## What are the risks and what could I get in return?

### Risk indicator

The risk indicator assumes that you keep the product for at least **5 years**. The actual risk can vary significantly if you cash in before maturity and you may get back less.

The risk indicator is designed to help you compare the risks of investment products. It uses the required calculation methodology, which includes market movements and the risk that the product manufacturer cannot pay out as required. The risk indicator is not guaranteed and may change over time.

**Any investment involves risk.** The value of your investment in this sub-fund will increase or decrease over time, and you may lose some or all of your investment. This product is in the medium to high risk category (level 4 out of 7). Adverse market conditions will most likely decrease the value of your investment.

The sub-fund's risk level reflects the following:

- Equity investments have a higher level of volatility and risk than bonds and money market instruments.

Other important risks partly or completely unreflected in the risk indicator:

- **If your currency as an investor is different from the subscription currency of this product, changes in currency exchange rates could reduce any investment gains or increase any investment losses.**
- Unusual market conditions or unforeseeable events may magnify risks or trigger other risks such as counterparty, liquidity and operational risks (a full description of these risks is available in the prospectus).
- If you place a request to sell (redeem) shares at a time when this product has received many other sell requests, the processing of your order may be delayed, which could affect the price you receive for your shares.

## What happens if Degroof Petercam Asset Services S.A. is unable to pay out?

The sub-fund's assets are segregated from those of the other sub-funds in the SICAV and from Degroof Petercam Asset Services S.A., the product manufacturer and management company of the sub-fund. Even if it were to fail, the product manufacturer could not use the sub-fund's assets to pay its debts.

The only scenario under which an investor could incur a loss is by selling shares at a time when they are worth less than what the investor paid.

## What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.
