Pollution Control, Waste Management & Technologies, Environmental Support Services, and Sustainable Food.

It may be exposed to Mainland China by investing in China A shares via the Stock Connect.

The Product may be exposed to emerging markets up to 30% of its assets, including exposure to China.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Product.

The Product follows the Sustainable Thematic approach which means that it invests in companies or projects which products, services or operations positively contribute to the environmental and/or social challenges addressed by the theme.

The Product seeks to allocate capital to specific themes of the transition towards a more sustainable economy and to benefit from future growth anticipated in these themes.

The approach is implemented in order to consistently eliminate at least 25% of the investment universe being companies conducting significant part of their business in environmental markets.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

 More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents BNPP AM Corporate English (bnpparibas-am.com).
- The financial product must comply, as part of their investment policy, with the list of exclusions criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/

- The financial product shall invest in companies with at least a 20% of revenues aligned with the financial product's thematics;
- The financial product's investment universe is reduced by a minimum of 25% due to exclusion of securities with low ESG score and the applicable exclusions
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology;
- The financial product's ratio of investments in investee companies without a supplier code of conduct is lower than that of the extra-financial investment universe (voluntary social PAI 4).
- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).
- The financial product shall invest at least 85% of its portfolio in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" and the quantitative and qualitative thresholds are indicated in the main part of the Prospectus.
- The financial product's shall invest at least 2% of its assets in companies "EU Taxonomy Aligned".

What is the policy to assess good governance practices of the investee companies?

Pre investment

The Investment Manager analyses companies' governance structures taking into account what constitutes common and best global practice for governance and identifying potential outliers. Once the governance and other ESG analytical data is gathered, an ESG report is produced and a proprietary ESG score is assigned as part of the Fundamental ESG analysis as described above.

Post investment

The Investment Manager's proxy voting is predominantly related to governance issues such as the election of directors, board structures and management remuneration. When practicable, the Investment Manager seeks to engage with the investee company before voting against management's recommendation on an AGM resolution. The Investment Manager is also in dialogue with companies throughout the year to discuss and comment on proposed governance structures.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 85%.

Asset allocation describes the share of investments in specific assets.

Good governance practices include

sound management

employee relations,

remuneration of staff ad tax

structures,

compliance.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective contribute to the environmental objectives set out in Article 9 of Regulation (EU) 2020/852; climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems and are aligned with the EU Taxonomy are disclosed in the two graphs below in the document.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The objective of the investment manager is not to prevent the product from investing in taxonomyaligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made

in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

BNP PARIBAS FUNDS GLOBAL HIGH YIELD Legal Entity Identifier: 213800I5ZTZ8DMKTK650 Product name:

BOND

Environmental and/or social characteristics

Does this financial product have a sus Yes	tainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	x with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics

promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF
In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

Good governance

practices include

structures,

compliance.

sound management

employee relations,

remuneration of staff and tax

At least 70% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green
- expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

 operational
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP Paribas Funds Global Income Bond Legal Entity Identifier: 21380013L4Z7PDMBUB22

Environmental and/or social characteristics

Ooes this financial product have a sus	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics promoted by the

financial product

are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate</u> <u>voluntary</u> <u>indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx)
- expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee
companies follow

good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP PARIBAS FUNDS GLOBAL Legal Entity Identifier: 549300S7589QFX0MGS37 INFLATION-LINKED BOND

Environmental and/or social characteristics

Does this financial product have a sus	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 0% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	x It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Sovereign issuers and agencies

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital

against a combination of environmental, social and governance factors, which include but not limited to:

- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Corporate issuers

The investment strategy selects corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus $\frac{1}{2}$
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Not applicable

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy by excluding companies involved in controversies due to poor

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 0%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

Asset allocation

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

compliance.

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU

Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of socially sustainable investments?

Not applicable

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor

practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using ESG internal proprietary methodology and Net Zero AAA proprietary framework, and by investing in issuers that demonstrate good environmental, social and governance practices.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its benchmark.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

 Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

The Net Zero AAA proprietary framework ranks issuers as 'Achieving', 'Aligned' and 'Aligning' to net zero based on science-based decarbonisation pathways or contributions towards the energy transition and decarbonisation of the real economy.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy;
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology;
- The percentage of the financial product's portfolio covered by AAA analysis based on the Net Zero AAA proprietary framework;
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its benchmark
- The carbon footprint of the financial product versus that of financial product's benchmark;
- The Implied Temperature Rise (ITR) of the financial product;
- The percentage of the investment universe reduction due to exclusion of securities which are not aligned according to the Net Zero AAA proprietary framework / and/or sector exclusions as per the RBC Policy.
 - The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
 - b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
 - b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account all principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its benchmark.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector

Principal adverse

negative impacts of

- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure</u> statement: sustainability risk integration and Principal Adverse Impacts considerations.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its benchmark.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;

- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.</u>

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings and criteria are built by BNP Paribas Asset Management's Sustainability Centre using proprietary ESG methodology and AAA proprietary framework.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its benchmark.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives", to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology.
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the by Net Zero AAA proprietary framework;
- The financial product shall have the weighted average ESG score of its portfolio higher than
 the weighted average ESG score of its benchmarkThe carbon footprint of the financial
 product shall be at least 30% lower than the carbon footprint of the financial product's
 benchmark;
- The Implied Temperature Rise (ITR) of the financial product shall remain below 2 degrees;
- The financial product's investment universe shall be reduced by a minimum of 20% due to exclusion of securities which are not aligned with the AAA proprietary framework and/or sector exclusions as per the RBC Policy

- The financial product shall invest at least 50% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product's investment universe is reduced by a minimum of 20% due to exclusion of securities which are not aligned with the AAA proprietary framework (as defined in the Prospectus) and/or sector exclusions as per the RBC Policy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistle-blower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report

The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

structures, employee relations, remuneration of staff and tax

compliance.

sound management

Good governance

practices include

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.
 - How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

comply with the EU

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 15%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 15%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- the proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are

indexes to

social

measure whether the financial

product attains the environmental or

characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Environmental and/or social characteristics

Ooes this financial product have a sus	stainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 35% of its assets in 'sustainable investments' as defined in Article 2(17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy. - operational

expenditure (OpEx) reflecting green operational activities of investee companies.

The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy,** the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Green Bond legal identifier: 2138007NIV728258MK31

SUSTAINABLE INVESTMENT OBJECTIVE

		×	in economic activities that qualify as environmentally sustainable under the EU Taxonomy			with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy		
		×	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy			with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		
						with a social objective		
		sustai	make a minimum of inable investments with al objective:%		,	notes E/S characteristics, but will ake any sustainable investments		

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Green Bond fund is to allocate capital to new and existing projects with environmental benefits by investing in green bonds issued by corporate, supranational, sovereign agencies, local entities and/or governments to finance environmentally sound and sustainable projects that foster a net-zero emissions economy and protect the environment.

The eligible green projects categories include, but are not limited to:

- Renewable energy (including production, transmission, appliances and products);
- Energy efficiency (such as in new and refurbished buildings, energy storage, district heating, smart grids, appliances and products);
- Clean transportation (such as electric, hybrid, public, rail, non-motorized, multi-modal transportation, infrastructure for clean energy vehicles and reduction of harmful emissions);

- Solutions for climate change (including efforts to make infrastructure more resilient to impacts of climate change, as well as information support systems, such as climate observation and early warning systems);
- Green buildings that meet regional, national or internationally recognized standards or certifications for environmental performance.

The selected green bonds should comply with the principles formulated by the International Capital Market Association and receive a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Sustainable investments underlying the financial product contribute to the environmental objectives set out in Article 9 of Regulation (EU) 2020/852: climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy;
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology;
- The percentage of the financial product's portfolio invested in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR;
- The percentage of the financial product's portfolio aggregate Revenue which is "EU Taxonomy Aligned" as defined by Regulation (EU) 2020/852.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process; RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

<u>Environment</u>

4. Investments in companies without carbon emission reduction initiatives

<u>Social</u>

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement</u>: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment:
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNPP AM <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations</u>.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Bloomberg MSCI Global Green Bond (Hedged in EUR) (RI) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in global green bonds supporting environmental projects, being issued by corporate, supranational sovereign agencies, local entities and/or governments issued in hard currencies (AUD, CAD, CHF, EUR, GBP, JPY, and USD). Investment grade structured debts may represent up to 20% of the assets.

After hedging, the Fund's exposure to currencies other than EUR may not exceed 5%.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT Sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights at each step of the investment process of the Fund.

The investment universe of this Fund is based on the Green Bond Principles ("GBP")* as formulated by the International Capital Market Association (more information on these principles are available in the following website: https://www.icmagroup.org/sustainable-finance/the-principles-guidelines-and-handbooks/green-bond-principles-gbp/). The Fund follows the Impact approach which means that the Fund invests with the intention to contribute to measurable positive social and/or environmental impact alongside financial returns.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents BNPP AM Corporate English (bnpparibas-am.com)</u>:
- The financial product shall have at least 90% of its assets (excluding ancillary assets) covered by the ESG analysis based on the proprietary ESG methodology;
- The financial product shall invest in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The financial product shall invest at least 80% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation and as disclosed in the asset allocation section below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus;

 The financial product's shall invest at least 0.5% of its assets in companies "EU Taxonomy Aligned".

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance, include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure.
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 80%.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product

Good governance practices include sound management structures, employee relations, remuneration of staff ad tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the share
 of revenue from
 green activities of
 investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective contribute to the environmental objectives set out in Article 9 of Regulation (EU) 2020/852; climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems and are aligned with the EU Taxonomy are disclosed in the two graphs below in the document.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are environmentally sustainable investments that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

Not applicable.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP PARIBAS FUNDS GREEN TIGERS

legal identifier: 549300W93DAX2403V045

SUSTAINABLE INVESTMENT OBJECTIVE

Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) characteristics and while it does not have sustainable investments with as its objective a sustainable investment, it an environmental objective: will have a minimum proportion of ___% of 35% sustainable investments in economic activities that × with an environmental objective in qualify as environmentally economic activities that qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy in economic activities that do with an environmental objective in not qualify as economic activities that do not qualify as environmentally sustainable environmentally sustainable under the under the EU Taxonomy **EU Taxonomy** with a social objective It will make a minimum of It promotes E/S characteristics, but will not make any sustainable investments sustainable investments with a social objective: 1%

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Green Tigers is to help or accelerate the transition to a more sustainable economy by focusing on challenges related to the environment in the Asia-Pacific region.

At all times, this sub-fund invests at least 75% of its assets in equities and/or equity equivalent securities issued by companies based in Asia and/or in the Pacific Region that conduct a significant part of their business in environmental markets.

"Environmental markets" include, but are not limited to, Renewable & Alternative Energy, Energy Efficiency, Water Infrastructure & Technologies, Pollution Control, Waste Management & Technologies, Environmental Support Services, and Sustainable Food.

Sustainable investments underlying the financial product contribute to the environmental objectives set out in Article 9 of Regulation (EU) 2020/852: climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product:

- The percentage of the financial product's portfolio invested in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics;
- The percentage of the financial product's portfolio compliant with the BNP Paribas Asset Management Responsible Business Conduct Policy (RBC policy);
- The percentage of the financial product's assets covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology (excluding ancillary liquid assets);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
- The percentage of the financial product's portfolio aggregate Revenue which is "EU Taxonomy Aligned" as defined by Regulation (EU) 2020/852.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

In order to ensure that the sustainable investments that the financial product intends to make do not cause significant harm to any environmental or social sustainable objective, the financial product assesses each investment against a set of indicators of adverse impacts by conducting proprietary Fundamental ESG analysis for all portfolio holdings. The ESG analysis aims to identify the quality of governance structures, the most material environmental and social harms for a company or issuer and assesses how well these harms are addressed and managed. The Investment Manager seeks robust policies, processes, management systems and incentives as well as adequate disclosure, as applicable. Additionally, the Investment Manager assesses any past controversies identified. A proprietary aggregate ESG score is then assigned for each company or issuer taking into account the indicators as set out below, based on a qualitative judgement. As part of the internal ESG proprietary methodology used, the three criteria E, S and G account respectively for a relative minimum weight of 20% each in the scoring model. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the financial product's investable universe. The Investment Manager considers it important to engage with companies and issuers and to analyse company and issuer disclosures and reports. The ESG process is proprietary to the Investment Manager, although the Investment Manager uses external ESG-research as an input.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

Indicators for adverse impacts on sustainability factors have been taken into account in the Investment Manager's Fundamental ESG analysis as follows – the data considered, as prescribed by SFDR, by the Investment Manager to assess the relevant indicator is set out in the first paragraph under each indicator below:

Mandatory Indicators

GHG emissions, carbon footprint and GHG intensity of investee companies

Data considered: an investee company's absolute scope 1, 2 and 3 GHG emissions, and its enterprise value and revenue.

Companies are tiered between those providing full disclosure of Scopes 1, 2, 3 emissions across the majority of their operations; reporting across all four pillars prescribed by the Task Force on Climate related Financial Disclosures (TCFD); having set stretching short-medium term target (3+ years), as well as a Net zero/Paris Agreement aligned/Science-based long term target (10-30 years) and detailed actions plans versus those with no emission disclosure in place, no targets and no clear commitment to setting one.

Exposure to companies active in the fossil fuel sector

Data considered: an investee company's exposure to fossil fuel revenues.

The Investment Manager evaluates a company's transition to a low carbon economy by working towards ambitious science-based Paris-aligned decarbonisation targets and by strategically phasing out any fossil fuel exposure.

Share of non-renewable energy consumption and production, and energy consumption intensity per high impact climate sector

Data considered: an investee company's total energy consumption and production as well as the consumption and production from non-renewable energy sources, and an investee company's output metric as the basis of energy intensity.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks prescribed by the International Sustainability Standards Board (ISSB), the Global Reporting Initiative (GRI) and the CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Activities negatively affecting biodiversity-sensitive areas

Data considered an investee company's sites/operations located in or near to biodiversity-sensitive areas.

The Investment Manager uses external tools and research as well as its own proprietary analysis in assessing companies' management of nature-related harms. The Investment Manager seeks investment in companies or issuers that have addressed the harm with robust policies, processes, management systems and incentives that are scaled appropriately to the importance of the harm. Site-level geolocation data and regional exposure are not always easily available or disclosed by companies and issuers. The Investment Manager engages with companies to achieve geo-location data and to assess the potential harm at the specific locations of interest, for example highlighting habitats of IUCN Red List species (the International Union for Conservation of Nature), protected areas and key biodiversity areas in the vicinity.

Emissions to water, and hazardous waste and radioactive waste ratio

Data considered: an investee company's generated tonnes of emissions to water, and tonnes of hazardous waste and radioactive waste.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

Data considered: an investee company's involvement in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.

The Investment Manager screens the Sub-Fund's investments against adherence to global standards such as the UN Global Compact principles and OECD Guidelines for Multinational Enterprises. An external research provider is used to support this screening activity. A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

Data considered: instances where an investee company is lacking policies to monitor compliance with the UNGC Principles or OECD Guidelines.

The Investment Manager uses external tools and research to assertain the existence/non-existence of these policies and identify those companies that do not satisfy credible policy standards in all those areas that speak to UNGC principles or the OECD Guidelines.

Unadjusted gender pay gap

Data considered: an investee company's average gross hourly earnings of male paid employees and of female paid employees as a percentage of average gross hourly earnings of male paid employees.

Companies are assessed for their pay equity through review of the pay gap, were available, alongside a broader set of KPIs related to Equality, Diversity & Inclusion (ED&I). Companies are tiered between those demonstrating state of the art management processes and those with no ED&I disclosure.

Board gender diversity

Data considered: an investee company's number of women on the board of directors and percentage of board members that are female.

Companies are assessed for their board gender diversity alongside other key roles which influence company strategy alongside a broader set of metrics related to leadership diversity. Companies are tiered between those achieving 40%-60% women on the board and in executive management as well as demonstrating diversity in key roles and those with no women on the board or in executive management.

Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Data considered: an investee company's exposure to controversial weapons through business activity and ownership.

Companies are screened by business activity in an effort to ensure, using a combination of screen activity and the Investment Manager's qualitative judgement, that they are not involved in the activity of manufacturing or of manufacturing tailor-made components, using, repairing, putting up for sale, selling, distributing, importing or exporting, storing or transporting controversial or indiscriminate weapons such as anti-personnel mines, submunitions, inert ammunition and armour containing depleted uranium or any other industrial uranium, weapons containing white phosphorus, biological, chemical or nuclear weapons. The Investment Manager seeks to exclude all companies with any involvement in controversial weapons from investment and in addition uses qualitative judgement as part of the analysis. If the Investment Manager determines that one of these activities takes place within a subsidiary, the direct parent company is also considered to be involved in controversial weapons if it holds a majority equity interest in the subsidiary. Likewise, if one of the above-mentioned activities is determined to take place within a parent company, any majority-owned subsidiary of this parent company is also deemed to be involved.

Voluntary Indicators

Investments in companies without carbon emission reduction initiatives

Data considered: instances where an investee company is lacking of all of the following: near-term GHG reduction target, long-term GHG reduction target (10+ years), science-based GHG reduction target, Net Zero commitment.

The Investment Manager actively seeks to engage with companies to encourage the implementation of effective performance management systems, with the objective to establish GHG emissions baseline data (scope 1, 2 and 3), set science-based long-term carbon emission reduction targets with a viable action plan to deliver on these targets, and regularly report.

Water usage and recycling

Data considered: an investee company's operational water use (cubic meters of water consumed), and water management (percentage of water recycled and reused).

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws

Data considered: an investee company's number of convictions per severity category in the past three to five years (three years for minor controversies or incidents; five years for more significant controversies or incidents).

The materiality and severity of convictions and fines for violation of anti-corruption and anti-bribery laws are reviewed as part of the Fundamental ESG analysis.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The Investment Manager uses a Global Standards Screening which assesses companies' impact on stakeholders and the extent to which a company causes, contributes or is linked to violations of international norms and standards. The underlying research provides assessments covering the OECD Guidelines for Multinational Enterprises and the UN's Global Compact Principles, as well as International Labour Organization's (ILO) Conventions, and the UN Guiding Principles on Business and Human Rights (UNGPs). A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The Sub-Fund considers principal adverse impacts on sustainability factors by identifying, assessing, and managing negative effects of portfolio-related investment decisions on environmental, social and employee matters, respect for human rights, and anti-bribery & corruption matters.

The following illustrates how this exposure is intended to be managed, once identified and assessed, taking into account each of the mandatory and voluntary indicators listed above.

1. All companies and other issuers must meet financial and ESG criteria before entering the Sub-Fund's list of investable companies. When all the data is gathered, an ESG report is

written and a proprietary aggregate ESG score assigned. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the investable universe. In cases where a company has a low ESG score, but is not deemed to cause significant harm and is not excluded, the company will have a capped position size in the portfolio, for risk management reasons. The Investment Manager does not seek to exclude a certain number or percentage of companies or issuers, but rather seeks an absolute level of ESG quality based on a qualitative judgement.

2. Bottom-up company-specific engagement: As part of the Investment Manager's ongoing, proprietary company and issuer-level ESG analysis, it identifies company and issuer-specific matters and risks and actively engages with companies and issuers about these matters. For the bottom-up, company specific engagements, the objective is typically to solve or improve the issue that has been identified as part of ESG analysis and when that objective has been achieved, move to the next objective or pause the engagement.

Top-down strategic engagement: Every year the Investment Manager assesses and outlines the engagement priorities for the next 12 months. These priorities are based on market developments and emerging sustainability issues that are considered relevant and material for companies and issuers. The Investment Manager then identifies the companies and issuers which it considers are most exposed to these topics and focuses its engagement on specific companies and issuers. For the strategic engagement areas, the Investment Manager sets up specific steps as objectives that it seeks to reach with the engagements. The strategic engagement areas have analysts assigned as leads for each of the areas of engagement.

3. Where the Investment Manager identifies unmanaged risk, and its usual management approach to engagement fails to produce positive outcomes, its Escalation Policy takes hold.

If the Investment Manager views the investee company or issuer is unresponsive to engagement or unwilling to consider alternative options posing less significant risks to shareholders, the Investment Manager will escalate the dialogue by:

- Seeking alternative or more senior contacts within the company or issuer
- Intervening or engaging together with other shareholders
- Intervening or engaging together with other institutions or organisations (multi-stakeholder)
- Highlighting the issue and/or joint engagements regarding the issue through institutional platforms and/or
- Filing or co-filing resolutions at General Meetings

If interventions are unsuccessful and the Investment Manager considers that the risk profile of the company has significantly deteriorated or company strategy/governance structures have altered because of an incident, to a degree where the return outlook and the company's strategy and quality no longer meet expectations, the company would be excluded from the investable universe and/or sold.

Information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

Νo

decisions based on

factors such as

investment objectives and risk

tolerance.

What investment strategy does this financial product follow?

This Product is actively managed. The composite benchmark 20% MSCI Japan (EUR) NR + 80% MSCI AC Asia Pacific ex-Japan (EUR) NR index is used for performance comparison only. The Product is not benchmark constrained and its performance may deviate significantly from that of the composite benchmark.

The Product seeks to increase the value of its assets over the medium term by investing in shares issued by companies that operate in Environmental Markets in the Asia-Pacific region.

Environmental Markets include, but are not limited to, Renewable & Alternative Energy, Energy Efficiency, Water Infrastructure & Technologies, Pollution Control, Waste Management & Technologies, Environmental Support Services, and Sustainable Food.

It may be exposed to Mainland China by investing in China A shares via the Stock Connect.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Product.

The Product follows the Sustainable Thematic approach which means that it invests in companies or projects which products, services or operations positively contribute to the environmental and/or social challenges addressed by the theme.

The Product seeks to allocate capital to specific themes of the transition towards a more sustainable economy and to benefit from future growth anticipated in these themes.

The approach is implemented in order to consistently eliminate at least 250% of the investment universe being companies conducting significant part of their business in environmental markets.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain f the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

 More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents BNPP AM Corporate English (bnpparibas-am.com)
- The financial product must comply, as part of their investment policy, with the list of exclusions criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall invest in companies with at least a 20% of revenues aligned with the financial product's thematics;
- The financial product's investment universe is reduced by a minimum of 25% due to exclusion of securities with low ESG score and the applicable exclusions
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology;
- The financial product's ratio of investments in investee companies without a supplier code of conduct is lower than that of the extra-financial investment universe (voluntary social PAI 4).
- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).

- The financial product shall invest at least 85% of its portfolio in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" and the quantitative and qualitative thresholds are indicated in the main part of the Prospectus.
- The financial product's shall invest at least 2% of its assets in companies "EU Taxonomy Aligned".
- What is the policy to assess good governance practices of the investee companies?

Pre investment

The Investment Manager analyses companies' governance structures taking into account what constitutes common and best global practice for governance and identifying potential outliers. Once the governance and other ESG analytical data is gathered, an ESG report is produced and a proprietary ESG score is assigned as part of the Fundamental ESG analysis as described above.

Post investment

The Investment Manager's proxy voting is predominantly related to governance issues such as the election of directors, board structures and management remuneration. When practicable, the Investment Manager seeks to engage with the investee company before voting against management's recommendation on an AGM resolution. The Investment Manager is also in dialogue with companies throughout the year to discuss and comment on proposed governance structures.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 85%.

Taxonomy-aligned activities are

Asset allocation

describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations, remuneration of

compliance.

expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective contribute to the environmental objectives set out in Article 9 of Regulation (EU) 2020/852; climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems and are aligned with the EU Taxonomy are disclosed in the two graphs below in the document.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

To comply with the EU Taxonomy, the criteria for **fossil**

gas include

limitations on emissions and

activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

are environmentally sustainable investments that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The objective of the investment manager is not to prevent the product from investing in taxonomyaligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP PARIBAS FUNDS HEALTH CARE Legal Entity Identifier: 2138000X5JSJS4FMQT04 INNOVATORS

Environmental and/or social characteristics

Does this financial product have a sus	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The sub-fund invest at least 50% of the fund assets (% of AUM) in companies with at least 20% revenue, profit or capital invested in economic activities aligned to the theme
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The sub-fund shall invest at least 50% of the fund assets (% of AUM) in companies with at least 20% revenue, profit or capital invested in economic activities aligned to the theme
- The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial describes the share product. of investments in specific assets.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

Taxonomy-aligned activities are expressed as a share of:

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a
- green economy.
 operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 30%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor

practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

It will make a minimusustainable invest a social objective:	ments with	'	notes E/S characteristics, but will ake any sustainable investments		

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- o Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy;
- The percentage of the financial product's portfolio invested in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology;
- The percentage of the investment universe, being the large and mid-cap companies across the main markets of developed countries, eliminated on the basis of low ESG scores and/or sector exclusions, as defined in the Prospectus.
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
 - b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
 - Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-

corruption and antibribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account all principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio

- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.</u>

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

Exclusion of issuers that are in violation of international norms and conventions and issuers
that are involved in activities presenting an unacceptable risk to society and/or the
environment;

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

<u>Social</u>

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.</u>

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives", to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

 More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents BNPP AM Corporate English (bnpparibas-am.com);
 - The financial product must comply, as part of their investment policy, with the list of exclusions criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/;
 - The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology;
 - The financial product shall invest in companies with at least a 20% of revenues aligned with the financial product's thematics;
 - The financial product's investment universe shall be reduced by a minimum of 25% due to
 exclusion of securities with low ESG score and sector exclusions.;
 - The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).
 - The proportion of investments in entities without a human rights policy in the portfolio is lower than that of the non financial investment universe (voluntary social indicator of negative impact on sustainability no. 9)

- The financial product shall invest at least 51% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product's investment universe is reduced by a minimum of 25% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistle-blower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report

The minimum proportion of sustainable investments of the financial product is 51%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations, remuneration of

structures,

staff and tax

compliance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.
 - How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

	Yes:					
		In fo	ssil	gas	In nuclear en	erg
×	No					

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 15%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- the proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes , or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

Where can the methodology used for the calculation of the designated index be found?

Not applicable

indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

benchmarks are

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

sustainable

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 5% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 65% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 5%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green

showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Product name : BNP PARIBAS FUNDS JAPAN EQUITY Legal Entity Identifier : 213800PMMLCEJCRDSV44

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does

an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

Sustainable

investment means

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Environmental and/or social characteristics

Does this financial product have a sus	etainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include

structures,

compliance.

sound management

employee relations,

remuneration of staff and tax

Taxonomy-aligned activities are expressed as a share of:

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made
- a transition to a green economy. - operational expenditure (OpEx) reflecting green operational activities of investee

companies, e.g. for

by investee

companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 8%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Product name : BNP PARIBAS FUNDS JAPAN SMALL CAP Legal Entity Identifier : 2138002KWXMBLNCJ1K71

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?							
Yes	No No						
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments						
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective						
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments						

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 65% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee
- green economy.
 operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

companies, e.g. for a transition to a

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 7%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any

environmental or social objective and that the investee companies follow good governance practices.

Sustainable

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS LOCAL EMERGING BOND Legal Entity Identifier : 213800I22KUZJM4CEK30

Environmental and/or social characteristics

Does this financial product have a sus Yes	tainable investment objective? x No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 1% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics

promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF
In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 1% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 39% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 1%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for
- green economy.
 operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

a transition to a

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor

practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good

governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Multi-Asset Opportunities

Legal entity identifyier: 213800R8Y0DPGFGWSN58

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this Jinancial product have a sustainable investment objective?							
••		Yes	• 0	×	No		
	It will make a minimum of sustainable investments with an environmental objective:		×	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments			
	qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy			with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy			
			×	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy			
			•	with a social objective			
	sustai	make a minimum of nable investments with a objective:%			notes E/S characteristics, but will ake any sustainable investments		

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to :

 Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

(workers' health and safety, diversity);

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Social: respect of human rights and workers' rights, human resources management

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution;
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital;
- Governance: business rights, corruption, democratic life, political stability, security.

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy;
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology;
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: 14787511-CB33-49FC-B9B5-7E934948BE63 (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and

construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

<u>Social</u>

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.</u>

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material toconsideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment:
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

<u>Social</u>

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

15. GHG intensity

16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement</u>: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

Νo

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, Environmental, Social and Governance (ESG) criteria that it promotes are taken into account at each step of its the investment process .

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The Investment Manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).</u>

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology;
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus;
- The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 30%.

Asset allocation describes the share of investments in specific assets.

Good governance

practices include

structures,

sound management

employee relations,

remuneration of

staff and tax

compliance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.
 - How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and/or hedging purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

economic activities

sustainable

under the EU

Taxonomy.

ASSET MANAGEMENT

- the proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes , or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment...

Reference benchmarks are

indexes to

social

measure whether the financial

product attains the

environmental or

characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?
 - Not applicable
- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Multi-Asset Thematic

Legal entity identifyier: 213800UZ2D3L57GDQS87

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective?			
••	Yes	• No	
	It will make a minimum of sustainable investments with an environmental objective:	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments	
	qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy	
	not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than

quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- o Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

 The percentage of the direct investments and internal active funds compliant with the RBC Policy;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's assets invested, through internal and/or external active and/or passive funds, in funds categorised as Article 8 and Article 9 under the SFDR regulation
 - The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
 - The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
 - b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and

sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
 - b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account all the principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.</u>

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the

following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 4. Exposure to companies active in the fossil fuel sector
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.</u>

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, Environmental, Social and Governance (ESG) criteria that it promotes are taken into account at each step of its the investment process .

For internal investments, the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. The ESG score is built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG scoring methodology.

While investing in external funds and/or passive funds selected by the dedicated internal team, the used ESG criteria are defined in the framework of the proprietary ESG methodology of the third-party asset manager and/or index provider.

Then the binding elements of the investment strategy described in the question below are constantly integrated to construct an investment portfolio with an improved ESG profile compared to its investment universe.

In addition, issuers that contribute to environmental and/or social objectives will be determined in accordance with sustainable investment methodologies disclosed in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall invest, through internal and/or external active and/or passive funds, at least 75% of its assets funds categorised as Article 8 and Article 9 under the SFDR regulation;
 - The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus;
 - The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

What is the asset allocation planned for this financial product?

At least 75% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation,

climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 12%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 11%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?

 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Reference

benchmarks are

environmental or

characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS FUNDS NORDIC SMALL CAP Legal Entity Identifier : 2138006KPZV6BCZDL636

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?			
Yes	No No		
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25% of sustainable investments		
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in		
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		
	x with a social objective		
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments		

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average portfolio GHG Intensity of the sub-fund compared to the average portfolio GHG Intensity of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the average portfolio GHG Intensity improved by at least 15% compared to the average portfolio GHG Intensity of its investment universe
- The financial product shall invest at least 25% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

At least 65% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The minimum proportion of sustainable investments of the financial product is 25%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

companies follow good governance practices.

Sustainable

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Ooes this financial product have a sus	stainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics

promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF
In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 10% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies.
 capital expenditure (CapEx) showing the green
- expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Product name : BNP PARIBAS FUNDS RUSSIA EQUITY Legal Entity Identifier : 213800G2LKI5NZHHK851

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 0% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	x It promotes E/S characteristics, but will not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Not applicable

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Not applicable

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

x No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

Good governance **practices** include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 0% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 0%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

Asset allocation

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor

practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Seasons

Sustainable investment means

follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable

investments with an environmental objective might be aligned with the Taxonomy or not.

an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies Legal entity identifyier: 213800NAF4CIGP4Q7Q29

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective?		
• • Yes	• No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy	
not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	
	with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product, through its investments in "risky asset", promotes environmental and social characteristics by assessing options underlying investments against Environmental, Social, and Governance (ESG) criteria. As such, the product is partially exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

Such issuers' selection is done through:

- o A negative screening applying
 - exclusion of issuers that violate or are at risk of violating commonly accepted international norms and standards, enshrined in the United Nations Global Compact (UNGC) Principles, the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights (UNGPs), and their underlying conventions;

- exclusion of companies involved in Controversial Weapons, Military Contracting, Tobacco and Thermal Coal.
- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer and selection of the ones with the highest ESG score

Furthermore, the investment manager, through its investments into "low risk asset", promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The EuroStoxx 50 ESG Index is the options' underlying and has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The minimum percentage of the "risky asset" which is exposed to the reference benchmark
- The percentage of the financial product's reference benchmark portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies;
- The minimum percentage of the financial product's reference benchmark investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

-— How have the indicators for adverse impacts on sustainability factors been taken into account?

Not Applicable.

— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not Applicable.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The product considers principal adverse impacts on sustainability factors.

The «low risk asset» consists in an investment in a portfolio of equity securities which systematically implement the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- ${\bf 5. \ Share \ of \ non-renewable \ energy \ consumption \ and \ production}$
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement</u>: sustainability risk integration and Principal Adverse Impacts considerations.

Regarding the "risk asset", to determine which PAI is considered and addressed or mitigated, the investment manager uses ESG methodology and disclosures of the reference benchmark.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

- 1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;
- 2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;
- 3- Engagement and voting policy, when applicable

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
- The minimum percentage of the "risky asset" which is exposed to the reference benchmark represents at least 50%
- The financial product reference benchmark portfolio shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

The investment strategy guides investment decisions based on factors such as investment

objectives and risk

tolerance.

- The financial product's reference benchmark investment universe shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product's reference benchmark portfolio of the investment strategy shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

What is the policy to assess good governance practices of the investee companies?

The reference benchmark ESG scoring framework assesses corporate governance such as sound management structures, employee relations, remuneration of staff and tax compliance through a core set of standard key performance indicators that look especially at board, pay, ownership and control, and accounting practices.

Further information on the reference benchmark, its composition, calculation and rules for periodical review and rebalancing and on the general methodology behind the ECPI indices can be found on: <u>ESG Indices - Qontigo</u>.

The financial product is invested in "risky asset" through options instruments. Consequently, the asset allocation planned for this financial product, as well as any minimum proportion described below, are the ones of the derivative instruments such as listed options used on a continuous basis for achieving the investment policy.

Given the variable exposure to the "risky asset" in relation to the protection mechanism and the market conditions, and in accordance with the binding elements of the investment strategy of the financial product, the proportion of such investments used to meet the environmental or social characteristics promoted by the financial product will be between 0% and the maximum allocation to the "risky asset" enabled by the investment strategy. Within the reference benchmark itself, the minimum proportion of investments used to meet the environmental or social characteristics is expected to be higher than 50%.

The exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 0%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?".

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

- **#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.
- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments such as options are used on a continuous basis for achieving the investment policy which promotes environmental or social characteristics. Moreover the securities physically held by the financial product, performance of which is swapped, respect minimum extra-financial safeguards.

Other derivative instruments may also be used for efficient portfolio management and hedging purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable.

What is the minimum share of socially sustainable investments?

Not applicable.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- the proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are

indexes to measure whether the financial product attains the

environmental or

characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The EuroStoxx 50 ESG Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

The environmental or social characteristics promoted by the financial product are directly linked to the ones of the reference benchmark as the "risky asset" part of the financial product is partially invested via the use of the reference benchmark.

The reference benchmark is rule-based and therefore continuously apply its methodology, including environmental or social characteristics.

However, there is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two strategy reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the reference benchmark administrator rules

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The alignment of the investment strategy with the methodology of the index is intrinsic to the investment objective of the financial product which is to get partially exposed to the performance of the options implemented via the use of the reference benchmark

How does the designated index differ from a relevant broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted

Where can the methodology used for the calculation of the designated index be found?

The methodology used for the calculation of the reference benchmark can be found at: <u>ESG Indices - Qontigo</u>

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP PARIBAS Funds SMaRT FOOD

legal identifier: 213800YTNPCDGU4KGD79

SUSTAINABLE INVESTMENT OBJECTIVE

Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with characteristics and while it does not have as its objective a sustainable investment, it an environmental objective: will have a minimum proportion of ___% of 35% sustainable investments in economic activities that with an environmental objective in qualify as environmentally economic activities that qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy in economic activities that do with an environmental objective in not qualify as economic activities that do not qualify as environmentally sustainable environmentally sustainable under the under the EU Taxonomy **EU Taxonomy** with a social objective It will make a minimum of It promotes E/S characteristics, but will not make any sustainable investments sustainable investments with a social objective: 1%

good governance practices. The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental

objective might be aligned with the Taxonomy or not.

Sustainable

investment means an investment in an

economic activity that contributes to an environmental or

social objective, provided that the

investment does not significantly harm

any environmental

or social objective

companies follow

and that the investee

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas SMaRT Food is to help or accelerate the transition to a more sustainable economy by focusing on challenges related to the food value chain and nutrition.

At all times, this sub-fund invests at least 75% of its assets in equities and/or equity equivalent securities issued by global companies that conduct a significant proportion of their business in the food supply chain and related or connected sectors with sustainable activities and processes.

The food value chain includes but is not limited to, growers and inputs, technology and logistics, food safety, sustainable packaging, distribution, basic foods and ingredients, value added foods.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product:

- The percentage of the financial product's portfolio invested in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics;
- The percentage of the financial product's portfolio compliant with the BNP Paribas Asset Management Responsible Business Conduct Policy (RBC Policy);
- The percentage of the financial product's assets covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology (excluding ancillary liquid assets);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

In order to ensure that the sustainable investments that the financial product intends to make do not cause significant harm to any environmental or social sustainable objective, the financial product assesses each investment against a set of indicators of adverse impacts by conducting proprietary Fundamental ESG analysis for all portfolio holdings. The ESG analysis aims to identify the quality of governance structures, the most material environmental and social harms for a company or issuer and assesses how well these harms are addressed and managed. The Investment Manager seeks robust policies, processes, management systems and incentives as well as adequate disclosure, as applicable. Additionally, the Investment Manager assesses any past controversies identified. A proprietary aggregate ESG score is then assigned for each company or issuer taking into account the indicators as set out below, based on a qualitative judgement. As part of the internal ESG proprietary methodology used, the three criteria E, S and G account respectively for a relative minimum weight of 20% each in the scoring model. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the financial product's investable universe. The Investment Manager considers it important to engage with companies and issuers and to analyse company and issuer disclosures and reports. The ESG process is proprietary to the Investment Manager, although the Investment Manager uses external ESG-research as an input.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

Indicators for adverse impacts on sustainability factors have been taken into account in the Investment Manager's Fundamental ESG analysis as follows – the data considered, as prescribed by SFDR, by the Investment Manager to assess the relevant indicator is set out in the first paragraph under each indicator below:

Mandatory Indicators

GHG emissions, carbon footprint and GHG intensity of investee companies

Data considered: an investee company's absolute scope 1, 2 and 3 GHG emissions, and its enterprise value and revenue.

Companies are tiered between those providing full disclosure of Scopes 1, 2, 3 emissions across the majority of their operations; reporting across all four pillars prescribed by the Task Force on Climate related Financial Disclosures (TCFD); having set stretching short-medium term target (3+

years), as well as a Net zero/Paris Agreement aligned/Science-based long term target (10-30 years) and detailed actions plans versus those with no emission disclosure in place, no targets and no clear commitment to setting one.

Exposure to companies active in the fossil fuel sector

Data considered: an investee company's exposure to fossil fuel revenues.

The Investment Manager evaluates a company's transition to a low carbon economy by working towards ambitious science-based Paris-aligned decarbonisation targets and by strategically phasing out any fossil fuel exposure.

Share of non-renewable energy consumption and production, and energy consumption intensity per high impact climate sector

Data considered: an investee company's total energy consumption and production as well as the consumption and production from non-renewable energy sources, and an investee company's output metric as the basis of energy intensity.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks prescribed by the International Sustainability Standards Board (ISSB), the Global Reporting Initiative (GRI) and the CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Activities negatively affecting biodiversity-sensitive areas

Data considered an investee company's sites/operations located in or near to biodiversity-sensitive areas.

The Investment Manager uses external tools and research as well as its own proprietary analysis in assessing companies' management of nature-related harms. The Investment Manager seeks investment in companies or issuers that have addressed the harm with robust policies, processes, management systems and incentives that are scaled appropriately to the importance of the harm. Site-level geolocation data and regional exposure are not always easily available or disclosed by companies and issuers. The Investment Manager engages with companies to achieve geo-location data and to assess the potential harm at the specific locations of interest, for example highlighting habitats of IUCN Red List species (the International Union for Conservation of Nature), protected areas and key biodiversity areas in the vicinity.

Emissions to water, and hazardous waste and radioactive waste ratio

Data considered: an investee company's generated tonnes of emissions to water, and tonnes of hazardous waste and radioactive waste.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

Data considered: an investee company's involvement in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.

The Investment Manager screens the Sub-Fund's investments against adherence to global standards such as the UN Global Compact principles and OECD Guidelines for Multinational

Enterprises. An external research provider is used to support this screening activity. A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

Data considered: instances where an investee company is lacking policies to monitor compliance with the UNGC Principles or OECD Guidelines.

The Investment Manager uses external tools and research to assertain the existence/non-existence of these policies and identify those companies that do not satisfy credible policy standards in all those areas that speak to UNGC principles or the OECD Guidelines.

Unadjusted gender pay gap

Data considered: an investee company's average gross hourly earnings of male paid employees and of female paid employees as a percentage of average gross hourly earnings of male paid employees.

Companies are assessed for their pay equity through review of the pay gap, were available, alongside a broader set of KPIs related to Equality, Diversity & Inclusion (ED&I). Companies are tiered between those demonstrating state of the art management processes and those with no ED&I disclosure.

Board gender diversity

Data considered: an investee company's number of women on the board of directors and percentage of board members that are female.

Companies are assessed for their board gender diversity alongside other key roles which influence company strategy alongside a broader set of metrics related to leadership diversity. Companies are tiered between those achieving 40%-60% women on the board and in executive management as well as demonstrating diversity in key roles and those with no women on the board or in executive management.

Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Data considered: an investee company's exposure to controversial weapons through business activity and ownership.

Companies are screened by business activity in an effort to ensure, using a combination of screen activity and the Investment Manager's qualitative judgement, that they are not involved in the activity of manufacturing or of manufacturing tailor-made components, using, repairing, putting up for sale, selling, distributing, importing or exporting, storing or transporting controversial or indiscriminate weapons such as anti-personnel mines, submunitions, inert ammunition and armour containing depleted uranium or any other industrial uranium, weapons containing white phosphorus, biological, chemical or nuclear weapons. The Investment Manager seeks to exclude all companies with any involvement in controversial weapons from investment and in addition uses qualitative judgement as part of the analysis. If the Investment Manager determines that one of these activities takes place within a subsidiary, the direct parent company is also considered to be involved in controversial weapons if it holds a majority equity interest in the subsidiary. Likewise, if one of the above-mentioned activities is determined to take place within a parent company, any majority-owned subsidiary of this parent company is also deemed to be involved.

Voluntary Indicators

Investments in companies without carbon emission reduction initiatives

Data considered: instances where an investee company is lacking of all of the following: near-term GHG reduction target, long-term GHG reduction target (10+ years), science-based GHG reduction target, Net Zero commitment.

The Investment Manager actively seeks to engage with companies to encourage the implementation of effective performance management systems, with the objective to establish GHG emissions baseline data (scope 1, 2 and 3), set science-based long-term carbon emission reduction targets with a viable action plan to deliver on these targets, and regularly report.

Water usage and recycling

Data considered: an investee company's operational water use (cubic meters of water consumed), and water management (percentage of water recycled and reused).

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws

Data considered: an investee company's number of convictions per severity category in the past three to five years (three years for minor controversies or incidents; five years for more significant controversies or incidents).

The materiality and severity of convictions and fines for violation of anti-corruption and antibribery laws are reviewed as part of the Fundamental ESG analysis.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The Investment Manager uses a Global Standards Screening which assesses companies' impact on stakeholders and the extent to which a company causes, contributes or is linked to violations of international norms and standards. The underlying research provides assessments covering the OECD Guidelines for Multinational Enterprises and the UN's Global Compact Principles, as well as International Labour Organization's (ILO) Conventions, and the UN Guiding Principles on Business and Human Rights (UNGPs). A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The Sub-Fund considers principal adverse impacts on sustainability factors by identifying, assessing, and managing negative effects of portfolio-related investment decisions on environmental, social and employee matters, respect for human rights, and anti-bribery & corruption matters.

The following illustrates how this exposure is intended to be managed, once identified and assessed, taking into account each of the mandatory and voluntary indicators listed above.

1. All companies and other issuers must meet financial and ESG criteria before entering the Sub-Fund's list of investable companies. When all the data is gathered, an ESG report is

written and a proprietary aggregate ESG score assigned. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the investable universe. In cases where a company has a low ESG score, but is not deemed to cause significant harm and is not excluded, the company will have a capped position size in the portfolio, for risk management reasons. The Investment Manager does not seek to exclude a certain number or percentage of companies or issuers, but rather seeks an absolute level of ESG quality based on a qualitative judgement.

2. Bottom-up company-specific engagement: As part of the Investment Manager's ongoing, proprietary company and issuer-level ESG analysis, it identifies company and issuer-specific matters and risks and actively engages with companies and issuers about these matters. For the bottom-up, company specific engagements, the objective is typically to solve or improve the issue that has been identified as part of ESG analysis and when that objective has been achieved, move to the next objective or pause the engagement.

Top-down strategic engagement: Every year the Investment Manager assesses and outlines the engagement priorities for the next 12 months. These priorities are based on market developments and emerging sustainability issues that are considered relevant and material for companies and issuers. The Investment Manager then identifies the companies and issuers which it considers are most exposed to these topics and focuses its engagement on specific companies and issuers. For the strategic engagement areas, the Investment Manager sets up specific steps as objectives that it seeks to reach with the engagements. The strategic engagement areas have analysts assigned as leads for each of the areas of engagement.

3. Where the Investment Manager identifies unmanaged risk, and its usual management approach to engagement fails to produce positive outcomes, its Escalation Policy takes hold.

If the Investment Manager views the investee company or issuer is unresponsive to engagement or unwilling to consider alternative options posing less significant risks to shareholders, the Investment Manager will escalate the dialogue by:

- Seeking alternative or more senior contacts within the company or issuer
- Intervening or engaging together with other shareholders
- Intervening or engaging together with other institutions or organisations (multi-stakeholder)
- Highlighting the issue and/or joint engagements regarding the issue through institutional platforms and/or
- Filing or co-filing resolutions at General Meetings

If interventions are unsuccessful and the Investment Manager considers that the risk profile of the company has significantly deteriorated or company strategy/governance structures have altered because of an incident, to a degree where the return outlook and the company's strategy and quality no longer meet expectations, the company would be excluded from the investable universe and/or sold.

Information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Product is actively managed. The benchmark MSCI AC World (EUR) NR is used for performance comparison only. The Product is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Product seeks to increase the value of its assets over the medium term by investing in shares issued by global companies which conduct their business in the global sustainable food value chain. The food value chain includes but is not limited to, growers and inputs, technology and logistics, food safety, sustainable packaging, distribution, basic foods and ingredients, value added foods.

It may be exposed to Mainland China by investing in China A shares via the Stock Connect.

The Product may be exposed to emerging markets up to 30% of its assets, including exposure to China.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Product.

The Product follows the Sustainable Thematic approach which means that it invests in companies or projects which products, services or operations positively contribute to the environmental and/or social challenges addressed by the theme.

The Product seeks to allocate capital to specific themes of the transition towards a more sustainable economy and to benefit from future growth anticipated in these themes.

The approach is implemented in order to consistently eliminate at least 25% of the investment universe being companies belonging to the food supply chain.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents BNPP AM</u> Corporate English (bnpparibas-am.com).
- The financial product must comply, as part of their investment policy, with the list of exclusions criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall invest in companies with at least a 20% of revenues aligned with the financial product's thematics;
- The financial product's investment universe is reduced by a minimum of 25% due to exclusion of securities with low ESG score and the applicable exclusions.
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology;
- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13)

- The financial product's ratio of investments in investee companies without a supplier code of conduct is lower than that of the extra-financial investment universe (voluntary social PAI 4).
- The financial product shall invest at least 85% of its portfolio in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" and the quantitative and qualitative thresholds are indicated in the main part of the Prospectus.

What is the policy to assess good governance practices of the investee companies?

Pre investment

The Investment Manager analyses companies' governance structures taking into account what constitutes common and best global practice for governance and identifying potential outliers. Once the governance and other ESG analytical data is gathered, an ESG report is produced and a proprietary ESG score is assigned as part of the Fundamental ESG analysis as described above.

Post investment

The Investment Manager's proxy voting is predominantly related to governance issues such as the election of directors, board structures and management remuneration. When practicable, the Investment Manager seeks to engage with the investee company before voting against management's recommendation on an AGM resolution. The Investment Manager is also in dialogue with companies throughout the year to discuss and comment on proposed governance structures.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 85%.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for hedging and/or efficient portfolio management and/or investment purposes, if applicable. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

Asset allocation

Good governance

practices include sound management

employee relations,

remuneration of

compliance.

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational activities
 of investee
 companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 35%.

performance.

Enabling activities directly enable other activities to

contribution to an environmental objective.

make a

substantial

Transitional

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

are environmentally sustainable investments that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Social Bond

legal identifier: 213800P7I4V0JL4IZP76

SUSTAINABLE INVESTMENT OBJECTIVE

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Sustainable

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?		
•• × Yes	• No	
It will make a minimum of sustainable investments with an environmental objective: % in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective: 80%	It promotes E/S characteristics, but will not make any sustainable investments	

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Social Bond fund is to allocate capital to new and existing projects with positive social outcomes or a combination of both social and environmental benefits by investing in:

 Social bonds issued by corporate, supranational, sovereign agencies, local entities and/or governments to finance socially sound and sustainable projects that achieve greater social benefits.

The eligible social project categories include, but are not limited to, providing and/or promoting:

 Affordable basic infrastructure (e.g. clean drinking water, sewers, sanitation, transport, energy);

indicators measure how the sustainable objectives of this financial product are attained.

Sustainability

- Access to essential services (e.g. health, education and vocational training, healthcare, financing and financial services);
- Affordable housing;
- Employment generation, and programs designed to prevent and/or alleviate unemployment stemming from socioeconomic crises;
- Food security and sustainable food systems (e.g. physical, social, and economic access to safe, nutritious, and sufficient food that meets dietary needs and requirements; resilient agricultural practices; reduction of food loss and waste; and improved productivity of smallscale producers).
- 2) Sustainability bonds issued by corporate, supranational sovereign agencies, local entities and/or governments to finance a combination of both green and social projects.

Examples of the eligible social project categories are mentioned above. The eligible green project categories include, but are not limited to:

- Renewable energy (including production, transmission, appliances and products);
- Energy efficiency (such as in new and refurbished buildings, energy storage, district heating, smart grids, appliances and products);
- Clean transportation (such as electric, hybrid, public, rail, non-motorized, multi-modal transportation, infrastructure for clean energy vehicles and reduction of harmful emissions);
- Solutions for climate change (including efforts to make infrastructure more resilient to impacts of climate change, as well as information support systems, such as climate observation and early warning systems);
- Green buildings that meet regional, national or internationally recognized standards or certifications for environmental performance.

The selected social and sustainability bonds should comply with the principles formulated by the International Capital Market Association and receive a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

The sustainable investment objective of the financial product is social and therefore outside the scope of the environmental objectives defined by the EU Taxonomy.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy;
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology;
- The percentage of the financial product's portfolio invested in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account all the principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process; RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas

- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

×

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment:
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the coomposition of the financial product's portfolio (i.e. type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- $5. \ Share \ of \ non-renewable \ energy \ consumption \ and \ production$
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

<u>Social</u>

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNPP AM <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations</u>.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Product is actively managed. The benchmark Bloomberg Global Treasury Euro Hedged 3-7 years is used for performance comparison only. The product is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Product aims at investing in bonds issued by entities supporting projects with positive social and sustainability outcomes.

The Product invests in Social Bonds and Sustainability Bonds, which are in line with the internal methodology developed by our Sustainability Centre.

After hedging, the Product's exposure to currencies other than EUR may not exceed 5%.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Good governance

practices include

structures,

staff ad tax

compliance.

sound management

employee relations, remuneration of

The investment team applies also BNP PARIBAS ASSET MANAGEMENT Sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria in the investments of the Product.

The Product follows the Sustainable Thematic approach which means that it invests in companies or projects which products, services or operations positively contribute to the environmental and/or social challenges addressed by the theme.

The Product seeks to allocate capital to specific themes of the transition towards a more sustainable economy and to benefit from future growth anticipated in these themes.

The Product invests at least 90% of its assets (excluding investments in ancillary liquid assets) in securities issued by issuers that have an ESG score assessed using the internal methodology. The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

■ The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the wensite of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com);

- The financial product shall have at least 90% of its assets (excluding ancillary assets) covered by the ESG analysis based on the proprietary ESG methodology;
- The financial product shall invest in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The financial product shall invest at least 80% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance, include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- expenditure
 (CapEx) showing
 the green
 investments made
 by investee
 companies, e.g. for
 a transition to a
 green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil** gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear** energy, the criteria include comprehensive safety and waste management rules.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 80%.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for hedging and/or efficient portfolio management and/or investment purposes. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

× N

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*}For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

Not applicable

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 80%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Sustainable Asian Cities Bond

Legal entity identifier: 213800BBDQKK3SP43W25

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

SUSTAINABLE INVESTMENT OBJECTIVE

Doe	s this financial product have a	sustainable investment objective?
•	× Yes	• No
×	It will make a minimum of sustainable investments with an environmental objective: 60%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments
	in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
×	It will make a minimum of sustainable investments with a social objective: 1%	It promotes E/S characteristics, but will not make any sustainable investments

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Sustainable Asian Cities Bond fund is to invest in the fixed income securities issued by entities (both private and public) determined, based on a proprietary methodology, to have relevant contributions in making urban centres in Asia more sustainable.

The concept of Sustainable Asian Cities is multi-sector and multi-aspect, with a major focus on five sustainable development areas:

 Enhancing urban mobility within and across cities, with a preference for low-carbon options e.g. public transport;

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- Improving Asian cities' basic infrastructure to operate and thrive, as well as improving cities' resilience to extreme weather events such as, but not limited to, storm water management or flood protection;
- Promoting integrated development to balance a mix of social, economic, nature-based activities such as, but not limited to, city's special economic zones or urban wetland installation;
- Building health and education facilities to increase provision and improve access to healthcare and education;
- Supporting innovative and technological solutions to support sustainable development of cities.

The product attains its sustainable objective by investing in:

- Sustainable labelled bonds (i.e., green, social, sustainability and sustainability-linked bonds) issued by corporate and government-related issuers domicited in or exercising the predominant part of their economic activity in Asian countries. The selected bonds should comply with the principles formulated by the International Capital Market Association and receive a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Centre following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.
- 2) Non-labelled bonds issued by corporate and public entities domiciled in or exercising the predominant part of their economic activity in Asian countries that contribute to the development of sustainable Asian cities through their products, services and solutions. The selected issuers should derive at least 20% of their revenues from economic activities that directly contribute to or potentially enable the development of sustainable Asian cities, according to the internal sustainable investment methodology.

The sustainable investment objective of the financial product is social and therefore outside the scope of the environmental objectives defined by the EU Taxonomy.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable objective of the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy;
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.
- How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process; RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- Hazardous waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT. SEDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation

models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that
 are involved in activities presenting an unacceptable risk to society and/or the environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social
 and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial poduct's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- Hazardous waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct

9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT. SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

Nο

What investment strategy does this financial product follow?

The Product is actively managed. The benchmark J.P. Morgan Asia Credit is used for performance comparison only. The Product is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Product seeks to increase the value of its assets over the medium term by investing in debt securities issued by Asian entities supporting the development of Sustainable Asian Cities.

The concept of Sustainable Asian Cities is multi-sector and multi-aspect, where investments can be broadly about these five aspects:

- Enhancing urban mobility within and across cities, with a preference for low-carbon options e.g. public transport
- · Improving cities' basic infrastructure to operate and thrive, as well as improving cities' resilience to extreme weather events
- · Promoting integrated development to balance a mix of social, economic, nature-based activities
- · Building health and education facilities to increase provision and improve access to healthcare and education
- Supporting innovative and technological solutions to support sustainable development of cities.

The investment universe of this Product is made up of sustainable labelled bonds and non-labelled bonds from issuers domiciled in, or exercising the predominant part of their economic activity in, Asian countries (such as, but not limited to, China, Indonesia, Korea).

The Product follows the Sustainable Thematic approach which means that it invests in companies or projects which products, services or operations positively contribute to the environmental and/or social challenges addressed by the theme.

The Product seeks to allocate capital to specific themes of the transition towards a more sustainable economy and to benefit from future growth anticipated in these themes.

The selected issuers, according to the proprietary methodology, must have at least 20% of their revenues in the activities, which are directly contributing to the theme, and/or potentially enablers of the above concept.

The Product invests at least 90% of its assets (excluding investments in cash and cash equivalents) in securities issued by issuers that have an ESG score or assessment using the investment manager internal methodology.

The investment

strategy guides investment

factors such as investment

tolerance.

decisions based on

objectives and risk

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Product.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The Product achieves this objective by investing in debt securities that are validated by the Sustainability Centre of BNPP AM.

The Product may be invested into debt securities traded on the China Interbank Bond market.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

 The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents</u> - <u>BNPP AM Corporate English</u> (bnpparibas-am.com);

- The financial product shall have at least 90% of its assets (excluding ancillary assets) covered by the ESG analysis based on the proprietary ESG methodology;
- The financial product shall invest at least 80% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance, include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 80%.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 60%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product. The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary
 to enable the management company to assess for each financial product it manages the exposure
 of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies
 due to poor practices related to human and labour rights, environment, and corruption, as well as
 companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as
 these companies are deemed to be in violation of international norms, or to cause unacceptable
 harm to society and/or the environment.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP PARIBAS FUNDS SUSTAINABLE Legal Entity Identifier: 213800WMDHBG3SVIPG26 ENHANCED BOND 12M

Environmental and/or social characteristics

Ooes this financial product have a sus	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement.

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product must comply, as part of their investment policy, with the list of exclusions criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link:
- https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall have at all the times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 25 % of securities with the lowest ESG Score and the above-mentioned exclusions applicable.
- The financial product's ratio of the lack of a supplier code of conduct is lower than that of the extra-financial investment universe (voluntary social PAI 4).
- The green bonds percentage of the financial product is higher than that of the extra-financial investment universe.
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2(17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

remuneration of

staff and tax

compliance.

structures,

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste

management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee
companies follow

good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE EURO BOND

Legal Entity Identifier: 213800PADJD20WPPPM31

Environmental and/or social characteristics

Does this financial product have a sus	stainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	x with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product must comply, as part of their investment policy, with the list of exclusions criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 25% of securities with the

lowest ESG Score and the sector above-mentioned exclusions applicable

- The financial product's ratio of the lack of a supplier code of conduct is lower than that of the extrafinancial investment universe (voluntary social PAI 4).
- The green bonds percentage within the portfolio of the financial product is higher than that of the extra-financial investment universe.
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article $\chi(17)$ of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimumrate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive management rules.

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an

environmental

environmentally sustainable

under the EU

Taxonomy.

economic activities

criteria for

objective that **do not** take into account the

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee
companies follow

good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP PARIBAS FUNDS SUSTAINABLE EURO Legal Entity Identifier: 21380041X8BU15MQFB08 CORPORATE BOND

Environmental and/or social characteristics

Ooes this financial product have a sus	stainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 60% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental social and governance practices within their sector of activity..

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy)

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

Nο

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

• What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product must comply, as part of their investment policy, with the list of exclusions criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 25% of securities with the lowest ESG Score and the above-mentioned exclusions applicable.
- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3)
- The green bonds percentage of the financial is higher than that of the extra-financial investment universe
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall invest at least 60% of its assets in 'sustainable investments' as defined in Article 2(17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of

staff and tax compliance.

structures,

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 60%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

The **EU Taxonomy** is a classification

system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE EURO MULTI-FACTOR CORPORATE BOND

Legal Entity Identifier: 213800DPOGNREC41KM77

Environmental and/or social characteristics

Does this financial product have a sus	tainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 37% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	x with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u> Environment

- 4. Investments in companies without carbon emission reduction initiatives ${\it Social}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

• What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product must comply, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 25% of securities with the lowest ESG Score and the above-mentioned exclusions applicable.
- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).
- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).
- The financial product shall invest at least 37% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 37%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas**

directly enable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 11%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 9%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 - Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS FUNDS SUSTAINABLE EURO

MULTI-FACTOR EQUITY

Legal Entity Identifier: 213800MX4TNTP1BW9349

Environmental and/or social characteristics

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Sustainable

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product

are attained.

more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, the protection and/or restoration of biodiversity and ecosystems. The extent to which the sustainable investments with an environmental objective are aligned with the EU Taxonomy will be disclosed in the annual report of the financial product.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio

- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

• What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product must comply, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 25% of securities with the lowest ESG Score and the above-mentioned exclusions applicable.
- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).
- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy as disclosed below
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics

Asset allocation describes the share

of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The Management Company is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

 Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy ¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental

objective.

To comply with the

criteria for **fossil gas** include limitations

EU Taxonomy, the

on emissions and

renewable power or

low-carbon fuels by the end of 2035. For

nuclear energy, the

criteria include comprehensive

safety and waste management rules.

switching to

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 12%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 13%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

indexes to measure whether the financial product attains the environmental or social characteristics that

they promote.

Reference

benchmarks are

• How does the designated index differ from a relevant broad market index?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or

social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE EUROPE DIVIDEND

Legal Entity Identifier: 213800JZY4TUMVRZMH43

Environmental and/or social characteristics

Does this financial product have a sust	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity

16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Good governance

practices include

structures,

compliance.

sound management

employee relations,

remuneration of staff and tax

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
- The financial product shall invest at least 40% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- The average percentage of the sustainable investments of the sub-fund is improved by at least 15% compared to its investment universe
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting

- the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

annual report.

The minimum proportion of sustainable investments of the financial product is 40%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

• Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy ?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 15%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE EUROPE MULTI-FACTOR EQUITY

Legal Entity Identifier: 213800PBFPQ6E8XMYZ44

Environmental and/or social characteristics

Does this financial product have a sust	tainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, the protection and/or restoration of biodiversity and ecosystems. The extent to which the sustainable investments with an environmental objective are aligned with the EU Taxonomy will be disclosed in the annual report of the financial product.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio

- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 25% of securities with the lowest ESG Score and the above-mentioned exclusions applicable.
- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).
- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).
 - The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy as disclosed below
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

Good governance

practices include sound management

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The Management Company is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities? Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 9%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 17%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

whether the financial product attains the environmental or social characteristics that

they promote.

• How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **BNP PARIBAS FUNDS SUSTAINABLE EUROPE** VALUE

Legal Entity Identifier: 2138001J0JK911RS3920

Environmental and/or social characteristics

Does this financial product have a sus	stainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

Corporate issuers

The investment strategy selects corporate issuers with the best ESG practices within their sector of activity through:

The positive screening using a selectivity approach. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement.

This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and sector exclusions as per the RBC Policy
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities,

sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity

16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product must comply, as part of their investment policy, with the list of exclusions criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
- The financial product's investment universe shall be reduced by a minimum of 25 % due to exclusion of securities with low ESG score and sector exclusions as per the RBC Policy
- The carbon footprint of portfolio companies is lower than that of its non financial investment universe (indicator of negative impacts on sustainability No. 2)
- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13)
- The financial product shall invest at least 35% of its assets in 'sustainable investments' as defined in Article (217) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

Good governance practices include sound management structures, employee relations, remuneration of staff and tax

compliance.

• What is the committed minimumrate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product's investment universe is reduced by a minimum of 25% due to exclusion of securities with low ESG score and sector exclusions as per the RBC Policy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the

annual report.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- 1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic
- activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP PARIBAS FUNDS SUSTAINABLE GLOBAL Legal Entity Identifier: 2RWK0J6LXFXM28DB0064 CORPORATE BOND

Environmental and/or social characteristics

Does this financial product have a sus	stainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental social and governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy)

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universeThe percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average portfolio ESG Score of the sub-fund compared to the average portfolio ESG Score of its investment universe, after eliminating at least 15% of securities with the lowest ESG Score
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

Νo

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product must comply, as part of their investment policy, with the list of exclusions criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 25% of securities with the lowest ESG Score and the above-mentioned exclusions applicable
- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3)
- The green bonds percentage of the financial is higher than that of the extra-financial investment universe.
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have the average portfolio ESG Score higher than the average portfolio ESG Score of its investment universe, after eliminating at least 15% of securities with the lowest ESG Score
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article $\chi(17)$ of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include

structures,

staff and tax

compliance.

sound management

employee relations, remuneration of

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- #1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- 1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective
- see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

provided that the investment does not significantly	Does this financial product have a sustainable investment objective? Yes No	
harm any environmental or social objective and that the investee companies follow good governance	It will make a minimum of sustainable investments with an environmental objective:	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment,
The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable in economic activities that qualify as environmentally sustainable in economic activities that	Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU	it will have a minimum proportion of 40% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: $\underline{ \text{https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63}$

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u> Environment

- 4. Investments in companies without carbon emission reduction initiatives $\underline{\textit{Social}}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall invest at least 40% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of

staff and tax

compliance.

structures,

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy. - operational
- expenditure (OpEx) reflecting green operational activities of investee companies.

the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 40%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 11%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee
companies follow

good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE GLOBAL MULTI-FACTOR CORPORATE BOND

Legal Entity Identifier: 213800YL78JBVLCMJI38

Environmental and/or social characteristics

Does this financial product have a sus Yes	tainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 36% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	x with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts in pricing and investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-bribery

matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

<u>Environment</u>

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product must comply, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 25% of securities with the lowest ESG Score, as defined in the Prospectus
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).
- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).
 - The financial product shall invest at least 36% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 36%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy ?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
Not applicable

under the EU

Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 9%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Environmental and/or social characteristics

Does this financial product have a sust	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
It will make a minimum of	with a social objective It promotes E/S characteristics, but will
sustainable investments with a social objective:%	not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- _____
- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
 - Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
 - Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

to the following objectives:

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-bribery matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u> Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

• What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product must comply, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 25% of securities with the lowest ESG Score and the above-mentioned exclusions applicable.
- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).
- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).
 - The financial product shall invest at least 40% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

Good governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Asset allocation describes the share

of investments in

Taxonomy-aligned activities are expressed as a share of:

specific assets.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 40%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

other activities to

make a substantial

corresponding to

environmental objective. **Transitional activities are** activities for which

low-carbon

directly enable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy ?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
Not applicable

environmental
objective that do not
take into account the
criteria for
environmentally
sustainable
economic activities
under the EU

Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 6%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 13%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and

that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE GLOBAL MULTI-FACTOR HIGH YIELD BOND

Legal Entity Identifier: 213800NQF8HLJ79ZB806

Environmental and/or social characteristics

Does this financial product have a sus	tainable investment objective? x No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: $\underline{\text{https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63}$

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u> Environment

- 4. Investments in companies without carbon emission reduction initiatives $\underline{\textit{Social}}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Good governance practices include sound management structures, employee relations, remuneration of

staff and tax

compliance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not vet available and among others have greenhouse gas emission levels corresponding to the best performance.

 Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy ?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities? Not applicable

investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

The EU Taxonomy is

a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE JAPAN MULTI-FACTOR EQUITY

Legal Entity Identifier: 213800GWBTLE3P1AUD47

Environmental and/or social characteristics

Does this financial product have a sust	tainable investment objective? X No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	x with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

structures,

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to

limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities? Not applicable

under the EU

Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 12%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 11%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

they promote.

indexes to measure

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

• How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Sustainable Multi-Asset Balanced

Legal entity identifyier: 213800LNF3Y04Y1C8T55

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) characteristics and while it does not have sustainable investments with as its objective a sustainable investment, it an environmental objective: will have a minimum proportion of 35% of sustainable investments in economic activities that with an environmental objective in qualify as environmentally sustainable under the EU economic activities that qualify as environmentally sustainable under the EU Taxonomy Taxonomy in economic activities that do with an environmental objective in not qualify as economic activities that do not qualify as environmentally sustainable environmentally sustainable under the under the EU Taxonomy **EU Taxonomy** with a social objective It will make a minimum of It promotes E/S characteristics, but will not make any sustainable investments sustainable investments with a social objective: ___%

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers selected based on their practices and activities linked to sustainable development through either the best-in-class approach or sustainable thematic approach.

The best-in-class approach consists in assessing ESG performance of issuers against a combination of environmental, social and governance (ESG) factors and investing in issuers that demonstrate superior environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The sustainable thematic approach consists in investing in :

o Companies that offer products services and solutions helping to address specific

environmental and/or social challenges;

 Green bonds, social bonds or sustainability bonds issued by corporates, supranational sovereign agencies, local entities and/or government to support projects with environmental ad/or social objectives

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- o Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the direct investments and internal active funds compliant with the RBC Policy;
- The percentage of the direct investments covered by ESG analysis based on the ESG internal proprietary methodology;
- The weighted average ESG score of the direct investments compared to the weighted average ESG score of its investment universe;
- The percentage of the indirect investments which comply with either a selectivity approach (exclusion of at least 25% of the worst ESG-rated securities of the investment universe) or a rating upgrade approach (ESG score better than the investment universe from which at least 20% of the worst ESG-rated securities have been excluded);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this

criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment

in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
 - b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-

bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

—— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account all the principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector

- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

<u>Social</u>

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.</u>

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability indicators:

Corporate mandatory indicators:

- 4. Exposure to companies active in the fossil fuel sector
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.</u>

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, Environmental, Social and Governance (ESG) criteria that it promotes are taken into account at each step of its the investment process.

For internal investments, the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. The ESG score is built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG scoring methodology.

While investing in external funds and/or passive funds selected by the dedicated internal team, the used ESG criteria are defined in the framework of the proprietary ESG methodology of the third-party asset manager and/or index provider.

Then the binding elements of the investment strategy described in the question below are constantly integrated to construct an investment portfolio with an improved ESG profile compared to its investment universe.

In addition, issuers that contribute to environmental and/or social objectives will be determined in accordance with sustainable investment methodologies disclosed in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- At least 90% of the direct investments (excluding ancillary liquid assets) shall be covered by the ESG analysis based on the ESG internal proprietary methodology;
- The direct investments part shall have a weighted average ESG score higher than the
 weighted average ESG score of its investment universe, being the Bloomberg Euro Aggregate,
 after eliminating at least 25% of securities with the lowest ESG Score and the sector
 exclusions applicable;
- At least 90% of funds selected (i.e. UCITS, UCIS, or ETFs) shall comply with either a selectivity approach (exclusion of at least 25% of the worst ESG-rated securities of the investment universe) or a rating upgrade approach (ESG score better than the investment universe from which at least 20% of the worst ESG-rated securities have been excluded);
- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus;
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

Separation of power (e.g. Split CEO/Chair),

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

What is the asset allocation planned for this financial product?

At least 75% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.
 - How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

Even if the investment objective of the product falls within the framework of the environmental objectives defined by the Taxonomy Regulation, all the economic activities related to this objective are not necessarily covered by the latter. In addition, taxonomy alignment data is still not yet communicated or published and the activities of certain issuers require additional fundamental analysis in order to be accounted for and are therefore not taken into account by the taxonomy data that we use.

The Management Company is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Yes:

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

environmental

sustainable economic activities

under the EU

Taxonomy.

objective that **do not take into**

account the criteria

for environmentally

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 11%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 8%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Sustainable Multi-Asset Flexible

Legal entity identifyier: 213800UKA7J880TZ5W79

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a s	sustainable investment objective? • • • • No
It will make a minimum of sustainable investments with an environmental objective: —% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

Sustainable investment means

follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable

investments with an environmental objective might be aligned with the Taxonomy or not.

an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers selected based on their practices and activities linked to sustainable development through either the best-in-class approach or sustainable thematic approach.

The best-in-class approach consists in assessing ESG performance of issuers against a combination of environmental, social and governance (ESG) factors and investing in issuers that demonstrate superior environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The sustainable thematic approach consists in investing in :

o Companies that offer products services and solutions helping to address specific environmental and/or social challenges;

 Green bonds, social bonds or sustainability bonds issued by corporates, supranational sovereign agencies, local entities and/or government to support projects with environmental ad/or social objectives

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- o Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the direct investments and internal active funds compliant with the RBC Policy;
- The percentage of indirect investments which comply with either a selectivity approach (exclusion of at least 20% of the worst ESG-rated securities of the investment universe) or a rating upgrade approach (ESG score better than the investment universe from which at least 20% of the worst ESG-rated securities have been excluded);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- A company with an economic activity aligned with the EU Taxonomy objectives. A company
 can be qualified as sustainable investment in case it has more than 20% of its revenues
 aligned with the EU Taxonomy. A company qualifying as sustainable investment through this
 criteria can for example contribute to the following environmental objectives: sustainable
 forestry, environmental restoration, sustainable manufacturing, renewable energy, water
 supply, sewerage, waste management and remediation, sustainable transportation,
 sustainable buildings, sustainable information and technology, scientific research for
 sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its

revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
 - Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account all the principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement</u>: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is

placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 4. Exposure to companies active in the fossil fuel sector
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement</u>: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, Environmental, Social and Governance (ESG) criteria that it promotes are taken into account at each step of its the investment process .

For internal investments, the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. The ESG score is built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG scoring methodology.

While investing in external funds and/or passive funds selected by the dedicated internal team, the used ESG criteria are defined in the framework of the proprietary ESG methodology of the third-party asset manager and/or index provider.

Then the binding elements of the investment strategy described in the question below are constantly integrated to construct an investment portfolio with an improved ESG profile compared to its investment universe.

In addition, issuers that contribute to environmental and/or social objectives will be determined in accordance with sustainable investment methodologies disclosed in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- At least 90% of funds selected (i.e. UCITS, UCIs, or ETFs) shall comply with either a selectivity approach (exclusion of at least 20% of the worst ESG-rated securities of the investment universe) or a rating upgrade approach (ESG score better than the investment universe from which at least 20% of the worst ESG-rated securities have been excluded);
- The financial product shall invest at least 30% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the

company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

At least 75% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or

Taxonomy-aligned activities are expressed as a share 0f:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and/or hedging and/or investment purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

 $^{^{}m 1}$ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 7%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 6%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that are not used to meet environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies

follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Sustainable Multi-Asset Growth

Legal entity identifyier: 213800D5ZCC78YP2D106

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective?						
	• • Yes	• No				
	It will make a minimum of sustainable investments with an environmental objective: ——% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective				
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments				

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing through funds, in bonds or shares of issuers selected based on their practices and activities linked to sustainable development through either the best-in-class approach or sustainable thematic approach.

The best-in-class approach consists in assessing ESG performance of issuers against a combination of environmental, social and governance (ESG) factors and investing in issuers that demonstrate superior environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The sustainable thematic approach consists in investing in :

 Companies that offer products services and solutions helping to address specific environmental and/or social challenges;

 Green bonds, social bonds or sustainability bonds issued by corporates, supranational sovereign agencies, local entities and/or government to support projects with environmental ad/or social objectives

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of internal active funds compliant with the RBC Policy;
- The percentage of funds which comply with either a selectivity approach (exclusion of at least 25% of the worst ESG-rated securities of the investment universe) or a rating upgrade approach (ESG score better than the investment universe from which at least 20% of the worst ESG-rated securities have been excluded);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment

in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
 - Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into internal active funds, takes into account all the principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es"

(Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement</u>: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external

experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 4. Exposure to companies active in the fossil fuel sector
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement</u>: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, Environmental, Social and Governance (ESG) criteria that it promotes are taken into account at each step of its investment process .

For internal investments, the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. The ESG score is built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG scoring methodology.

While investing in external funds and/or passive funds selected by the dedicated internal team, the used ESG criteria are defined in the framework of the proprietary ESG methodology of the third-party asset manager and/or index provider.

Then the binding elements of the investment strategy described in the question below are constantly integrated to construct an investment portfolio with an improved ESG profile compared to its investment universe.

In addition, issuers that contribute to environmental and/or social objectives will be determined in accordance with sustainable investment methodologies disclosed in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- At least 90% of funds selected (i.e. UCITS, UCIS, or ETFs) shall comply with either a selectivity approach (exclusion of at least 25% of the worst ESG-rated securities of the investment universe) or a rating upgrade approach (ESG score better than the investment universe from which at least 20% of the worst ESG-rated securities have been excluded);
- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus;
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices

- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure.
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

What is the asset allocation planned for this financial product?

At least 75% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.
- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

Even if the investment objective of the product falls within the framework of the environmental objectives defined by the Taxonomy Regulation, all the economic activities related to this objective are not necessarily covered by the latter. In addition, taxonomy alignment data is still not yet communicated or published and the activities of certain issuers require additional fundamental analysis in order to be accounted for and are therefore not taken into account by the taxonomy data that we use.

The Management Company is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures.

Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

	Yes:				
		lı	n fossil	gas	In nuclear energy
×	No				

To comply with the EU

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are
sustainable
investments with
an environmental
objective that do
not take into
account the
criteria for
environmentally
sustainable
economic activities
under the EU
Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not Applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 9%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

 For internal funds, the proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are

indexes to

social

measure whether the financial

product attains the environmental or

characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Sustainable Multi-Asset Stability

Legal entity identifyier: 213800X77ZBZRGKT7B43

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective?						
	Yes	• No				
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments				
	qualify as environmentally sustainable under the EU Taxonomy in economic activities that do	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy				
	not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy				
		with a social objective				
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments				

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers selected based on their practices and activities linked to sustainable development through either the best-in-class approach or sustainable thematic approach.

The best-in-class approach consists in assessing ESG performance of issuers against a combination of environmental, social and governance (ESG) factors and investing in issuers that demonstrate superior environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The sustainable thematic approach consists in investing in :

 Companies that offer products services and solutions helping to address specific environmental and/or social challenges;

 Green bonds, social bonds or sustainability bonds issued by corporates, supranational sovereign agencies, local entities and/or government to support projects with environmental ad/or social objectives

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the direct investments and internal active funds compliant with the RBC Policy;
- The percentage of the direct investments covered by ESG analysis based on the ESG internal proprietary methodology;
- The weighted average ESG score of the direct investments compared to the weighted average ESG score of its investment universe;
- The percentage of the indirect investments which comply with either a selectivity approach (exclusion of at least 25% of the worst ESG-rated securities of the investment universe) or a rating upgrade approach (ESG score better than the investment universe from which at least 20% of the worst ESG-rated securities have been excluded);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

A company with an economic activity aligned with the EU Taxonomy objectives. A company
can be qualified as sustainable investment in case it has more than 20% of its revenues
aligned with the EU Taxonomy. A company qualifying as sustainable investment through this
criteria can for example contribute to the following environmental objectives: sustainable
forestry, environmental restoration, sustainable manufacturing, renewable energy, water
supply, sewerage, waste management and remediation, sustainable transportation,

sustainable buildings, sustainable information and technology, scientific research for sustainable development;

- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
 - b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
 - Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account all the principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water

- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.</u>

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

-—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and

rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es"

(Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration

Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 4. Exposure to companies active in the fossil fuel sector
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.</u>

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, Environmental, Social and Governance (ESG) criteria that it promotes are taken into account at each step of its the investment process .

For internal investments, the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. The ESG score is built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG scoring methodology.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

While investing in external funds and/or passive funds selected by the dedicated internal team, the used ESG criteria are defined in the framework of the proprietary ESG methodology of the third-party asset manager and/or index provider.

Then the binding elements of the investment strategy described in the question below are constantly integrated to construct an investment portfolio with an improved ESG profile compared to its investment universe.

In addition, issuers that contribute to environmental and/or social objectives will be determined in accordance with sustainable investment methodologies disclosed in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- At least 90% of the direct investments (excluding ancillary liquid assets) shall be covered by the ESG analysis based on the ESG internal proprietary methodology;
- The direct investments part shall have a weighted average ESG score higher than the weighted average ESG score of its investment universe, being the Bloomberg Euro Aggregate, after eliminating at least 25% of securities with the lowest ESG Score and the sector exclusions applicable;
- At least 90% of funds selected (i.e. UCITS, UCIS, or ETFs) shall comply with either a selectivity approach (exclusion of at least 25% of the worst ESG-rated securities of the investment universe) or a rating upgrade approach (ESG score better than the investment universe from which at least 20% of the worst ESG-rated securities have been excluded);
- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

What is the asset allocation planned for this financial product?

At least 75% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

- **#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

To comply with the

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are
sustainable
investments with an
environmental
objective that do not
take into account
the criteria for
environmentally
sustainable
economic activities
under the EU
Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 12%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 8%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

For direct lines or internal funds, the proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international
- norms, or to cause unacceptable harm to society and/or the environment.

Reference

attains the environmental or

social

benchmarks are

financial product

indexes to measure whether the

characteristics that

they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

Not applicable

- How does the designated index differ from a relevant broad market index?
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE US MULTI-FACTOR CORPORATE BOND

Legal Entity Identifier: 213800WPHI8FXY82F898

Environmental and/or social characteristics

Does this financial product have a sust Yes	tainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
It will make a minimum of sustainable investments with a	x with a social objective It promotes E/S characteristics, but will not make any sustainable investments
social objective:%	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-hribery

matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- -The financial product must comply, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/
- The financial product shall have at all times least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 25% of securities with the lowest ESG Score and the above-mentioned exclusions applicable.
- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).
- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).
- The financial product shall invest at least 35% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to

renewable power or low-carbon fuels by the end of 2035. For

nuclear energy, the criteria include

comprehensive

safety and waste

management rules.

Enabling activities

other activities to

make a substantial

contribution to an

environmental objective. Transitional activities are

low-carbon

yet available and

greenhouse gas

emission levels

the best

performance.

corresponding to

directly enable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy 1?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities? Not applicable

BNP PARIBAS

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 9%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

• How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP PARIBAS FUNDS SUSTAINABLE US Legal Entity Identifier: 213800R4HBLFN2D54E31
MULTI-FACTOR EQUITY

Environmental and/or social characteristics

Does this financial product have a sus	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 37% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: $\underline{ \text{https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63}$

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u> Environment

- 4. Investments in companies without carbon emission reduction initiatives $\underline{\textit{Social}}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall invest at least 37% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of

staff and tax

compliance.

structures,

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 37%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 4%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 12%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee
companies follow

good governance practices.

The EU Taxonomy is

a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE US VALUE MULTI-FACTOR EQUITY

Legal Entity Identifier: 213800U0JS6LX701DA82

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No		
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-bribery matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights. Issuers failing to meet their fundamental obligations in the areas of human and labour rights, environment and corruption are excluded from the investment universe. The in-house sector policies relating to companies operating in sensitive areas (controversial weapons, asbestos, mining, palm oil, etc.) are implemented in order to identify and exclude companies with the worst practices.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with a significantly improved ESG profile compared to its investment universe.

In addition, the Investment Manager relies on the internal sustainable investment methodology, as defined in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investments contribute to such objectives, to determine issuers that contribute to environmental and/or social objectives.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the investment manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at all times at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The average portfolio ESG Score of the sub-fund compared to the average portfolio ESG Score of its investment universe, after eliminating at least 15% of securities with the lowest ESG Score
- The financial product shall invest at least 40% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

To comply with the

product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 40%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

 Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
Not applicable

environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 4%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 9%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

• How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

DISCLAIMER

Every ad hoc pre-contractual document, shall be read in conjunction with the prospectus in force In case of discrepancy between an ad hoc pre-contractual document and a pre-contractual document included in the version of the prospectus in force, the version in the prospectus shall prevail.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Target Risk Balanced

Legal entity identifier: 21380077LNCANKMN7I79

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a s	sustainable investment objective?
• • Yes	• No
It will make a minimum of sustainable investments with an environmental objective:	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments
qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

Sustainable investment means

follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable

investments with an environmental objective might be

an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each

recommended manager or fund in each sector. The team applies a qualitative rather than quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- o Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

 The percentage of the direct investments and internal active funds compliant with the RBC Policy;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's assets invested, through internal and/or external active and/or passive funds, in funds categorised as Article 8 and Article 9 under the SFDR regulation;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- A company with an economic activity aligned with the EU Taxonomy objectives. A company
 can be qualified as sustainable investment in case it has more than 20% of its revenues
 aligned with the EU Taxonomy. A company qualifying as sustainable investment through this
 criteria can for example contribute to the following environmental objectives: sustainable
 forestry, environmental restoration, sustainable manufacturing, renewable energy, water
 supply, sewerage, waste management and remediation, sustainable transportation,
 sustainable buildings, sustainable information and technology, scientific research for
 sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
 - a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
 - b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

—— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account all the principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- $5. \ Share \ of \ non-renewable \ energy \ consumption \ and \ production$
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT <u>SFDR disclosure statement</u>: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will

not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 4. Exposure to companies active in the fossil fuel sector
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SEDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, Environmental, Social and Governance (ESG) criteria that it promotes are taken into account at each step of the investment process .

For internal investments, the Investment Manager integrates the ESG score into the fundamental analysis and valuation of issuers. The ESG score is built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG scoring methodology.

While investing in external funds and/or passive funds selected by the dedicated internal team, the used ESG criteria are defined in the framework of the proprietary ESG methodology of the third-party asset manager and/or index provider.

Then the binding elements of the investment strategy described in the question below are constantly integrated to construct an investment portfolio with an improved ESG profile compared to its investment universe.

In addition, issuers that contribute to environmental and/or social objectives will be selected in accordance with sustainable investment methodologies disclosed in the answer to the question What are the objectives of the sustainable investments that the financial product partially intends

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

to make and how does the sustainable investments contribute to such objectives.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- The financial product shal invest, through internal and/or external active and/or passive funds, at least 75% of its assets funds categorised as Article 8 and Article 9 under the SFDR regulation;
- The financial product shall invest at least 20% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

Asset allocation describes the share of

share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments made
 by investee
 companies, e.g. for
 a transition to a
 green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

What is the asset allocation planned for this financial product?

At least 75% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.
 - How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and/or hedging and/or investment purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective –see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 6%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 6%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets the proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: $\underline{www.bnpparibas-am.com}$ after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Not applicable

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 30% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 0%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee

companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 25% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 80% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 25%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green
- expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

 operational
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF
In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 70% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a
- green economy.
 operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 65% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee
- a transition to a green economy.
 operational expenditure (OpEx) reflecting green operational activities of investee companies.

companies, e.g. for

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

an investment in an economic activity

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics

promoted by the

financial product are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF
In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for
- green economy.
 operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

a transition to a

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil** gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights. anti-corruption and anti-bribery matters

the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 24% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

Taxonomy-aligned activities are expressed as a share of:

At least 65% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 24%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made
- by investee companies, e.g. for a transition to a green economy.
 operational expenditure (OpEx) reflecting green operational

activities of investee

companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does

Sustainable

an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP PARIBAS FUNDS USD MONEY MARKET Legal Entity Identifier: 2138002RYJD3IVRUN140

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
Yes	No X
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
Taxonomy	x with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are

Sustainability indicators measure how the environmental or social characteristics

promoted by the

financial product

are attained.

not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;
- b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.
- 3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:
- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

To achieve the investment objective of the financial product, the investment manager takes into account at each step of its investment process the Environmental, Social and Governance (ESG) criteria that the financial product promotes.

The investment universe of the financial product is thoroughly screened with a view to identify issuers that are in violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights.

Then the Investment Manager integrates ESG ratings and criteria into the assessment of issuers. ESG ratings are built by BNP Paribas Asset Management's Sustainability Centre using a proprietary ESG methodology.

The investment manager constantly integrates the binding elements of the investment strategy described in the question below to construct an investment portfolio with an improved ESG profile compared to its investment universe.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision-making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

At least 50% of the investments of the financial product will be used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product.

For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in

Good governance

practices include

structures,

compliance.

sound management

employee relations,

remuneration of staff and tax

specific assets. Taxonomy-aligned

activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx)
- expenditure (CapEx showing the green investments made by investee companies, e.g. for a transition to a green economy. - operational
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
